Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dodine D:1655

Use Type: Fungicide, Microbiocide

CAS Number: 2439-10-3

Formula: $C_{15}H_{33}N_3O_2$

Synonyms: Aceto de *N*-dodecilguanidina (Spanish); Caswell No. 419; Dodecylguanidine acetate; *N*-Dodecylguanidine acetate; Dodecylguanidine monoacetate; 1-Dodecylguanidinium acetate; Dodguadine; Dodin; Dodine acetate; Dodine, mixture with glyodin; Dodine monoacetate; Doguadine; ENT 16,436; Guanidine, dodecyl-, acetate; Guanidine, dodecyl-, monoacetate; Laurylguanidine acetate

Trade Names: AC 5223®; AMERICAN CYANAMID® 5223; APADODINE®; CARPENE®; CURITAN®; CYPREX®; CYPREX® 65W; CYTOX® 2160; DOQUADINE®; EFUZIN®; KARPEN®; MELPREX®; MELPREX® 65; MILPREX®; QUESTURAN®; Radspor L; SULGEN®; SYLLIT®; SYLLIT® 65; SYLLIT® 400SC, TEBULAN®; TSITREX®; VANDODINE®; VENTUROL®; VONDODINE®

Chemical Class: Guanidine

EPA/OPP PC Code: 044301

California DPR Chemical Code: 245

HSDB Number: 1709 as Cyprex

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: MF1750000

EC Number: 219-459-5 [*Annex I Index No.:* 607-076-00-X]

Uses: Used to control black spot on apples, pears and pecans; brown rot and foliar diseases on peaches and nectarines, cherries, strawberries, black walnuts and sycamore trees. In industry, used as a biocide and preservative. May also be used to catalyze organic reactions.

U.S. Maximum Allowable Residue Levels for Dodine [40 CFR 180.172 (a)]: apple 5 ppm; cherry, sweet 5 ppm; cherry, tart 5 ppm; meat 0 ppm; milk 0 ppm; peach 5 ppm; pear 5 ppm; pecan 0.3 ppm; spinach 12 ppm; strawberry 5 ppm; walnut, black 0.3 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.172 (b)]:*** in or on spinach, 12.0 ppm.

Human toxicity (long-term)[101]: Intermediate–28.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Low–140.71163 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Health Advisory: Mutagen, Skin irritant/sensitizer

Acute Oral Category: 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R22; R36/38; R50/53; safety phrases: S2; S26; S60; S61 (see Appendix 1)

Description: Colorless or white crystalline solid. Molecular weight = 287.44; Freezing/Melting point = 136°C; Vapor pressure = 2×10^{-7} mmHg @ 25°C. High solubility in water; solubility = 900 mg/L @ 20°C. High solubility in water.

Incompatibilities: An acidic organic salt; reacts and neutralizes bases and may generate heat. May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition.

Determination in Air: Ionization. NIOSH IV Method#1450, Esters.[18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <1.25. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation, burns, and permanent eye injury. Poisonous if inhaled or ingested. May cause vomiting and diarrhea. LD_{50} (oral, rat) = 660–851 mg/kg; LD_{50} (dermal, rat) = >6000 mg/kg.

Long Term Exposure: May cause tumors. May be mutagenic and cause reproductive and fetal effects.

Points of Attack: Somatic cells in animals, DNA.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Isolate spill or leak area in all directions for at least 50 meters /150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

DSMA D:1670

Use Type: Herbicide, Defoliant

CAS Number: 144-21-8

Formula: CH_3AsNa_2O

Synonyms: Arsonic acid, methyl-, disodium salt; Disodium methanearsenate; Disodium methyl arsenate; Disodium methyl-dioxido-oxoarsorane; Arrhenal; Arsinyl; Arsynal; Diarsen; Disodium methanearsonate; Disodium methylarsonate; Disodium monomethylarsonate; EPA-19713-45; Metharsan; Metharsinat; Methylarsonat disodny; Neo-Asycodile

Trade Names: ANSAR® 184; ANSAR 8100®; ANSAR DSMA® Liquid; CHIPCO CRAB KLEEN®; CRAB-3-RAD 100®; CRALO-E-RAD®; DAL-E-RAD 100®; DISOMEAR®; DI-TAC®; DMA 100®; JON-TROL®; METHAR®; METHAR 30®; SODAR; SOMAR®; STENOSINE®; TONARSAN®; TONARSIN®; VERSAR DSMA LQ®; WEED BROOM®

Chemical Class: Organoarsenic

EPA/OPP PC Code: 013802

California DPR Chemical Code: 251

HSDB Number: 1701

UN/NA&ERG Number: UN2994/151; UN2759/151

RTECS® Number: PA2275000

EC Number: 205-620-7

Uses: Used as a herbicide to control post-emergent grass weeds, including crab grass, in common grass lawns and established turf; for general non-crop weed control in cotton. Not actively registered for use in the U.S. or EU countries[115]. There are 15 global suppliers[97].

Fish toxicity (threshold): Highly toxic to acquatic organisms. LC$_{50}$ – *Oncorhynchus mykiss* (rainbow trout) –> 115.14 mg/l–96.0 h; EC50 – *Daphnia pulex* (Water flea) – 153 mg/l–48 h.

U.S. Maximum Allowable Residue Levels for Methanearsonic acid (calculated as As$_2$O$_3$) from application of the disodium and monosodium salts of methanearsonic acid [40 CFR 180.289]: in or on raw agricultural commodities as follows: citrus fruit, 0.35 ppm; cottonseed, 0.7 ppm; cottonseed hulls, 0.9 ppm. *Tolerances for total residues of combined arsenic (calculated as As)* **[***21 CFR 556.60***]**; in food as follows: (a) In edible tissues and in eggs of chickens and turkeys, in uncooked muscle tissue, 0.5 ppm; in uncooked edible byproducts, 2 ppm; in eggs, 0.5 ppm. (b) In edible tissues of swine in uncooked liver and kidney: 2 ppm; in uncooked muscle tissue and byproducts other than liver and kidney, 0.5 ppm.

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans

Health Advisory: Nerve Toxin (S!), Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 2, WARNING

Air Pollutant Standard Set. Clean Air Act: List of high risk pollutants (Section 63.74) as arsenic compounds

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92); Toxic Pollutant (Section 401.15) as arsenic and compounds

RCRA, 40CFR261, Appendix 8 Hazardous Constituents, waste number D004

CERCLA Reportable Quantity (RQ): 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%.

WGK (German Aquatic Hazard Class): Not assigned

Description: White crystalline solid or amber liquid. Odorless. Molecular weight = 183.93; Specific gravity (H$_2$O:1) = 1.04; Boiling point = (decomposes) 162.5°C; Freezing/Melting point = 135°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Highly soluble in water; solubility = >300 g/L @ 25°C.

Incompatibilities: Incompatible with strong acids; strong oxidizers; peroxides, bromine azide, bromine pentafluoride, bromine trifluoride; cesium acetylene carbide, chromium trioxide; nitrogen trichloride, silver nitrate. Decomposed by strong oxidizers or reducing agents. Forms highly toxic fumes on contact with acids or active metals (iron, aluminum, zinc). Hydrogen gas can react with inorganic arsenic to form highly toxic arsine gas. Mildly corrosive in the presence of moisture.

Permissible Exposure Limits in Air: NIOSH IDLH: 5 mg[As]/m^3

arsenic, organic compounds

OSHA PEL: 0.5 mg[As]/m^3 TWA

ACGIH TLV®[1]: 0.01 mg[As]/m^3 TWA; Confirmed Human Carcinogen; Biological Exposure Index (BEI): Determinant: Inorganic arsenic plus methylated metabolites in urine; Sampling Time: end of workweek; BEI = 35 μg[As]/L. The determinant may be present in biological specimens collected from subjects who have not been occupationally exposed, at a concentration which could affect interpretation of the result. Such background concentrations are incorporated in the BEI value.

Determination in Air: Filter collection followed by atomic absorption analysis. NIOSH 7900; OSHA ID105.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 10 μg/L; State Drinking Water Guidelines: Arizona 10 μg/L; Connecticut 10 μg/L

Determination in Water: Log K$_{ow}$ = –5.0. negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Skin, eye, and respiratory tract irritant. Subacute poisoning by arsenicals causes salty taste, burning in throat and stomach, and intestinal pain. Acute toxicity indicated by headache, vomiting, stupor, convulsions, paralysis[86]. Symptoms of exposure include abnormally low blood pressure and rapid heart rate; fever and rapid breathing may occur. LD$_{50}$ (oral, rat) = 600 mg/kg; LD$_{50}$ (dermal, rabbit) = 236–325 mg/kg.

Long Term Exposure: May cause reproductive and fetal effects. Interferes with adenosine triphosphate (ATP) production and cell division. May be neurotoxic. Mee's lines of the nails are common. Trivalent arsenic compounds are corrosive to the skin. Arsenic trioxide and pentoxide are sensitizers/irritants.

Points of Attack: Gastrointestinal tract, particularly the large intestine, and the kidney, reproductive system, central nervous system, skin. Arsenic may cause skin damage or problems with circulatory systems, and may increase risk of getting cancer.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to physician:* For severe poisoning BAL (British Anti-Lewisite, Dimercaprol, dithiopropanol ($C_3H_8OS_2$)) has been used to treat toxic symptoms of certain heavy metals poisoning – including arsenic. Although BAL is reported to have a large margin of safety, caution must be exercised, because toxic effects may be caused by excessive dosage. Most can be prevented by pre-medication with 1-ephedrine sulfate (CAS: 134-72-5).

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Note to physician: For severe poisoning BAL (British Anti-Lewisite, Dimercaprol, dithiopropanol ($C_3H_8OS_2$)) has been used to treat toxic symptoms of certain heavy metals poisoning – including arsenic. Although BAL is reported to have a large margin of safety, caution must be exercised, because toxic effects may be caused by excessive dosage. Most can be prevented by pre-medication with 1-ephedrine sulfate (CAS: 134-72-5). For milder poisoning *penicillamine (not penicillin)* has been used, both with mixed success. Side effects occur with such treatment and it is never a substitute for controlling exposure. It can only be done under strict medical care.

Respirator Selection: *at any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full faceplate and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFAg100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Disodium methanearsenate requires a shipping label of "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of arsenic, nitrogen and carbon. Use any agent suitable for surrounding fire. Stay upwind; keep out of low areas. Wear self-contained breathing apparatus and full protective clothing. Move container from fire area, if you can do so without risk. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chemical class: Organochlorine; Cyclodiene

EPA/OPP PC Code: 079401; 079402 (*alpha*-isomer); 079403 (*beta*-isomer)

California DPR Chemical Code: 259

HSDB Number: 390

UN/NA & ERG Number: UN2761 (solid)/151

RTECS® Number: RB9275000 (*alpha*-isomer); RB9875200 (*beta*-isomer)

EC Number: 204-079-4 [*Annex I Index No.:* 602-052-00-5]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Not approved for use in EU countries[115]. Globally banned as of April 29, 2010. Endosulfan was added to the list of Stockholm Convention Persistent Organic Pollutants (POPs): Annex A (Elimination). Endosulfan is a chlorinated hydrocarbon insecticide and acaricide of the cyclodiene subgroup which acts as a poison to a wide variety of insects and mites on contact. Although it may also be used as a wood preservative, it is used primarily on a wide variety of food crops including tea, coffee, fruits, and vegetables, as well as on rice, cereals, maize, sorghum, or other grains. Formulations of endosulfan include emsulsifiable concentrate, wettable powder, ultra-low volume (ULV) liquid, and smoke tablets. It is compatible with many other pesticides and may be found in formulations with dimethoate, malathion, methomyl, monocrotophos, pirimicarb, triazophos, fenoprop, parathion, petroleum oils, and oxine-copper. It is not compatible with alkaline materials. Technical endosulfan is made up of a mixture of two molecular forms (isomers) of endosulfan, the *alpha*- and *beta*-isomers.

U.S. Maximum Allowable Residue Levels for Endosulfan [40CFR 180.182(a)(1)]: Alfalfa, forage 0.3 ppm; alfalfa, hay 1.0 ppm; almond 0.3 ppm; almond, hulls 1.0 ppm; apple 1.0 ppm; apple, wet pomace 5.0 ppm; apricot 2.0 ppm; barley, grain 0.3 ppm; barley, straw 0.4 ppm; bean 2.0 ppm; blueberry 0.3 ppm; broccoli 3.0 ppm; Brussels sprouts 2.0 ppm; cabbage 4.0 ppm; carrot, roots 0.2 ppm; cattle, fat 13.0 ppm; cattle, liver 5.0 ppm; cattle, meat 2.0 ppm; cattle, meat byproducts, except liver 1.0 ppm; cauliflower 2.0 ppm; celery 8.0 ppm; cherry, sweet 2.0 ppm; cherry, tart 2.0 ppm; collards 2.0 ppm; corn, sweet, forage 12.0 ppm; corn, sweet, kernel plus cob with husks removed 0.2 ppm; corn, sweet, stover 14.0 ppm; cotton, gin byproducts 30.0 ppm; cotton, undelinted seed 1.0 ppm; eggplant 1.0 ppm; goat, fat 13.0 ppm; goat, liver 5.0 ppm; goat, meat 2.0 ppm; goat, meat byproducts, except liver 1.0 ppm; grape 2.0 ppm; hazelnut 0.2 ppm; hog, fat 13.0 ppm; hog, liver 5.0 ppm; hog, meat 2.0 ppm; hog, meat byproducts, except liver 1.0 ppm; horse, fat 13.0 ppm; horse, liver 5.0 ppm; horse, meat 2.0 ppm; horse, meat byproducts, except liver 1.0 ppm; kale 2.0 ppm; lettuce, head 11.0 ppm; lettuce, leaf 6.0 ppm; milk, fat 2.0 ppm; mustard greens 2.0 ppm; mustard, seed 0.2 ppm; nectarine 2.0 ppm; nut, macadamia 0.2 ppm; oat, grain 0.3 ppm; oat, straw 0.4 ppm; pea, succulent 2.0 ppm; peach 2.0 ppm; pear 2.0 ppm; pecan 0.2 ppm; pepper 2.0 ppm; pineapple 1.0 ppm; pineapple, process residue 20.0 ppm; plum 2.0 ppm; plum, prune 2.0 ppm; potato 0.2 ppm; rapeseed, seed 0.2 ppm; rye, grain 0.3 ppm; rye, straw 0.3 ppm; sheep, fat 13.0 ppm; sheep, liver 5.0 ppm; sheep, meat 2.0 ppm; sheep, meat byproducts, except liver 1.0 ppm; spinach 2.0 ppm; strawberry 2.0 ppm; sugarcane, cane 0.5 sweet potato, roots 0.15 tomato 1.0 ppm; turnip, roots 0.2 ppm; turnip, tops 2.0 ppm; vegetable, cucurbit, group 9 1.0 ppm; walnut 0.2 ppm; watercress 2.0 ppm; wheat, grain 0.3 ppm; wheat, straw 0.4 ppm. *Tolerances for the combined residues (alpha and beta isomers) and its metabolite endosulfan sulfate, 6,7,8,9,10,10-hexachloro-1,5,5a,6,9,9a-hexahydro-6,9-methano-2,4,3-benzodioxathiepin-3,3-dioxide* **[***40CFR 180.182(a)(2)***]:** in or on dried tea (reflecting <0.1 ppm residues in beverage tea) resulting from application of the insecticide to growing tea, 24 ppm.

Human toxicity (long-term) ***[101]:*** Intermediate–42.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.00446 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans; ACGIH, A4 Not classifiable as a human carcinogen.

Health Advisory: Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 1, DANGER–POISON

Endocrine disruptor: Known ED

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Toxic Pollutant (Section 401.15)

EPA Hazardous Waste Number (RCRA No.): P050

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B). Severe pollutant

List of Stockholm Convention POPs: Annex A (Elimination) all isomers

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL *u*g/L): 8080(0.05)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)

List of Stockholm Convention POPs: Annex A (Elimination) all isomers

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B). Severe pollutant; as endosulfan

WGK (German Aquatic Hazard Class): see above (CAS: 115-29-7)

Description: Endosulfan, in pure form, is a colorless crystalline solid. The technical product is a light to dark brown waxy solid. It has a rotten egg or sulfur-like odor. Molecular weight = 406.93; Molecular weight = 1.745 @ 20°C: Freezing/Melting point = 406.91°C; Boiling point = decomposes; Freezing/Melting point = 70–100°C; 80°C (technical); 106.1°C (pure); 106°C (a); 212°C (b); Vapor pressure = 1.7×10^{-7} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Very low solubility in water; solubility = 0.00001%

Incompatibilities: Strong acids, strong bases. Hydrolyzed by acids. Contact with alkalis forms toxic sulfur dioxide fumes. Corrosive to iron, especially in the presence of moisture.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 0.1 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.006 ppm/0.1 mg/m^3 TWA measured as inhalable fraction and vapor [skin]; not classifiable as a human carcinogen

115-29-7

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.1 mg/m^3

PAC-2: 0.8 mg/m^3

PAC-3: 280 mg/m^3

Determination in Air: No test available

Permissible Concentration in Water: Federal Drinking Water Guidelines: 40 ppb[93]. State Drinking Water Guidelines: Arizona 74 μg/L; Maine 42 μg/L; Florida 42 μg/L The U.S. EPA recommends that the amount of endosulfan in rivers, lakes, and streams should not be more than 74 parts per billion (74 ppb). To protect freshwater aquatic life: 0.056 μg/L as a 24 hr average, never to exceed 0.22 μg/L. To protect saltwater aquatic life: 0.0087 μg/L as a 24 hr average, never to exceed 0.034 μg/L. To protect human health: 74.0 μg/L(6). Mexico(35) has set an MAC of 2 μg/L in estuaries and 0.2 μg/L in coastal waters. Kansas[61] has set a guideline of 74.0 μg/L for endosulfan in drinking water.

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, eye and/or dermal and/or eye contact. Can be absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Endosulfan may affect the central nervous system, blood, resulting in irritability, convulsions and renal failure. High-level exposure may result in death. The effects may be delayed. Ingestion of endosulfan may result in nausea, vomiting, and diarrhea. Dizziness, agitation, nervousness, tremor, incoordination, and convulsions may also occur. Central nervous system depression may terminate in respiratory failure. Contact with endosulfan may irritate or burn the skin, eyes, and mucous membranes. The probable oral lethal dose is 50 to 500 mg/kg, or 1 teaspoonful to 1 ounce for a 150 lb person. Death has occurred within 2 hours of heavy dust exposure during bagging operations. LD_{50} (oral, rat) = 18 mg/kg[83,USDA]; LD_{50} (dermal, rabbit) = 400 mg/kg.

Long Term Exposure: May cause tumors. Repeated exposure may cause brain damage, causing convulsions, loss of coordination, and memory loss. May cause liver and kidney damage. Studies of the effects of endosulfan on animals suggest that long-term exposure to endosulfan can also damage the kidneys, testes, and liver and may possibly affect the body's ability to fight infection. However, it is not known if these effects also occur in humans. The U.S. EPA does not know if children are more sensitive to endosulfan than adults. The U.S. EPA does not know if endosulfan can affect the ability of people to have children or if it causes birth defects. Large amounts of endosulfan damaged the testes of animals, but it is not known if this damaged their ability to reproduce. Some birth defects have been seen in the offspring of animals ingesting endosulfan during pregnancy

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Liver and kidney function tests. Examination of the nervous system. EEG.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Consult hospital or poison control center on use of antidotes. Transport to health care facility

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Viton or Neoprene™ materials are recommended. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. If used out of doors adequate emergency water should be available.

Respirator Selection: SCBA >0.1 mg/m^3. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode. A dust respirator approved for pesticide use may be worn. An organic vapor respirator may be necessary if exposure to the solvent is significant.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a cool, dry, well-ventilated area, free of alkalis, acids, and acid fumes. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Endosulfan required label is "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II. STN: 49-215-16.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. In the case of spills, stay upwind; stay out of low areas. Use water spray to reduce vapors. Do not dry sweep. Do not touch spilled material; stop leak if you can do it without risk. *Small wet spills:* take up with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills*: with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use any extinguishing agent suitable for surrounding fire. Hazardous decomposition includes sulfur oxides and chlorine. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: A recommended method for disposal is burial 18 inches deep in non-cropland, away from water supplies, but bags can be burned. Large quantities should be incinerated at high temperature in a unit with effluent gas scrubbing. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Endothall E:0110

Use Type: Herbicide, Algaecide

CAS Number: 145-73-3; 129-67-9 (disodium salt)

Formula: $C_8H_{10}NO_5PS$

Synonyms: 1,2-Dicarboxy 3,6-endoxocyclohexane; 3,6-Endooxohexahydrophthalic acid; Endothal (Great Britian); Endothal chlorophenoxy herbicide; Endothall technical; 3,6-Endoxohexahydrophthalic acid; 3,6-Epoxycyclohexane-1,2-dicarboxylic acid; 3,6-Endo-epoxy-1,2-cyclohexanedicarboxylic acid; Hexahydro-3,6-*endo*-oxyphthalic acid; 7-Oxabicyclo(2.2.1) heptane-2,3-dicarboxylic acid

Trade Names: ACCELERATE®; AQUATHOL®; DES-I-CATE®; HYDOUT®; HYDROTHAL-47®; HYDROTHOL®; NIAGARATHOL®; RIPENTHOL®; TRI-ENDOTHAL®

Chemical class: Dicarboxylic acid

EPA/OPP PC Code: 038901

California DPR Chemical Code: 5813

HSDB Number: 391

UN/NA & ERG Number: UN2811/154

RTECS® Number: RN7875000; RN8225000 (disodium salt)

EC Number: 205-660-5 [*Annex I Index No.:* 607-150-00-

1] (*145-73-3*); 204-959-8 [*Annex I Index No.:* 607-055-00-5] (*129-67-9*)

Uses: Endothall is used as a cotton defoliant and as a selective contact herbicide on both terrestrial and aquatic weeds. The potassium and amine salts of endothall are used as aquatic herbicides to control a variety of plants including plankton, pondweed, niad, coontail, milfoil, elodea, and algaes in water bodies and rice fields. Endothall is also used to control annual grass and broadleaf weeds in sugar beets, spinach and turf. It reduces sucker branch growth in hops. Endothall is a desiccant to aid the harvest of alfalfa, potatoes, clover, and cotton. Not approved for use in EU countries[115]. Approved for use in the U.S. and other countries. There are 24 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Endothall from use of its mono-N,N-dimethylalkylamine salt wherein the alkyl Group the same as in the fatty acid of coconut oil [40 CFR 180.293(a)(1)]: in or on the following raw agricultural commodities: cotton, undelinted seed 0.1 ppm; hop, 0.1 ppm; potato 0.1 ppm; rice, grain 0.05 ppm (negligible); and rice, straw, 0.05 ppm (negligible). [*40 CFR 180.293(a)(2)*]: An interim tolerance of 0.2 ppm is established in potable water from use of its potassium, sodium, di-*N,N*-dimethylalkylamine, and mono-*N-N*-dimethylalkylamine salts as algicides or herbicides to control aquatic plants in canals, lakes, ponds, and other potential sources of potable water. *While petitions for tolerances for negligible residues are pending and until action is completed on these petitions, interim tolerances are established* **[***40 CFR 180.319***]:** in or on the following raw agricultural commodity: sugar beets.

Human toxicity (long-term)[101]: Very low–100.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Low–240.32545 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Acute Oral Category: 1, DANGER-Poison

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active] dipotassium and mono (*N,N*-dimethyl alkylamine) salts.

EPA Hazardous Waste Number (RCRA No.): P088

Safe Drinking Water Act: MCL, 0.1 mg/L; MCLG, 0.1 mg/L; Regulated chemical (47 FR 9352)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)

European/International Regulations (*145-73-3; 129-67-9*): Hazard Symbol: T; risk phrases: R21; R25; R36/37/38; safety phrases: S1/2; S36/37/39; S45 (see Appendix 1)

Description: Endothall, when pure, is a white crystalline solid. The technical grade is a light brown liquid. Odorless. Molecular weight = 186.18; Specific gravity (H_2O:1) = 1.43; Freezing/Melting point = 144°C with conversion to the anhydride; Vapor pressure = 2×10^{-5} mmHg @ 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 1. Highly soluble in water; solubility = 100% @ 20°C.

Incompatibilities: Undergoes slow hydrolysis in termperatures above 90°C. Reacts with strong oxidizers.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

disodium salt

PAC-1: 0.19 mg/m^3

PAC-2: 2 mg/m^3

PAC-3: 10 mg/m^3

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 100 μg/L; Federal Drinking Water Guidelines: 50 μg/L; State Drinking Water Guidelines: Arizona 140 μg/L; Maine 50 μg/L. A no-observed-adverse effects-level (NOAEL) of 2 mg/kg/day has been determined by EPA. This gives a reference dose (or Acceptable Daily Intake (ADI)) of 0.02 mg/kg/day on the basis of which a lifetime health advisory of 0.14 mg/L (140 μg/L) was calculated.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, eye and/or dermal and/or eye contact. May be absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Ingestion may cause severe vomiting with abdominal pain; inflammation of the gastrointestinal tract with erosion and hemorrhage; pulmonary edema; may cause hypotension and cardiovascular collapse. May be absorbed through the unbroken skin, causing irritation or burning sensation on abraded skin. May cause irritation of the eyes and respiratory tract. Effects of exposure may be delayed. Poisonous: approximate lethal dose (human) is about 2.5 teaspoonful. LD_{50} (oral, rat) = 38–50 mg/kg; LD_{50} (dermal, rat) = >1000 mg/kg.

Long Term Exposure: May cause reproductive and fetal effects. May cause kidney and liver damage. May cause skin sensitization.

Points of Attack: Reproductive cells. Skin, kidneys and liver.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped.

Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear rubber gloves for all handling. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Wear hats, protective suits, and boots for all handling.

Respirator Selection: SCBA >0.19 mg/m^3 *disodium salt.* Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with endothall you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not dry sweep. Use industrial vacuum. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon, sulfur and phosphorus. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Small quantities may be disposed of by burial in soil which is rich in organic matter. Large quantities are best disposed of by incineration. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥ 100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Endrin E:0140

Use Type: Insecticide, Avicide
CAS Number: 72-20-8
Formula: $C_{12}H_8Cl_6O$
Synonyms: 2,7:3,6-Dimethanonaphth(2, 3-b)oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-,(*aα*,2. *β*,2*aβ*,2*aβ*,3*α*,6*α*,6*aβ*,7*β*,7*aα*)-; Endrina (Spanish); ENT 17,251; (1r, 4s, 4as, ss, 7r, 8r, 8ar)-1,2,3,4,10-Hexachloro-1,4,4a,5,6,7,8,8a-octahydro-6,7-epoxy-1,4:5,8-dimethano naphthalene;

Hexachloroepoxyoctahydro-endo,endo-dimethano napthalene; 1,2,3,4,10,10-Hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4-endo-endo-1,4,5,8-dimethanonaphthalene; NCI-C00157

Trade Names: COMPOUND 269®; EN 57®; ENDREX®; ENDRICOL®; ENDRIN CHLORINATED HYDROCARBON INSECTICIDE®; HEXADRIN®; MENDRIN®; NENDRIN®; OKTANEX®

Chemical class: Organochlorine

EPA/OPP PC Code: 041601

California DPR Chemical Code: 262

HSDB Number: 198

UN/NA & ERG Number: UN2761 (solid)/151

RTECS® Number: IO1575000

EC Number: 200-775-7 [*Annex I Index No.:* 602-051-00-X]

Uses: Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP). It is a persistent and acutely toxic insecticide. Endrin is an insecticide which has been used to control insects, rodents, and birds, mainly on field crops such as cotton, maize, sugarcane, rice, cereals, ornamentals, and other crops. It has also been used for grasshoppers in non-cropland and to control voles and mice in orchards. Once widely used in the U.S., most uses were canceled in 1980 and it has not been produced nor sold in the U.S. since 1986. It is not easily dissolved in water and can remain in the soil for more than 14 years.

Human toxicity (long-term)[101]: High–2.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Extra high–0.00440 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen; IARC, Group 3 not classifiable as to its carcinogenicity in humans

California Proposition 65 Chemical: Developmental/Reproductive toxin 5/15/98

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR423, Appendix A, Priority Pollutants

EPA Hazardous Waste Number (RCRA No.): P051; D012

RCRA Toxicity Characteristic (Section 261.24), Maximum Concentration of Contaminants, regulatory level, 0.02 mg/L

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.0028; Non-wastewater (mg/kg), 0.13

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL ug/L): 8080(0.1); 8250(10)

Safe Drinking Water Act: MCL, 0.0002 mg/L; MCLG, 0.002 mg/L; Regulated chemical (47 FR 9352)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

Mexico, Drinking Water Criteria, 0.07 mg/L

List of Stockholm Convention POPs: Annex A (Elimination)

European/International Regulations: Hazard Symbol: T+, N; risk phrases R24; R28; R50/53; safety phrases: S1/2; S21; S22; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Endrin is the common name of one member of the cyclodiene group of pesticides. It is a cyclic hydrocarbon having a chlorine-substituted, methano-bridge structure. Endrin is a white, crystalline solid. Commercial products may be in liquid forms: emulsifiable concentrates, wettable powders, etc. Molecular weight = 380.90; Specific gravity (H_2O:1) = 1.7 @ 20°C; Boiling point = (decomposes) 245°C; Freezing/Melting point = (decomposes) 200°C; Vapor pressure = 2×10^{-7} mmHg @ 20°C. *Mixture in xylene:* Flash point = 27°C. Explosive limits (*in xylene*): LEL = 1.1%; UEL = 7.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Keep away from parathion, strong acids (forms explosive vapors), strong oxidizers. Slightly corrosive to metals. Toxic hydrogen chloride and phosgene may be generated when solution burns.

Permissible Exposure Limits in Air: OSHA PEL: 0.1 mg/m^3 TWA[skin]

NIOSH REL: 0.1 mg/m^3 TWA[skin]

ACGIH TLV®[1]: 0.1 mg/m^3 TWA[skin]; not classifiable as a human carcinogen

NIOSH IDLH: 2 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1.8 mg/m^3
PAC-2: 20 mg/m^3
PAC-3: 2000 mg/m^3

DFG MAK: 0.1 mg/m^3, measured as the, inhalable fraction TWA; Peak Limitation Category II(8); [skin]; Pregnancy Risk Group C

Determination in Air: Collection by filter/chromosorb tube-102; workup with toluene; analysis by gas chromatography/electrochemical detection; NIOSH IV, Method #5519[18].

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 2 μg/L; State Drinking Water Guidelines: Arizona 0.32 μg/L. To protect freshwater aquatic life: 0.0023 μg/L as a 24 hr average, never to exceed 0.18 μg/L. To protect saltwater aquatic life: 0.0023 μg/L as a 24 hr average, never to exceed 0.037 μg/L. To protect human health: 1.0 μg/L[6]. The U.S. EPA has derived a no-observed-adverse effects-level (NOAE) of 0.045 mg/kg/day on the basis of which they have arrived at a long-term health advisory of 16 μg/L and a lifetime health advisory of 0.32 μg/L. Acceptable Daily Intake (ADI) = 0.0002 mg/kg.

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Methylene chloride extraction followed by gas chromatography with electron capture or halogen-specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625). Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact. It is rapidly absorbed through the skin.

Harmful Effects and Symptoms: Endrin is extremely toxic. Symptoms appear between 20 minutes and 12 hours following exposure. There is evidence that this material may cause chromosomal damage. Doses of 1 mg/kg can cause symptoms. It is a suspected carcinogen. Also, it is a central nervous system depressant and hepatotoxin. Pregnant women are considered to be at special risk[83].

Short Term Exposure: *signs and symptoms of endrin exposure*: Signs and symptoms of acute exposure to endrin may be severe and include headache, dizziness, deafness, agitation, nervousness, tremors, frothing of the mouth, seizures, and coma. Convulsive episodes may alternate with periods of severe central nervous system depression. Nausea, vomiting, and diarrhea are common. Hypertension (high blood pressure), tachycardia (rapid heart rate), and cardiac arrhythmias (abnormal heart beating) may be noted. Respiratory depression may lead to respiratory arrest. Contact with the skin, eyes, and mucous membranes may result in redness and irritation. Victims often have an elevated temperature. Contact can irritate the skin and eyes and may affect vision. Inhalation can cause irritation of the respiratory tract. Exposure can cause headache, nausea, vomiting, diarrhea, loss of appetite, sweating and weakness, lightheadedness, dizziness, convulsions and unconciousness. Lower exposure can affect concentration, memory and muscle coordination. Endrin can cause death by respiratory arrest. Symptoms include headache, nausea, vomiting, dizziness, tremors, convulsions, loss of consciousness, rise in blood pressure, fever, frothing of the mouth, deafness, coma, and death. This material is extremely toxic. It is rapidly absorbed through the skin. Symptoms appear between 20 minutes and 12 hours after exposure. Doses of 1 mg/kg can cause symptoms. Also, it is a central nervous system depressant and hepatotoxin. Inhalation may cause irritation to nose and throat, and sudden convulsions, which may occur from 30 minutes to 10 hours after exposure. Recovery is usually rapid, but headache, dizziness, lethargy, weakness, and weight loss may persist to 2 to 4 weeks. Prolonged breathing or ingestion can result in an onset of symptoms in 3 hours at a dose of 1 mg per kg of body weight. Ingestion of 12 grams has caused death. Pregnant women are considered to be at special risk. LD_{50} (oral, rat) = 3 mg/kg; LD_{50} (dermal, rat) = 12 mg/kg.

Long Term Exposure: May cause tumors. Organochlorine pesticides are highly toxic to mammals and will accumulate in the tissues of living organisms. May damage the developing fetus. May damage the nervous system, causing numbness and weakness in the extremities. Repeated exposure may cause personality changes of depression, anxiety and/or irritability. May cause anorexia. High or repeated exposure may cause liver damage. Studies in animals confirm that endrin's main target is the nervous system. Birth defects, especially abnormal bone formation, have been seen in some animal studies.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Examination of the nervous system. Electroencephalogram (a test for abnormal seizure activity). Blood endrin level. Liver and kidney function tests.

First Aid: *Emergency life-support procedures*: Acute exposure to endrin may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation exposure:* Move victims to fresh air. Emergency personnel should avoid self-exposure to endrin. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Transport to a health care facility. *Dermal/eye exposure:* Remove victims from exposure. Emergency personnel should avoid self-exposure to endrin. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Remove contaminated clothing as soon as possible. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. Wash exposed skin areas three times. Wash initially with soap and water, follow with an alcohol wash, then again with soap and water. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Transport to a health care facility. *Ingestion exposure:* Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of endrin is unknown or suspected to be greater than 30 minutes, do not induce vomiting and transport to a health card facility ipecac should not be administered to children under 6 months of age.

Warning: Ingestion of endrin may result in sudden onset of seizures or loss of consciousness. Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If *ANY* uncertainty exists, transport to a health card facility. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Ambulate (walk) the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be readministered. Continue to ambulate and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (0.5 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (0.5 to 1 cup) of water. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (0.5 to 1 oz.) of cathartic; 50 to 100 g (1-3/4 to 3-1/2 oz.) is recommended for adults. Transport to a health care facility[83].

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >1.8 mg/m^3 NIOSH: 1 mg/m^3: Any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator); 2 mg/m^3: Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter); or CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with endrin you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers and heat. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organochlorine pesticides, liquid or solid require a “poisonous materials” label. They fall in Hazard Class 6.1. Endrin may be in Packing Group I.

Spill Handling: For leaks or spills, use water spray to disperse vapor and to flush spills. Liquid containing this material should be absorbed in vermiculite, dry sand, or earth. Do not touch spilled material; stop leak if you can do it without risk. Establish forced ventilation to keep levels below explosive limit. *Small dry spills*: collect powdered material in the most convenient and safe manner and deposit in sealed containers; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Keep unnecessary people away; isolate hazard area and deny entry. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and phosgene and hydrogen chloride gases. Endrin itself does not burn but it may be dissolved in a flammable liquid. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: A disposal procedure recommended by the manufacturer consists of absorption, if necessary, and burial at least 18 inches deep; preferably in sandy soil in a flat or depressed location away from wells, livestock, children, wildlife, etc. Incineration is the recommended method. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Formula: $C_{14}H_{14}NO_4PS$

Synonyms: ENT 17,798; *O*-Ester-*p*-nitrophenol with *O*-ethylphenyl phosphonothioate; Ethoxy-4-nitrophenoxyphenylphosphine sulfide; *O*-Ethyl-*O*-(4-nitrophenyl)-benzenethionophosphonate; Ethyl-*p*-nitrophenyl benzenethionophosphonate; Ethyl-*p*-nitrophenyl benzenethionophosphate; Ethyl-*p*-nitrophenyl benzenethiophosphonate; Ethyl-*p*-nitrophenyl phenylphosphonothioate; *O*-Ethyl-*O*-*p*-nitrophenyl phenylphosphonothioate; *O*-Ethyl-*O*-(4-nitrophenyl phenyl)phenylphosphonothioate; *O*-Ethyl-*O*-*p*-nitrophenyl phenylphosphonothioate; Ethyl-*p*-nitrophenyl thionobenzenephosphate; *O*-Ethyl phenyl-*p*-nitrophenylthiophosphonate; Thionobenzenephosphonic acid ethyl-*p*-nitrophenyl ester

Trade Names: NIAGARA®[C]; PIN®; SANTOX®; TRIPLE KILL T®[C]; VETO®[C]

Chemical class: Organophosphate

EPA/OPP PC Code: 041801

California DPR Chemical Code: 263

HSDB Number: 4049

UN/NA & ERG Number: UN2783 (solid)/152

RTECS® Number: TB1925000

EC Number: 218-276-8 [*Annex I Index No.:* 015-036-00-2]

Uses: Banned for use in the EU. All registered uses of EPN in the U.S. were canceled by the U.S. EPA on August 31, 1988. Effective June 9, 1993, the U.S. EPA announced the revocation of all tolerances for residues of the insecticide EPN in or on various agricultural commodities. These tolerances are listed in 40 CFR 180.119. There are 21 global suppliers[97].

Human toxicity (long-term)[101]: Extra high–0.07 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–1.51635 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: ACGIH, A4 Not classifiable as a human carcinogen.
Acute Oral Category: 1, DANGER–POISON
Health Advisory: Nerve Toxin, Developmental/Reproductive Toxin
U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates
Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
European/International Regulations: Hazard Symbol: T+, N; risk phrases: R27/28; R50; R53; safety phrases: S1/2; S22; S36/37; S45; S60; S61 (see Appendix 1)

Description: EPN is a light yellow crystalline solid or liquid. A brown liquid above 36°C. Aromatic odor (as a pesticide). Molecular weight = 323.32; Specific gravity (H_2O:1) = 1.268 @ 25°C; Freezing/Melting point = 36°C; Vapor pressure = 3.4×10^{-7} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Reaction with oxidizers. Contact with alkalies causes decomposition (hydrolysis) producing *p*-nitrophenol. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: OSHA PEL: 0.5 mg/m^3 TWA [skin]
NIOSH REL: 0.5 mg/m^3 TWA [skin]
ACGIH TLV®[1]: 0.1 mg/m^3 TWA inhalable fraction [skin]; not classifiable as a human carcinogen (2000); BEI$_A$ issued as Acetylcholinesterase inhibiting pesticides.
NIOSH IDLH: 5 mg/m^3
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.45 mg/m^3
PAC-2: 5 mg/m^3
PAC-3: 50 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #5600[18], Organophosphorus pesticides. Collection on a filter, workup with isooctane, Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5012[18].

Permissible Concentration in Water: State Drinking Water Standards: Florida 0.2 μg/L. Japan[35] has set an effluent maximum of 1 mg/L and an environmental water quality standard of zero.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 *n*g/L. Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin absorption, skin and/or eye contact. Passes through the skin.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: an acetylcholinesterase inhibitor. EPN can affect the nervous system, causing convulsions and possible respiratory failure. Exposure may result in unconsciousness or death. The effects may be delayed. Medical observation is indicated. This material may be fatal is swallowed. It is poisonous if inhaled and extremely hazardous by dermal and/or eye contact. Repeated exposure may, without symptoms, be increasingly hazardous. The estimated fatal oral dose is 0.3 grams for a 150 lb (70 kg) person. Acute exposure to EPN may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression and respiratory paralysis. Giddiness, slurred speech, confusion, and psychosis may also be observed. A rebuttable presumption against pesticide registration was issued for EPN on September 19, 1979 by EPA on the basis of neurotoxicity. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 7–38 mg/kg; LD_{50} (dermal, rat) = 25 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. EPN may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Neutoxic.

Points of Attack: Respiratory system, lungs, cardiovascular system, central nervous system, eyes, skin, blood cholinesterase. Neutoxic.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: SCBA > 0.45 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well- ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a “poisonous materials” label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Extra care must be exercised as the material in an organic solvent is highly flammable.

EPTC E:0185

Use Type: Herbicide

CAS Number: 759-94-4

Formula: $C_9H_{19}NOS$

Synonyms: Carbamic acid, dipropylthio-, *S*-ethyl ester; Carbamothioic acid, dipropyl-, *S*-ethyl ester; Caswell No. 435; dipropylcarbamothioic acid *S*-ethyl ester; *N,N*-dipropylthiocarbamic acid *S*-ethyl ester; Ethyl di-*N*-propylthiolcarbamate; *S*-Ethyl dipropylcarbamothioate; Ethyl *N,N*-dipropylthiocarbamate; Ethyl dipropylthiocarbamate; *S*-Ethyl dipropylthiocarbamate; *S*-Ethyldipropylthiocarbamate; *S*-Ethyl-*N,N*-di-*N*-propylthiocarbamate; Ethyl *N,N*-di-*N*-propylthiolcarbamate; Ethyl *N,N*-dipropylthiolcarbamate; FDA 1541; NSC 40486

Trade Names: ALIROX®; EPTAM®; EPTAM® 6E; EPTAM 2.3G (granular, 2.3% by weight); EPTAM 10G (granular, 10% by weight); ERADICANE®; GENEP® EPTC; R-1608®; SHORTSTOP®; STAUFFER® R 1608; TORBIN®

Chemical class: Thiocarbamate

EPA/OPP PC Code: 041401

California DPR Chemical Code: 264

HSDB Number: 394 as EPTAM

UN/NA & ERG Number: UN2902/151

RTECS® Number: FA4550000

EC Number: 212-073-7 [*Annex I Index No.:* 006-030-00-0]

Uses: Some formulations are Restricted Group Pesticides (RUP). EPTC is a pre-emergence and early post-emergence herbicide used to control the growth of germinating annual weeds, including broadleaves, grasses, and sedges. It is used in every region of the United States in the production of a wide variety of food crops. The heaviest usage is in the Corn Belt, Northeastern and Mid-Atlantic states, Coastal and Northern Great Plains and in the Pacific Northwest on corn, potatoes, sweet potatoes, dry beans, peas, alfalfa, and snap beans. EPTC is also used on home-grown vegetables and ornamentals. Not approved for use in EU countries[115]. Registered for use in the U.S. and other countries.

U.S. Maximum Allowable negligible (N) Residue Levels for EPTC S-ethyl dipropylthiocarbamate [40 CFR 180.117]: in or on the following raw agricultural commodities: almonds, hulls 0.1 ppm (N); asparugus 0.1 ppm (N); beans, castor 0.1 ppm (N); cotton, forage 0.1 ppm (N); cottonseed 0.1 ppm (N); flaxseed 0.1 ppm (N); fruits, citrus 0.1 ppm (N); fruits, small 0.1 ppm (N); grain crops 0.1 ppm (N); grasses, forage 0.1 ppm (N); legumes, forage 0.1 ppm (N); nuts 0.1 ppm (N); pineapples 0.1 ppm (N); safflower, seed 0.1 ppm (N); strawberries 0.1 ppm (N); sunflower, seed 0.1 ppm (N); vegetables, fruiting 0.1 ppm (N); vegetables, leafy 0.1 ppm (N); vegetables, root crop 0.1 ppm (N); vegetables, seed and pod 0.1 ppm (N). (N) = negligible amount of residue.

Human toxicity (long-term)[101]: Very low–175.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–1848.27939 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans.

California Proposition 65 Chemical: Developmental/Reproductive toxin (4/27/1999)

Acute Oral Category: 3, CAUTION

Health Advisory: Nerve Toxin, Mutagen, Developmental toxin (TRI)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPA Hazardous Waste Number (RCRA No.): U390

RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Non-wastewater (mg/kg), 1.4

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn; risk phrases: R22; R50/53; safety phrases: S2; S23 (see Appendix 1)

Description: Light yellow liquid or yellow granular material. Commercial products may be in the form of dusts, sprays, solutions, wettable powder suspensions or emulsions. Molecular weight = 189.35; Specific gravity (H_2O:1) = 0.995 @ 20°C; Boiling point = 127.22°C at 20 mmHg[88]; Vapor pressure = 0.034 mmHg @ 35°C[88]; 2.4×10^{-2} mmHg @ 25°C[83,USDA]; Flash point = 115°C. Low solubility in water; solubility = <1 mg/mL@ 22.5°C[88]; 370 ppm. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Reacts violently with powerful oxidizers such as calcium hypochlorite. Slowly decomposes in water, forming carbon disulfide and propyl amine; this decomposition is accelerated by the presence of acids. Flammable gases are generated by the combination of thiocarbamates with aldehydes, nitrides, and hydrides. Thiocarbamates are incompatible with acids, peroxides, and acid halides.

Determination in Water: Log K_{ow} = >3.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Some thiocarbamates may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. Low toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. LD_{50} (oral, rat) = 900–1000 mg/kg; LD_{50} (dermal, rat) = >3000 mg/kg.

Long Term Exposure: A cholinesterase inhibitor. A neurotoxin.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water.

Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with EPTC you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from alkalies. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, liquid, toxic, n.o.s., require a shipping label of "poisonous materials." This material falls in DOT Hazard Class 6.1. Technical name required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: A combustible liquid. Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Land burial is acceptable for small quantities. Larger quantities can be incinerated. EPTC is combustible and could be incinerated. Recommendable method: Incineration. Peer-review: Incineration in a unit with effluent gas scrubbing is recommendable for large amounts. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Esfenvalerate E:0207

Use Type: Insecticide
CAS Number: 66230-04-4
Formula: $C_{25}H_{22}ClNO_3$
Synonyms: Benzeneacetic acid, 4-chloro-*α*-(1-methylethyl)-, cyano(3-phenoxyphenyl)methyl ester, [*s*-(R*,R*)]-; [*s*-(R*,R*)]-4-Chloro-*α*-(1-methylethyl)benzeneacetic acid, cyano (3-phenoxyphenyl)methyl ester; *s*-(R*,R*)-Cyano(3-phenoxyphenyl) methyl 4-chloro-2-(1-methylethyl) benzene-; Fenvalerate; A-*α*; (*S*)-*α*-Cyano-3-phenoxybenzyl (*S*)-2-(4-chlorophenyl)isovalerate; *s*-Fenvalerate; (*S*)-*α*-Cyano-3-phenoxybenzyl (*S*)-2-(4-chlorophenyl)-3-methylbutyrate
Trade Names: AMERICARE®; ASANA®; ASANA-XL®; ASANA® DPX-YB656-84; ENFORCER®; EVERCIDE®; HALMARK®; OMS-3023®; S-1844®; S-5602 ALPHA®; SUMI-ALFA®; SUMI-ALPHA®; SS-PYDRIN®; SUMICIDIN A-ALPHA®
Chemical class: Pyrethroid
EPA/OPP PC Code: 109303
California DPR Chemical Code: 2321
HSDB Number: 6625
UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151
EC Number: [*Annex I Index No.*: 608-058-00-4]
Uses: A U.S. EPA restricted Use Pesticide (RUP). Esfenvalerate is a synthetic insecticide used to control a wide range of pests such as moths, flies, beetles, and other insects. It is used on vegetable crops (soya beans, sugar cane), tree fruit, cotton, maize, sorghum and nut crops, and non-crop lands. It also is used on a wide variety of household pests. It is usually mixed with a wide variety of other types of pesticides such as carbamate compounds or organophosphates and has the naturally occurring compound fenvalerate for use in the U.S. Esfenvalerate is almost identical to fenvalerate. Much of the data for fenvalerate is applicable to the pesticide esfenvalerate because the two compounds contain the same components. The only differences in the two products are the relative proportions of the four separate constituents (isomers). Esfenvalerate has become the preferred compound because it requires lower application rates than fenvalerate, is less chronically toxic, and is a more powerful insecticide.
U.S. Maximum Allowable Residue Levels for Esfenvalerate [40 CFR 180.533 (a)]: artichoke, globe 1 ppm; beet, sugar, dried pulp 2.5 ppm; beet, sugar, roots 0.5 ppm; beet, sugar, tops 5 ppm; egg 0.03 ppm; kiwifruit 0.5 ppm; kohlrabi 2 ppm; lettuce, head 5 ppm; mustard greens 5 ppm; poultry, fat 0.3 ppm; poultry, liver 0.03 ppm; poultry, meat 0.03 ppm; poultry, meat-by-products, except liver 0.3 ppm; sorghum, forage 10 ppm; sorghum, grain, grain 5 ppm; sorghum, grain, stover 10 ppm.
Human toxicity (long-term)[101]: Very low–140.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Extra high–0.00338 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicty: EPA Group E, evidence of non-carcinogenicity for humans.
Health Advisory: Endocrine disruptor (S!)
European/International Regulations: Hazard Symbol: T, Xi, N; risk phrases: R23/25; R43; R50/53; safety phrases: S1/2; S24; S36/37/39; S45; S60; S61 (see Appendix 1)
Description: Viscous yellow or amber liquid or white or amber crystalline solid. Molecular weight = 419.9; Specific gravity (H_2O:1) = 1.175 @ 25°C; Boiling point = 160°C; Freezing/Melting point = 59.7°C; Vapor pressure = 1.1×10^{-8} mmHg @ 20°C; 0.037 mmHg @ 25°C. Soluble in water; solubility = <1 ppm @ 20°C.
Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); strong acids. Moisture may cause hydrolysis/decomposition
Permissible Exposure Limits in Air: NIOSH(2) IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA
STEL set by HSE(33) = 10 mg/m^3.
Determination in Air: Filter; none; Gravimetric; NIOSH IV[18] [Particulates NOR; #0500 (total), #0600 (respirable)]. Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. (pyrethrum)
Permissible Concentration in Water: Acceptable Daily Intake (ADI) = 0.02 mg/kg as pyrethroid.
Determination in Water: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. Log K_{ow} = >6.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, absorbed through the skin.
Harmful Effects and Symptoms
Short Term Exposure: Pyrethroids can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system, causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). Highly toxic. May cause nausea, vomiting and abdominal pain if ingested. LD_{50} (oral, rat) = 90–450 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.
Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic “pneumonia” can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin sensitizer; allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A

severe generalized allergy can occur with weakness and collapse. May cause endocrine effects. May cause tumors.

Points of Attack: Respiratory system, skin (sensitizer), central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to their sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m³:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m³:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m³:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35°C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations.

If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of sulfur. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Ethalfluralin E:0225

Use Type: Herbicide

CAS Number: 55283-68-6

Formula: $C_{13}H_{14}F_3N_3O_4$

Synonyms: Benzenamine, *N*-ethyl-*N*-(2-methyl-2-propenyl)-2,6-dinitro-4-(trifluoromethyl)-; *N*-Ethyl-*N*-(2-methyl-2-propenyl)-2,6-dinitro-4-(trifluoromethyl)benzenamine

Trade Names: COMPOUND 94961®; COBEX®; EL 161®; ETHALFLURLIN®; SOMILAN®; SONALAN®; SONALEN®

Chemical class: 2,6-; Fluorodinitrotoluidine

EPA/OPP PC Code: 113101

California DPR Chemical Code: 2166

HSDB Number: 7545

UN/NA & ERG Number: UN3077(solid)/171; UN1596 (Dinitroanilines)/153

RTECS® Number: XU6200000

EC Number: 259-564-3

Uses: Ethalfluralin is a selective herbicide used for the pre-emergence control of annual grasses and broadleaf weeds in certain food and feed crops. Ethalfluralin may be used in growing a variety of grain, seed, and cucurbit crops. The greatest amounts of ethalfluralin are used in growing soybeans, dry beans, and sunflower seeds. Ethalfluralin is used only outdoors, in agriculture; no residential uses were registered. Not used in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Ethalfluralin [40 CFR 180.416(a)]: bean, dry, seed 0.05 ppm; canola, seed 0.05 ppm; peanut 0.05 ppm; pea, dry, seed 0.05 ppm; safflower, seed 0.05 ppm; soybean 0.05 ppm; sunflower, seed 0.05 ppm; vegetable, cucurbit, group 9, 0.05 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicty: EPA. Group C, Possible human carcinogen

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer.

Description: Yellow-orange crystalline solid. Mild amine odor. Commercial products an mixtures may contain flammable carriers (such as xylene); these may be red-orange liquids with a mild aromatic odor. Molecular weight = 333.26; Specific gravity (H_2O:1) = 1.15; Boiling point = [decomposes; may be dangerous above 200°C (solid); 70°C (liquid)]; Freezing/Melting point = 55–58°C; Vapor pressure = 9×10^{-8} mmHg @ 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 1. Very slightly soluble in water; solubility = 0.35 ppm. @ 25°C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Sensitive to heat. Dintroanilines can be explosive and are strong oxidizers. Contact with reducing agents, other strong oxidizers or, nitrosylsulfuric acid may cause fire or explosion.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Determination in Water: Log K_{ow} = >5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Absorbed through the skin. Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. Eye or dermal contact may cause severe irritation and serious damage. May be absorbed through the skin. Inhalation of vapor or mists should be avoided. Harmful if swallowed. May cause nausea and vomiting. May cause shortness of breath (dyspnea). LD_{50} (oral, rat) = 3000 to >5000[83] mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Long Term Exposure: May cause loss of appetite and anorexia nervosa. Ethalfluralin has caused birth defects in laboratory animals.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Contact physician if poisoning is suspected or if redness, itching, or a burning sensation develops in the eyes or skin. May cause sensitization.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Personal Protective Methods: Dinitroanilines react with cellulose-based and expanded polymeric absorbents[88]. Prevent any reasonable probability of dermal and/or eye contact. Wear protective eye wear/goggles or face shield and protective clothing such as coveralls over long- sleeved shirt and full length pants; impermeable, chemical-resistant gloves when handling this product[83]. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material (such as DuPont™ Viton® gloves and Tychem® suit fabrics) for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: (1) Color Code-Yellow Stripe: Reactivity Hazard; Store separately in a area isolated from flammables, combustibles, or other yellow-coded materials. (2) Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, strong acids, strong bases and other incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: For dinitroaniline solids, isolate spill or leak area in all directions for at least 50 meters /150 feet. Increase, in the downwind direction, as necessary. *If tank, rail car or tank truck is involved in spill*, isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: This chemical is a combustible solid but does not readily ignite. Liquid formulations may be combustible or flammable. Moderate heat causes decomposition that produces toxic vapors, including hydrogen chloride, oxides of nitrogen and carbon, and fluorine. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Do not reuse container.

Ethametsulfuron-methyl E:0228

Use Type: Herbicide

CAS Number: 97780-06-8

Formula: $C_{14}H_{16}N_6O_6S$

Synonyms: Benzoic acid, 2-[((((4-ethoxy-6-(methylamino)-1,3,5-triazin-2-yl)amino)carbonyl)amino)sulfonyl]-, methyl ester; Methyl 2-[((((4-ethoxy-6-(methylamino)-1,3,5-triazin-2-yl)amino)carbonyl)amino)sulfonyl] benzoate; Methyl 2-[(4-ethoxy-6-methylamino-1,3,5-triazin-2-yl)carbamoylsulfamoyl] benzoate

Trade Names: A-7881®; DPX-A 7881® (application withdrawn); MUSTER®

Chemical class: Triazinylsulfonylurea; Sulfonylurea; Nicotinanilide; Carboxamide

EPA/OPP PC Code: 129091

UN/NA & ERG Number: UN3077(solid)/171

Uses: Plant growth inhibitor. Pending in EU countries[115]. Registered for use in the U.S.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Unclassifiable
Health Advisory: Developmental/Reproductive toxin (S!).

Description: White to tan crystalline solid. Molecular weight = 410.41; Specific gravity (H_2O:1) = 1.47; Boiling point = 315°C; Freezing/Melting point = 192–194C°; Vapor pressure = extremely low. Low to moderate solubility in water; solubility = 52 mg/L.

Permissible Exposure Limits in Air: based on manufacturer recommendations: 5 mg/m^3, 8 and 12 hour TWA, respirable dust; 10 mg/m^3, 8 and 12 hour TWA, total dust[BayerCropScience].

Determination in Water: Log K_{ow} = <1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >5 g/kg.; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause reproductive problems.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or from exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as non-specific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl, halosulfuron, primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a non-specific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96]. May cause kidney problems.

Points of Attack: Kidneys, liver, lungs and skin

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Specific respirator(s) have not been recommended by NIOSH. However, based on potential carcinogenicity, and where the potential exists for exposure, the following might be considered: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any MSHA/NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter) or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Ethephon E:0245

Use Type: Plant growth regulator

CAS Number: 16672-87-0

Formula: $C_2H_6ClO_3P$

Synonyms: CEP; 2-CEPA; (2-Chloroethyl)phosphonic acid; Chlorethephon; 2-Chlorethylphosphonic acid; 2-Chloroethanephosphonic acid; Ethefon; Ethephon; Phosphonic acid, (2-chloroethyl)-

Trade Names: AMCHEM® 68-250; ARVEST®; BASE® 250; BOLL'D®; BROMEFLOR®; BROMOFLOR®; CAMPOSAN®; CEPHA®; CEPHA® 10LS; CERONE®; CHIPCO® FLOREL PRO; ETHEPON®; ETHEL®; ETHEVERSE®; ETHREL®; FINISH®; FLORDIMEX®; FLOREL®; G-996®; KAMPOSAN®; PREP®; ROLL-FRUCT®; TERPAL® (with mepiquat chloride); T-EXTRA®; TOMATHREL®

Chemical class: Organophosphate

EPA/OPP PC Code: 099801

California DPR Chemical Code: 1626

HSDB Number: 2618

UN/NA & ERG Number: UN2928/154

RTECS® Number: SZ7100000

EC Number: 240-718-3 [*Annex I Index No.:* 015-514-00-4]

Uses: Ethephon is a plant growth regulator used to promote fruit ripening, abscission, flower induction, and other responses. It is registered for use on a number of food, feed and nonfood crops (rubber plants, flax), greenhouse nursery stock, and outdoor residential ornamental plants, but is used primarily on cotton. Ethephon is applied to plant foliage by either ground or aerial equipment. It also may be applied by hand sprayer to certain home garden vegetables and ornamentals. Use practice limitations include prohibitions against applying ethephon through any type of irrigation system; feeding or grazing livestock in treated areas; and treating within 2 to 60 days of harvest, depending on the crop.

U.S. Maximum Allowable Residue Levels for Ethephon (40 [CFR 180.300(a)]: Apple 5.0 ppm; apple, juice 10.0 ppm; barley, bran 5.0 ppm; barley, grain 2.0 ppm; barley, straw 10.0 ppm; blackberry 30.0 ppm; blueberry 20.0 ppm; cantaloupe 2.0 ppm; cattle, fat 0.02 ppm; cattle, kidney 1.0 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts, except kidney 0.2 ppm; cherry 10.0 ppm; coffee, bean, green 0.5 ppm; cotton, gin byproducts 180.0 ppm; cotton, undelinted seed 6.0 ppm; cucumber 0.1 egg 0.002 ppm; goat, fat 0.02 ppm; goat, kidney 1.0 ppm; goat, meat 0.02 ppm; goat, meat byproducts, except kidney 0.2 ppm; grape 2.0 ppm; grape, raisin 12.0 ppm; hazelnut 0.80 ppm; hog, fat 0.02 ppm; hog, kidney 1.0 ppm; hog, meat 0.02 ppm; hog, meat byproducts, except kidney 0.2 ppm; horse, fat 0.02 ppm; horse, kidney 1.0 ppm; horse, meat 0.02 ppm; horse, meat byproducts, except kidney 0.2 ppm; milk 0.01 ppm; nut, macadamia 0.5 ppm; pepper 30.0 ppm; pineapple 2.0 ppm; poultry, fat 0.02 ppm; poultry, liver 0.05 ppm; poultry, meat 0.01 ppm; poultry, meat byproducts, except liver 0.01ppm; sheep, fat 0.02 ppm; sheep, kidney 1.0 ppm; sheep, meat 0.02 ppm; sheep, meat byproducts, except kidney 0.2 ppm; sugarcane, molasses 1.5 ppm; tomato 2.0 ppm; walnut 0.5 ppm; wheat, bran 5.0 ppm; wheat, germ 5.0 ppm; wheat, grain 2.0 ppm; wheat, middlings 5.0 ppm; wheat, shorts 5.0 ppm; wheat, straw 10.0 ppm. ***A tolerance with regional registration, as defined in 180.1(n)*** **[CFR 180.300(c)]:** sugarcane 0.1 ppm.

Human toxicity (long-term)[101]: Very low–126.0 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–26627.94738 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Toxicity (oral) Category 3, Slightly Toxic (human fatal >30 gm.); however some formulations may be in toxicity category I, Danger or category II, Warning for primary eye and/or skin irritation.

Health Advisory: Nerve Toxin

European/International Regulations: Hazard Symbol: Xn, C, H, N; risk phrases: R20/21; R34; R52/53; safety phrases: S1/2; S26; S28; S36/37/39; S45; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Ethephon is a white to tan powder. Commercial product is a white, waxy solid. Commercial products may be available as aqueous solutions or soluble concentrates. Molecular weight = 144.49; Specific gravity (H_2O:1) = 1.2; 1.65; Boiling point = (decomposes) 265°C; Freezing/Melting point = 73–74°C; Vapor pressure = 1.1×10^{-7} mmHg @ 20°C; <0.01 mmHg @ 20°C. High solubility in water; solubility = <1 kg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Hygroscopic. Solutions are highly acidic. May cause corrosion of metals, especially when moisture is present. Contact with flammable material may cause fire and explosions. Contact with combustible or oxidizable materials may form heat-, shock-, and friction-sensitive explosive mixtures. Static electricity may also cause explosions. Keep away from all acids, especially dibasic organic acids, ammonium compounds, antimony sulfide, arsenic trioxide, metal sulfides, powdered metals, calcium aluminum hydride, cyanides, manganese dioxide, phosphorus, selenium, sulfur, thiocyanates, zinc

Determination in Water: Log K_{ow} = –0.22[83,USDA]. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms: Ethephon is an organophosphonate or salt of a phosphonic acid. Unlike organophosphates, it may not inhibit activity of the enzyme acetylcholinesterase, whcih is essential for transmission of nerve signals in animals and insects. Nevertheless, the metal ions may act as a neurotoxin.

Short Term Exposure: Highly corrosive. Because this material has a low vapor pressure and volatility, significant inhalation of vapors is unlikely at ordinary temperatures. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = >3 g/kg; LD_{50} (dermal, rabbit) = >5 g/kg.

Long Term Exposure: A cholinesterase inhibitor. A neurotoxin. May cause heart problems.

Points of Attack: Central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: (1) Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. (2) Color Code-Yellow Stripe: Reactivity Hazard; Store separately in a area isolated from flammables, combustibles, or other yellow-coded materials. Store in tightly closed containers in a cool, well-ventilated area. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, strong acids, strong bases and other incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Ethephon, labeled “poisonous materials, Corrosive Material.” This chemical falls in Hazard Class 6.1. Label 6.1, 8. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Decomposure starts above 250°C, releasing oxides of nitrogen, sulfur, carbon and phosphorus.

May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Ethion E:0260

Use Type: Insecticide, Acaricide

CAS Number: 563-12-2

Formula: $C_9H_{22}O_4P_2S_4$

Synonyms: Bis(*S*-(Diethoxyphosphinothioyl)mercapto)methane; ENT 24,105; Ethyl methylene phosphorodithioate; Etion (Spanish); Methanedithiol, *S,S*-diester with *O,O*-diethyl phosphorodithioate acid; *S,S'*-Methylene *O,O,O′,O′*-tetraethyl phosphorodithioate; Phosphorodithioic acid, *O,O*-diethyl ester, *S,S*-diester with methanedithiol; STCC 4921565; *O,O,O′,O′*-Tetraethyl *S,S'*-methylenebis(dithiophosphate); *O,O,O′,O′*-Tetraethyl *S,S′*-methylenebisphosphordithioate; Tetraethyl *S,S′*-methylene bis(phosphorothiolothionate); *O,O,O′,O′*-Tetraethyl *S,S′*-methylene di(phosphorodithioate); a,*S′*-Methylene *O,O,O′,O′*-tetraethyl ester phosphorodithioic acid

Trade Names: AC 3422®; EACITHION®; EAQUA ETHION®; EBLADAN®; ECOMMANDO INSECTICIDE CATTLE EAR TAG®; EDRASTIC®; EEMBATHION®; EETHANOX®; EETHIOL®; EETHODAN®; EETHOPAZ®; EFMC-1240®; EFOSFATOXE®; EFOSFONO 50®; EHYLEMOX®; EITOPAZ®; EKWIT®[C]; EMITKILL®; ENAGATA®; ENIA 1240®[C]; ENIAGARA 1240®[C]; ENIALATE®; EPHOSPHOTOX E®; EPROKIL®[C]; ERHODIACIDE®; ERHODOCIDE®; ERODOCID®; ERP-THION®; ESENTRY®[C]; ESOPRATHION®; ETAFETHION®; EVEGFRUFOSMITE®; EVEGFRU FOSMITE®

Chemical class: Organophosphate

EPA/OPP PC Code: 058401

California DPR Chemical Code: 268

HSDB Number: 399

UN/NA & ERG Number: UN3018 (liquid)/152

RTECS® Number: TE4550000

EC Number: 209-242-3 [*Annex I Index No.:* 015-047-00-2]

Uses: Not approved for use in EU countries[115]. Not registered for use in the U.S. There are 33 global suppliers[97]. Ethion is an organophosphate pesticide used to kill aphids, mites, scales, thrips, leafhoppers, maggots, and foliar feeding larvae. It may be used on a wide variety of food, fiber, and ornamental crops, including greenhouse crops, lawns, and turf. Ethion is a preharvest topical insecticide used primarily for spraying on citrus fruits, deciduous fruits, apples, nuts and cotton. It is also used as a cattle dip for ticks and as a treatment for buffalo flies. It is mixed with oil and sprayed on dormant trees to kill eggs and scales. It is available in dust, emulsifiable concentrate, emulsifiable solution, granular, and wettable powder formulations.

U.S. Maximum Allowable Residue Levels for Ethion [40 CFR 180.173]: cattle, meat-by-products 1.0 ppm; cattle, fat 2.5 ppm; cattle, meat (fat basis) 0.5 ppm; citrus fruits 2.0 ppm; citrus pulp, dehydrated 10.0 ppm; goat, fat 0.2 ppm; goat, meat byproducts 0.2 ppm; goat, meat 0.2 ppm; hog, fat 0.2 ppm; hog, meat byproducts 0.2 ppm; hog, meat 0.2 ppm; horse, fat 0.2 ppm; horse, meat byproducts 0.2 ppm; horse, meat 0.2 ppm; milk fat (residues in milk) 0.5 ppm; raisins 4.0 ppm; sheep, fat 0.2 ppm; sheep, meat byproducts 0.2 ppm; sheep, meat 0.2 ppm; tea, dried 10.0 ppm.

Human toxicity (long-term)[101]: High–3.50 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–18.38485 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of noncarcinogenicity for humans

Health Advisory: Nerve Toxin, Mutagen

Acute Oral Category: 1, DANGER–POISON

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 1000 lb (454 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)

European/International Regulations: Hazard Symbol: T, Xn, N; risk phrases: R21; R25; R50/53; safety phrases: S1/2; S25; S36/37; S45; S60; S61 (see Appendix 1)

Description: Ethion is a colorless to amber-colored liquid. The technical product has a very disagreeable odor. Molecular weight = 384.48; Specific gravity (H_2O:1) = 1.31 @ 20°C; Boiling point = decomposes above 164°C; Freezing/Melting point = –13 to –12°C; Vapor pressure = 0.0000015 mmHg @ 20°C; Flash point = 176°C; LEL (Lower Explosive Limit) = 28,000 ppm. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 0.0001%.

Incompatibilities: Incompatible with alkaline formulations and strong acids. Violent decomposition in temperatures above 164°C. Mixtures with magnesium may be explosive. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air:

OSHA PEL: None

NIOSH REL: 0.4 mg/m^3 [skin]

ACGIH TLV®[1]: 0.05 mg/m^3 TWA, inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI$_A$ issued as Acetylcholinesterase inhibiting pesticides.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1.2 mg/m^3
PAC-2: 13 mg/m^3
PAC-3: 38 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus Pesticide[18].

Permissible Concentration in Water: State Drinking Water Guidelines: California 4 μg/L; Florida 35 μg/L

Determination in Water: Log K_{ow} = >5.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms may include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, weakness, muscle twitching, difficult breathing, blurring or dimness of vision, and loss of muscle coordination. Death may occur from failure of the respiratory center, paralysis of the respiratory muscles, intense bronchoconstriction, or all three. This material is very toxic; the probable oral lethal dose for humans is 50–500 mg/kg, which is between one teaspoonful and one ounce for a 150 lb person. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = <20 mg/kg; LD_{50} (dermal, rat) = 100 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Ethion may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. Neurotoxin.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >1.2 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes phosphine gase and oxides of phosphorus, sulfur, and nitrogen. Combustible; burns easily when ignited. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Ethofumesate E:0265

Use Type: Herbicide

CAS Number: 26225-79-6

Formula: $C_{13}H_{18}O_5S$

Synonyms: 5-Benzofuranol, 2-ethoxy-2,3-dihydro-3,3-dimethyl-, methanesulfonate (+)-; 2-Ethoxy-2,3-dihydro-3,3-dimethyl-5-benzofuranyl methanesulfonate,(+)-; 2-ethoxy-2,3-dihydro-3,3-dimethylbenzofuran-5-yl methanesulfonate

Trade Names: BATAMIX PROGRESS®; BETANAL®; ETHOSAT® 500; KEMIRON®; NORTRON®; NC-8438®; POWERTWIN®; PROGRASS®; PROGRESS®; TANDEM®; TORERO®

Chemical class: Benzofuran

EPA/OPP PC Code: 110601

California DPR Chemical Code: 1900

HSDB Number: 7451

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: DF7716500

EC Number: 247-525-3 [*Annex I Index No.:* 607-314-00-2]

Uses: A major use is to control weeds in sugar beet crops.

U.S. Maximum Allowable Residue Levels for Ethofumesate and its metabolites 2-hydroxy-2,3-dihydro-3,3-dimethyl-5-benzofuranyl methanesulfonate and 2,3-dihydro-3,3-dimethyl-2-oxo-5-benzofuranyl methanesulfonate (both calculated as the parent compound)

[40 CFR 180.345(a)(1)]: in or on the following raw agricultural commodities: beet, sugar, roots 0.1 ppm; beet, sugar, tops 1.00 ppm; cattle, fat 0.05 ppm; cattle, meat byproducts 0.05 ppm; cattle, meat 0.05 ppm; goat, fat 0.05 ppm; goat, meat byproducts 0.05 ppm; goat, meat 0.05 ppm; grass, straw 1 ppm; hog, fat 0.05 ppm; hog, meat byproducts 0.05 ppm; hog, meat 0.05 ppm; horse, fat 0.05 ppm; horse, meat byproducts 0.05 ppm; horse, meat 0.05 ppm; sheep, fat 0.05 ppm; sheep, meat byproducts 0.05 ppm; and sheep, meat 0.05 ppm. [*40 CFR 180.345(a)(2)*] in or on the following processed feeds when present therein as a result of application of the herbicide to the growing crops: sugar beet molasses 0.5 ppm.

Human toxicity (long-term)[101]: Very low–2800.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–58.73095 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S2; S61 (see Appendix 1)

Description: Colorless to white crystalline solid. Commercial formulations include flowable concentrate, emulsifiable concentrate, and granular products. Mild aromatic odor. Molecular weight = 286.33; Freezing/Melting point = 71°C; Boiling point = (decomposes); Specific gravity (H_2O:1) = 1.25 @ 20°C; Vapor pressure = 4.9×10^{-6} mmHg @ 20°C; 8.6×10^{-7} mmHg @ 25°C; Flash point = 80°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Soluble in water; solubility = 110 ppm @ 25°C. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Determination in Water: Log K_{ow} = >2.5–<3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation; ingestion; dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May irritate eyes, skin, and respiratory tract. May be harmful if inhaled. May be harmful if swallowed. LD_{50} (oral, rat) = <1200 mg/kg; LD_{50} (dermal, rat) = >1200 mg/kg.

Long Term Exposure: Possible eye problems.

Points of Attack: Liver, kidney, cornea.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be

properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of carbon and sulfur. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Ethoprophos E:0270

Use Type: Nematicide, Insecticide

CAS Number: 13194-48-4

Formula: $C_8H_{19}O_2PS_2$

Synonyms: AI3-27318; Caswell No. 434C; ENT 27,318; Ethoprop; *O*-Ethyl *S,S*-dipropyl dithiophosphate; *O*-Ethyl *S,S*-dipropyl phosphorodithioate; Phosethoprop; Phosphorodithioic acid, *O*-ethyl *S,S*-dipropyl ester

Trade Names: AI3-27318®; CASWELL No. 434C®; JOLT®[C]; MENAP®; MOBIL V-C 9-104®; MOCAP®[C]; MOCAP 10G®[C]; PHOSETHOPROP®; ROVOKIL®; V-C 9-104®[C]; V-C CHEMICAL V-C 9-104®[C]; VIRGINIA-CAROLINA VC 9-104®

Chemical class: Organophosphate

EPA/OPP PC Code: 041101

California DPR Chemical Code: 404

HSDB Number: 1715

UN/NA & ERG Number: UN3018 (liquid)/152

RTECS® Number: TE4025000

EC Number: 236-152-1[*Annex I Index No.:* 015-107-00-8]

Uses: Ethoprop is used as a pre-plant soil application to control wireworms and nematodes in potatoes, sugar cane, sweet potatoes, and tobacco, with lesser usage on corn (field and sweet), beans (lima and snap), cucumbers, and cabbage. In addition, it is used to treat pineapples, bananas, and plantains, as well as field-grown ornamentals and non-bearing citrus trees, and commercial turf. Roughly 60% of ethoprop is applied to potatoes.

U.S. Maximum Allowable Residue Levels for Ethoprop (40 [CFR 180.262 (a)]: in or on the following raw agricultural commodities: banana 0.02 ppm; bean, lima 0.02 ppm; bean, snap 0.02 ppm; cabbage 0.02 ppm; corn, fodder 0.02 ppm; corn, forage 0.02 ppm; corn, fresh (including sweet K = CWHR) 0.02 ppm; corn, grain 0.02 ppm; cucumber 0.02 ppm; peanut 0.02 ppm; peanut, hay 0.02 ppm; pineapple 0.02 ppm; potato 0.02 ppm; sugarcane 0.02 ppm; and sweet potato 0.02 ppm.

Human toxicity (long-term)[101]: Intermediate–12.45550 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Extra high–0.47783 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans.

California Proposition 65 Chemical: Cancer (2/27/01)

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin; Very toxic by inhalation and in contact with the skin (EU).

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 1000 lb (454 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R25; R26/27; R43; R50/53; safety phrases: S1/2; S27/28; S36/37/39; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Ethoprophos is a pale yellow liquid. Commercial products can also range from dry granular to emulsifiable concentrates. Molecular weight = 242.34; Specific gravity (H_2O:1) = 1.094 @ 25°C; Boiling point = 88–91°C; Freezing/Melting point = –13°C; Vapor pressure = 3.8×10^{-4} mmHg @ 26°C; Flash point = 140°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Highly soluble in water; solubility = 675–> 1000 ppm @ 20°C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Keep away from alkaline materials.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 2.4 mg/m^3
PAC-2: 26 mg/m^3
PAC-3: 26 mg/m3

Determination in Air: OSHA versatile sampler-2; Toluene/ Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 0.7 μg/L.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Determination in Soil: Soil Adsorption Index (K_{oc}) = 70

Routes of Entry: Inhalation, dermal and eye contact. Ingestion.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Highly toxic by inhalation and skin/ eye contact. Symptoms are similar to parathion and may include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, weakness, muscle twitching, difficult breathing, blurring or dimness of vision, and loss of muscle coordination. Death may occur from failure of the respiratory center, paralysis of the respiratory muscles, intense bronchoconstriction, or all three. This material is extremely toxic; the probable oral lethal dose for humans is 5–50 mg/kg, or between 7 drops and 1 teaspoonful for a 150 lb person. It is a cholinesterase inhibitor which affects the nervous system. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 34[83,USDA] mg/kg; LD_{50} (dermal, rat) = 60 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Neutoxic. May cause skin sensitization.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. Neutoxic.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont^{TM} Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA = >2.4 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Ethoxyquin E:0295

Use Type: Insecticide, Fungicide, Plant growth regulator, Ingredient in other products

CAS Number: 91-53-2

Formula: $C_{14}H_{19}NO$

Synonyms: 1,2-Dihydro-6-ethoxy-2,2,4-trimethylquinoline; 1,2-Dihydro-2,2,4-trimethyl-6-ethoxyquinoline; 6-Ethoxy-1,2-dihydro-2,2,4-trimethyl quinoline; Ethoxyquine; 6-Ethoxy-2,2,4-trimethyl-1,2-dihydroquinoline; 2,2,4-Trimethyl-6-ethoxy-1,2-dihydroquinoline

Trade Names: CHEMLEY®[C]; DECCOQUIN 305®; EMQ®; EQ®; NIFLEX®; NIX-SCALD®[C]; SANTOFLEX A®; SANTOFLEX AW®; SANTOQUIN®; SANTOQUINE®; STOP-SCALD®

Chemical class: Quinoline

EPA/OPP PC Code: 055501

California DPR Chemical Code: 269

HSDB Number: 400

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: VB8225000

EC Number: 202-075-7 [*Annex I Index No.:*613-014-00-2]

Uses: Used for preharvest or postharvest preservation of color in apples and pears. It is used as an antioxidant to preserve color in paprika and ground and powdered chili. Ethoxyquin is also a chemical preservative used in animal feed to prevent ingredients from reacting with oxygen and becoming rancid. It has been known to cause birth defects in pet birds and dogs. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for ethoxyquin [40 CFR 180.178]: preharvest and postharvest residues, apple 3.0 ppm; pear 3.0 ppm.

Regulatory Authority and Advisory Information:
Acute Oral Category: 3, CAUTION
Health Advisory: Mutagen
European/International Regulations: Hazard Symbol: Xn; risk phrases: R22; safety phrases: S2; S24 (see Appendix 1)
WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Transparent yellow or brown viscous liquid. Molecular weight = 217.32; Specific gravity (H_2O:1) = 1.032 @ 25°C; Boiling point = 124°C; 150°C @ 2 mmHg (decomposes); Freezing/Melting point = –20°C; Specific gravity (H_2O:1) = 1.029 @ 25°C; Vapor pressure = 2.56×10^{-4} mmHg @ 25°C Flash point = 143°C(oc). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = <1 mg/L @ 25°C.

Incompatibilities: Polymerization can occur on contact with strong light and/or water. Decomposes in temperatures above 150°C. Keep away from oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); strong acids.

Determination in Air: No occupational or safety limits found.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, eye and/or dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This chemical can irritate skin, eyes and respiratory tract. Harmful if swallowed. May cause reversible liver problems. Overexposure may cause irritation of the gastrointestinal tract. May affect central nervous system and behavior causing respiratory problems, convulsions, coma, loss of voluntary muscle control; lack of balance and coordination; drowsiness. LD_{50} (oral, rat) = 800–>1725 mg/kg.

Long Term Exposure: May cause dermatitis. Possible blood, bladder, liver and kidney toxin. May be a skin sensitizer; causing allergic skin reaction. May affect metabolism, blood, resulting in a change in clotting factor. May be mutagenic.

Points of Attack: Skin, lungs, liver, kidney.

Medical Surveillance: With ethoxyquin, if symptoms develop or overexposure is suspected, the following may be useful: liver and kidney function tests; routine blood analysis. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure, locked poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Ethylene dibromide E:0580

Use Type: Fumigant, Nematicide

CAS Number: 106-93-4

Formula: $C_2H_4Br_2$; $BrCH_2CH_2Br$

Synonyms: Celmide; DBE; 1,2-Dibromaethan (German); 1,2-Dibromoetano (Spanish); Dibromoethane; *α,β*-Dibromoethane; *sym*-Dibromoethane; 1,2-Dibromoethane; Dibromuro de etileno (Spanish); ENT 15,349; Ethane, 1,2-dibromo-; Ethylene bromide; 1,2-Ethylene dibromide; Glycol bromide; Glycol dibromide; NCI-C00522

Trade Names: AADIBROOM®; EDB-85; FUMO-GAS®; ISCOBROME D®; KOPFUME®; NEFIS®; NEPHIS®; SOILFUME®; UNIFUME®

Chemical class: Halogenated organic compound

EPA/OPP PC Code: 042002

California DPR Chemical Code: 271

HSDB Number: 536

UN/NA & ERG Number: UN1605/154

RTECS® Number: KH9275000

EC Number: 203-444-5 [*Annex I Index No.:* 602-010-00-6]

Uses: Not approved for use in EU countries[115]. Not registered for use in the U.S. Persons whose clothing or skin is contaminated with liquid ethylene dibromide (above 10°C) can secondarily contaminate others by direct contact or through off-gassing vapor. Ethylene dibromide was used extensively as a pesticide and an ingredient of soil, vegetable, fruit, and grain fumigant formulations. Still used in India, South Africa and other countries. There are 15 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Ethylene Dibromide [58 FR 65554 (12/15/93)]: This document revokes pesticide tolerances for ethylene dibromide (EDB) resulting from its use as a soil and post-harvest fumigant. EPA is taking this action because uses have been cancelled.

Human toxicity (long-term)[101]: Extra high–0.05 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Very low–4841.72356 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: GHS (1A, 1B) Known or presumed human carcinogen.; EPA Group B2, Probably human carcinogen; NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen; A3 Confirmed animal carcinogen with unknown relevance to humans

California Proposition 65 Chemical: Cancer (1/1/1987); Developmental/Reproductive toxin (5/15/1998)

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer

Acute Oral Category: 1, DANGER–POISON.

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112); Accidental Release Prevention/Flammable Substances, (Section 112[r], Table 3), TQ = 20,000 lb (9,080 kg)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)

U.S. EPA Hazardous Waste Number (RCRA No.): U067

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.028; Non-wastewater (mg/kg), 15

RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8010 (10); 8240 (5)

Safe Drinking Water Act: MCL, 0.00005 mg/L; MCGL, zero

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10,000 lb (4540 kg)

CERCLA Reportable Quantity (RQ): 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%

US DOT 49CFR172.101, Inhalation Hazardous Chemical

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] [as 1,2-dibromoethane (EDB)]

European/International Regulations: Hazard Symbol: T, Xi, N; risk phrases: R45; R23/24/25; R36/37/38; R51/53; safety phrases: S2; S45; S53; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Ethylene dibromide is a colorless nonflammable liquid or solid (below 10°C). It has a sweet, chloroform-like odor. The minimum concentration detectable by odor is 10 ppm. Molecular weight = 187.86; Specific gravity (H_2O:1) = 2.168; Boiling point = 131.6°C; Freezing/Melting point = 9.84°C; Relative vapor density (air = 1) = 6.5; Vapor pressure = 7.5 mmHg @ 18°C. Hazard Identification (based on NFPA-704 M Rating System): Health 0, Flammability 3, Reactivity 0. Highly soluble in water; solubility = >4000 mg/L @ 30°C.

Incompatibilities: Reacts vigorously with chemically active metals, alkali metals, liquid ammonia, strong bases, strong oxidizers, causing fire and explosion hazard. Light, heat (including hot surfaces), and moisture can cause slow decomposition, forming hydrogen bromide and bromine gases. Attacks fats, rubber, some plastics and coatings.

Permissible Exposure Limits in Air: NIOSH(2) IDLH (immediately dangerous to life or health) = 100 ppm.

Conversion factor: 1 ppm = 7.69 mg/m³ @ 25°C & 1 atm

OSHA PEL: 20 ppm TWA; 30 ppm Ceiling Concentration; 50 ppm [5-minute maximum peak] [skin]. For Construction, Shipyards, and Federal Contractors: 25 ppm/190 mg/m³ Ceiling Concentration [skin]

NIOSH REL: 0.045 ppm TWA; 0.13 ppm [15-minute] Ceiling Concentration; Potential occupational carcinogen. Limit exposure to lowest feasible concentration; See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: [skin] confirmed animal carcinogen with unknown relevance to humans.

NIOSH IDLH: Potential occupational carcinogen, 100 ppm

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: **17** ppm
PAC-2: **24** ppm
PAC-3: **46** ppm

*AEGLs (Acute Emergency Guideline Levels) and ERPGs (Emergency Response Planning Guideline) are in **bold face**.

DFG MAK: [skin] Carcinogen Category 2

Determination in Air: Charcoal tube absorption; workup with Benzene/Methanol; Gas chromatography/Electrochemical detection; NIOSH IV, Method #1008[18].

Permissible Concentration in Water: Federal Drinking Water Standards: 0.2 ppb[93]; EPA 0.05 μg/L; State Drinking Water Standards: Florida 0.02 μg/L; Hawaii 0.04 μg/L; Massachusetts 0.02 μg/L; State Drinking Water Guidelines: Arizona 0.0005 μg/L; Maine 0.004 μg/L; Minnesota 0.2 μg/L.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Absorption can occur by the inhalation, oral, and dermal routes. It is toxic by these three routes of exposure. Toxicity is thought to be due to metabolic products of ethylene dibromide

Harmful Effects and Symptoms

Short Term Exposure: Contact can cause severe skin and eye burns, with permanent eye damage. Exposure to the vapor may also damage the eyes. Inhalation may irritate and damage the lungs. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. High exposure can cause dizziness, drowsiness, vomiting, unconsciousness, and death. High exposure can damage the liver or kidneys enough to cause death. The systemic effects of ethylene dibromide are in part due to metabolic conversion to the cell toxin 2-bromoacetaldehyde. Persons with pre-existing skin disorders or eye problems, or impaired liver, kidney, or respiratory tract function may be more susceptible to the effects of ethylene dibromide. *Inhalation:* Levels of 75 ppm may cause irritation of the nose, throat and lungs. 100–200 ppm for 1 hour may cause diarrhea, abdominal pain and vomiting. Other symptoms may include headache, loss of appetite, swollen glands, pale skin coloring, insomnia, dizziness and depression. Accidental high exposure has caused symptoms as listed above, internal bleeding and death. *Skin:* Contact with as little as 1 gram (1/28 ounce) may cause itching, swelling, redness, burning and blistering. May be absorbed through the skin and cause symptoms as listed under inhalation. *Eyes:* May cause irritation of eyes and eyelids. *Ingestion:* May cause vomiting, diarrhea, abdominal pain, nausea and damage to the liver and kidneys. High dose, as little as 4.5 ml (about 1 teaspoon), has caused death. LD_{50} (oral, rat) = 108–146 mg/kg; LD_{50} (dermal, rat) = 300 mg/kg.

Long Term Exposure: May cause tumors. No reliable reports exist of adverse health effects in humans exposed chronically to ethylene dibromide. Chronic exposure may be more serious for children because of their potential for a longer latency period. *Carcinogenicity[83]:* The Department of Health and Human Services has determined that ethylene dibromide can reasonably be anticipated to be a human carcinogen, based on ethylene dibromide-induced tumors in multiple sites and by various routes of exposure in animals. Results from epidemiological studies have been inconclusive. *Reproductive and developmental effects:* There is inconclusive but suggestive evidence that ethylene dibromide may reduce fertility in men. Antispermatogenic effects have been demonstrated in various animal species. Ethylene dibromide is included in *Reproductive and Developmental Toxicants,* a 1991 report published by the U.S. General Accounting Office. Special consideration regarding the exposure of pregnant women is warranted, since ethylene dibromide has been shown to be a genotoxin; thus, medical counseling is recommended for pregnant women

Points of Attack: Eyes, skin, respiratory system, liver, kidneys, reproductive system. Cancer site in animals: skin and lung tumors. Possible nerve poison. Possible liver and kidney toxin. May cause testicular damage with abnormal sperm in men and diminished fertility in women.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Preemployment and periodic examinations should evaluate the skin and eyes, respiratory tract, and liver and kidney functions. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Serum bromide levels can be used to document that exposure did occur. However, bromide levels do not accurately predict the clinical course. Routine laboratory studies include CBC, glucose, and electrolyte determinations. Additional studies for patients exposed to ethylene dibromide include liver function tests and renal function tests. In cases of inhalation exposure, chest radiography and arterial blood gas measurements may be helpful

First Aid: Persons whose clothing or skin is contaminated with liquid ethylene dibromide (>10°C) can secondarily contaminate others by direct contact or through off gassing vapor. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. If ingestion of liquid ethylene dibromide occurs, **do not induce vomiting**. If the victim is alert and able to swallow, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note to physician or authorized medical personnel: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyrotomy if equipped and trained to do so. Treat patients who have bronchospasm with an aerosolized bronchodilator such as albuterol. Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or are having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed, begin fluid administration. For adults with systolic pressure <80 mmHg, bolus perfusion of 1000 mL/hour intravenous saline or lactated Ringer's solution may be appropriate. Higher adult systolic pressures may necessitate lower perfusion rates. For children with compromised perfusion administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Personal Protective Methods: Wear protective gloves, clothing, including eye protection to prevent any reasonable probability of skin or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. **8 hr:** polyvinyl alcohol gloves; Teflon™ gloves, suits, boots; Viton™ gloves, suits; 4H™ and Silver Shield™ gloves; Barricade® coated suits; Trychem 1000™ suits. Do NOT use chlorinated polyethylene. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >17 ppm. NIOSH: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison/Corrosive: Store in a secure poison location. Store in a cool, dry place that is well-ventilated. Keep in tightly sealed containers and away from light, heat, active metals and liquid ammonia. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of "poisonous materials." Hazard Class is 6.1.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be

properly trained and equipped. OSHA 1910.120(q) may be applicable.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (From a small package or a small leak from a large package)

First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.2/0.3
Night 0.3/0.5

Fire Extinguishing: EDB is a noncombustible liquid. Hazardous decomposition includes oxides of carbon, bromine, vinyl bromide, and hydrogen bromide gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Controlled incineration with adequate scrubbing and ash disposal facilities. A potential candidate for rotary kiln incineration at a temperature range of 820 to 1,600 °C and residence times of seconds for liquids and gases, and hours for solids. A potential candidate for fluidized bed incineration at a temperature range of 450 to 980 °C and residence times of seconds for liquids and gases, and longer for solids[83].

Ethylene dichloride E:0590

Use Type: Fumigant, Insecticide

CAS Number: 107-06-2

Formula: $C_2H_4Cl_2$; $ClCH_2CH_2Cl$

Synonyms: 1,2-Bichloroethane; Dichloremulsion; Dichlor-mulsion; *α,β*-Dichloroethane; *sym*-Dichloroethane; 1,2-Dichloroethane; Dichloroethylene; 1,2-Dicloroetano (Spanish); EDC; ENT 1,656; Ethane, 1,2-dichloro-; Ethane dichloride; Ethylene chloride; 1,2-Ethylene dichloride; Freon 150; Glycol dichloride; NCI-C00511

Trade Names: BORER SOL®; BROCIDE®; DESTRUXOL BORER-SOL®; DOWFUME®[C]; DUTCH LIQUID®; DUTCH OIL®

Chemical class: Chlorinated hydrocarbon

EPA/OPP PC Code: 042003

California DPR Chemical Code: 274

HSDB Number: 65
UN/NA & ERG Number: UN1184/131
RTECS® Number: KI0525000
EC Number: 203-458-1 [*Annex I Index No.:* 602-012-00-7]
Uses: Not approved for use in EU countries[115]. Not registered for use in the U.S. When mixed with carbon tetrachloride, ethylene dichloride is used as a grain fumigant for bulk storage in bags, sealed containers, bins or on floors. In recent years, 1,2-dichloroethane has found wide use in the manufacture of ethylene glycol, diaminoethylene, polyvinyl chloride, nylon, viscose rayon, styrenebutadiene rubber, and various plastics. It is a solvent for resins, asphalt, bitumen, rubber, cellulose acetate, cellulose ester, and paint; a degreaser in the engineering, textile and petroleum industries; and an extracting agent for soybean oil and caffeine. It is also used as an antiknock agent in gasoline, a pickling agent and a dry-cleaning agent. It has found use in photography, xerography, water softening, and also in the production of adhesives, cosmetics, pharmaceuticals, and varnishes.
U.S. Maximum Allowable Residue Levels for Fumigants, including ethylene dichloride [40 CFR 193.225, 180.521, 180.522]: grain, cereal, milled fractions 125 ppm; corn, field, grits 125 ppm; rice, cracked 125 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: IARC: Animal Sufficient Evidence; Human Inadequate Evidence*, possibly carcinogenic to humans*, Group 2b, 1999; EPA: Sufficient evidence from animal studies; inadequate evidence or no useful data from epidemiologic studies; NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen; NIOSH: Potential occupational carcinogen
California Proposition 65 Chemical: Cancer (1/1/1987)
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR423, appendix A, Priority Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92); Toxic Pollutant (Section 401.15)
U.S. EPA Hazardous Waste Number (RCRA No.): U077, D028
RCRA Toxicity Characteristic (Section 261.24), Maximum Concentration of Contaminants, regulatory level, 0.5 mg/L
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.21; Non-wastewater (mg/kg), 6.0
RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8010 (0.5); 8240 (5)
Safe Drinking Water Act: MCL, 0.005 mg/L; MCLG, zero; Regulated chemical (47 FR 9352)
CERCLA Reportable Quantity (RQ): 100 lb (45.4 kg)
US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)
US DOT 49CFR172.101, Inhalation Hazardous Chemical
Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)]
European/International Regulations: Hazard Symbol: F, T; risk phrases: R45; F11; R22-36/37/38; safety phrases: S2; S53; S45 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters
Description: 1,2-Dichloroethane is a clear, colorless, flammable liquid. A pleasant, chloroform-like odor, and a sweet taste. Decomposes slowly: turns dark and acidic on contact with air, moisture, and light. The Odor Threshold is 100 ppm. Molecular weight = 98.96; Specific gravity (H_2O:1) = 1.245; Boiling point = 83.5°C; Freezing/Melting point = –35.7°C; Vapor pressure = 75 mmHg @ 23.70°C; Flash point = 13.33°C (cc)[17]; Autoignition temperature = 413°C. Explosive limits: LEL = 6.2%; UEL = 16.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 3, Reactivity 0. Soluble in water; solubility = 0.869 g/100 mL @ 20°C.
Incompatibilities: Forms explosive mixture with air. Reacts violently with strong oxidizers and caustics; chemically active metals such as magnesium or aluminum powder, sodium and potassium, alkali metals, alkali amides; liquid ammonia. Decomposes to vinyl chloride and HCl above 600°C. Attacks plastics, rubber, coatings. Attacks many metals in presence of water.
Permissible Exposure Limits in Air: Conversion factor: 1 ppm = 4.05 mg/m^3 @ 25°C & 1 atm
NIOSH IDLH: 50 ppm; a potential human carcinogen.
OSHA PEL: 50 ppm TWA; 100 ppm Ceiling Concentration; 200 ppm [5 minute maximum peak in any 3 hours]. For Construction and Shipyards: 50 ppm/200 mg/m^3 TWA
NIOSH REL: 1 ppm/4 mg/m^3 TWA; 2 ppm/8 mg/m^3 STEL, a potential occupational carcinogen. Limit exposure to lowest feasible concentration. See *NIOSH Pocket Guide*, Appendix A
ACGIH TLV®[1]: 10 ppm, not classifiable as a human carcinogen as chloroethanes
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: $\mathbf{50}_{\mathbf{E}}$ ppm
PAC-2: $\mathbf{200}_{\mathbf{E}}$ ppm
PAC-3: $\mathbf{300}_{\mathbf{E}}$ ppm
PAC values marked with a subscript "**E**" correspond to ERPGs (Emergency Response Planning Guideline) values and are in **bold face**.
DFG MAK: [skin] Carcinogen Category 2
Determination in Air: Charcoal adsorption, workup with CS_2, analysis by gas chromatography/flame ionization. See NIOSH IV, Method #1003 for halogenated hydrocarbons[18]
Permissible Concentration in Water: Federal Drinking Water Guidelines: 4 ppb[93]
Determination in Water: Inert gas purge followed by chromatography with halide-specific detection (EPA Method 601) or gas chromatography plus mass spectrometry (EPA Method 624). Log K_{ow} = <1.5. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation of vapor, skin absorption of liquid, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Inhalation of the vapors can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Exposure can cause nausea, vomiting, headaches, drowsisness and loss of consciousness. Overexposure to ethylene dichloride may damage the central nervous system, kidneys, liver. *Inhalation:* Levels of 10 to 30 ppm may cause dizziness, nausea, and vomiting. Levels up to 50 pm may cause weakness, trembling, headaches, abdominal cramps, liver and kidney damage, and fluid build up in lungs. May cause coma and death at high levels. *Skin:* Contact may cause irritation and skin rash, and irritates the eyes. *Eyes:* May cause redness, pain, and blurred vision. Vapor can damage the cornea. *Ingestion:* Ingestion of 2 ounces has resulted in nausea, vomiting, faintness, drowsiness, difficulty breathing, pale skin, internal bleeding, kidney damage, and death due to respiratory failure. Other possible symptoms may include abdominal spasms, severe headache, lethargy, lowered blood pressure, diarrhea, shock, physical collapse, and coma. LD_{50} (oral, rat) = 670–900 mg/kg.

Long Term Exposure: May cause tumors. Repeated or prolonged contact can chronically irritate the skin causing dryness, redness and a rash. Prolonged or repeated exposure may cause eye, nose and throat irritation, nerve damage, liver and kidney damage. This substance has been determined to cause cancer of the lung, stomach, breast and other sites in laboratory animals, and may be a human carcinogen. Can irritate the lungs and bronchitis may develop. Repeated or prolonged exposure can cause loss of appetite, nausea and vomiting, trembling and low blood sugar.

Points of Attack: Eyes, skin, kidneys, liver, respiratory system, central nervous system, cardiovascular system. Cancer site in animals: forestomach, mammary gland and circulatory system cancer.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Before beginning employment and at regular times after that, the following are recommended: Lung function tests. Liver and kidney function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. **8 hr:** Teflon™ gloves, suits, boots; Viton™ gloves, suits; 4H™ and Silver Shield™ gloves; Barricade® coated suits; CPF3™ suits; Responder™ suits; Trychem 1000™ suits; **4 hr:** polyvinyl alcohol gloves. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >50 ppm. NIOSH: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers (such as perchlorates, peroxides, permanganates, chlorates and nitrates), strong acids (such as hydrochloric, sulfuric and nitric), chemically active metals (such as potassium, sodium, magnesium and zinc), strong caustics (such as sodium hydroxide) and dimethylaminopropylamine, since violent reactions occur. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of "FLAMMABLE LIQUID, POISONOUS/TOXIC

MATERIALS." It usually falls in Hazard Class 3 and Packing Group II.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep ethylene dichloride out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Hazardous decomposition includes phosgene, acetylene, vinyl chloride, and hydrogen chloride[9]. CAUTION: This product may have a very low flash point: Use of water spray when fighting fire may be inefficient. *Small fire*: dry chemical, CO_2, water spray or alcohol-resistant foam. *Large fire*: water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or vehicular loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Contaminated porous surfaces (sand, vemiculite, etc.) should be disposed of at a waste management facility. Recovered liquids may be reprocessed, incinerated, or treated at a waste management facility. Consider liquid injection incineration, with a temp range of 650 to 1600°C and a residence time of 0.1 to 2 seconds. Also a potential candidate for rotary kiln incineration, with a temp range of 820 to 1600°C and a residence time of seconds. Also a potential candidate for fluidized bed incineration, with a temp range of 450–980°C and a residence time of seconds.

Ethylene oxide E:0660

Use Type: Fungicide and fumigant
CAS Number: 75-21-8
Formula: C_2H_4O
Synonyms: Dihydrooxirene; Dimethylene oxide; ENT 26,263; E. O; 1,2-Epoxyaethan (German); Epoxyethane; 1,2-Epoxyethane; Ethene oxide; ETO; NCI-C50088; Oxacyclopropane; Oxane; *α,β*-Oxidoethane; Oxirane; Oxirene, Dihydro-; UN 1040
Trade Names: AMPROLENE®; ANPROLENE®; ANPROLINE®; BIODAC®; MERPOL®; OXYFUME®; OXYFUME 12®; T-GAS®; STERILIZING GAS ETHYLENE OXIDE 100%®
Chemical class: Alcohol/ether
EPA/OPP PC Code: 042301
California DPR Chemical Code: 277
HSDB Number: 170
UN/NA & ERG Number: UN1040/119; IMO 2.3
RTECS® Number: KX2450000
EC Number: 200-849-9 [*Annex I Index No.:* 603-023-00-X]
Uses: Ethylene oxide is used as a fumigant for spices, seasonings, and foodstuffs and as an agricultural fungicide. When used directly in the gaseous form or in nonexplosive gaseous mixtures with nitrogen or carbon dioxide, ethylene oxide can act as a disinfectant, fumigant, sterilizing agent, and insecticide. It is a man-made chemical used as an intermediate in organic synthesis for ethylene glycol, polyglycols, glycol ethers, esters, ethanolamines, acrylonitrile, plastics, and surface-active agents. It is also used as a fumigant for textiles and for sterilization, especially for surgical instruments. It is used in drug synthesis and as a pesticide intermediate. Not approved for use in EU countries[115]. Actively registered in the U.S.
U.S. Maximum Allowable Residue Levels for Ethylene Oxide [(40 CFR 180.151, 185.2850 (a)]: walnut, black 50 ppm; coconut, copra 50 ppm; spices, whole 50 ppm; seasonings, processed natural, including spices, except salt mixture 50 ppm; spices, processed 50 ppm. [*40 CFR 180.151(a)(2)*]: can be safely used as a fumigant for the control of microorganisms and insect infestation in ground spices and other processed natural seasoning materials, except mixtures to which salt has been added, in accordance with the following prescribed conditions: (i) Ethylene oxide, either alone or admixed with carbon dioxide or dichlorodifluoromethane, shall be used in amounts not to exceed that required to accomplish the intended technical effects. If used with dichlorodifluoromethane, the dichlorodifluoromethane shall conform with the requirements prescribed by 21 CFR 173.355 of this chapter. (ii) To assure safe use of the fumigant, its label and labeling shall conform to that registered with the U.S. Environmental Protection Agency and it shall be used in accordance with such label or labeling. (iii) Residues of ethylene oxide in ground spices from both post-harvest application to whole spices and application to the ground spices shall not exceed the established tolerance of 50 ppm for residues in whole spices in paragraph (a)(1) of this section.

WGK (German Aquatic Hazard Class): 2-Hazard to waters
Description: Ethylene oxide is a colorless, compressed, liquefied gas or liquid (<11°C). Sweet odor. *Danger*: the Odor Threshold = 50 ppm. Molecular weight = 44.05; Specific gravity (H_2O:1) = 0.8821 (liquid) @ 10°C; Boiling point = 10.6°C; Freezing/Melting point = –112.2°C; Vapor pressure = 1.46 atm; 750 mmHg @ 10.2°C; Relative vapor density (air = 1) = 1.49; Relative vapor density (air = 1) = 1.49; Flash point = flammable gas (–20°C, liquid); Autoignition temperature = 429°C. Explosive limits: LEL = 3.0%; UEL = 100%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 4, Reactivity 3. Easily dissolved in water.
Incompatibilities: Forms explosive mixture with air. Dangerously reactive; may rearrange chemically and/or polymerize violently with evolution of heat, when in contact with highly active catalytic surfaces such as anhydrous chlorides of iron, tin and aluminum, pure oxides of iron and aluminum, and alkali metal hydroxides. Even small amounts of strong acids, alkalis, oxidizers can cause a dangerous reaction. Avoid

contact with copper. Protect container from physical damage, sun and heat. Attacks some plastics, rubber or coatings.

Permissible Exposure Limits in Air: Conversion factor: 1 ppm = 1.80 mg/m^3 @ 25°C & 1 atm

OSHA PEL: 1 ppm/5 ppm [15 min excursion] TWA, cancer hazard, see 29CFR1910.1047(c).

NIOSH REL: <0.1 ppm/<0.18 mg/m^3 TWA; 5 ppm/9 mg/m^3 [10 min/day] Ceiling Concentration; Potential carcinogen. Limit exposure to lowest feasible level. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: 1 ppm/1.8 mg/m^3 TWA, Suspected Human Carcinogen

NIOSH IDLH: 800 ppm

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 5 ppm
PAC-2: **45** ppm (60 min.)
PAC-3: **200** ppm (60 min.)

*AEGLs (Acute Emergency Guideline Levels) & ERPGs (Emergency Response Planning Guideline) are in **bold face**.

DFG MAK: [skin]; Carcinogen Category 2; Germ Cell Mutagen Category 2; TRK: 1 ppm/1.83 mg/m^3; Sampling time: not fixed; 90 μg[hydroxyethylvaline]/L blood.

Determination in Air: Collection by charcoal tube (petroleum-based); DMF. Any dust and mist respirator with a full facepiece; analysis by gas chromatography/electrochemical detection; NIOSH IV, Method #1614[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 10 μg/L.

Determination in Water: Log K_{ow} = Negative (<–0.5). Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ethylene oxide is rapidly absorbed after inhalation, and solutions of ethylene oxide can penetrate human skin.

Harmful Effects and Symptoms

Short Term Exposure: Ethylene oxide gas may produce immediate local irritation of the skin, eyes, and upper respiratory tract. At high concentrations, it may cause an immediate or delayed accumulation of fluid in the lungs. Inhalation of ethylene oxide can produce central nervous system depression, and, in extreme cases, respiratory distress and coma. The onset of symptoms may be delayed for up to 72 hours. In some persons, ethylene oxide exposure may result in allergic sensitization, and future exposure may cause hives or a life-threatening allergic reaction. Signs and symptoms of acute exposure to ethylene oxide may be severe, and include dyspnea (shortness of breath), cough, pulmonary edema, pneumonia, and respiratory failure. Lethargy, headache, dizziness, twitching, convulsions, paralysis, and coma may be observed. Cardiac arrhythmias and cardiovascular collapse may also occur. Gastrointestinal effects of acute exposure may include nausea, vomiting, and abdominal pain. Ethylene oxide irritates the eyes, skin, and respiratory tract. Very high exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. *Inhalation:* Exposure to 500–700 ppm for 2 to 3 minutes, resulted in nausea, vomiting, headache, disorientation, fluid in the lungs, followed by seizures. Human volunteers breathing a concentration of about 2500 ppm experienced slight irritation of the respiratory tract; breathing in 12,500 ppm showed definite respiratory tract irritation within 10 seconds. Symptoms may not occur for hours after exposure. Other symptoms reported at unknown concentrations include headache, nausea, coughing, vomiting, difficult breathing, respiratory tract irritation, weakness, incoordination, seizures and fluid in the lungs. *Skin:* The pure liquid may cause frostbite. A 1% water solution can cause irritation and redness. A 40–80% water solution may cause extensive blister formation. Ethylene oxide may severely irritate or burn mucous membranes and moist skin. *Eyes:* May cause irritation and severe burns. May affect the eyes, causing delayed development of cataract. Eye contact may result in conjunctivitis (red, inflamed eyes) and erosion of the cornea. *Ingestion:* May cause gastric irritation and liver injury. LD_{50} (oral, rat) = 72–330 mg/kg.

Long Term Exposure: May cause tumors. Chronic ethylene oxide exposure may cause delayed peripheral nerve damage (neuropathy), especially in the lower extremities. Although the results are inconclusive, some data suggest that chronic ethylene oxide exposure impairs cognitive function. Ethylene oxide may also damage the liver and kidneys. Skin allergy can occur, and some persons may become sensitized to the chemical. Cataracts and corneal burns have been reported from occupational exposure. Chronic exposure may be more serious for children because of their potential longer latency period. *Carcinogenicity:* The DHHS has determined that ethylene oxide may reasonably be anticipated to be a human carcinogen (NTP 2000). In animals, chronic exposure causes leukemia and intra-abdominal cancer, and there is some evidence that it increases the risk of leukemia in human workers. The International Agency for Research on Cancer has determined that ethylene oxide is carcinogenic to humans. *Reproductive and developmental effects:* Shepard's Catalog of Teratogenic Agents describes one study in which the spontaneous abortion frequency in hospital workers exposed to ethylene oxide during pregnancy was average for the general population (6.7%); however, the frequency for appropriate hospital controls was below average for the general population (5.6%). Ethylene oxide is included in *Reproductive and Developmental Toxicants*, a 1991 report published by the U.S. General Accounting Office. Special consideration regarding the exposure of pregnant women is warranted, since ethylene oxide has been shown to be a teratogen and genotoxin; thus, medical counseling is recommended for the acutely exposed pregnant woman. ETO has caused cancer in several species of laboratory animals. It has also caused changes in genetic material and reproductive problems in laboratory animals. may damage the developing fetus. It may cause inheritable genetic damage in humans. There is an increased incidence of gynecological disorders and spontaneous abortions among workers in ethylene oxide production. Its role in this increase is unclear at this time. (NJ) Increased incidence of leukemia and stomach cancer have been reported; however, the evidence is not considered conclusive. Leukemia, brain tumors, lung tumors, and other cancers have been observed in laboratory animals.

Points of Attack: Eyes, skin, respiratory system, liver, central nervous system, blood, kidneys, reproductive system. Cancer site: peritoneal cancer, leukemia.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Comprehensive physical examination with emphasis on the genito-urinary tract including testicle size and consistency in males. Semen analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Liver and kidney function tests. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed.

First Aid: *Note:* Persons whose clothing or skin is contaminated with ethylene oxide liquid or solution can secondarily contaminate personnel by direct contact or through off-gassing vapor. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note to physician or authorized medical personnel: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Ethylene oxide poisoning is not known to pose additional risk during the use of bronchial or cardiac sensitizing agents. Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or are having seizures or cardiac arrhythmias should be treated according to advanced life support protocols.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. **8 hr:** Barricade® coated suits; Responder, Trellchem HPS™ suits; Trychem 1000™ suits; **4 hr:** Teflon™ gloves, suits, boots; 4H™ and Silver Shield™ gloves. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear gas and splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >5 ppm. OSHA: Employees engaged in handling operations involving this carcinogen must be provided with, and required to wear and use, a half-mask filter-type respirator for dusts, mists, and fumes. A respirator affording higher levels of protection than this respirator may be substituted. NIOSH: *5 ppm:* GmFS+ [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern]; or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS+ [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

+End-of- service life indicator (ESLI) required.

Storage: Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. It must be stored to avoid contact with even small amounts of acids (such as nitric or sulfuric acids); alkalis (such as sodium hydroxide or potassium hydroxide); catalytic anhydrous chlorides of iron, aluminum or tin; iron or aluminum oxide; or metallic potassium, since it may react by itself, liberating much heat and causing a possible explosion. Ethylene oxide should not contact oxidizers (such as perchlorates, peroxides, permanganates, chlorates, and nitrates) since an explosion could occur. Store in tightly closed containers in a cool, well-ventilated area away from heat, sparks, or sunlight. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where ethylene oxide is handled, used, or stored. Metal containers involving the transfer of 5 gallons or more of ethylene oxide should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of ethylene oxide. Wherever ethylene oxide is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Procedures for the handling, use and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Ethylene oxide requires a shipping label of “POISON, GAS, FLAMMABLE GAS.” It usually falls in Hazard Class 2.3 and there is no Packing Group. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling: *Gas:* Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Establish forced ventilation to keep levels below explosive limit. Stop the flow of gas if it can be done safely. If source of leak is a cylinder and the leak cannot be stopped in place, remove leaking cylinder to a safe place in the open air, and repair leak or allow cylinder to empty. Keep this chemical out of confined space, such as a sewer, because of the possibility of explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. *Liquid:* For *small spills* flush area with flooding amounts of water. For *large spills* dike spill for later disposal. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (from a small package or a small leak from a large package)

Ethylene oxide and Ethylene oxide with Nitrogen: First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.1/0.2
Night 0.1/0.2

Large spills (from a large package or from many small packages)

First: isolate in all directions (feet/meters) 500/150
Then: Protect persons downwind (miles/kilometers)
Day 0.5/0.8
Night 1.6/2.5

Fire Extinguishing: Decomposition products are explosive. Highly flammable. *Gas:* Hazardous decomposition includes carbon monoxide. Do not extinguish the fire unless the flow of gas can be stopped and any remaining gas is out of the line. Specially trained personnel may use fog lines to cool exposures and let the fire burn itself out. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If cylinders are exposed to excessive heat from fire or flame contact, withdraw immediately to a secure location. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Liquid: Highly flammable. Hazardous decomposition includes oxides of carbon. Use dry chemical, carbon dioxide; or foam extinguishers. Although soluble in water, solutions will continue to burn until diluted to approximately 22 volumes of water to one volume of ethylene oxide. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Concentrated waste containing no peroxides – discharge liquid at a controlled rate near a pilot flame. Concentrated waste containing peroxides – perforation of a container of the waste from a safe distance followed by open burning.

Ethyl formate E:0690

Use Type: Fumigant, Insecticide
CAS Number: 109-94-4
Formula: $C_3H_6O_2$; $HCOOC_2H_5$
Synonyms: Areginal; Ethyl formic ester; Ethyl methanoate; Formic acid, ethyl ester; Formic ether
Chemical class: Unclassified
EPA/OPP PC Code: 043102
California DPR Chemical Code: 278
HSDB Number: 943
UN/NA & ERG Number: UN1190/129; IMO 3.1
RTECS® Number: LQ8400000
EC Number: 203-721-0 [*Annex I Index No.:* 607-015-00-7]

Uses: Used as a fumigant, especially on dried fruit, Also used as a solvent for cellulose nitrate and acetate and in the production of synthetic flavors. Not currently registered for agricultural use in EU countries and the U.S. Used in Australia and there are 63 global suppliers[97].

U.S. Maximum Allowable Residue Levels for the food additive Ethyl formate [40 CFR 185.2900(a)]: may be safely used in or on specified dried fruits in accordance with the following conditions: it is used or intended for use in or on raisins and dried Zante currants as a bulk and package fumigant. [*40 CFR 185.2900(b)*]: may be safely used in or on specified dried fruits in accordance with the following conditions: it is used in accordance with directions registered with the U.S. EPA, and so used that the total formic acid present free and combined, in the finished product shall not exceed 250 ppm. [*40 CFR 185.2900(c)*]: may be safely used in or on specified dried fruits in accordance with the following conditions: to assure safe use of the additive, its label and labeling shall conform to that.

Regulatory Authority and Advisory Information:

Health Advisory: Skin irritant/sensitizer, Very toxic by Inhalation (EU)

+Acute Oral Category: 3, CAUTION

European/International Regulations: Hazard Symbol: F; risk phrases: R11; R20/22; R36/37; safety phrases: S2; S9; S16; S24; S26; S33 (see Appendix 1)

WGK (German Aquatic Hazard Class): 1-Low hazard to waters

Description: Ethyl formate is a colorless liquid. Fruit-like odor. Molecular weight = 74.09; Specific gravity (H_2O:1) = 0.92; Boiling point = 54.3°C; Freezing/Melting point = –79°C; Vapor pressure = 200 mmHg @ 21°C; 100 mmHg @ 5.4°C Flash point = –20°C (cc); Autoignition temperature = 440°C. Explosive limits: LEL = 2.8% (36000 ppm); UEL = 16.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 3, Reactivity 0. Solubility in water = 9% @ 18°C.

Incompatibilities: Forms explosive mixture with air. Reacts violently with nitrates, strong oxidizers, strong alkalis, and strong acids. Decomposes slowly in water to form ethyl alcohol and formic acid. May accumulate static electrical charges, and may cause ignition of its vapors.

Permissible Exposure Limits in Air: NIOSH IDLH: 1500 ppm

OSHA PEL: 100 ppm/300 mg/m^3 TWA

NIOSH REL: 100 ppm/300 mg/m^3 TWA

ACGIH TLV®[1]: 100 ppm/303 mg/m^3 TWA

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 100 ppm

PAC-2: 100 ppm

PAC-3: 8000 ppm

DFG MAK: 100 ppm/310 mg/m^3 TWA; Peak Limitation Category I(1); [skin]; Pregnancy Risk Group C

Determination in Air: Charcoal (tube) adsorption, workup with CS_2; analysis by gas chromatography/flame ionization detection; NIOSH IV, Method #1452

Determination in Water: Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, eye and/or dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Either contact or the vapor can cause skin and eye irritation. Inhalation irritates the respiratory tract. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Ethyl formate may affect the central nervous system. Exposure can cause headache, nausea, and vomiting. LD_{50} (oral, rat) = >4000 mg/kg.

Long Term Exposure: May cause tumors. Prolonged or repeated contact can cause skin dryness and cracking. May affect the nervous system; chronic respiratory disease, skin disease, liver and kidney disease.

Points of Attack: Eyes, respiratory system, central nervous system, skin, liver, and kidneys.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Consider chest x-ray following acute overexposure. Nervous system tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Neoprene™, Nitrile and styrene-butadiene rubber are among the recommended protective materials. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >100 ppm. NIOSH: *up to 1500 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, air-purifying respirator with organic vapor cartridge(s)]; or CcrOv (APF = 10) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s)]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, strong bases, moisture and heat. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of "FLAMMABLE LIQUID." It usually falls in Hazard Class 3 and Packing Group II.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Hazardous decomposition includes carbon monoxide. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Spray into a furnace in admixture with a flammable solvent[24].

Etofenprox E:0835

Use Type: Insecticide
CAS Number: 80844-07-1
Formula: $C_{25}H_{28}O_3$
Synonyms: Benzene, 1-[(2-(4-ethoxyphenyl)-2-methylpropoxy)methyl]-3-phenoxy-; 2-(4-Ethoxyphenyl)-2-methylpropyl 3-phenoxybenzyl ether; 3-Phenoxybenzyl-2-(4-ethoxyphenyl)-2-methylpropyl ether
Trade Names: MTI 500®; PUNKASO®; TREBON®; ZOECON® RF-316
Chemical class: Pyrethroid
EPA/OPP PC Code: Not assigned; Reg No. 2724-791
California DPR Chemical Code: 2292
UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151
RTECS® Number: DA0670000
EC Number: 407-980-2
Uses: Approved for use in the U.S. and more than a dozen EU countries.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group C, Possible human carcinogen
Health Advisory: Developmental/Reproductive Toxin, Endocrine disruptor (S!)
Acute Oral Category: 4, Caution, not acutely toxic
European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S23; S27/28; S36/37/39 (see Appendix 1)

Description: A white crystalline solid. Some commercial products are liquids in combustible or flammable solvents. Citrus-like odor. Molecular weight = 376.49; Specific gravity (H_2O:1) = 1.073; Boiling point = (decomposes) 482 °C; Freezing/Melting point = 194°C; Flash point = 161°C; Hazard Identification (based on NFPA-704 M Rating System) for liquid in hydrocarbon solvent: Health 1, Flammability 2, Reactivity 0. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Permissible Exposure Limits in Air: NIOSH(2)
IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA
STEL set by HSE(33) = 10 mg/m^3.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18], as pyrethroid.

Permissible Concentration in Water: Acceptable Daily Intake (ADI) = 0.02 mg/kg as pyrethroid.

Determination in Water: Log K_{ow} = >6.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Incompatibilities: Strong oxidizing agents; hypochlorites.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be very harmful if swallowed. LD_{50} (oral, rat) = >4 g/kg; LD_{50} (dermal, rat) = >2000 mg/kg.

Long Term Exposure: The NOAEL for chronic toxicity is 3.7 mg/kg/day for male rats. The target organ in mice is the kidney. The NOAEL is 3.1 mg/kg/day for mice.

Points of Attack: Liver, thyroid. May cause reproductive and fetal effects.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to their sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m³:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m³:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m³:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35°C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Color Code-Green: General storage may be used. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be

properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Etridiazole E:0848

Use Type: Fungicide

CAS Number: 2593-15-9; 153233-91-1

Formula: $C_5H_5Cl_3N_2OS$

Synonyms: Ethazole; 5-Ethoxy-3-(trichloromethyl)-1,2,4-thiadiazole; ETMT; Terrazole; 3-(Trichloromethyl)-5-ethoxy-1,2,4-thiadiazole; 1,2,4-Thiadiazole, 5-ethoxy-3-(trichloromethyl)-

Trade Names: AATERRA®; BANROT® (With Thiophanate-methyl); DWELL®[C]; ETHAZOLE®; 4-WAY®; KOBAN®; MF-344®; OLIN MATHIESON® 2,424; OM® 2424; PANSOIL®; TERRACHLOR-SUPER X® (with Pentachloronitrobenzene); TERRACLOR SUPER X® (with Pentachloronitrobenzene); TERRACOAT®; TERRAFLO®; TERRAMASTER®; TRUBAN®

Chemical class: Aromatic hydrocarbon; Thiazole

EPA/OPP PC Code: 084701

California DPR Chemical Code: 580

HSDB Number: 1709

UN/NA & ERG Number: UN2810/153

RTECS® Number: XI3875000

EC Number: 219-991-8 [*Annex I Index No.:* 613-133-00-X]

Uses: Etridiazole is a fungicide used in some countries as a seed treatment on barley, beans, corn, cotton, peanuts, peas, sorghum, soybeans, safflower, and wheat. It is also used on cotton for in-furrow application at planting, on ornamental plants and shrubs by horticultural nurseries, on non-bearing citrus and non-bearing coffee, and for golf course fairways, tees and greens. Some states hold Special Local Need registrations for use on tobacco transplants.

U.S. Maximum Allowable Residue Levels for Etridiazole: is not registered for use on any (U.S.) food crops; however, residues could be present on foods as a result of seed treatment use. It is also used on tomatoes imported into the U.S.

Human toxicity (long-term)[101]: Intermediate–10.51051 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Low–369.29192 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; EU GHS Category 2: Suspected human carcinogen

California Proposition 65 Chemical: Carcinogen (10/1/1994)

Acute Oral Category: 3, CAUTION

Health Advisory: Mutagen, Endocrine disruptor

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active] as terrazole

European/International Regulations: Hazard Symbol: T, Xn, N; risk phrases: R21; R22; R23; R40; R50/53; safety phrases: S1/2; S36/37; S38; S45; S60; S61 (see Appendix 1)

Description: Pale-yellow liquid when pure or reddish-brown liquid or semi-solid as a technical product. Mild odor. Molecular weight = 247.53; Specific gravity (H_2O:1) = 1.503; Freezing/Melting point = 20.1°C; Boiling point = 95°C @1 mmHg; Vapor pressure = 1.3×10^{-4} mmHg @ 20°C; 9.75×10^{-5} mmHg @ 25°C; Flash point = 155°C. Moderately soluble in water; solubility = 50–110 mg/L @ 25°C.

Incompatibilities: Alkali materials can cause material to become hydrolyzed. Toxic fumes of nitrogen and sulfur oxides and chlorine gas are formed when heated to decomposition.

Permissible Exposure Limits in Air: OEL (Russia): 1 mg/m^3 STEL (1/1993)[9]

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 175 μg/L.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. May be harmful if swallowed. Skin sensitizer. LD_{50} (oral, rat) = >1000 mg/kg; LD_{50} (dermal, rabbit) = >1700 mg/kg.

Long Term Exposure: Skin sensitizer. Possible liver toxin. A neurotoxin. Endocrine system disruptor. Reproductive effects.

Points of Attack: Skin, liver, brain, endocrine system.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. If symptoms develop or overexposure is suspected, the following may be useful: liver function tests; routine blood analysis. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Because of its low vapor pressure and low order of toxicity, it does not usually present a major problem in industry. Protective creams, gloves, and masks with organic vapor canisters for use in areas of elevated vapor concentrations should suffice. Elevated temperature may increase the requirement for protective methods or ventilation. Wear appropriate clothing to prevent repeated or prolonged dermal and/or eye contact. Wear eye protection to prevent any possibility of eye contact with molten biphenyl. Employees should wash promptly when skin is contaminated. Work clothing should be changed daily as it may be contaminated. Remove nonimpervious clothing immediately if wet or contaminated.

Respirator Selection: *Up to 10 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *Up to 25 mg/m^3:* Sa:Cf* (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie* (APF = 25) (any powered air-purifying respirator with an organic vapor cartridge in combination with a high-efficiency particulate filter). *Up to 50 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprTOvHie* (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 100 mg/m^3:* SaF: Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: PD,PP (any self-contained breathing apparatus that has a full faceplate and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard: Store in a secure poison location. Before entering confined space where biphenyl may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Toxic solids, organic, n.o.s. requires a shipping label of "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Establish ventilation to keep levels below explosive limit. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution. Do not re-enter the contaminated area until an expert verifies that the area has been properly cleaned. Ventilate area of spill or leak following clean-up. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and sulfur, chlorides, hydrogen chloride gas, carbon monoxide, and acrid smoke. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

F

Famoxadone F:0025

Use Type: Fungicide
CAS Number: 131807-57-3
Formula: $C_{22}H_{18}N_2O_4$
Synonyms:(*RS*)-3-Anilino-5-methyl-5-(4-phenoxyphenyl)-1, 3-oxazolidine-2,4-dione; 5-Methyl-5-(4-phenoxyphenyl)-3-(phenylamino)-2,4-oxazolidinedione; 2,4-Oxazolidinedione, 5-methyl-5-(4-phenoxyphenyl) -3-(phenylamino)-
Trade names: DPX-JE874®; FAMOXATE®; MEDLEY®; TANOS-50DF®
Chemical Class: Oxazole
EPA/OPP PC Code: 113202
California DPR Chemical Code:
HSDB Number: 7266
UN/NA & ERG Number: UN3077 (solid)/177; UN1992 (flammable liquid, toxic, n.o.s.)/131
RTECS® Number: None assigned
EC Number: [*Annex I Index No.* 612-206-00-3]
Uses: Tanos 50-DF is recommended for use as a preventative fungicide for control of late blight and early blight on potatoes and field tomatoes.
U.S. Maximum Allowable Residue Levels for the fungicide famoxadone [40 CFR 180.587(a)]: in or on the following commodities: cattle, fat 0.02 ppm; cattle, liver 0.05 ppm; goat, fat 0.02 ppm; goat, liver 0.05 ppm; horse, fat 0.02 ppm; horse, liver 0.05 ppm; lettuce, head 10.0 ppm; milk, fat (reflecting negligible residues in whole milk) 0.06 ppm; potato 0.02 ppm; sheep, fat 0.02 ppm; sheep, liver 0.05 ppm; tomato 1.0 ppm; vegetable, cucurbits, group 9, 0.30 ppm; and vegetable, fruiting, group 8 except tomato 4.0 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans
Acute Oral Category: 4, Caution, not acutely toxic
European/International Regulations: Hazard Symbol: Xn, F, N; risk phrases: R48/22; R50; R53; safety phrases: S2; S46; S60; S61 (see Appendix 1)
Description: Light off-white powder. Commercial formulations may be a flammable liquid. Molecular weight = 374.39; Specific gravity (H_2O:1) = 1.29 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 140.8 °C; Flash point (liquid formulation) = 5–10 °C; Henry's Law constant = 4.6×10^{-8} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System) (liquid formulation): Health 2, Flammability 3, Reactivity 0. Very low solubility in water; solubility = 50 μg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Combustible; dust may form explosive mixture with air. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Imides react with azo- and diazo-compounds, generating toxic gases. Contact with organic imides and reducing agents releases flammable gases. Imides are extremely weak bases (weaker than water). They react as acids with strong bases, forming salts.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Harmful if the liquid is absorbed through the skin. May cause irritation to the eyes, skin, and respiratory tract. Eye irritation may be serious. Harmful if swallowed. LD_{50} (oral, rat) = 5 g/kg; LD_{50} (dermal, rat) = 2 g/kg.
Long Term Exposure: Possible nerve poison and liver toxin.
Points of Attack: Nervous system, brain, liver, kidney, lungs, blood.
Medical Surveillance: Complete blood count. Neurofunctional test battery. Liver function tests.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.
Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.
Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained

breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-(powder) Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location and refrigerate 2 to 8 °C. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Color Code-(flammable solution) Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents; and combustible materials. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored, Use only non-sparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9. Flammable liquids, n.o.s. require a label of "Flammable liquids" They fall in Hazard Class 3, 6.1. Technical name required.

Spill Handling: *Small spills* and leakage: should a spill occur while you are handling this chemical, first remove all sources of ignition, then you should dampen the solid spill material with 60–70% ethanol and transfer the dampened material to a suitable container. Use absorbent paper dampened with 60–70% ethanol to pick up any remaining material. Seal the absorbent paper, and any of your clothes, which may be contaminated, in a vapor-tight plastic bag for eventual disposal. Solvent wash all contaminated surfaces with 60–70% ethanol followed by washing with a soap and water solution. Do not reenter the contaminated area until the safety officer (or other responsible person) has verified that the area has been properly cleaned.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. CAUTION: This product may have a very low flash point: Use of water spray when fighting fire may be inefficient. *Small fire*: dry chemical, CO_2, water spray or alcohol-resistant foam. *Large fire*: water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or vehicular loads*: fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fenamiphos F:0050

Use Type: Nematicide, Insecticide

CAS Number: 22224-92-6

Formula: $C_{13}H_{22}NO_3PS$

Synonyms: ENT 27,572; Ethyl 3-methyl-4-(methylthio) phenyl(1-methylethyl)phosphoramidate; Ethyl 4-(methylthio)-*m*-tolylisopropylphosphoramidate; Isopropylamino-*O*-ethyl-(4-methylmer capto-3-methylphenyl)phosphate;

(1-Methylethyl)phosphoramidicacidethyl3-methyl-4-(methylthio)phenyl ester; Isopropylphosphoramidic acidethyl 4-(methylthio)-*m*-toyl ester; 1-(Methylethyl)-ethyl 3-methyl-4-(methylthio)phenylphosphoramidate; NSC-195106; Phenamiphos; Phosphoramidic acid, (1-methylethyl)-, ethyl(3-methyl-4-(methylthio)phenyl)ester; Phosphoramidic acid, (1-methylethyl)-, ethyl 3-methyl-4-(methylthio)phenyl ester; Phosphoramidic acid,isopropyl-, ethyl 4-(methylthio)-*m*-tolyl ethyl ester

Trade Names: BAY 68138®; Bayer 68138®; NEMACUR®; NEMACURP®

Chemical Class: Organophosphate

EPA/OPP PC Code: 100601

California DPR Chemical Code: 1857

HSDB Number: 295

UN/NA & ERG Number: UN2783 (solid)/152

RTECS® Number: TB3675000

EC Number: 244-848-1 [*Annex I Index No.:* 015-123-00-5]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Fenamiphos is an organophosphate nematicide used to control a wide variety of nematode (roundworm) pests. Nematodes can live as parasites on the outside or the inside of a plant. They may be free living or associated with cyst and root-knot formations in plants. Fenamiphos is used on a variety of plants including tobacco, turf, bananas, pineapples, citrus and other fruit vines, some vegetables, and grains. The compound is absorbed by roots and is then distributed throughout the plant. Fenamiphos, as is typical of other organophosphates, blocks the enzyme acetylcholinesterase in the target pest. The pesticide also has secondary activity against other invertebrates such as sucking insects and spider mites.

U.S. Maximum Allowable Residue Levels for Fenamiphos and its cholinesterase inhibiting metabolites ethyl 3-methyl-4-(methylsulfinyl)phenyl(1-methylethyl)phosphoramidate and ethyl 3-methyl-4-(methylsulfonyl)phenyl (1-methylethyl) phosphoramidate [40 CFR 180.349(a)(1)]: in or on the following food commodities: apple 0.25 ppm; banana 0.10 ppm; Brussels sprouts 0.10 ppm; cabbage 0.10 ppm; cherry 0.25 ppm; citrus, oil 25.0 ppm; citrus, dried pulp 2.5 ppm; cottonseed 0.05 ppm; eggplant 0.1 ppm; garlic 0.50 ppm; grapefruit 0.60 ppm; grape 0.10 ppm; lemon 0.60 ppm; lime 0.60 ppm; okra 0.30 ppm; oranges 0.60 ppm; peach 0.25 ppm; peanut 0.02 ppm; pineapple 0.30 ppm; pineapple, bran 10.0 ppm; raisins 0.3 ppm; raspberry 0.1 ppm; strawberry 0.6 ppm; and tangerine 0.60 ppm. ***[40 CFR 180.349(a)(2)]:*** in or on the following raw agricultural meat commodities: cattle, fat 0.05 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts 0.05 ppm; goat, fat 0.05 ppm; goat, meat 0.05 ppm; goat, meat byproducts 0.05 ppm; hog, fat 0.05 ppm; hog, meat 0.05 ppm; hog, meat byproducts 0.05 ppm; horse, fat 0.05 ppm; horse, meat 0.05 ppm; horse, meat byproducts 0.05 ppm; milk 0.01 ppm; sheep, fat 0.05 ppm; sheep, meat 0.05 ppm; and sheep, meat byproducts 0.05 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.349 (c)]:*** in or on the following raw agricultural commodities: asparagus 0.02 ppm; beet, garden, roots 1.5 ppm; beet, garden, tops 1.0 ppm; bok choy 0.5 ppm; kiwifruit 0.1 ppm; and pepper, nonbell 0.6 ppm.

U.S. Maximum Allowable Residue Levels for Fenamiphos: 100% of U.S. production for seed treatment.

Human toxicity (long-term)[101]: High–2.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.33001 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive)

Acceptable Daily Intake (ADI): EPA Oral reference dose (RfD) = 0.00025 mg/kg/day (UF: 1000, MF: 1)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

MARINE POLLUTANT (49CFR, Subchapter 172.101, Appendix B

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

UN Packaging Group I, Greatest Danger

European/International Regulations: Hazard Symbol: T+, Xn, N; risk phrases: R21; R25; R28; R52/53; safety phrases: S1/2; S23-S28; S36/37; SS45; S55; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Fenamiphos is a yellowish-brown powder or off-white to tan, waxy solid. Found commercially as a granular ingredient (5 to 15%) or in an emulsifiable concentrate (400 g/l). Molecular weight = 251.24; 303.39; Specific gravity (H_2O:1) =1.15 @ 20 °C; Boiling point = (decomposes) 200 °C; Freezing/Melting point = 40 °C (technical grade); 49.2 °C (pure compound); Vapor pressure = 1×10^{-6} mmHg @ 20 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 0.03%.

Incompatibilities: Fenamiphos is unstable in alkaline media and is rapidly decomposed in the presence of light. Dilute aqueous solutions are completely decolorized in 30 minutes or less when exposed to ordinary light, concentrated solutions decompose more slowly. Decomposes above 200 °C, releasing toxic gases, including nitrogen oxides, sulfur oxides and phosphorus oxides. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 0.1 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.05 mg/m^3 TWA inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI$_A$ issued for Acetylcholinesterase inhibiting pesticides.

Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.082 mg/m^3
PAC-2: 0.9 mg/m^3
PAC-3: 4 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 0.7 μg/L; State Drinking Water Guidelines: Arizona 1.8 μg/L; Maine 1.8 μg/L; Florida 1.75 μg/L.

Determination in Water: Log K_{ow} = >3.2. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion, eye contact.

Harmful Effects and Symptoms: Exposure may be fatal due to respiratory failure.

Short Term Exposure: This is a highly toxic chemical. It can be absorbed through the unbroken skin and is a cholinesterase inhibitor with effects typical of such compounds. Acute exposure to fenamiphos may produce the following signs and symptoms: pinpoint pupils, blurred vision, headaches, dizziness, muscle spasm, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may increase following oral exposure or decrease following dermal exposure. Hypotension (low blood pressure) may occur although hypertension (high blood pressure) is not uncommon. Chest pain may be noted. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. This material is highly toxic orally, by inhalation, and by absorption through the skin. Death may occur from respiratory failure. Delayed pulmonary edema may occur after inhalation. Exposure may be fatal, caused by respiratory failure. LD_{50} (oral, rat) = 8 mg/kg; LD_{50} (dermal, rat) = 80 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. A neurotoxin.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: SCBA >0.082 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well- ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a label of "poisonous materials." This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides, sulfur oxides and phosphorus oxides. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fenbutatin oxide F:0085

Use Type: Insecticide, Miticide

CAS Number: 13356-08-6

Formula: $C_{60}H_{78}OSn_2$

Synonyms: AI3-27738; Bis(trineophyltin)oxide; Bis[tris(β,β-dimethylphenethyl)tin]oxide; Bis[tris(2-methyl-2-phenylpropyl) tin]oxide; Caswell No. 481DD; Distannoxane, hexakis (β,β-dimethylphenethyl)-; Distannoxane, hexakis(2-methyl-2-phenylpropyl)-; Di[tri(2,2-dimethyl-2-phenylethyl)tin]oxide; ENT27738; Fenbutatin-oxyde; Hexakis(β,β-dimethylphenethyl) distannoxane; Hexakis; Hexakis(2-methyl-2-phenylpropyl) distannoxane; 2-(Methyl-2-phenylpropyl)distannoxane

Trade Names: BENDEX®; NEOSTANOX®; OSDARAN®; SD-14114®; SHELL SD-14114®; TORQUE®; VENDEX®

Chemical Class: Organotin; Phenyltin

EPA/OPP PC Code: 104601; 596300 (obsolete)

California DPR Chemical Code: 1876

HSDB Number: 6632; 7001 for tin compounds

UN/NA & ERG Number: UN2786/154; UN2811/154

RTECS® Number: JN8770000

EC Number: 236-407-7 [*Annex I Index No.:* 050-017-00-2]

Uses: A U.S. EPA restricted Use Pesticide (RUP). A selective miticide for deciduous pome and stone fruits, citrus fruits, grapes, vegetables, berry fruit, nut crops (selected), ornamentals and greenhouse crops.

U.S. Maximum Allowable Residue Levels for Fenbutatin Oxide and its organotin metabolites calculated as hexakis (2-methyl-2-phenylpropyl) distannoxane [40 CFR 180.362 (a)]: Almond 0.5 ppm; almond, hulls 80 ppm; apple 15 ppm; cattle, fat 0.5 ppm; cattle, meat 0.5 ppm; cattle, meat byproducts 0.5 ppm; cherry, sweet 6 ppm; cherry, tart 6 ppm; citrus, dried pulp 100 ppm; citrus, oil 140 ppm; cucumber 4 ppm; egg 0.1 ppm; eggplant 6 ppm; fruit, stone, group 12 20 ppm; goat, fat 0.5 ppm; goat, meat 0.5 ppm; goat, meat byproducts 0.5 ppm; grape 5 ppm; grape, raisin 20 ppm; hog, fat 0.5 ppm; hog, meat 0.5 ppm; hog, meat byproducts 0.5 ppm; horse, fat 0.5 ppm; horse, meat 0.5 ppm; horse, meat byproducts 0.5 ppm; milk, fat 0.1 ppm; papaya 2 ppm; peach 10 ppm; pear 15 ppm; pecan 0.5 ppm; plum 4 ppm; plum, prune 4 ppm; plum, prune, dried 20 ppm; poultry, fat 0.1 ppm; poultry, meat 0.1 ppm; poultry, meat byproducts 0.1 ppm; raspberry 10 ppm; sheep, fat 0.5 ppm; sheep, meat 0.5 ppm; sheep, meat byproducts 0.5 ppm; strawberry 10 ppm; walnut 0.5 ppm. *Regional registration, as defined in section 180.1(n)* ***[40 CFR 180.362 (a)]*** Raspberries: 10.0 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Acute Oral Category: 3, CAUTION

Health Advisory: Developmental toxin (TRI)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant, as organotin pesticide compounds

European/International Regulations: Hazard symbol: T+, Xn, N; risk phrases: R26; R36/38; R50/R53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: White crystalline solid or powder. Mild odor. Molecular weight = 1052.66; Specific gravity (H_2O:1) = 1.312; Boiling point = (decomposes) 238 °C @ 0.05 mm; Freezing/Melting point = 138 °C; 148 °C; Vapor pressure = 1.8×10^{-11} mmHg @ 20 °C. Practically insoluble in water; solubility = 0.005 mg/L @ 23 °C.

Incompatibilities: Forms explosive mixture with air. Decomposes above 230 °C. Contact with water causes slow decomposition. Organotin oxides can be strongly basic and will react, possibly dangerously, with acidic compounds and mixtures.

Permissible Exposure Limits in Air: NIOSH IDLH: 25 mg[Sn]/m^3

OSHA PEL: 0.1 mg[Sn]/m^3 TWA [*Note*: The PEL applies to all organic tin compounds.]

NIOSH REL: 0.1 mg[Sn]/m^3 TWA [skin] [*Note:* The REL applies to all organic tin compounds, except cyhexatin.]

ACGIH TLV®[1]: 0.1 mg[Sn]/m^3 TWA; 0.2 mg[Sn]/m^3 STEL [skin], A4, not classified as a human carcinogen

DFG MAK: 0.1 mg[Sn]/m^3; inhalable fraction TWA; Peak Limitation Category II(2); [skin]; Pregnancy Risk Group D *phenyltin compounds*

DFG MAK: 0.002 mg[Sn]/m^3; inhalable fraction TWA; Peak Limitation Category II(2); Pregnancy Risk Group C

Determination in Air: Filter/XAD-2® (tube); CH_3COOH/CH_3CN; high-pressure liquid chromatography/Graphite furnace atomic absorption spectrometry; NIOSH IV Method #5504, as organotin compounds.[18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Highly toxic. Irritates the eyes, skin, and respiratory tract. Contact may cause skin burns. Inhalation can cause coughing, wheezing and/or shortness of breath. Toxic hazard rating is high for oral, intravenous, intraperitoneal administration. This material causes swelling of the brain and spinal cord. Exposure may result in muscular weakness and paralysis, leading to respiratory failure; convulsive movements; closure of eyelids and sensitivity to light; headaches, and EEG changes, headache, dizziness, psychological and neurological disturbances, vertigo (an illusion of movement), sore throat, cough, abdominal pain, nausea, vomiting, diarrhea; urine retention; paresis, focal anesthesia; pruritus. Higher levels can cause unconsciousness, collapse and death. LD_{50} (oral, rat) = >2.5 g/kg; LD_{50} (dermal, rat) = 1000 mg/kg.

Long Term Exposure: Repeated or prolonged contact can cause dermatitis; dry and cracked skin. May cause brain damage, hepatic necrosis; kidney damage. Some organotin compounds, such as dibutyltins and tributyltins, have been shown to affect the immune system in animals, but this has not been examined in people. Studies in animals and people also have shown that some organotins, such as dibutyltins, tributyltins, and triphenyltins, can affect the reproductive system. Reproductive effects.

Points of Attack: Skin, brain, kidneys.

Medical Surveillance: Kidney function tests. Psychological testing. Examination of the nervous system. EEG.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH/OSHA *[Tin, organic compounds as (Sn)]*: *Up to 1 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *Up to 2.5 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *Up to 5 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting facepiece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting face-piece and is operated in a continuous-flow mode); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 25 mg/m^3:* SaF: Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions*: SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full faceplate and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [Any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, dark, well-ventilated area away from oxidizers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organotin pesticides, solid, toxic, require a label of "poisonous materials." It falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes inorganic tin, tin oxides, and phenyltin compounds. This material is a severe marine pollutant. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Organic tin compounds may be disposed of in sealed containers in secured sanitary landfill. *Chemical Treatability of tin; Concentration Process*: Chemical precipitation; Chemical Classification: Metals; Scale of Study: Pilot scale Type of Wastewater Used: Synthetic wastewater; Results of Study: At 600 ppm, 95.3% reduction with alum. At 500 ppm, 98% reduction with ferric chloride, 92% reduction with lime. (Three coagulants used: 200 mg of alum at pH = 6.4, 40 ppm of ferric chloride @ pH = 6.2, 41 ppm of lime @ pH = 11.5. Chemical coagulation was followed by dual media filtration)[83]. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fenhexamid F:0075

Use Type: Fungicide

CAS Number: 126833-17-8

Formula: $C_{14}H_{17}Cl_2NO_2$

Synonyms: 2',3'-Dichloro-4'-hydroxy-1-methylcyclohexanecarboxanilide; (*N*-2,3-Dichloro-4-hydroxyphenyl)-1-methyl cyclohexanecarboxamide;*N*-(2,3-dichloro-4-hydroxyphenyl)-1-methylcyclohexanecarboxamide; 1-Methyl-cyclohexanecarboxylic acid (2,3-dichloro-4-hydroxy-phenyl)-amide

Trade names: KBR-2738

Chemical Class: Hydroxyanilide

EPA/OPP PC Code: 090209

California DPR Chemical Code: 4032

HSDB Number: 7273

UN/NA & ERG Number: UN3077(solid)/171

EC Number: 422-530-5 [*Annex I Index No.*616-111-00-8]

Uses: Fungicide; for control of Botrytis cinerea and related diseases on Rubus, Ribes, bushberries, caneberries, grapes, pistachios, strawberries, ornamentals and other crops. Control of Monilinia diseases of almonds and stone fruit. On grapes and grapevines for suppression of powdery mildew and to control bunch rot[83].

U.S. Maximum Allowable Residue Levels for the fungicide fenhexamid [40 CFR 180.553(a)]: in or on the following commodities: almond, hull 2.0 ppm; almond 0.02 ppm; bushberry, subgroup 13B, 5.0 ppm; caneberry, subgroup 13A, 20.0 ppm; cucumber 2.0 ppm; fruit, stone, group 12, except plum, prune, fresh, postharvest 10.0 ppm; grape 4.0 ppm; grape, raisin 6.0 ppm; juneberry 5.0 ppm; kiwifruit, postharvest 15.0 ppm; leafy greens, subgroup 4A, except spinach 30.0 ppm; lingonberry 5.0 ppm; pistachio 0.02 ppm; plum, prune, dried 2.5 ppm; plum, prune, fresh 1.5 ppm; salal 5.0 ppm; strawberry 3.0 ppm; and vegetable, fruiting, group 8, except nonbell pepper 2.0 ppm.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans
Toxic to aquatic life
Acute Oral Category: 3, CAUTION
European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S2; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): No value assigned

Description: White to beige powder. Commercial products are available in various form, including wettable powders, suspension concentrates, and water dispersible granules. Molecular weight = 302.21; Specific gravity (H_2O:1) = 1.338 @ 20 °C; Boiling point = 319.8 °C; Freezing/Melting point = 141 °C; 154 °C; Vapor pressure = 5×10^{-9} mmHg @ 25 °C. Low solubility in water; solubility 15 mg/L.

Incompatibilities: Dust may form explosive mixture with air. Decomposes >300 °C. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May be harmful if swallowed. May cause eye irritation. Higher levels may cause irritation of the respiratory tract. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg[83].

Long Term Exposure: Possible liver, kidney and erythrocyte toxicity.

Points of Attack: Liver, kidneys, blood cells.

Medical Surveillance: Complete blood count, liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***[40 CFR 170.240(d)(4-6)]***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, acids, water, or combustible materials. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: If you spill this chemical, first remove all sources of ignition. Dampen the spilled material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until an expert verifies that the area has been properly cleaned.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See ***40 CFR*** Parts 261.3 for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations.

Fenitrothion F:0100

Use Type: Insecticide, Acaracide

CAS Number: 122-14-5

Formula: $C_9H_{12}NO_5PS$; $(CH_3O)_2PSO\text{-}C_6H_3(NO_2)(CH_3)$

Synonyms: *O,O*-Dimethyl-*O*-(3-methyl-4-nitrophenyl)-phosphorothioate; *O,O*-Dimethyl-*O*-(3-methyl-4-nitrophenyl)-thiophosphate; *O,O*-Dimethyl-*O*-(3-methyl)phosphorothioate; *O,O*-Dimethyl-*O*-(4-nitro-3-methylphenyl)thiophosphate; *O,O*-Dimethyl-*O*-4-nitro-*m*-toylphosphorothioate; ENT 25,715; Methylnitrophos (used in Eastern Europe); Phosphorothioic acid, *O,O*-dimethyl *O*-(3-methyl-4-nitrophenyl)ester; Phosphorothioic acid, *O,O*-dimethyl *O*-(4-nitro-*m*-tolyl)ester; Phenitrothion

Trade Names: ACCOTHION®; ACEOTHION®; AGRIA 1050®; AGRIYA 1050®; AGROTHION®; AMERICAN CYANAMID CL-47,300®; ARBOGAL®; BAY 41831®; BAYER 41831®; BAYER S 5660®; CEKUTROTHION®; CL 47300®; CP47114®; CYFEN®; CYTEL®; CYTEN®; DICATHION®; DICOFEN®; DYBAR®; EI 47300®; FALITHION®; FENITEX®; FENITOX®; FENSTAN®; FOLETHION®; FOLITHION®; H-35-F 87 (BVM)®; 8057HC®; KALEIT®; KEEN SUPERKILL ANT AND ROACH EXTERMINATOR®; KILLGERM TETRACIDE INSECTICIDAL SPRAY®; KOTION®; MEP (PESTICIDE)®; METATHION®; METATHIONE®; METATION®; MICROMITE®; MONSANTO CP 47114®; NITROPHOS®; NOVATHION®; NUVAND®; NUVANOL®; OLEOSUMIFENE®; OMS 43®; OVADOFOS®; PENNWALT C-4852; PESTROY®; S 112A®; S 5660®; SMT®; SUMITHION®[C]; TURBAIR GRAIN STORAGE INSECTICIDE®; VERTHION®

Chemical Class: Organophosphate

EPA/OPP PC Code: 105901

California DPR Chemical Code: 2520

HSDB Number: 1590

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152, depending on which commercial products are being shipped.

RTECS® Number: TG0350000

EC Number: 204-254- 2 [*Annex I Index No.:* 015-054-00-0]

Uses: Not approved for use in EU countries[115]. Registered for use in the U.S. This is a selective acaricide and a contact and stomach insecticide. Fenitrothion is a contact insecticide and selective acaricide of low ovicidal properties. It is considered an acetylcholinesterase inhibitor. Fenitrothion is effective against a wide range of pests, i.e. penetrating, chewing and sucking insect pests (coffee leafminers, locusts, rice stem borers, wheat bugs, flour beetles, grain beetles, grain weevils) on cereals, cotton, orchard fruits, rice, vegetables, and forests. It may also be used as a fly, mosquito, and cockroach residual contact spray for farms and public health programs. Fenitrothion is also effective against household insects and all of the nuisance insects listed by the World Health Organization. Its effectiveness as a vector control agent for malaria is confirmed by the World Health Organization. Fenitrothion is non-systemic, and non-persistent. Fenitrothion was introduced in 1959 by both Sumitomo Chemical Company and Bayer Leverkusen and later by American Cyanamid Company. Fenitrothion is far less toxic than parathion with a range of insecticidal activity that is very similar and is similar enough in structure to be produced in the same factories. The difference in precursor chemicals might make it somewhat more expensive, but it is heavily used in other countries, including Japan, where parathion has been banned. Fenitrothion comes in dust, emulsifiable concentrate, flowable, fogging concentrate, granules, ULV, oil-based liquid spray, and wettable powder formultaions. It is compatible with other neutral insecticides.

U.S. Maximum Allowable Residue Levels for Fenitrothion [40 CFR 185.2200]: in wheat gluten resulting from post-harvest application of the insecticide to stored wheat in Australia, 30 ppm, of which not >15 ppm for combined residues of the insecticide *O,O*-dimethyl *O*-(4-nitro-*m*-totyl) phosphorothioate and its metabolites *O,O*-dimethyl *O*-(4-nitro-*m*-totyl) phosphate and 3-methyl-4-nitrophenol.

Human toxicity (long-term)[101]: High–9.10 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–63.62386 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Acute Oral Category: 2, WARNING

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

Superfund/EPCRA 302 Extremely Hazardous Substances:

TPQ = 500 lb (227 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Fenitrothion is a volatile brownish-yellow oil. Phenol-like odor. Commercial products in various forms, including dust and dry granules. Molecular weight = 277.25; Specific gravity (H_2O:1) = 1.323 @ 25 °C; Boiling point = (decomposes) 140 °C; Freezing/Melting point = 0.28 °C; Vapor pressure = 5.3×10^{-5} mbar @ 20 °C; Flash point = 157 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 30 ppm. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Keep away from strong oxidizers, reducing agents, strong bases; unstable in alkaline media. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Decomposes at about 100–140 °C releasing poisonous gases and various organophosphorus polymers.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Determination in Water: Log K_{ow} = >3.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L.

Routes of Entry: Inhalation, through the skin, ingestion.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Irritates the eyes and skin. Nausea is often the first symptom, followed by vomiting; abdominal cramps; diarrhea; excessive salivation; headache; giddiness; dizziness; weakness; tightness in the chest; loss of muscle coordination; slurring of speech, muscle twitching (particularly the tongue and eyelid); respiratory difficulty; blurring or dimness of vision; pinpoint pupils; profound weakness; mental confusion; disorientation and drowsiness. This compound is an organophosphate insecticide. It is a highly toxic cholinesterase inhibitor that acts on the nervous system. Does not cause delayed neurotoxicity and contact produces little irritation. The effects may be delayed. Delayed pulmonary edema may occur after inhalation. Keep exposed victim under medical observation. LD_{50} (oral, rat) = 200–300 mg/kg; LD_{50} (dermal, rat) = >1000 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, kidneys, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase; personality change, depression, anxiety or irritability. May be a skin sensitizer.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself.

Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Stable for 2 years if stored at 20–25 °C. Do not store above 40 °C. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Poisonous gases produced in fire, including oxides of nitrogen, sulfur and phosphorus. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fenoxaprop-ethyl F:0105

Use Type: Herbicide

CAS Number: 66441-23-4; 71283-80-2 (P-ethyl)

Formula: $C_{18}H_{16}ClNO_5$

Synonyms: Caswell No. 431C; 2-[4-((6-Chloro-2-benzoxazolyl)oxy)phenoxy]propionic acid, ethyl ester, (±)-; (±)-Ethyl 2-[4-((6-chloro-2-benzoxazolyl)oxy)phenoxy] propanoate; Ethyl-2-[(4-(6-chloro-2-benzoxazolyloxy))-phenoxy]propionate; Ethyl-2-[4-((6-chlorobenzoxazol-2-yl)oxy)phenoxy]propionate; Ethyl (D+)-2-[4-(6-chlor-2-benzoxazolyloxy)phenoxy]propanoate; (±)Ethyl-2-[-((6-chloro-2-benzoxazolyl)oxy)phenoxy]ropionate; Propionic acid, 2-[4-((6-chloro-2-benzoxazolyl)oxy)phenoxy] ethylester, (±)-

Trade Names: ACCLAIM®[C]; DEPON®; EXCEL®; FENOXYPROP®; FURORE®; HOE 033171®; HOE-A 25-01®; OPTION® Fenoxaprop-ethyl; PUMA®; WHIP®

Chemical Class: Chlorophenoxy; Aryloxyphenoxypropionate

EPA/OPP PC Code: 128701

California DPR Chemical Code: 2311

HSDB Number: 6848 (CAS: 66441-23-4)

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: UA2454000

EC Number: 266-362-9 [*Annex I Index No.:* 604-039-00-X]

Uses: Used to control annual and perennial grassy weeds in potatoes, soy beans, beans, beets, vegetables, flax, ground nuts, rape and cotton. Not approved for use in EU countries[115]. Not registered for use in the U.S. There are 17 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Fenoxaprop-Ethyl and its metabolites [2-[4-[(6-chloro-2-benzoxazoyl) oxy]phenoxy]propanoic acid and 6-chloro-2,3- dihydrobenzoxazol-2-one], expressed as fenoxaprop-ethyl [40 CFR 180.430(a)]: in or on the following raw agricultural commodities: cottonseed 0.05 ppm; peanuts 0.05 ppm; peanut hulls 0.05 ppm; rice grain 0.05 ppm; soybeans 0.05 ppm.

Human toxicity (long-term)[101]: Intermediate–17.50 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–34.71346 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

California Proposition 65 Chemical: Developmental/Reproductive toxin (3/26/1999)

Acute Oral Category: 3, CAUTION

Health Advisory: Endocrine disruptor (S!), Developmental/Reproductive Toxin (confirmed), Ground water contaminant (PAN)

AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Marine Pollutant: IMDG

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R43; R50/53; safety phrases: S2; S24; S37, S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Colorless or white solid. Liquid form is dark brown and has an aromatic hydrocarbon odor. Molecular weight = 361.78; Specific gravity (H_2O:1) = 1.33; Boiling point = 199.6 °C; Freezing/Melting point = 84–86 °C; Vapor pressure = 3.2×10^{-8} mmHg @ 20 °C. Practically insoluble in water.

Incompatibilities: Decomposed by acids and alkalis. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the skin, eyes, and respiratory tract. Eye contact may cause irritation, burning sensation, and damage. Harmful if ingested, inhaled or absorbed through the skin. May be harmful if swallowed. LD_{50} (oral, rat) = >2 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause skin sensitization. May cause reproductive and fetal effects.

Points of Attack: Skin. Reproductive system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum luteinizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develop. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers and bases. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically transfer material from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: *Solid material:* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. *Liquid formulations containing organic solvents*: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and oxygen and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. *Solid material: A* combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Hazardous decomposition includes chlorates, hydrogen chloride and carbon monoxide. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. *Liquid formulations containing organic solvents:* A combustible liquid. Hazardous decomposition includes chlorates, hydrogen chloride and carbon monoxide. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with ***40CFR165***, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fenoxycarb F:0107

Use Type: Insecticide, Miticide

CAS Number: 72490-01-8; 79127-80-3

Formula: $C_{17}H_{19}NO_4$

Synonyms: AI3-29460; Carbamic acid, [2-(4-phenoxyphenoxy)ethyl]-, ethyl ester; Carbamic acid, [2-4(-phenoxyphenoxy)ethyl]-, ethyl ester; Caswell No. 652C; Ethyl [2-(4-phenoxyphenoxy)ethyl]carbamate; Ethyl 2-(*p*-phenoxyphenoxy)ethyl carbamate; Ethyl[2-(*p*-phenoxyphenoxy) ethyl]carbamate; 2-(4-Phenoxyphenoxy)ethylcarbamic acidethyl ester; [2-(4-Phenoxyphenoxy)ethyl]carbamic acidethyl ester; *N*-[2-(*p*-Phenoxyphenoxy)ethyl]carbamic acid; [2-(4-Phenoxy-phenoxy)-ethyl]carbamic acidethyl ester

Trade Names: AWARD; ABG 6215; ACR®-2984 F; ACR® 2913; BASUS®[C]; COMPLY®; ECTOGARD®[C]; ELIMINATOR®[C]; INSEGAR®; LogIC®; LUFOX®; PICTYL®; PRECISION®; TORUS®[C]; RO 13-5223®; VARIKILL®

Chemical Class: Carbamate

EPA/OPP PC Code: 125301; (128801 old Code No.)

California DPR Chemical Code: 2283

HSDB Number: 6635

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: FD0423000

EC Number: 276-696-7 [*Annex I Index No.:* 006-086-00-6]

Uses: Fenoxycarb is an insect growth regulator, sex attractant, or feeding stimulant. It is intended to be used to inhibit metamorphosis of juvenile insects to the adult stage. It is used as bait to control a broad spectrum of insects on olives, vines, fruit, cotton, and stored products. It is used to control fire ants, cockroaches, mosquitos, beetles, moths, scale and sucking insects.

Regulatory Authority and Advisory Information:

Carcinogenicy: EPA, Likely to be a human carcinogen

Health Advisory: Nerve Toxin (S!), Developmental toxin (TRI)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: N; risk phrases: R40; R50/53; safety phrases: S2; S24; S37, S60; S61 (see Appendix 1)

Description: Light tan to white flaky solid or powder. Molecular weight = 301.35. Specific gravity (H_2O:1) = 1.23 @ 20 °C; Boiling point = 100 °C; Freezing/Melting point = 49–54 °C. Low solubility in water; solubility = 6 ppm @ 25 °C.

Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. Keep away from sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Skin absorption, ingestion, inhalation.

Harmful Effects and Symptoms: Conflicting information exists on this carbamate insecticide. One site describes this chemical as an eye irritant but not a skin irritant.

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = >10,000 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver, kidney and thyroid damage.

Points of Attack: Respiratory system, lungs, liver, kidney, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase, thyroid.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. Also consider complete blood count and chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters / 0.5mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

California DPR Chemical Code: 5784

HSDB Number: 7943

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: DG9081200

Uses: Used to control spider mites in greenhouses.

U.S. Maximum Allowable Residue Levels for fenpyroximate and its isomer, (Z)-1,1-dimethylethyl 4-[[[[(1,3-dimethyl-5-phenoxy-1H-pyrazol-4-yl)methylene] amino]oxy] methyl]benzoate [40 CFR 180.566(a)(1)]: in or on the following commodities: Almond, hulls 3.0 ppm; berry, low growing, crop, subgroup 13-07G, 1.0 ppm; citrus, dried pulp 2.5 ppm; citrus, oil 10 ppm; cotton, gin byproducts 10 ppm; cotton, undelinted seed 0.10 ppm; cucumber 0.10 ppm; fruit, citrus, group 10, 0.60 ppm; fruit, pome, group 11, 0.40 ppm; grape 1.0 ppm; hop, dried cones 10 ppm; melon subgroup 9A, 0.10 ppm; nut, tree, group 14, 0.10 ppm; okra 0.20 ppm; peppermint, tops 7.0 ppm; pistachio 0.10 ppm; spearmint, tops 7.0 ppm; vegetable, fruiting, group 8, 0.20 ppm. ***[40 CFR 180.566(a)(2)]*** cattle, fat 0.03 ppm; cattle, meat 0.03 ppm; cattle, meat byproducts, except kidney and liver 0.03 ppm; goat, fat 0.03 ppm; goat, meat 0.03 ppm; goat, meat byproducts, except kidney and liver 0.03 ppm; horse, fat 0.03 ppm; horse, meat 0.03 ppm; horse, meat byproducts, except kidney and liver 0.03 ppm; milk 0.015 ppm; sheep, fat 0.03 ppm; sheep, meat 0.03 ppm; sheep, meat byproducts, except kidney and liver 0.03 ppm. ***[40 CFR 180.566(a)(3)]*** cattle, kidney 0.25 ppm; cattle, liver 0.25 ppm; goat, kidney 0.25 ppm; goat, liver 0.25 ppm; horse, kidney 0.25 ppm; horse, liver 0.25 ppm; sheep, kidney 0.25 ppm; sheep, liver 0.25 ppm. ***[40 CFR 180.566(b)]*** honey 0.10 ppm, expires: 12/31/13.

Regulatory Authority and Advisory Information: Acute Oral Category: 2, WARNING

Description: White crystalline solid or powder. Molecular weight = 421.49; Specific gravity (H_2O:1) = 1.14; Boiling point = (decomposes) 546 °C; Freezing/Melting point = 101 °C. Practically insoluble in water; solubility = 0.000015 ppm.

Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bio-accumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Harmful if swallowed. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides.

LD_{50} (oral, rat) = 250 mg/kg[9]; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause reproductive and fetal effects.

Points of Attack: Reproductive system.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88].

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: Dampen the spilled material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until an expert verifies that the area has been properly cleaned.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Fenthion F:0120

Use Type: Insecticide, Larvicide, Veterinary medicine

CAS Number: 55-38-9

Formula: $C_{10}H_{15}O_3PS_2$

Synonyms: Dimethyl 4-methylthio-m-tolyl phosphorothioate; DMTP; ENT 25540; Fenthion-methyl; *m*-Cresol, 4-(methylthio)-, o-ester with *O,O*-Dimethyl phosphorothioate; mercaptofos; NCI-C08651; *O,O*-Dimethyl o-(3-methyl-4-(methylthio) phenyl) es; *O,O*-Dimethyl o-(3-methyl-4-(methylthio) phenyl) ester, phosphorothioic acid; *O,O*-Dimethyl o-(3-methyl-4-methylmercaptophenyl) phosphorothioate; *O,O*-Dimethyl o-(3-methyl-4-methylthiophenyl) thiophosphate; *O,O*-Dimethyl o-(4-methylthio-3-methylphenyl) phosphorothioate; *O,O*-Dimethyl o-3-methyl-4-methylthiophenyl phosphorothioate; *O,O*-Dimethyl o-4-(methylmercapto)-3-methylphenyl phosphorothioate; *O,O*-Dimethyl o-4-(methylmercapto)-3-methylphenyl thiophosphate;

O,O-Dimethyl o-[3-methyl-4-(methylthio)phenyl] phosphorothioate; *O,O*-Dimethyl o-[4-(methylthio)-m-tolyl] phosphorothioate; *O,O*-dimethyl o-[4-(methylthio)-m-tolyl] thiophosphate; *O,O*-dimethyl-(o-(4-methylthio)-m-tolyl)phosphorothioic acidester; *O,O*-Dimethyl-o-(4-(methylthio)-m-tolyl)phosphorothioate; *O,O*-Dimethyl-o-3-methyl-4-methylthiophenyl phosphorothioate; *O,O*-dimethyl-o-4-(methylmercapto)-3-methylphenyl phosphorothioate; *O,O*-Dimethyl-o-4-(methylmercapto)-3-methylphenyl thiophosphate; Phosphorothioic acid ((H_3PO_3S)), *O,O*-dimethyl o-4-(methylthio)-m-tolyl ester; Phosphorothioic acid, dimethyl [4-(methylthio)-m-tolyl] ester; Phosphorothioic acid, *O,O*-dimethyl *o*-[4-(methylthio)-*m*-tolyl] ester

Trade Names: B 29493®; BACID®; BAY 29493®; BAYCID®; BAYER 29493®; BAYER 9007®; BAYER S-1752®; BAYTEX®; ENTEX®; LEBAYCID®; MPP®; MPP (pesticide) OMS 2®; PHENTHION®; PILARTEX®; QUELETOX®; S 1752®; SPOTTON®; SULFIDOPHOS®; TALODEX®; TIGUVON®

Chemical Class: Organophosphate

EPA/OPP PC Code: 053301

California DPR Chemical Code: 63 (CAS:55-38-9)

HSDB Number: 1403

UN/NA&ERG Number: UN3018 (liquid)/152

RTECS® Number: TF9625000

EC Number: 200-231-9 [*Annex I Index No.:* 015-048-00-8]

Uses: Not registered for use in the U.S. Not approved for use in EU countries[115]. Used in 20 countries including Australia. There are 23 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Fenthion and its cholinesterase-inhibiting metabolites [40 CFR 180.214]: in or on the following raw agricultural commodities: alfalfa, 5 ppm; alfalfa (hay) 18 ppm; cattle (fat, meat, and meat byproducts) 0.1 ppm; grass 5 ppm; grass (hay) 18 ppm; hogs (fat, meat, and meat byproducts) 0.1 ppm; milk 0.01 ppm (negligible residue); poultry (fat, meat, and meat byproducts) 0.1 ppm; rice 0.1 ppm; and rice (straw) 0.5 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, Not likely to be a human carcinogen

Acute Oral Category: 2, WARNING

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B), severe pollutant

Regulations: Hazard Symbol: T, Xn, N; risk phrases: R21/22; R23; R48/25; R68; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Yellow amber to brown oily liquid. May be colorless when pure. Musty or garlic-like odor. Available in various forms, including emulsifiable concentrates, granules and powders for dusting, ULV liquids and wettable powders. Molecular weight: 278.33; Specific gravity (H_2O:1) = 1.25 @ 20 °C; Boiling point = 80 °C; 105 °C @ 0.01 mmHg; Freezing point/Melting point = 7–7.5 °C; Vapor pressure: 2.8×10^{-6} mmHg at 20 °C; Flash point = 168 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 1. Low solubility in water; solubility = <1 mg/ml @ 22.5 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Combustible. Fenthion may react with strong alkaline materials, or reducing agents such as hydrides to generate highly toxic and flammable phosphine gas. Contact with oxidizing agents may result in the release of toxic phosphorus oxides.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: None. Appendix D (NIOSH Pocket Guide)

ACGIH TLV®[1]: 0.2 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.15 mg/m^3

PAC-2: 27 mg/m^3

PAC-3: 27 mg/m^3

DFG MAK: 0.2 mg/m^3, inhalable fraction TWA; Peak Limitation Category II(2) [skin]

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Analytical Method (IV) Method #5600, Organophosphorus Pesticides.

Permissible Concentration in Water: No criteria found. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, inhalation, skin and/or eye absorption.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms of exposure include nausea, vomiting, abdominal cramps, diarrhea, salivation; headache, dizziness, lassitude (weakness, exhaustion); rhinorrhea (discharge of thin mucus), chest tightness; blurred vision, miosis; cardiac irregularities; muscle fasciculation; dyspnea (breathing difficulty). LD_{50} (oral, rat) = 150–250 mg/kg; LD_{50} (dermal, rat) = >1500 mg/kg.

Long Term Exposure: May cause tumors. May be a neurotoxin. May damage central nervous, respiratory and cardiovascular systems. May cause reproductive and fetal effects.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, plasma cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Also consider complete blood count and chest x-ray following acute overexposure. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.15 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. *Eliminate* all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. *Do not get water inside containers*.

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. Combustible material: may burn but does not ignite readily. Containers may explode when heated. Runoff may pollute waterways. *Fire involving tanks, tank trucks or vehicle loads*, *isolate* for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Highly toxic, may be fatal if inhaled, swallowed or absorbed through skin. Contact with molten substance may cause severe burns to skin and eyes. Avoid any skin contact. Effects of contact or inhalation may be delayed. Runoff from fire control or dilution water may be corrosive and/or toxic and cause pollution. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended[22]. In accordance with ***40CFR165***, follow recommendations for the disposal of pesticides and pesticide containers. Noncombustible containers should be compacted and buried under more than 16 inches/40 cm. of soil[83]. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fenvalerate F:0128

Use Type: Insecticide
CAS Number: 51630-58-1
Formula: $C_{25}H_{22}ClNO_3$
Synonyms: A13-29235; Benzeneacetic acid, 4-chloro-α-(1-methylethyl)-, cyano(3-phenoxyphenyl)methyl ester; Caswell No. 077A; 4-Chloro-α-(1-methylethyl)benzeneacetic acid, cyano(3-phenoxyphenyl)methyl ester; α-Cyano-3-phenoxybenzyl-2-(4-chlorophenyl)-3-methybutyrate; Cyano(3-phenoxyphenyl)methyl ester of 4-chloro-α-(1-methylethyl)benzeneacetic acid; Cyano(3-phenoxyphenyl)methyl 4-chloro-α-(1-methylethyl)benzeneacetate; (IRS)-α-Cyano-3-phenoxybenzyl (RS)-2-(4-chlorophenyl)-3-methybutyrate; α-Cyano-*m*-phenoxybenzyl 2-(*p*-chlorophenyl)-3-methylbutyrate; α-Cyano-3-phenoxybenzyl 2-(4-chlorophenyl) isovalerate; Cyano-(3-phenoxybenzyl)methyl 2-(4-chlorophenyl)-3-methylbutyrate; Cyano-(3-phenoxyphenyl)methyl 4-chloro-α-(1-methylethyl)benzeneacetate; 4-Chloro-α-(1-methylethyl)benzeneacetic acid cyano(3-phenoxyphenyl) methyl ester; Fenvaleriato (Spanish); Phenvalerate
Trade Names: BELMARK®; ECTIN®; FENKILL®; EVERCIDE®; KORANDA®; PYDRIN®; S 5602®; SANMARTON®; SD 43775®; SUMICIDE®; SUMICIDIN®; SUMICIDINE®; SUMIFLEECE®; SUMIFLY®; SUMIPOWER®; SUMITICK®; TIRADE®; WL 43775®
Chemical Class: Pyrethroid
EPA/OPP PC Code: 109301 (former Nos. 295700 or 296700)
California DPR Chemical Code: 1963
HSDB Number: 6640
UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151
RTECS® Number: CY1576300
EC Number: 257-326-3
Uses: Not approved for use in EU countries[115]. Fenvalerate is one of the most versatile synthetic pyrethroid insecticides. It is mostly used in agriculture and on cattle, but also in homes and gardens. It acts as a stomach poison against a wide variety of leaf and fruit-eating insects such as bollworm fruit and shoot borers and aphids. Crops on which it is used include cotton, cauliflower, okra, vines and fruits. It is also used in public health and animal husbandry. It is effective against pests whose strains are resistant to organochlorine, organophosphorus, and carbamate insecticides. Not registered for use in EU countries[115]. Not registered for use in the U.S. Used in 20 countries. There are 38 global suppliers[97].
U.S. Maximum Allowable Residue Levels for Fenvalerate [40 CFR 180.379(a)(1)]: Almond, hulls 15.0 ppm; almond 0.2 ppm; apple 2.0 ppm; artichoke, globe 0.2 ppm; bean, dry, seed 0.25 ppm; bean, snap, succulent 2.0 ppm; broccoli 2.0 ppm; blueberry 3.0 ppm; cabbage 10.0 ppm; caneberry subgroup 13A, 3.0 ppm; cantaloupe 1.0 ppm; carrot, roots 0.5 ppm; cattle, fat 1.5 ppm; cattle, meat byproducts 1.5 ppm; cattle, meat 1.5 ppm; cauliflower 0.5 ppm; collards 10.0 ppm; corn, grain 0.02 ppm; corn, forage 50.0 ppm; corn, stover 50.0 ppm; corn, sweet, kernel plus cob with husks removed 0.1 ppm; cotton, undelinted seed 0.2 ppm; cucumber 0.5 ppm; currant 3.0 ppm; eggplant 1.0 ppm; eldeberry 3.0 ppm; English walnut 0.2 ppm; fruit, stone 10.0 ppm; goat, fat 1.5 ppm; goat, meat byproducts 1.5 ppm; goat, meat 1.5 ppm; gooseberry 3.0 ppm; hazelnut 0.2 ppm; hog, fat 1.5 ppm; hog, meat byproducts 1.5 ppm; hog, meat 1.5 ppm; horse, fat 1.5 ppm; horse, meat byproducts 1.5 ppm; horse, meat 1.5 ppm; huckleberry 3.0 ppm; melon, honeydew 1.0 ppm; milk 0.3 ppm; milk, fat 7.0 ppm; muskmelon 1.0 ppm; peanut 0.02 ppm; pear 2.0 ppm; pea 1.0 ppm; pea, dry, seed 0.25 ppm; pecan 0.2 ppm; pepper 1.0 ppm; potato 0.02 ppm; pumpkin 1.0 ppm; radish, roots 0.3 ppm; radish, tops 8.0 ppm; sheep, fat 1.5 ppm; sheep, meat byproducts 1.5 ppm; sheep, meat 1.5 ppm; soybean 0.05 ppm; squash, summer 0.5 ppm; squash, winter 1.0 ppm; sugarcane, cane 2.0 ppm; sunflower, seed 1.0 ppm; tomato 1.0 ppm; turnip, greens 20.0 ppm; turnip, roots 0.5 ppm; watermelon 1.0 ppm. ***[40 CFR 180.379(a)(2)]*** 0.05 ppm (I) in or on food commodities (other than those already covered by a higher tolerance as a result of use on growing crops) in food-handling establishments where food products are held, processed, or prepared. (ii) Application of Fenvalerate shall be limited to space treatment with a maximum of 0.5 fluid ounce of a 0.05% active ingredient solution/1,000 ft^3 of space, or as a contact spray applied as a coarse wet spray at a maximum of 1 gallon of a 0.2% active ingredient solution/1,000 ft^2 of surface. Food must be removed or covered during treatment. Spray should not be applied directly to surfaces or utensils that may come into contact with food. Food-contact surfaces and equipment should be thoroughly cleaned with an effective cleaning compound and rinsed with potable water before using. (iii) Application of Fenvalerate shall be limited to space treatment with a maximum of 1.0 fluid ounce of a 0.25-percent active ingredient solution/1,000 ft^3 of space, or as a contact spray applied as a coarse wet spray at a maximum of 1 gallon of a 0.05-percent active ingredient solution per 1,000 ft^2 of surface, or as a pressurized spot/crack and crevice spray of a 0.25-percent solution. Food must be removed or covered during treatment. Spray should not be applied directly to surfaces or utensils that may come into contact with food. Food-contact surfaces and equipment should be thoroughly cleaned with an effective cleaning compound and rinsed with potable water before using. (iv) To assure safe use of the additive, its label and labeling shall conform to that registered with the U.S. Environmental Protection Agency, and it shall be used in accordance with such label and labeling. ***[40 CFR 180.379(a)(3)]*** in or on Soybean, hulls: 1.0 ppm. ***[40 CFR 185.300 (c)]*** in or on Okra: 0.1 ppm.
Human toxicity (long-term)[101]: Very low–175.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Extra high–0.01433 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans; IARC, Group 3 not classifiable as to its carcinogenicity in humans.

Acute Oral Category: 2, WARNING

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

U.S. DOT Marine pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant

WGK (German Aquatic Hazard Class): 3-Highly water polluting

Description: Yellowish to brown viscous liquid. Also available as an emulsifiable concentrate, which is corrosive. Technical grade is a brown viscous liquid. Faint chemical odor. Boiling point = decomposes. Molecular weight 419.93; Specific gravity (H_2O:1) = 1.17 @ 23 °C; Vapor pressure = 1.1×10^{-8} mmHg @ 25 °C; 3.7×10^{-7} mmHg @ 25 °C. Practically insoluble in water; solubility = 0.085 ppm @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers, chlorates, nitrates, peroxides, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Moisture may cause hydrolysis or other forms of decomposition. Emulsifiable concentrate is corrosive.

Permissible Exposure Limits in Air: NIOSH(2) IDLH = 5,000 ppm

OSHA PEL: 5 mg/m^3 TWA

NIOSH REL: 5 mg/m^3 TWA

ACGIH TLV®[1]: 5 mg/m^3 TWA

STEL set by HSE(33) = 10 mg/m^3.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18], as pyrethroid.

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 180 µg/L. Runoff from spills or fire control may cause water pollution. Acceptable Daily Intake (ADI) =0.02 mg/kg as pyrethroid.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). Emulsifiable concentrate is corrosive to skin, eyes, and respiratory tract. LD_{50} (oral, rat) = <100 mg/kg; LD_{50} (dermal, rabbit) = >2.5 g/kg.

Long Term Exposure: May cause tumors. High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse. Endocrine disruptor.

Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to their sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m^3:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, liquid, toxic, n.o.s., require a shipping label of "poisonous materials." This material falls in DOT Hazard Class 6.1. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and oxygen and hydrogen chloride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with ***40CFR165***, follow recommendations for the disposal of pesticides and pesticide containers.

Ferbam F:0130

Use Type: Fungicide
CAS Number: 14484-64-1
Formula: $C_9H_{18}FeN_3S_6$; $Fe[(CH_3)_2NCS_2]_3Fe$
Synonyms: Carbamic acid, aimethyldithio-, iron salt; Dimethylcarbamo dithioic acid, iron complex; Dimethylcarbamodithioic acid, iron(3+) salt; Dimethyldithiocarbamic acid, iron salt; Dimethyldithiocarbamic acid, iron(3+) salt; ENT 14,689; Ferbam, iron salt; Ferric dimethyl dithiocarbamate; Iron dimethyldithiocarbamate; Iron(III) dimethyldithio carbamate; Iron, tris(dimethylcarbamodithioato-*S,S*′)-, (OC-6-11)-; Iron, tris(dimethylcarbamodithioato-*S,S*′-)-; Iron, tris(dimethyldithiocarbamato)-; Iron tris(dimethyldithiocarbamate); Tris(dimethylcarbamo dithioato-*S,S*′) iron; (OC-6-11)-tris(Dimethylcarbamo dithioato-*S,S*′)iron; Tris(Dimethyldithiocarbamato)iron; Tris(*N,N*-dimethyldithiocarbamato)iron(III)
Trade Names: AI3-14689®; AAFERTIS®; APPLE DUST No. 1®[C]; BERCEMA FERTAM 50®; CASWELL No. 458®; FERBAM 50®; FERBECK®; FERMATE FERBAM FUNGICIDE®[C]; FERMOCIDE®; FERRADOUR®; FERRADOW®; FUKLASIN ULTRA®; HEXAFERB®; HOKMATE®; KARBAM BLACK®; KARBAM CARBAMATE®; KNOCKMATE®; NIACIDE®; STAUFFER FERBAM®; SUP'R-FLO FERBAM FLOWABLE®; TRICARBAMIX®[C]; TRIFUNGOL®; VANCIDE FE95®[C]
Chemical Class: Dithiocarbamate
EPA/OPP PC Code: 034801
California DPR Chemical Code: 288
HSDB Number: 1645
UN/NA & ERG Number: UN3077(solid)/171; UN2771(solid)/151
RTECS® Number: NO8750000
EC Number: 238-484-2 [*Annex I Index No.:* 006-051-00-5]
Uses: Registered for use in the U.S. and Canada. Not approved for use in EU countries[115]. A dimethyl-dithiocarbamate fungicide. It is widely used, together with other fungicides, to control Postbloom Fruit Drop (PFD) on citrus crops, and as a foliar protectant against scab, rust, mold and many fungus disease on fruits, vegetables, melons and ornamentals. It is registered in several states for use on currents and gooseberries to control leaf spot disease, and on apple, crabapple, hawthorn and quince to control cedar-apple rust disease. It is used to control rust disease on shrubs and ornamentals.
U.S. Maximum Allowable Residue Levels for Ferbam (40 CFR 180.114): In or on apple 7 ppm; apricot 7 ppm; asparagus 7 ppm; bean 7 ppm; blackberry 7 ppm; blueberry 7 ppm; boysenberry 7 ppm; cabbage 7 ppm; cherry 7 ppm; cranberry 7 ppm; cucumber 7 ppm; dewberry 7 ppm; fruit, stone, group 12, 7 ppm; grape 7 ppm; guava 7 ppm; lettuce 7 ppm; loganberry 7 ppm; mango 7 ppm; nectarine 7 ppm; papaya 7 ppm; pea 7 ppm; peach 7 ppm; pear 7 ppm; raspberry 7 ppm; squash 7 ppm; tomato 7 ppm; youngberry 7 ppm.
Human toxicity (long-term)[101]: Very low–140.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Low–437.01653 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: IARC, Group 3 not classifiable as to its carcinogenicity in humans. Acute Oral Category: 4, Caution, not acutely toxic
Health Advisory: Mutagen, Developmental/Reproductive Toxin
EPA Hazardous Waste Number (RCRA No.): U396
EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R36/37/38; R50/53; safety phrases: S2; S60; S61 (see Appendix 1)
Description: Ferbam is a dark brown to black powder or granular solid. Odorless. Molecular weight = 416.5[9]; Specific gravity (H_2O:1) = 0.6; Boiling point = (decomposes)[9]; Freezing/Melting point = (decomposes) 180 °C[9]; Vapor pressure = ~0 mmHg @ 20 °C[9]. Practically insoluble in water; solubility = 0.01% @ 20 °C[9].
Incompatibilities: May be a combustible material. Dust may form explosive mixture in air. Water, acid, oxidizing materials. Heat, or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide. Flammable gases are generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Decomposition products in fire include oxides of nitrogen and sulfur. Corrosive to iron, copper brass and zinc metals, especially in the presence of moisture. Heat alkalies (lime), moisture can cause decomposition. Decomposes on prolonged storage. Degradation produces ethylene thiourea.
Permissible Exposure Limits in Air: OSHA PEL: 15 mg/m^3 (total dust) TWA
NIOSH REL: 10 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3, inhalable fraction, TWA; not classifiable as a human carcinogen
NIOSH IDLH: 800 mg/m^3
DFG MAK: Danger of skin sensitization (dithiocarbamates used as rubber components).
Determination in Air: Collection by filter; Gravimetric; NIOSH IV, Method #0500, Particulates NOR (total)[18].
Permissible Concentration in Water: State Drinking Water Guidelines: Maine: 4 ppb.
Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = ranges from negative to <2. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, ingestion, eye and/or dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Ferbam can affect you when breathed in. Breathing ferbam can irritate the nose and throat. Ferbam can cause skin and eye irritation. High exposure to ferbam may affect the nervous system and

thyroid; dizziness, confusion, loss of coordination, seizures, paralysis, and coma. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups.

LD_{50} (oral, rat) = >1000 mg/kg; LD_{50} (dermal, rat) = >4000 mg/kg.

Long Term Exposure: May cause tumors. Repeated or prolonged contact with skin may cause allergy with skin rash and itching. Exposure to ferbam may damage the kidneys and liver. Ferbam may damage the developing fetus.

Points of Attack: Eyes, skin, respiratory system, gastrointestinal tract.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Kidney function tests. Liver function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with an organic vapor/acid gas cartridge (specific for organic vapors, hydrogen chloride (HCl), acid gas and SO_2) with a dust/mist filter. Splash-proof safety goggles should be worn while handling this chemical. Alternatively, a full-face respirator, equipped as above, may be used to provide simultaneous eye and respiratory protection[88].

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9. Dithiocarbamate pesticides, solid, toxic, require a label of "poisonous materials." They usually fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and sulfur. Combustible. Extinguish fire using an agent suitable for type of surrounding fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. A potential candidate for liquid injection incineration at a temperature range of 650 to 1600 °C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1600 °C and residence times of seconds for liquids and gases, and hours for solids[83]. In accordance with ***40CFR165***, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Ferric sulfate F:0180

Use Type: Herbicide, Molluscicide, Agricultural product constituent

CAS Number: 10028-22-5

Formula: $Fe_2O_{12}S_3$

Synonyms: Diiron trisulfate; Iron persulfate; Iron sesquisulfate; Iron(III) sulfate; Iron sulfate (2:3); Iron (3+) sulfate; Iron tersulfate; Sulfato ferrico (Spanish); Sulfuric acid, iron(III) salt (3:2); Sulfuric acid, iron(3+) salt (3:2)

Trade Names: GREENMASTER AUTUMN®; MAXICROP MOSS KILLER®; VITAX MICRO GRAN®; VITAX TURF TONIC®

Chemical Class: Inorganic

EPA/OPP PC Code: 034902

California DPR Chemical Code: 1811

HSDB Number: 6311

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: NO8505000

EC Number: 233-072-9

Uses: Ferric sulfate is used on forage alfalfa, almonds, nurseries and structural pest control. This material is also used in pigments, textile dyeing, water treatment, and metal pickling

Regulatory Authority and Advisory Information: Acute Oral Category: 3, CAUTION
Health Advisory: Mutagen
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)
WGK (German Aquatic Hazard Class): 1-Low hazard to waters

Description: Ferric sulfate is a grayish-white powder or yellow lumpy crystals. Molecular weight = 399.88; Boiling point = (decomposes); Freezing/Melting point = (decomposes) 480 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Slightly soluble in water.

Incompatibilities: Hydrolyzed slowly in aqueous solution. Incompatible with magnesium, aluminum. Corrosive to copper and its alloys, mild and galvanized steel. Light sensitive.

Permissible Exposure Limits in Air: OSHA PEL: None
NIOSH REL: 1 mg[Fe]/m^3 TWA
ACGIH TLV®[1]: 1 mg[Fe}/m^3 TWA; 0.1 mg/m^3 TWA *as persulfates*
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 6.1 mg/m^3
PAC-2: 6.1 mg/m^3
PAC-3: 35 mg/m^3

Determination in Air: Filter; Acid; Inductively coupled plasma; NIOSH IV, Method #7300, Elements[18].

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 300(Fe)μg/L

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation:* May cause irritation of nose and throat, coughing and difficulty in breathing 0.075 mg/m^3 for 2 hours did not cause any change in breathing functions. Inhaling iron oxide fumes may cause a pneumoconiosis in the lungs. Iron oxide fumes can cause “metal fume fever.” Irritation of eyes, skin, mucous membrane; abdominal pain, diarrhea, vomiting. *Skin:* Contact causes irritation. Remove promptly. *Eyes:* Contact causes irritation. *Ingestion:* May cause irritation of mouth and stomach, nausea, vomiting, diarrhea, drowsiness, liver damage, coma and death. The estimated lethal dose is 30 g (one ounce).

Long Term Exposure: Excessive intake of iron compounds may result in increased accumulation of iron in the body, especially the liver, spleen and lymphatic system. May cause nausea, vomiting, stomach pain, constipation, and black bowel movements. Inhalation of iron dusts may cause mottling of the lung. Prolonged or repeated high exposure may cause liver damage. Prolonged eye contact can cause a brownish discoloration of the eye. Repeated overexposure may cause kidney stones. May cause reproductive and fetal effects.

Points of Attack: Eyes, skin, respiratory system, liver, lungs, gastrointestinal tract.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. If symptoms develop or overexposure is suspected, the following may be useful: Blood test for iron level (serum iron). Liver function tests. Lung function tests. For those exposed to this chemical, taking dietary supplements or vitamins containing iron is not recommended without medical advice.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. The symptoms of metal fume fever may be delayed for 4–12 hours following exposure: it may last <36 hours.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposures *over 1 mg/m³* of iron, use an NIOSH/MSHA- or European Standard EN 149-approved respirator equipped with particulate (dust/fume/mist) filters. *Where potential for high exposures exists*, use an NIOSH/MSHA- or European Standard EN 149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use an NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from light, moisture, aluminum, magnesium, copper and its alloys, zinc, galvanized and mild steels. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until cleanup is complete. Ventilate area of spill or leak. Absorb liquids containing ferric sulfate in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. Collect powdered material in the most convenient manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of sulfur and iron. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See ***40 CFR*** Parts 261.3 for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations. For heptahydrate, treat with soda ash or dilute NaOH to precipitate iron. Separate any precipitate and landfill.

Fipronil F:0243

Use Type: Insecticide, Veterinary medicine

CAS Number: 120068-37-3

Formula: $C_{12}H_4Cl_2F_6N_4OS$

Synonyms: 5-Amino-1-(2,6-dichloro-4-(trifluoromethyl) phenyl)-4-(1,*R,S*)-(trifluoromethyl)sulfinyl-1*H*-pyrazole-3-carbonitrile; 5-Amino-3-cyano-1-(2,6-dichloro-4-trifluoromethylphenyl)-4-trifluoromethylsulfinylpyrazole; (±)-5-Amino-1-(2,6-dichloro-α,α,α-trifluoro-*p*-tolyl)-4-trifluoromethylsulfinylpyrazole-3-carbonitrile; 1*H*-Pyrazole-3-carbonitrile, 5-amino-1-(2,6-dichloro-4-(trifluoromethyl)phenyl)-4-[(trifluoromethyl) sulfinyl]-

Trade Names: BES® 602; CEASEFIRE®; CHIPCO®; COMBAT®; FRONTLINE; MB-46030®; H&G®; ICON®; MAXFORCE® ANT STATION; MAXFORCE® ROACH STATION; REGENCY SOFION®; REGENT®; REGENT® 500-FS; TERMIDOR® L VI-NIL

Chemical Class: Pyrazole; Phenylpyrazole; Organofluorine

EPA/OPP PC Code: 129121

California DPR Chemical Code: 3995

HSDB Number: 7051

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: UQ4430250

EC Number: [*Annex I Index No.:* 608-055-00-8[

Uses: Not approved for use in EU countries[115]. Fipronil was introduced into the U.S. in 1996 for use in animal health and indoor pest control. It is the constituent of many products for controlling a wide spectrum of domestic animal and residential pests.

U.S. Maximum Allowable Residue Levels for Fipronil and its metabolites 5-amino-1-[2,6-dichloro-4-(trifluoromethyl)phenyl]-4-[(trifluoromethyl) sulfonyl] -1H-pyrazole-3-carbonitrile and 5-amino-1-[2,6-dichloro-4-(trifluoromethyl)phenyl]-4-(trifluoromethyl)thio)-1H-p yrazole-3-carbonitrile and its photodegradate 5-amino-1-[2,6-dichloro-4-(trifluoromethyl)phenyl]-4-[(1R,S)-(trifluoromethyl)]-1H-pyrazole-3-carbonitrile [40 CFR 180.517 (a)]: in or on the following items at the levels specifies: corn, field, grain 0.02 ppm; corn, field, stover 0.30 ppm; corn, field, forage 0.15 ppm; egg 0.03 ppm; fat of cattle, goat, horse and sheep 0.40 ppm; hog fat 0.04 ppm; hog liver 0.02 ppm; hog meat 0.01 ppm; hog meat byproducts, except liver 0.01 ppm; liver of cattle, goat, horse and sheep 0.10 ppm; milk, fat (reflecting 0.05 ppm in whole milk) 1.50 ppm; meat byproducts, except liver of cattle, goat, horse and sheep 0.04 ppm; meat of cattle, goat, horse and sheep 0.04 ppm; poultry fat 0.05 ppm; poultry meat 0.02 ppm; poultry meat byproducts 0.02 ppm; rice, grain 0.04 ppm; rice, straw 0.10 ppm.

Human toxicity (long-term)[101]: Extra high–0.14 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.31368 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Acute Oral Category: 2, WARNING

Health Advisory: Endocrine disruptor (S!)

EPA Oral reference dose (RfD) = 2.0×10 mg/kg/day based on the NOAEL for chronic toxicity (0.500 ppm or 0.019 mg/kg/day).

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23/24/25; R48/25; R50/53; safety phrases: S1/2; S24; S28; S36/37; S38; S45; S60; S61 (see Appendix 1)

Description: White crystalline solid. Molecular weight = 437.16; Specific gravity (H_2O:1) = 1.5–1.7; Boiling point = (decomposes); Freezing/Melting point = 201 °C; Vapor pressure = 3 00×10^{-8} mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Low solubility in water; solubility = 1.9 ppm.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal and eye contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Highly toxic. Contact with eyes or skin may cause irritation or injury. Harmful if swallowed. LD_{50} (oral, rat) = 100 mg/kg; LD_{50} (dermal, rabbit) = 354 mg/kg. Fipronil-desulfinyl (breakdown product): LD_{50} (oral, rat) = 15 (female) –18 (male) mg/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. Kidney, liver and thyroid toxin. Neurotoxin. Animal tests indicated that this chemical may cause reproductive and fetal effects. Bioconcentrates in tissues.

Points of Attack: Thyroid, bones, kidney, liver, testicular. Central nervous system.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Examination of the nervous system. Liver and kidney function tests. More than light alcohol consumption may exacerbate liver damage. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon, hydrogen chloride, and hydrogen fluoride. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Fluazifop-butyl F:0244

Use Type: Herbicide

CAS Number: 69806-50-4; 79241-46-6 (*p*-butyl isomer)

Formula: $C_{19}H_{20}F_3NO_4$

Synonyms: Butyl(*RS*)-2-[4-((5-(trifluoromethyl)-2-pyridinyl)oxy)phenoxy]propanoate;(±)-Butyl-2-[4-(((5-trifluoro-methyl)-2-pyridinyl)oxy)phenoxy]propanoate; Butyl 2-[4-((5-(trifluoromethyl)-2-pyridyl)oxy)phenoxy]propionate; Caswell No. 460C; Propanoic acid, 2-[4-((5-(trifluoromethyl)-2-pyridinyl)oxy)phenoxy]-,butyl ester; Propionic acid, 2-[*p*-((5-(trifluoromethyl)-2-pyridyl)oxy)phenoxy]-, butylester; (*RS*)-2-[4-(5-Trifluoromethyl-2-pyridyloxy)]-phenoxy] propanoic acid, butyl ester; 2-[4-((5-(Trifluoromethyl)-2-pyridinyl)oxy)-phenoxy]propanoic acid, butyl ester

Trade Names: FUSILADE®[C]; FUSILADE® MAX (P-butyl); FUSION®; GRASS-B-GONE®; Greencrop; HACHE UNO SUPER®; HORIZON®; ICI-A0009®; ONESIDE®; ONESIDE EC®; ORNAMEC®; PP 009®; SL-236®; TF 1169®; TS-7236®; TORNADO®

Chemical Class: Aryloxyphenoxypropionate; Organofluorine

EPA/OPP PC Code: 122805 (Fluazifop-butyl); 122809 (Fluazifop-*p*-butyl)

California DPR Chemical Code: 2186 (Fluazifop-butyl)

HSDB Number: 6644; 5815 (Fluazifop-*p*-butyl)

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: UA3000000

EC Number: 274-125-6 607-304-00-8

Uses: Fluazifop-butyl is a selective post-emergence herbicide. Its principal uses in California is on rights-of-way, landscapes, almonds, cotton, and outdoor container nurseries. Not approved for use in EU countries[115]. Not registered for use in the U.S. Used in southeast Asia. There are 18 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Fluazifop-butyl (+ or -)-2-(4-(5-(trifluoromethyl)-2-pyridinyl)oxy) phenoxy propanoic acid (fluazifop), both free and conjugated and of (+ or -)-2-(4-(-(trifluoromethyl)-2-pyridinyl) oxy)phenoxy propanoate (fluazifop-butyl), all expressed as fluazifop [40 CFR 180.411(a)]: in or on the following raw agricultural commodities: cattle, fat 0.05 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts 0.05 ppm; cottonseed 0.1 ppm; eggs 0.05 ppm; goats, fat 0.05 ppm; goats, meat 0.05 ppm; goats, meat byproducts 0.05 ppm; hogs, fat 0.05 ppm; hogs, meat 0.05 ppm; hogs, meat byproducts 0.05 ppm; horses, fat 0.05 ppm; horses, meat 0.05 ppm; horses, meat byproducts 0.05 ppm; milk 0.05 ppm; poultry, fat 0.05 ppm; poultry, meat 0.05 ppm; poultry, meat byproducts 0.05 ppm; sheep, fat 0.05 ppm; sheep, meat 0.05 ppm; sheep, meat byproducts 0.05 ppm; and soybeans 1.0 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.411(b)]:*** in or on the following raw agricultural commodities: peppers, tabasco 1.0 ppm. ***[40 CFR 180.411(c)]***: in or on the raw agricultural commodity: carrots 2.0 ppm; endive 6.0 ppm; macadamia nuts 0.1 ppm; onions (bulb) 0.5 ppm; pecans 0.05 ppm; spinach 6.0 ppm; stone fruits 0.05 ppm; and sweet potatoes 0.5 ppm. ***[40 CFR 180.411(d)]***: in or on the raw agricultural commodities: asparagus 3.0 ppm; coffee 0.1 ppm; and rhubarb 0.5 ppm.

Human toxicity (long-term)[101]: Low–70.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–62.61862 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

California Prop.65: Listed; Developmental toxin

Toxicity (oral) Category 3, Caution, Slightly toxic

Health Advisory: Developmental/Reproductive Toxin, Skin irritant/sensitizer, Developmental toxin (TRI)

AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0% as Fluazifop-butyl

Hazard Codes: T, N; risk phrases: R61; R50/53; safety phrases: S53; S45; S60; S61 (see Appendix 1); *P-isomer*: Hazard Codes: Xi; risk phrases: R43; R63; safety phrases: S2; S29; S36/37; S46; S60; S61 (see Appendix 1)

Description: Pale yellow liquid. Odorless. Molecular weight = 383.37; Specific gravity (H_2O:1) = 1.214; Boiling point = 164.5 °C; (P-isomer decomposes before boiling); Freezing/Melting point = 4.8 °C; 13 °C; (P-isomer is <1 °C); Vapor pressure = 4.1×10^{-7} mmHg @ 20 °C; 0.055 mmHg @ 20 °C; Flash point = 37 °C. Slightly soluble in water (both isomers); solubility = <1 mg/L @ 25 °C.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4000 μg[Fl]/L; Federal Drinking Water Guidelines: EPA 2000 μg[Fl]/L; State Drinking Water Standards: California 2000 μg[Fl]/L; Delaware 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[Fl]/L; Maine 1680 μg[Fl]/L. The EPA maximum contaminant level (MCL) in water is 0.7 mg/L and is enforceable.

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in marine organisms. According to Fluoride Action Network Pesticide Project, “the potential for bioconcentration in aquatic organisms is very high. Highly toxic to zooplankton.”

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. LD_{50} (oral, rat) = 2000–4000+ mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg. Both isomers have low toxicity; the P-isomer is slightly less toxic.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause reproductive and fetal effects. May cause skin sensitization.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney, reproductive system, bones. *P-isomer:* Possible skin sensitizer. Kidney, spleen and liver toxin. May cause eye cataracts.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes fluorine and oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Fire Extinguishing: Hazardous decomposition includes fluorine and nitrogen oxides. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with ***40CFR165***, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

California DPR Chemical Code: 3898

HSDB Number: 7264

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: UR8085000

Uses: Used to control *Sclerotinia* blight on peanuts and late blight and white mold on potatoes.

U.S. Maximum Allowable Residue Levels for Fluazinam [40 CFR 180.574 (a)]: peanuts 0.02 ppm; potatoes 0.02 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Suggested evidence of human carcinogenicity

Toxicity (oral) Category: 3, CAUTION: Category: 4, Caution (depending on formulation)

Description: Light yellow crystalline solid or powder. Pungent odor. Commercial product may be a soluble concentrate. Molecular weight = 464.99; 465.09; Specific gravity (H_2O:1) = 1.259 @ 25 °C; 1.81; Freezing/Melting point = 116 °C. Slightly soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >4000 mg/kg.

Long Term Exposure: Skin and possible lung sensitizer. May cause asthma and dermatitis or acne. May cause liver damage.

Points of Attack: Liver, skin, lungs.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose lung and skin allergy. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention.

Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until an expert verifies that the area has been properly cleaned.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen fluoride and hydrogen chloride gases. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83]. It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Fluchloralin F:0246

Use Type: Herbicide

CAS Number: 33245-39-5

Formula: $C_{12}H_{13}ClF_3N_3O_4$

Synonyms: Benzenamine, *N*-(2-chloroethyl)-2,6-dinitro-*N*-propyl-4-(trifluoromethyl)-; *N*-(2-Chloroethyl)-2,6-dinitro-*N*-propyl-4-(trifluoromethyl)aniline; *N*-(2-Chloroethyl)-2,6-dinitro-*N*-propyl-4-(trifluoromethyl) benzenamide; *N*-(2-Chloroethyl)-α,α,α-trifluoro-2,6-dinitro-*N*-propyl-*p*-toluidine; *N*-(2-Chloroethyl)-2,6-dinitro-*N*-propyl-4-(trifluoromethyl)benzenamine; *N*-Propyl-*N*-(2-chloroethyl)-2,6-dinitro-4-trifluoromethylaniline; *N*-Propyl-*N*-(2-chloroethyl)-α,α,α-trifluoro-2,6-dinitro-*p*-toluidine

Trade Names: BAS 392-H®; BASALIN®[C]

Chemical Class: Chloroaniline

EPA/OPP PC Code: 108701

California DPR Chemical Code: 1848

HSDB Number: 3919

UN/NA & ERG Number: UN3077(solid)/171; UN1590/153

RTECS® Number: XU5160000

EC Number: 251-426-0

Uses: A pre-emergence herbicide used on dry and succulent peas and beans, okra, peanuts, soybeans, sunflowers and cotton. Not currently registered in the U.S. Not listed for use in EU countries[115]. Used in India. There are 16 global suppliers[97].

Human toxicity (long-term)[101]: Very low–46200.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–7.09937 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Health Advisory: Mutagen

Acute Oral Category: 3, CAUTION

Description: Orange-yellow crystalline solid. Faint, unusual odor. Commercial products may be available as flammable liquid concentrates. Molecular weight = 355.71; Freezing/Melting point = 42 °C; Vapor pressure = 4×10^{-5} mmHg @ 20 °C; Flash point = 29.5 °C. Low solubility in water; solubility = 10 ppm; <1 ppm @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Forms toxic fumes of nitrogen oxides, chlorine, and fluorine when heated to decomposition. Light may cause slow decomposition. Slightly corrosive, especially in the presence of moisture.

Determination in Air: Filter; none; Gravimetric; NIOSH IV[18] [Particulates NOR; #0500 (total), #0600 (respirable)]

Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. May be harmful if swallowed; potential liver toxin. A skin sensitizer. LD_{50} (oral, rat) = 3 g/kg; LD_{50} (dermal, rat) = >4 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause contact dermatitis and/or asthma; liver problems. May cause reproductive and fetal effects.

Points of Attack: Skin, lungs, liver, bones, reproductive system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: *Clothing:* Avoid dermal contact with chloroaniline. Wear solvent-resistant gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove, clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day and put on before work. *Eye protection:* Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles and face shield when working with powders or dust, unless full facepiece respiratory protection is worn.

Respirator Selection: Where potential exists for exposures to chloroaniline, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode. All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in theNIOSH/NPPTL Certified Equipment List, which is available on the NIOSH web site.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers (such as perchlorates, peroxides, permanganates, chlorates and nitrates), since violent reactions occur. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. *p-isomer:* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen fluoride and hydrogen chloride. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve in a combustible solvent, such as alcohol or benzene, and spray into a furnace equipped with afterburner and scrubber[24]. Alternatively, pour into a mixture of sand and soda ash and burn in a furnace with paper as a fuel. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Flucythrinate F:0248

Use Type: Insecticide, Acaricide

CAS Number: 70124-77-5

Formula: $C_{26}H_{23}F_2NO_4$

Synonyms: AC 222705; Benzeneacetic acid, 4-(difluoromethoxy)-α-(1-methylethyl)-, cyano(3-phenoxyphenyl)methyl ester; (±)-Cyano(3-phenoxyphenyl)methyl(+)-4-(difluoromethoxy)-α(1-methylethyl)benzeneacetate; (+)-Cyano-(3-phenoxyphenyl)methyl (+)-4-(difluoromethoxy)-α-(1-methylethyl) benzene acetate; (RS)-Cyano-(3-phenoxyphenyl)methyl (S)-4-(difluoromethoxy)-α-(1-methylethyl)-benzeneacetate; (+)-α-Cyano-*m*-phenoxybenzyl alcohol ester of (+)-2-(*p*-difluoromethoxy)phenyl-3-methylbutyric acid; (RS)-α-Cyano-3-phenoxybenzyl (S)-2-(4-difluoromethoxyphenyl)-3-methylbutyrate; Fluorocythrin; OMS 2007

Trade Names: AASTAR®[C]; CYBOLT®; CYTHRIN®; FUCHING JUJR®; GUARDIAN®[C]; PAYOFF®[C]; STOCK GUARD®; TOMAHAWK®

Chemical Class: Pyrethroid

EPA/OPP PC Code: 118301

California DPR Chemical Code: 2168

HSDB Number: 6647

UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151

RTECS® Number: CY15782000

EC Number: 274-322-7

Uses: Not approved for use in EU countries[115]. Not currently registered in the U.S. This is a synthetic pyrethroid used to control pests in apples, cabbage, head lettuce, pears, corn and cotton, but it was used primarily on cotton.

Human toxicity (long-term)[101]: Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.00707 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Acute

Oral Category: 1, DANGER–POISON

Health Advisory: Endocrine disruptor (Possible)

Description: Dark amber, viscous liquid. Faint odor, like esters. Commercial product may be powders or emulsifiable concentrates. Molecular weight = 451.47; Specific gravity (H_2O:1) = 1.188 @ 22 °C; Boiling point = 108 °C @ 0.35 mmHg; Vapor pressure = 8.7×10^{-9} mmHg @ 20 °C; 1.16×10^{-8} mmHg @ 25 °C; 0.0012 mmHg @ 25 °C; Flash point = 45 °C. Practically insoluble in water; solubility = 0.5 ppm @ 21 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Keep away from alkaline materials. Incompatible with oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Contact with moisture may cause hydrolysis or other forms of decomposition.

Permissible Exposure Limits in Air: NIOSH(2) IDLH = 5,000 ppm

OSHA PEL: 5 mg/m^3 TWA

NIOSH REL: 5 mg/m^3 TWA

ACGIH TLV®[1]: 5 mg/m^3 TWA

STEL set by HSE(33) = 10 mg/m^3.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18], as pyrethroid.

Permissible Concentration in Water: Acceptable Daily Intake (ADI) =0.02 mg/kg as pyrethroid

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, absorbed through the skin

Harmful Effects and Symptoms

Short Term Exposure: Flucythrinate can cause extreme eye irritation. May be fatal if inhaled or through dermal absorption. Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, rat) = 67 mg/kg; LD_{50} (dermal, rabbit) = >1000 mg/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. High or repeated exposure may cause lung allergy with cough, wheezing and/or shortness of breath or hay fever symptoms with sneezing, runny or stuffy nose. Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact may cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse. A possible neurotoxin.

Points of Attack: Respiratory system, skin, eyes and central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to their sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m³:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Heat of decomposition releases oxides of nitrogen and carbon and hydrogen fluoride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers.

EC Number: [*Annex I Index No.:* 612-144-00-7]

Uses: Commonly used on tobacco. Not listed for use in EU countries[115]. Registered for use in the U.S.

Fish toxicity (threshold): Hazardous (toxic) to fish and invertebrates.

Regulatory Authority and Advisory Information: RCRA: it is ignitable (D001) and may contain xylene U239

SARA 312/313 hazard Class: Acute, Chronic, and Fire Hazard

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer

U.S. DOT Marine pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R36/38; R43; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Yellow crystalline solid. Solution in water is reddish-brown. Solvent-like odor. Molecular weight = 421.735; Boiling point = (decomposes); Freezing/Melting point = 102 °C; Vapor pressure = 3.2×10^{-2} mmHg; Flash point = (solid) >250 °C; ~ 60 °C (solution); Autoignition in solvent such as xylene = (est.) 400 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 0. Low solubility in water; solubility = 0.1 mg/L @ 25 °C. Physical and toxicological (including NFPA) properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Dust may form explosive mixture with air. Dintroanilines can be explosive and are strong oxidizers. Contact with reducing agents, other strong oxidizers or, nitrosylsulfuric acid may cause fire or explosion.

Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, skin and eyes.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin and respiratory tract. Inhalation can cause coughing and wheezing. High levels can cause methemoglobinemia, causing headache, dizziness, and blue color to the skin and lips. Higher levels can cause difficult breathing; collapse and possible death. LD_{50} (oral, rat) = 3100 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause skin sensitization. May cause liver and kidney damage.

Points of Attack: Skin, bones, blood, liver, kidneys.

Medical Surveillance: Blood methemoglobin level. Liver and kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. In the case of poisoning, special first aid is required; antidotes for the formation of met hemoglobin should be available, including instructions.

Note to physician: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Personal Protective Methods: Dinitroanilines react with cellulose-based and expanded polymeric absorbents[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: (1) Color Code-Yellow Stripe: Reactivity Hazard. Store separately in a area isolated from flammables, combustibles, or other yellow coded materials. (2) Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, strong acids; strong bases and other incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Also corrosive. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dinitroanilines require a label of "poisonous materials." They usually fall into Hazard Group 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Heat of decomposition releases oxides of nitrogen and carbon and hydrogen fluoride and hydrogen chloride gasses. This chemical is a combustible solid but does not readily ignite. However, moderate heat causes decomposition that produces toxic vapors that form an explosive mixture with air. Use dry chemical, carbon dioxide; water spray; alcohol foam or polymer foam extinguishers. Hazardous decomposition includes carbon monoxide and nitrogen oxides. Heated vapors in confined spaces can explode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Fluometuron F:0270

Use Type: Herbicide
CAS Number: 2164-17-2
Formula: $C_{10}H_{11}F_3N_2O$
Synonyms: *N,N*-Dimethyl-*N'*-[3-(trifluoromethyl)phenyl]urea; 1,1-Dimethyl-3-(3-trifluoromethylphenyl) urea; Meturone; NCI-C08695; *N*-(*m*-Trifluoromethylphenyl)-*N',N'*-dimethylurea; *N*-(3-Trifluoromethylphenyl)-*N',N'*-dimethylurea; 3-(3-Trifluoromethylphenyl)-1,1-dimethylurea; 3-(*m*-Trifluoromethylphenyl)-1,1-dimethylurea; Urea, *N,N*-dimethyl-*N'*-[3-(trifluoromethyl)phenyl]-; Urea, 1,1-dimethyl-3-(α,α,α-trifluoro-m-tolyl)-
Trade Names: C 2059®; CIBA 2059®; COTORAN®; COTORAN® 50SC; COTORAN MULTI 50WP®; COTOREX®; COTTONEX®; COTTONEX® 50SC; DREXEL CROAK®; FLO-MET®; FLUOMETURON® 50SC; HERBICIDE C-2059®; HIGALCOTON®; LANEX®[C]; METURON 80 DF®; PAKHTARAN®; SETRE FLUOMETURON 80 WP®
Chemical Class: Phenylurea
EPA/OPP PC Code: 035503
California DPR Chemical Code: 166
HSDB Number: 1721
UN/NA & ERG Number: UN2767 (Phenyl urea pesticides, solid, toxic)/151
RTECS® Number: YT1575000
EC Number: 218-500-4

Uses: A General Use Pesticide (GUP). Fluometuron is a selective herbicide which acts on susceptible plants by inhibiting photosynthesis. Fluometuron is registered by EPA exclusively for use on cotton and sugarcane. It can be applied pre-emergence, for weed control before planting, or post-emergence, after target crops and weeds come up, and may have residual activity for several months. Fluometuron is available in liquid, dry flowable, and wettable powder formulations.

U.S. Maximum Allowable Residue Levels for Fluometuron (40 CFR 180.229): cotton, undelinted seed 0.1 ppm.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group C, Possible human carcinogen; IARC: Group 3, unclassifiable as to its carcinogenicity in humans.
Acute Oral Category: 2, WARNING
Health Advisory: Mutagen, Tumorigen
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive)
EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

Description: Fluometuron is a colorless or white crystalline solid. It is often used in liquid solution that may be flammable. Molecular weight = 232.23; Boiling point = 275 °C; Freezing/Melting point = 151–153 °C;

163–165 °C; Vapor pressure = 9.0×10^{-7} mmHg @ 20 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Slightly soluble in water; solubility = 22 mg/L @ 22 °C[83,USDA].

Incompatibilities: Liquid solutions are incompatible with oxidizers.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 90 ppb[93]. State Drinking Water Guidelines: Florida 91 μg/L; Maine 90 μg/L.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact; may penetrate unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: Contact can cause eye and skin irritation. Inhalation can irritate the respiratory tract. Symptoms of exposure include increased leukocyte content in circulation blood. The material is a mild cholinesterase inhibitor. LD_{50} (oral, rat) = 1450 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause skin allergy. Mild cholinesterase inhibitor; cumulative effect is possible. Repeated exposure may cause hemolytic anemia, a reduction in blood pressure and a decrease in the red blood cell count. May cause liver damage; convulsions or coma. May be mutagenic.

Points of Attack: Respiratory system, lungs, central nervous system, skin, eyes, plasma and red blood cell cholinesterase. Liver, bones.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Liver function tests. Complete blood count. Evaluation by a qualified allergist

First Aid: *Dermal contact:* Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help ensure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eye contact:* Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20–30 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* Consult a physician, hospital or poison center at once. If the victim is unconscious or convulsing, do not induce vomiting or give anything by mouth. Ensure that the airway is open, lay on side and keep head lower than body and transport immediately to medical facility. If conscious and not convulsing, give a glass of water to dilute the substance. Do not induce vomiting without a physician's advice.

Personal Protective Methods: Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a refrigerator or a cool, dry place and protect from exposure to ultraviolet light. Keep liquid away from oxidizers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenyl urea pesticides, solid, toxic, require a label of "poisonous materials." Hazard Class 6.1.

Spill Handling: *Dry material:* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with 60–70% acetone and avoid airborne dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Liquid: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until cleanup is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Oil-skimming equipment may be used to remove slicks from water. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen fluoride and nitrogen and carbon oxides. *Dry material:* use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. *Combustible solution:* Hazardous decomposition includes nitrogen oxides and fluorine. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. If this material cannot be disposed of according to label instructions, it may be dissolved or mixed with a combustible solvent and burned in a chemical incinerator equipped with an afterburner and scrubber. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers.

Fluopicolide F:0275

Use Type: Fungicide

CAS Number: 239110-15-7

Formula: $C_{14}H_8Cl_3F_3N_2O$

Synonyms: 2,6-Dichloro-*N*-[3-chloro-5-(trifluoromethyl)-2-pyridylmethyl]benzamide; 2,6-Dichloro-*N*-[[3-chloro-5-(trifluoromethyl)-2-pyridyl]amethyl]benzamide

Trade names: INFINITO®, Bayer; PRECIDIO

Chemical Class: Benzamide

EPA/OPP PC Code: 027412

California DPR Chemical Code: 5949

HSDB Number: 7886

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: None assigned

EC Number: Not assigned

Uses: Fluopicolide is targeted for control of oomycete fungal diseases on turf, ornamentals, and several food uses including grapes and six crop groupings (leafy vegetables, fruiting vegetables, brassica vegetables, root and tuber vegetables, bulb vegetables, and cucurbits) that may be grown throughout the U.S[83].

U.S. Maximum Allowable Residue Levels for fluopicolide and its metabolite, 2,6-dichlorobenzamide (BAM): [40 CFR 180.627(a)]: Brassica, head and stem, subgroup 5A, 5.0 ppm; grape 2.0 ppm; grape, raisin 6.0 ppm; vegetable, bulb, crop group 3-07, 7.0 ppm; vegetable, cucurbit, group 9, 0.50 ppm; vegetable, fruiting, group 8, 1.60 ppm; vegetable, leafy, except brassica, group 4, 25 ppm; vegetable, leaves of root and tuber, group 2, 15.0 ppm; vegetable, root, subgroup 1A, except sugar beet and carrot 0.15 ppm; vegetable, tuberous and corm (except potato), subgroup 1D, 0.02 ppm.

Regulatory Authority and Advisory Information: WGK (German Aquatic Hazard Class): No value assigned

Description: Beige solid or powder. Commercial product is available as an emulsifiable concentrate. Practically odorless.

Molecular weight = 383.58; Specific gravity (H_2O:1) = 1.65 @ 20 °C; Boiling point = (decomposes) 320 °C; Freezing/Melting point = 148.8 °C; Vapor pressure = 1×10^{-7} mmHg @ 25 °C; Autoignition temperature = >450 °C. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. May form explosive mixture with air.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = 2.86 mg/L @ pH 4; 2.80 mg/L@ pH 7; 2.80 mg/L @ pH 9 @ 20 °C to >3.0.[83] Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Determination in Water: Log K_{ow} = Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, derma or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the eyes, skin and respiratory tract. Low toxicity but harmful if ingested. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. Possible liver, kidney and spleen toxicity.

Points of Attack: Liver, kidney, spleen, bones.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver, kidney and spleen function tests.

First Aid: *Eyes*: First check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. *Immediately* transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop. *Skin: Immediately* flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, *immediately* call a physician and be prepared to transport the victim to a hospital for treatment. *Inhalation*: *Immediately* leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Ingestion: *do not induce vomiting*. If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and *immediately* call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Do not induce vomiting*. Immediately transport the victim to a hospital[88].

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location and refrigerate 2 to 8 °C. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Small spills and leakage: should a spill occur while you are handling this chemical, first remove all sources of ignition, then you should dampen the solid spill material with 60–70% ethanol and transfer the dampened material to a suitable container. Use absorbent paper dampened with 60–70% ethanol to pick up any remaining material. Seal the absorbent paper, and any of your clothes, which may be contaminated, in a vapor-tight plastic bag for eventual disposal. Solvent wash all contaminated surfaces with 60–70% ethanol followed by washing with a soap and water solution. Do not reenter the contaminated area until the safety officer (or other responsible person) has verified that the area has been properly cleaned.

Fire Extinguishing: Decomposition in fire releases toxic oxides of nitrogen and carbon and hydrogen chloride, hydrogen cyanide, and hydrogen fluoride gasses. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fluridone F:0393

Use Type: Herbicide

CAS Number: 59756-60-4

Formula: $C_{19}H_{14}F_3NO$

Synonyms: Fluridon; 1-Methyl-3-phenyl-5-[3-(trifluoromethyl)phenyl]-4(1*H*)-pyridinone; 4(1*H*)-Pyridinone, 1-methyl-3-phenyl-5-[3-(trifluoromethyl)phenyl]-

Trade Names: AVAST®; EL 171®; PRIDE®; SONAR®; SONAR AS®

Chemical Class: Organic fluoride compound.

EPA/OPP PC Code: 112900; (215900 use code No. 112900)

California DPR Chemical Code: 2279

HSDB Number: 6653

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: UU77865000

EC Number: 261-916-6

Uses: Used is horticulture, ornamental, aquatic and greenhouse environments. It is used as an aquatic herbicide to treat large areas of water (lakes, ponds, reservoirs, etc.) for Eurasian watermilfoil. Not used on food crops. Not approved for use in EU countries[115]. Registered for use in the U.S.

Human toxicity (long-term)[101]: Very low–560.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–678.82839 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Description: White to tan crystalline solid. Some commercial formulations are a light tan viscous liquid, possibly in a propylene glycol carrier. Slight odor. Molecular weight = 329.33; Specific gravity (H_2O:1) = 1.15 @ 25 °C; Boiling point = 100 °C; Freezing/Melting point = 154 °C; Vapor pressure = 1×10^{-7} mmHg @ 20 °C; Flash point (liquid) = >93.3 °C; Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Decomposes in temperature >200 °C. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Permissible Concentration in Water: Federal Drinking Water Standards (minimum reporting level): EPA 0.90 μg/L[83]. State Drinking Water Guidelines: Florida 560 μg/L.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >5,000 mg/kg; >10,000 mg/kg. Low toxicity.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Bones.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and

long pants; Chemical-resistant gloves such as butyl rubber (0.4–0.7 mm thickness/ >480 minutes; DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***[40 CFR]*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Specific respirator(s) have not been recommended by NIOSH. However, based on potential carcinogenicity, and where the potential exists for exposure, the following might be considered: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any MSHA/NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter) or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until cleanup is complete. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposes >200 °C. Hazardous decomposition includes hydrogen fluoride, carbon, and sulfur oxides. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Safe Disposal of Pesticides. An empty pesticide container can be as hazardous as a full one because of residues left inside. Never reuse such a container. When empty, a pesticide container should be rinsed carefully three times and the rinsewater thoroughly drained back onto the sprayer or the container previously used to mix the pesticide. Use the rinse water as a pesticide, following label directions. Replace the cap or closure securely. Dispose of the container according to label instructions. Do not puncture or burn a pressurized container like an aerosol – it could explode. Do cut or puncture other empty pesticide containers made of metal or plastic to prevent someone from reusing them. Wrap the empty container and put it in the trash after you have rinsed it[83]. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fluroxypyr F:0395

Use Type: Herbicide
CAS Number: 69377-81-7; 81406-37-3 (1-methyheptyl ester)
Formula: $C_7H_5Cl_2FN_2O_3$
Synonyms: 1-Methylheptyl[(4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy]acetate; Acetic acid, [(4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy]-,1-methylheptyl ester; [(4-Amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy] acetic acid, 1-methylheptyl ester
Trade Names: *methyl ester*: AGROSTAR; BOFIX FFC®; CABADEX®; CASCADE®; DOWCO® 433 MHE; FOREFRONT®; GALAXY GL184®; PARADIGM®; PASTUREGARD®; STARANE®; TOMAHAWK®; VISTA®; WIDEMATCH®, (fluroxypyr+clopyralid); XRM-5084®
Chemical Class: Pyridinecarboxylic acid; Pyridine compound
EPA/OPP PC Code: 128969; 128968 (-methyl ester)
California DPR Chemical Code: 5918
HSDB Number: 6655
UN/NA&ERG Number: UN3077(solid)/171
RTECS® Number: AF2503000
EC Number: [Annex I Index No.: 607-255- 00-2]; 279-752-9 [Annex I Index No.: 607-272-00-5] (-methy ester).
U.S. Maximum Allowable Residue Levels for Fluroxypyr 1-methylheptyl ester [40 CFR 180.535(a)]: Barley, grain 0.5 ppm; barley, forage 12.0 ppm; barley, hay 20.0 ppm; barley, straw 12.0 ppm; cattle, fat 0.1 ppm; cattle, kidney 1.5 ppm; cattle, meat 0.1 ppm; cattle, meat byproducts 0.1 ppm; corn, field, forage 1.0 ppm; corn, field, grain 0.02 ppm; corn, field, stover 0.5 ppm; corn, sweet, forage 1.0 ppm; corn, sweet, kernel plus cob, with husks removed 0.02 ppm; corn, sweet, stover 2.0 ppm; goat, fat 0.1 ppm; goat, kidney 1.5 ppm; goat, meat 0.1 ppm; goat, meat byproducts 0.1 ppm; grain, aspirated fractions 0.6 ppm; grass, forage 120 ppm; grass, hay 160 ppm; hog, fat 0.1 ppm; hog, kidney 1.5 ppm; hog, meat 0.1 ppm; hog, meat byproducts 0.1 ppm; horse, fat 0.1 ppm; horse, kidney 1.5 ppm; horse, meat 0.1 ppm; horse, meat byproducts 0.1 ppm; milk 0.3 ppm; oat, forage 12.0 ppm; oat, grain 0.5 ppm; oat, hay 20.0 ppm; oat, straw 12.0 ppm; sheep, fat 0.1 ppm; sheep, kidney 1.5 ppm; sheep, meat 0.1 ppm; sheep, meat byproducts 0.1 ppm; sorghum, grain, forage 2.0 ppm; sorghum, grain, grain 0.02 ppm; sorghum, grain, stover 4.0 ppm; wheat, forage 12.0 ppm; wheat, grain 0.5 ppm; wheat, hay 20.0 ppm; wheat, straw 12.0 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans
European/International Regulations: Hazard Symbol: N; risk phrases: R52/R53; safety phrases: S2; S60; S61 (see Appendix 1); (1-methyheptyl ester): Hazard Symbol: N; risk phrases: R50/R53; safety phrases: S2; S60; S61 (see Appendix 1)
Description: White crystalline solid. Molecular weight = 255.03; 367.23 (-methyl ester); Specific gravity (H_2O:1) = 1.1 @ 25 °C; Boiling point = (decomposes); Freezing/Melting point = 232 °C; Vapor pressure = 4×10^{-6} mmHg @ 25 °C. Highly soluble in water.
Incompatibilities: May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition; forming a strong acid. Temperatures above 250 °C can cause decomposition. *Methyl ester*: Esters react with acids to liberate heat along with alcohols and acids. Strong oxidizing acids may cause a vigorous reaction that is sufficiently exothermic to ignite the reaction products. Heat is also generated by the interaction of esters with caustic solutions. Flammable hydrogen is generated by mixing esters with alkali metals and hydrides.
Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = 2405–3650 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.
Long Term Exposure: Possible kidney damage.
Points of Attack: Kidney, adrenal and testicular glands.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working

with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Depending on formulation, the dry material may be classified as Environmentally hazardous substances, solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the liquid spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon, hydrogen chloride and chlorine gases. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers.

Fluvalinate F:0398

Use Type: Insecticide

CAS Number: 69409-94-5; 102851-06-9 (*Tau*-τ)

Formula: $C_{26}H_{22}ClF_3N_2O_3$

Synonyms: AI3-29426; Caswell No. 934; *N*-2-Chloro-α,α,α-(trifluoro-*p*-tolyl)-*dl*-valinealpha-cyanophenoxybenzyl ester; *N*-(2-Chloro-4-(trifluoromethyl) phenyl-*dl*-valinecyano(3-phenoxylphenyl)methyl ester; *N*-[2-chloro-4-(trifluoromethyl)phenyl]-*dl*-valine(±)-cyano(3-phenoxylphenyl)methyl ester; (RS)-α-(Cyano-3-phenoxybenzyl *n*-(2-chloro-α,α,α-trifluoro-*p*-tolyl)-d-valinate; (RS)-α-Cyano-3-phenoxybenzyl (R)-2-[2-chloro-4-(trifluoromethyl)anilino]-3-methylbutanoate; Cyano(3-phenoxyphenyl)methyl*N*-[((2-chloro-4-trifluoromethyl) phenyl)]-d-valinate; *dl*-Valine,n-[2-chloro-4-(trifluoromethyl)phenyl]-cyano(3-phenoxylphenyl)methyl ester; D-Valine, *N*-(2-chloro-4-(trifluoromethyl)phenyl)-, cyano(3-phenoxyphenyl)methyl ester

Trade Names: APISTAN®; KARTAN®; KLARTAN®; MAVRIK®; MAVRIK AQUAFLOW®; SPUR®[C]; TAUFLUALINATE®; YARDER®; ZEOCON®; ZR 3210®

Chemical Class: Pyrethroid

EPA/OPP PC Code: 109302

California DPR Chemical Code: 2195

HSDB Number: 6659

UN/NA & ERG Number: UN3352 (liquid)/151; UN3082 (liquid)/171

RTECS® Number: YV9397100

Uses: Not listed for use in EU countries[115]. Some applications may be classified as a U.S. EPA restricted Use Pesticide (RUP). Used as a broad-spectrum insecticide to control moths, beetles and other pests on cereals, potatoes, fruit trees, vegetables, cotton, turf and ornamentals. It is used in Apistan® to control varroa mites in honey bees.

U.S. Maximum Allowable Residue Levels for Fluvalinate (40 CFR 180.427): Honey 0.05 ppm.

Human toxicity (long-term)[101]: Low–70.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.09863 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
California Proposition 65 Chemical: Developmental/Reproductive toxin (11/6/1998)
Acute Oral Category: 3, CAUTION
Acceptable Daily Intake (ADI): EPA Oral reference dose (RfD) = 0.01 mg/kg
Health Advisory: Developmental/Reproductive Toxin, Skin irritant/sensitizer, Endocrine disruptor (S!)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Yellow to yellow-amber, viscous oil. Sweet, weak odor. Molecular weight = 502.92; Specific gravity (H_2O:1) = 1.30 @25 °C; Specific gravity (H_2O:1) = 1.29 @ 25 °C; Freezing/Melting point = 25 °C; Vapor pressure = 1×10^{-7} mmHg @ 25 °C. Henry's Law constant = 1.5×10^{-8} atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water; solubility = 0.005 ppm @ 20–25 °C.

Incompatibilities: Corrosive to some metals. Keep away from strong oxidizers and alkaline materials. Decomposes in temperatures above 350 °C releasing toxic vapors of hydrogen chloride, nitrogen oxides, and hydrogen fluoride.

Permissible Exposure Limits in Air: NIOSH(2)
IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA
STEL set by HSE(33) = 10 mg/m^3.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. (pyrethrum)

Permissible Concentration in Water: Acceptable Daily Intake (ADI) = 0.02 mg/kg as pyrethroid

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system, causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, rat) = <300 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse. May be a liver and kidney toxin.

Points of Attack: Respiratory system, skin, central nervous system, kidneys, liver, bones.

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to their sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***[40 CFR]*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m^3:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Heat of decomposition releases oxides of nitrogen, hydrogen chloride, and hydrogen fluoride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers.

Fomesafen F:0399

Use Type: Herbicide

AS Number: 72178-02-0; 108731-70-0 (sodium salt)
Formula: $C_{15}H_{10}ClF_3N_2O_6S$
Synonyms: Benzamide, 5-[2-chloro-4-(trifluoromethyl)phenoxy]-*N*-(methylsulfonyl)-2-nitro-; 5-[2-Chloro-4-(trifluoromethyl)phenoxy]-*N*-methylsulfonyl)-2-nitrobenzamide; 5-(2-Chloro-0,α α-trifluoro-*p*-tolyloxy)-*N*-methylsulfonyl-2-nitrobenzamide; 5-[2-Chloro-4-(trifluoromethyl) phenoxy]-*N*-(methylsulphonyl)-2-nitrobenzamide
Trade Names: BAS 530 04®; FASTER®; FLEX®; FLEXSTAR; FOMESAFEN® SODIUM; PP 021®; REFLEX®; REFLEX® 2LC Herbicide (sodium salt); TORNADO®[C]; TWISTE®[C]; TYPHOON®
Chemical Class: Diphenyl ether; Chlorophenoxy
EPA/OPP PC Code: 123802 (sodium salt)
California DPR Chemical Code: 5083 (sodium salt)
HSDB Number: 6660
RTECS® Number: CV2475000
EC Number: 276-439-9 [*Annex I Index No.:* 604-040-00-5]
Uses: After July 25, 2003, flumesafen was not permitted in many countries to be used as an active ingredient on crops except to control weeds in soybean crops, and white, kidney and snap beans. Not approved for use in EU countries[115]. Registered for use in the U.S.
U.S. Maximum Allowable Residue Levels for Fomesafen sodium salt (40 CFR 180.433): bean, dry 0.05 ppm; bean, snap, succulent 0.05 ppm; cotton, gin byproducts 0.025 ppm; cotton, undelinted seed 0.025 ppm; pepper, bell 0.025 ppm; pepper, non-bell 0.025 ppm; potato 0.025 ppm; soybean 0.05 ppm; tomato 0.025 ppm.
Human toxicity (long-term)[101]: (sodium salt) High–1.75 ppb, Health Advisory
Fish toxicity (threshold)[101]: (sodium salt) Very low–69325.01943 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group C, Possible human carcinogen
Acute Oral Category: 3, CAUTION
AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides
Safe Drinking Water Act: Priority List (55 FR 1470)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xn; risk phrases: R22; safety phrases: S2 (see Appendix 1)
Description: White crystalline solid or powder. Molecular weight = 438.76; Specific gravity (H_2O:1) = 1.29 @ 20 °C; Freezing/Melting point = 220 °C; Disassociation constant = pKa 2.827; Vapor pressure = 3.5×10^{-5} mmHg @ 25 °C; Henry's Law constant = 7.53×10^{-13} atm-m^3/mol @ 25 °C (est)[83]. Moderately soluble in water; solubility = 60 mg/L @25 °C.
Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.
Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, ingestion, absorbed through the skin.
Harmful Effects and Symptoms
Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. LD_{50} (oral, rat) = 1–2 g/kg; LD_{50} (dermal, rat) = 1 g/kg.
Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. Workers exposed to chlorophenoxy compounds over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affects human reproduction.
Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney, bones.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When

this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with an organic vapor/acid gas cartridge (specific for organic vapors: Hydrogen chloride, acid gas and SO_2) with a dust/mist filter. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with fomesafen you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers and heat. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: No information.

Spill Handling: For leaks or spills, use water spray to disperse vapor and to flush spills. Liquid containing this material should be absorbed in vermiculite, dry sand, earth. Do not touch spilled material; stop leak if you can do it without risk. Establish forced ventilation to keep levels below explosive limit. *Small dry spills*: collect powdered material in the most convenient and safe manner and deposit in sealed containers; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Keep unnecessary people away; isolate hazard area and deny entry. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, hydrogen chloride, and hydrogen fluoride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters (0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as a hazardous waste in a landfill approved and licensed for the disposal of pesticides. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fonofos F:0400

Use Type: Insecticide

CAS Number: 944-22-9

Formula: $C_{10}H_{15}OPS_2$; $C_6H_5SPS(OC_2H_5)C_2H_5$

Synonyms: ENT 25,796; *O*-Ethyl-*S*-phenyl ethylphosphono dithioate; *O*-Ethyl-*S*-phenyl(RS)-ethylphosphonodithioate; *O*-Ethyl-*S*-phenyl ethyldithio phosphonate; Phosphonodithioic acid, ethyl-*O*-ethyl, *S*-phenyl ester

Trade Names: CAPFOS®; CUDGEL®; DIFONATE®; DYFONATE®[C]; DYPHONATE®; DOUBLE DOWN®; STAUFFER-2790

Chemical Class: Organophosphate
EPA/OPP PC Code: 041701
California DPR Chemical Code: 254
HSDB Number: 1717
UN/NA & ERG Number: UN3018 (liquid)/152; UN2783 (solid)/152
RTECS® Number: TA5950000
EC Number: 213-408-0 [*Annex I Index No.:* 015-091-00-2]

Uses: It is a soil organophosphate insecticide primarily used on corn. It was also used on maize, cereals, sorghum, fruit, olives, potatoes, sugar cane, peanuts, tobacco, turf, and some vegetable crops. It controls aphids, corn borer, corn rootworm, corn wireworm, cutworms, white grubs, symphylins, and other soil pests including some maggots. It was available in granular, microgranular, emusifiable concentrate, suspension concentrate, microcapsule suspension, and seed treatment. Not registered for use in the U.S. or in EU countries[115]. There are 16 global suppliers[97].

Human toxicity (long-term)[101]: Intermediate–10.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–3.50002 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans
Health Advisory: Nerve Toxin, Mutagen
Acute Oral Category: 1, DANGER–POISON
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive)
U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500 lb (227 kg)
Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant
European/International Regulations: Hazard Symbol: T+, N; risk phrases: R27/28; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

Description: Fonofos is a pale yellow liquid. Pungent, mercaptan-like odor. Commercial forms also include granules and emulsifiable concentrates. Some liquid formulations may be flammable depending on the carrier solvent used. Molecular weight = 246.34; Specific gravity (H_2O:1) = 1.16 @ 25 °C; Boiling point = 130 °C @ 0.1 mm[83]; Freezing/Melting point = 30 °C; Vapor pressure = 3.38×10^{-4} mmHg @ 25 °C[83,USDA]; Flash point = 94 °C (cc). Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Practically insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Contact with strong acids or alkalies causes chemical to be hydrolyzed. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Corrosive to steels.

Permissible Exposure Limits in Air: OSHA PEL: None. However, the vacated 1989 OSHA PEL 0.1 mg/m^3 TWA [skin] is currently enforced in some states.
NIOSH REL: 0.1 mg/m^3 TWA [skin]
ACGIH TLV®[1]: 0.01 mg/m^3 TWA inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI$_A$ issued for Acetylcholinesterase inhibiting pesticides
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.012 mg/m^3
PAC-2: 1.3 mg/m^3
PAC-3: 53 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 10 μg/L; State Drinking Water Guidelines: Maine 14 μg/L; Florida 14 μg/L.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 *n*g/L. Log K_{ow} = >3.5. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Symptoms include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, vertigo, sensation of tightness in chest, blurring of vision, ocular pain, loss of muscle coordination, slurring in speech, muscle twitching, drowsiness, excessive secretion of respiratory tract mucous, and convulsions. This material is cholinesterase inhibitor. It can cause severe symptoms and death from respiratory arrest. Exposure above the airborne exposure limit may result in death. The effects may be delayed. Delayed pulmonary edema may occur after inhalation. Medical observation is recommended. LD_{50} (oral, rat) = 3–24.5 mg/kg. Extremely toxic; LD_{50} (dermal, rat) = 147 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Fonofos may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage and be neutoxic.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.012 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May contain phosphine gas. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: This phosphono compound is reported to be satisfactorily decomposed by hypochlorite. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Foramsulfuron F:0403

Use Type: Herbicide
CAS Number: 173159-57-4
Formula: $C_{17}H_{20}N_6O_7S$
Synonyms: 2-[[[[(4,6-Dimethoxy-2-pyrimidinyl)amino]carbonyl]amino]sulfonyl]-4-(formylamino)-*N,N*-dimethylbenzamide; 1-(4,6-Dimethoxypyrimidin-2-yl)-3-[2-(dimethylcarbamoyl)-5-formamidophenylsulfonyl]urea
Trade Names: Bayer AE-F130360®
Chemical Class: Sulfonylurea; Pyrimidiny sulfonylurea
EPA/OPP PC Code: 122020
California DPR Chemical Code: 5851
HSDB Number: 7894
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: Not found or assigned
EC Number: None assigned
Uses: Used on athletic fields and recreational areas, including golf courses (for turf), lawns, etc. Used on corn. An acetolactate syntheses inhibitor.
U.S. Maximum Allowable Residue Levels for the pesticide foramsulfuron [40 CFR 180.1219]: is exempted from the requirement of a tolerance in corn, field, grain/corn, field, forage/ corn, field, stover/corn, pop, grain/corn, pop, forage/corn, pop, stover; corn, sweet, forage; corn, sweet, kernel plus cob with husks removed; corn, sweet, stover when applied as a herbicide in accordance with good agricultural practices.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: U.S. EPA considers the sulfonylureas not classifiable *with the exception of* sulfosulfuron (141776-32-1), a likely human carcinogen, and triflusulfuron-methyl (126535-15-7) a Possible human carcinogen[96].
Acute Oral Category: 4, Caution
European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R38; R50/53; R65; safety phrases: S2; (see Appendix 1)
Description: Light beige, brownish-yellow solid. Weak, aromatic odor. Molecular weight = 452.44; Specific gravity (H_2O:1) = 1.44 @ 20°C; Boiling point = (decomposes); Freezing/Melting point = 199.6°C
Vapor pressure = 3 × 10^{-13} mmHg @ 20°C; Henry's Law constant = 5.68 0 10^{-17} atm-m^3/mol @ 25°C (est)[83].
Highly soluble in water.
Incompatibilities: Dust may form explosive mixture with air. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = –0.78. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation of dust and dermal and/or eye contact.
Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].
Short Term Exposure: May cause irritation of the skin, eyes and respiratory tract. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.
Long Term Exposure: Prolonged or frequently repeated skin contact may cause allergic reaction in some individuals.
Points of Attack: Skin.
Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***[40 CFR]*** 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Specific respirator(s) have not been recommended by NIOSH. However, based on potential carcinogenicity, and where the potential exists for exposure, the following might be considered: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any MSHA/NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter) or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen sulfur and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Forchlorfenuron F:0405

Use Type: Plant growth regulator

CAS Number: 68157-60-8

Formula: $C_{12}H_{10}ClN_3O$

Synonyms: *N*-(2-Chloro-4-pyridinyl)-*N*'-phenylurea; 1-(2-Chloro-4-pyridyl)-3-phenylurea; CPPU; *N*-Phenyl-*N*'-(2-chloro-4-pyridyl)urea; Urea, *N*-(2-chloro-4-pyridinyl)-*N*'-phenyl-

Trade Names: CN-11-3183; KT-30®; SKW 20010

Chemical Class: Phenylurea

EPA/OPP PC Code: 128819

California DPR Chemical Code: 5557

HSDB Number: 7983

UN/NA & ERG Number: UN2767 (Phenyl urea pesticides, solid, toxic)/151; UN3077(solid)/171

RTECS® Number: YS7182500

EC Number: [*Annex I Index No.:* 613-254-00-8]

Uses: Forchlorfenuron is as a plant growth regulator widely used in agriculture on fruits to increase their size, to promote cell division, and to improve the quality and the yield of fruits, especially table grapes, grape raisins, and kiwi fruit. In some parts of California, forchlorfenuron is said to double the size of Thompson seedless grapes and delay crop maturity up to several weeks.

U.S. Maximum Allowable Residue Levels for Forchlorfenuron [40 CFR 180.569 (a) (1)]: bushberry subgroup 13-07B, 0.01 ppm; grape 0.03 ppm; grape, raisin 0.06 ppm; kiwifruit 0.04 ppm. ***[40 CFR 180.569 (a) (2)]***: The following food commodities were cancelled or revoked on 12/31/2011: almond 0.01 ppm; almond, hulls 0.15 ppm; cherry, sweet 0.01 ppm; fig 0.01 ppm; pear 0.01 ppm; pistachio 0.01 ppm; plum, prune, fresh 0.01 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity: GHS Category 2: Suspected human carcinogen

EPA Acute reference dose (ARfD) = 0.1 mg/kg/day

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R40; R51/R53; safety phrases: S2; S36/37; S46; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: White to faint yellow crystalline powder. Molecular weight = 247.69; Specific gravity (H_2O:1) = 1.415 @ 25 °C; Freezing/Melting point = 170–172 °C; Vapor pressure = very low, 4×10^{-10} mmHg @ 25 °C; Flash point = >200 °C (cc). Low solubility in water.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Dust may form explosive mixture with air.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation can cause irritation of the lungs and respiratory tract. May be harmful if swallowed. Dermal contact may cause severe irritation or burns. LD_{50} (oral, rat) = 4904 mg/kg[83]; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause emphysema, weight loss.

Points of Attack: Respiratory system, bones.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and potential recommendation for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical and toxicity properties, the exposure level, length of exposure, and the route of exposure. Lung function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Personal Protective Methods: Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a refrigerator or a cool, dry place and protect from exposure to ultraviolet light. Keep liquid away from oxidizers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenyl urea pesticides, solid, toxic, require a label of "poisonous materials." Hazard Class 6.1.

Spill Handling: *Dry material:* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with 60–70% acetone and avoid airborne dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA

1910.120(q) may be applicable. *Liquid:* Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Oil-skimming equipment may be used to remove slicks from water. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen fluoride and nitrogen oxides. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. If this material cannot be disposed of according to label instructions, it may be dissolved or mixed with a combustible solvent and burned in a chemical incinerator equipped with an afterburner and scrubber. In accordance with ***[40CFR165]***, follow recommendations for the disposal of pesticides and pesticide containers.

Formaldehyde F:0410

Use Type: Microbiocide, Fungicide, Bactericide; Soil sterilent

CAS Number: 50-00-0

Formula: CH_2O; HCHO

Synonyms: BFV; FA; Formaldehido (Spanish); Formalin; Formalin 40; Formalina (Spanish); Formalin-loesungen (German); Formic aldehyde; Methanal; Methyl aldehyde; Methylene glycol; Methylene oxide; NCI-C02799; Oxomethane; Oxymethylene; Polyoxymethylene glycols; Tetraoxymethylene; Trioxane

Trade Names: DYNOFORM®; FANNOFORM®; FORMALITH®; FORMOL®; FYDE®; HERCULES 37M6-8®; HOCH®; IVALON®; KARSAN®; LYSOFORM®; MAGNIFLOC 156C FLOCCULANT®; MORBICID®; STERIFORM®; SUPERLYSOFORM®

Chemical Class: Unclassified

EPA/OPP PC Code: 043001

California DPR Chemical Code: 295

HSDB Number: 164

UN/NA & ERG Number: UN1198 (flammable solutions)/132

RTECS® Number: LP8925000

EC Number: 200-001-8 [*Annex I Index No.:* 605-001-00-5]

Uses: Registered for use in the U.S. Not approved for use in EU countries[115]. Formaldehyde has found wide industrial usage as a fungicide, germicide and in disinfectants. It is used most often in an aqueous solution stabilized with methanol (formalin). It is also a pesticide intermediate.

U.S. Maximum Allowable Residue Levels for Formaldehyde [40 CFR 180.180.1001 (d)]: not more than 1% of pesticide formulation is exempted from the requirement of a tolerance when used as a preservative for formulation in accordance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to growing crops only.

Human toxicity (long-term)[101]: 26,923 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: 184 ppb, MATC (Maximum Acceptable Toxicant Concentration).

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B1, Probable carcinogen; NTP: 12th Report on Carcinogens, 2011: Known to be a human carcinogen; EU GHS Category 2: Suspected human carcinogen IARC: Group I, carcinogenic to humans; ACGIH A2 Suspected human carcinogen.

California Proposition 65 Chemical: Cancer (10/1/1993).

OSHA, 29CFR1910 Specifically Regulated Chemicals (See CFR 1910.1048)

Health Advisory: Tumorigen, Mutagen, Reproductive Toxin, Skin irritant/sensitizer

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112); Accidental Release Prevention/Flammable substances, (Section 112[r], Table 3), TQ = 15,000 lb (6810 kg)

OSHA 29CFR1910.119, Appendix A. Process Safety List of Highly Hazardous Chemicals, TQ = 1000 lb (450 kg)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500 lb (227 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%

European/International Regulations: Hazard Symbol: T; risk phrases: 23/24/25; R34; R40; R43; safety phrases: S1/2; S26; S36/37/39; S45; S51 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Formaldehyde is a colorless, pungent gas. The Odor Threshold is 0.8 ppm[41]. Formalin is an aqueous solution that is 37% formaldehyde by weight; inhibited solutions (added to prevent polymerization) usually contain 6–12% methyl alcohol. Molecular weight = 30.03; Specific gravity (H_2O:1) = 0.815 @ –20 °C; (formalin) 1.08 @ 25 °C; Boiling point (gas) = –19.1 °C; (commercial 37% solution) = 101 °C; Freezing /Melting point = –92.2 °C; –116.5 °C; Relative vapor density (air = 1) = 1.04; Vapor pressure = >1 atm; Flash point = Flammable gas; (formalin) 85 °C; (commercial 37% solution, 15% methanol) 50 °C; Autoignition temperature = 430 °C. Explosive limits (gas): LEL = 7.0% (20,950 ppm); UEL = 73.0%. NFPA 704 M Hazard Identification (gas): Health 3, Flammability 4, Reactivity 0; (37% solution, 15% methanol): Health 3, Flammability 2, Reactivity 2. Good solubility in water.

Incompatibilities: Pure formaldehyde may polymerize unless properly inhibited (usually with methanol). Forms explosive mixture with air. Incompatible with strong acids, amines, strong oxidizers, alkaline materials, nitrogen dioxide, performic acid, phenols,urea. Reaction with hydrochloric acid forms bis-chloromethyl ether, a carcinogen. Formalin is incompatible with strong oxidizers, alkalis, acids, phenols, urea, oxides, isocyanates, caustics, anhydrides. Liquid formaldehyde is corrosive to some steels.

Permissible Exposure Limits in Air: NIOSH(2) IDLH level = [Ca] 20 ppm. For sensitized persons, odor is not an adequate indicator of formaldehyde's presence and may not provide reliable warning of hazardous concentrations. (Nitriles) 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

AIHA WEEL: Worker exposure by all routes should be minimalized to the fullest extent possible

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: **0.9** ppm
PAC-2: **14** ppm
PAC-3: **56** ppm

*AEGLs (Acute Emergency Guideline Levels) and ERPGs (Emergency Response Planning Guideline) are in **bold face**.

DFG MAK:[skin] Carcinogen Category 2

Determination in Air: Collection with Si gel cartridge coated with DNPH; Workup with acetonitrile; analysis with high-pressure liquid chromatography/ultraviolet detection; NIOSH IV, Method #2016[18]. See also Method(s) #2541, #3500. See NIOSH Criteria Document 78-212 NITRILES.[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 100 ppb[93]; EPA Health Advisory: 1000 μg/L; State Drinking Water Guidelines: California 100 μg/L; Maine 140 μg/L; Florida 600 μg/L; Minnesota 1000 μg/L; New Hampshire 100 μg/L; New Jersey 100 μg/L

Determination in Water: Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Formaldehyde is a highly toxic systemic poison that is absorbed well by inhalation. The vapor is a severe respiratory tract and skin irritant and may cause dizziness or suffocation. Contact with formaldehyde solution may cause severe burns to the eyes and skin. Inhalation of vapors can produce narrowing of the bronchi (tracheobronchitis) and possible spasms with an accumulation of fluid in the lungs. This can cause death. Children may be more susceptible than adults to the respiratory effects of formaldehyde. Formaldehyde solution (formalin) causes corrosive injury to the gastrointestinal tract, especially the pharynx, epiglottis, esophagus, and stomach. The systemic effects of formaldehyde are due primarily to its metabolic conversion to formate, and may include metabolic acidosis, circulatory shock, respiratory insufficiency, and acute renal failure. Formaldehyde is a potent sensitizer and a probable human carcinogen. Acute exposure to formaldehyde may result in burns to the skin, eyes, and mucous membranes; lacrimation (tearing); nausea; vomiting (may be bloody); abdominal pain; and diarrhea. Difficulty in breathing, cough, pneumonia, and pulmonary edema may occur. Sensitized people may experience asthmatic reactions, even when exposed briefly. Hypotension (low blood pressure) and hypothermia (reduced body temperature) may precede cardiovascular collapse. Lethargy, dizziness, convulsions, and coma may be noted. Nephritis (inflammation of the kidneys), hematuria (bloody urine), and liver toxicity have been reported. Exposure at concentrations well above the PEL may cause death. The effects may be delayed

Note: There is considerable individual variation in sensitivity to formaldehyde. *Inhalation:* Irritation of the nose and throat can occur after an exposure of 0.25 ppm to 0.45 ppm. Levels between 0.4 ppm and 0.8 ppm can give rise to coughing and wheezing, tightness of the chest and shortness of breath. Sudden exposures to concentrations of 4 ppm may lead to irritation of lung and throat severe enough to give rise to bronchitis and laryngitis. Breathing may be impaired at levels above 100 ppm and serious lung damage may occur at 50 ppm. *Skin:* Direct contact with the liquid can lead to irritation, itching, burning and drying. It is also possible to develop an allergic reaction to the compound following exposure by any route. *Eyes:* Exposure to airborne levels of formaldehyde of 0.4 ppm have brought on tearing and irritation. Small amounts of liquid splashed in the eye can cause damage to the cornea. Eye irritation was reported at levels between 0.05 and 2.0 ppm. *Ingestion:* As little as 1 liquid ounce has resulted in death to humans. Smaller amounts can damage the throat, stomach and intestine, resulting in nausea, vomiting, abdominal pain and diarrhea. Accidental exposure may also cause loss of consciousness, lowered blood pressure, kidney damage and, if the person is pregnant, the possibility of the fetus being aborted. LD_{50} (oral, rat) = 500–800 mg/kg; LD_{50} (dermal, rat) = 270 mg/kg.

Long Term Exposure: The major concerns of repeated formaldehyde exposure are sensitization and cancer. In sensitized persons, formaldehyde can cause asthma and contact dermatitis. In persons who are not sensitized, prolonged inhalation of formaldehyde at low levels is unlikely to result in chronic pulmonary injury. Adverse effects on the central nervous system such as increased prevalence of headache, depression, mood changes, insomnia, irritability, attention deficit, and impairment of dexterity, memory, and equilibrium have been reported to result from long-term exposure. Inhalation can result in respiratory congestion with associated coughing and shortness of breath. Repeated dermal contact can lead to drying and scaling. Some individuals may experience allergic reactions after initial contact with the chemical. Subsequent contact may cause skin rashes and asthma and reactions may become more severe if exposure persists. Chronic exposure may be more serious for children because of their potential longer latency period. *Carcinogenicity[83]:* The Department of Health and Human Services has determined that formaldehyde may reasonably be anticipated to be a carcinogen. In humans, formaldehyde exposure has been weakly associated with increased risk of nasal cancer and nasal tumors were observed in rats chronically inhaling formaldehyde. *Reproductive and developmental effects:* There is limited evidence that formaldehyde causes adverse reproductive effects. The TERIS database states that the risk of developmental defects to the exposed fetus ranges from none to minimal. There have been reports of menstrual disorders in women occupationally exposed to formaldehyde, but they are controversial. Studies in experimental animals have reported some effects on spermatogenesis. Formaldehyde has not been proven to be teratogenic in animals and is probably not a human teratogen at occupationally permissible levels. Formaldehyde has been shown to have genotoxic properties in human and laboratory animal studies producing sister chromatid exchange and chromosomal aberrations. Special consideration regarding the exposure of pregnant women is warranted, since formaldehyde has been shown to be a genotoxin; thus, medical counseling is recommended for the acutely exposed pregnant woman. Genetic damage from exposure has been shown in bacteria and some insects. May cause skin sensitization.

Points of Attack: Skin, eyes and respiratory system. Cancer site: nasal cancer.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Routine laboratory studies for all exposed patients include CBC, glucose, and electrolyte determinations. Additional studies for patients exposed to formaldehyde include urinalysis (protein, casts, and red blood cells may be present), methanol level, osmolal gap, and ABG measurements (to monitor acidosis in severe toxicity). Chest radiography and pulse oximetry may be helpful in cases of inhalation exposure. Plasma formaldehyde levels are not useful. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: Flush liquid-exposed skin and hair with plain water for 3 to 5 minutes. Wash area thoroughly with soap and water when possible. Use caution to avoid hypothermia when decontaminating children or the elderly. Use blankets or warmers when appropriate. Irrigate exposed or irritated eyes with plain water or saline for 15 minutes. Remove contact lenses if easily removable without additional trauma to the eye. If pain or injury is evident, continue eye irrigation while transferring the victim to the Support Zone. Victims who are conscious and able to swallow should be given 4 to 8 ounces of water or milk. Gastric lavage with a small-bore nasogastric (NG) tube should be considered if it can be performed within 1 hour after ingestion. The effectiveness of activated charcoal administration is unknown, but it is suggested following lavage (administer activated charcoal at 1 gm/kg, usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. *Note to physician or authorized medical personnel:* There is no antidote for formaldehyde. Treat patients who have metabolic acidosis with sodium bicarbonate (adult dose = 1 ampule; pediatric dose = 1 Eq/kg). Further correction of acidosis should be guided by ABG measurements. Hemodialysis is effective in removing formic acid (formate) and methanol and in correcting severe metabolic acidosis. If methanol poisoning from ingestion of formalin is suspected, as indicated by a serum methanol level of greater than 20 mg/dL or elevated osmolal gap, start ethanol infusion. With 10% ethanol, the loading dose is 7.5 mL/kg body weight; maintenance dose is 1.0 to 1.5 mL/kg/hour; and maintenance dose during hemodialysis is 1.5 to 2.5 mL/kg/hour. In this setting, the target blood level of ethanol is 0.1 mg/dL. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Personal Protective Methods: Prevention of intoxication may be easily accomplished by supplying adequate ventilation and protective clothing. Barrier creams may also be helpful. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Formalin (as formaldehyde): Prevent dermal and/or eye contact. **8 hr:** butyl rubber (gloves, suits, boots), nitrile rubber (gloves, suits, boots), Viton™ (gloves, suits), Saranex™ coated suits, Barricade™ coated suits; CPF3™ suits; **4 hr:** Teflon™ (gloves, suits, boots), 4H™ and Silver Shield™ gloves, Responder™ suits. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >**0.9** ppm (60 min. AEGL) *Formaldehyde (1910.1048)*: *<or = 7.5 ppm (10×PEL)*: Full facepiece respirator with cartridges or canisters specifically approved for protection against formaldehyde. A half-mask respirator with cartridges specifically approved for protection against formaldehyde can be substituted for the full facepiece respirator providing that effective gas-proof goggles are provided and used in combination with the half-mask respirator. *<or = 75 ppm (100×PEL)* (1) Full face-mask respirator with chin-style or chest- or back-mounted type with industrial-size canister specifically approved for protection against formaldehyde; or (2) Type C supplied-air respirator, demand type or continuous-flow type, with full facepiece, hood, or helmet. *>75 ppm (100×PEL)* or unknown concentrations (emergencies): (1) Self-contained breathing apparatus with positive-pressure full facepiece; or (2) Combination supplied-air, full facepiece positive-pressure respirator with auxiliary self-contained air supply.

Storage: Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Formaldehyde must be stored to avoid contact with oxidizers (such as permanganates, nitrates, peroxides, chlorates and perchlorates), and alkaline materials, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat, sparks or flames. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where formaldehyde is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Procedures for the handling, use and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Formaldehyde, solutions, with not <25% formaldehyde require a label of "CORROSIVE." Formaldehyde, solutions, flammable, require a label of "CORROSIVE, FLAMMABLE LIQUID." Nonflammable solutions are in Hazard Class 8 and flammable solutions are in Hazard Class 3; both are in Packing Group III.

Spill Handling: Issue poison warning.
First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.1/0.2
Night 0.1/0.2
Large spills (from a large package or from many small packages)
First: isolate in all directions (feet/meters) 200/60
Then: Protect persons downwind (miles/kilometers)
Day 0.3/0.5
Night 0.5/0.8

Shut off ignition sources; no flares, smoking or flames in hazard area. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors; do not get water inside container. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Use fluorocarbon water spray, cellosize, and hycar to diminish vapors. Use sodium carbonate, ammonium hydroxide or sodium sulfite to neutralize spill. Use universal gel, fly ash, universal sorbent material, or cement powder to absorb the spill. Keep formaldehyde out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable gas or a combustible liquid. Hazardous decomposition includes oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *If tank, rail car or tank truck is involved in a fire*, *isolate* for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters /0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or alcohol-resistant foam. Vapors are heavier than air and will collect in low areas. Vapors in confined areas may explode when exposed to fire. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration in solution of combustible solvent. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Formetanate hydrochloride

F:0440

Use Type: Insecticide, Acaricide

CAS Number: 23422-53-9

Formula: $C_{11}H_{16}ClN_3O_2$

Synonyms: Carbamic acid, methyl-, ester with *N′*-(*m*-hydroxyphenyl)-*N,N*-dimethylformamidine, hydrochloride; *m*-[((Di-methylamino)methylene)amino] phenylcarbamate,hydrochloride;3-Dimethylaminomethylene aminophenyl-*N*-methylcarbamate,hydrochloride; *N,N*-Dimethyl-*N′*-[((methylamino)carbonyl)oxy] phenylmethanimideamidemonohydrochloride

Trade Names: CARZOL®; CARZOL® SP; DICARZOL®; ENT 27566®; EP-332®; MORTON® EP332; NOR-AM® EP 332; SCHERING® 36056; SN 36056®

Chemical Class: Formamidine; Carbamate (N-methyl)

EPA/OPP PC Code: 097301

California DPR Chemical Code: 111

HSDB Number: 2619

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: FC2800000

EC Number: 245-656-0 [*Annex I Index No.:* 006-052-00-0]

Uses: Registered for use in the U.S. Not listed for use in EU countries[115]. An insecticide used for thrips and true bug control on fruit crops.

U.S. Maximum Allowable Residue Levels for Formetanate Hydrochloride [40 CFR 180.276]: in or on raw agricultural commodities as follows: 5 ppm in or on peaches; 4 ppm in or on grapefruit, lemons, limes, nectarines, oranges, and tangerines; 3 ppm in or on apples and pears; 2 ppm in or on plums (fresh prunes). ***[40 CFR 185.3450]***: in dried prunes when present therein as a result of the application of the insecticide to growing plums (fresh prunes). ***[40 CFR 186.3450]***: in citrus molasses resulting from the application of the insecticide to the growing raw agricultural commodities grapefruit, lemons, limes, oranges, and tangerines.

Human toxicity (long-term)[101]: Intermediate–14.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–627.37903 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Carcinogens: Group E, evidence of non-carcinogenicity for humans.
Acute Oral Category: 1, DANGER–POISON
Health Advisory: Nerve Toxin
RCRA Universal Treatment Standards: Wastewater (mg/L), 0.056; Non-wastewater (mg/kg), 1.4
EPA Hazardous Waste Number (RCRA No.): P198
EPCRA Section 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
EPCRA Section 304 RQ: EHS, 1 lb (0.454 kg)
Marine pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant as formetanate
European/International Regulations: Hazard Symbol: T+, N; risk phrases: R 26/28; R 43; R 50/53; safety phrases S:1/2; S24; S28; S37/39; S45; S60; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: White to yellow, crystalline solid or powder. Faint odor. Molecular weight = 257.8; Freezing/Melting point = 191.2 °C; Vapor pressure = practically zero @ 25 °C. Highly soluble in water.

Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. When heated to decomposition or on contact with acids or acid fumes, may produce highly toxic chloride fumes; deadly phosgene gas may be formed. May cause pitting of some metals.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <–3. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Skin absorption, ingestion and inhalation

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Extremely toxic. LD_{50} (oral, rat) = 15–20 mg/kg.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. Nerve toxin; this chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Also consider complete blood count and chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: *On small fire:* use dry chemical powder, carbon dioxide or water spray. *On a large fire*: use water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Formothion F:0460

Use Type: Insecticide, Acaricide

CAS Number: 2540-82-1

Formula: $C_6H_{12}NO_4PS_2$; $(CH_3O)_2PSSCH_2CON(CH_3)CHO$

Synonyms: *O,O*-Dimethyl-*S*-(*N*-formyl-*N*- methylcarbamoylmethyl)phosphorodithioate; Carbamoylmethyl phosphorodithioate; *O,O*-Dimethyldithiophosphorylacetic acid-*N*-methyl-*N*-formylamide; *O* *O,O*-Dimethyl-*S*-(*N*-methyl-*N*-formyl-carbamoylmethyl)-dithiophosphate; *O,O*-Dimethyl-*S*-(*N*-methyl-*N*-formyl-carbamoylmethyl)-phosphorodithioate; *O,O*-Dimethylphosphorodithioate *N*-formyl-2-mercapto-*N*-methylacetamide-*S*-ester; ENT

27,257; Formotion (Spanish); *S*-(2-(Formylmethylamino)2-oxoethyl)-*O,O*-dimethylphosphorodithioate; *N*-Formyl-*N*-methylcarbamoylmethyl-*O,O*-dimethylphosphorodithioate; *S*-(*N*-Formyl-*N*-methylcarbamoylmethyl)-*O,O*-dimethylphosphorodithioate; *S*-(*N*- formyl-*N*-methylcarbamoylmethyl)dimethylphosphorodithiolothionate

Trade Names: AFLIX®; ANTHIO®; ANTIO®; CP 53926®; S 6900®; SAN 244 I®; SAN 6913 I®; SAN 71071®; SPENCER S-6900®; VEL 4284®

Chemical Class: Organophosphate

EPA/OPP PC Code: 366400

HSDB Number: 1587

UN/NA & ERG Number: UN3018 (liquid)/152
UN2783 (solid)/152

RTECS® Number: TE1050000

EC Number: 219-818-6 [*Annex I Index No.:* 015-057-00-7]

Uses: Formothion is a systemic and contact insecticide used to control spider mites, aphids, psyllids, mealy bugs, whiteflies, jassids, leaf miners, ermine moths, and fruit flies. It is used on tree fruits, vines, olives, hops, cereals, sugar cane, rice. Formothion is available as an emulsifiable concentrate and an ultra-low-volume spray. A U.S. EPA restricted Use Pesticide (RUP). Not approved for use in EU countries[115].

Regulatory Authority and Advisory Information: Health Advisory: Nerve Toxin, Mutagen
Acute Oral Category: 2, WARNING
U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)
Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
European/International Regulations: Hazard Symbol: Xn; risk phrases: R21/22; safety phrases: S2; S36/37 (see Appendix 1)

Description: Formothion is a yellowish viscous oil or oily crystalline mass. Odorless. Molecular weight = 257.27; Specific gravity (H_2O:1) = 1.361 @ 20 °C; Freezing/Melting point = 25.5 °C; Vapor pressure = 85×10^{-6}; mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. High solubility in water.

Incompatibilities: Alkaline materials. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.025 mg/m^3
PAC-2: 0.27 mg/m^3
PAC-3: 140 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = <1.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal absorption.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Early symptoms of poisoning include: headache, blurred vision, dizziness, weakness, perspiring, nausea,muscle spasms, vomiting, and sensation of tightness in chest; loss of coordination. Chronic low doses may produce symptoms similar to influenza. Formothion is one of the least toxic systemic organophosphates. Formothion is a compound of low to moderate toxicity. It causes the depression of cholinesterase, leading to accumulation of acetylcholine in the nervous system, which is believed to be responsible for the symptoms. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, profound weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 365 mg/kg. Moderately toxic; LD_{50} (dermal, rat) = 353 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. Repeated exposure may cause changes in personality and exhibit depression, anxiety or irritability.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Also consider complete blood count and chest x-ray following acute overexposure.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.025 mg/m^3 Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fosetyl-Al F:0468

Use Type: Fungicide

CAS Number: 39148-24-8

Formula: $C_6H_{18}AlO_9P_3$

Synonyms: Aluminum tris(*O*-ethylphosphonate); Aluminum phosethyl; Aluminium triethyl triphosphonate;

Fosetyl aluminum; Phosethyl aluminum; Phosphonic acid, monoethyl ester, aluminum salt (3:1); Phosethyl-Al

Trade Names: 32545 R®; ALIETTE®; ALIETTE® 80 WG; CHIPCO® ALIETTE WDG; EFOSITE-AL®; EFOSITE ALUMINUM®; EPAL®; LS-74783®; MIKAL®

Chemical Class: Organophosphate

EPA/OPP PC Code: 123301

California DPR Chemical Code: 2210

HSDB Number: 6856

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid

RTECS® Number: SZ9640000

EC Number: 254-320-2 [*Annex I Index No.:* 006-095-00-5]

Uses: Used on fruits, vegetables and nut crops; also on ornamentals and greenhouse products.

U.S. Maximum Allowable Residue Levels for Fosetyl-al [40 CFR 180.415 (a)]: avocado 25 ppm; banana 3.0 ppm; bushberry subgroup 13B, 40 ppm; caneberries 0.1 ppm; cranberry 0.5 ppm; fruit, citrus, group 10, 5.0 ppm; fruit, pome 10 ppm; ginseng, root 0.1 ppm; hop, dried cone 45 ppm; juneberry 40 ppm; leafy vegetables (except brassica vegetables) 100 ppm; lingonberry 40 ppm; nut, macadamia 0.20 ppm; onion, green 10.0 ppm; pea, succulent 0.3 ppm; pineapple 0.1 ppm; pineapple, fodder 0.1 ppm; pineapple, forage 0.1 ppm; onion, dry bulb 0.5 ppm; salal 40 ppm; strawberry 75 ppm; tomato 3 ppm; turnip, greens 40 ppm; turnip, roots 15 ppm; vegetable, brassica, leafy, group 5, 60 ppm; and vegetable, cucurbit, group 9, 15 ppm. *Regional registration, as defined in section 180.1(n)* ***[40 CFR 180.415(c)]:*** in or on the following raw agricultural commodities: asparagus 0.1 ppm; grape 10 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be a human carcinogen

Acute Oral Category: 3, CAUTION

Health Advisory: Nerve Toxin, Skin irritant/sensitizer

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

DOT Inhalation Hazard Chemicals as organophosphates

European/International Regulations: Hazard Symbol: Xi; risk phrases: R41; safety phrases: S2; S26; S39; S46 (see Appendix 1)

Description: White, crystalline solid or powder. Odorless. Molecular weight = 354.101; Specific gravity (H_2O:1) = 1.55; Boiling point = (decomposes); Freezing/Melting point = 214 °C; Vapor pressure = 1×10^{-7} mmHg @ 20 °C. Henry's Law constant = 3.2×10^{-15} atm-m^3/mol @ 25 °C (est)[83]. Highly soluble in water; solubility = 120 g/L.

Incompatibilities: In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Decomposes in temperatures above 260 °C.

Permissible Exposure Limits in Air:

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV[18], Method #5600, Organophosphorus Pesticides

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 50-200[Al]μg/L; State Drinking Water Standards: California 1000[Al]μg/L; State Drinking Water Guidelines: Arizona 73 [Al]μg/L; Maine 1430 [Al]μg/L; California 200 [Al]μg/L.

Determination in Water: Log K_{ow} = –3. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation; dermal and eye contact.

Harmful Effects and Symptoms

Short Term Exposure: A severe eye irritant. Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = >5 g/kg[83]; LD_{50} (dermal, rat) = 600 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac* *(adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Note to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15–30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Decomposes in temperatures above 260 °C. Hazardous decomposition includes oxides of aluminum, phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fosthiazate F:0479

Use Type: Insecticide, Nematicide
CAS Number: 98886-44-3
Formula: $C_9H_{18}NO_3PS_2$
Synonyms: ACS 66824; (*RS*)-*S*-sec-Butyl-*O*-ethyl-2-oxo-1,3-thiazolidin-3-ylphosphonothioate; *S*-sec-Butyl O-ethyl (2-oxo-1,3-thiazolidine-3-yl)phosphonothioate; *S-sec*-Butyl-*O*-ethyl(2-oxo-3-thiazolidinyl)phosphonothioate; O-Ethyl S-(1-methylpropyl) (2-oxo-3-thiazolidinyl)phosphonothioate; (2-Oxo-3-thiazolidinyl)phosphonothioic acid O-ethyl S-(1-methylpropyl) ester
Trade names: CGA 41065®; IKI 1145®; NEMATHORIN®; PREMEIR®; PRIME®
Chemical Class: Organophosphate
EPA/OPP PC Code: 129022
California DPR Chemical Code:
HSDB Number: 7961
UN/NA & ERG Number: UN3018 (liquid
RTECS® Number: TB1707000
EC Number: [*Annex I Index No.* 015-168-00-0]
Uses: Systemic pesticide applied to the soil.
U.S. Maximum Allowable Residue Levels for residues of the insecticide fosthiazate, including its metabolites and degradates, in or on the commodity in this paragraph. Compliance with the tolerance level specified in this paragraph is to be determined by measuring only the sum of fosthiazate, O-ethyl S-(1-methylpropyl)(2-oxo-3-thiazolidinyl)phosphonothioate, and its metabolite, O-ethyl S-(1-methylpropyl)(2-(methylsulfonyl)ethyl)phosphoramidothioate, calculated as the stoichiometric equivalent of fosthiazate [40 CFR 18.596 (A)]: in or on the commodity: tomato 0.02 ppm.
Regulatory Authority and Advisory Information: Acute Oral Category: 2, WARNING
Health Advisory: Nerve Toxin
Air Pollutant Standard Set. US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates
European/International Regulations: Hazard Symbol: T, Xn, Xi, N; risk phrases: R21; R23/25; R39; R41; R43; R50/53; safety phrases: S1/2; S25; S26; S39; S45; S53; S60; S61 (see Appendix 1)
Description: Pale yellow liquid. Molecular weight = 283.37; Specific gravity (H_2O:1) = 1.23 @ 20 °C; Boiling point = 197.8 °C; Vapor pressure = 4×10^{-6} mmHg @ 25 °C. Soluble in water.
Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.
Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #5600[18], Organophosphorus pesticides. See also OSHA Method #62(58)
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L.
Routes of Entry: Inhalation, dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: An eye irritant. Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.
LD_{50} (oral, rat) = 57 mg/kg; LD_{50} (dermal, rat) = 861 mg/kg.
Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Skin sensitizer.
Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase. May be neurotoxic. Skin.
Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Complete blood count. Evaluation by a qualified

allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of this material will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Fuberidazole F:0480

Use Type: Fungicide, Seed treatment

CAS Number: 3878-19-1

Formula: $C_{11}H_8N_2O$

Synonyms: Fuberidatol; Fuberisazol; Fubridazole; 2-(2-Furanyl)-1H-benzimidazole; 2-(2-Furyl)benzimidazole; Furidazol; Furidazole; 2-(2'-furyl)-benzimidazole

Trade Names: BAYCOR®; BAYER 33172®; BAYTAN®; BAYTAN® FS; ICI BAYTAN®; NEOVORONIT®; SIBUTOL®; SIBUTROL®; VORONIT®; VORONITE®; W VII/117®

Chemical Class: Benzimidazole

EPA/OPP PC Code: 466200

UN/NA & ERG Number: UN2811/154

RTECS® Number: DD9010000

EC Number: 223-404-0 [*Annex I Index No.:* 613-016-00-3]

Uses: Uses include cereal seed dressing; and fungicidal non-mercurial seed dressing with special action against fusarium. Not registered as a pesticide for use in the U.S. Registered for use in EU countries[115].

Regulatory Authority and Advisory Information: Health Advisory: Mutagen

Acute Oral Category: 2, WARNING

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S22; S60; S61 (see Appendix 1)

Description: Fuberidazole is a tan crystalline powder. The commercial may be available as an emulsifiable concentrate. Molecular weight = 184.21; Boiling point = (decomposes); Freezing/Melting point = 286 °C (decomposition); Vapor pressure = 10^{-5} mmHg @ 25 °C; LEL = 17,000 ppm. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Soluble in water; solubility = 0.05 g/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers, isocyanates, halogenated organics, acidic phenols, epoxides, anhydrides, and acid halides. Decomposes above 286 °C.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.3 mg/m^3

PAC-2: 3.3 mg/m^3

PAC-3: 15 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >2.5–<3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Fuberidazole is classified as moderately toxic. Gastrointestinal tract acute effects. LD_{50} (oral, rat) = 300–500 mg/kg(9); LD_{50} (dermal, rat) = 500 mg/kg.

Long Term Exposure: May be a skin sensitizer. May cause reproductive and fetal effects.

Points of Attack: Skin. Reproductive system.

Medical Surveillance: If skin sensitization is suspected, an evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA); or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical-resistant suit.

Respirator Selection: SCBA >0.3 mg/m^3. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic, n.o.s. require a label of "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills*: with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: When heated to decomposition, above 286 °C, it releases oxides of nitrogen and carbon. This material is a combustible solid. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR 165 recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

G

Gibberellic acid G:0121

Use Type: Plant growth hormone, Plant regulator

CAS Number: 77-06-5; 125-67-7 (monopotassium salt)

Formula: $C_{19}H_{22}O_6$; $C_{20}H_{24}O_6$ (methyl ester); $C_{19}H_{21}KO_6$ (potassium salt)

Synonyms: Gibb-3-ene-1,10-dicarboxylic acid, 2,4a,7- trihydroxy-1-methyl-8-methylene-, 1,4a-lactone, (1α,2β,4aα, 4bβ,10β)-; Gibberellins; NCI-C55823; 2,4a,7-Trihydroxy-1-methyl-8-methylenegibb-3-ene-1,10-dicarboxylic acid, 1,4a-lactone; GA; GA_3

monopotassium salt: Potassium gibberellate

Trade Names: ACTIVOL®; BERELEX®; BRELLIN®; BOLL-SET®; CEKUGIB®; CROP BOOSTER®; CYTOPLEX HMS®, DYNOGEN®; FALGRO®; FLORALTONE® (with 2,3,5-triiodobenzoic acid); FLORGIB®; FOLI-ZYME®; GIBBEX®; GIBBERELLIN A_3®; GIBBERELLIN X®; GIBBREL®; GIBGRO®; GIB-SOL®; GIB-TABS®; GIBRESCOL®; GROCEL®; KALGIBB®; MAXON®; N-LARGE®; NOVAGIB®; PGR-IV®; PRO-GIBB®; REGULEX®; RELEASE®; RELAX®; RYZUP®; STIMULATE®; VIGOR®

Chemical class: Tetracyclic dihydroxylactonic acid; Diterpenoid acid

EPA/OPP PC Code: 043801; 043802 (potassium salt)

California DPR Chemical Code: 310; 771 (potassium salt)

HSDB Number: 712

UN/NA & ERG Number: None[88] Not regulated.

RTECS® Number: LY8990000

Uses: Gibberellic acids (Gibberellins) are naturally occurring plant hormones that are used as plant growth regulators to stimulate both cell division and elongation that affects leaves and stems. Applications of this hormone also hastens plant maturation and seed germination. Delayed harvesting of fruits, allowing them to grow larger. Gibberellic acids are applied to growing field crops, small fruits, grapes, vines and tree fruit, and ornamentals, shrubs and vines.

U.S. Maximum Allowable Residue Levels for Gibberellic Acid (40 CFR 180.1098): in or on all food commodities when used as plant regulators on plants, seeds, or cuttings and on all food commodities after harvest in accordance with good agricultural practices. *Note:* The U.S. EPA has generally exempted from tolerances many or most of the biochemical plant growth regulators.

Regulatory Authority and Advisory Information:

Health Advisory: Mutagen

Description: White, crystalline solid or powder. Odorless. Molecular weight = 346.39; Freezing/Melting point = 235 °C (decomposition); Vapor pressure = 1.3×10^{-13} mmHg @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Soluble in water.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, chlorine solutions, phosphorus trichloride, silver powders or dust. Incompatible with acidic or alkaline materials. Contact with some silver compounds may form explosive salts of silver oxalate.

Determination in Water: Log K_{ow} = <0.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Eyes, skin, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = 6300 mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Long Term Exposure: May cause tumors. May cause reproductive and fetal effects.

Points of Attack: Reproductive system.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.
Shipping: No shipping information available.
Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label[83]. Wash all contaminated surfaces with a soap and water solution.
Fire Extinguishing: *on a small fire:* use dry chemical, carbon dioxide or water spray. *On a small fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.
Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83]. Burial or incineration (where permitted) would be effective disposal procedures.

Glufosinate-ammonium G:0135

Use Type: Herbicide
CAS Number: 77182-82-2
Formula: $C_5H_{15}N_2O_4P$
Synonyms: 2-Amino-4-(hydroxymethylphosphinyl)butanoic acid monoammonium salt; Ammonium (3-amino-3-carboxypropyl)methylphosphinate; Ammonium 2-amino-4-(hydroxymethylphosphinyl)butanoate; Ammonium-*dl*-homoalanin-4-yl (methyl) phosphinate; Ammonium (*dl*-homoalanine-4-yl)methylphosphinate; Butanoic acid, 2-amino-4-(hydroxymethylphosphinyl)-, monoammonium salt; Butanoic acid, 2-amino-4-(hydroxymethylphosphinyl)-, monoammonium salt; Monoammonium 2-amino-4-(hydroxymethylphosphinyl) butanoate; Phosphinothricin monoammonium salt
Trade Names: BASTA®; DERRINGER®; FINALE®; HOE 00661®; HOE 03986®; HOE 39866®; IGNITE®; LIBERTY®; RELY®; REMOVE®; RUBOUT®; TOTAL®
Chemical class: Organophosphate
EPA/OPP PC Code: 128850
California DPR Chemical Code: 3946
HSDB Number: 6666
UN/NA & ERG Number: UN2783 (solid)/152
RTECS® Number: EK7713600
EC Number: 278-636-5 [*Annex I Index No.:* 015-155-00-X]
Uses: Glufosinate-ammonium is a naturally occurring broad-spectrum contact herbicide that is used to control a wide range of weeds after the crop emerges or for total vegetation control on non-crop lands. It is used on crops that have been genetically engineered. Glufosinate herbicides are also used to desiccate crops before harvest.
U.S. Maximum Allowable Residue Levels for Glufosinate Ammonium and its metabolite, 3-methylphosphinico-propionic acid, expressed as 2-amino-4-(hydroxmethyl-phosphinyl)butanoic acidequivalents. [40 CFR 180.473(a)(1)]: in or on the following food commodities: almond, hulls 0.50 ppm; apple 0.05 ppm; banana 0.03 ppm; banana, pulp 0.20 ppm; cattle, fat 0.05 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts 0.10 ppm; egg 0.05 ppm; goat, fat 0.05 ppm; goat, meat 0.05 ppm; goat, meat byproducts 0.10 ppm; grape 0.05 ppm; hog, fat 0.05 ppm; hog, meat 0.05 ppm; hog, meat byproducts 0.10 ppm; horse, fat 0.05 ppm; horse, meat 0.05 ppm; horse, meat byproducts 0.10 ppm; milk 0.02 ppm; nut, tree group 0.10 ppm; potato 0.80 ppm; potato chips 1.60 ppm; potato granules and flakes 2.00 ppm; poultry, fat 0.05 ppm; poultry, meat 0.05 ppm; poultry, meat byproducts 0.10 ppm; sheep, fat 0.05 ppm; sheep, meat 0.05 ppm; and sheep, meat byproducts 0.10 ppm. ***For glufosinate and its metabolites, 2-acetamido-4methylphosphinico-butanoic acid and 3-methylphosphinico-propionic acid, expressed as 2-amino-4-(hydroxymethylphosphinyl)butanoic acidequivalents. [40 CFR 180.473(a)(2)]:*** in or on the following food commodities derived from transgenic canola, transgenic field corn, transgenic soybeans and transgenic sugar beets that are tolerant to the herbicide glufosinate ammonium as follows: aspirated grain fractions 25.0 ppm; beet,

sugar, molasses 5.0 ppm; beet, sugar, roots 0.9 ppm; beet, sugar, tops (leaves) 1.5 ppm; canola, meal 1.1 ppm; canola, seed 0.4 ppm; corn, field, forage 4.0 ppm; corn, field, grain 0.2 ppm; corn, field, stover 6.0 ppm; soybean, hulls 5.0 ppm; and soybean 2.0 ppm.

Human toxicity (long-term [101]: Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–1984.85607 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans

Acute Oral Category: 3, CAUTION

Health Advisory: Nerve Toxin

DOT Inhalation Hazard Chemicals as organophosphates

European/International Regulations: Hazard Symbol: T; risk phrases: R20/21/22; R48/20/33; R60; R63; safety phrases: S2; S45; S53 (see Appendix 1)

WGK (German Aquatic Hazard Class): 1-Low hazard to waters

Description: White to yellowish crystalline solid or powder. Slight, pungent odor. Molecular weight = 198.19; Specific gravity (H_2O:1) = 1.32; 1.4; Boiling point = (decomposes); Freezing/Melting point = 215–217 °C. Highly soluble in water; solubility = 2×10^5 ppm @ 20 °C.

Incompatibilities: Decomposes in temperatures above 240 °C. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides[18].

Determination in Water: Aqueous hydrolysis rate = <0.0023/day @ 25 °C, pH 5,7,9[83,USDA]. Log K_{ow} = <–3. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 1620 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Possible reproduction hazard. A neurotoxin.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase. May target liver, kidneys, bladder, blood, and lungs. A neurotoxin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every

3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15–30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a label of "poisonous materials." This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Glutaraldehyde G:0140

Use Type: Fungicide, Biocide

CAS Number: 111-30-8

Formula: $C_5H_8O_2$; $HCO(CH_2)_3CHO$

Synonyms: 1,3-Diformal propane; Glutamic dialdehyde; Glutaral; Glutard dialdehyde; Glutaric acid dialdehyse; Glutaric dialdehyde; NCI-C55425; Pentanedial;

1,5-Pentanedial; 1,5-Pentanedione; Potentiated acid glutaraldehyde

Trade Names: AQUCAR®; CIDEX® (component of this product); CUDEX; ODIX (component of this product); COLDCIDE-25® microbiocide concentrate; GKN-O® microbiocide concentrate (glutaraldehyde + alkyl dimethyl benzyl ammonium chloride + alkyl dimethyl ethylbenzyl ammonium chloride); HOSPEX®; SONACIDE®

Chemical class: Aldehyde

EPA/OPP PC Code: 043901

California DPR Chemical Code: 139

HSDB Number: 949

UN/NA & ERG Number: UN2810/Guide 153

RTECS® Number: MA2450000

EC Number: 203-856-5 [*Annex I Index No.:* 605-022-00-X]

Uses: Used to control pollutants in water treatment plants and towers. Glutaraldehyde is also used as a cross-linking agent for protein and polyhydroxy materials. It has been used in tanning and as a fixative for tissues. It is also used as an intermediate. Buffered solutions are used as antimicrobial agents in hospitals. Registered for use in the U.S. and other countries. Not approved for use in most EU countries[115].

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: ACGIH A4, not classified as a human carcinogen.

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23/25; R34; R42/43; R50; safety phrases: S1/2; S26; S36/37/39; S45; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Glutaraldehyde is a colorless liquid, which readily changes to a glossy polymer. Pungent odor. The Odor Threshold is 0.04 ppm[NY]; 0.2 ppm[NJ]. Molecular weight = 100.13; Specific gravity (H_2O:1) = 1.057; Boiling point = 100 °C; also 187–189 °C (decomposes); Freezing/Melting point = –13.8 °C; also–5.7 °C; Vapor pressure = 17 mmHg. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Highly soluble in water.

Incompatibilities: May react violently with bromine, ketones. Incompatible with strong acids, azo dyes, caustics, ammonia, amines, boranes, hydrazines, strong oxidizers.

Permissible Exposure Limits in Air: Conversion factor: 1 ppm = 4.09 mg/m^3 @ 25 °C & 1 atm

OSHA PEL: None

NIOSH REL: 0.2 ppm/0.8 mg/m^3 Ceiling Concentration.

Note: NIOSH recommends that careful consideration should be given to reducing exposures to this aldehyde. Further information can be found in the *NIOSH Current Intelligence Bulletin 55: Carcinogenicity of Acetaldehyde and Malonaldehyde, and Mutagenicity of Related Low-Molecular-Weight Aldehydes* [DHHS (NIOSH), Publication No. 91-112]; See *NIOSH Pocket Guide*, Appendix C

ACGIH TLV®[1]: 0.05 ppm/0.2 mg/m^3 Ceiling Concentration, sensitizer, not classifiable as a human carcinogen

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: **0.2** ppm

PAC-2: **1** ppm

PAC-3: **5** ppm

*AEGLs (Acute Emergency Guideline Levels) and ERPGs (Emergency Response Planning Guideline) are in **bold face**.

DFG MAK: 0.05 ppm/0.21 mg/m^3 TWA; Peak Limitation Category I(2) a momentary value of 0.2 ml/m^3/0.83 mg/m^3 should not be exceeded; danger of skin and airway sensitization; Carcinogen Category 4; Pregnancy Risk Group C

Determination in Air: Si gel; Acetonitrile; High-pressure liquid chromatography/Ultraviolet; NIOSH IV, Method #2532; OSHA Analytical Method #ID-64

Determination in Water: Log K_{ow} = –0.19. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact. Can be absorbed through the skin

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. *Inhalation:* 0.3 ppm can cause nose and throat irritation; 0.4 ppm has caused headaches; 0.5 ppm has been described as intolerably irritating. *Skin:* Can cause irritation. Contact with a 5% solution can sensitize the skin and cause an allergic response to subsequent contact of much lower concentrations. *Eyes*: Vapors of a 2% solution (0.4 ppm) have produced irritation; high levels may cause irreversible eye damage. *Ingestion:* Can cause irritation of the mouth and stomach. LD_{50} (oral, rat) = 134–246[OEC] mg/kg. Moderately toxic.

LD_{50} (oral, rat) = 134 mg/kg; LD_{50} (dermal, rat) = >2.5 g/kg.

Long Term Exposure: May cause tumors. Repeated or prolonged contact with skin may cause chemical sensitization, skin allergy and asthma. Exposure may cause liver and nervous system damage. Glutaraldehyde may cause mutations, handle with extreme caution. May cause asthmatic signs and symptoms in hyper-reactive individuals.

Points of Attack: Eyes, skin, respiratory system, liver, central nervous system.

Medical Surveillance: If symptoms develop or overexposure has occurred, the following may be useful: Liver function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Note: Testing by NIOSH has not been completed to determine the carcinogenicity of glutaraldehyde and related low-molecular-weight-aldehydes. However, the limited studies to date indicate that these substances have chemical reactivity and mutagenicity similar to acetaldehyde and malonaldehyde. NIOSH recommends that acetaldehyde and malonaldehyde be considered potential occupational carcinogens in conformance with the OSHA carcinogen policy. Therefore, NIOSH recommends that careful consideration should be given to reducing exposures to related aldehydes such as gluteraldehyde. Exposure to acetaldehyde has produced nasal tumors in rats and laryngeal tumors in hamsters, and exposure to malonaldehyde has produced thyroid gland and pancreatic islet cell tumors in rats. Further information can be found in the

"NIOSH Current Intelligence Bulletin 55: Carcinogenicity of Acetaldehyde and Malonaldehyde, and Mutagenicity of Related Low-Molecular-Weight Aldehydes" [NIOSH Publication No. 91-112.] NIOSH Current Intelligence Bulletin #55, September 1991.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact: **8 hr:** butyl rubber gloves, suits, boots; Viton™ gloves, suits; **4 hr**: natural rubber gloves; Neoprene™ rubber gloves, suits, boots; nitrile rubber gloves, suits, boots; polyvinyl chloride gloves, suits, boots. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >**0.2** ppm AEGL (Acute Emergency Guideline Levels). NIOSH: Where potential exists for exposures *over 0.2 ppm*, use an NIOSH/MSHA- or European Standard EN 149-approved respirator with an organic vapor cartridge/canister and a dust/mist/fume prefilter. More protection is provided by a full facepiece respirator than by a half-mask respirator, and even greater protection is provided by a powered-air purifying respirator. *Where potential for high exposures exists*, use an NIOSH/MSHA- or European Standard EN 149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use an NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: (1) Color Code-Yellow Stripe (*strong reducing agent*): Reactivity Hazard; Store separately in a area isolated from flammables, combustibles, or other yellow coded materials. (2) Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong acids, caustics, ammonia, amines, oxidizers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Glutaraldehyde fits the shipping name of Toxic, liquids, organic, n.o.s. It requires a shipping label of "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. Extinguish fire using an agent suitable for type of surrounding fire. Glutaraldehyde itself does not burn. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollution Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA. All federal, state, and local environmental regulations must be observed.

RTECS® Number: MC1075000

EC Number: 213-997-4 [*Annex I Index No.:* 607-315-00-8]

Uses: A General Use Pesticide (GUP). Glyphosate is a broad-spectrum, nonselective systemic herbicide used for control of annual and perennial plants including grasses, sedges, broad-leaved weeds, fruit orchards, vineyards, and woody plants. Frequently used on plantation crops such as tea, bananas, coffee, coconut, cocoa, mangoes and palms. As a pre-crop emergence control, it is used on vegetables, beet, okra, soya beans, lucerne, figs, kiwi, olives cereals, cotton, etc.) It can be used on non-cropland, aquatic weed control, and pre-harvest desiccation of cotton, cereals, peas and beans. It controls suckers on fruit trees. Glyphosate itself is an acid, but it is commonly used in salt form, most commonly the isopropylamine salt. It may also be available in acidic or trimethylsulfonium salt forms. It is generally distributed as water-soluble concentrates and powders. The world's largest selling herbicide.

U.S. Maximum Allowable Residue Levels for Glyphosate (40 CFR 180.364): Acerola 0.2 ppm; alfalfa, forage 175 ppm; alfalfa, hay 400 ppm; almond, hulls 25 ppm; aloe vera 0.5 ppm; ambarella 0.2 ppm; animal Feed, nongrass, group 18, 400 ppm; artichoke, Jerusalem 0.2 ppm; asparagus 0.5 ppm; atemoya 0.2 ppm; avocado 0.2 ppm; bamboo, shoots 0.2 ppm; banana 0.2 ppm; barley, bran 30 ppm; barley, grain 20 ppm; beet, sugar, dried pulp 25 ppm; beet, sugar, roots 10 ppm; beet, sugar, tops 10 ppm; berry group 13, 0.2 ppm; betelnut 1 ppm; biriba 0.2 ppm; borage, seed 0.1 ppm; breadfruit 0.2 ppm; cacao bean 0.2 ppm; cactus, fruit 0.5 ppm; cactus, pads 0.5 ppm; canistel 0.2 ppm; canola, meal 15 ppm; canola, seed 10 ppm; cattle, liver 0.5 ppm; chaya, leaves 1 ppm; cherimoya 0.2 ppm; citrus, dried pulp 1.5 ppm; coconut 0.1 ppm; coffee, bean 1 ppm; corn, field, forage 6 ppm; corn, field, grain 1 ppm; cotton, gin byproducts 100 ppm; cotton, undelinted seed 15 ppm; crambe, seed 0.1 ppm; cranberry 0.2 ppm; custard apple 0.2 ppm; date, dried fruit 0.2 ppm; dokudami, leaves 2 ppm; durian 0.2 ppm; egg 0.05 ppm; epazote, leaves 1.3 ppm; feijoa 0.2 ppm; fig 0.2 ppm; fish 0.25 ppm; flax, meal 8 ppm; flax, seed 4 ppm; fruit, citrus, group 10, 0.5 ppm; fruit, pome, group 11, 0.2 ppm; fruit, stone, group 12, 0.2 ppm; galangal, roots 0.2 ppm; ginger, white, flower 0.2 ppm; goat, liver 0.5 ppm; gourd, buffalo, seed 0.1 ppm; governor's plum 0.2 ppm; gow kee, leaves 0.2 ppm; grain, aspirated fractions 100 ppm; grain, cereal, except barley, field corn, grain sorghum, oats and wheat 0.1 ppm; grain, cereal, forage, fodder and straw, group 16, 100 ppm; grain, crops, except wheat, oats, grain sorghum, barley, 0.1 ppm; grape 0.2 ppm; grass, forage, fodder and hay, group 17, 300 ppm; guava 0.2 ppm; herb and spice group 19, 0.2 ppm; herb and spice group 19, 7 ppm; hog, kidney 4 ppm; hog, liver 0.5 ppm; hop, dried cones 7 ppm; horse, liver 0.5 ppm; ilama 0.2 ppm; imbe 0.2 ppm; imbu 0.2 ppm; jaboticaba 0.2 ppm; jackfruit 0.2 ppm; jojoba, seed 0.1 ppm; juneberry 0.2 ppm; kava, roots 0.2 ppm; kenaf, forage 200 ppm; kiwifruit 0.2 ppm; lesquerella, seed 0.1 ppm; leucaena, forage 200 ppm; lingonberry 0.2 ppm; longan 0.2 ppm; lychee 0.2 ppm; mamey apple 0.2 ppm; mango 0.2 ppm; mangosteen 0.2 ppm; marmaladebox 0.2 ppm; meadowfoam, seed 0.1 ppm; mioga, flower 0.2 ppm; mustard, seed 0.1 ppm; nut, pine 1 ppm; nut, tree, group 14, 1 ppm; oat, grain 20 ppm; okra 0.5 ppm; olive 0.2 ppm; oregano, Mexican, leaves 2 ppm; palm heart, leaves 0.2 ppm; palm, oil 0.1 ppm; papaya 0.2 ppm; papaya, mountain 0.2 ppm; passionfruit 0.2 ppm; pawpaw

0.2 ppm; peanut 0.1 ppm; peanut, forage 0.5 ppm; peanut, hay 0.5 ppm; pepper leaf, fresh leaves 0.2 ppm; peppermint, tops 200 ppm; perilla, tops 1.8 ppm; persimmon 0.2 ppm; pineapple 0.1 ppm; pistachio 1 ppm; pomegranate 0.2 ppm; poultry, meat 0.1 ppm; poultry, meat byproducts 1 ppm; pulasan 0.2 ppm; quinoa, grain 5 ppm; rambutan 0.2 ppm; rapeseed, meal 15 ppm; rapeseed, seed 10 ppm; rose apple 0.2 ppm; safflower, seed 0.1 ppm; salal 0.2 ppm; sapodilla 0.2 ppm; sapote, black 0.2 ppm; sapote, mamey 0.2 ppm; sapote, white 0.2 ppm; sesame, seed 0.1 ppm; sheep, liver 0.5 ppm; shellfish 3 ppm; sorghum, grain, grain 15 ppm; soursop 0.2 ppm; soybean, forage 100 ppm; soybean, hay 200 ppm; soybean, hulls 100 ppm; soybean, seed 20 ppm; Spanish lime 0.2 ppm; spearmint, tops 200 ppm; star apple 0.2 ppm; starfruit 0.2 ppm; stevia, dried leaves 1 ppm; strawberry 0.2 ppm; sugar apple 0.2 ppm; sugarcane, cane 2 ppm; sugarcane, molasses 30 ppm; sunflower, seed 0.1 ppm; Surinam cherry 0.2 ppm; tamarind 0.2 ppm; tea, dried 1 ppm; tea, instant 7 ppm; teff, grain 5 ppm; ti, leaves 0.2 ppm; ti, roots 0.2 ppm; ugli fruit 0.5 ppm; vegetable, brassica, leafy, group 5, 0.2 ppm; vegetable, bulb, group 3, 0.2 ppm; vegetable, cucurbit, group 9, 0.5 ppm; vegetable, foliage of legume, except soybean, subgroup 7a, 0.2 ppm; vegetable, fruiting, group 8, 0.1 ppm; vegetable, legume, group 6, 5 ppm; vegetable, root, except sugarbeet, ppm; subgroup 1b, 0.2 ppm; wasabi, roots 0.2 ppm; water spinach, tops 0.2 ppm; watercress, upland 0.2 ppm; wax jambu 0.2 ppm; wheat, grain 5 ppm; wheat, milled fractions, except flour 20 ppm; yacon, tuber 0.2 ppm.

Note: June 2013 EPA raised the allowable concentrations of glyphosate as follows: forage and hay teff, up to 100 ppm; oilseed crops, up to 40 ppm; root crops, 6000 ppb; fruits, 200 ppb–500 ppb.

Human toxicity (long-term)[101]: Very low–700.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Very low–26000.00 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans.

Note: Human skin cell studies conducted at the Indian Institute of Toxicology Research in Pradesh, India, reported in a 2013 study that glyphosate "has cancer-promoting properties."

Acute Oral Category: 3, CAUTION

Health Advisory: Mutagen

NTP: Toxicity studies, Report #TOX-16, October 2000

US DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R41; R51/53; safety phrases: S2; S26; S39; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Glyphosate is a colorless crystalline powder. Odorless. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 0. Often used as a liquid in a carrier solvent which may change physical and toxicological properties. Molecular weight = 169.09; Specific gravity (H_2O:1) = 1.71; Boiling point = (decomposes); Freezing/Melting point = (decomposes) 230 °C; 190 °C; Vapor pressure = 1.97×10^{-7} mmHg @ 45 °C. Flash point: flammable in solution. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Highly soluble in water; solubility = 5–10 mg/L @ 25 °C.

Incompatibilities: Decomposes in temperatures above 215 °C. pH = 2.5 (1% solution). Solutions are corrosive to iron, unlined steel, and galvanized steel, forming a highly combustible or explosive gas mixture. Do not store glyphosate in containers made from these materials.

Permissible Exposure Limits in Air: No OELs have been established in the U.S. for this chemical.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 700 ppb[93]

Determination in Water: Analysis of glyphosate is by a high-performance liquid chromatographic (HPLC) method. Log K_{ow} = Negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, through the skin.

Harmful Effects and Symptoms: Some glyphosate end-use products (some in Toxicity Categories I or II) cause primary eye irritation or skin irritation. In California, glyphosate ranks high among pesticides causing illness or injury to workers, who report numerous incidents of eye and skin irritation from splashes during mixing and loading[83].

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Exposure to high levels can cause nausea, vomiting, diarrhea, decreased blood pressure, and convulsions. High exposures can cause arrhythmia and possible death. LD_{50} (oral, rat) = 4873 mg/kg; LD_{50} (dermal, rabbit) = >7500 mg/kg.

Long Term Exposure: May cause tumors. May cause liver and kidney damage. Long term exposure to glyphosate above the MCL (0.7 mg/L/700 ppm) may cause lung congestion, kidney damage and reproductive effects[14]. Reproductive cells. May cause skin sensitization.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase, liver, kidney, heart.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. If this chemical has been inhaled, remove from exposure and transfer promptly to a medical facility

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Collect powdered material in the most convenient and safe manner and deposit in sealed containers for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon and phosphorus. Solid glyphosate may burn, but does not readily ignite. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. The best way to dispose of small amounts of excess pesticides is to use them – apply them – according to the directions on the label. If you cannot use them, ask your neighbors whether they have a similar pest control problem and can use them. If all of the remaining pesticide cannot be properly used, check with your local solid waste management authority, environmental agency, or health department to find out whether your community has a household hazardous waste collection program or a similar program for getting rid of unwanted, leftover pesticides. These authorities can also inform you of any local requirements for pesticide waste disposal. Safe Disposal of Pesticides. An empty pesticide container can be as hazardous as a full one because of residues left inside. Never reuse such a container. When empty, a pesticide container should be rinsed carefully three times and the rinse water thoroughly drained back onto the sprayer or the container previously used to mix the pesticide. Use the rinsewater as a pesticide, following label directions. Replace the cap or closure securely. Dispose of the container according to label instructions. Do not puncture or burn a pressurized container like an aerosol – it could explode. Do cut or puncture other empty pesticide containers made of metal or plastic to prevent someone from reusing them. Wrap the empty container and put it in the trash after you have rinsed it[83].

Glyphosate isopropylamine

G:0180

Use Type: Herbicide

CAS Number: 38641-94-0

Formula: $C_6H_{17}N_2O_5P$

Synonyms: Glifosato estrella; Glyphosate-isopropyl ammonium; Isopropylamine glyphosate; Mono(isopropylammonium) salt of glyphosate

Trade names: MON 39; MON 139; GILFONOX; GLYCEL; NITOSORG; RATTLER; RODEO; RONDO; ROUNDUP; UTAL

Chemical Class: Phosphonoglycine Herbicide

EPA/OPP PC Code: 103601

California DPR Chemical Code: 1855

HSDB Number: 3433

UN/NA & ERG Number: UN3077(solid)/171; UN3082 (liquid)/171

RTECS® Number: MC1080000

EC Number: 254-056-8

Uses: As a herbicide to control broadleaf weeds and grasses in many food and non-food crops and a variety of other sites including ornamentals, lawns and turf, residential areas, greenhouses, forest plantings and industrial rights-of-way. It is formulated as a liquid, solid or pellet/tablet, and is applied using ground or aerial equipment[83]. Registered for use in the U.S. and other countries. Registered for use in some (Germany, Finland) EU countries[115].

U.S. Maximum Allowable Residue Levels for Glyphosate isopropylamine salt (40 CFR 180.364): in or on the following food commodities: acerola 0.2 ppm; alfalfa, forage 175 ppm; alfalfa, hay 400 ppm; alfalfa, seed 0.5 ppm; almond, hulls 25 ppm; animal feed, nongrass, group 18 400 ppm; aloe vera 0.5 ppm; ambarella 0.2 ppm; artichoke, globe 0.2 ppm; asparagus 0.5 ppm; atemoya 0.2 ppm; avocado 0.2 ppm; bamboo, shoots 0.2 ppm; banana 0.2 ppm; barley, bran 30 ppm; barley, grain 20 ppm; beet, sugar, dried pulp 25 ppm; beet, sugar, roots 10 ppm; beet, sugar, tops 10 ppm; berry, group 13, 0.2 ppm; betelnut 1.0 ppm; biriba 0.2 ppm; blimbe 0.2 ppm; borage, seed 0.1 ppm; breadfruit 0.2 ppm; cactus, fruit 0.5 ppm; cactus, pads 0.5 ppm; canistel 0.2 ppm; canola, meal 15 ppm; canola, seed 10 ppm; cattle, kidney 4.0 ppm; cattle liver 0.5 ppm; chaya 1.0 ppm; cherimoya 0.2 ppm; citrus, dried pulp 1.5 ppm; cacao bean 0.2 ppm; coconut 0.1 ppm; coffee, bean 1.0 ppm; corn, field, forage 6.0 ppm; corn, field, grain 1.0 ppm; cotton, gin byproducts 175 ppm; cotton, undelinted seed 35 ppm; cranberry 0.2 ppm; crambe, seed 0.1 ppm; custard apple 0.2 ppm; date 0.2 ppm; dokudami 2.0 ppm; durian 0.2 ppm; egg 0.05 ppm; epazote 1.3 ppm; feijoa 0.2 ppm; fig 0.2 ppm; fish 0.25 ppm; flax, meal 8.0 ppm; flax, seed 4.0 ppm; fruit, citrus, group 10, 0.5 ppm; fruit, pome, group 11, 0.2 ppm; fruit, stone, group 12, 0.2 ppm; galangal, root 0.2 ppm; ginger, white, flower 0.2 ppm; goat, kidney 4.0 ppm; goat, liver 0.5 ppm; gourd, buffalo, seed 0.1 ppm; governor's plum 0.2 ppm; gow kee, leaves 0.2 ppm; grain, aspirated fractions 100.0 ppm; grain, cereal, group 15, except barley, field corn, grain sorghum, oat and wheat 0.1 ppm; grain, cereal, stover and straw, group 100 ppm; grape 0.2 ppm; grass, forage, fodder and hay, group 17, 300 ppm; guava 0.2 ppm; herb subgroup 19A, 0.2 ppm; hog, kidney 4.0 ppm; hog, liver 0.5 ppm; hop, dried cone 7.0 ppm; horse, kidney 4.0 ppm; horse, liver 0.5 ppm; ilama 0.2 ppm; imbe 0.2 ppm; imbu 0.2 ppm; jaboticaba 0.2 ppm; jackfruit 0.2 ppm; jojoba, seed 0.1 ppm; juneberry 0.2 ppm; kava, roots 0.2 ppm; kenaf, forage 200 ppm; kiwifruit 0.2 ppm; lesquerella, seed 0.1 ppm; leucaena, forage 200 ppm; lingonberry 0.2 ppm; longan 0.2 ppm; lychee 0.2 ppm; mamey apple 0.2 ppm; mango 0.2 ppm; mangosteen 0.2 ppm; marmaladebox 0.2 ppm; meadowfoam, seed 0.1 ppm; mioga, flower 0.2 ppm; mustard, seed 0.1 ppm; nut, pine 1.0 ppm; nut, tree, group 14, 1.0 ppm; oat, grain 20 ppm; okra 0.5 ppm; olive 0.2 ppm; oregano, Mexican, leaves 2.0 ppm; palm heart 0.2 ppm; palm heart, leaves 0.2 ppm; palm, oil 0.1 ppm; papaya 0.2 ppm; papaya, mountain 0.2 ppm; passionfruit 0.2 ppm; pawpaw 0.2 ppm; peanut 0.1 ppm; peanut, forage 0.5 ppm; peanut, hay 0.5 ppm; pepper leaf, fresh leaves 0.2 ppm; peppermint, tops 200 ppm; perilla, tops 1.8 ppm; persimmon 0.2 ppm; pineapple 0.1 ppm; pistachio 1.0 ppm; pomegranate 0.2 ppm; poultry, meat 0.1 ppm; poultry, meat byproducts 1.0 ppm; pulasan 0.2 ppm; quinoa, grain 5.0 ppm; rambutan 0.2 ppm; rapeseed, meal 15 ppm; rapeseed, seed 10 ppm; rose apple

0.2 ppm; safflower, seed 0.1 ppm; salal 0.2 ppm; sapodilla 0.2 ppm; sapote, black 0.2 ppm; sapote, mamey 0.2 ppm; sapote, white 0.2 ppm; sesame, seed 0.1 ppm; sheep, kidney 4.0 ppm; sheep, liver 0.5 ppm; shellfish 3.0 ppm; sorghum, grain, grain 15 ppm; soursop 0.2 ppm; soybean, seed 20 ppm; soybean, forage 100 ppm; soybean, hay 200 ppm; soybean, hulls 100 ppm; Spanish lime 0.2 ppm; spearmint, tops 200 ppm; spice subgroup 19B, 7.0 ppm; star apple 0.2 ppm; starfruit 0.2 ppm; stevia, dried leaves 1.0 ppm; strawberry 0.2 ppm; sugar apple 0.2 ppm; sugarcane, cane 2.0 ppm; sugarcane, molasses 30 ppm; sunflower, seed 0.1 ppm; Surinam cherry 0.2 ppm; tamarind 0.2 ppm; tea, dried 1.0 ppm; tea, instant 7.0 ppm; teff, grain 5.0 ppm; ti, leaves 0.2 ppm; ti, roots 0.2 ppm; ugli fruit 0.5 ppm; vegetable, brassica, leafy, group 5, 0.2 ppm; vegetable, bulb, group, 0.2 ppm; vegetable, cucurbit, group 9, 0.5, ppm; vegetable, foliage of legume except soybean, subgroup 7A, 0.2 ppm; vegetable, fruiting, group 0.1 ppm; vegetable, leafy, group, 0.2 ppm; vegetable, leaves of root and tuber, group (except sugar beet tops), 0.2 ppm; vegetable, legume, group 6 except soybean, 5.0 ppm; vegetable, root and tuber, group 1, except sugar beet, 0.2 ppm; wasabi, roots 0.2 ppm; water spinach, tops 0.2 ppm; watercress, upland 0.2 ppm; wax jambu 0.2 ppm; wheat, grain 5.0 ppm; wheat, milling fractions (except flour) 20 ppm; and yacon, tuber 0.2 ppm.

Regulatory Authority and Advisory Information:
Health Advisory: Mutagen

Description: White powder or a clear, amber liquid. However, there is a wide range of products available on the market. Slight amine odor. Molecular weight = 228.22; Specific gravity (H_2O:1) = 1.167 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 198 °C; Vapor pressure = 2×10^{-8} mmHg @ 25 °C; Flash point = >200 °C. High solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, through the skin

Harmful Effects and Symptoms

Short Term Exposure: Irritation may occur from skin or eye contact. May cause respiratory tract irritation. Signs of exposure, including ingestion, may include nausea and vomiting; diarrhea, erythema of mucous membranes; epigastric pain. Life-threatening effects from inhalation include pulmonary edema and aspiration pneumonitis. High exposures may cause arrhythmia, decreased blood pressure, convulsions and possible death. Intoxication or overexposure may cause mental problems. LD_{50} (oral, rat) = >10 g/kg; LD_{50} (dermal, rat) = >7.5 g/kg.

Long Term Exposure: Mutagenic. May cause reproductive and fetal effects. Some commercial glyphosate formulations have caused erythema, “goose bumps” (piloerection), and contact dermatitis.

Points of Attack: Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. If this chemical has been inhaled, remove from exposure and transfer promptly to a medical facility

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Collect powdered material in the most convenient and safe manner and deposit in sealed containers for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon and phosphorus. Solid glyphosate may burn, but does not readily ignite. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. The best way to dispose of small amounts of excess pesticides is to use them – apply them – according to the directions on the label. If you cannot use them, ask your neighbors whether they have a similar pest control problem and can use them. If all of the remaining pesticide cannot be properly used, check with your local solid waste management authority, environmental agency, or health department to find out whether your community has a household hazardous waste collection program or a similar program for getting rid of unwanted, leftover pesticides. These authorities can also inform you of any local requirements for pesticide waste disposal. Safe Disposal of Pesticides. An empty pesticide container can be as hazardous as a full one because of residues left inside. Never reuse such a container. When empty, a pesticide container should be rinsed carefully three times and the rinsewater thoroughly drained back onto the sprayer or the container previously used to mix the pesticide. Use the rinse water as a pesticide, following label directions. Replace the cap or closure securely. Dispose of the container according to label instructions. Do not puncture or burn a pressurized container like an aerosol – it could explode. Do cut or puncture other empty pesticide containers made of metal or plastic to prevent someone from reusing them. Wrap the empty container and put it in the trash after you have rinsed it[83].

H

Heptachlor H:0140

Use Type: Insecticide
CAS Number: 76-44-8
Formula: $C_{10}H_5Cl_7$
Synonyms: 3-Chlorochlordene; E 3314; ENT 15,152; GPKh; HEPTA; 3,4,5,6,7,8,8-Heptachlorodicyclopentadiene; 3,4,5,6,7,8,8a-Heptachlorodicyclopentadiene; Heptachlorane; 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7a-tetrahydro-4,7-methano-1H-indene; 1,4,5,6,7,10,10-Heptachloro-4,7,8,9-tetrahydro-4,7-endomethyleneindene; 1,4,5,6,7,8,8a-Heptachloro-3a,4,7,7a-tetrahydro-4,7-methanoindene; 1,4,5,6, 7,8,8-Heptachloro-3a,4,7,7a-tetrahydro-4,7-methanoindene; 1(3a),4,5,6,7,8,8-Heptachloro-3a(1),4,7,7a-tetrahydro-4,7-methanoindene; 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7a-tetrahydro-4,7-methanol-1H-indene; 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7,7a-tetrahydro-4,7-methelene Indene; Heptacloro (Spanish); 4,7-Methanoindene, 1,4,5,6,7,8,8-heptachloro-3a,4,7,7a-tetrahydro-; NCI-C00180
Trade Names: AAHEPTA®; AGROCERES®; ARBINEX 30TN®; BIARBINEX®; CUPINCIDA®; DRINOX®; E 3314®; FENNOTOX®; HEPTAGRAN®; HEPTAMUL®; HEPTOX®; INDENE®; RHODIACHLOR®; TERMIDE®; VELSICOL 104. ®[C];
Chemical class: Organochlorine
EPA/OPP PC Code: 044801
California DPR Chemical Code: 317
HSDB Number: 554
UN/NA & ERG Number: UN2761 (solid)/151
RTECS® Number: PC0700000
EC Number: 200-962-3 [*Annex I Index No.:* 602-046-00-2]]
Uses: Heptachlor is an organochlorine cyclodiene insecticide, first isolated from technical chlordane in 1946. During the 1960s and 1970s, it was used primarily by farmers to kill termites, ants, and soil insects in seed grains and on crops, as well as by exterminators and home owners to kill termites. An important metabolite of heptachlor is heptachlor epoxide, which is an oxidation product formed from heptachlor by many plant and animal species. Not currently registered in the U.S. The only commercial use still permitted is for fire ant control in power transformers. Heptachlor had been found in at least 206 of the 1662 current or former EPA National Priorities List (NPL) sites. Heptachlor epoxide has been found in at least 195 NPL sites. Banned for use in EU countries[115]. In the U.S., registration of heptachlor-containing pesticides was canceled in 1988 with the exception of its use for fire ant control in power transformers.
U.S. Maximum Allowable Levels for heptachlor: The Food and Drug Administration (FDA) limits the amount of heptachlor and heptachlor epoxide on raw food crops and on edible seafood to 0–10 parts per billion (ppb), depending on the type of food product. The limit on edible seafood is 300 ppb, and for the fat of food-producing animals is 200 ppb.
Human toxicity (long-term)[101]: Extra high–0.40 ppb, MCL (Maximum Contaminant Level)
Fish toxicity (threshold)[101]: Extra high–0.05276 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; EU GHS Category 2: Suspected human carcinogen; ACGIH A3 Confirmed animal carcinogen with unknown relevance to humans.
California Proposition 65 Chemical: Carcinogen (7/1/1998); Developmental toxin (8/20/1999)
Acute Oral Category: 2, WARNING
Health Advisory: Mutagen, Developmental/Reproductive Toxin.
Endocrine disruptor: Probable ED
Carcinogen (Animal Positive) (IARC) (NCI)(9)
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR423, Appendix A, Priority Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92); 40CFR401.15 Section 307 Toxic Pollutants
EPA Hazardous Waste Number (RCRA No.): P059; D031
RCRA Toxicity Characteristic (Section 261.24), Maximum Concentration of Contaminants, regulatory level, 0.008 mg/L
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.0012; Non-wastewater (mg/kg), 0.066
RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL *u*g/L): 8080(0.05); 8270(10)
Safe Drinking Water Act: MCL, 0.0004 mg/L; MCLG, zero
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant
Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)]
List of Stockholm Convention POPs: Annex A (Elimination)
European/International Regulations: Hazard Symbol: T, N; risk phrases: R24/25; R33; R40; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)
Description: Pure heptachlor is a white waxy-looking solid or powder; technical grade is a tan waxy-looking solid or

powder and has a lower level of purity. The technical grade is the form used most often as a pesticide. Its odor is somewhat like camphor. Heptachlor is both a breakdown product and a component of the pesticide chlordane (approximately 10% by weight). It is a noncombustible solid, but may be dissolved in flammable liquids which may change the physical properties shown here. Molecular weight = 373.32; Specific gravity (H_2O:1) = 1.57 @ 9°C; Boiling point = (decomposes) 145°C; Freezing/Melting point = 95.5°C (pure); 46–74°C (technical product); Vapor pressure = 0.0004 mmHg[83]; 0.0003 mmHg @ 25°C[9]. Hazard Identification (based on NFPA-704M Rating System): Health 3, Flammability 0, Reactivity 0. Practically insoluble in water; solubility = <0.1 mg/L @ 25°C.

Incompatibilities: Reacts with strong oxidizers. Attacks metal. Forms hydrogen chloride gas with iron and rust above 74°C. Susceptible to epoxidation (see following record). Reacts with alkaline solutions, slowly releasing hydrogen chloride gas.

Permissible Exposure Limits in Air: OSHA PEL: 0.5 mg/m^3 TWA[skin]

NIOSH REL: 0.5 mg/m^3 TWA[skin]; A potential occupational carcinogen. Limit exposure to lowest feasible concentration. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: 0.05 mg/m^3 TWA[skin]; confirmed animal carcinogen with unknown relevance to humans.

NIOSH IDLH: potential occupational carcinogen, 35 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.15 mg/m^3
PAC-2: 4.9 mg/m^3
PAC-3: 700 mg/m^3

DFG MAK: 0.5 mg/m3, inhalable fraction [skin]; Peak Limitation Category II(2); Pregnancy Risk Category D; Carcinogen Category 4

Determination in Air: Collection by Chromosorb tube-102; Toluene; Gas chromatography/Electrochemical detection; NIOSH II(5), Method #S287[18].

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 0.4 μg/L[83]; 0.07 ppb[80]; State Drinking Water Standards: California 0.01 μg/L; Illinois 0.1 μg/L; State Drinking Water Guidelines: Arizona 0.008 μg/L; Maine 0.08 μg/L; Minnesota 0.08 μg/L.

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Methylene chloride extraction followed by gas chromatography with electron capture or halogen specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625). Log K_{ow} = >5.5. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Heptachlor can cause a feeling of anxiety, headache, dizziness, weakness, a sensation of "pins and needles" on the skin, and muscle twitching. Heptachlor has been demonstrated to be highly toxic to aquatic life, to persist for prolonged periods in the environment, to bioconcentrate in organisms at various trophic levels, and to exhibit carcinogenic activity in mice. The principal metabolite of heptachlor, heptachlor epoxide is more acutely toxic than heptachlor. Most of what we know about the health effects of these pesticides comes from studies on mice and rats fed heptachlor and heptachlor epoxide in the food or water. Very high levels for short periods produce serious liver problems. Mice had trouble walking and rats developed tremors. High levels of heptachlor in the feed for several weeks damaged the livers of rats and the livers and adrenal glands of mice. LD_{50} (oral, rat) = 40 mg/kg; (dermal, rat, male) = 119 mg/kg[83].

Long Term Exposure: May cause tumors. A potential carcinogen, tumorigenic, mutagen and reproductive toxin. Organochlorine pesticides are highly toxic to mammals and will accumulate in the tissues of living organisms. High or repeated exposure may cause brain damage with personality changes, decreased memory, difficult coordination and concentration. Higher levels can cause tremor, seizures, unconsciousness and death. This substance is possibly carcinogenic to humans. There is limited evidence that heptachlor may damage the developing fetus. A liver toxin; may cause liver and kidney damage.

Points of Attack: Central nervous system, liver. Cancer site in animals: liver cancer.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. Evaluation for brain effects.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.15 mg/m^3. NIOSH: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd, Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Protect storage containers from physical damage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organochlorine pesticides, liquid or solid require a "poisonous materials" label. They fall in Hazard Class 6.1. This material may be in Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and chlorine gas. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration (816°C, 0.5 sec minimum for primary combustion; 1760°C, 1.0 sec for secondary combustion) with adequate scrubbing and ash disposal facilities. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Hexachlorobenzene H:0190

Use Type: Insecticide, Fungicide, Microbiocide

CAS Number: 118-74-1

Formula: C_6Cl_6

Synonyms: Benzene, hexachloro-; Granox NM; HCB; Hexa C. B; Pentachlorophenyl chloride

Trade Names: AMATIN®; ANTICARIE®; BUNT-CURE®; BUNT-NO-MORE®; CEKU C. B. ®; CO-OP HEXA®; GRANERO®; JULIN'S CARBON CHLORIDE®; NO BUNT[C]; RES-Q®[C]; SANOCID®; SANOCIDE®; SMUT-GO®[C]; SNIECIOTOX®; THIHEX®[C]; ZAPRAWA NASIENNA SNECIOTOX®

Chemical class: Organochlorine; Chlorinated hydrocarbon (aromatic)
EPA/OPP PC Code: 061001
California DPR Chemical Code: 321
HSDB Number: 1724
UN/NA & ERG Number: UN2729/152
RTECS® Number: DA2975000
EC Number: 204-273-9 [*Annex I Index No.:* 602-065-00-6]
Uses: Hexachlorobenzene was used widely as a pesticide to protect seeds of onions and sorghum, wheat, and other grains against fungus until 1965. It can be used with or without other seed treatments, fungicides and/or insecticides. It has fumigant action on fungal spores and is available as a dry seed treatment or slurry seed treatment. Not approved for use in EU countries[115]. Has been banned from use in the United States. Hexachlorobenzene (HCB) is an impurity in picloram. Not approved for use in EU countries[115]. Not registered for use in the U.S. There are more than 40 global suppliers[97].
Human toxicity (long-term)[101]: High–1.00 ppb, MCL (Maximum Contaminant Level)
Fish toxicity (threshold)[101]: Very low–1760.07814 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group 2B, Probable carcinogen NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen; EU GHS (1A, 1B) Known or presumed human carcinogen; ACGIH A3 Confirmed animal carcinogen with unknown relevance to humans.
California Proposition 65 Chemical: Carcinogen (10/1/1987) and developmental toxin (1/1/1989)
Acute Oral Category: 1, DANGER–POISON
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (confirmed)
Carcinogen (Animal Positive) (IARC)(9)
List of priority pollutants (U.S. EPA)
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean Water Act: Section 313 Water Priority Chemicals (57FR41331, 9/9/92)
EPA Hazardous Waste Number (RCRA No.): U127; D032

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)]
List of Stockholm Convention POPs: Annex A (Elimination) POPs: Annex A & Annex C (Unintentional production and release) as HCB
European/International Regulations: Hazard Symbol: T, N; risk phrases: R45; R48/25; R50/53; safety phrases: S2; S45; S53; S60; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters
Description: Hexachlorobenzene is a solid, crystallizing in needles. Molecular weight = 284.78; Specific gravity (H_2O:1) = 2.04 @ 23°C; Boiling point = 325°C; Freezing/Melting point = 228.8°C; 232°C; Vapor pressure = 6×10^{-5} mmHg @ 25°C Flash point = 242°C. Hazard Identification (based on NFPA-704M Rating System): Health 1, Flammability 1, Reactivity 0. Slightly soluble in water.
Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, chlorine solutions, phosphorus trichloride, silver powders or dust; *N,N*-dimethylformamide. Violent reaction in temperatures above 65°C[17].
Permissible Exposure Limits in Air:
OSHA PEL: None
NIOSH REL: None
ACGIH TLV®[1]: 0.002 TWA [skin]; confirmed animal carcinogen with unknown relevance to humans.
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.006 mg/m^3
PAC-2: 8.9 mg/m^3
PAC-3: 160 mg/m^3
DFG MAK: [skin]; Carcinogen Category 4; Pregnancy Risk Group D
Determination in Air: Use NIOSH IV, Method # 1003, Halogenated hydrocarbons[18].
Permissible Concentration in Water: Federal Drinking Water Guidelines: 0.2 ppb[93] State Drinking Water Guidelines: Arizona 0.02 μg/L; Maine 0.2 μg/L; Minnesota 0.2 μg/L.
Determination in Water: Methylene chloride extraction followed by concentration and gas chromatography with electron capture detection (EPA Method 612) or gas chromatography plus mass spectrometry (EPA Method 625). Log K_{ow} = >5.0 Values at or above 3.0 are likely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, ingestion, eye and dermal contact.
Harmful Effects and Symptoms
Short Term Exposure: Irritates the eyes, skin, and respiratory tract. *Inhalation*: Coughing, shortness of breath and labored breathing have been reported from large, unmeasured doses or by decomposition to chlorine. *Skin:* Can cause irritation. Exposure to sunlight with (or soon after) exposure can increase effects. Following this reaction, changes in skin pigment and blistering may follow. Red or dark urine may be noticed. High doses may cause redness, pain and serious burns. *Eyes:* May cause irritation. Higher doses may cause redness, pain and blurred vision. *Ingestion*: Headache, dizziness, nausea, vomiting,

numbness of hands and arms, apprehension, excitement, tremors, partial paralysis of arms and legs, loss of muscle control, loss of sensory perception, convulsions and coma may result from high doses.

Long Term Exposure: May cause tumors. May affect the lungs, liver, skin, and nervous system. This substance causes cancer in laboratory animals, and may be carcinogenic to humans. May damage the developing fetus. May cause liver, thyroid, kidney and immune system damage. High, prolonged or repeated exposure may affect the nervous system. Repeated skin exposure can lead to permanent skin changes and increased hair growth. Animal tests show that this substance possibly causes toxic effects upon human reproduction. Ingestion of contaminated grain, estimated at doses of 0.05–0.2 grams/day, resulted in blisters, erosions on exposed skin areas, red-colored urine, skin sores, change in skin color, arthritis, and problems of the liver, nervous system, and stomach [porphyria cutanea tarda (PCT)] in Turkey. The following symptoms were also reported: enlarged livers, porphyria in the blood, loss of appetite, weight loss and wasting of skeletal muscles. Severe and long-standing poisoning caused abnormal hair growth, loss of vision, wasting of hands, black discoloration, and skin sores which became ulcerated, healing with pigmented scars. Breast-fed children developed "pink-sore," a condition which was 95% fatal. Toxic effects on blood and active symptoms persisted up to 20 years. Studies in animals show that ingestion of this chemical can damage the liver, thyroid, nervous system, bones, kidneys, blood, and immune and endocrine system.

Points of Attack: Liver, skin and thyroid.

Medical Surveillance: Liver function tests. Thyroid function tests. Evaluation by a qualified allergist and/or dermatologist. Iron as a dietary supplement could increase liver damage. Consult a physician before taking supplements. Guard against sunlight exposure to contaminated skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to physician:* For ingestions of <10 mg/kg body weight occurring <1 hour before treatment, induce vomiting. For ingestions of more than 10 mg/kg body weight occurring <1 hour before treatment, use gastric lavage. For ingestion occurring more than 1 hour before treatment, use activated charcoal. There is no specific antidote, and supervision for at least 72 hours is recommended.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *SCBA* >0.006 mg/m^3. *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well- ventilated area away from oxidizers, dimethyl formamide and heat. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of “poisonous materials.” It usually falls in Hazard Class 6.1. STN: 49-251-91.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Violent reaction in temperatures above 65°C[17]. Hazardous decomposition includes toxic hydrogen chloride gas and chlorine. This chemical may burn but does not easily ignite. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration is most effective @ 1300°C and 0.25 sec. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Hexaflumuron H:0248

Use Type: Insecticide, Termiticide

CAS Number: 86479-06-3

Formula: $C_{16}H_{18}Cl_2F_6N_2O_3$

Synonyms: AI3-29832; Benzamide, *N*-[((3,5-dichloro-4-(1,1,2,2-tetrafluoroethoxy)phenyl)amino)carbonyl]-2,6-difluoro-

Trade Names: CONHEX®; CONSULT®; DE-473®; NAF-46®; RECRUIT®; SONET®; TRUENO®; XRD 473®

Chemical class: Benzoyl urea

EPA/OPP PC Code: 118202

California DPR Chemical Code: 3899

HSDB Number: 7049

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: CV3800000

EC Number: 401-400-1

Uses: This is an insect growth regulator (IGR) that works by inhibiting the insect's growth by interfering with chitin synthesis, which termites need to form an exoskeleton. It is used to impregnate termite bait. There are more than 20 global suppliers[97]. Registered for use in the U.S. Not currently registered for agricultural use in many EU countries[115].

Fish toxicity (threshold) [101]***:*** Intermediate–28.07482 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: Rats and mice fed up to 500 mg/kg/day for 104 weeks did not develop cancer. Based on the results of animal studies, hexaflumuron is not expected to increase the risk of cancer in humans.Acute Oral Category: 4, Caution.

European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: White solid or powder. The commercial product may be an emulsifiable concentrate. Molecular weight = 461.16; Specific gravity (H_2O:1) = 1.675 @ 25°C; Boiling point = (decomposes); Freezing/Melting point = 203°C; Vapor pressure = 5×10^{-7} mmHg (very low/negligible). Practically insoluble in water; solubility = <0.1 ppm. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Decomposes in temperatures above 275°C. Irritating or toxic fumes or gases in a fire.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Dermal contact, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May effect the blood; formation of methemoglobin. In long-term (chronic) feeding tests, hexaflumuron increased the incidence and severity of a liver cell abnormality[83].

Points of Attack: Blood, eyes, kidney, liver, bones.

Medical Surveillance: For those with frequent or potentially high exposure, the following are recommended before beginning work and at regular times after that: Lung function tests. If overexposure is suspected, also consider: Complete blood count and test for methemoglobin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA) or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical-resistant suit[83] such as DuPont™ Tychem® suit fabrics.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in the case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or where they might spill or leak into wells, drains, ground water, or surface water. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Dampen the spilled material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until an expert verifies that the area has been properly cleaned.

Fire Extinguishing: Decomposition products in fire include toxic nitrogen oxides, hydrogen chloride, and hydrogen fluoride. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Hexazinone H:0320

Use Type: Herbicide

CAS Number: 51235-04-2

Formula: $C_{11}H_{20}O_2N_3$

Synonyms: 3-Cyclohexyl-6-(Dimethylamino)-1-methyl-*s*-triazine-2,4(1*H*,3*H*)-dione;3-Cyclohexyl-6-dimethylamino-1-methyl-1,2,3,4-tetrahydro-1,3,5-triazine-2-,4-dione; 3-Cyclohexyl-6-(dimethylamino)-1-methyl-1,3,5-triazine-2,4(1*H*,3*H*)-dione; 3-Cyclohexyl-1-methyl-

6-(dimethylamino)-*s*-trazine-2,4(1*H*,3*H*)-dione; 1,3,5-Triazine-2,4(1*H*,3*H*)-dione, 3-Cyclohexyl-6-(dimethylamino)-1-methyl-;*s*-Triazine-2,4(1*H*,3*H*)-dione, 3-Cyclohexyl-6-(dimethylamino)-1-methyl-

Trade Names: BO-RID®[C]; BRUSHKILLER®; DPX 3674®; K-4 HERBICIDE®; OUSTAR®; PRONONE®; VELPAR®; VELPAR WEED KILLER®

Chemical class: Triazine; Triazinone

EPA/OPP PC Code: 107201

California DPR Chemical Code: 1871

HSDB Number: 6670

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: XY7850000

EC Number: 257-074-4 [*Annex I Index No.:* 613-132-00-4]

Uses: Hexazinone is used against many annual, biennial, and perennial weeds, as well as some woody plants. It is mostly used on non-crop areas; however, it is used selectively for the control of weeds among sugar cane, pineapples, and rangeland forage. Hexazinone is a systemic herbicide that works by inhibiting photosynthesis in the target plants. Rainfall or irrigation water is needed before it becomes activated. It is available in soluble concentrate, water-soluble powder, or granular formulations. Not approved for use in EU countries[115]. Registered for use in the U.S. and other countries.

U.S. Maximum Allowable Residue Levels for Hexazinone and its metabolites (calculated as hexazinone)[40 CFR 180.396(a)]: in or on the following food commodities: alfalfa green forage 2.0 ppm; alfalfa, hay 8.0 ppm; blueberry 0.2 ppm; cattle, fat 0.1 ppm; cattle, meat byproducts 0.1 ppm; cattle, meat 0.1 ppm; goat, fat 0.1 ppm; goat, meat byproducts 0.1 ppm; goat, meat 0.1 ppm; grass, pasture 10 ppm; grass, range 10 ppm; hog, fat 0.1 ppm; hog, meat byproducts 0.1 ppm; hog, meat 0.1 ppm; horse, fat 0.1 ppm; horse, meat byproducts 0.1 ppm; horse, meat 0.1 ppm; milk 0.1 ppm; pineapple (whole fruit) 0.5 ppm; sheep, fat 0.1 ppm; sheep, meat byproducts 0.1 ppm; and sheep, meat 0.1 ppm. ***A tolerance with regional registration, as defined in 180.1(n) and which excludes use of hexazinone on sugarcane in Florida, is established for combined residues of the herbicide hexazinone and its metabolites (calculated as hexazinone) [40 CFR 180.396(c)]:*** in or on the following food commodities: sugarcane, cane 0.2 ppm and sugarcane, molasses 5.0 ppm.

Human toxicity (long-term)[101]: Very low–400.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–24566.31408 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Acute Oral Category: 3, CAUTION

Health Advisory: Developmental/Reproductive Toxin, Skin irritant/sensitizer

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R36; R50/53; safety phrases: S2; S41; S60; S61 (see Appendix 1)

Description: Hexazinone is a white crystalline solid. Slight acrid odor. Commercial product may be granular, soluble liquid, or emulsifiable concentrate. It may be dissolved in a flammable carrier such as methanol. Molecular weight = 252.36; Specific gravity (H_2O:1) = 1.26 @ 25°C; Boiling point = (decomposes); Freezing/Melting point = 114–117°C; Vapor pressure = 3.0×10^{-7} mmHg; Flash point = 100°C[Sigma Aldrich]. Soluble in water; solubility = 3.4×10^5 ppm @ 25°C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers, acids, acid chlorides, acid halides, isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides. Contact with strong reducing agents duch as halides may generate explosive flammable gas.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 200 ppb[93]; EPA Health Advisory: 400 μg/L; State Drinking Water Guidelines: Maine 230 μg/L; Florida 230 μg/L.

Determination in Water: Solvent extraction with methylene chloride followed by analysis by gas chromatography with a thermionic bead detector. Log K_{ow} = <1.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Skin, inhalation and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive eye irritant. May cause severe eye and skin irritation and, possible permanent eye damage. In experience with humans, only one report was available on hexazinone. It involved a 26-year-old woman who inhaled hexazinone dust. Vomiting occurred within 24 hours. LD_{50} (oral, rat) = 1690 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause reproductive and fetal effects.

Points of Attack: Reproductive system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid, usually fall in Hazard Class 9. This description may not apply to all shipping situations. Consult appropriate Dangerous Goods Regulations, including 49CFR, for additional description requirements, mode-specific, or quantity-specific shipping requirements.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Spill Handling: Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other noncombustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high- pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

U.S. Maximum Allowable Residue Levels for Hexythiazox [40 CFR 180.448(a)]: Almond, hulls 10 ppm; apple, wet pomace 2.5 ppm; caneberry subgroup 13A, 1.0 ppm; cattle, fat 0.02 ppm; cattle, meat byproducts 0.12 ppm; citrus, dried pulp 1.5 ppm; citrus, oil 0.90 ppm; date, dried fruit 1.0 ppm; fruit, pome, group 11, 1.7 ppm; fruit, stone, group 12, except plum 1.0 ppm; goat, fat 0.02 ppm; goat, meat byproducts 0.12 ppm; grape 0.75 ppm; hog, fat 0.02 ppm; hog, meat byproducts 0.02 ppm; hop 2.0 ppm; horse, fat 0.02 ppm; horse, meat byproducts 0.12 ppm; milk 0.02 ppm; nut, tree, group 14, 0.30 ppm; peppermint, tops 2.0 ppm; pistachio 0.30 ppm; plum 0.10 ppm; plum, prune, dried 0.40 ppm; plum, prune, fresh 0.10 ppm; sheep, fat 0.02 ppm; sheep, meat byproducts 0.12 ppm; spearmint, tops 2.0 ppm; strawberry 3.0 ppm. ***Regional registration, as defined in section 180.1(n)*** **[*40 CFR 180.448(c)*]:** Cotton, gin byproducts, California only 3.0 ppm; Cotton, undelinted seed, California only 0.20 ppm; Fruit, citrus group 10 (Arizona, California, Texas only) 0.35 ppm.

Human toxicity (long-term) [101]***:*** Intermediate–17.50 ppb, Health Advisory

Fish toxicity (threshold)[101]***:*** Intermediate–62.61862 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Acute Oral Category: 4, Caution, not acutely toxic

Environmental hazard; highly toxic to marine life.

List of priority pollutants (U.S. EPA)

Clean Water Act: Toxic Pollutant (Section 401.15) other than those listed elsewhere; includes trichlorophenols

RCRA Section 261 Hazardous Constituents, waste number not listed

EPCRA Section 313 (as chlorophenols) Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: White to pale yellow crystalline solid, tan granules or powder. Odorless. Molecular weight = 352.89; Boiling point = 221.5°C; Freezing/Melting point = 105–108°; Vapor pressure = 2.3×10^{-8} mmHg. Hazard Identification (based on NFPA-704 M Rating System): Health 0, Flammability 1, Reactivity 0. Very slightly soluble in water; solubility = <1 ppm.

Incompatibilities: Dust forms an explosive mixture with air. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Decomposes in temperatures >290°C.

Determination in Water: Log K_{ow} = 5.57 (est)[83]. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, absorbed through the unbroken skin.

Short Term Exposure: Inhalation can cause severe irritation, burns to the nose and throat, headache, dizziness, vomiting, lung damage, muscle twitchings, spasms, tremors, weakness, staggering and collapse. Dermal contact may cause severe irritation and burns. Absorbed through the skin to cause or increase the severity of symptoms listed above. Eye contact causes severe irritation. May cause burns. Ingestion can cause irritation, burns to the mouth and throat, low blood pressure, profuse sweating, intense thirst, nausea, abdominal pain, stupor, vomiting, red blood cell damage and accumulation of fluid in the lungs followed by pneumonia. May also cause restlessness and increased breathing rate followed by rapidly developing muscle weakness. The substance irritates the eyes, the skin and the respiratory tract. LD_{50} (oral, dermal, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Skin sensitivity may develop. A possible liver toxin. May have effects on the blood, heart, liver, lung, kidney. The state of New Jersey lists the 2-chloro-isomer as a probable carcinogen, and that it causes leukemia and soft-tissue cancers in humans.

Points of Attack: Central nervous system, blood, bladder, liver.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. If symptoms develop or overexposure is suspected, the following may be useful: Liver function tests. Kidney function tests. Examination by a qualified allergist. EKG

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with carboxin you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and sulfur and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Hydramethylnon H:0365

Use Type: Insecticide

CAS Number: 67485-29-4

Formula: $C_{25}H_{24}F_6N_4$

Synonyms: AC 217300; AI3-29349; Amidinohydrazone; Caswell No. 642AB; Caswell No. 839A; Pyrimidinone; 1,4-Pentadien-3-one-1,5-bis(α,α,α-trifluoro-*p*-tolyl)-tetrahydro-5,5-dimethyl-2(1*H*)-pyrimidinylidene)hydrazone; 2(1*H*)-Pyrimidinone, tetrahydro-5,5-dimethyl-, [3-(4-(trifluoromethyl)phenyl]-1-[2-(4-(trifluoromethyl) phenyl] ethenyl-2-propenylidene]hydrazone; Tetrahydro-5,5-dimethyl-2(1*H*)-pyrimidinone[1,5-bis(α,α,α-trifluoro-*p*-tolyl)-1,4-pentadien-3-one]hydrazone; Tetrahydro-5,5-dimethyl-2(1*H*)-pyrimidinone[3-(4-(trifluoromethyl) phenyl)]-1-[2-(4-(trifluoromethyl) phenyl)ethenyl]-2-propenylidene] hydrazone

Trade Names: AC-217300; AMDRO®, BASF Agricultural Products Germany; CL 217,300®; COMBAT®, BASF Agricultural Products Germany; MATOX®; MAXFORCE®

ANT KILLER GRANULAR BAIT; MAXFORCE® ROACH GEL SENSIBLE®, BASF Agricultural Products Germany; SIEGE®, BASF Agricultural Products Germany; WIPEOUT®

Chemical class: Organofluorine

EPA/OPP PC Code: 118401

California DPR Chemical Code: 2203

HSDB Number: 6673

UN/NA & ERG Number: May vary by formulation. Consult appropriate Dangerous Goods Regulations, including 49CFR.

RTECS® Number: UW7583000

EC Number: 405-090-9 [*Annex I Index No.:* 613-181-00-1]

U.S. Maximum Allowable Residue Levels for Hydramethylnon [40 CFR 180.395(a)]: grass, forage 2.0 ppm; grass, hay 2.0 ppm; pineapple 0.05 ppm.

Uses: Hydramethylnon is a slow-acting toxicant used primarily to control ants in grasses and rangelands and other non-crop lands such as lawns, turf, and non-bearing nursery stock. Hydramethylnon is also registered for the control of household ant species and cockroaches in non-food use areas in and around domestic dwellings and commercial establishments. Hydramethylnon has established tolerances from use on grasses in pastures and rangeland; however, hydramethylnon is almost completely metabolized within the body of ruminants and there are no detectable residues in meat, milk, or meat byproducts. Therefore, tolerances are not required for these commodities even though hydramethylnon is considered a food use pesticide for the purposes of re-registration and tolerance reassessment. Not approved for use in EU countries[115] Registered for use in the U.S.

Human toxicity (long-term)[101]: Extra high–0.21 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–8.90567 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

California Proposition 65 Chemical: Developmental/Reproductive toxin (male) (3/5/1999)

Health Advisory: Endocrine disruptor, Developmental toxin (TRI)

Acute Oral Category: 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R22; R36; R48/25; R50/53; safety phrases: S1/2; S22; S36/37; S45; S60; S61 (see Appendix 1)

Description: Dark yellow to tan crystalline solid, granules, or powder. Commercial products are available in various forms. Characteristic vegetable oil odor. Molecular weight = 494.475; Specific gravity (H_2O:1) = 1.68 @ 25°C; Freezing/Melting point = 190°C; Vapor pressure = 2.3×10^{-8} mmHg; Flash point = 94°C (cc)[BASF]; Henry's Law constant = 2.20×10^{-6}atm-m^3/mol @ 25°C (est)[83]. Practically insoluble in water; solubility = 0.005 mg/L @ 25°C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air purifying respirators for pesticides. Toxic if inhaled, ingested, or absorbed through the skin. LD_{50} (oral, rat) = 1200 mg/kg; LD_{50} (dermal, rabbit) = >5g/kg.

Long Term Exposure: A male reproductive toxin. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Testes, reproductive system, bones.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Comprehensive physical examination with emphasis on the genito-urinary tract including testicle size and consistency in males. Semen analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear (minimum EN 166 or equivalen); Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Consult appropriate Dangerous Goods Regulations, including 49CFR, for additional description requirements, mode-specific, or quantity-specific shipping requirements.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen fluoride, fluorine, carbon dioxide, and nitrogen oxide. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

I

Imazalil I:0075

Use Type: Fungicide; Veterinary medicine
CAS Number: 35554-44-0
Formula: $C_{14}H_{14}Cl_2N_2O$
Synonyms: Allyl-1-(2,4-dichlorophenyl)-2-imidazol-1-ylethyl ether; (±)1-(*β*-Allyloxy-2,4-dichlorophenethyl) imidazole; (±)-1-[*β*-(Allyloxy)-2,4-dichlorophenethyl] imidazole; 1-[2-(Allyloxy)-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole; Caswell No. 497AB; Chloramizol; 1-(2-(2,4-Dichlorophenyl)-2-(2-propenyloxy)ethyl)-1*H*-imidazole; 1-[2-((2,4-Dichlorophenyl)-2-propenyloxy)-ethyl]-1 *H*-imidazole; Enilconazole; 1*H*-Imidazole, 1-[2-(2,4-dichlorophenyl)-2-(2-propenyloxy)ethyl]-; 1*H*-Imidazole, 1-[2-(2,4-dichlorophenyl)-2-(2-propenyloxy)ethyl]-, (±)-
Trade Names: BAYTAN IM®; BROMAZIL® Imazalil; CEREVAX® EXTRA; CLINAFARM®; DECCOZIL®, Cerexagri Inc (France); FECUNDAL® 100EC; FF4961®; FLO-PRO IMZ®; FRESHGARD®; FUNGAFLOR®; IMAVEROL®; MAGNET®; MIST-O-MATIC® liquid seed treatment; NUZONE®; RAXIL®; RTU-VITAVAX EXTRA®; R 23979®; VITAVAX EXTRA®
Chemical class: Imidazole derivative
EPA/OPP PC Code: 111901
California DPR Chemical Code: 2084
HSDB Number: 6672
UN/NA & ERG Number: UN2811/154
RTECS® Number: NI47760000
EC Number: 212-615-0 [*Annex I Index No.:* 613-042-00-5]
Uses: Imazalil is a systemic fungicide used on fruit, vegetables and ornamentals to control powdery mildew, black spot and other fungi. Also used as a seed dressing and for post-harvest applications to bananas, citrus and other fruit. It has been shown that the use of imazalil is less likely to lead to resistant fungi strains than other fungicides.
U.S. Maximum Allowable Residue Levels for Imazalil and its metabolite, 1-(2,4-dichlorophenyl)-2-(1H-imidazole-1-yl)-1-ethanol, in or on the following food commodities [40 CFR 180.413(a)(1)]: banana (whole) 3.00 ppm; banana, pulp 0.20 ppm; barley, grain 0.05 ppm; barley, straw 0.5 ppm; citrus, oil 25.0 ppm; citrus, dried pulp 25.0 ppm; fruit, citrus, post harvest 10.0 ppm; wheat, forage 0.5 ppm; wheat, grain 0.05 ppm; wheat, straw 0.5 ppm; ppm. [***40 CFR 180.413(a)(2)***]: cattle, fat 0.01 ppm; cattle, liver 0.50 ppm; cattle, meat 0.01 ppm; cattle, meat byproducts 0.01 ppm; goat, fat 0.01 ppm; goat, liver 0.50 ppm; goat, meat 0.01 ppm; goat, meat byproducts 0.01 ppm; hog, fat 0.01 ppm; hog, liver 0.50 ppm; hog, meat 0.01 ppm; hog, meat byproducts 0.01 ppm; horse, fat 0.01 ppm; horse, liver 0.50 ppm; horse, meat 0.01 ppm; horse, meat byproducts 0.01 ppm; milk 0.01 ppm; sheep, fat 0.01 ppm; sheep, liver 0.50 ppm; sheep, meat 0.01 ppm; sheep, meat byproducts 0.01 ppm; ppm.
Human toxicity (long-term)[101]: Intermediate–17.50 ppb, Health Advisory
Fish toxicity (threshold)[101]: Low–193.77060 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
U.S. EPA Carcinogens: Likely to be carcinogenic to humans
Acute Oral Category: 2, WARNING
Health Advisory: Developmental/Reproductive Toxin, Skin irritant/sensitizer, Developmental toxin (TRI)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R20/22; R41; R50/53; safety phrases: S1/2; S26; S39; S60; S61 (see Appendix 1)
Description: Yellow to brown wax-like, solidified oil or crystalline solid. Commercial products are in various forms including emulsifiable concentrate. Liquid formulations in organic solvents are combustible. Molecular weight = 297.18; Freezing/Melting point = 51–52 °C; Boiling point = (decomposes) 320–350 °C (estimated); Vapor pressure = 6.8×10^{-8} mmHg. Flash point = 191.5 °C. Low to moderate solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Incompatible with oxidizers and alkaline materials. May react with mineral or clay-based absorbents. Decomposes >250 °C.
Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or dermal contact.
Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in marine organisms.
Harmful Effects and Symptoms
Short Term Exposure: Causes eye irritation with pain. May cause skin and respiratory tract irritation. May cause nausea if ingested; toxic. Liver and kidney toxin. LD_{50} (oral, rat) = 250 mg/kg; LD_{50} (dermal, rat) = >4 g/kg.
Long Term Exposure: May cause cancer and developmental problems. May cause liver and kidney problems. May cause skin sensitization.
Medical Surveillance: If skin sensitization is suspected, an evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Liver and kidney function tests. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA); or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical resistant suit.

Respirator Selection: May react with mineral or clay-based absorbents. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic, n.o.s. require a label of "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills*: with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Heated to decomposition, above 285 °C, it releases toxic fumes including oxides of nitrogen and carbon and hydrogen chloride gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: In accordance with 40CFR 165 recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Imazethabenz-methyl I:0078

Use Type: Herbicide
CAS Number: 81405-85-8
Formula: $C_{16}H_{20}N_2O_3$
Synonyms: Benzoic acid, 2-(4,5-dihydro-4-methyl-4-(1-methylethyl)-5-xox-1H-imidazol-2-yl)-4 (or 5)-methyl-, methyl ester; 2[4,5-Dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-4 (or 5)-methylbenzoic acid methyl ester; Imazamethabenz; (Methyl 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-m-toluate plus; Methyl 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-m-toluate); (Methyl 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-m-toluate plus Methyl 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-m-toluate); m-(or p-)Toluic acid, 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-, methyl ester; m-(or p-)Toluic acid, 2-(4,5-dihydro-4-methyl-4-isopropyl-5-oxo-1H-imidazol-2-yl)-, methyl ester
Trade Names: DAGGER®; ASSERT®
Chemical class: Imidazolinone
EPA/OPP PC Code: 128842
California DPR Chemical Code: 2240
HSDB Number: 6675
UN/NA & ERG Number: Consult appropriate Dangerous Goods Regulations, including 49CFR
RTECS® Number: DG8576140
Uses: Generally used as a herbicide on small grain crops. Registered for use in the U.S. Banned for use in EU as imazamethabenz
Human toxicity (long-term)[101]: Very low–441.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Very low–515.35916 ppb, MATC (Maximum Acceptable Toxicant Concentration)
U.S. Maximum Allowable Residue Levels for Imazamethabenz-methyl [40 CFR 180.437]: in or on the following raw agricultural commodities: barley, grain 0.10 ppm; barley straw 2.00 ppm; sunflower seed 0.10 ppm; wheat grain 0.10 ppm; wheat straw 2.00 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen
Acute Oral Category: 3, CAUTION
Description: White or slightly yellow powder. Musty odor. Molecular weight = 288.33; Specific gravity (H_2O:1) = 0.33 @ 20 °C; Freezing/Melting point = 133–145 °C; Vapor pressure = 1.2×10^{-8} mmHg @ 25 °C; Flash point = 91 °C. Soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Incompatible with oxidizers, chlorates nitrates, peroxides; and alkaline materials. Strongly acidic, a corrosive material; may attack some metals, including aluminum and steel, and some coatings, especially in the presence of moisture.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.
Harmful Effects and Symptoms
Short Term Exposure: May cause irritation to the eyes, skin, or respiratory tract. High levels may cause permanent eye damage. May be toxic if ingested or absorbed through the skin. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.
Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use

directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Consult appropriate Dangerous Goods Regulations, including 49CFR, for additional description requirements, mode-specific, or quantity-specific shipping requirements.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full face-pieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See ***40 CFR Parts 261.3*** for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations.

Imazapyr I:0080

Use Type: Herbicide
CAS Number: 81334-34-1
Formula: $C_{13}H_{15}N_3O_3$
Synonyms: 2-(4,5-Dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl)-3-pyri dinecarboxylic acid; 2-(4-Isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl) nicotinic acid; 3-Pyridinecarboxylic acid, 2-(4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-im idazol- 2-yl)-
Trade Names: OPTION® Imazapyr; OPTION®-35WDG[83]
Chemical class: Imidazolinone
EPA/OPP PC Code: 128821
California DPR Chemical Code: 2256
HSDB Number: 6676
UN/NA&ERG Number: UN3077(solid)/171; UN3082 (liquid)/171
RTECS® Number: US5682500
EC Number: 617-219-8 [*Annex I Index No.:* 613-216-00-1]

U.S. Maximum Allowable Residue Levels for Imazapyr (40 CFR 180.500): Cattle, fat 0.05 ppm; cattle, kidney 0.20 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts, except kidney 0.05 ppm; corn, field, forage 0.05 ppm; corn, field, grain 0.05 ppm; corn, field, stover 0.05 ppm; fish 1.0 ppm; goat, fat 0.05 ppm; goat, kidney 0.20 ppm; goat, meat 0.05 ppm; goat, meat byproducts, except kidney 0.05 ppm; grass, forage 100 ppm; grass, hay 30 ppm; horse, fat 0.05 ppm; horse, kidney 0.20 ppm; horse, meat 0.05 ppm; horse, meat byproducts, except kidney 0.05 ppm; milk 0.01 ppm; sheep, fat 0.05 ppm; sheep, kidney 0.20 ppm; sheep, meat 0.05 ppm; sheep, meat byproducts, except kidney 0.05 ppm; shellfish 0.10 ppm; ppm.

Uses: Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP). Imazapyr is a systemic, non-selective herbicide used for the pre- and post-emergence control of a broad range of weeds, including terrestrial annual and perennial grasses, broad-leaved herbs, woody species, and riparian and emergent aquatic species. Imazapyr may be used in a variety of agricultural, commercial, and residential settings. Use sites include corn, forestry sites, rights-of-way, fence rows, hedge rows, drainage systems, outdoor industrial areas, outdoor buildings and structures, domestic dwellings, paved areas, driveways, patios, parking areas, walkways, various water bodies (including ponds, lakes, streams, swamps, wetlands, and stagnant water), and urban areas. Imazapyr may also be used on recreation areas, athletic fields, and golf course roughs[83].

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans.
Acute Oral Category: 4, Caution, not acutely toxic
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R36; R50/53; safety phrases: S2; S26; S61 (see Appendix 1)

Description: White to tan crystalline solid or powder. Slight ammoniacal odor. Commercial formulations include liquid, wettable powder, granules, emusifyible concentrate. Molecular Weight = 261.28; Melting point = 169–173 °C; Vapor pressure = 1.79×10^{-11} mmHg @ 25 °C (est)[83]; Henry's Law constant = 7.08×10^{-17} atm-m^3/mol @ 25 °C (est)[83]. Highly soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Corrosive to iron and steel but not corrosive to some stainless steel alloys.

Permissible Exposure Limits in Air: No standards set.

Determination in Water: Log K_{ow} = <0.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the eyes, skin, or respiratory tract. Corrosive; can cause corneal injury to the eyes. May be toxic if ingested or absorbed through the skin. Ingestion may cause vomiting, pulmonary dysfunction, oral mucosal and gastro-intestinal irritation, and transient liver andrenal dysfunction[83]. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: *Eyes:* First check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. *Immediately* transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop.

Skin: *Immediately* flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, *immediately* call a physician and be prepared to transport the victim to a hospital for treatment. *Inhalation: Immediately* leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, self-contained breathing apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing. *Ingestion: Do not induce vomiting.* If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and *immediately* call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Do not induce vomiting. Immediately* transport the victim to a hospital[88].

Personal Protective Methods: Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full face-pieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. US EPA guidelines for the classification determination are listed in ***40 CFR Parts 261.3***. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Imazaquin I:0084

Use Type: Herbicide, Plant growth regulator

CAS Number: 81335-37-7; 81335-47-9 (ammonium salt)

Formula: $C_{17}H_{17}N_3O_3$; $C_{17}H_{20}N_4O_3$ (ammonium salt)

Synonyms: 2-[4,5-Dihydro-4-methyl-4-(1-methylethyl)-5-*oxo*-1*H*-imidazol-2-yl]-3-quinolinecarboxylic acid; 2-(5-Isopropyl-5-methyl-4-*oxo*-2-imidazolin-2-yl)-3-quinolinecarboxylic acid; Quinolinecarboxylic acid, 2-(5-isopropyl-5-methyl-4-*oxo*-2-imidazolin-2-yl)-; 3-Quinolinecarboxylic acid, 2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-*oxo*-1*H*-imidazol-2-yl]-
ammonium salt: Ammonium imazaquin; 2-(4,5-Dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1 h-imidazol-2-yl)-3-quinolinecarboxylic acid monoammonium salt

Trade Names: AC 252,214®; ALA-SCEPT®; BACKDRAFT®; CL 252,214®; DETAIL®; IMAGE® herbicide consumer concentrate (ammonium salt); METEOR®; MON-9850®; SCEPTER®; SQUADRON® (with Pendimethalin); TRI-SCEPT®; PARTNER® Imazaquin; UPRIGHT®

Chemical class: Imidazolinone

EPA/OPP PC Code: 128848; 128840 (ammonium salt)

California DPR Chemical Code: 2613*; 3006* (ammonium salt)

HSDB Number: 6677

UN/NA & ERG Number: UN3077(solid)

RTECS® Number: VB2009800

Uses: Imazaquin is a selective, pre-emergence and post-emergence herbicide used to control grasses and broadleaf weeds. It is used on corn, wheat, soybeans, turf and ornamentals.

U.S. Maximum Allowable Residue Levels for Imazaquin (40 CFR 180.426): soybean 0.05 ppm.

Human toxicity (long-term)[101]: Very low–1750.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–61926.11430 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
Acute Oral Category: 4, Caution

Description: A gray crystalline solid. Commercial products available as a concentrated liquid. Pungent odor. Molecular weight = 311.337; 328.27 (ammonium salt); Boiling point = (decomposes); Freezing/Melting point = 220 °C; 219–224 ºC (ammonium salt); Vapor pressure = 7×10^{-9} mmHg @ 25 °C. Soluble in water; solubility = 100 mg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Decomposes in temperatures >240 °C.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the eyes, skin, or respiratory tract. May be toxic if ingested or absorbed through the skin. LD_{50} (oral, rat) = 5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure;

Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Imazethapyr I:0090

Use Type: Herbicide, Plant growth regulator

CAS Number: 81335-77-5; 101917-66-2 (ammonium salt)

Formula: $C_{15}H_{19}N_3O_3$; $C_{15}H_{22}N_4O_3$ (ammonium salt)

Synonyms: Ammonium salt of (±)-2-(4,5-dihydro-4-methyl-4-(1-methylethyl)-5-*oxo*-1H-imidazol-2-yl)-5-ethyl-3-pyridinecarboxylic acid;(±)-2-(4,5-Dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl)-5-ethyl-3-pyridinecarboxylic acid, ammonium salt; (±)-2-[4,5-Dihydro-4-methyl-4-(1-methylethyl)-5-*oxo*-1*H*-imadazol-2-yl]-5-ethyl-3-pyridinecarboxylicacid;(±)-5-Ethyl-2-(4-isopropyl-4-methyl-5-*oxo*-2-imidazolin-2-yl)nicotinic acid; (±)-5-Ethyl-2-(4-isopropyl-4-methyl-5-*oxo*-1H-imidazolin-2-yl)nicotinic acid (ammonium salt)

Trade Names: AC-263499®; CL-263499®; CONTOUR®; EXTREME®; HAMMER®; LIGHTNING®; ODYSSEY®, (imazamox+imazethapyr); OVERTOP®; PATRIOT®, (atrazine+imazethapyr); PASSPORT®; PIVOT®; PURSUIT®; (ammonium salt of); PURSUIT DG® Herbicide; RESOLVE®; STANDOUT®; VALOR®, (imazethapyr+pendimethalin)

Chemical class: Imidazolinone

EPA/OPP PC Code: 128922; 128923 (ammonium salt)

California DPR Chemical Code: 2340

HSDB Number: 6678

UN/NA & ERG Number: None found

RTECS® Number: US5682900

EC Number: 617-222-4

Uses: Imazethapyr is a general use, selective pre-emergence herbicide that is used to control grasses and broadleaf weeds on a variety of field and vegetable crops including dry and edible beans, peas, soybeans, peanuts, alfalfa and corn. Not approved for use in EU countries[115]. Registered for use in the U.S. and other countries.

U.S. Maximum Allowable Residue Levels for Imazethapyr applied as its acid or ammonium salt [40 CFR

180.447(a)(1)]: in or on the following commodities: soybean 0.1 ppm; vegetable, legume, group 6, 0.1 ppm; *Imazethapyr* **its metabolite CL 288511, 2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(1-hydroxyethyl)-3-pyridine carboxylic acid; and its metabolite CL 182704, 5-[1-(beta-D-glucopyranosyloxy)ethyl]-2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-3-pyridinecarboxylic acid, applied as its acid or ammonium salt [*40 CFR 180.447(a)(2)*]:** in or on the following commodities: alfalfa, seed 0.15 ppm; alfalfa, seed screenings 0.15 ppm; animal feed, nongrass, group 18, forage 3.0 ppm; animal feed, nongrass, group 18, hay 5.5 ppm; peanut 0.1 ppm; rice, bran 1.2 ppm; Rice, grain 0.3 ppm; 0ice, straw 0.4 ppm; *Imazethapyr* **and its metabolite CL 288511, 2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(1-hydroxyethyl)-3-pyridine carboxylic acid, applied as its acid or ammonium salt [*40 CFR 180.447(a)(3)*]:** in or on the following commodities: cattle, meat byproducts 0.10 ppm; corn, field, forage 0.1 ppm; corn, field, grain 0.1 ppm; corn, field, stover 0.1 ppm; crayfish 0.15 ppm; goat, meat byproducts 0.10 ppm; hog, meat byproducts 0.10 ppm; horse, meat byproducts 0.10 ppm; sheep, meat byprducts 0.10 ppm; *Imazethapyr* **as its ammonium salt, and its metabolite, 2- [4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-5-(1- hydroxyethyl)-3-pyridine carboxylic acid, both free and conjugated, applied as its acid or ammonium salt [*40 CFR 180.447 (c)*]:** in or on the following commodities: endive 0.1 ppm; lettuce, head 0.1 ppm; lettuce, leaf 0.1 ppm.

Human toxicity (long-term)[101]: Very low–1750.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–52267.57728 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans.

Acute Oral Category: 4, Caution

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive; ammonium salt is active)

Description: Colorless to slightly yellowish crystalline solid. Pungent odor. Molecular weight = 289.33; Specific gravity (H_2O:1) = 1.11; Boiling point = (decomposes); Freezing/Melting point = 173 °C. Highly soluble in water; solubility = 1.42×10^3 mg/L.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Corrosive to zinc, mild steel, brass, copper and aluminum. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the eyes, skin, or respiratory tract. May be toxic if ingested or absorbed through the skin. LD_{50} (oral, rat) = >5 g/kg; (dermal, rat) = >2 g/kg; (inhalation, rat) = 3.27 mg/L[83].

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: No information.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See ***40 CFR Parts 261.3*** for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations.

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: NJ0560000

EC Number: 428-040-8 [*Annex I Index No.:* 612-252-00-4]

Uses: One of the most heavily used pesticides in the world. A systemic insecticide used to control sucking insects in the soil, seeds and foliar environments. It is one of the most-used pesticides in the world and has a broad variety of both agriculture and non-agricultural uses, including on pets and household environments. Used on rice, cereals, maize, vegetables, fruit, sugar beets, potatoes, cotton, hops and turf. It is related to nicotine and acts on the nervous system. A U.S. EPA restricted Use Pesticide (RUP). Effective 12/1/2013, A two-year ban and severe restriction on the use of neonicotinoids for seed treatment, soil application (granules) and foliar treatment on bee attractive plants and cereals.

U.S. Maximum Allowable Residue Levels for Imidacloprid and its metabolites containing the 6-chloropyridinyl moiety, all expressed as 1-[(6-chloro-3-pyridinyl)methyl]-N-nitro-2-imidazolidinimine [40 CFR 180.472(a)]: in or on the following food commodities: acerola 1.0 ppm; apple 0.5 ppm; apple, wet pomace 3.0 ppm; artichoke, globe 2.5 ppm; avocado 1.0 ppm; banana (there are no US registrations as of June 13, 2003 for use on banana) 0.02 ppm; barley, grain 0.05 ppm; barley, hay 0.5 ppm; barley, straw 0.5 ppm; beet, sugar, roots 0.05 ppm; beet, sugar, tops 0.5 ppm; beet, sugar, molasses 0.3 ppm; blueberry 3.5 ppm; brassica vegetables crop group 3.5 ppm; canistel 1.0 ppm; canola, seed 0.05 ppm; cattle, fat 0.3 ppm; cattle, meat byproducts 0.3 ppm; cattle, meat 0.3 ppm; citrus, dried pulp 5.0 ppm; citrus, fruit, group 0.7 ppm; coriander 3.5 ppm; corn, field, forage 0.10 ppm; corn, field, grain 0.05 ppm; corn, field, stover 0.20 ppm; corn, pop, grain 0.05 ppm; corn, pop, stover 0.20 ppm; corn, sweet, forage 0.10 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; corn, sweet, stover 0.20 ppm; cotton, gin byproducts 4.0 ppm; cotton, undelinted seed 6.0 ppm; cotton, meal 8.0 ppm; cranberry 0.05 ppm; currant 3.5 ppm; egg 0.02 ppm; elderberry 3.5 ppm; feijoa 1.0 ppm; fruit, pome, group 11, 0.6 ppm; fruit, stone, group 12, 3.0 ppm; goat, fat 0.3 ppm; goat, meat byproducts 0.3 ppm; goat, meat 0.3 ppm; gooseberry 3.5 ppm; grape, juice 1.5 ppm; grape, pomace (wet or dried) 5.0 ppm; grape, raisin 1.5 ppm; grape, raisin, waste 15.0 ppm; grape 1.0 ppm; guava 1.0 ppm; hog, fat 0.3 ppm; hog, meat byproducts 0.3 ppm; hog, meat 0.3 ppm; hop, dried cone 6.0 ppm; horse, fat 0.3 ppm; horse, meat byproducts 0.3 ppm; horse, meat 0.3 ppm; huckleberry 3.5 ppm; jaboticaba 1.0 ppm; juneberry 3.5 ppm; leaf petioles, subgroup 4B, 6.0 ppm; leafy greens, subgroup 4A, 3.5 ppm; lettuce, head and leaf 3.5 ppm; lingonberry 3.5 ppm; longan

3.0 ppm; lychee 3.0 ppm; mango 1.0 ppm; milk 0.1 ppm; mustard, seed 0.05 ppm; okra 1.0 ppm; passionfruit 1.0 ppm; papaya 1.0 ppm; pecans 0.05 ppm; persimmon 3.0 ppm; potato, chip 0.4 ppm; potato, waste 0.9 ppm; poultry, fat 0.05 ppm; poultry, meat byproducts 0.05 ppm; poultry, meat 0.05 ppm; pulasan 3.0 ppm; rambutan 3.0 ppm; salal 3.5 ppm; sapodilla 1.0 ppm; sapote, black 1.0 ppm; sapote, mamey 1.0 ppm; sheep, fat 0.3 ppm; sheep, meat byproducts 0.3 ppm; sheep, meat 0.3 ppm; sorghum, forage 0.10 ppm; sorghum, grain 0.05 ppm; sorghum, straw 0.1 ppm (expiration/revocation date 11/17/97); sorgum, stover 0.10 ppm; soybean, meal 4.0 ppm; soybean, seed 1.0 ppm; spanish lime 3.0 ppm; star apple 1.0 ppm; starfruit 1.0 ppm; strawberry 0.50 ppm; tomato, paste 6.0 ppm; tomato, pomace (wet or dried) 4.0 ppm; tomato, puree 3.0 ppm; vegetable, cucurbit, group 9, 0.5 ppm; vegetable, fruiting, group 8, 1.0 ppm; vegetable, leaves of root and tuber, group 2, 4.0 ppm; vegetable, legume, except soybean, group 6, 4.0 ppm; vegetable, root and tuber, group 1, except sugar beet 0.40 ppm; watercress 3.5 ppm; watercress, upland 3.5 ppm; wax jambu 1.0 ppm; wheat, (forage) 7.0 ppm; wheat, grain 0.05 ppm; wheat, hay 0.5 ppm; and wheat, straw 0.5 ppm. ***[40 CFR 180.472(d)]*** Tolerances are established for indirect or inadvertent combined residues of the insecticide imidacloprid and its metabolites containing the 6-chloropyridinyl moiety, all expressed as 1-[(6-chloro-3-pyridinyl)methyl]-*N*-nitro-2-imidazolidinimine, when present therein as a result of the application of the pesticide to growing crops listed in this section and other non-food crops as follows: forage, fodder, and straw of grain, cereal crop group (forage) 2.0 ppm; forage, fodder, and straw of grain, cereal crop group (hay) 6.0 ppm; forage, fodder, and straw of grain, cereal crop group (stover) 0.3 ppm; forage, fodder, and straw of grain, cereal crop group (straw) 3.0 ppm; grain, cereal, group 15, 0.05 ppm; safflower, meal 0.5 ppm; safflower, seed 0.05 ppm; soybean, meal 0.5 ppm; sweet corn, kernel plus cob with husks removed 0.05 ppm; vegetable, cucurbit 0.2 ppm (expiration/revocation date 12/31/97); vegetable, foliage of legume, group 7, 2.5 ppm; and vegetable, legume, crop group 6, 0.3 ppm.

Human toxicity (long-term)[101]: Very low–399.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–1199.99656 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans.

Acute Oral Category: 2, WARNING

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S22; S57; S60; S61 (see Appendix 1)

Description: Colorless (when pure) to off-white crystalline solid. Slight characteristic odor. The commercial product is often water-soluble granules. Molecular weight = 255.7; Specific gravity (H_2O:1) = 1.55 @ 25 °C; Boiling point = (decomposes); Freezing/Melting point = 145°C; Vapor pressure = 5×10^{-12} mmHg @ 25 °C. Highly soluble in water; solubility = 600 mg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Combustible solid. Dust forms explosive mixure with air. Incompatible with oxidizers. Decomposes in temperatures above 225 °C.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 400 ppb[14].

Determination in Water: Log K_{ow} = <0.6. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Dermal contact, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation:* Causes labored breathing. *Ingestion:* May cause convulsions, vomiting, diarrhea. May attack central nervous system causing apathy, incoordination. LD_{50} (oral, rat) = 450–500 mg/kg; (dermal, rat) = >5 g/kg.

Long Term Exposure: May affect the central nervous system.

Points of Attack: Central nervous system, lungs, digestive system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88].

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. This chemical is combustible; it may burn but does not easily ignite. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. If this material cannot be disposed of according to label instructions, it may be dissolved or mixed with a combustible solvent and burned in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Indole-3-butyric acid I:0125

Use Type: Plant growth regulator, Pesticide

CAS Number: 133-32-4

Formula: $C_{12}H_{13}NO_2$

Synonyms: IBA; 1*H*-Indole-3-butanoic acid; Indole butyric; Indole butyric acid; β-Indolebutyric acid; γ-(Indole-3)-butyric acid; 3-Indolebutyric acid; γ-(Indol-3-yl) butyric acid; Indolyl-3-butyric acid; 3-Indolyl-γ-butyric acid; γ-(3-Indolyl)butyric acid; 4-(Indolyl)butyric acid; 4-(Indol-3-yl)butyric acid; 4-(3-Indolyl)butyric acid

Trade Names: ASSET PGR®; BOLL-SET®; CROP BOOSTER®; CYTOPLEX®; GOLDENGRO®; HORMEX®; HORMODIN®; JIFFY GROW®; MAXON®; MEPEX®; PGR-IV®; RHIZOPON®; ROOTGRO®; ROOTONE® (with 1-Naphthaleneacetamide and 1-Naphthaleneacetic acid)[C]; SERADIX®; SNIPPER®

Chemical class: Botanical; Auxin

EPA/OPP PC Code: 046701

California DPR Chemical Code: 323

HSDB Number: 7214

UN/NA & ERG Number: UN2811 (Toxic solids, organic, n.o.s.)/154

RTECS® Number: NL5250000

EC Number: 205-101-5

Uses: Biochemical pesticide, plant growth regulator. Used as a growth hormone and stimulant for root cuttings. Not listed for use in EU countries[115]. Registered for use in the U.S. and other countries.

U.S. Maximum Allowable Residue Levels for indole-3-butyric acid: An exemption from the requirement of a tolerance is established for residues of auxins [***40 CFR 180.1158***]: in or on all food commodities when used as plant regulators on plants, seeds, or cuttings and on all food commodities after harvest in accordance with good agricultural practices.

Regulatory Authority and Advisory Information:
Health Advisory: Mutagen
Acute Oral Category: 3, CAUTION

Description: White or off-white crystalline solid or powder. Odorless. Technical grade: 97.0%. Dust: 0.01%–4.5%; soluble concentrate/liquid: 0.0004%–1.03%; wettable powder/dust: 0.1%–0.8%[83]. Molecular weight = 203.258; Boiling point = (decomposes); Freezing/Melting point = 122–125 °C; Vapor pressure = 1.8×10^{-6} mmHg @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers, chlorates nitrates, peroxides, and high temperatures. This material may be combustible and light sensitive.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the eyes, skin, or respiratory tract. Toxic if ingested. LD_{50} (oral, rat) = >500 mg/kg.

Long Term Exposure: May be mutagenic.

Points of Attack: Reproductive cells. May cause reproductive and fetal effects.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If swallowed, do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This chemical requires a label of "poisonous materials." It usually falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. May be combustible at high temperatures. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: If allowed, incineration with effluent gas scrubbing is recommended. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Iprodione I:0185

Use Type: Fungicide

CAS Number: 36734-19-7

Formula: $C_{13}H_{13}Cl_2N_3O_3$

Synonyms: 3-(3,5-Dichlorophenyl)-*N*-(1-methylethyl)-2,4-dioxo-1-imidazolidinecarboxamide; 3-(3,5-Dichlorophenyl)-*N*-sopropyl-2,4-dioxo-1-imidazolidinecarboximide; Glycophen; 1-Isopropyl carbamoyl-3-(3,5-dichlorophenyl)- hydantoin

Trade Names: ANFOR®; CHIPCO®; 26019DIVA®; DOP® 26019; GLYCOPHENE®; IPRODINE®; KIDEN®; LFA 2043®; MRC 910®; PROMIDIONE®; PROTURF®; ROP 500F®; ROVRAL®; RP-26019®; VERISAN®

Chemical class: Dicarboximide

EPA/OPP PC de: 109801; (209900 old EPA code number)

California DPR Chemical Code: 2081

HSDB Number: 6855

UN/NA & ERG Number: UN3077(solid)/171; UN3082 (liquid)/171

RTECS® Number: NI8870000

EC Number: 253-178-9 [*Annex I Index No.:* 616-054-00-9]

Uses: Iprodione is a contact and/or locally systemic fungicide used to control a broad range of root and stem rots, molds and mildews on a variety of field, fruit, and vegetable crops including almonds, grapes, peaches, potatoes, rice, berries, onions, peanuts and lettuce. Registration does not permit uses on turf, ornamentals and vegetable and small fruit gardens. End-uses for the formulations have been classified for outdoor use only; the application methods have been restricted so as to avoid undue human contact. Iprodione can also be used as a post-harvest fungicide and seed treatment

Human toxicity (long-term)[101]: High–7.97268 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Low–378.15513 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for iprodione, its isomer 3-(1-methylethyl)-N-(3,5-dichlorophenyl)-2,4-dioxo-1-imidazolidinecarboxamide, and its metabolite 3-(3,5-dichlorophenyl)-2,4-dioxo-1-imidazolidinecarboxamide [40 CFR 180.399(a)]: in or on the following raw agricultural commodities: almonds (hulls) 2.0 ppm; almonds (nutmeat) 0.3 ppm; apricots 20.0 ppm; beans (dried, vine hay) 90.0 ppm; beans (dry) 2.0 ppm; beans (forage) 90.0 ppm; beans (succulent) 2.0 ppm; blueberries 15.0 ppm; boysenberries 15.0 ppm; broccoli 25.0 pm; caneberries 25.0 ppm; carrots 5.0 ppm; cherries, sour 20.0 ppm; cherries, sweet, (pre- and post-harvest) 20.0 ppm; cottonseed 0.10 ppm; currants 15.0 ppm; garlic 0.1 ppm; ginseng 2.0 ppm; ginsend, dried 4.0 ppm; grapes 60.0 ppm; kiwi fruit 10.0 ppm; lettuce 25.0 ppm; nectarines (pre- and post-harvest) 20.0 ppm; onions (dry bulb) 0.5 ppm; peaches (pre- and post-harvest) 20.0 ppm; peanuts 0.5 ppm; peanut forage 150.0 ppm; peanut hay 150.0 ppm; plums (pre- and post-harvest) 20.0 ppm; potatoes 0.5 ppm; prunes 20.0 ppm; raisins 300.0 ppm; rasberries 15.0 ppm; rice bran 30.0 ppm; rice grain 10.0 ppm; rice hulls 50.0 ppm; rice straw 20.0 ppm; and strawberries 15.0 ppm. [***40 CFR 180.399(b)***]: Tolerances are established for the combined residues iprodione, its isomer and its metabolite (see above) all expressed as iprodione equivalents in or on the following raw agricultural commodities of animal origin: cattle, fat 0.5 ppm; cattle, kidney 3.0 ppm; cattle, liver 3.0 ppm; cattle, meat 0.5 ppm; cattle, meat byproducts (except kidney and liver) 0.5 ppm; eggs 1.5 ppm; goats, fat 0.5 ppm; goats, kidney 3.0 ppm; goats, liver 3.0 ppm; goats, meat 0.5 ppm; goat, meat byproducts (except kidney and liver) 0.5 ppm; hogs, fat 0.5 ppm; hogs, kidney 3.0 ppm; hogs, liver 3.0 ppm; hogs, meat 0.5 ppm; hogs, meat byproducts (except kidney and liver) 0.5 ppm; horses, fat 0.5 ppm; horses, kidney 3.0 ppm; horses, liver 3.0 ppm; horses, meat 0.5 ppm; horses, meat byproducts (except kidney and liver) 0.5 ppm; milk 0.5 ppm; poultry, fat 3.5 ppm; poultry, liver 5.0 ppm; poultry, meat 1.0 ppm; poultry, meat byproducts (except liver) 1.0 ppm; sheep, fat 0.5 ppm; sheep, kidney 3.0 ppm; sheep, liver 3.0 ppm; sheep, meat 0.5 ppm; sheep meat byproducts (except kidney and liver) 0.5 ppm. *Regional registration, as defined in section 180.1(n)* **[*40 CFR 180.399(c)*]:** in or on the following raw agricultural commodity: Chinese mustard 15.0 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans; EU GHS Category 2: Suspected human carcinogen.

California Proposition 65 Chemical: Carcinogen (5/1/1996)

Acute Oral Category: 3, CAUTION

Health Advisory: Endocrine disruptor (S!)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R40; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: White crystalline solid. Odorless. Molecular weight = 330.18; Specific gravity (H_2O:1) = 1.0; Freezing/Melting point = 135–136 °C. Vapor pressure = 1.2×10^{-7} mmHg; Flash point = 150 °C. Low solubility in water; solubility = 15 mg/L.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Incompatible with oxidizers, chlorates, nitrates, peroxides, and alkaline materials. Imides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic imides with strong reducing agents. Imides are extremely weak bases (weaker than water). React with strong bases to form salts. That is, they can react as acids.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 280 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >3 g/kg; LD_{50} (dermal, rat) = >2.5 g/kg.

Long Term Exposure: May cause lung, pulmonary problems. May cause cancer.

Points of Attack: Lungs. Endocrine disruptor.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water, heat and incompatible materials. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Absorb liquid containing this chemical in vermiculite, dry sand, earth, or similar material. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Captan may burn, but does not ignite readily. May be combustible at temperatures above 150 °C. Hazardous decomposition includes toxic oxides of nitrogen, carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR Parts 261.3***. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Isobenzan I:0250

Use Type: Insecticide

CAS Number: 297-78-9

Formula: $C_9H_4Cl_8O$

Synonyms: CP 14,957; ENT 25,545; ENT 25,545-x; Isobenzano (Spanish); Octochlorohexahydromethano isobenzofuran; 1,3,4,5,6,8,8-Octochloro-1,3,3a,4,7,7a-hexahydro-4,7-methanoisobenzofuran; 1,3,4,5,6,7,10,10-Octochloro-4,7-endo-methylene-4,7,8,9-tetrahydrophthalan; 1,3,4,5,6,7,8,8-Octochloro-2-oxa-3a,4,7,7a-tetrahydro-4,7-methanoindene

Trade Names: OMTAN®; R 6700®; SD 440®; SHELL 4402®; SHELL WL 1650®; TELODRIN®; WL 1650®

Chemical class: Cyclodiene

EPA/OPP PC Code: 058501

HSDB Number: 6388

UN/NA & ERG Number: UN2761 (solid)/151

RTECS® Number: PC1225000

EC Number: 206-045-4 [*Annex I Index No.*: 602-053-00-0]

Uses: This broad-spectrum insecticide was used throughout the world and manufactured from 1958 to 1965. Its use in agriculture was restricted because of its persistence and toxicity. Not listed for use in EU countries[115]. Not registered for use in the U.S. There are 15 global suppliers[97].

Regulatory Authority and Advisory Information:

Health Advisory: Tumorigen

Acute Oral Category: 1, DANGER–POISON

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R27/28; R50; safety phrases: S1/2; S28; S36/37; S45; S61 (see Appendix 1)

Description: Isobenzan is a white to light brown crystalline solid or powder. It has a mild odor. Molecular weight = 411.73; Specific gravity (H_2O:1) = 1.87; Freezing/Melting point = 121 °C; Vapor pressure = 1×10^{-5} mmHg @ 25 °C. Henry's Law constant = 5.9×10^{-8} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0. Practically insoluble in water; solubility = 0.09 mg/L @20 °C.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.091 mg/m^3
PAC-2: 1 mg/m^3
PAC-3: 1 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Log K_{ow} = 4.51[83]. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This material is highly toxic. It is absorbed by the skin as well as by the respiratory and gastrointestinal tract. Symptoms may last for a long time because the material is eliminated slowly; its half-life in human blood is 2.77 years. Symptoms of exposure include headache, dizziness, drowsiness, irritability, and numbness of the legs. Convulsions may occur. LD_{50} (oral, rat) = 6.2–11.1 mg/kg[83].

LD_{50} (oral, rat) = 4800 μg/kg; LD_{50} (dermal, rat) = 5 mg/kg.

Long Term Exposure: Organochlorine pesticides are highly toxic to mammals and will accumulate in the tissues of living organisms.

Points of Attack: Central nervous system.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.091 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149. Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i. e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88].

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organochlorine pesticides, liquid or solid require a "poisonous materials" label. They fall in Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic hydrogen chloride gas. *On a small fire:* use dry chemical, carbon dioxide or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: An extremely hazardous waste. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Isofenphos I:0345

Use Type: Insecticide

CAS Number: 25311-71-1

Formula: $C_{15}H_{24}NO_4PS$

Synonyms: AI3-27748; Benzoic acid, 2-[(ethoxy-((1-

methylethyl)amino)phosphinothioyl)oxy]-, 1-methylethyl ester; Benzoic acid, 2-[(ethoxy((1-methylethyl)amino) phosphinothioyl)oxy]-, 1-methyl ester; Caswell No. 447AB; Dipropylene glycol; 2-[(Ethoxyl((1-methylethyl) amino)phosphinothioyl)oxy]benzoic acid 1-methylethyl ester; 2-[(Ethoxy((1-methylethyl)amino) phosphinothioyl) oxy]benzoic acid 1-methylethyl ester; *O*-Ethyl *O*-(2-isopropoxycarbonyl)phenylisopropyl phosphoramidothioate; Isopropyl *O*-[ethoxy(isopropylamino)phosphinothioyl] salicylate; Isopropyl *O*-[ethoxy-*N*-isopropylamino(thiop hosphoryl)] salicylate; Isopropyl salicylate *O*-ester with *O*-ethyl isopropylphosphoramidothioate; 1-Methylethyl 2-[(ethoxy((1-methylethyl)amino)phosphinothioyl)oxy] benzoate; Phosphoramidoth ioic acid, isopropyl-, *O*-ethyl *O*-(2-isopropoxycarbonylphenyl) ester; Phosphoramidothioic acid, isopropyl-, *O*-ethyl ester, *O*-ester with isopropyl salicylate; Propanol, oxybis-; Salicylic acid, isopropyl ester, *O*-ester with *O*-ethyl isopropyl phosphoramidothioate

Trade Names: 40 SD®; AMAZE®[C]; BAY 92114®[C]; BAY-SRA-12869®[C]; OFTANOL®[C]; PRYFON 6®; SRA 12869®; SRA 128691®

Chemical class: Organophosphate

EPA/OPP PC Code: 109401; (512400 old EPA code number)

California DPR Chemical Code: 2194

HSDB Number: 6983

UN/NA & ERG Number: UN3018 (liquid)/152

RTECS® Number: VO43955000

EC Number: 246-814-1 [*Annex I Index No.:* 015-129-00-8]

Uses: All food tolerances have been revoked in the U.S. Isofenphos was marketed under the basic producer's trade name Oftanol, and was used in the United States on turf and ornamental trees and shrubs to control white grubs, mole crickets, and other insects (mostly subterranean species). Isofenphos was first registered in the United States in 1980 by Bayer Corporation for use on corn for control of the corn rootworm and was also used as a pre-emergence soil treatment in fruit crops and vegetables such as maize and carrots. Registered products containing isofenphos were voluntarily canceled in the U.S. in 1999. Not approved for use in EU countries[115]. There are 17 global suppliers[97].

Human toxicity (long-term)[101]: High–3.50 ppb, Health Advisory

Fish toxicity (threshold)[101]: Low–116.60189 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans.

Acute Oral Category: 1, Toxicity (oral) Category: 1, DANGER-Poison

Health Advisory: Nerve Toxin

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Marine pollutant (49CFR, Subchapter 172.101, Appendix B)

DOT Inhalation Hazard Chemicals as organophosphates

European/International Regulations: Hazard Symbol: T, N; risk phrases: R24/25; R50/53; safety phrases: S1/2; S36/ S37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: A colorless, oily liquid. Molecular weight = 345.4; Specific gravity (H_2O:1) = 1.13 @ 20 °C; Boiling point = (decomposes) 220 °C[Bayer]; Freezing/ Melting point = –12 °C; Vapor pressure = 1.6×10^{-6} mmHg @ 20 °C; Flash point = 115 °C; Explosive limits: LEL = 2.2%; UEL 18.8%. Low solubility in water; solubility = 23.8 mg/kg @ 20 °C.

Incompatibilities: Sensitive to heat and moisture. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. May react violently with aliphatic amines, alkalies, boranes, isocyanates, nitric acid, sulfuric acid.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides [18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Dermal contact, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Highly toxic in contact with skin or if swallowed. Can be absorbed through the unbroken skin. Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = <50 mg/kg; LD_{50} (dermal, rat) = <200 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. A neurotoxin.

Points of Attack: Respiratory system, central nervous system, peripheral nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 g in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15–30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont^{TM} Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large* *spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Isoproturon I:0525

Use Type: Herbicide
CAS Number: 34123-59-6
Formula: $C_{12}H_{18}N_2O$
Synonyms: 3-(4-Isopropylphenyl)-1,1-dimethylurea; Urea, *N,N*-dimethyl-*N'*-[4-(1-methylethyl)phenyl]-
Trade Names: ARELON® DISPERSION; ATLAS FIELDGARD®; CALIPURON®; CGA 18731®; DAHR®; DPX 6774®; HARLEQUIN®, (isoproturon + simazine); HOE 16410®; JOSH®; PROTUGAN®
Chemical class: Phenyl urea
EPA/OPP PC Code: 512200
HSDB Number: Not assigned
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: YTO170000
EC Number: 251-835-4 [*Annex I Index No.*:006-044-00-7]
Uses: Used as a pre-emergence and post-emergence selective herbicide for the control of grasses and broadleaf weeds in spring and winter wheat, spring and winter barley, and winter rye. Not currently registered in the U.S. Used in various European countries. There are more than 40 global suppliers[97].
Regulatory Authority and Advisory Information:
Carcinogenicity: GHS Category 2: Suspected human carcinogen
Health Advisory: Mutagen, Developmental/Reproductive Toxin
Acute Oral Category: 3, CAUTION
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R40; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)
Description: Colorless to off-white crystalline solid. Molecular weight = 206.29; Specific gravity (H_2O:1) = 1.18; Freezing/Melting point = 152 °C; Vapor pressure = 8.8×10^{-6} mmHg @ 20 °C; 3.5×10^{-4} mmHg @ 77 °C. Soluble in water; solubility = 70 mg/L @ 20 °C.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air purifying respirators for pesticides. May be harmful if swallowed. Dermal contact may cause severe irritation or burns. LD_{50} (oral, rat) = 1826 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.
Long Term Exposure: May cause reproductive and fetal effects.
Points of Attack: Skin. Reproductive cells.
Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive

experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i. e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenyl urea pesticides, solid, toxic, require a label of "poisonous materials." This compound falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon, and corrosive fumes of chlorides. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate in a unit with effluent gas scrubbing. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Isoxaben I:0530

Use Type: Herbicide
CAS Number: 82558-50-7
Formula: $C_{18}H_{24}N_2O_4$
Synonyms: Benzamide, 2,6-dimethoxy-*N*-[3-(1-ethyl-1-methylpropyl)-5-isoxazolyl]-; Benzamide, *N*-[3-(1-ethyl-1-methylpropyl)-5-isoxazolyl]-2,6-dimethoxy-; 2,6-Dimethoxy-*N*-[3-(1-ethyl-1-methylpropyl)-5-isoxazolyl]benzamide; *N*-[3-(1-Ethyl-1-methylpropyl) -5-isoxazolyl]-2,6-dimethoxybenzamide; *N*-3-(1-Ethyl-1-methylpropyl)-5-isoxazolyl-2,6-dimethoxybenzamide; Benzamizole
Trade Names: EL 107®; FLEXIDOR®; FLEXIDOR® 125; GALLERY®; NA 8318®; SNAPSHOT
Chemical class: Amide Herbicide; Benzamide
EPA/OPP PC Code: 125851
California DPR Chemical Code: 2289
HSDB Number: 6691
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: CV4370300
EC Number: 407-190-8 [*Annex I Index No.:* 616-043-00-9]
Human toxicity (long-term)[101]: Intermediate–35.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Low–400.00001 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA. Group C, possible human carcinogen
Acute Oral Category: 4, Caution, not acutely toxic
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S60; S61 (see Appendix 1)
Description: White crystalline solid, off-white granular solid, or waxy powder. Mild odor. Freezing/Melting point = 177.5 °C; Molecular weight = 332.44[9]; Vapor pressure = 4×10^{-7} mmHg @ 20 °C. Practically insoluble in water; solubility = <0.002 ppm.
Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Reacts with strong oxidizers and alkaline media. Benzamines can form flammable gases with strong reducing agents. May react with azo and diazo compounds to generate toxic gases.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Dermal contact, inhalation, ingestion.
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. May be harmful if swallowed. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air purifying respirators for pesticides. LD_{50} (oral, rat) = >10 g/kg; LD_{50} (dermal, rabbit) = 200 mg/kg.
Long Term Exposure: May cause cancer, liver and kidney effects, birth defects.
Points of Attack: Skin, liver, kidneys. Reproductive cells.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].
First Aid: *Eyes*: First check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. *Immediately* transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop. *Skin: Immediately* flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, *immediately* call a physician and be prepared to transport the victim to a hospital for treatment. *Inhalation*: *Immediately* leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Ingestion: *do not induce vomiting*. If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and *immediately* call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Do not induce vomiting*. Immediately transport the victim to a hospital[88].
Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.
Respirator Selection: SCBA >4.7 mg/m³ (for benzamide). Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location and refrigerate 2 to 8 °C. Prior to working with this chemical you should be trained on its

proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Small spills and leakage: should a spill occur while you are handling this chemical, first remove all sources of ignition, then you should dampen the solid spill material with 60–70% ethanol and transfer the dampened material to a suitable container. Use absorbent paper dampened with 60–70% ethanol to pick up any remaining material. Seal the absorbent paper, and any of your clothes which may be contaminated, in a vapor-tight plastic bag for eventual disposal. Solvent wash all contaminated surfaces with 60–70% ethanol followed by washing with a soap and water solution. Do not reenter the contaminated area until the safety officer (or other responsible person) has verified that the area has been properly cleaned.

Fire Extinguishing: Decomposition in fire releases toxic oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Isoxaflutole I:0560

Use Type: Herbicide

CAS Number: 141112-29-0

Formula: $C_{15}H_{12}F_3NO_4S$

Synonyms: 4-(2-Methylsulfonyl-4-trifluoromethyl-benzoyl)-5-cyclopropylisoxazole; 5-Cyclopropylisoxazol-4-yl 2-mesyl-4-trifluoromethylphenyl ketone; 5-Cyclopropyl-4-isoxazolyl)[2-(methylsulfonyl)-4-(trifluoromethyl) phenyl]-methanone; 5-Cyclopropyl-1,2-oxazol-4-yl α,α,α-trifluoro-2-mesyl-*p*-tolyl ketone; 5-Cyclopropyl-4-(2-methanesulfonyl-4-trifluoromethylbenzoyl)isoxazole; 5-Cyclopropyl-4-(2-methylsulfonyl-4- trifluoromethyl-benzoyl)isoxazole

Trade Names: BALANCE® PRO; BALANCE® WDG; EPIC® (flufenacet+isoxaflutole); RPA 201772®

Chemical class: Cyclopropylisoxazole; Isoxazole

EPA/OPP PC Code: 123000

California DPR Chemical Code: None listed

HSDB Number: 7275

UN/NA & ERG Number: UN3077(solid)/171

EC Number: [*Annex I Index No.:* 606-054-00-7]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Registered for use on field cotton. Registered for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Tolerances are established for combined residues of the herbicide Isoxaflutole and its metabolites 1-(2-methylsulfonyl-4-trifluoromethylphenyl)-2-cyano-3-cyclopropyl propan-1,3-dione (RPA 202248) and 2-methylsulphonyl-4-trifluoromethyl benzoic acid (RPA 203328), calculated as the parent compound [40 CFR 180.537(a)(1)]: in or on the following raw agricultural commodities: corn, field, forage 1.0 ppm; corn, field, grain 0.20 ppm; and corn, field, stover 0.50 ppm. [***40 CFR 180.537(a)(2)***] in or on the following raw agricultural commodities: cattle, fat 0.20 ppm; cattle, liver 0.50 ppm; cattle, meat 0.20 ppm; cattle, meat byproducts, except liver 0.10 ppm; egg 0.01 ppm; goat, fat 0.20 ppm; goat, liver 0.50 ppm; goat, meat 0.20 ppm; goat, meat byproducts, except liver 0.10 ppm; hog, fat 0.20 ppm; hog, liver 0.50 ppm; hog, meat 0.20 ppm; hog, meat byproducts, except liver 0.10 ppm; horse, fat 0.20 ppm; horse, liver 0.50 ppm; horse, meat 0.20 ppm; horse, meat byproducts, except liver 0.10 ppm; milk 0.02 ppm; poultry, fat 0.20 ppm; poultry, liver 0.30 ppm; poultry, meat 0.20 ppm; sheep, fat 0.20 ppm;

sheep, liver 0.50 ppm; sheep, meat 0.20 ppm; and sheep, meat byproducts, except liver 0.10 ppm.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans; suspected developmental toxin
California Proposition 65 Chemical: Carcinogen (12/22/2000)
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R50/53; R63; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Yellow to tan/beige granular solid. Slight acetic acid odor for technical grade; the end-use material is odorless. Molecular weight = 359.32; Specific gravity (H_2O:1) = 1.10; Boiling point = (decomposes); Freezing/Melting point = 138–140 °C. Low solubility in water.

Incompatibilities: Reacts with strong oxidizers. When heated to decomposition, this chemical forms toxic fumes of nitrogen oxides, sulfur oxides, hydrogen fluoride, and carbon mononoxide

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >2 g/kg; also >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. This chemical is a probable carcinogen and it may be a reproduction hazard.

Points of Attack: Reproductive cells. May cause reproductive and fetal effects.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive- pressure mode). *Escape:* 100 F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location and refrigerate 2 to 8 °C. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Small spills and leakage: should a spill occur while you are handling this chemical, first remove all sources of ignition, then you should dampen the solid spill material with 60–70% ethanol and transfer the dampened material to a suitable container. Use absorbent paper dampened with 60–70% ethanol to pick up any remaining material. Seal the absorbent paper, and any of your clothes which may be contaminated, in a vapor-tight plastic bag for eventual disposal. Solvent wash all contaminated surfaces with 60–70% ethanol followed by washing with a soap and water solution. Do not reenter the contaminated area until the safety officer (or other responsible person) has verified that the area has been properly cleaned.

Fire Extinguishing: Decomposes in temperatures >200 °C. Decomposition in fire releases toxic oxides of nitrogen oxides, sulfur oxides, hydrogen fluoride, and carbon mononoxide. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

K

Kinetin K:0120

Use Type: Plant growth regulator
CAS Number: 525-79-1
Formula: $C_{10}H_9N_5O$
Synonyms: Adenine, *N*-furfuryl-; Adenine, *N*^{6}-furfuryl-; Cytokinin; Cytokinin, as kinetin, based on biological activity; Cytokinins (with Cytokinin B, Cytokinin R); Cytokinins (derived from aqueous extract of seaweed); *N*^{6}-(Furfurylamino)purine; 6-(Furfurylamino)purine; *N*^{6}-Furfuryladenine; 1-*H*-Purin-6-amine, *N*-(2-furanylmethyl)-; 2-Furanmethanamine, *N*-1*H*-purin-6-yl-; *N*-(2-Furanylmethyl) -1*H*-purin-6-amine; 6-Furfurylaminopurine; 1-*H*-Purin-6-amine, *N*-(2-furanylmethyl)-
Trade Names: FAP®; FOLIAR TRIGGRR®; FOLIZYME®; GOLDENGRO®; HAPPYGRO®; MAXON®; MEGAGRO®; MEPEX®; NITROZYME®
Chemical class: Botanical
EPA/OPP PC Code: 116802
California DPR Chemical Code: 2082
HSDB Number: 7429
UN/NA & ERG Number: Consult appropriate Dangerous Goods Regulations, including 49CFR
RTECS® Number: AU6270000
EC Number: 208-382-2
Uses: Cytokinin is a group of plant regulators that promote cell division and leaf expansion and retard leaf aging. Cytokinin is composed of four naturally occurring cytokinins (derived from aqueous extract of seaweed meal). The extracts from these plant species (e.g., the naturally occurring cytokinins) are exempt from the requirements of tolerances when used as plant regulators in or on many raw agricultural commodities ***(40 CFR 180.1042)***. Cytokinin is applied to growing crops (field crops, vegetable crops, small fruits, vines and tree fruit), young trees, ornamental, and golf courses to increase fruit size, yield, blossoms, branching, healthy appearance, and other desirable growth effects. Not listed for use in EU countries[115]. Registered for use in the U.S.
Regulatory Authority and Advisory Information: Health Advisory: Mutagen
European/International Regulations: Hazard Symbol: Xi; risk phrases: R68; R36/37/38; safety phrases: S2; S22; S23; S24/25; S26; S27 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters[CB]
Description: White crystalline solid. Commercial formulations may be liquid concentrates. Molecular weight = 215.22; Freezing/Melting point = 265°C; Henry's Law constant = 1.2×10^{-14} atm-m^3/mole @ 25°C (est)[83]; Vapor pressure = 1.8×10^{-8} mmHg @ 25[83]. Slightly soluble in water; solubility = 358 mg/L @25°C[83].
Determination in Water: Log K_{ow} = 0.6 (est)[83]. Unlikely to bioaccumulate in marine organisms.
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed.
Long Term Exposure: May cause reproductive and fetal effects.
Points of Attack: Reproductive cells.
Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested
Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.
Shipping: Consult appropriate Dangerous Goods Regulations, including 49CFR, for additional description requirements, mode-specific, or quantity-specific shipping requirements.
Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from

area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

L

Lactofen L:0050

Use Type: Herbicide

CAS Number: 77501-63-4; (81362-49-4 obsolete); 62476-59-9 (lactofen-sodium, degradation product)

Formula: $C_{19}H_{15}ClF_3NO_7$

Synonyms: Benzoic acid, 5-[2-chloro-4-(trifluoromethyl) phenoxy]-2-nitro-2-ethoxy-1-methyl-2-oxoethyl ester; 1'-(Carboethoxy)ethyl-5-[2-chloro-4-(trifluoromethyl) phenoxy]-2-nitrobenzoate; 5-[2-Chloro-4-(trifluoromethyl) phenoxy]-2-nitrobenzoicacid2-ethoxy-1-methyl-2-oxoethyl ester; (±)-2-Ethoxy-1-methyl-2-oxoethyl-5-[2-chloro-4-(trifluoromethyl)phenoxy]-2-nitrobenzoate; Ethyl *O*-[5-(2-chloro-α,α,α-trifluoro-*p*-tolyloxy)-2-nitrobenzoyl]-*dl*-lactate

Trade Names: COBRA®; PPG-844®; STELLER®; V-10086®

Chemical class: Diphenyl ether

EPA/OPP PC Code: 128888

California DPR Chemical Code: 3538

HSDB Number: 6991; 6551 (lactofen-sodium)

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: DG5643120

Uses: Lactofen is a broad-spectrum herbicide used for pre-emergence and post-emergent weed control on peanuts, snap beans, soybeans, cotton, and fruiting vegetables. Not registered for use in residential settings. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Lactofen [40 CFR 180.432 (a)]: Beans, snap, succulent (excluding limas) 0.01 ppm; Cotton, gin byproducts 0.02 ppm; Cotton, undelinted seed 0.01 ppm; Peanut 0.01 ppm; Soybean, seed 0.01 ppm.

Human toxicity (long-term) [101]: High–2.05882 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: High–1.97989 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA, Unlikely to be a carcinogen at low doses and likely to be carcinogenic to humans in high doses.

California Proposition 65 Chemical: Carcinogen (1/1/1989)
Acute Oral Category: 1, DANGER–POISON
EPA Oral reference dose (RfD) = 0.002 mg/kg/day
EPA ADI (Acceptable Daily Intake) = 0.0015 mg/kg/day
Safe Drinking Water Act: Priority List (55 FR 1470)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Tan to dark brown solid. Technical product is a white crystalline solid. Commercial product may also be available as an emulsifiable concentrate. Molecular weight = 461.79; Specific gravity (H_2O:1) = 1.39; Freezing/Melting point = 43.9–45.5 °C. Vapor pressure = 7.9×10^{-9} mmHg @ 20 °C. Practically insoluble in water.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: High-Performance Liquid Chromatography. Log K_{ow} = >4. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Eyes, dermal contact, ingestion. May be absorbed through unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: This material can cause corrosive burns to the skin and eyes. *Ingestion:* Slight irritation. Mildly toxic via all routes of exposure. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause permanent eye damage. May be mutagenic.

Points of Attack: Liver and kidneys, eyes and skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen (in high doses). Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Diphenyl ether derivatives may react with the following absorbent materials: Expanded Polymeric[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF=50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Corrosive and poisonous. Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Store in tightly closed containers in a cool, well-ventilated area. Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water, heat and incompatible materials. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material may contain a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Absorb liquid containing this chemical in vermiculite, dry sand, earth, or similar material. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic hydrogen chloride and hydrogen fluoride gas and oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Lenacil L:0235

Use Type: Herbicide
CAS Number: 2164-08-1
Formula: $C_{13}H_{18}N_2O_2$
Synonyms: 3-Cyclohexyl-6,7-dihydro-1H-cyclopenta-pyrimidine-2,4-(3H,5H)-dione; Cyclohexyl-5,6-trimethyleneuracil; Cyclohexyl-6,7-dihydro-1H-cyclopenta-pyrimidine-2,4(3H,5H)-dione
Trade Names: LENAZAR FLO®; SAFARI LITE®; VENZAR Flowable®
Chemical class: Uracil
EPA/OPP PC Code: 525200
California DPR Chemical Code: Not assigned
UN/NA&ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171
RTECS® Number: GY5875000
EC Number: 218-499-0
Uses: Systemic herbicide that attacks roots.
Fish toxicity (threshold): Acute aquatic toxicology (category 1). Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.
Regulatory Authority and Advisory Information: Acute Oral Category: 4, Caution, not acutely toxic
European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S2; S61 (see Appendix 1)
Description: Off-white to tan solid or powder. Commercial product is available as an emulsifiable concentrate. Molecular weight=234.30; Specific gravity (H_2O:1)=1.3 @ 25 °C; Boiling point=(decomposes); Melting point=(decomposes). Vapor pressure=10^{-6} mmHg @ 25°; Autoignition temperature=~ 290 °C. Low solubility in water.
Incompatibilities: Incompatible with strong oxidizers. Decomposes in temperatures above 265 °C.
Permissible Exposure Limits in Air: No standards set.
Incompatibilities: Dust may form explosive mixture with air. Keep away from bases, strong oxidizers.
Determination in Water: Log K_{ow}=<2.5. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, ingestion, dermal and/or eye contact. May pass through the unbroken skin.
Harmful Effects and Symptoms
Short Term Exposure: May cause irritating to eyes, respiratory tract, and skin. May cause sensitization by dermal and/or eye contact. LD_{50} (oral, rat)=11,000 mg/kg; LD_{50} (rat, oral, dermal) = >5 000 mg/kg.
Long Term Exposure: May cause skin allergy.
Points of Attack: Skin.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
First Aid: Never give anything by mouth to an unconscious person. If breathing is irregular or stopped, administer artificial respiration. *Inhalation*: Move to fresh air. Consult a physician. *Dermal contact*: Wash off immediately with soap and plenty of water. If skin irritation persists, call a physician. *Eye contact*: Rinse thoroughly with plenty of water, also under the eyelids. Keep eye wide open while rinsing. If eye irritation persists call a doctor. Ingestion: Drink 1 or 2 glasses of water. Do not induce vomiting without medical advice. Consult a physician.
Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash- or dust-proof chemical goggles (depending on physical state of material) and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.
Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a refrigerator or a cool, dry place. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.
Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.
Spill Handling: This material may not be readily biodegradable. Wear personal protective equipment. Environmental precautions: Do not flush into surface water or sanitary sewer system. Do not allow material to contaminate ground water system. Methods for cleaning up: Sweep up or vacuum up spillage and collect in suitable container for disposal. Use approved industrial vacuum cleaner for removal. If spill area is on ground near valuable plants or trees, remove 5 cm of top soil after initial clean up.
Fire Extinguishing: Hazardous decomposition products formed under fire conditions including toxic oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams

of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chemical class: Organochlorine

EPA/OPP PC Code: 009001

California DPR Chemical Code: 359

HSDB Number: 646

UN/NA & ERG Number: UN2761 (solid)/151

RTECS® Number: GV4900000

EC Number: 200-401-2 [*Annex I Index No.:* 602-043-00-6]; 210-168-9 (technical)

Uses: Lindane has been used against insects in a wide range of applications including treatment of animals, buildings, man for ectoparasites, clothes, water for mosquitoes, living plants, seeds and soils. Most applications have been canceled due to excessive residues, e.g., stored foodstuffs, that may cause cancer. Formulators, distributors and users of lindane represent a special risk group. The major use of lindane in recent years has been to pretreat seeds. Other uses include sunflowers, peas, wheat, barley and oats. Lindane is currently also used in lotions, creams and shampoos for the control of lice and mites in humans. Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP). Lindane should be handled as a carcinogen, with extreme caution. Most applications have been canceled. It has not been produced in the U.S. since 1977; however, it is still imported into the U.S. and formulated to treat head lice, body lice and scabies.

U.S. Maximum Allowable Residue Levels for Lindane (40 CFR 180.133): in or on cattle, fat 7.0 ppm; goat, fat 7.0 ppm; hog, fat 4.0 ppm; horse, fat 7.0 ppm; sheep, fat 7.0 ppm. All other allowable residues in or on raw agricultural commodities expired or were revoked on 4/26/2007.

Human toxicity (long-term)[101]: Extra high–0.20 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Extra high–0.11310 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA, suggestive evidence of carcinogenicity, but not sufficient to assess human carcinogenic potential; NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen; ACGIH A3 Confirmed animal carcinogen with unknown relevance to humans.

California Proposition 65 Chemical: *(Lindane and other hexachlorocyclohexane isomers*) Cancer 1/1/89

Acute Oral Category: 2, WARNING

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR423, Appendix A, Priority Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92); 40CFR401.15 Section 307 Toxic Pollutants, as hexachlorocyclohexane

EPA Hazardous Waste Number (RCRA No.): U129

RCRA Toxicity Characteristic (Section 261.24), Maximum Concentration of Contaminants, regulatory level, 0.4 mg/L

Safe Drinking Water Act: MCL, 0.0002 mg/L; MCLG, 0.0002 mg/L; Regulated chemical (47 FR 9352)

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8080(0.05)

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.0017; Non-wastewater (mg/kg), 0.066

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 1000/10,000 lb (454/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Rotterdam Convention Severe Marine Pollutant (Class II)

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] (as lindane)

See also HCH (mixed isomers) 608-73-1

List of Stockholm Convention POPs: Annex A (Elimination)

European/International Regulations: Hazard Symbol: T, N; risk phrases: R20/21; R25; R48/22; R64; R50/53; safety phrases: S1/2; S13; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Lindane is a white to yellow crystalline powder. Slight, musty odor (pure material is odorless). Molecular weight = 290.83; Specific gravity (H_2O:1) = 1.85 (no temperature); Boiling point = (decomposes) 323.3 °C @ 760 mmHg; Freezing/Melting point = 112.5 °C; Vapor pressure = 0.00001 mmHg. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Low solubility in water; solubility = <1 mg/mL @ 24 °C. Noncombustible solid, but may be dissolved in flammable liquids. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Lindane decomposes on contact with powdered iron, aluminum, and zinc and with alkalis, producing trichlorobenzene. Incompatible with strong oxidizers and alkaline materials (undergoes dehydrochlorination). Corrosive to metals[9].

Permissible Exposure Limits in Air: NIOSH IDLH: 50 mg/m^3

OSHA PEL: 0.5 mg/m^3 TWA [skin]

NIOSH REL: 0.5 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.5 mg/m^3 TWA [skin]; confirmed animal carcinogen with unknown relevance to humans.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 9.1 mg/m^3
PAC-2: 100 mg/m^3
PAC-3: 100 mg/m^3

DFG MAK: 0.1 mg/m3, inhalable fraction; [skin]; Carcinogen Category 4; Pregnancy Risk Group C

Determination in Air: Collection on a filter, workup with isooctane, analysis by gas chromatography/flame ionization.

Permissible Concentration in Water: Federal Drinking Water Standards: 0.03 ppb[80]; EPA 0.2 μg/L; State Drinking Water Guidelines: Arizona 0.2 μg/L; Maine 0.2 μg/L. To protect freshwater aquatic life–0.080 μg/L as a 24 hour average, never to exceed 2.0 μg/L. To protect saltwater aquatic life–never to exceed 0.16 μg/L. To protect human health-preferably zero. An additional lifetime cancer risk of 1 in 100,000 is posed by a concentration of 0.186 μg/L[6]. Acceptable Daily Intake (ADI): EPA, 10-day health advisory (10 kg child) who consumes 1 L/water/day = 1.2 mg/L; Long-term health advisory (10 kg child) who consumes 1 L/water/day = 0.033 mg/L; Long-term health advisory (70 kg adult) who consumes 2 L/water/day = 0.12 mg/L; Lifetime health advisory (70 kg adult) who consumes 2 L/water/day = 10 μg/L.

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Methylene chloride extraction followed by gas chromatography with electron capture or halogen-specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625). Log K_{ow} => 3.7. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or dermal contact.

Harmful Effects and Symptoms

Lindane is a stimulant of the nervous system, causing violent convulsions that are rapid in onset and generally followed by death or recovery within 24 hours.

Short Term Exposure: Lindane irritates the eyes and the respiratory tract and may affect the central nervous system. Symptoms of exposure include vomiting, faintness, tremor, restlessness, muscle spasms, unsteady gait, and convulsions may occur as a result of exposure. Elevated body temperature and pulmonary edema have been reported in children. Coma, respiratory failure and death can result. Exposure to vapors of this compound or its thermal decomposition products may lead to headache, nausea, vomiting, and irritation of the eyes, nose, and throat. Lindane is a stimulant of the nervous system, causing violent convulsions that are rapid in onset and generally followed by death or recovery within 24 hours. The probable human oral lethal dose is 50–500 mg/kg, or between 1 teaspoon and 1 ounce for a 150 lb (70 kg) person[83]. LD_{50} (oral, rat) = 75–165 mg/kg.

Long Term Exposure: May cause tumors. Organochlorine pesticides are highly toxic to mammals and will accumulate in the tissues of living organisms. Repeated or prolonged contact with skin may cause dermatitis. May damage the liver and kidneys. May damage the nerves in the arms and legs, possibly with weakness and poor coordination. May cause a serious drop in the blood cell count (aplastic anemia) or in the white blood cell count (agranulocytopenia). The Department of Health and Human Services has determined that HCH (hexachlorocyclohexanes) may reasonably be anticipated to be carcinogenic. Liver cancer has been seen in laboratory rodents that ate HCH for long periods of time. In animals, there is evidence that oral exposure to lindane during pregnancy results in an increased incidence of fetuses with extra ribs. However, ATSDR reports that animal studies have not shown birth defects in the babies of animals fed HCH during pregnancy. HCH has been detected in human breast milk.

Points of Attack: Eyes, central nervous system, blood, liver, kidneys and skin, brain.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Examination of the nervous system. Complete blood count. Blood test for lindane (may not be accurate longer than 1 week following last exposure). Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >9.1 mg/m^3. At any detectable concentration: SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly sealed containers in a cool, dry place away from light and incompatible materials. Protect containers against physical damage. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organochlorine pesticides, liquid or solid require a "poisonous materials" label. They fall in Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic hydrogen chloride gas, phosgene, and oxides of carbon. *On a small fire:* use dry chemical, carbon dioxide or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chemical class: Urea
EPA/OPP PC Code: 035506
California DPR Chemical Code: 361
HSDB Number: 1733
UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171
RTECS® Number: YS9100000
EC Number: 206-356-5 [*Annex I Index No.:* 006-021-00-1]

Uses: Inhibits photosynthesis. Linuron is a selective, pre-emergence herbicide used to control grasses and broadleaf weeds in carrots, beans, peas, asparagus, maize, potatoes, soybeans, sorghum, wheat, bananas, coffee, cotton and ornamentals. It is also used for control of annual weeds in storehouses, roadsides, fence rows and other non-crop lands. Linuron is frequently used in formulations with other herbicides, insecticides and fungicides.

U.S. Maximum Allowable Residue Levels for Linuron [40 CFR 180.184 (a)]: in or on the following food commodities: asparagus 7 ppm; carrots 1 ppm; cattle, fat 1 ppm; cattle, meat byproducts 1 ppm; cattle, meat 1 ppm; celery 0.5 ppm; corn, field, fodder 1 ppm; corn, field, forage 1 ppm; corn, fresh (inc. sweet k + cwhr) 0.25 ppm; corn, grain (inc. pop) 0.25 ppm; corn, sweet, fodder 1 ppm; corn, sweet, forage 1 ppm; cottonseed 0.25 ppm; goats, fat 1 ppm; goats, meat byproducts 1 ppm; goats, meat 1 ppm; hogs, fat 1 ppm; hogs, meat byproducts 1 ppm; hogs, meat 1 ppm; horses, fat 1 ppm; horses, meat byproducts 1 ppm; horses, meat 1 ppm; parsnips (with or without tops) 0.5 ppm; potatoes 1 ppm; sheep, fat 1 ppm; sheep, meat byproducts 1 ppm; sheep, meat 1 ppm; sorghum, fodder 1 ppm; sorghum, forage 1 ppm; sorghum, grain (milo) 0.25 ppm; soybeans (dry and succulent) 1 ppm; soybeans, forage 1 ppm; soybeans, hay 1 ppm; wheat, forage 0.5 ppm; wheat, grain 0.25 ppm; wheat, hay 0.5 ppm; and wheat, straw 0.5 ppm. ***Regional registration* [*40 CFR 180.184 (b)*]**: parsley 0.25 ppm.

Human toxicity (long-term)[101]: High–5.60 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–42.00007 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group C, Possible human carcinogen; Carcinogenicity: GHS Category 2: Suspected human carcinogen

California Proposition 65 Chemical: Developmental/Reproductive toxin (3/19/1999)

Health Advisory: Mutagen, Reproductive and developmental toxin (TRI), Endocrine disruptor (S!)

Acute Oral Category: 4, Caution, not acutely toxic

Marine Pollutant, IMDG

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: T, N; risk phrases: R22; R40; R48/22; R50/53; R61; R62; safety phrases: S2; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: White crystalline solid or powder. Odorless. Commercial product may be available as a water soluble or emulsifiable concentrate. Molecular weight = 249.11; Specific gravity (H_2O:1) = 1.492 @ 20 °C; Freezing/Melting point = 93–94 °C; Vapor pressure = 1.43×10^{-6} mmHg @ 25 °C[83,USDA]. Slightly soluble in water; solubility = 75 mg/L @ 25 °C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].

Permissible Concentration in Water: State Drinking Water Standards: Florida 14 μg/L; Minnesota 1.0 μg/L

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Dermal contact, ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. Ingestion may cause nausea, vomiting, and diarrhea. LD_{50} (oral, rat) = 1146 mg/kg; LD_{50} (dermal, rat) = >2.5 g/kg.

Long Term Exposure: Developmental problems; mutagen.

Points of Attack: Skin; reproductive system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i. e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon, and corrosive fumes of chlorides. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate in a unit operating at 850 °C equipped with off-gas scrubbing equipment. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

RTECS® Number: WM8400000
EC Number: 204-497-7 [*Annex I Index No.:* 015-041-00-X]
Uses: Not approved for use in EU countries[115]. Malathion is a non-systemic, wide-spectrum organophosphate insecticide. It was one of the earliest organophosphate insecticides developed (introduced in 1950). Malathion is suited for the control of sucking and chewing insects on fruits, vegetables, citrus, cotton, corn, sorghum, ornamentals and stored products, and is also used to control mosquitoes, flies, household insects, farm and livestock parasites (ectoparasites), and head and body lice. Malathion may also be found in formulations with many other pesticides; the U.S. EPA lists 2,283 current and canceled labels of products containing malathion. Malathion is marketed as 99.6% technical grade liquid. Available formulations include wettable powders (25% and 50%), emulsifiable concentrates, dusts and aerosols.
U.S. Maximum Allowable Residue Levels for Malathion (40 CFR 180.111): [40 CFR 180.111(a) (1)]: alfalfa, forage 135 ppm; alfalfa, hay 135 ppm; almond, hulls 50 ppm; almond, postharvest 8 ppm; apple 8 ppm; apricot 8 ppm; asparagus 8 ppm; avocado 8 ppm; barley, grain, postharvest 8 ppm; bean, dry, seed 8 ppm; bean, succulent 8 ppm; beet, garden, roots 8 ppm; beet, garden, tops 8 ppm; beet, sugar, roots 1 ppm; beet, sugar, tops 8 ppm; blackberry 8 ppm; blueberry 8 ppm; boysenberry 8 ppm; carrot, roots 8 ppm; chayote, fruit 8 ppm; chayote, roots 8 ppm; cherry 8 ppm; chestnut 1 ppm; clover, forage 135 ppm; clover, hay 135 ppm; corn, field, forage 8 ppm; corn, field, grain, postharvest 8 ppm; corn, pop, grain, postharvest 8 ppm; corn, sweet, forage 8 ppm; corn, sweet, kernel plus cob with husks removed 2 ppm; cowpea, forage 135 ppm; cowpea, hay 135 ppm; cranberry 8 ppm; cucumber 8 ppm; currant 8 ppm; date, dried fruit 8 ppm; dewberry 8 ppm; eggplant 8 ppm; fig 8 ppm; flax, seed 0.1 ppm; garlic, bulb 8 ppm; gooseberry 8 ppm; grape 8 ppm; grapefruit 8 ppm; guava 8 ppm; hazelnut 1 ppm; hop, dried cones 1 ppm; horseradish 8 ppm; kumquat 8 ppm; leek 8 ppm; lemon 8 ppm; lentil, seed 8 ppm; lespedeza, hay 135 ppm; lime 8 ppm; loganberry 8 ppm; lupin, seed 8 ppm; mango

8 ppm; melon 8 ppm; mushroom 8 ppm; nectarine 8 ppm; nut, macadamia 1 ppm; oat, grain, postharvest 8 ppm; okra 8 ppm; onion, bulb 8 ppm; onion, green 8 ppm; orange 8 ppm; papaya 1 ppm; parsnip 8 ppm; passionfruit 8 ppm; pea 8 ppm; pea, field, hay 8 ppm; pea, field, vines 8 ppm; peach 8 ppm; peanut, hay 135 ppm; peanut, postharvest 8 ppm; pear 8 ppm; pecan 8 ppm; pepper 8 ppm; peppermint, tops 8 ppm; pineapple 8 ppm; plum 8 ppm; plum, prune 8 ppm; potato 8 ppm; pumpkin 8 ppm; quince 8 ppm; radish 8 ppm; raspberry 8 ppm; rice, grain, postharvest 8 ppm; rice, wild 8 ppm; rutabaga 8 ppm; rye, grain, postharvest 8 ppm; safflower, seed 0.2 ppm; salsify, roots 8 ppm; salsify, tops 8 ppm; shallot, bulb 8 ppm; sorghum, grain, forage 8 ppm; sorghum, grain, grain, postharvest 8 ppm; soybean, forage 135 ppm; soybean, hay 135 ppm; soybean, seed 8 ppm; soybean, vegetable, succulent 8 ppm; spearmint, tops 8 ppm; squash, summer 8 ppm; squash, winter 8 ppm; strawberry 8 ppm; sunflower, seed, postharvest 8 ppm; sweet potato, roots 1 ppm; tangerine 8 ppm; tomato 8 ppm; trefoil, forage 135 ppm; trefoil, hay 135 ppm; turnip, greens 8 ppm; turnip, roots 8 ppm; vegetable, brassica, leafy, group 5, 8 ppm; vegetable, leafy, except brassica, group 4, 8 ppm; vetch, hay 135 ppm; walnut 8 ppm; wheat, grain, postharvest 8 ppm***; malathion and its metabolite, malaoxon [40 CFR 180.111(a) (2)]:*** barley, straw 50 ppm; corn, field, stover 30.0 ppm; cotton, undelinted seed 20.0 ppm; grass, forage 200 ppm; grass, hay 270 ppm; oat, forage 4.0 ppm; oat, straw 50 ppm; rye, forage 4.0 ppm; rye, straw 50 ppm; watercress 0.2 ppm; wheat, forage 4.0 ppm; wheat, straw 5 0 ppm***; residues of malathion [40 CFR 180.111(a) (3)]:*** cattle, fat 4 ppm; cattle, meat (The tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; cattle, meat byproducts (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; egg 0.1 ppm; goat, fat 4 ppm; goat, meat (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; Goat, meat byproducts (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; hog, fat 4 ppm; hog, meat (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; hog, meat byproducts (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; horse, fat 4 ppm; horse, meat (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; horse, meat byproducts (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; milk, fat 0.5 ppm; poultry, fat 4 ppm; poultry, meat (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; Poultry, meat byproducts (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; sheep, fat 4 ppm; sheep, meat (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) 4 ppm; sheep, meat byproducts (the tolerance level shall not be exceeded in any cut of meat or in any meat byproducts from cattle, goat, hog, horse, poultry, or sheep) ***[40 CFR 180.111(a)(4)]:*** may be safely used in accordance with the following conditions: (i) It is incorporated into paper trays in amounts not exceeding 100 milligrams per square foot. (ii) Treated paper trays are intended for use only in the drying of grape (raisins). (iii) Total residues of malathion resulting from drying of grape on treated trays and from application to grape before harvest shall not exceed 12 parts per million on processed ready-to-eat raisins. ***[40 CFR 180.111(a)(5)]:*** Residues of malathion in safflower, refined oil from application to the growing safflower plant shall not exceed 0.6 ppm. ***[40 CFR 180.111(a)(6)]:*** Malathion may be safely used for the control of insects during the drying of grape (raisins) in compliance with paragraph (a)(4) of this section by incorporation into paper trays in amounts not exceeding 100 mg/ft^2. ***[40 CFR 180.111(a)(7)]:*** Malathion may be safely used in feed in accordance with the following conditions. (i) A tolerance of 50 ppm is established for residues of malathion in citrus, dried pulp for cattle feed, when present as the result of the application of the pesticide to bagged citrus pulp during storage. Whether or not tolerances for residues of malathion on the fresh fruit have been established under section 408 of the Act, the total residue of malathion in the citrus, dried pulp shall not exceed 50 ppm. (ii) A tolerance of 10 ppm is established for malathion in nonmedicated cattle feed concentrate blocks resulting from its application as a pesticide to paper used in packaging the nonmedicated cattle feed concentrate blocks.

Human toxicity (long-term)[101]: Very low–100.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.28991 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Suggestive evidence of carcinogenicity, but not sufficient to assess human carcinogenic potential; IARC, Group 3 not classifiable as to its carcinogenicity in humans.

Acute Oral Category: 2, WARNING; Category: 3, CAUTION (depending on formulation and carrier solvent)

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

EPA Acute reference dose (RfD) 0.14 mg/kg/day

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: Xn, Xi; N; risk phrases: R22; R43; R50/53; safety phrases: S2; 24; S37; S46; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: At room temperature, malathion is a yellow to deep brown liquid. Clear and colorless when pure. It is a solid below 2.8 °C. It is often dissolved in a hydrocarbon solvent before use. *Warning properties*: Garlic odor at 13.5 mg/m^3; inadequate warning for acute and chronic exposures. Molecular weight = 330.36; Specific gravity (H_2O:1) =1.2076 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 1.4–2.9 °C; Boiling point = 156–157 °C; Vapor pressure = 8×10^6 mmHg @ 20 °C; Flash point ≥163 °C (may be lower depending on carrier solvent used). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Slightly soluble in water; solubility = 145 ppm @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Reacts violently with alkaline pesticides. Attacks metals including iron, steel, tin plate, lead, copper, and some plastics, coatings, and rubbers.

Permissible Exposure Limits in Air: OSHA PEL: 15 mg/m^3 (*total dust*) TWA[skin]

NIOSH REL: 10 mg/m^3 TWA[skin]

ACGIH TLV®[1]: 1 mg/m^3 TWA measured as inhalable fraction and vapor; [skin]; not classifiable as a human carcinogen; TLV-BEI$_A$ issued as Acetylcholinesterase inhibiting pesticides.

NIOSH IDLH: 250 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: **15**$_A$ mg/m^3

PAC-2: **120**$_A$ mg/m^3

PAC-3: **390**$_A$ mg/m^3

*AEGLs (Acute Emergency Guideline Levels) are in **bold face**. Subscript "**A**" is a 60-minute value.

DFG MAK: 15 mg/m^3 inhalable fraction TWA; Peak Limitation Category II(4); Pregnancy Risk Group D

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.[18]. See also OSHA Method #62[58].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 100 ppb[80]; EPA Health Advisory: 500 μg/L; State Drinking Water Guidelines: Arizona 140 μg/L; Maine 140 μg/L; Florida 140 μg/L; California 160 μg/L. Canadian Drinking Water Standards: MAC 0.19 mg/L.

Determination in Water: Log K_{ow} = >2.5–3.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation of vapor, skin absorption, ingestion and skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Systemic malathion toxicity due to excess cholinergic stimulation may result from all routes of exposure. Symptoms include abdominal cramps, vomiting, diarrhea, pinpoint pupils and blurred vision, excessive sweating, salivation and lacrimation, wheezing, excessive tracheobronchial secretions, agitation, seizures, bradycardia or tachycardia, muscle twitching and weakness, and urinary and fecal incontinence. Seizures are much more common in children than in adults. Death results from loss of consciousness, coma, excessive bronchial secretions, respiratory depression and cardiac irregularity. Commercial malathion products often contain impurities and hydrocarbon solvents, such as xylene or toluene, which themselves can cause toxicity. Toxicity of malathion depends on metabolic activation; thus, symptoms may appear from a few minutes to a few hours after exposure. The effects caused by many short term exposures during a week's time can be accumulated and felt as one intense response. Sometimes effects are not felt until hours or days after exposure. *Inhalation:* No effects were reported from exposures of up to 86 mg/m^3 for 42 days. The only effect reported due to inhalation was the reduction in activity of an important nervous system enzyme. Delayed pulmonary edema may occur following inhalation. *Skin:* Important route of exposure during formulation and usage. Prolonged contact (hours) along with poor hygiene has resulted in irritation, as well as symptoms listed under ingestion. *Eyes:* Direct contact can lead to irritation and discomfort. *Ingestion:* Swallowing of malathion has caused severe poisoning and death. Swallowing of 1-1/2 to 3 ounces of a moisture (50% malathion) has caused severe poisoning with symptoms which include nausea, vomiting, headache, abdominal pain, diarrhea, difficulty in breathing, fall in blood pressure, muscle spasms, paralysis, loss of reflexes, convulsions and coma. Between 3-1/2 and 5 ounces of a mixture (50% malathion) has caused death. LD_{50} (oral, rat) = 1000–>5000 mg/kg; LD_{50} (dermal, rat) = >2000 mg/kg.

Long Term Exposure: May cause tumors. High or repeated exposure may damage the nerves, causing weakness, dizziness, and poor coordination in arms and legs. Repeated exposures may cause personality changes, depression, anxiety or irritability. Persistent weakness and impaired memory have been reported to occur from low-level exposures to some organophosphates in the absence of acute cholinergic effects, but there is no reliable information on adverse health effects of chronic exposure to malathion.(ATSDR) *Carcinogenicity[83]:* The International Agency for Research on Cancer has determined that malathion is unclassifiable as to its carcinogenicity to humans. In animals, malathion induced liver carcinogenicity at doses that were considered excessive. *Reproductive and developmental effects:* Studies have been reported in which malathion induced transient testicular effects in rodents. Results from studies addressing reproductive or developmental effects in humans are inconclusive. Prolonged, daily contact with exposed areas of skin has led to skin irritation and sensitization. May cause genetic changes (mutations). Birth defects have not been observed in humans exposed to malathion, but developmental effects have been seen in the offspring of animals that ingested enough malathion while pregnant to cause health effects in the mother. Animal studies have shown that malathion can be transferred from a pregnant mother to the developing fetus and from a nursing mother to the newborns through the mother's milk. A neurotoxin.

Points of Attack: Eyes, skin, respiratory system, liver, blood cholinesterase, central nervous system, cardiovascular system and gastrointestinal tract.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Erythrocyte cholinesterase levels should be checked as noted above and as described in detail by NIOSH Criteria Document No. 76-205. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >$\mathbf{15}_{\mathbf{A}}$ mg/m^3 Subscript "**A**" is a 60-minute value. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. The premium grade can maintain its biological activity unchanged for approximately 2 years if stored unopened in a cool, shaded, and well-aired place at 20–30 °C. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Decomposes in temperatures >170 °C. Hazardous decomposition includes nitrogen oxides, sulfur oxides and phosphorus oxides. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Maleic hydrazide M:0220

Use Type: Herbicide, Plant growth regulator, Fungicide

CAS Number: 123-33-1

Formula: $C_4H_4N_2O_2$

Synonyms: 1,2-Dihydropyridazine-3,6-dione; 1,2-Dihydro-3,6-pyradazinedione; 1,2-Dihydro-3,6-pyridazinedione; ENT 18,870; Hydrazid hydrazida maleica (Spanish); 6-Hydroxy-3(2*H*)-pyridazinone; KMH; MAH; Maleic acid hydrazide; Maleic hydrazide acid; Maleic hydrazine; Maleic hydrazide fungicide; Mazide; *N,N*-maleoylhydrazine; Malzid; 1,2,3-tetrahydro-3,6-dioxopyridazine; MH

Trade Names: BH DOCK KILLER®; BOS MH®; BURTOLIN®; CHEMFORM®; DE-CUT®; DESPROUT D REXEL-SUPER P®; EC 300®; FAIR 30®; FAIR PLUS®; FAIR PS®; MAINTAIN 3®; MALEIN 30®; MALAZIDE®; MH 30®; MH 40®; MH 36 BAYER®; PO-SAN® (with 9*H*-Fluorene-9-carboxylic acid, 2-chloro-9-hydroxy-, methyl ester)®; REGULOX®; REGULOX W®; REGULOX 50W®; RETARD®; ROYAL MH 30®; ROYAL SLO-GRO®; SLO-GRO®; SPROUT-STOP®; STUNTMAN®; SUCKER-STUFF®; SUPER DE-SPROUT®; SUPER SPROUT STOP®; VONDALDHYDE®; VONDRAX®

Chemical class: Pyridazine; Pyridazinone

EPA/OPP PC Code: 051501

California DPR Chemical Code: 368

HSDB Number: 1162

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: UR5950000

EC Number: 204-619-9

Uses: Banned for use in EU countries[115]. Actively registered for use in the U.S. Maleic hydrazide is a plant growth regulator (sprout inhibitor) and herbicide that is registered for use on tobacco, potatoes, onions, non-bearing citrus, turf, utility and highway rights-of-way, airports, industrial land, lawns, recreational areas, ornamental/shade trees and ornamental plants. Most of the use of maleic hydrazide in the U.S. is on tobacco.

U.S. Maximum Allowable Residue Levels for Maleic Hydrazide [40 CFR 180.175(a)(1)]: in or on the following raw agricultural commodities: onion, dry bulb 15.0 ppm and potato 50.0 ppm. ***[40 CFR 180.175(a)(2)]:*** may be present in potato chips when used in accordance with the following conditions: (i) The food additive is present as a result of the application of a pesticide formulation containing maleic hydrazide to the growing potato plant in accordance with directions registered by the U.S. EPA. (ii) The label of the pesticide formulation containing the food additive conforms to labeling registered by the U.S. EPA. (iii) The food additive is present in an amount not to exceed 160 ppm by weight of the finished food.

Human toxicity (long-term)[101]: Very low–4000.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–19952.62315 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans; IARC: Animal Inadequate Evidence; Human No Adequate Data, *not classifiable as carcinogenic to humans*, Group 3, 1987

Acute Oral Category: 4, Caution

Health Advisory: Mutagen

U.S. EPA Hazardous Waste Number (RCRA No.): U148

CERCLA Reportable Quantity (RQ): 5000 lb (2270 kg)

Description: Maleic hydrazide is a colorless crystalline solid. Odorless. Molecular weight = 112.10; Specific gravity (H_2O:1) = 1.62 @ 25°C; Freezing/Melting point = 292°C (decomposes @ 260°C); also reported at >300°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Highly soluble in water.

Incompatibilities: Contact with flammable material may cause fire and explosions. Contact with combustible or oxidizable materials may form heat-, shock-, and friction-sensitive explosive mixtures. Static electricity may also cause explosions. Keep away from all acids, especially dibasic organic acids, ammonium compounds, antimony sulfide, arsenic trioxide, metal sulfides, powdered metals, calcium aluminum hydride, cyanides, manganese dioxide, phosphorus, selenium, sulfur, thiocyanates, zinc. May be corrosive to brass and its alloys.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 11 mg/m^3
PAC-2: 130 mg/m^3
PAC-3: 750 mg/m^3

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 4000 μg/L; State Drinking Water Guidelines: Maine 3500 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: A lowest-observed-adverse-effect-level (LOAEL) of 500 mg/kg/day has been calculated. On the basis of this, the USEPA has calculated a lifetime health advisory for an adult of 3.5 mg/L. Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/eye contact. Absorbed through the intact skin

Harmful Effects and Symptoms

Short Term Exposure: Irritation of eyes, skin and mucous membranes. Ingestion can cause tremors and muscle spasms. Sin contact may cause sensitization. LD_{50} (oral, rat) = >3500 mg/kg; LD_{50} (dermal, rat) = >4000 mg/kg.

Long Term Exposure: May cause tumors. May cause liver damage and acute central nervous system effects. May cause mutations (genetic changes).

Points of Attack: Central nervous system, liver, skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Liver function tests. Examination by a qualified allergist. Tests of the nervous system. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: *Skin:* Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eyes:* Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20–23 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* If convulsions are not present, give a glass or two of water or milk to dilute the substance. Ensure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >11 mg/m^3. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a refrigerator or a cool, dry place. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with acetone to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Mancozeb M:0235

Use Type: Fungicide

CAS Number: 8018-01-7

Formula: $C_4H_6MnN_2S_4 \cdot C_4H_6N_2S_4Zn$

Synonyms: Carbamodithioic acid, 1,2-ethanediylbis-, manganous zinc salt; Ethylenebis(dithiocarbamic acid manganese zinc complex (8CI); Maneb-zinc; Manganese ethylene-bis(dithiocarbamate)(polymeric) complex with zinc salt; Zinc ion and manganese ethylenebisdithiocarbamate 80%; A coordination product of manganese 16%, zinc 2%, and ethylenebisdithiocarbamate 62%

Trade Names: ACROBAT® (mancozeb+dimethomorph); ASHLAND SOLACE® (cymoxanil+mancozeb); CARMAZINE®; CUPROFIX®; DITHANE®; EMCARB® (mancozeb+carbendez); EMTHANE M-15®; EVOLVE®; F 2966®; FORE®; FORMEC®; GAUCHO® (imidacloprid+mancozeb); GAVEL® (mancozeb+zoxamide); GREEN-DAISEN M®; KARAMATE®; KENCOZEB®; MANCOFOL®; MANOSEB®; MANTOX®; MANZATE 200®; MANZEB®; MANZIN 80®; MARZIN®; MAXIM®; MILOR®; NEMISPOR®; PACE® fungicide (mixture of mancozeb and metalaxyl); PENNCOZEB®; POLICAR®; TRIZIMAN®; TRIZIMAN-D®; VONDOZEB PLUS®; ZIMANAT®; ZIMMAN-DITHANE®; ZIMANEB®

Chemical class: Dithiocarbamate

EPA/OPP PC Code: 014504

California DPR Chemical Code: 211

HSDB Number: 6792

UN/NA & ERG Number: UN2771(solid)/151; UN3077 (solid)/171

RTECS® Number: ZB3200000

EC Number: [*Annex I Index No.:* 006-076-00-1]

Uses: Mancozeb is used to control a wide variety of fungal diseases, including potato blight, leaf spot, scab (on apples and pears), and rust (on roses). It is used on fruits, vegetables, nuts and field crops, and many more. It is also used as a seed treatment of cotton, potatoes, corn, safflower, sorghum, peanuts, tomatoes, flax, and cereal grains.

U.S. Maximum Allowable Residue Levels for Mancozeb (40 CFR 180.176): apples 7 ppm; asparagus 0.1 ppm; banana 4 ppm; banana, pulp 0.5 ppm; barley, grain 5 ppm; barley, milled fractions 20 ppm; barley, straw 25 ppm; beet, sugar 2 ppm; beet, sugar, tops 65 ppm; carrots 2 ppm; celery 5 ppm; corn, fodder 5 ppm; corn, forage 5 ppm; corn, grain, except popcorn 0.1 ppm; corn, fresh, including sweet ppm; corn, kernels plus cob with ppm; husk removed 0.5 ppm; corn, pop, grain 0.5 ppm; cotton, undelinted seed 0.5 ppm; crabapples 10 ppm; cranberry 7 ppm; cucumber 4 ppm; fennel 10 ppm; grape 7 ppm; kidney 0.5 ppm; liver 0.5 ppm; melon 4 ppm; oat, bran 20 ppm; oat, grain 5 ppm; oat, milled fractions 20 ppm; oat, straw 25 ppm; onion, dry bulb 0.5 ppm; papaya 10 ppm; peanut 0.5 ppm; peanut, hay 65 ppm; pear 10 ppm; potato 1 ppm; quince 10 ppm; rye, grain 5 ppm; rye, milled fractions 20 ppm; rye, straw 25 ppm; tomato 4 ppm; wheat, grain 5 ppm; wheat, milled byproducts 20 ppm; wheat, straw 25 ppm.

Human toxicity (long-term)[101]***:*** High–5.82363 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]***:*** High–3.16731 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, probable human carcinogen

California Proposition 65 Chemical: Carcinogen (1/1/1990)
Acute Oral Category: 4, Caution, not acutely toxic
Health Advisory: Mutagen, Developmental/Reproductive Toxin (TRI); Endocrine disruptor (probable)
AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as manganese or zinc compounds
The "Director's List" (CAL/OSHA) as manganese or zinc compounds
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as manganese compounds
EPCRA Section 313: Form R *de minimis* concentration reporting level: 1.0% as manganese compounds
Clean Water Act: Section 307 Toxic Pollutants as zinc compounds
Safe Drinking Water Act: SMCL, 0.05 mg/L as manganese
Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R43; R50; R63; safety phrases: S2; S36/37, S46; S61 (see Appendix 1)

Description: Grayish-yellow powder. Molecular weight = 266.31; Specific gravity (H_2O:1) = 1.99; Boiling point = (decomposes); Freezing/Melting point = (decomposes). Vapor pressure = very low/negligible. Flash point = >135 °C. Low solubility in water.

Incompatibilities: Combustible material. Dust may form explosive mixture in air. Decomposes in temperatures above 170 °C. Keep away from water, acid, oxidizing materials. Heat, or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide gases. Flammable gases are also generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Corrosive to iron, copper brass and zinc metals, especially in the presence of moisture. Contact with lime, moisture can cause decomposition. Decomposes on prolonged storage. Degradation produces ethylene thiourea.

Permissible Exposure Limits in Air: ACGIH(1) TLV 0.2 mg/m^3 as manganese; OSHA(2) PEL ceiling limit 5 mg/m^3 as manganese; NIOSH(2) 1 mg/m^3 as manganese.

Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 3 mg/m^3
PAC-2: 2 mg/m^3
PAC-3: 990 mg/m^3

Determination in Air: *Manganese:* Use NIOSH Analytical Method, Elements by ICP, #7300; #7301; #7303; #9102; Elements in blood or tissue, #8005; Metals in urine, #8310; OSHA Analytical Method, ID-125G or ID.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 6 ppb[14]. State Drinking Water Guidelines: Arizona 21 μg/L; Maine 6 μg/L. Canadian Drinking Water Standards: AO $\leq$ 5.0 mg[Zn]/L.

Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = <1.5. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity but may be a thyroid toxin. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause tumors. May cause thyroid problems. A reproductive toxin (may enlarge ovarian cells). Skin sensitizer.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >3 mg/m^3. NIOSH: *At any detectable concentration*: SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Thiocarbamate and dithiocarbamate pesticides, solid, toxic require a label of "poisonous materials." They usually fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and sulfur. Combustible. Extinguish fire using an agent suitable for type of surrounding fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. A potential candidate for liquid injection incineration at a temperature range of 650 to 1,600°C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1,600°C and residence times of seconds for liquids and gases, and hours for solids[83]. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Maneb M:0240

Use Type: Fungicide

CAS Number: 12427-38-2

Formula: $C_4H_6MnN_2S_4$

Synonyms: Carbamic acid, ethylenebis(dithio-), manganese salt; Carbamodithioic acid, 1,2-ethanediylbis-, manganese salt; EBDC; ENT 14,875; 1,2-Ethanediylbis (carbamodithioato)(2-)-manganese; 1,2-Ethanediylbiscarbamodithioic acid, manganese complex; 1,2-Ethanediylbiscarbamodithioic acid, manganese(2+) salt(1:1); 1,2-Ethanediylbismaneb, manganese (2+) salt (1:1); Ethylenebisdithiocarbamate manganese; Ethylenebis(dithiocarbamato), manganese;

Ethylenebis(dithiocarbamic acid), manganese salt; Ethylenebis(dithiocarbamic acid) manganous salt; 1,2-Ethylenediylbis(carbamodithioato)manganese; Manganese ethylene-1,2-bisdithiocarbamate; Manganese(II) ethylene di(dithiocarbamate); Manganous ethylenebis(dithiocarbamate); MEB; MNEBD

Trade Names: (The U.S. EPA lists more than 460 active and/or canceled products containing maneb) AAMANGAN®; AKZO CHEMIE MANEB®; BASF-MANEB SPRITZPULVER®; BAVISTIN M®; COSMIC®; CHEM NEB®; CHLOROBLE M®; CLEANACRES®; CR 3029®; DELSENE M FLOWABLE®; DITHANE-22®; F 10®; FARMANEB®; IDA MANEB®; KASCADE®; KYPMAN 80®; LONOCOL M®; MANAM®; MANEB 80®; MANEBA®; MANEBE®; MANEBGAN®; MANESAN®; MANESAN®; MANEX®; MANOC®; MANZATE®; MANZATE D®; MANZATE MANEB FUNGICIDE®; MANZEB®; MANZI®; M-DIPHAR®; MULTI-W®; NEREB®; NESPOR®; NEWSPOR®; PLANTIFOG 160M®; POLYRAM M®; REMASAN CHLOROBLE M®; RHODIANEHE®; SOPRANEBE®; SQUADRON AND QUADRANGLE MANEX®; SUPERMAN MANEB F®; SUP'R FLO®; TERSAN-LSR®; TRIMANGOL®; TRIMANOC®; TRITHAC®; TUBOTHANE®; UNICROP MANEB®; VANCIDE®; VANCIDE MANEB 80®; VASSGRO MANEX®; VITAVAX® Maneb

Chemical class: Dithiocarbamate

EPA/OPP PC Code: 014505

California DPR Chemical Code: 369

HSDB Number: 4063

UN/NA & ERG Number: UN2210 (Maneb preparation, with not <60% maneb)/135; UN2968 (Maneb, stabilized against self-heating)/135

RTECS® Number: OP0700000

EC Number: 235-654-8 [*Annex I Index No.:* 006-077-00-7]

Uses: Maneb is an ethylene(bis)dithiocarbamate fungicide used in the control of early and late blights on potatoes and tomatoes and many other diseases of fruits, vegetables, field crops, and ornamentals. Maneb controls a wider range of diseases than other fungicides. It is available as granular, wettable powder, flowable concentrate, and ready-to-use formulations. Maneb is widely used by itself and in combination with other pesticides on a variety of crops. Principal uses in California are for head and leaf lettuce, walnuts, almonds, onions, potatoes and broccoli.

U.S. Maximum Allowable Residue Levels for Maneb [40 CFR 180.110 (a)]: almond 0.1 ppm; apple 2 ppm; apricot 10 ppm; banana 4 ppm; banana, pulp 0.5 ppm; bean, dry 7 ppm; bean, succulent 10 ppm; beet, sugar, tops 45 ppm; broccoli 10 ppm; Brussels sprouts 10 ppm; cabbage 10 ppm; cabbage, chinese, bok choy 10 ppm; carrot, roots 7 ppm; cauliflower 10 ppm; celery 5 ppm; collards 10 ppm; corn, sweet, kernel plus ppm; cob with husks removed 5 ppm; cranberry 7 ppm; cucumber 4 ppm; eggplant 7 ppm; endive 10 ppm; fig 7 ppm; grape 7 ppm; kale 10 ppm; kohlrabi 10 ppm; lettuce 10 ppm; melon 4 ppm; mustard greens 10 ppm; nectarine 10 ppm; onion 7 ppm; papaya 10 ppm; peach 10 ppm; pepper 7 ppm; potato 0.1 ppm; pumpkin 7 ppm; squash, summer 4 ppm; squash, winter 4 ppm; tomato 4 ppm; turnip, greens 10 ppm; turnip, roots 7 ppm; walnut 0.05 ppm.

Human toxicity (long-term)[101]: High–5.73770 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Extra high–0.00193 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, probable human carcinogen.

California Proposition 65 Chemical: Cancer (1/1/1990)

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!), Increased Thyroid Weight

Acute Oral Category: 3, CAUTION

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Safe Drinking Water Act: SMCL, 0.05 mg/L as manganese

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R20; R36; R43; R63; R50/53; safety phrases: S2; S36/37; S46; S60; S61 (see Appendix 1)

Description: Maneb is a yellow powder or crystalline solid. Faint odor. Molecular weight = 265.30; Specific gravity (H_2O:1) = 1.97 @ 25 °C; Boiling point = (decomposes); Freezing/Melting point = (decomposes) <195 °C; Vapor pressure = 7.5×10^{8} mmHg @ 25 °C[83,USDA]. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 3, Reactivity 1. Moderately soluble in water. This material is spontaneously combustible and can be dangerous when wet.

Incompatibilities: Combustible material. Contact with air or water may generate heat spontaneously; heat may be sufficient to ignite the material. Decomposes in temperatures >195 °C. Dust may form explosive mixture in air. Water, acid, oxidizing materials. Heat, or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide. Flammable gases are generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Decomposition products in fire include oxides of nitrogen and sulfur. Corrosive to iron, copper brass and zinc metals, especially in the presence of moisture. Heat alkalies (lime), moisture can cause decomposition. Decomposes on prolonged storage. Degradation produces ethylene thiourea.

Permissible Exposure Limits in Air: OSHA PEL: 5 mg[Mn]/m^3 Ceiling Concentration

NIOSH REL: 1 mg[Mn]/m^3 TWA; 3 mg[Mn]/m^3 STEL

ACGIH TLV: 5 mg[Mn]/m^3 TWA

DFG MAK: Danger of skin sensitization.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 6 ppb[14]. State Drinking Water Guidelines: Arizona 35 μg/L; Maine 6 μg/L; Florida 75 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = 0.62[83]. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, eye and/or dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Maneb irritates the eyes, skin, and respiratory tract. Maneb is low in acute toxicity and does not present alarming properties during long-term administration to experimental animals, except at very high dosages. However, it is a material of concern because of evidence of mutagenic and teratogenic effects as well as the possibility of nitrosation to carcinogenic nitrosamines. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. LD_{50} (oral, rat) = 3 g/kg; LD_{50} (dermal, rat) = >5 g/kg[9].

Long Term Exposure: May cause tumors. Repeated dermal contact can cause skin sensitization and rash. High or repeated exposures may interfere with thyroid function (causing goiter), damage the central nervous system, affect liver function, or cause kidney damage. May cause reproductive and fetal effects.

Points of Attack: Skin, thyroid, liver, kidneys, central nervous system, reproductive system. Reproductive cells.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. If symptoms develop or overexposure is suspected, the following may be useful: Exam of the nervous system. Thyroid function tests. Consider kidney and liver function tests with higher or repeated exposures. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposure to maneb, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code (liquid)-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with this chemical you should be trained on its proper handling and storage. Maneb must be stored to avoid contact with water, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from acids, moisture, heat, and oxidizing materials. Where possible, automatically transfer material from drums or other storage containers to process containers. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Maneb or maneb preparations with not <60 % maneb require labels of 4.2–Spontaneously combustible material & 4.3 Dangerous when wet. Maneb falls in Hazard Class 4.2.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Use HEPA vacuum or wet method to reduce dust during clean up . Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. Keep maneb out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: *Highly flammable and dangerous when wet.* Hazardous decomposition includes nitrogen oxides, hydrogen sulfide; sulfur oxides, and carbon disulfide. Use dry chemical, soda ash; *dry* sand, or lime extinguishers. *Do not use water or* foam. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Maneb is unstable to moisture and is hydrolyzed by acids and hot water. It decomposes at about 100 °C but may spontaneously decompose vigorously when stored in bulk. Incineration is the preferred disposal means. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chemical class: Chlorophenoxy; Phenoxyacetic acid; Aryloxyalkanoic

EPA/OPP PC Code: 030501; 431500 (-thioethyl)

California DPR Chemical Code: 2326

HSDB Number: 1127

UN/NA & ERG Number: UN3345 (solid)/153; UN3348 (liquid)/153

RTECS® Number: AG1575000

EC Number: 202-360-6 [*Annex I Index No.:* 607-051-00-3]

Uses: A U.S. EPA restricted Use Pesticide (RUP) as MCPA, sodium salt. MCPA is a systemic post-emergence phenoxy herbicide used to control broadleaf annual and perennial weeds (including thistle and dock) in cereals, flax, rice, vines, peas, potatoes, grasslands, forestry applications, and on rights-of-way. It is very compatible with many other compounds and may be used in formulation with many other products, including bentazone, bromoxynil, 2,4-D, dicamba, fenoxaprop, MCPB, mecoprop, thifensulfuron, and tribenuron.

U.S. Maximum Allowable Residue Levels for Tolerances are established for residues of the herbicide 2-methyl-4-chlorophenoxyacetic acid from application of the herbicide in the acid form or in the form of its sodium, ethanolamine, diethanolamine, triethanolamine, isopropanolamine, diisopropanolamine, triisopropanolamine, or dimethylamine salts or its isooctyl or butoxyethyl esters [40 CFR 180.339(a)]: in or on raw agricultural commodities as follows: alfalfa 0.1 ppm; alfalfa, hay 0.1 ppm; barley, grain 0.1 ppm (N); barley straw 2 ppm; clovers 0.1 ppm; clover, hay 0.1 ppm; flax, straw 2 ppm; flaxseed 0.1 ppm (N); grasses, pasture 300 ppm; grasses, rangeland 300 ppm; grass, canary, annual seed 0.1 ppm; grass, canary, annual, straw 0.1 ppm; grass, hay 20 ppm; lespedeza 0.1 ppm; lespedeza, hay 0.1 ppm; oats, forage 20 ppm; oats, grain 0.1 ppm; oats, straw 2 ppm; peas 0.1 ppm (N); peavines 0.1 ppm (N); peavines, hay 0.1 ppm (N); rice, grain 0.1 ppm (N); rice, straw 2 ppm; rye, forage 20 ppm; rye, grain 0.1 ppm (N); rye, straw 2 ppm; sorghum, fodder 20 ppm; sorghum, forage 20 ppm; sorghum, grain 0.1 ppm; trefoils 0.1 ppm; trefoil, hay 0.1 ppm; vegetables, seed and pod 0.1 ppm; vetches 0.1 ppm; vetch, hay 0.1 ppm; wheat, forage 20 ppm; wheat, grain 0.1 ppm (N); wheat, straw 2 ppm. *For combined negligible residues (***N***) of the herbicide 2-methyl-4-chlorophenoxyacetic acid and its metabolite 2-methyl-4-chlorophenol* ***[40 CFR 180.339(b)]:*** in or on the following raw agicultural commodities: cattle, fat 0.1 ppm (N); cattle, meat byproducts 0.1 ppm (N); cattle, meat 0.1 ppm (N); goats, fat 0.1 ppm (N); goats, meat byproducts 0.1 ppm (N); goats, meat 0.1 ppm (N); hogs, fat 0.1 ppm (N); hogs, meat byproducts 0.1 ppm (N); hogs, meat 0.1 ppm (N); horses, fat 0.1 ppm (N); horses, meat byproducts 0.1 ppm (N); horses, meat 0.1 ppm (N); milk 0.1 ppm (N); sheep, fat 0.1 ppm (N); sheep, meat byproducts 0.1 ppm (N); and sheep, meat 0.1 ppm (N). (N) = negligible amount of residue.

Human toxicity (long-term)[101]: High–4.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–17986.45312 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans.

Acute Oral Category: 2, WARNING

Health Advisory: Mutagen, Developmental/Reproductive Toxin (S!), Skin irritant/sensitizer.

EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides

European/International Regulations: Hazard Symbol: Xi; Xn; risk phrases: R22; R38/R41; R50/53; safety phrases: S2; S26; S37; S39; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: MCPA is a white to tan crystalline solid. Available commercially in various forms including emulsifiable concentrates and as amines, salts, and esters. Molecular weight = 200.63; Specific gravity (H_2O:1) = 1.41; 1.56; Boiling point = (decomposes); Freezing/Melting point = 118–119 °C; Vapor pressure = 1.5×10^6 mmHg @ 20 °C; 200 mmHg @ 21 °C. The acid is very slightly soluble in water; solubility = 725 ppm. Solubility of the salt and amine are high. An Arizona State University data base (Aquasol) lists solubility at 630 mg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: A weak acid. Incompatible with alkalies. Decomposes in temperatures above 290 °C. The ester reacts with acids to liberate heat along with alcohols and acids. Strong oxidizing acids may cause a vigorous reaction that is sufficiently exothermic to ignite the reaction products. Heat is also generated by the interaction of esters with caustic solutions. Flammable hydrogen is generated by mixing esters with alkali metals and hydrides.

Permissible Exposure Limits in Air: No standards set. Poland: MAC (TWA) 1 mg/m^3, MAC (STEL) 3 mg/m^3, 1999.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 4 ppb[93]; EPA Health Advisory 30 μg/L; State Drinking Water Guidelines: Minnesota 3 μg/L; Maine 4 μg/L; Florida 1000 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = 2.6. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Can cause nausea, vomiting, diarrhea and abdominal pain. The approximate lethal dose to a 150 lb man is 3.3 tablespoonfuls. LD_{50} (oral, human) = 800 mg/kg; LD_{50} (dermal, rat) = >1 g/kg.

Long Term Exposure: May cause tumors. Animal tests show that this substance possibly causes toxic effects upon human reproduction. May cause hypotension; decreased blood pressure. May be a neurotoxin and a skin sensitizer.

Points of Attack: Central nervous system. Liver and kidneys and central nervous system. Reproductive cells.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Monitor blood pressure. Liver function tests. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenoxyacetic acid derivative pesticide, solid or liquid, toxic require a shipping label of "poisonous materials" and fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Also, can be precipitated with divalent cations. Carbon or peat can be used as sorbents.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of nitrogen and carbon. Solid material not combustible. Liquid formulations containing organic solvents may be flammable. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration with added flammable solvent; incinerator equipped with fume scrubber. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chemical class: Chlorophenoxy; Aryloxyalkanoic acid; Phenoxybutyric

EPA/OPP PC Code: 019201

California DPR Chemical Code: 5055

HSDB Number: 1737

UN/NA&ERG Number: UN3345 (solid)/153; UN3348 (liquid)/153

RTECS® Number: ES8575000

EC Number: 202-365-3 [*Annex I Index No.:*607-053-00-4]

Uses: A metabolite of MCPA (see above). MCPB is a phenoxy herbicide produced as a sodium salt and an acid. Herbicide registered for use on peas prior to flowering. There are no residential uses of MCBP. Target organisms: post-emergence control of Canadian thistle, buttercup, mustard, purslane, ragweed, common lambsquarters, pigweed, smartweed, sowthistle, morning glory and other broad leaf weeds[83].

U.S. Maximum Allowable Residue Levels for MCPA [40 CFR 180.318]: pea (green and dry) 0.1 (N) ppm. (N) = negligible amount of residue.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans

Health Advisory: Nerve Toxin (?), Mutagen (S!)

Acute Oral Category: 3, CAUTION

European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: White crystalline solid; Commercial product is available as an emulsifiable concentrate. Molecular weight = 228.68; Specific gravity (H_2O:1) = 1.23 @ 25 °C; Boiling point = >350 °C; Freezing/Melting point = 98–100 °C; Vapor pressure = 4×10^7 mmHg @ 20 °C; Flash point = 192 °C. Solubile in water; solubility = >40 mg/L.

Incompatibilities: Strong oxidizers.

Determination in Water: Log K_{ow} = <2. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Dermal, eyes, ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. May cause eye pain and is capable of causing irreversible eye damage. LD_{50} (oral, rat) = <1000[9]–4000 mg/kg[83]; (dermal, rat) > 2 g/kg[83].

Long Term Exposure: May cause reproductive and fetal effects.

Points of Attack: Eyes. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Monitor blood pressure. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenoxyacetic acid derivative pesticides, solid or liquid, toxic, require a shipping label of "poisonous materials" and fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Also, can be precipitated with divalent cations. Carbon or peat can be used as sorbents.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of nitrogen and carbon. Solid material not combustible. Liquid formulations containing organic solvents may be flammable. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers.If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration with added flammable solvent; incinerator equipped with fume scrubber. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

(MCPP) Mecoprop M:0295

Use Type: Herbicide

CAS Number: 93-65-2; 7085-19-0 (EPA and state of California, primary usage); 16484-77-8 (mecoprop-P)

Formula: $C_{10}H_{11}ClO_3$

Synonyms: 4-Chloro-2-methylphenoxy-α-propionic acid; 2-(4-Chloro-2-methylphenoxy)propanoic acid; (+)-α-(4-Chloro-2-methylphenoxy) propionic acid; (4-Chloro-2-methylphenoxy)propionic acid; 2-(4-Chloro-2-methylphenoxy)propionic acid; α-(4-Chloro-2-methylphenoxy)propionic acid; 2-(4-Chlorophenoxy-2-methyl) propionic acid; 2-(4-Chloro-*o*-tolyl)oxylpropionic acid; 2-(*p*-chloro-*o*-tolyloxy)propionic acid; CMPP; 2 M-4CP; MCPP; 2-MCPP; MCPP; MCPP 2,4-D; MCPP-D-4; MCPP K-4; 2-Methyl-4-chlorophenoxy-α-propionic acid; 2-(2-Ethyl-4-chlorophenoxy)propanoic acid; α(2-Methyl-4-chlorophenoxy)propionic acid; 2-(2'-Methyl-4'-chlorophenoxy)propionic acid; 2M4KHP; NSC 60282; Propanoic acid, 2-(4-chloro-2-methylphenoxy)-; Propionic acid, 2-(4-chloro-2-methylphenoxy); Propionic acid, 2-[(4-chloro-*o*-tolyl)oxy]-; Propionic acid, 2-(2-methyl-4-chlorophenoxy)-

Trade Names: ASSASSIN®; BANVEL P®; BH MECOPROP®; CERIDOR®; CHIPCO®; CHIPCO TURF HERBICIDE MCPP®; CLEAVAL®; CLENECORN®; CLOVOTOX®; COMPITOX EXTRA®; CORNOX PLUS®; CR 205®; CRUSADER®; DOCKLENE®; EXP 419®; GRASLAM®; HARNESS®; HARRIER®; HEDONAL MCPP®; HERRISOL®; HYMEC®; IOTOX®; ISO-CORNOX®; KILPROP®; LIRANOX®; MECOBROM®; MECOMIN D®; MECOPEOP®; MECOPAR®; MECOPEX®; MECOTURF®; MEPRO®; MECHLORPROP®; MECOPROP®; MYLONE®; MUSKETEET®; POST-KITE®; PROPAL®; PROPONEX-PLUS®; RANKOTEX®; RD 4593®; RUNCATEX®; SELOXONE®; SCOTLENE®; SEL-OXONE®; SUPER GREEN AND WEED®; SUPOERTOX®; SWIPE 560 EC®; TARGET®; TERSET®; TETRALEN-PLUS®; TRIESTER II®; TRIMEC 1144 40% SP®; TRIPLET®; U 46®; U 46 KV-ESTER®; VERDONE®; VI-PAR®; VI-PEX®; VIPEX®

Chemical class: Chlorophenoxy; Aryloxyalkanoic acid

EPA/OPP PC Code: 031501. Not assigned for (-p)

California DPR Chemical Code: 374

HSDB Number: 1738

UN/NA & ERG Number: UN3345 (solid)/153; UN3348 (liquid)/153

RTECS® Number: UE9750000

EC Number: 202-264-4 [*Annex I Index No.:* 607-049-00-2]

Uses: A General Use Pesticide, postemergent herbicide, most often used in combination with other pesticides. Most of the production is used on turf, including lawns, sport turf and commercial sod production for control of creeping broadleaf weeds such as clovers, chickweed, ivy, plantain and similar plants. It is also used on wheat, barley and oats. A small percentage is used in noncrop areas such as rights-of-way, drainage ditch banks and forest site preparation.

Human toxicity (long-term)[101]: High–7.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–25458.68925 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: IARC: Group 2b, Possible human carcinogen

Acute Oral Category: 2, WARNING

Health Advisory: Mutagen, Developmental/Reproductive Toxin (S!)

AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides

EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk Phrases: R22; R38; R41; R50/53; safety phrases: S2; S13; S26; S37/39; S60; S61 (see Appendix 1)

Description: Mecoprop is a white to tan crystalline solid. Odorless. Molecular weight = 214.64; Freezing/Melting point = 9395 °C; Vapor pressure = 1.2×10^{5} mmHg @ 20 °C. Henry's Law constant = 3.8×10^{9} atm-m^3/mol @ 25 °C (est)[83]. Highly soluble in water; solubility = >2000 ppm @ 20 °C.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Incompatibilities: A weak acid. Incompatible with strong bases and oxidizers.

Routes of Entry: Inhalation, dermal absorption.

Harmful Effects and Symptoms

Short Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Contact irritates the eyes and skin. Irritates the respiratory tract. Exposure can cause headache, weakness, convulsions, muscle cramps, loss of coordination, unconsciousness, and death. Moderately toxic: probable oral lethal dose (human) 0.5–5 g/kg, between 1 oz and 1 pint (or 1 lb) for a 70 kg person (150 lb)[83]. LD_{50} (oral, rat) = 650 to >1000 mg/kg; LD_{50} (dermal, rat) = 700 mg/kg.

Long Term Exposure: May cause tumors. May cause cancer. May affect human reproduction. Exposure may damage blood cells, causing anemia, and damage to the kidneys. May be a neurotoxin and a skin sensitizer.

Points of Attack: Blood, kidney, skin, central nervous system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Examination of the nervous system. Complete blood count. Kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is a potential for overexposure: SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers and strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenoxyacetic acid derivative pesticides, solid or liquid, toxic, require a shipping label of "poisonous materials" and fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes phosgene, hydrogen chloride, and carbon monoxide. Mecoprop is a noncombustible solid. Use dry chemical, carbon dioxide; alcohol or polymer foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA

1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Mefluidide M:0307

Use Type: Herbicide; plant growth regulator

CAS Number: 53780-34-0

Formula: $C_{11}H_{13}F_3N_2O_3S$

Synonyms: Acetamide, *N*-(2,4-dimethyl-5-[((trifluoromethyl)sulfonyl)amimo)phenyl]-; 5-Acetamido-2,4-dimethyltrifluoromethanesulfonanilide; *N*-[(2,4-Dimethyl-5-((trifluoromethyl)sulfonyl)amino) phenyl] acetamide; 2',4'-Dimethyl-5-[(trifluoromethyl) sulfonamido] acetanilide

Trade Names: EMmHgK®; MBR 12325®; MBR 12325®; METHAFLUORIDAMID®; S 15733®; VEL 3973®; VISTAR® Herbicide

Chemical class: Anilide

EPA/OPP PC Code: 114001; 114002 (diethanolamine salt); 114003 (potassium salt)

California DPR Chemical Code: 5082

HSDB Number: 6698

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: AE2460000

EC Number: 258-767-4

Uses: Not approved for use in EU countries[115]. Mefluidide is used to control ornamental and non-ornamental woody plants, ground cover, hedges, trees, turfgrass and broadleaf weeds. Both the diethanolamine and potassium salts are actively used in the U.S.

Human toxicity (long-term)[101]: Very low–2100.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–19076.48500 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information

Acute Oral Category: 3, CAUTION

This product is considered hazardous under the criteria of the Federal OSHA Hazard Communication Standard 29 CFR 1910.1200.

SARA Title III, Section 311/312 Hazard Category: Immediate Health Hazard

Description: White crystalline solid. Some formulations are a dark brown liquid. Molecular weight = 310.29; Freezing/Melting point = 184 °C. Vapor pressure = 2.40×10^{8} mmHg @ 25 °C (est)[83]; Henry's Law constant = 1.28×10^{11} atm-m^3/mol @ 25 °C (est)[83]; Flash point = >212 °C. Slightly soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Eyes; dermal contact, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause eye, skin, and respiratory tract irritation. May be absorbed through the unbroken skin. Harmful if swallowed, with gastrointestinal irritation. LD_{50} (oral, rat) = >3.5 g/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Bones.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur and carbon and hydrogen fluoride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Mepiquat chloride M:0336

Use Type: Herbicide, Plant growth regulator

CAS Number: 24307-26-4

Formula: $C_7H_{16}ClN$

Synonyms: *N,N*-Dimethylpiperidinium chloride; 1,1-Dimethylpiperidinium chloride; *N,N*-Dimethylpiperidium chloride; 1,1-Dimethylpiperidin-1-ium chloride

Trade Names: BAS 083 01W®; BAS 85559X®; MEPEX®; MEPICHLOR®; MEPPLUS®; PIX®; PONNAX®; ROQUAT®; TERPAL® (with Ethephon)

Chemical Class: Quarternary ammonium salt

EPA/OPP PC Code: 109101

California DPR Chemical Code: 2075

HSDB Number: 7059

UN/NA & ERG Number: Not a regulated material.

RTECS® Number: TN4939200

EC Number: 246-247-6 [*Annex I Index No.:* 613-127-00-7]

Uses: Registered solely for cotton, to control the growth and yield.

U.S. Maximum Allowable Residue Levels for Mepiquat Chloride [40 CFR 180.384 (a)(1)]: in or on the following commodities: cattle, meat byproducts 0.1 ppm; cotton, gin byproducts 6.0 ppm; cottonseed 2.0 ppm; goat, meat byproducts 0.1 ppm; hog, meat byproducts 0.1 ppm; horse, meat byproducts 0.1 ppm; sheep, meat byproducts 0.1 ppm. ***[40 CFR 180.384 (a)(2)]:*** in or on the following commodities: cattle, fat 0.1 ppm; cattle, meat 0.1 ppm; goat, fat 0.1 ppm; goat, meat 0.1 ppm; grape 1.0 ppm; hog, fat 0.1 ppm; hog, meat 0.1 ppm; horse, fat 0.1 ppm; horse, meat 0.1 ppm; rasisins 5.0 ppm; sheep, fat 0.1 ppm; sheep, meat 0.1 ppm.

Human toxicity (long-term)[101]: Very low–4200.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–100000.00 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans.

Acute Oral Category: 2, WARNING

European/International Regulations: Hazard Symbol: Xn; risk phrases: R22; R52/53; safety phrases: S2; S61 (see Appendix 1)

Description: White crystalline solid, off-white powder, or pinkish liquid. Slightly sweet, musty odor; Molecular weight = 149.63; Specific gravity (H_2O:1) = 1.17; Boiling point = (decomposes) >100 °C; Freezing/Melting point = >300 °C with discoloration ~ 296 °C[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Highly soluble in water; solubility = 52.9 g/100 ml[83].

Incompatibilities: Decomposes in temperatures above 320 °C.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <– 3. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: This material may cause irritation to the skin, eyes, and respiratory tract. LD_{50} (oral, rat) = <500 mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, acids, water, or combustible materials.

Shipping: Not a regulated material.

Spill Handling: Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon and hydrogen chloride gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Noncombustible containers should be compacted and buried under more than 16 inches/40 cm. of soil[83]. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Metalaxyl M:0475

Use Type: Fungicide

CAS Number: 57837-19-1; 70630-17-0 (M-)

Formula: $C_{15}H_{21}NO_4$

Synonyms: *dl*-Alanine, *N*-(2,6-dimethylphenyl)-*N*-(methoxyacetyl)-, methyl ester; *N*-(2,6-Dimethylphenyl)-*N*-(methoxyacetyl)alanine, methyl ester; *N*-(2,6-Dimethylphenyl)-*N*-(methoxyacetyl)-*dl*-alanine methyl ester

Trade Names: AGROX® PREMIERE; ALLEGIENCE®; APRON®; CG 117®; CGA-48988®; CHLORAXYL®; COTGUARD®; EPERON®; DELTA-COAT; FOLIO® GOLD; GAUCHO®; KODIAK®; METALAXIL®; METAXANIN®; PACE®; PREVAIL®; RAXIL® (tebuconazole+metalaxyl); RIDOMIL® GOLD/BRAVO®; RIDOMIL®; RIDOMIL 2E®; SUBDUE®

Chemical class: Phenylamide

EPA/OPP PC Code: 113501

California DPR Chemical Code: 2132

HSDB Number: 7061

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: AY691000

EC Number: 260-979-7 [*Annex I Index No.:* 607-425-00-6]

Uses: Metalaxyl is used as a systemic fungicide on a variety of food and non-food crops including tobacco, turf and conifers, and ornamentals. Used in combination with fungicides of different mode of action as a foliar spray on tropical and subtropical crops; as a seed treatment to control downy mildew; and as a soil fumigant to control soilborne pathogens.

U.S. Maximum Allowable Residue Levels for Metalaxyl [40 CFR 180.408 (a)]: Tolerances are established for the combined residues of the fungicide metalaxyl (*N*-(2,6-dimethylphenyl)-*N*-(methoxyacetyl)alanine methylester) and its metabolites containing the 2,6-dimethylaniline moiety, and *N*-(2-hydroxymethyl-6-methylphenyl)-*N*-(methoxyacetyl)-alanine methyl ester, each expressed as metalaxyl equivalents, in or on the following food commodities: alfalfa, forge 6.0 ppm; alfalfa, hay 20.0 ppm; almond 0.5 ppm; almond, hulls 10.0 ppm; apple 0.2 ppm; apple, wet pomace 0.4 ppm; apricot, dried 4.0 ppm; asparagus 7.0 ppm; avocado 4.0 ppm; beet 0.1 ppm; beet, sugar 0.1 ppm; beet, sugar, molasses 1.0 ppm; beet, sugar, roots 0.5 ppm; beet, sugar, tops 10.0 ppm; beet, tops 0.1 ppm; blueberry 2.0 ppm; broccoli 2.0 ppm; Brussels sprouts 2.0 ppm; cabbage 1.0 ppm; cattle, fat 0.4 ppm; cattle, kidney 0.4 ppm; cattle, liver 0.4 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts, except kidney and liver 0.05 ppm; cauliflower 1.0 ppm; citrus, oil 7.0 ppm; citrus, pulp 7.0 ppm; clover, forage 1.0 ppm; clover, hay 2.5 ppm; cottonseed 0.1 ppm; cranberry 4.0 ppm; egg 0.05 ppm; fruit, citrus 1.0 ppm; fruit, stone, group, 1.0 pmm; ginseng 3.0 ppm; goat, fat 0.4 ppm; goat, kidney 0.4 ppm; goat, liver 0.4 ppm; goat, meat 0.05 ppm; goat, meat byproducts, except kidney and liver 0.05 ppm; grain, ceral (except wheat, barley, and oats) 0.1 ppm; grain, crop 0.1 ppm; grape 2.0 ppm; grass, forage 10.0 ppm; grass, hay 25.0 ppm; hog, fat 0.4 ppm; hog, kidney 0.4 ppm; hog, liver 0.4 ppm; hog, meat 0.05 ppm; hog, meat byproducts, except kidney and liver 0.05 ppm; hop, dried cone 20.0 ppm; hop, green 2.0 ppm; horse, fat 0.4 ppm; horse, kidney 0.4 ppm; horse, liver 0.4 ppm; horse, meat 0.05 ppm; horse, meat byproducts, except kidney and liver 0.05 ppm; leafy vegetables (except brassica) group (except spinach) 5.0 ppm; leaves of root and tuber vegetables (human food or animal feed) group, 15.0 ppm; legume vegetable group (dry or succulent) 0.2 ppm; lettuce, head 5.0 ppm; milk 0.02 ppm; mustard greens 5.0 ppm; onion, dry bulb 3.0 ppm; onion, green 10.0 ppm; peanut, hay 20.0 pmm; peanut, meal 1.0 ppm; peanut, nut 0.2 ppm; peanut, shells 2.0 ppm; peanut, vines 20.0 ppm; pineapple 0.1 ppm; pineapple, fodder 0.1 ppm; pineapple, forage 0.1 ppm; plum, prune, dried 4.0 ppm; potato waste, dried, processed 4.0 ppm; potato, processed (including potato, chips) 4.0 ppm; poultry, fat 0.4 ppm; poultry, kidney 0.4 ppm; poultry, liver 0.4 ppm; poultry, meat 0.05 ppm; poultry, meat byproducts, except kidney and liver 0.05 ppm; potato 0.5 ppm; raisins 6.0 ppm; raspberry 0.5 ppm; sheep, fat 0.4 ppm; sheep, kidney 0.4 ppm; sheep, liver 0.4 ppm; sheep, meat 0.05 ppm; sheep, meat byproducts, except kidney and liver 0.05 ppm; soybean, grain 1.0 ppm; soybean, hulls 2.0 ppm; soybean, meal 2.0 ppm; spinach 10.0 ppm; strawberry 10.0 ppm; sunflowers 0.1 ppm; sunflower, forage 0.1 ppm; tomato, processed 3.0 ppm; vegetables, brassica, leafy, group (except broccoli, cabbage, cauliflower, Brussels sprouts, and mustard greens) 0.1 ppm; vegetable, cucurbit, group, 1.0 ppm; vegetable, fruiting (except cucurbits) group, 1.0 ppm; vegetable, legume, cannery waste 5.0 ppm; vegetable, legume, foliage 8.0 ppm; vegetable, root and tuber group, 0.5 ppm; walnut 0.5 ppm. ***Regional registration, as defined in section 180.1(n) are established for the combined residues of the fungicide metalaxyl and its metabolites containing the 2,6-dimethylaniline moiety, and N-(2-hydroxymethyl-6-methyl)-N-(methoxyacetyl)-alanine methylester, each expressed as metalaxyl [40 CFR 180.408 (c)]:*** in or on the following raw agricultural commodity: papaya, 0.1 ppm. ***[40 CFR 180.408 (d)]:*** in or on the food commodities when present therein as a result of the appliсatiion of metalaxyl to growing crops listed in paragraph (a) of this section and other non-food crops to read as follows: barley, grain 0.2 ppm; barley, fodder 2.0 ppm; barley, milling fractions 1.0 ppm; barley, straw 2.0 ppm; grain, cereal group (except wheat, barley and oats), fodder 1.0 ppm; grain, cereal group (except wheat, barley and oats), forage 1.0 ppm; grain, cereal group (except wheat, barley and oats), straw 1.0 ppm; oat, fodder 2.0 ppm; oat, forage 2.0 ppm; oat, grain 0.2 ppm; oat milling fractions 1.0 ppm; oat, straw 2.0 ppm; wheat, fodder 2.0 ppm; wheat, forage 2.0 ppm; wheat, grain 0.2 ppm; wheat, milling fractions 1.0 ppm; wheat, straw 2.0 ppm.

Human toxicity (long-term)[101]: Very low–518.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–9099.97083 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Health Advisory: Mutagen

Acute Oral Category: 3, CAUTION

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk Phrases: R22; R43; R52/53; safety phrases: S2; S13; S24; S37; S46; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): No value assigned.

Description: Flammable, white crystalline solid or powder. Odorless. Molecular weight = 297.34; Specific gravity (H_2O:1) = 1.22; Boiling point = 294 °C; Freezing/Melting point = 67–68 °C; 69–72 °C; Vapor pressure = 6×10^{6} mmHg @ 20 °C; Flash point = 100 °C (cc). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Highly soluble in water; solubility = 7.0 g/L @ 20 °C.

Incompatibilities: Incompatible with alkaline materials, strong acids, oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.); contact may cause fires or explosions.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 400 ppb[93]. State Drinking Water Guidelines: Maine 420 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact may burn eyes, skin, and respiratory tract. Eye contact may cause permanent damage. May cause skin allergy. Toxic if ingested. LD_{50} (oral, rat) = 600–700 mg/kg; LD_{50} (dermal, rat) = >2000 mg/kg.

Long Term Exposure: Prolonged or frequent exposure may cause liver damage; skin allergy.

Points of Attack: Skin, eyes, liver.

Medical Surveillance: Check liver function. Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develop. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential for exposure exists, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers; strong acids; strong alkalies. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Small amounts may be destroyed by alkaline hydrolysis. Admixture with alkali can be followed by soil burial. Larger quantities can be disposed of by incineration in admixture with acetone or xylene and using effluent gas scrubbing. Do not reuse empty container; proper disposal required.

Metaldehyde M:0480

Use Type: Molluscicide
CAS Number: 108-62-3
Formula: $C_8H_{16}O_4$
Synonyms: 1,3,5,7-Tetroxocane, 2,4,6,8-tetramethyl-1,3,5,7-tetraoxacyclooctane
Trade Names: ANTIMILACE®; ARIOTOX®; CEKUMETA®; DEADLINE®; DURHAM®; HALIZAN®; LIMATOR®; META®; METASON®; NAMEKIL®; SLUG-TOX®; TRAILS END®
Chemical class: Aldehyde; Cyclo-octane
EPA/OPP PC Code: 053001
California DPR Chemical Code: 379
HSDB Number: 1735
UN/NA & ERG Number: UN 1332/133; IMO 4.1
RTECS® Number: XF9900000
EC Number: 203-600-2 [*Annex I Index No.:* 605-005-00-7]

Uses: A tetramer of acetaldehyde, metaldehyde is a molluscicide used in a variety of vegetable and ornamental crops in the field or greenhouse. It may be formulated with or without calcium arsenate and is also available in a mixed formulation with thiram. A U.S. EPA restricted Use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Metaldehyde [40 CFR 180.523(a)]: artichoke, globe 0.07 ppm; berry group 13, 0.15 ppm. cactus 0.07 ppm; fruit, citrus, group 10, 0.26 ppm; lettuce 1.73 ppm; strawberry 6.25 ppm; tomato 0.24 ppm; vegetable, brassica, leafy, group 5, 2.5 ppm; watercress 3.2 ppm.

Human toxicity (long-term)[101]: 3.5 ppb, Health Advisory.

Fish toxicity (threshold)[101]: 1121 ppb, MATC (Maximum Acceptable Toxicant Concentration).

Fish toxicity (threshold)[101]: Very low–1121.12787 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information

Acute Oral Category: 2, WARNING
Health Advisory: Mutagen, Reproductive Toxin
TSCA: 40CFR716.120(*d*)1 as aldehydes
European/International Regulations: Hazard Symbol: F, Xn; risk phrases: R11; R22; safety phrases: S2; S13; S16; S25; S46 (see Appendix 1)

Description: Metaldehyde is a white crystalline powder. Flammable solid. Mild menthol odor. Molecular weight = 176.24; Boiling point = 112–116 °C; Freezing/Melting point = 47 °C; Flash point = 36 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 3, Reactivity 1. Moderately soluble in water; solubility = 260 mg/L @ 30 °C.

Incompatibilities: Aldehydes form an explosive mixture with air. Incompatible with oxidizers, acids, strong reducing agents; may cause fire and explosive polymerization. Aldehydes are readily oxidized, releasing carboxylic acids. Contact with azo/diazo compounds, dithiocarbamates, nitrides, generates flammable and/or toxic gases. May react with air to release, initially, peroxo acids followed by ultimately carboxylic acids. These autoxidation reactions are activated by light, catalyzed by salts of transition metals, and are autocatalytic (catalyzed by the products of the reaction). The addition of stabilizers/antioxidants to shipments of aldehydes retards autoxidation[88].

Permissible Exposure Limits in Air: No OELs established.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate the eyes, skin and respiratory tract. Exposure can cause nausea, vomiting, diarrhea, abdominal pain, irritability, sleepiness, muscle twitching, convulsions, coma and death. LD_{50} (oral, rat) = 227–283 mg/kg[83]; LD_{50} (dermal, rat) = >2000 mg/kg.

Long Term Exposure: May cause kidney and liver damage. May cause reproductive and fetal effects. Neurotoxic.

Points of Attack: Central nervous system, kidneys, and liver. Reproductive cells.

Medical Surveillance: Preplacement and periodic physical examinations should be concerned particularly with the skin, vision, central nervous system, liver and kidneys. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a cool, dry place or in a refrigerator[52] away from strong bases; strong acids, heat. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Metaldehyde can be described as FLAMMABLE SOLID, N. O. S., Hazard Class 4.1, Packing Group II or III.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with toluene to avoid dust, then transfer material to a suitable container. Use absorbent paper dampened with toluene to pick up remaining material. Wash surfaces well with soap and water. Seal all wastes in vapor-tight plastic bags for eventual disposal[52]. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 1900.

Fire Extinguishing: Flammable solid. Hazardous decomposition includes nitrogen oxides. Use dry chemical, carbon dioxide, alcohol-resistant foam extinguishers, as water may not be an effective extinguisher for fighting fire. *Fire may re-ignite once it has been extinguished*. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. Extinguish fires using an agent suitable for the type of surrounding fire; benomyl itself does not burn.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Metamitron M:0485

Use Type: Herbicide

CAS Number: 41394-05-2

Formula: $C_{10}H_{10}N_4O$

Synonyms: 4-Amino-3-methyl-6-phenyl-1,2,4-triazin-5(4*H*)-one; 1,2,4-Triazin-5(4*H*)-one, 4-amino-3-methyl-6-phenyl-

Trade Names: BAY 6676®; BAY-DRW 1139®; DRW 1139®; GALAHAD®; GOLDBEET®; GOLTIX®; GOLTIX® 90; GOLTIX® SUPER; GOLTIX® WG; MM 70®; HERBRAK®; MARQUISE®; SKATER®; TORERO® (metamitron + ethofumesate)

Chemical class: Triazine; Triazinone

California DPR Chemical Code: 2672

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: XZ3015000

EC Number: 255-349-3 [*Annex I Index No.:* 613-129-00-8]

Uses: Metamitron is a selective systemic herbicide that is absorbed through roots and leaves and inhibits photosynthesis. It is used to control grasses and broadleaf weeds in sugar beets and fodder beets. Not currently registered in the U.S. Used in most European countries and having 34 global suppliers[97].

Regulatory Authority and Advisory Information:

Acute Oral Category: 3, CAUTION

Health Advisory: Mutagen

European/International Regulations: Hazard Symbol: Xn, N; risk Phrases: R22; R43; R50; safety phrases: S2; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Colorless to yellow crystalline solid. Mild, characteristic odor. Molecular weight = 202.22; Specific gravity (H_2O:1) = 1.35; Boiling point = 336 °C; (decomposes); Freezing/Melting point = 167–169 °C; Vapor pressure = 10^4 mmHg @ 25 °C. Highly soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers, acids, acid chlorides, acid halides, isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides. Contact with strong reducing agents such as halides may generate explosive flammable gas. Decomposes in temperatures above 250 °C, producing toxic fumes, including nitrogen oxide.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passing through the unbroken skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. May cause an allergic reaction. High levels of exposure can be fatal. LD_{50} (oral, rat) = 1200–2950 mg/kg; (dermal, rat) = >500 mg/kg.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks of tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May cause reproductive and fetal effects.

Points of Attack: Liver, lungs, skin. Reproductive cells.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Spill Handling: Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

Methamidophos M:0520

Use Type: Insecticide, Miticide

CAS Number: 10265-92-6

Formula: $C_2H_8NO_2PS$; $CH_3OP(O)(NH_2)SCH_3$

Synonyms: *O,S*-Dimethyl ester of amide of amidothioate; *O,S*-Dimethylphosphoramidothioate; ENT 27,396; Metamidofos (Spanish); Metamidofos estrella; NSC 190987

Trade Names: ACEPHATE-MET®; BAY 71625®; BAYER 71628®; CHEVRON 9006®; CHEVRON ORTHO 9006®; FILITOX®; GS-13005®; HAMIDOP®; METAFOS®; MONITOR®; MTD®; NITOFOL®; NURATRON®; ORTHO 9006®; PATROLE®; PILLARON®; SRA 5172®; SUPRACIDE®; SWIPE®; TAHMABON®; TAMARON®; VITARON®

Chemical class: Organophosphorus

EPA/OPP PC Code: 101201

California DPR Chemical Code: 1697

HSDB Number: 1593

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TB4970000

EC Number: 233-606-0 [*Annex I Index No.:* 015-095-00-4]

Uses: Methamidophos is a highly active, systemic, residual organophosphate insecticide/acaricide/avicide with contact and stomach action. Its mode of action in insects and mammals is by decreasing the activity of an enzyme important for nervous system function called acetylcholinesterase. This enzyme is essential in the normal transmission of nerve impulses. Methamidophos is a potent acetylcholinesterase inhibitor. It is effective against chewing and sucking insects and is used to control aphids, flea beetles, worms, whiteflies, thrips, cabbage loopers, Colorado potato beetles, potato tubeworms, armyworms, mites, leafhoppers, and many others. Crop uses include broccoli, Brussels sprouts, cauliflower, grapes, celery, sugar beets, cotton, tobacco, and potatoes. It is used abroad for many vegetables, hops, corn, peaches, and other crops. Generally, methamidophos is not considered phytotoxic if used as directed, but defoliation has occurred when applied as foliar spray to deciduous fruit. It is compatible with many other pesticides, but do not use with alkaline materials. Methamidophos is slightly corrosive to mild steel and copper alloys. This compound is highly toxic to mammals, birds, and bees. Do not graze treated areas, and be sure to wear protective clothing including respirator, chemical goggles, rubber gloves, and impervious protective clothing. A U.S. EPA restricted Use Pesticide (RUP). Not approved for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Methamidophos [40 CFR 180.315(a)]: in or on the following raw agricultural commodities: broccoli 1.0 ppm; Brussels sprouts 1.0 ppm; cabbage 1.0 ppm; cauliflower 1.0 ppm; cotton, undelinted seed 0.1 ppm; cucumber 1.0 ppm; eggplant 1.0 ppm; lettuce 1.0 ppm; melon 0.5 ppm; pepper 1.0 ppm; potato 0.1 ppm; and tomato 1.0 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.315(b)]:*** in or on the following raw agricultural commodity: celery 1 ppm.

Human toxicity (long-term)[101]: High–7.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Low–165.16992 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Mutagen, Developmental/Reproductive Toxin

EPA Oral reference dose (RfD) = 0.00005 mg/kg/day (UF: 1000, MF: 1)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] [methamidophos (soluble liquid formulations of the substance that exceed 600 g active ingredient/l)]

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R24; R26/28; R50; safety phrases: S1/2; S28; S36/37; S45; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Methamidophos is a white to off-white crystalline solid. Mercaptan odor (like sulfur). Commercially available formulations include soluble concentrate, emulsifiable concentrate, wettable powder, granules, ultra-low-volume spray and water-miscible spray concentrate. Molecular weight = 141.12; Specific gravity (H_2O:1) = 1.27; Boiling point = (decomposes); Freezing/Melting point = 44.5–45 °C; Vapor pressure = 8×10^{4} mmHg @ 20 °C; Flash point = 205 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Highly soluble in water. Often used as a liquid in a carrier solvent which may change physical and toxicological properties.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Incompatible with strong acids or alkali. Attacks mild steel and copper-containing alloys (technical grade).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 5 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = Negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion and dermal contact.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Irritates the eyes. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. This material is highly toxic. Acute exposure to methamidophos may also produce the following signs and symptoms of exposure: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may be noted, although hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. LD_{50} (oral, rat) = 7.5–30 mg/kg; LD_{50} (dermal, rat) = 50 mg/kg.

Long Term Exposure: The substance may have effects on the nervous system, resulting in delayed neuropathy. Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause reproductive and fetal effects.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. Reproductive cells of mammals.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Obtain authorization of an antidote or performance of other invasive procedures. The effects may be delayed. Medical observation recommended. *Note to physician or authorized medical personnel:* 1,1'-trimethylenebis(4-formylpyridinium bromide)dioxime (a.k.a. TMB-4 dibromide and TMV-4) has been used as an antidote for organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides, sulfur oxides and phosphorus oxides. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Metham-sodium M:0536

Use Type: Fungicide; Nematicide, Herbicide, Soil fumigant, Algaecide

CAS Number: 137-42-8; 6734-80-1 (dihydrate)

Formula: $C_2H_4NNaS_2$; $C_2H_4NNaS_2 \cdot 2H_2O$ (dihydrate)

Synonyms: Carbam; Carbamic acid, methyldithio-, monosodium salt; Carbamic acid, *N*-methyldithio-, monosodium salt; Carbamic acid, *N*-methyldithio-, sodium salt; Carbamodithioic acid, methyl-, monosodium salt; Carbam, sodium salt; Carbathion; Carbathione; Carbation; Carbothion; Diethylamino-2,6-acetoxylidide; Methan-sodium; *N*-Methylaminodithioformic acid sodium salt; *N*-Methylaminomethanethionothiolic acid sodium salt; Methylcarbamodithioic acid sodium salt; Methyldithiocarbamic acid, sodium salt; SMDC; Sodium metam; Sodium metham; Sodium *N*-methylaminodithioformate; Sodium *N*-methylaminomethanethionothiolate; Sodium methylcarbamodithioate; Sodium methyldithiocarbamate; Sodium *N*-methyldithiocarbamate; Sodium monomethyldithiocarbamate

Trade Names: A7-VAPAM®; BASAMID-FLUID®; BUSAN®; CHAP-FUME®; DISCOVERY®; HERBATIM (dihydrate)®; KARBATION®; KARBATION (dihydrate)®; MAPOSOL®; MAPOSOL (dihydrate)®; METACIDE®; METAM (dihydrate)®; METAM-FLUID BASF®; METHAM DIHYDRATE (dihydrate)®; MONAM (dihydrate)®; N-869®; N 869 (dihydrate)®; NEMATIN®; SECTAGON®; SISTAN®; SMDC (dihydrate)®; SOLASAN 500®; SOLESAN 500®; SOMETAM®; TRAPEX®; TRIMATON (dihydrate)®; TRIMATRON®; UCETAM®; VAPAM®; VAPAM (dihydrate)®; VAPOROOTER (dihydrate)®; VDM®; VPM (dihydrate)®; VPM® Fungicide; VPN®; WOODFUME VAPAM®

Chemical class: Dithiocarbamate

EPA/OPP PC Code: 039003

California DPR Chemical Code: 616

HSDB Number: 1767

UN/NA&ERG Number: UN3267/153; UN2771(solid)/151

RTECS® Number: FC2100000

EC Number: 205-293-0 [*Annex I Index No.:* 006-013-00-8]

Uses: A general soil biocide that is used to control weeds, weed seeds, roots, tubers, rhizomes, insects, nematodes and soil inhabiting fungi on all food and non-food crops. Also used as a pre-planting fumigant in seed beds, vine crops, fruit trees, row crops, flowers and ornamentals. Environmental friendly; it breaks down after two weeks into carbon dioxide, water, and sodium and sulfur in small amounts. A U.S. EPA restricted Use Pesticide (RUP). Registered for use in some EU countries[115].

Human toxicity (long-term)[101]: High–1.76768 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Intermediate–60.02431 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen.

California Proposition 65 Chemical: Carcinogen (11/6/1998); developmental toxin (5/15/1998)

Health Advisory: Developmental/Reproductive Toxin

Acute Oral Category: 3, CAUTION

EPA Hazardous Waste Number (RCRA No.): U384

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Marine pollutant (49CFR, Subchapter 172.101, Appendix B)

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: Xn, Xi, H, N; risk Phrases: R22; R31/34; R43; R50/53; R63; safety phrases: S1/2; S26; S36/37/39; S45; S60; S61 (see Appendix 1)

Description: A yellow to nearly clear yellow-green solution. Also described as a colorless to white crystalline solid. Unpleasant sulfur-amine odor, similar to that of carbon disulfide. Molecular weight = 129.18, 165.21 (dihydrate); Freezing/Melting point (decomposes); Boiling point = 110 °C (technical product); Vapor pressure = 20 mmHg @ 20 °C. Readily soluble in water; solubility = 722 g/L @ 20 °C. Water reactive.

Incompatibilities: Slow reaction upon dilution produces the toxic gases hydrogen sulfide and methylisothiocyanate. This reaction is accelerated by the addition of acid[88]. May liberate toxic gas when in contact with acids. Combustible; vapors when heated or dust from dry material may form explosive mixture in air. Keep away from water, acid, oxidizing materials. Heat or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide. Dithiocarbamates are incompatible with acids, peroxides, and acid halides. Flammable gases are generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Corrosive to iron, copper, brass and zinc metals, especially in the presence of moisture. Heat alkalies (lime), moisture can cause decomposition. Degradation produces ethylene thiourea.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: State Drinking Water Guidelines: California 20 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = <0.5. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: The acute symptoms of exposure to metham sodium are excessive salivation, sweating, fatigue, weakness, nausea, headache, dizziness, eye and respiratory tract irritation, and skin irritation in the form of rashes[88]. Concentrated solutions are corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. LD_{50} (oral, rat) = LD_{50} (oral, rat) = 845 mg/kg[83]; LD_{50} (dermal, rat) = >500 mg/kg.

Long Term Exposure: May cause skin sensitization; Liver and urinary tract effects.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin and eyes, liver, urinary tract.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves[ERG].

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Thiocarbamate and dithiocarbamate pesticides, solid, toxic, require a label of "poisonous materials." They usually fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. *Do not get water inside containers*[ERG]. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, disodium oxide, and sulfur. Extinguish fire using an agent suitable for type of surrounding fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. A potential candidate for liquid injection incineration at a temperature range of 650 to 1600 °C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1600 °C and residence times of seconds for liquids and gases, and hours for solids[83].

RTECS® Number: TE2100000

EC Number: 213-449-4 [*Annex I Index No.:* 015-069-00-2]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Not approved for use in EU countries[115]. There are no residential uses for methidathion. Methidathion is a non-systemic organophosphate insecticide and acaricide with stomach and contact action. The compound is used to control a variety of insects and mites in many crops such as nuts, artichokes, olives, cotton, fruits, vegetables, tobacco, alfalfa, and sunflowers, and also in greenhouses and on rose cultures. It is especially useful against scale insects.

U.S. Maximum Allowable Residue Levels for Methidathion all with a Expiration/revocation date of 12/31/2016 [40 CFR 180.298 (a)]: almond hulls 6.0 ppm; artichoke, globe 0.05 ppm; citrus, oil 420.0 ppm; cotton, undelinted seed 0.2 ppm; fruit, citrus, group 10, except tangerine, 4.0 ppm; fruit, pome, group 11, 0.05 ppm; fruit, stone, group 12, 0.05 ppm; mango 0.05 ppm; nut, tree, group 14, 0.05 ppm; olive 0.05 ppm; safflower, seed 0.5 ppm; sorghum, forage, forage 2.0 ppm; sorghum, grain, forage 2.0 ppm; sorghum, grain, grain 0.2 ppm; sorghum, grain, stover 2.0 ppm; sunflower, seed 0.5 ppm; tangerine 6.0 ppm. ***[40 CFR 180.298 (c)]:*** in or on kiwifruit 0.1 ppm; longan 0.1 ppm; starfruit 0.1 ppm; sugar apple 0.2 ppm.

Human toxicity (long-term)[101]: High–1.05 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.15019 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Health Advisory: Nerve Toxin, Mutagen, Skin irritant/sensitizer

Acute Oral Category: 1, DANGER–POISON

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Extremely Hazardous Substance (EPA-SARA) (TPQ = 500)[7]

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

European/International Regulations: Hazard Symbol: T+, Xn, N; risk phrases: R21; R28; R50/53; safety phrases: S1/2; S22; S28; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Methidathion is a colorless crystalline solid or powder. Organophosphate odor. Molecular weight = 302.34; Specific gravity (H_2O:1) = 1.495 @ 20 °C; Freezing/Melting point = 39–40 °C; Vapor pressure = 3.4×10^{6} mmHg @ 20 °C; 0.186 mmHg @ 20 °C. Henry's Law constant = 7.2×10^{6} atm-m^3/mol @ 25 °C (est)[83]. Moderately soluble in water; solubility = 225 ppm @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1.8 mg/m^3
PAC-2: 20 mg/m^3
PAC-3: 160 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <3.0.Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: This material is poisonous to humans. Its toxic effects are by action on the nervous system. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Human volunteers ingesting 0.11 mg/kg/day for 6 weeks had no clinical effects. Symptoms are similar to parathion poisoning and may include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, dizziness, giddiness, weakness, muscle twitching, difficult breathing, sensation of tightness of chest, blurring or dimness of vision, and loss of muscle coordination. Death may occur from failure of the respiratory center, paralysis of the respiratory muscles, intense broncho-constriction, or all three. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 20–32 mg/kg; LD_{50} (dermal, rat) = 25 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; methidathion may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver and gallbladder damage. Possible reproductive (ovaries) toxin and nerve poison.

Points of Attack: Respiratory system, lungs, central nervous system, central nervous system, cardiovascular system, skin, eyes, plasma, ovaries, and red blood cell cholinesterase.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. ***First Aid:*** **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. *Eyes:* Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: SCBA >1.8 mg/m^3. *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any

NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a label of "poisonous materials." This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Methiocarb M:0550

Use Type: Acaricide, Molluscicide, Insecticide

CAS Number: 2032-65-7

Formula: $C_{11}H_{15}NO_2S$; $C_6H_2(SCH_3)(CH_3)_2OCONHCH_3$

Synonyms: Carbamic acid, methyl-, 3,5-dimethyl-4-(methylthio) phenyl ester; Carbamic acid, *N*-methyl-, 4-(methylthio)-3, 5-xylyl ester; Carbamic acid, methyl-, 4-(methylthio)-3,5-xylyl ester; 3,5-Dimethyl-4-methyl mercaptophenyl-*N*-methyl-carbamate; 3,5-Dimethyl-4-(methylthio)phenol methylcarbamate; 3,5-Dimethyl-4-methylthiophenyl *N*-methylcarbamate; 3,5-Dimethyl-4-(methylthio)phenyl methylcarbamate; EBT 25,726; Mercaptodimethur; Methyl carbamic acid 4-(methylthio)-3,5-xylyl ester; 4-Methylmercapto-3,5-dimethylphenyl *N*-methylcarbamate; 4-Methylmercapto-3,5-xylyl methylcarbamate; 4-Methylthio-3,5-dimethylphenyl methylcarbamate; 4-(Methylthio)-3,5-xylyl-*N*-methylcarbamate; 4-(Methylthio)-3,5-xylyl methylcarbamate; Metiocarb (Spanish); Metmercapturon; Phenol, 3,5-dimethyl-4-(Methylthio)-, methylcarbamate; MXMC

Trade Names: AI3-25726®; ALCO SLUB"M[C]; B 37344®; BAY 5024®; BAY 9026®; BAY 37344®; BAYER 37344®; DCR 736®; DRAZA®; DRAZA G MICROPELLETS®; H 321®; MESUROL®; METHIOCARBE®; OMS-93®; PBI SLUG GARD®; PROVADA®; SD 9228®; SLUG-GETA®[C]

Chemical class: Carbamate (N-methyl)

EPA/OPP PC Code: 100501

California DPR Chemical Code: 375

HSDB Number: 782

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: FC5775000

EC Number: 217-991-2; [*Annex I Index No.:* 006-023-00-2]

Uses: Used to control slugs and snails, soil insects and spider mites in pome fruit, stone fruit, hops, strawberries, potatoes, beets, maize, vegetables and ornamentals. Also used as seed treatment to control fruit flies on maize and bird repellant on berries and cherries. Methiocarb producers deleted all food uses from their product labels between 1989-92. It is A U.S. EPA restricted Use Pesticide (RUP) except for residential application.

Human toxicity (long-term)[101]: Intermediate–35.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.04597 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin (S!)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

EPA Hazardous Waste Number (RCRA No.): P199

Potential groundwater contaminant.

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Non-wastewater (mg/kg), 1.4

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as mercaptodimethur

European/International Regulations: Hazard Symbol: T, N; risk phrases: R25; R50/53; safety phrases: S1/2; S22; S37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Methiocarb is a colorless crystalline powder. Molecular weight = 225.33; Boiling point = 325 °C; Freezing/Melting point = 118–118.5 °C; Vapor pressure = 1×10^4 mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Very slightly soluble in water; solubility = 25 ppm @ 20 °C.

Incompatibilities: Carbamates are incompatible with strong oxidizing acids, peroxides, and hydro-peroxides; strong reducing agents such as hydrides; strong acids and bases. Contact with nitrides or chemically active metals (aluminum, copper, magnesium, neptunium, sodium, tin, titanium, zinc, etc.) causes the release of potentially explosive hydrogen gas and a metal salt.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1.4 mg/m^3
PAC-2: 15 mg/m^3
PAC-3: 15 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Cholinesterase toxin. Contact irritates the skin and eyes. Inhalation will irritate the respiratory tract. As a carbamate insecticide, this compound is a reversible cholinesterase inhibitor and acts on the nervous system. It is classified as very toxic, and the probable oral lethal dose for humans is 50–500 mg/kg or between 1 teaspoon and 1 ounce for a 150 lb adult. Symptoms include salivation, slowed heartbeat, spontaneous urination and defecation, labored breathing, headache, blurred vision, tremor, slight paralysis, and muscle twitching. Exposure to carbamate poisoning can also result in nausea, vomiting, diarrhea, and abdominal pain, convulsions, coma and death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Acute effects: Eye, effects other than irritation; Brain; Gastrointestinal tract; Heart, cardiovascular system; Central nervous system; Respiratory toxin other than severe or moderate irritation; Skin irritant. moderate. LD_{50} (oral, rat, both sexes) = 30 mg/kg[83]. LD_{50} (oral, rat) = 20 mg/kg; LD_{50} (dermal, rat) = 35 mg/kg.

Long Term Exposure: The substance may have effects on the central nervous system and kidneys. Chronic effects: Respiratory toxin; Kidney.

Points of Attack: Central nervous system, liver, plasma and red blood cell cholinesterase.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. Do not drink any alcoholic beverages before or during use.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >1.4 mg/m^3. *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*

GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol -resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Methomyl M:0560

Use Type: Insecticide, Acaricide

CAS Number: 16752-77-5

Formula: $C_5H_{10}N_2O_2S$

Synonyms: Acetimidic acid, thio-*N*-(Mmthylcarbamoyl)oxy-,methyl ester; Acetimidothioic acid, methyl-*N*-(methylcarbamoyl) ester; ENT 27,341; Ethanimidothioc acid, *N*-[(methylamino)carbonyl]; Mesomile; Methyl *N*-[methylamino(carbonyl)oxy]ethanimido)thioate; Methyl-*N*-[methyl(carbamoyl)oxy]thioacetimidate; *S*-Methyl-*N*-(methylcarbamoyloxy)thioacetimidate; Metomilo (Spanish); 3-Thiabutan-2-one,*O*-(methylcarbamoyl)oxime

Trade Names: ACINATE®; AGRINATE®; CIMETLE®; DuPont™ 1179®; FRAM FLY KILL®; FLYTEK®; IMPROVED BLUE MALRIN SUGAR BAIT®; IMPROVED GOLDEN MALRIN BAIT®; INSECTICIDE 1179®; KIPSIN®; KUIK®; LANNATE®; LANNOX®; LANOX 90®; LANOX 216®; METHOMEX®; METHOMYL® 20SC; MEMILENE®; METHAVIN®; NU-BAIT II®; NUDRIN®; PILLARMATE®; RENTOKILL®; RENTOKIL FRAM FLY BAIT®; RIDECT®; SD 14999®; SOREX GOLDEN FLY BAIT®; WL 18236®

Chemical class: Carbamate (N-methyl)

EPA/OPP PC Code: 090301

California DPR Chemical Code: 383

HSDB Number: 1736

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: AK2975000

EC Number: 240-815-0 [*Annex I Index No.:* 006-045-00-2]

Uses: Methomyl is a broad-spectrum insecticide that is particularly effective against organophosphorus-resistant pests. It is used as an acaricide to control ticks and spiders. It is used for foliar treatment of vegetable, fruit and field crops, tobacco, cotton, commercial ornamentals, and in and around poultry houses and dairies. It is also used as a fly bait. Methomyl is effective as a "contact insecticide," because it kills target insects upon direct contact, and also as a "systemic insecticide" because of its capability to cause overall "systemic" poisoning in target insects, after it is absorbed and transported throughout the pests that feed on treated plants. It is capable of being absorbed by plants without being "phytotoxic" or harmful, to the plant. A U.S. EPA restricted Use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Methomyl [40 CFR 180.253(a)]: in or on raw agricultural commodities as follows: alfalfa 10 ppm; apples 1 ppm; asparagus 2 ppm; avocado 2 ppm; barley (grain) 1 ppm; barley (hay) 10 ppm; barley (straw) 10 ppm; beans (dry) 0.1 ppm (negligible residues); beans (forage) 10 ppm; beans (succulent) 2 ppm; beets (tops) 6 ppm; blueberry 6 ppm; broccoli 3 ppm; brussel sprouts 2 ppm; cabbage 5 ppm; cauliflower 2 ppm; celery 3 ppm; chinese cabbage 5 ppm; collards 6 ppm; corn (fodder) 10 ppm; corn (forage) 10 ppm; corn (fresh, including sweet kerrnel and corn with husk removed) 0.1 ppm (negligible residues); corn (grain, including pop) 0.1 ppm (negligible residues); cottonseed 0.1 ppm (negligible residues); cucurbits 0.2 ppm (negligible residues); dandelions 6 ppm; endive (escarole) 5 ppm; grapefruit 2 ppm; grapes 5 ppm; grass (Bermuda) 10 ppm; grass (Bermuda, hay, dried and dehydrated) 40 ppm; hop, dried cone 12 ppm (there are no U.S. registrations for use of methomyl on hop, dried cone, as of February 14, 1990); kale 6 ppm; leek 3.0 ppm; lemons 2 ppm; lentils 0.1 ppm;

lettuce 5 ppm; mint (hay) 2 ppm; mustard greens 6 ppm; nectarines 5 ppm; oats (forage) 10 ppm; oats (grain) 1 ppm; oats (hay) 10 ppm; oats (straw) 10 ppm; onions (green) 3 ppm; oranges 2 ppm; parsley 6 ppm; peaches 5 ppm; peanuts 0.1 ppm (negligible residues); pea 5 ppm; pea (vines) 10 ppm; pecans 0.1 ppm; peppers 2 ppm; pomegranates 0.2 ppm (negligible residues); rye (forage) 10 ppm; rye (grain) 1 ppm; rye (hay) 10 ppm; rye (straw) 10 ppm; sorghum (forage) 1 ppm; sorghum (grain) 0.2 ppm (negligible residues); soybeans 0.2 ppm (negligible residues); soybeans (forage) 10 ppm; spinach 6 ppm; strawberries 2 ppm; swiss chard 6 ppm; tangerines 2 ppm; tomatoes 1 ppm; turnip greens (tops) 6 ppm; vegetables, brassica, leafy, group 6.0 ppm; vegetable (fruiting) 0.2 ppm (negligible residues); vegetables, leafy [except for beets (tops), broccoli, brussel sprouts, cabbage, cauliflower, celery, Chinese cabbage, collards, dandelions, endive (escarole), kale, lettuce, mustard greens, parsley, spinach, Swiss chard, turnip greens (tops), and watercress] 0.2 ppm (negligible residues); vegetables (root crop) 0.2 ppm (negligible residues); watercress 6 ppm; wheat (forage) 10 ppm; wheat (grain) 1 ppm; wheat (hay) 10 ppm; wheat (straw) 10 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.253(c)]:*** in or on the following raw agricultural commodity: pears 4 ppm.

Human toxicity (long-term)[101]: Very low–200.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–80.25646 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Health Advisory: Nerve Toxin, Mutagen, Endocrine disruptor (S!)

Acute Oral Category: 1, DANGER–POISON

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPA Hazardous Waste Number (RCRA No.): P066

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.028; Non-wastewater (mg/kg), 0.14

Safe Drinking Water Act: Priority List (55 FR 1470)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R28; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

Description: Methomyl is a white crystalline solid with a slight sulfurous odor. A noncombustible solid, which may be dissolved in flammable liquids that may alter physical properties listed here. Molecular weight = 162.23; Specific gravity (H_2O:1) = 1.2946 @ 24 °C; Boiling point = (decomposes) 335 °C; Freezing/Melting point = 79.6 °C; Vapor pressure: 0.00005 mmHg @ 25 °C; also 0.0001 mmHg[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Highly soluble in water.

Incompatibilities: Carbamates are incompatible with strong oxidizing acids, peroxides, and hydro-peroxides; strong reducing agents such as hydrides; strong acids and bases. Contact with nitrides or chemically active metals (aluminum, copper, magnesium, neptunium, sodium, tin, titanium, zinc, etc.) causes the release of potentially explosive hydrogen gas and a metal salt. Heat causes decomposition, forming toxic and irritating fumes including nitrogen oxides, sulfur oxides, hydrogen cyanide, methyl isocyanate. Rapid decomposition in moist soils and in alkaline solutions.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 2.5 mg/m^3

PAC-2: 10 mg/m^3

PAC-3: 23 mg/m^3

OSHA PEL (vacated 1989): TWA 2.5 mg/m^3 is enforced in some states.

ACGIH TLV®[1]: 2.5 mg/m^3 (skin)

Determination in Air: OSHA versatile sampler-2; Reagent; high-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5601(18)

Permissible Concentration in Water: Federal Drinking Water Guidelines: 200 μg/L; State Drinking Water Guidelines: Arizona 180 μg/L; Maine 175 μg/L. The USEPA has calculated a no-observed-adverse-effects-level (NOAEL) of 2.5 mg/kg/day from which a lifetime health advisory of 175 μg/L has been calculated.

Determination in Water: By high-performance liquid chromatography as described in EPA Health Advisory cited below. Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Cholinesterase inhibitor. Irritates the eyes. May affect the nervous system, resulting in respiratory failure, convulsions. Exposure may result in death. Methomyl has high oral toxicity, moderate inhalation toxicity and low skin toxicity. The probable oral lethal dose for humans is between 7 drops and 1 teaspoon for a 150 pound adult. Death is due to respiratory arrest. Acute exposure to methomyl usually leads to a cholinergic crisis. Signs and symptoms may include increased salivation, lacrimation (tearing), spontaneous defecation, and spontaneous urination. Pinpoint pupils, blurred vision, tremor, muscle twitching, and loss of muscle coordination may occur. Mental confusion, convulsions, and coma may also be noted. Gastrointestinal effects include nausea, vomiting, diarrhea, and abdominal pain. Bradycardia (slow heart rate) occurs frequently. Dyspnea (shortness of breath), pulmonary edema, and respiratory arrest may also occur. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Cholinesterase toxin. Acute effects: Eye, effects other than irritation; Brain; Gastrointestinal tract; Heart, cardiovascular system; Nervous system toxin; Central nervous system; Respiratory toxin; Respiratory irritant, severe, or moderate but not mild irritant effects; Eye irritant–moderate. LD_{50} (oral, rat) = 30–45 mg/kg. Highly toxic. LD_{50} (oral, rat) = 17 mg/kg; LD_{50} (dermal, rat) = > 1.5 g/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; methomyl may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause anemia. May cause reproductive and fetal effects.

Points of Attack: Eyes, respiratory system, central nervous system, cardiovascular system, liver, kidneys, blood cholinesterase; reproductive cells.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personne:* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >2.5 mg/m^3 *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1 and Packing Group II.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition (>190 °C) releases toxic oxides of nitrogen, sulfur, and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Potential candidate for disposal by rotary kiln incineration with a temperature range of 820–1600 °C and a residence time of seconds for liquids and gases, and hours for solids. Also a potential candidate for fluidized bed incineration with a temperature range of 450–980 °C, with a residence time of seconds for liquids and gases, and longer for solids[83]. Hydrolysis: Alkaline hydrolysis leads to complete degradation. Landfill: The aqueous solution is noncorrosive. It is stable as a solid, in aqueous solution under normal conditions but is subject to decomposition in moist soil [UN] Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Methoprene M:0565

Use Type: Insect growth hormone

CAS Number: 40596-69-8

Formula: $C_{19}H_{34}O_3$

Synonyms: 2,4-Dodecadienoic acid, 11-methoxy-3,7,11-trimethyl-, ispropyl ester, (E,E)-; 2,4-Dodecadienoic acid, 11-methoxy-3,7,11-trimethyl-, 1-methylethyl ester, (E,E)-; Isopropyl (2E,4E)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienoate; Isopropyl (E,E)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienoate; (E,E)-11-Methoxy-3,7,11-trimethyl-2,4-dodecandienoate; 1-Methylethyl (E,E)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienoate

Trade Names: ALTOSID®; APEX®; DIACON®; DIANEX®; ENT 70,460®; EXTINGUISH®; FLEATROL®; KABAT®; MANTA®; MOORMAN'S® IGR CATTLE CONCENTRATE; OVITROL®; PHARORID®; PRECOR®; ZR-515®

Chemical class: Natural product; mimics juvenile hormone

EPA/OPP PC Code: 105401 (549500 old EPA code number)

California DPR Chemical Code: 1784

HSDB Number: 6926

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: JR1685000

EC Number: 254-993-2

Uses: Methoprene is an insect growth regulator (IGR) used against a variety of insects including horn flies, mosquitoes, beetles, tobacco moths, sciarid flies, fleas (eggs and larvae), fire ants, pharoah ants, midge flies and Indian meal moths. Controlling some of these insects, methoprene is used in the production of a number of foods including meat, milk, mushrooms, peanuts, rice and cereals. It also has several uses on domestic animals (pets) for controlling fleas and to control insects in wastewater, sludge beds and ponds. For oral use in dogs, 9 weeks of age and older and 4 pounds body weight or greater, for the prevention and control of flea populations [21 CFR 520.1390]. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Methoprene [40 CFR 180.359]: in or on the following raw agricultural commodities: barley 5 ppm; buckwheat 5 ppm; cattle, fat 1 ppm; cattle, meat 0.1 ppm; cattle, meat byproducts 0.1 ppm; corn (except popcorn and sweetcorn) 5 pm; eggs 0.1 ppm; goats, fat 1 ppm; goats, meat 0.1 ppm; goats, meat byproducts 0.1 ppm; hogs, fat 1 ppm; hogs, meat 0.1 ppm; hogs, meat byproducts 0.1 ppm; horses, fat 1 ppm; horses, meat 0.1 ppm; horses, meat byproducts 0.1 ppm; milk 0.1 ppm; millet 5 ppm; mushrooms 1 ppm; oats 5 ppm; peanuts 2 ppm; poultry, fat 1 ppm; poultry, meat 0.1 ppm; poultry, meat byproducts 0.1 ppm; rice 5 ppm; rye 5 ppm; sheep, fat 1 ppm; sheep, meat 0.1 ppm; sheep, meat byproducts 0.1 ppm; sorghum (milo) 5 ppm; and wheat 5 ppm***. [40 CFR 185.4150]:*** in or on the food additive commodity cereal grain milled fractions (except flour and rice hulls). ***[40 CFR 186.4150]***: may be safely used in accordance with the following prescribed conditions: (a) It is used as a feed additive in the form of mineral and/or protein blocks or other feed supplements in the feed of cattle at the rate of 22.7 to 45.4 mg per 100 pounds of body weight per month. (b) It is used to prevent the breeding of hornflies in the manure of treated cattle. (c) To ensure safe use of the additive, the label and labeling of the pesticide formulation containing this additive shall conform to the label and labeling registered by the U.S. EPA. (d) In or on the following feed additive commodities: cereal grain milled fractions (except flour and rice hulls) 10 ppm; rice hulls 25 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: IARC, Group 3 not classifiable as to its carcinogenicity in humans.

Acute Oral Category: 4, Caution, not acutely toxic

Description: Amber colored liquid. Faint fruity odor. Molecular weight = 310.47; Specific gravity (H_2O:1) = 0.93; Boiling point = 135 @ 0.06 mmHg; Flash point = >90 °C. Slightly soluble in water; solubility = 1.40 ppm.

Incompatibilities: This material may react as an ester. Esters react with acids to liberate heat along with alcohols and acids. Strong oxidizing acids may cause a vigorous reaction that is sufficiently exothermic to ignite the reaction products. Heat is also generated by the interaction of esters with caustic solutions. Flammable hydrogen is generated by mixing esters with alkali metals and hydrides.

Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Dermal contact, eye contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Moderately toxic by skin absorption and if ingested. Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided LD_{50} (oral, rat) = >25 g/kg; (dermal, rat) = >2 g/kg. Very low toxicity.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Combustible. Acrid smoke and fumes and oxides of carbon, including oxides of nitrogen, disodium oxide, and sulfur. Combustible. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See ***40 CFR*** Parts 261.3 for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations. Incineration might be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Methoxychlor M:0580

Use Type: Insecticide

CAS Number: 72-43-5

Formula: $C_{16}H_{15}Cl_3O_2$; $H_3COC_6H_4CH(CCl_3)C_6H_4OCH_3$

Synonyms: Benzene,1,1'-(2,2,2-trichloroethylidene) bis[4-methoxy-]; 2,2-bis(*p*-anisyl)-1,1,1-trichloroethane; 1,1-Bis(*p*-methoxyphenyl)-2,2,2-trichloroethane; 2,2-Bis(*p*-methoxyphenyl)-1,1,1-trichloroethane; Dianisyltrichlorethane;2,2-Di-*p*-anisyl-1,1,1-trichloroethane; Dimethoxy-DDT;*p,p*'-Dimethoxydiphenyltrichloroethane; Dimethoxy DT; 2,2-(*p*-Methoxyphenyl)-1,1,1-trichloroethane; Di(*p*-methoxyphenyl)-trichloro methyl methane; DMDT; *p,p*'-DMDT; ENT 1,716; Methoxide; Methoxo; *p,p'*-Methoxychlor; Methoxy DDT; Metoxicloro (Spanish); NCI-C00497; 1,1,1-Trichloro-2,2-bis(*p*-anisyl)ethane; 1,1,1-Trichloro-2,2-bis(*p*-methoxyphenol) ethanol; 1,1,1-Trichloro-2,2-bis(*p*-methoxyphenyl) ethane; 1,1,1-Trichloro-2,2-di(4-methoxyphenyl)ethane; 1,1,1-Trichloro-2,2-di(*p*-methoxyphenyl)ethane; 1,1-(2,2,2-Trichloroethylidene) bis(4-methoxybenzene)

Trade Names: CHEMFORM®; HIGALMETOX®; MARLATE®; METOX®; MOXIE®; PRENTOX®

Chemical class: Organochlorine

EPA/OPP PC Code: 034001

California DPR Chemical Code: 384

HSDB Number: 1173

UN/NA & ERG Number: UN2761 (solid)/151; UN2996 (liquid)/151; UN2995 (Organochlorine pesticides, liquid, toxic, flammable, flash point not <23 °C)/131; UN 3077/151

RTECS® Number: KJ3675000

EC Number: 200-779-9

Uses: Not approved for use in EU countries[115]. Not registered for use in the U.S. There are 33 global suppliers[97]. The U.S. EPA lists 826 active and/or canceled products containing methoxychlor. Methoxychlor was introduced as an insecticide in 1945. It is a close relative of DDT and has been increasing in use since the ban on DDT in 1972 because of its very low mammalian toxicity for home and garden, on domestic animals for fly control, for elm bark-beetle vectors of Dutch elm disease, and for blackfly larvae in streams. Methoxychlor is registered for about 87 crops such as alfalfa; nearly all fruits and vegetables, corn, wheat, rice, and other grains; beef and dairy cattle; and swine, goats and sheep, and for agricultural premises and outdoor fogging. It is available in wettable and dust powders, emulsifiable concentrates, granules, and as an aerosol. It is combined in formulations with malathion, parathion, piperonyl butoxide, and pyrethrins.

U.S. Maximum Allowable Levels for Methoxychlor: The EPA limits the amount of methoxychlor present in agricultural products to 1–100 ppm. The Food and Drug Administration (FDA) limits the amount of methoxychlor in bottled water to 0.04 ppm

Human toxicity (long-term)[101]: Intermediate–40.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Extra high–0.11310 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen; IARC, Group 3 not classifiable as to its carcinogenicity in human.

Health Advisory: Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 4, Caution

Acceptable Daily Intake (ADI) = 0.1 mg/kg, based on 2-yr feeding study (oral, rats) = 200 ppm[83].

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)

EPA Hazardous Waste Number (RCRA No.): U247; D014

RCRA Toxicity Characteristic (Section 261.24), Maximum Concentration of Contaminants, regulatory level, 10.0 mg/L

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.25; Non-wastewater (mg/kg), 0.18

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL *u*g/L): 8080(2); 8270(10)

Safe Drinking Water Act: MCL, 0.04 mg/L; MCLG, 0.04 mg/L; Regulated chemical (47 FR 9352); Priority List (55 FR 1470)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.45 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

The EPA limits the amount of methoxychlor present in agricultural products to 1–100 ppm

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Methoxychlor is a white, off-white or yellow crystalline solid. It is often dissolved in a combustible or flammable liquid carriers such as diesel oil. Slight fruity odor. Molecular weight = 345.65; Specific gravity (H_2O:1) = 1.4; Freezing/Melting point = 77.78 °C[9]; Vapor pressure = very low; Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 3.9×10^2 ppm @ 24 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers (peroxides, perchlorates, nitrates, chlorine, etc.), alkaline materials; chemically active metals. Corrodes iron and aluminum in the presence of moisture. Will attack some forms of plastics and rubbers[9].

Permissible Exposure Limits in Air

OSHA PEL: 15 mg/m^3 (*total dust*) TWA

NIOSH REL: A potential occupational carcinogen. Limit exposure to lowest feasible concentration. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: 10 mg/m^3 TWA not classifiable as a human carcinogen

NIOSH IDLH: potential occupational carcinogen 5000 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 30 mg/m^3

PAC-2: 53 mg/m^3

PAC-3: 7000 mg/m^3

Determination in Air: Filter; Isooctane; Gas chromatography/Electrochemical detection; NIOSH II(4), Method #S371[18].

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 40 μg/L; State Drinking Water Guidelines: Arizona 340 μg/L; Maine 35 μg/L; State Drinking Water Standards: California 35 μg/L. Canadian Drinking Water Standards: MAC 0.9 mg/L.

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Log K_{ow} = >3.0+. Values above 3.0 are likely to bioaccumulate in marine organisms. The primary hazard of this pesticide is the threat to the environment. Immediate steps should be taken to limit its spread to the environment. Can easily penetrate the soil and contaminate groundwater and nearby streams.

Routes of Entry: Inhalation, ingestion, skin and/or eyes. Passes through the unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation*: The results of accidental exposure and animal studies suggest that high levels may cause irritation to nose and throat, headache, nausea, vomiting, staggering walk, drowsiness, convulsions, coma and death. *Skin:* Absorbed in significant amounts especially when dissolved in organic solvents. Local irritation and numbing of affected area may be experienced. *Eyes:* May cause irritation. *Ingestion:* Symptoms are similar to those listed under inhalation. Ingestion of 5 ounces a day for 6 weeks resulted in no observable symptoms. The least amount causing death has been reported as one pound. Exposure can cause anxiety, fatigue, nausea, vomiting, dizziness, confusion, weakness, "pins and needles" in extremities, muscle twitching and tremor. Higher levels can cause convulsions, unconsciousness and even death. *Note:* For application, methoxychlor is dissolved in organic or petroleum distillate solvents. These solvents may have poisonous effects in addition to those above. The estimated fatal oral dose for humans is 450 g/subject (approximately 6 g/kg body weight)[IARC]. LD_{50} (oral, rabbit) = >6 g/kg; (dermal, rat) = >6 g/kg[96].

Long Term Exposure: May cause tumors. Organochlorine pesticides are highly toxic to mammals and will accumulate in the tissues of living organisms. Methoxychlor has been shown to affect reproduction. May affect liver, kidneys, and central nervous system. Very high exposures may cause anemia. May disrupt the estrous cycle. May be a reproductive toxin. Potential neurotoxin.

Points of Attack: Central nervous system, liver, kidneys. Cancer site in animals: liver and ovarian cancer. Reproductive cells.

Medical Surveillance: Liver and kidney function tests. Complete blood count. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >30 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149. Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88].

Storage: Color Code-Blue (dry material): Health Hazard/Poison (Toxic): Store in a secure, locked and cool, ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organochlorine pesticides, liquid or solid (non-flammable), require a “poisonous materials” label. They fall in Hazard Class 6.1. Organochlorine pesticides, liquid, toxic, flammable, flash point not <23 °C, require both a “poisonous materials” and a “flammable material” label. They fall in Hazard Class 6.1. Labels 6.1, 3.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and toxic hydrogen chloride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or car/trailer loads*: if tank, rail car or tank truck is involved in a fire, isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. A is a potential candidate for incineration by rotary kiln with a temperature range of 820–1600 °C and a residence time of seconds for liquid or gas and hours for solid. Control acid mist from exhaust gases[83]. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Methoxyfenozide M:0603

Use Type: Insecticide
CAS Number: 161050-58-4
Formula: $C_{22}H_{28}N_2O_3$
Synonyms: Benzoic acid, 3-methoxy-2-methyl-2-(3,5-dimethylbenzoyl)-2-(1,1-dimethylethyl)hydrazide
Trade Names: INTREPID®; PRODIGY®
Chemical class: Diacylhydrazine
EPA/OPP PC Code: 121027
California DPR Chemical Code: 5698
HSDB Number: 7936
UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171
RTECS® Number: Not found
EC Number: Not assigned
Uses: Methoxyfenozide prevents insects from molting, or shedding their exoskeleton in order to grow, e. g., caterpillars and lychee webworms.
U.S. Maximum Allowable Residue Levels for Methoxyfenozide [40 CFR 180.544(a)(1)]: acerola 0.4 ppm; almond, hulls 25 ppm; animal feed, nongrass, group 18, forage 50.0 ppm; animal feed, nongrass, group 18, hay 150.0 ppm; apple, wet pomace 7.0 ppm; artichoke, globe 3.0 ppm; avocado 0.6 ppm; bean, dry, seed 0.24 ppm; brassica, head and stem, subgroup 5A, 7.0 ppm; brassica, leafy greens, subgroup 5B, 30 ppm; bushberry subgroup 13-07B, 3.0 ppm; canistel 0.6 ppm; cattle, fat 0.50 ppm; cattle, meat 0.02 ppm; coriander, leaves 30 ppm; corn, field, forage 15 ppm; corn, field, grain 0.05 ppm; corn, field, refined oil 0.20 ppm; corn, field, stover 125 ppm; corn, pop, grain 0.05 ppm; corn, pop, stover 125 ppm; corn, sweet, forage 30 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; corn, sweet, stover 60 ppm; cotton, gin byproducts 35 ppm; cotton, undelinted seed 2.0 ppm; cranberry 0.5 ppm; feijoa 0.4 ppm; fruit, pome, group 11, 1.5 ppm; fruit, stone, group 12, except plum, prune, fresh 3.0 ppm; goat, fat 0.50 ppm; goat, meat 0.02 ppm; grain, aspirated fractions 2.0 ppm; grape 1.0 ppm; grape, raisin 1.5 ppm; grass, forage, fodder and hay, group 17, forage 18.0 ppm; grass, forage, fodder and hay, group 17, hay 30.0 ppm; guava 0.4 ppm; hog, fat 0.1 ppm; hog, meat 0.02 ppm; horse, fat 0.50 ppm; horse, meat 0.02 ppm; jaboticaba 0.4 ppm; leaf petioles subgroup 4B, 25 ppm; leafy greens subgroup 4A, 30 ppm; longan 2.0 ppm; lychee 2.0 ppm; mango 0.6 ppm; milk 0.10 ppm; nut, tree, group 14, 0.10 ppm; okra 2.0 ppm; onion, green, subgroup 3-07B, 5.0 ppm; papaya 0.6 ppm; passionfruit 0.4 ppm; pea and bean, succulent shelled, subgroup 6B, 0.2 ppm; pea, blackeyed, seed 4.0 ppm; pea, dry seed 2.5 ppm; pea, southern, seed 4.0 ppm; peanut 0.02 ppm; peanut, hay 55.0 ppm; peanut, oil 0.04 ppm; peppermint, tops 7.0 ppm; pistachio 0.10 ppm; plum, prune, fresh 0.30 ppm; pomegranate 0.6 ppm; poultry, fat 0.02 ppm; poultry, meat 0.02 ppm; pulasan 2.0 ppm; rambutan 2.0 ppm; sapodilla 0.6 ppm; sapote, black 0.6 ppm; sapote, mamey 0.6 ppm; sheep, fat 0.50 ppm; sheep, meat 0.02 ppm; soybean, aspirated grain fractions 160 ppm; soybean, forage 30 ppm; soybean, hay 80 ppm; soybean, hulls 2.0 ppm; soybean, seed 1.0 ppm; Spanish lime 2.0 ppm; spearmint, tops 7.0 ppm; star apple 0.6 ppm; starfruit 0.4 ppm; strawberry 1.5 ppm; turnip, greens 30 ppm; vegetable, cucurbit, group 9, 0.3 vegetable, foliage of legume, except soybean, subgroup 7A, 35 ppm; vegetable, fruiting, group 8, 2.0 ppm; vegetable, leaves of root and tuber, group 2, 30 ppm; vegetable, legume, edible podded, subgroup 6A, 1.5 ppm; vegetable, root, subgroup 1A, 0.5 ppm; vegetable, tuberous and corm, except potato, subgroup 1D, 0.02 ppm; wax jambu 0.4 ppm. ***For combined residues of the insecticide methoxyfenozide and its glucuronide metabolite RH-141,518; beta-D-glucopyranuronic acid, 3-[2-(1,1-dimethylethyl)-2-(3,5-dimethylbenzoyl)-hydrazino]carbonyl-2-methylphenyl-] in the following commodities [40 CFR 180.544(a)(2)]:*** Cattle, liver 0.40 ppm; Cattle, meat byproducts, except liver 0.10 ppm; Egg 0.02 ppm; Goat, liver 0.40 ppm; Goat, meat byproducts, except liver 0.10 ppm; Hog, liver 0.1 ppm; Hog, meat byproducts, except liver 0.02 ppm; Horse, liver 0.40 ppm; Horse, meat byproducts, except liver 0.10 ppm; Poultry, liver 0.10 ppm; Poultry, meat byproducts, except liver 0.02 ppm; Sheep, liver 0.40 ppm; Sheep, meat byproducts, except liver 0.10. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.544(c)]:*** Citrus, oil 100 ppm; Fruit, citrus, group 10, 10 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity: EPA, Not likely to be a human carcinogen
Health Advisory: Suspected groundwater pollutant.
Description: White crystalline solid or powder. Molecular weight = 368.47; Specific gravity (H_2O:1) = 0.63; Boiling point = (decomposes); Freezing/Melting point = 204–207 °C; Vapor pressure = 3.5×10^{11} mmHg @ 25 °C[83]. Henry's Law constant = 3.84×10^{12} atm-m^3/mol @ 25 °C (est)[83]. Low solubility in water.
Permissible Concentration in Water: Federal Drinking Water Guidelines: 700 ppb[14].
Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Dermal contact, inhalation, ingestion.
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use

NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. Harmful if swallowed. At high levesl of exposure may affect glandular systems. LD_{50} (oral, dermal, rat) = >5 g/kg.

Long Term Exposure: At high levels of exposure may affect endocrine system, thyroid and adrenal glands.

Points of Attack: Adrenal glands, endocrine system, thyroid.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Exam of the nervous system. Thyroid function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Methyl bromide M:0720

Use Type: Fumigant, Herbicide, Insecticide, Nematicide

CAS Number: 74-83-9

Formula: CH_3Br

Synonyms: Bromomethane; Methane, bromo-; Methylbromid; Metilbromid (Spanish); Monobromomethane

Trade Names: BROM-O-GAS®; BROM-O-SOL®; DAWSON® 100; DOWFUME®; EDCO®; EMBAFUME®; HALON 1001®; ISCOBROME®; KAYAFUME®; MATABROM®; METHO-GAS®; M-B-C FUMIGANT®; R 40B1®; ROTOX®; TERABOL®; TERR-O-GAS®; ZYTOX®

Chemical class: Organohalide; Halogenated organic compound

EPA/OPP PC Code: 053201

California DPR Chemical Code: 385

HSDB Number: 779

UN/NA & ERG Number: UN1062/123

RTECS® Number: PA4900000

EC Number: 200-813-2 [*Annex I Index No.:* 602-002-00-3]

Uses: The primary use of methyl bromide is as an insect fumigant to control insects, nematodes, weeds and pathogens in more than 100 crops and for soil, grain storage, warehouses, mills, ships, etc. Use of methyl bromide in the U.S. will be phased out under the requirements of the Montreal Protocol, with some exemptions. Methyl bromide is also used as a chemical intermediate and a methylating agent, a refrigerant, a herbicide, a fire-extinguishing agent, a low-boiling solvent in aniline dye manufacture, for degreasing wool, for extracting oils from nuts, seeds, and flowers, and in ionization chambers. It is used as an intermediate in the manufacture of many drugs. A U.S. EPA restricted Use Pesticide (RUP), NO INERT. Still actively registered for use in the U.S. (2013). As of March 18, 2005, the use of methyl bromide in the EU was banned for most purposes, including quarantine and pre-shipment fumigations.Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Methyl Bromide [40 CFR 180.123(a)(1)]: almond, postharvest 200.0 ppm; apple, postharvest 5.0 ppm; apricot, postharvest 20.0 ppm; artichoke, jerusalem, postharvest 30.0 ppm; asparagus, postharvest 100.0 ppm; avocado, postharvest 75.0 ppm; barley, grain, postharvest 50.0 ppm; bean, lima, postharvest 50.0 ppm; bean, postharvest 50.0 ppm; bean, snap, succulent, postharvest 50.0 ppm; bean, succulent, postharvest 50.0 ppm; beet, garden, roots, postharvest 30.0 ppm; beet, sugar, roots, postharvest 30.0 ppm; blueberry, postharvest 20.0 ppm; butternut, postharvest 200.0 ppm; cabbage, postharvest 50.0 ppm; cacao bean, roasted bean, postharvest 50.0 ppm; cantaloupe, postharvest 20.0 ppm; carrot, roots, postharvest 30.0 ppm; cashew, postharvest 200.0 ppm; cherry, sweet, postharvest 20.0 ppm; cherry, tart, postharvest 20.0 ppm; chestnut, postharvest 200.0 ppm; cippolini, bulb, postharvest 50.0 ppm; citron, citrus, postharvest 30.0 ppm; coconut, copra, postharvest 100.0 ppm; coffee, bean, green, postharvest 75.0 ppm; corn, field, grain, postharvest 50.0 ppm; corn, pop, postharvest 240.0 ppm; corn, sweet, kernel plus cob with husks removed, postharvest 50.0 ppm; cucumber, postharvest 30.0 ppm; cumin, seed, postharvest 100.0 ppm; eggplant, postharvest 20.0 ppm; garlic, postharvest 50.0 ppm; ginger, postharvest 100.0 ppm; grape, postharvest 20.0 ppm; grapefruit, postharvest 30.0 ppm; hazelnut, postharvest 200.0 ppm; horseradish, postharvest 30.0 ppm; kumquat, postharvest 30.0 ppm; lemon, postharvest 30.0 ppm; lime, postharvest 30.0 ppm; melon, honeydew, postharvest 20.0 ppm; muskmelon, postharvest 20.0 ppm; nectarine, postharvest 20.0 ppm; nut, brazil, postharvest 200.0 ppm; nut, hickory, postharvest 200.0 ppm; nut, macadamia, postharvest 200.0 ppm; oat, postharvest 50.0 ppm; okra, postharvest 30.0 ppm; onion, bulb, postharvest 20.0 ppm; onion, green, postharvest 20.0 ppm; orange, postharvest 30.0 ppm; parsnip, roots, postharvest 30.0 ppm; peach, postharvest 20.0 ppm; peanut, postharvest 200.0 ppm; pear, postharvest 5.0 ppm; pea, blackeyed, postharvest 50.0 ppm; pea, postharvest 50.0 ppm; pecan, postharvest 200.0 ppm; pepper, postharvest 30.0 ppm; pimento, postharvest 30.0 ppm; pineapple, postharvest 20.0 ppm; pistachio, postharvest 200.0 ppm; plum, postharvest 20.0 ppm; pomegranate, postharvest 100.0 ppm; potato, postharvest 75.0 ppm; pumpkin, postharvest 20.0 ppm; quince, postharvest 5.0 ppm; radish, postharvest 30.0 ppm; rice, grain, postharvest 50.0 ppm; rutabaga, roots, postharvest 30.0 ppm; rutabaga, tops, postharvest 30.0 ppm; rye, grain, postharvest 50.0 ppm; salsify, roots, postharvest 30.0 ppm; sorghum, grain, grain, postharvest 50.0 ppm; soybean, postharvest 200.0 ppm; squash, summer, postharvest 30.0 ppm; squash, winter, postharvest 20.0 ppm; squash, zucchini, postharvest 20.0 ppm; strawberry, postharvest 60.0 ppm; sweet potato, postharvest 75.0 ppm; tangerine, postharvest 30.0 ppm; timothy, hay, postharvest 50.0 10/19/10 tomato, postharvest 20.0 ppm; turnip, roots, postharvest 30.0 ppm; walnut, postharvest 200.0 ppm; watermelon, postharvest 20.0 ppm; wheat 50.0 ppm. ***[40 CFR 180.123(a)(2)]:*** Inorganic bromide may be present as a residue in certain processed foods in accordance with the following conditions: (i) When inorganic bromide residues are present as a result of fumigation of the processed food with methyl bromide or from such fumigation in addition to the authorized use of methyl bromide on the source raw agricultural commodity, as provided for in this part, the total residues of inorganic bromides (calculated as Br) shall not exceed the following levels: (a) 400 ppm in or on egg, dried and herb, processed and spice. (b) 325 ppm in or on cheese, parmesan and cheese, roquefort cheese. (c) 250 ppm in or on tomato, concentrated products and fig, dried fruit. (d) 125 ppm in or on processed foods other than those listed above. (ii) When inorganic bromide residues are present in malt beverage, fermented in accordance with 21 CFR 172.730(a)(2), the amount shall not exceed 25 ppm (calculated as Br). (iii) Where tolerances are established on both the raw agricultural commodities and processed foods made therefrom, the total residues of inorganic bromides in or on the processed food shall not be greater than those designated in paragraph (a)(2) of this section, unless a higher level is established elsewhere in this part. ***[40 CFR 180.123(a)(3)]:*** Tolerances are established for residues of inorganic bromides (calculated as Br) as follows: (i) 400 ppm for residues in or on dog food, resulting from fumigation with methyl bromide. (ii) 125 ppm for residues in or on processed commodities for animal feedstuffs from barley, corn, grain sorghum, oat, rice, rye and wheat, resulting directly from fumigation with methyl bromide or from carryover and concentration of residues of inorganic bromides from fumigation of the grains with methyl bromide. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.123©)]:*** (calculated as Br) in or on the following food commodity grown in soil fumigated with methyl bromide. Ginger, postharvest, 100 ppm. ***[40 CFR 180.124]:*** A tolerance is established for residues of the fumigant methyl bromide, including metabolites and degradates, in or on the commodity in the table below. Compliance with the tolerance level specified below is to be determined by measuring only methyl bromide. Cotton, undelinted seed: 150 ppm. ***[40 CFR 180.521(a)]:*** Fumigants may be safely used in or on grain-mill machinery in accordance with the following prescribed conditions: (1) The fumigants consist of methyl bromide. (2) To assure safe use of the fumigant, its label and labeling shall conform to the label and labeling registered by the U.S. Environmental Protection Agency. (3) Residues of inorganic bromides (calculated as Br) in milled fractions derived from cereal grain from all fumigation sources, including fumigation of grain-mill machinery, shall not exceed 125 ppm. ***[40 CFR 180.522(a)]:*** Fumigants for processed grain may be safely used, in accordance with the following conditions. (1) Methyl bromide. Total residues of inorganic bromides (calculated as Br) from the use of this fumigant shall not exceed 125 parts per milion. (2) Methyl bromide is used to fumigate corn grits and cracked rice in the production of fermented malt beverage. (3) To assure safe use of the fumigant, its label and labeling shall conform to the label and labeling registered by the U.S. Environmental Protection Agency, and the usage employed should conform with such label or labeling. (4) The total residue of inorganic bromides in fermented malt beverage, resulting from the use of corn grits and cracked rice fumigated with the fumigant described in paragraph (a)(2) of this section plus additional residues of inorganic bromides that may be present from uses in accordance with other regulations in this chapter promulgated under section 408 and/or 409 of the Act, does not exceed 25 ppm bromide (calculated as Br). ***[40 CFR 180.2020]:*** when applied as a pre-plant soil fumigant. All pre-plant soil uses. Non-food determinations. Methyl bromide does not need a tolerance or exemption from the requirement of a tolerance based on EPA's determination that they are not likely to result in residues in or on food.

Human toxicity (long-term)[101]: Intermediate–10.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–1760.07814 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not Likely to be a human carcinogen; IARC, Group 3 not classifiable as to its carcinogenicity in humans; ACGIH A4, not classified as a human carcinogen

California Proposition 65 Chemical: Listed; Developmental/Reproductive Toxin (1/1/1993)

Health Advisory: Mutagen

Acute Oral Category: 2, WARNING

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B). Only as methyl bromide and ethylene dibromide mixture, liquid

California Proposition 65 Developmental/Reproductive toxin (methyl bromide, as a structural fumigant) (1/1/1993)

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23/25; R36/37/38; R48/20; R50/59; R68; safety phrases: S1/2; S15; S27; S36/39; S38; S45; S59; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Methyl bromide is a colorless gas. Chloroform-like odor at high concentrations. A liquid below 3.3 °C. Shipped as a liquefied compressed gas. Molecular weight = 94.95; Specific gravity (H_2O:1) = 1.676 @ 25 °C; Boiling point = 3.5 °C; Freezing/Melting point = –93.68 °C; Relative vapor density (air = 1) = 3.36; Vapor pressure = 1.9 atm; 750 mmHg @ 3.3 °C; Flash point = practically non-flammable except in presence of a high-energy ignition source; Autoignition temperature = 537 °C. Explosive limits: LEL = 10.0% (3000 ppm); UEL = 16.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Soluble in water; solubility = >15,000 mg/L @ 25 °C.

Incompatibilities: Not flammable but will combust in the presence of strong oxidizers and in high temperatures[17]. Attacks aluminum to form *spontaneously* flammable aluminum trimethyl. Incompatible with strong oxidizers, aluminum, dimethylsulfoxide, ethylene oxide, water. Attacks aluminum, zinc, magnesium, alkali metals and their alloys, creating a pyrophoric gas that may be a fire and explosion hazard. Attacks some rubbers and coating.

Permissible Exposure Limits in Air: Conversion factor: 1 ppm = 3.89 mg/m^3 @ 25 °C & 1 atm

OSHA PEL: 20 ppm/80 mg/m^3 Ceiling Concentration [skin]

NIOSH REL: A potential occupational carcinogen. Limit exposure to lowest feasible concentration. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: 1 ppm/3.9 mg/m^3 [skin]; not classifiable as a human carcinogen

NIOSH IDLH: 250 ppm

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 19 ppm
PAC-2: **210** ppm
PAC-3: **740** ppm

*AEGLs (Acute Emergency Guideline Levels) and ERPGs (Emergency Response Planning Guideline) are in **bold face**.

DFG MAK: [skin], Carcinogen Category 3B

Determination in Air: Charcoal adsorption, workup with CS_2, analysis by gas chromatography/flame ionization. See NIOSH Method 2520[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 10 μg/L; State Drinking Water Guidelines: Arizona 0.19 μg/L; Massachusetts 10 μg/L; Minnesota 10 μg/L; Wisconsin 10 μg/L.

Determination in Water: Inert gas purge followed by gas chromatography with halide-specific detection (EPA Method 601) or gas chromatography plus mass spectrometry (EPA Method 624). Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Methyl bromide is absorbed well by the lungs and to some degree through intact skin. Oral exposure is rare because methyl bromide is a gas at room temperature, but it may be absorbed by the gastrointestinal tract. Exposure by any route can cause systemic effects.

Harmful Effects and Symptoms: *Warning*: Effects may be delayed for hours to days. Caution is advised.

Short Term Exposure: Methyl bromide is a neurotoxic gas that can cause convulsions, coma, and long-term neuromuscular and cognitive deficits. Exposure to high concentrations of pure methyl bromide may cause inflammation of the bronchi or lungs, an accumulation of fluid in the lung, and irritation of the eyes and nose. Tearing agents added to methyl bromide to provide warning of its presence can also cause these symptoms, even at very low concentrations. Dermal contact with high vapor concentrations or with liquid methyl bromide can cause systemic toxicity and may cause stinging pain and blisters. Methyl bromide irritates the respiratory tract. Inhalation of the gas can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. May affect the central nervous system, causing psychological disturbances. Signs and symptoms of acute exposure to methyl bromide may be severe and include tremors, convulsions, brain hemorrhage, paralysis, coma, and permanent brain damage. Respiratory effects include cough, tachypnea (rapid respiratory rate), pulmonary edema, and respiratory collapse. Cyanosis (blue tint to the skin and mucous membranes), pallor, ventricular fibrillation, and circulatory collapse may also occur. Lethargy, profound weakness, headache, dizziness, mental confusion, slurring of speech, staggering gait, and blurred or double vision are often found. Gastrointestinal signs and symptoms include nausea, vomiting, abdominal pain, and anorexia. Oliguria (scanty urination), anuria (lack of urine formation), kidney hemorrhage, and kidney failure may occur. Contact with methyl bromide may cause dermatitis (red, inflamed skin) and conjunctivitis (red, inflamed eyes). *Inhalation:* A level of 35 ppm can cause nausea, vomiting, loss of appetite, headache, dizziness, drowsiness and dimming of vision. These effects go away soon after exposure ceases. Headaches, dizziness, and weakness can be felt at 100 ppm and can last for months after exposure. Higher levels have caused coughing, nose and throat irritation, disturbed speech and walk, visual disturbances, twitching, numbness, paralysis, convulsions and permanent nerve damage. Symptoms are often delayed 2–48 hours. Exposures of 10,000 ppm for a few minutes can cause death. Can cause abdominal cramps, respiratory failure resulting in death. *Skin*: Contact with liquid can cause burning or tingling sensation, itching, redness and swelling. Large amounts can cause blisters, numbness or aching pain. Methyl bromide can be absorbed through the skin and cause symptoms described under inhalation. Death has occurred from skin absorption. *Eye*: Can cause irritation, tearing, reddening or burning pain. *Ingestion:* Can cause throat and stomach irritation as well as symptoms described under inhalation. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 100–200 mg/kg.

Long Term Exposure: May cause tumors. Repeated exposures have been associated with peripheral neuropathies, especially sensory neuropathy, impaired gait, behavioral changes, and mild liver and kidney dysfunction. Visual impairment secondary to atrophy of the optic nerve has been reported. Chronic exposure may be more serious for children because of their potential longer latency period. *Carcinogenicity[83]:* The International Agency for Research on Cancer has determined that methyl bromide is not classifiable as to its carcinogenicity to humans. *Reproductive and developmental effects:* Methyl bromide is not considered a reproductive or developmental toxin. Levels between 20 and 35 ppm can cause symptoms as described under short term inhalation. Symptoms can last months or years, or can be permanent. Repeated or prolonged contact with skin may cause dermatitis, lung damage and broncho-spasms. Methyl bromide may affect the central nervous system, causing paralysis, poor vision, psychological disorders, hallucinations, numbness in the arms and legs, brain damage. May cause liver and kidney damage. Methyl bromide is a mutagen and may have a cancer risk. May damage the testes.

Points of Attack: Eyes, skin, respiratory system, central nervous system, brain, kidney. Cancer site in animals: lung, kidney, and forestomach tumors.

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Production of effects on the reproductive system. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Evaluate the central nervous system, respiratory tract, and skin in preplacement and periodic examinations. Examination of the nervous system. Blood test for bromides (unexposed persons usually have serum levels of 5 mg/L or below). Kidney function tests. Evaluation for brain effects.

First Aid: *Emergency life-support procedures:* Acute exposure to methyl bromide may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation exposure:* 1. Move victims to fresh air. Emergency personnel should avoid self-exposure to methyl bromide. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 4. Transport to a health care facility. *Dermal/eye exposure:* 1. Remove victims from exposure. Emergency personnel should avoid self- exposure to methyl bromide. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Remove contaminated clothing as soon as possible. 4. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. 5. Wash exposed skin areas twice with soap and water. 6. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 7. Transport to a health care facility[ERG]. *Note to physician or authorized medical personnel:* In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or are having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed begin fluid administration. For adults, bolus 1000 mL/hour intravenous saline or lactated Ringer's solution if blood pressure is under 80 mmHg; if systolic pressure is over 90 mmHg, an infusion rate of 150 to 200 mL/hour is sufficient. For children with compromised perfusion administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Personal Protective Methods: *Note:* Do not wear *ordinary rubber gloves* or *adhesive bandages* while using methyl bromide. It can dissolve rapidly through rubber or adhesive tape and cause severe symptoms. Wear appropriate personal protective clothing to prevent the skin from becoming frozen from contact with the evaporating liquid or from contact with vessels containing the liquid: **8 hr:** Responder™ suits; Trychem 1000™ suits. **4 hr**: butyl rubber gloves, suits, boots; Neoprene™ rubber gloves, suits, boots; Teflon™ gloves, suits, boots. Also, Saranex™ and styrene-butadiene rubber are among the recommended protective materials. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear eye protection to prevent any reasonable probability of eye contact. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >19 ppm. NIOSH: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front-or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents, and combustible materials. Sources of ignition, such as smoking and open flames, are prohibited where the chemical is handled, used, or stored. Use only non-sparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded. Procedures for the handling, use and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association.

Shipping: Methyl bromide requires a shipping label of "POISON GAS." It usually falls in Hazard Class 2.3. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling: If in a building, evacuate building and confine vapors by closing doors and shutting down HVAC systems. Restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak to disperse the gas. Wear chemical protective suit with self-contained breathing apparatus to combat spills. Stay upwind and use water spray to "knock down" vapor; contain runoff. Stop the flow of gas, if it can be done safely from a distance. If source is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place; and repair leak or allow cylinder to empty. Keep this chemical out of confined spaces, such as a sewer, because of the possibility of explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 48-8730 (24-hour response line).

Small spills (from a small package or a small leak from a large package)

First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
  Day 0.1/0.2
  Night 0.1/0.2

Large spills (from a large package or from many small packages)

First: isolate in all directions (feet/meters) 500/150
Then: Protect persons downwind (miles/kilometers)
  Day 0.4/0.6
  Night 1.4/2.3

Fire Extinguishing: Hazardous decomposition includes hydrogen bromide, bromine, carbon oxybromide, and carbon monoxide. NEVER direct water jet on liquid. Methyl bromide is a flammable gas, especially in the presence of a high-energy ignition source. Non-flammable at room temperature. Establish forced ventilation to keep levels below explosive limit. If liquid is spilled, evacuate area of spill; absorb liquid in vermiculite, dry sand, earth, or similar material and deposit in sealed containers for later disposal. If gas is leaked, do not extinguish the fire unless the flow of gas can be stopped and any remaining gas is out of the line. Specially trained personnel may use fog lines to cool exposures and let the fire burn itself out. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If cylinders are exposed to excessive heat from fire or flame contact, withdraw immediately to a secure location. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Generators of waste (equal to or greater than 100 kg/mo) containing this contaminant, EPA hazardous waste number U029, must conform with USEPA regulations in storage, transportation, treatment and disposal of waste. Controlled incineration with adequate scrubbing and ash disposal facilities[14]. A potential candidate for rotary kiln incineration at a temperature range of 820 to 1600 °C and residence times of seconds for liquids and gases, and hours for solids. A potential candidate for fluidized bed incineration at a temperature range of 450 to 980 °C and residence times of seconds for liquids and gases, and longer for solids[14]. Alternative from the United Nations. Treatment and Disposal Methods for Waste Chemicals Dec. 1985, p. 204: Pour onto vermiculite, sodium bicarbonate or a soda-ash mixture (90:10). Mix and shovel into paper boxes. Place in an open incinerator. Cover with scrap wood and paper. Ignite with an excelsior train; stay on upwind side or pump into a closed incinerator with afterburner. "Dissolve in a flammable solvent. Spray into the fire box of an incinerator equipped with afterburner and scrubber" but methyl bromide gas is very toxic and incineration by a layman appears to be too hazardous. Methyl bromide is apparently degraded rapidly in the sunlight in air and a preferable disposal procedure for the layman would be to release a small amount slowly to the atmosphere in a well-ventilated outdoor location. Recommendable methods:

Incineration & evaporation. Peer-review: Methyl bromide is a toxic gas and incineration may be difficult to arrange safely unless an efficient method of feeding the gas into the incinerator can be arranged. Incineration requires dilution with excess fuel. (Peer-review conclusions of an IRPTC expert consultation)[UN].

Methyl parathion M:1070

Use Type: Insecticide, Nematicide

CAS Number: 298-00-0

Formula: $C_8H_{10}NO_5PS$

Synonyms: Dimethyl *p*-nitrophenyl monothiophosphate; Dimethyl-*p*-nitrophenyl monothiophosphate; *O,O*-Dimethyl *O*-*p*-nitrophenyl phosphorothioate; *O,O*-Dimethyl *O*-(4-nitrophenyl)phosphorothioate; *O,O*-Dimethyl *O*-(*p*-nitrophenyl) phosphorothioate; Dimethyl *p*-nitrophenyl phosphorothionate; *O,O*-Dimethyl *O*-4-nitrophenyl phosphorothioate; Dimethyl 4-nitrophenyl phosphorothionate; *O,O*-Dimethyl *O*-(*p*-nitrophenyl) thionophosphate; Dimethyl *p*-nitrophenyl thiophosphate; *O,O*-Dimethyl *O*-*p*-nitrophenyl thiophosphate; *O,O*-Dimethyl *O*-(*p*-nitrophenyl) thiophosphate; Dimethyl parathion; ENT 17,292; Methyl fosferno; Methyl niran; Methylthiophos; Metilparationa (Spanish); NCI-C02971; *p*-Nitrophenyldime thylthionophosphate; M-Parathion; Parathion-methyl; Parathion Metile (Spanish); Partron M; Phenol, *p*-Nitro-, *O*-ester with *O,O*-dimethyl phosphorothioate; Phosphorothioic acid, *O,O*-dimethyl *O*-(*p*-nitrophenyl) ester; Phosphorothioic acid, *O,O*-dimethyl *O*-(4-nitrophenyl) ester

Trade Names: A-GRO®[C]; AI3-17292®; ATOMIC®[C]; AZOFOS®; AZOPHOS; BAMA BRAND®[C]; BAY 11405®; BAY E-601®; BLADAN M®; CEKUMETHION®; CLEAN CROP®[C]; COTTON TOX DUST®[C]; DALF®; DECLARE®; DEVITHION®; DREXEL METHYL PARATHION 4E®[C]; DURHAM[C]; E 601®; EMMY®[C]; E-Z-FLO®[C]; FALL OUT®[C]; FMC NYNAMITE®[C]; FOLIDOC®; FOLIDOL-80®; FOLIDOL M®; FOLIDOL M-40®; FOSFERNO M 50®; GEARPHOS®; 8056HC®; KILEX PARATHION®; ME-PARATHION®; MEPTOX®; METACID 50®; METACIDE®; METAFOS®; METAPHOS®; METRON®; METHYL-E 605®; METRON®; NITROX®; NITROX® 80; OLEOVOFOTOX®; PARAPEST M-50®; PENNCAP M®; PENNCAP MLS®; QUINOPHOS®; SEIS-TRES 6-3®; SINAFID M-48®; SIXTY-THREE SPECIAL E. C. INSECTICIDE®; TEKWAISA®; THIOPHENIT®; THYLPAR M-50®; TOLL®; VERTAC METHYL PARATHION TECHNISCH 80%®; WOFATOX 50 EC®

Chemical class: Organophosphate

EPA/OPP PC Code: 053501

California DPR Chemical Code: 394

HSDB Number: 1168

UN/NA & ERG Number: UN2783 (solid)/152

RTECS® Number: TG175000

EC Number: 206-050-1 [*Annex I Index No.:* 015-035-00-7]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Severely Restricted for use in EU, as parathion-methyl. This material is used as an insecticide on over 50 crops, primarily cotton, but also on walnuts, corn, dried beans and almonds and on several ornamentals. It is no longer allowed to be used on crops consumed by children.

U.S. Maximum Allowable Residue Levels for Methyl Parathion or its methyl homolog [40 CFR 180.121(a)]: in or on the following raw agricultural commodities: alfalfa (fresh) 1.25 ppm; alfalfa hay 5 ppm; almonds 0.1(N) ppm; almond hulls 3 ppm; apples 1 ppm; apricots 1 ppm; artichokes 1 ppm; avocados 1 ppm; barley 1 ppm; beans 1 ppm; beet greens (alone) 1 ppm; beets (with or without tops) 1 ppm; beets, sugar 0.1(N) ppm; beets, sugar (tops) 0.1(N) ppm; blackberries 1 ppm; blueberries (huckleberries) 1 ppm; boysenberries 1 ppm; broccoli 1 ppm; brussels sprouts 1 ppm; cabbage 1 ppm; carrots 1 ppm; cauliflower 1 ppm; celery 1 ppm; cherries 1 ppm; citrus fruits 1 ppm; clover 1 ppm; collards 1 ppm; corn 1 ppm; corn, forage 1 ppm; cottonseed 0.75 ppm; cranberries 1 ppm; cucumbers 1 ppm; currants 1 ppm; dates 1 ppm; dewberries 1 ppm; eggplants 1 ppm; endive (escarole) 1 ppm; figs 1 ppm; filberts 0.1(N) ppm; garlic 1 ppm; gooseberries 1 ppm; grapes 1 ppm; grass (forage) 1 ppm; guavas 1 ppm; hops 1 ppm; kale 1 ppm; kohlrabi

1 ppm; lettuce 1 ppm; loganberries 1 ppm; mangoes 1 ppm; melons 1 ppm; mustard greens 1 ppm; mustard seed 0.2 ppm; nectarines 1 ppm; oats 1 ppm; okra 1 ppm; olives 1 ppm; onions 1 ppm; parsnips (with or without tops) 1 ppm; parsnip greens (alone) 1 ppm; peaches 1 ppm; peanuts 1 ppm; pears 1 ppm; peas 1 ppm; peas, forage 1 ppm; pecans 0.1(N) ppm; peppers 1 ppm; pineapples 1 ppm; plums (fresh prunes) 1 ppm; potatoes 0.1(N) ppm; pumpkins 1 ppm; quinces 1 ppm; radishes (with or without tops) 1 ppm; radish, tops 1 ppm; rape seed 0.2 ppm; raspberries 1 ppm; rice 1 ppm; rutabagas (with or without tops) 1 ppm; rutabaga tops 1 ppm; safflower seed 0.1(N) ppm; sorghum 0.1(N) ppm; sorghum fodder 3 ppm; sorghum forage 3 ppm; soybeans 0.1 ppm; soybean hay 1 ppm; spinach 1 ppm; squash, 1 ppm; strawberries 1 ppm; summer squash 1 ppm; sugarcane 0.1(N) ppm; sugarcane fodder 0.1(N) ppm; sugarcane forage 0.1(N) ppm; sunflower seed 0.2 ppm; sweet potatoes 0.1(N) ppm; Swiss chard 1 ppm; tomatoes 1 ppm; turnips (with or without tops) 1 ppm; turnips greens 1 ppm; vetch 1 ppm; walnuts 0.1(N) ppm; wheat 1 ppm; and youngberries 1 ppm. Tolerances are established for residues of the insecticide *O,O*-dimethyl-*O*-*p*-nitrophenyl thiophosphate (the methyl homolog of parathion) ***[40 CFR 180.121(b)]:*** in or on the following raw agricultural commodities: birdsfoot trefoil forage 1.25 ppm; birdsfoot trefoil hay 5 ppm; guar beans 0.2 ppm; lentils 1 ppm; parsley 1 ppm; and vegetables, leafy, Brassica (cole) 1.0 ppm. ***While petitions for tolerances for negligible residues are pending and until action is completed on these petitions, interim tolerances are established for residues of the listed pesticide chemicals [40 CFR 180.319]:*** in or on raw agricultural commodities as follows: parathion or its methyl homolog, insecticide, rye 0.5 ppm.

Human toxicity (long-term)[101]: High–2.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–5.59677 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: IARC Group 3, unclassifiable; EPA, Not likely to be carcinogenic to human.

Acute Oral Category: 1, DANGER–POISON (Extreme)

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] [methyl-parathion (emulsifiable concentrates (EC) @ or >19.5% active ingredient and dusts @ or >1.5% active ingredient)]

European/International Regulations: Hazard Symbol: T+, Xn, N; risk phrases: R5; R10; R24; R26/28; R48/22; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Methyl parathion is a white to yellow-brown, crystalline solid with a garlic odor. The commercial product in xylene is a tan liquid (80% methyl parathion/20% xylene). Molecular weight = 263.21; Specific gravity (H_2O:1) = 1.358 @ 20 °C; Boiling point = 147.8; Freezing/Melting point = 37.2 °C; Vapor pressure = 0.00001 mmHg @ 20 °C; Flash point = 46 °C. LEL (Lower Explosive Limit) = 39,000 ppm. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 2. Low solubility in water; solubility = 0.006% @ 25 °C.

Incompatibilities: Dangerous when heated. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Rapidly decomposed by alkalies. Explosive risk when heated above 50 °C. The liquid xylene solution decomposes violently at 120 °C. Half decomposed in 8 days at 40 °C. When a sample was heated in a small test tube it decomposed in a few minutes, the residue exploded[Food Chem. 4(1):42. 1956].

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 0.2 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.2 mg/m^3 TWA, measured as inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI$_A$ issued as Acetylcholinesterase inhibiting pesticides.

Protective Action Criteria (PAC)*

PAC-1: 0.11 mg/m^3

PAC-2: **1.2**$_A$ mg/m^3

PAC-3: **3.5**$_A$ mg/m^3

*AEGLs (Acute Emergency Guideline Levels) are in **bold face**. Subscript “**A**” is a 60-minute value.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 1 μg/L; State Drinking Water Guidelines: Arizona 1.8 μg/L; Maine 2 μg/L; Florida 10 μg/L; California 2 μg/L.

Determination in Water: Log K_{ow} = ~3.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Methyl parathion may affect the nervous system, causing convulsion, respiratory failure, and death. An acetyl-cholinesterase inhibitor. Acute exposure to parathion-methyl may produce the following symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. High exposure may result in death. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) may occur although hypertension (high blood pressure) is not uncommon. Chest pain may be noted. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. Because this is a mutagen, handle it as a possible carcinogen–with extreme caution. Methyl parathion may damage the developing fetus. This material is extremely toxic; the probable oral lethal dose is 5–50 mg/kg, or between 7 drops and 1 teaspoonful for a 150–lb person. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 3–24 mg/kg; (dermal, rat) = 45–67 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; parathion-methyl may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause personality changes; depression, anxiety, irritability. May cause liver damage. May damage the developing fetus.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.11 mg/m^3. NIOSH: *2 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *5 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any powered air-purifying respirator with an organic vapor cartridge in combination with a high-efficiency particulate filter). *10 mg/m^3*: CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting facepiece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode); or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *200 mg/m^3:* SaF: Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: PD, PP (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Store in tightly closed containers in a cool, well-ventilated area away from heat sources, since violent reactions may occur. See incompatible material listed above. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of 5 gallons or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid, toxic, n.o.s. require a shipping label of "poisonous materials." Hazard Class is 6.1. Methyl parathion, solid and liquid, carry the symbol "D." The letter "D" identifies proper shipping names which are appropriate for describing materials for *domestic* transportation but may be inappropriate for international transportation under the provisions of international regulations (e.g., IMO, ICAO). An alternate proper shipping name may be selected when either domestic or international transportation is involved. Methyl parathion, solid, requires a shipping label of "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II. Methyl parathion, liquid, requires a shipping label of "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate and wash area of spill or leak after clean up is complete. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. This chemical is a combustible solid. Often available and used in a flammable liquid solution. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors from the liquid are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration (816 °C, 0.5 second minimum for primary combustion; 1204 °C, 1.0 second for secondary combustion) with adequate scrubbing and ash disposal facilities. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Metiram M:1306

Use Type: Fungicide

CAS Number: 9006-42-2; 9063-14-3

Formula: $C_{16}H_{33}N_{11}S_{16}Zn_3$

Synonyms: Carbamic acid, 1*H*-benzimidazol-2-yl-, carbatene; Carbamodithioic acid, 1,2-ethanydiylbis-, polymer with ammonia complex of zinc EBDC; Caswell No. 041A; EBDC, polymer with ammonia complex of zinc EBDC; Ethylenebis(dithiocarbamic acid), polymer with ammonia complex of zinc EBDC; Mixture of 5.2 parts by weight (83.9%) of [ethylenebis(dithiocarbamato)] zinc with 1 part by weight (16.1%) ethylenebis(dithiocarmabic acid), bimolecular and trimolecular cyclic anhydrosulfides and disulfides; *tris*[Amine(ethylenebis(dithiocarbamato))] zinc(2+1) (tetrahydro-1,2,4,7-dithiadiazocine-3, 8-dithione)polymer; Zinc ammoniate ethylenebis(dithiocarbamate)-poly(ethylenethiuram disulfide); Zinc metiram; Zineb-ethylene thiuram disulfide adduct

Trade Names: ATLAS® BRAND[C]; AMAREX®; NIA 9102®[C]; NIAGARA[C]; POLYCARBACIN®; POLYCARBACINE®; POLYCARBAZIN®; POLYCARBAZINE®; POLYMARCIN®; POLYMARCINE®; POLYMARSIN®; POLYMARZIN®; POLYMARZINE®; POLYRAM®

Chemical class: Dithiocarbamate

EPA/OPP PC Code: 014601

California DPR Chemical Code: 493

HSDB Number: 6705

UN/NA & ERG Number: UN3077(solid)/171; UN2771(solid)/151

RTECS® Number: TR6250000

Uses: Metiram is used to protect fruits, vegetables, field crops and other crops and ornamentals against many types of fungi and other foliar diseases.

U.S. Maximum Allowable Residue Levels for Metiram [40 CFR 180.217 (a)]: apple 2.0 ppm; potato 0.5 ppm.

Human toxic ity (long-term)[101]: High–2.10 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–24.87820 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen

California Proposition 65 Chemical: Carcinogen (1/1/1990) and developmental toxin (3/30/1999)

EPA ADI (Acceptable Daily Intake) = 0.0003 mg/kg

Acute Oral Category: 4, Caution, not acutely toxic

Health Advisory: Mutagen, Developmental Toxin; Endocrine disruptor (Confirmed, German Environmental Agency)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

EPA Hazardous Waste Number (RCRA No.): U114

Clean Water Act: Section 307 (a)(1)Toxic Pollutants as zinc and compounds

Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as zinc compounds

The "Director's List" (CAL/OSHA) as zinc compounds

Description: Light yellow solid or powder at room temperature. Characteristic dithiocarbamate odor. Molecular weight 1088.7; Specific gravity (H_2O:1) = 1.86; Boiling point = (decomposes); Freezing/Melting point = (decomposes) >140 °C; Vapor pressure = $<10^{7}$ mmHg @ 20 °C. Practically insoluble in water.

Incompatibilities: Combustible material. Dust may form explosive mixture in air. Water, acid, oxidizing materials. Heat or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide. Flammable gases are generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Decomposition products in fire include oxides of nitrogen and sulfur. Corrosive to iron, copper brass and zinc metals, especially in the presence of moisture. Heat alkalies (lime), moisture can cause decomposition. Decomposes on prolonged storage. Degradation produces ethylene thiourea.

Permissible Concentration in Water: Canadian Drinking Water Standards: AO ≤ 5.0 mg[Zn]/L. Runoff from spills or fire control may cause water pollution. The U.S. EPA[6] has set 5 ppm for the prevention of adverse effects due to the organoleptic properties of zinc.

Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. LD_{50} (oral, rat) = >2.5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause skin sensitization.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes. Repeated or prolonged contact with skin may result in dermatitis (red inflamed skin).

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon, sulfur and zinc. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. A potential candidate for liquid injection incineration at a temperature range of 650 to 1,600 °C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1,600 °C and residence times of seconds for liquids and gases, and hours for solids[83].

Metobromuron M:1308

Use Type: Herbicide
CAS Number: 3060-89-7
Formula: $C_9H_{11}BrN_2O_2$
Synonyms: 3-(4-Bromophenyl)-1-methoxy-1-methylurea; 3-(*p*-Bromophenyl)-1-methoxy-1-methylurea; *N*′-(4-Bromophenyl)-*N*-methoxy-*N*-methylurea; 3-(*p*-Bromophenyl)-1-methyl-1-methoxyurea; Metobromuron [3-(*p*-bromophenyl)-1-methoxy-1-methylurea]; Urea, *N*′-(4-bromophenyl)-*N*-methoxy-*N*-methyl-
Trade Names: C-3126®; CIBA 3126®; PATORAN®; PATTONEX®
Chemical class: Urea
EPA/OPP PC Code: 035901
California DPR Chemical Code:
HSDB Number: 1741
UN/NA & ERG Number: Consult appropriate Dangerous Goods Regulations, including 49CFR
RTECS® Number: YS3325000
EC Number: 221-301-5
Uses: Pre-emergence herbicide. Used against grasses and broadleaf weed control on flax, groundnuts, potatoes, beans, soybeans, sunflowers, tomatoes, and tobacco. Pending for use in EU countries[115]. Not registered for use in the U.S. There are 24 global suppliers[97].
U.S. Maximum Allowable Residue Levels for the herbicide Metobromuron, [40 CFR 180.250]: in or on the raw agricultural commodity, potatoes 0.2 ppm.
Regulatory Authority and Advisory Information:
Description: White crystalline solid or powder. Commercial product may be in a flammable hydrocarbon carrier. Molecular weight = 259.11; Specific gravity (H_2O:1) = 1.59; Freezing/Melting point = 95 °C; Vapor pressure = 3×10^6 mmHg @ 20 °C; Soluble in water; solubility = 8.8 mg/L@ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.
Determination in Water: FDA Method 242.4 *Method for Substituted Urea Herbicides* High-Performance Liquid Chromatography with Fluorescence Detection with no Detection limit reported. Log K_{ow} = ~2.5. Unlikely to bioaccumulate in marine organisms.
Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); strong acid.
Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Dermal contact may cause severe irritation or burns. LD_{50} (oral, rat) = >5 g/kg.
Long Term Exposure: May cause skin sensitization.
Points of Attack: Skin.
Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.
Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.
Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with metobromuron you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Consult appropriate Dangerous Goods Regulations, including 49CFR, for additional description requirements, mode-specific, or quantity-specific shipping requirements.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon, and corrosive fumes of bromine. Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Hydrolysis is not recomended as a disposal procedure because of the generation of the toxic products 3,4-dichloroaniline and dimethylamine. Incinerate in a unit with effluent gas scrubbing. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Metolachlor M:1310

Use Type: Herbicide

CAS Number: 51218-45-2; 87392-12-9 (S-)

Formula: $C_{15}H_{22}ClNO_2$

Synonyms: 2-Chloro-6'-ethyl-*N*-(2-methoxy-1-methylethyl) acet-*o*-toluidide; α-Chloro-2'-ethyl-6'-methyl-*N*-(1-methyl-2-methoxyethyl)-acetanilide; 2-Chloro-*N*-(2-ethyl-6-methylphenyl)-*N*-(2-methoxy-1-methylethyl) acetamide; 2-Chloro-*N*(6-ethyl-*o*-tolyl)-*N*-(2-methoxy-1-methylethyl)-acetamide; 2-Ethyl-6-methyl-1-*N*-(2-methoxy-1-methylethyl)chloroacetanilide; Metelilachlor

Trade Names: BICEP®[C]; BROADSTRIKE®; CGA-24705®; CINCH®; CODAL®; COTORAN® MULTI®; CYCLE®[C] DREXEL ME-TOO-LACHLOR®; DUAL®; DUAL MAGNUM®; DUET®[C]; INTER PLUS®; MEDAL®[C]; MILOCEP®; ONTRACK 8E®[C]; PENNANT®[C]; PRELUDE®[C]; PRIMAGRAM®; PRIMEXTRA®; TURBO®

Chemical class: Chloroacetanilide; Chloroacetamide

EPA/OPP PC Code: 108801; 288700 (old EPA product code)

California DPR Chemical Code: 1996

HSDB Number: 6706

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: AN3430000

EC Number: 257-060-8

Uses: Not approved for use in EU countries[115]. Registered for use in the U.S. Metolachlor is a selective herbicide that is usually applied to crops before plants emerge from the soil, and is used to control certain broadleaf and annual grassy weeds in field corn, soybeans, peanuts, grain sorghum, potatoes, pod crops, cotton, safflower, stone fruits, nut trees, highway rights-of-way and woody ornamentals. Prior to the RED of April, 1995, its primary use was on corn, soybeans and sorghum. It inhibits protein synthesis; thus, high-protein crops (e. g., soy) can be adversely affected by excessive metolachlor application. Additives may be included in product formulations to help protect sensitive crops (i.e., sorghum) from injury.

U.S. Maximum Allowable Residue Levels for Metolachlor including its metabolites and degradates [40 CFR 180.368(a)(1)]: almond, hulls 0.30 ppm; animal feed, nongrass, group, 18 ppm; 1.0 ppm; cattle, fat 0.02 ppm; cattle, kidney 0.20 ppm; cattle, liver 0.05 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts, except kidney and liver 0.04 ppm; corn, field, forage 6.0 ppm; corn, field, grain 0.10 ppm; corn, field, stover 6.0 ppm; corn, sweet, forage 6.0 ppm; corn, sweet, kernel plus cob with husks removed 0.10 ppm; corn, sweet, stover 6.0 ppm; cotton, gin byproducts 4.0 ppm; cotton, undelinted seed 0.10 ppm; dillweed 0.50 ppm; egg 0.02 ppm; goat, fat 0.02 ppm; goat, kidney 0.20 ppm; goat, liver 0.05 ppm; goat, meat 0.02 ppm;

goat, meat byproducts, except kidney and liver 0.04 ppm; grass, forage 10 ppm; grass, hay 0.20 ppm; horse, fat 0.02 ppm; horse, kidney 0.20 ppm; horse, liver 0.05 ppm; horse, meat 0.02 ppm; horse, meat byproducts, except kidney and liver 0.04 ppm; milk 0.02 ppm; nut, tree, group, 14 ppm; 0.10 ppm; okra 0.50 ppm; peanut 0.20 ppm; peanut, hay 20 ppm; peanut, meal 0.40 ppm; potato 0.20 ppm; poultry, fat 0.02 ppm; poultry, meat 0.02 ppm; poultry, meat byproducts 0.05 ppm; safflower, seed 0.10 ppm; sheep, fat 0.02 ppm; sheep, kidney 0.20 ppm; sheep, liver 0.05 ppm; sheep, meat 0.02 ppm; sheep, meat byproducts, except kidney and liver 0.04 ppm; sorghum, grain, forage 1.0 ppm; sorghum, grain, grain 0.30 ppm; sorghum, grain, stover 4.0 ppm; soybean, forage 5.0 ppm; soybean, hay 8.0 ppm; soybean, seed 0.20 ppm; tomato 0.10 ppm; vegetable, foliage of legume, subgroup 7A, except soybean 15.0 ppm; vegetable, legume, group 6 0, 30 ppm. ***[40 CFR 180.368(a)(2)]:*** asparagus 0.10 ppm; beet, sugar, molasses 2.0 ppm; beet, sugar, roots 0.5 ppm; beet, sugar, tops 15.0 ppm; brassica, head and stem, subgroup 5A, 0.60 ppm; brassica, leafy greens, subgroup 5B, 1.8 ppm; bushberry subgroup 13-07B, 0.15 ppm; caneberry subgroup 13-07A, 0.10 ppm; carrot, roots 0.40 ppm; cattle, fat 0.02 ppm; cattle, kidney 0.20 ppm; cattle, liver 0.05 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts, except kidney and liver 0.04 ppm; corn, field, grain 0.10 ppm; corn, field, forage 6.0 ppm; corn, field, stover 6.0 ppm; corn, pop, grain 0.10 ppm; corn, pop, stover 6.0 ppm; corn, sweet, forage 6.0 ppm; corn, sweet, kernel plus cob with husks removed 0.10 ppm; corn, sweet, stover 6.0 ppm; cotton, gin byproducts 4.0 ppm; cotton, undelinted seed 0.10 ppm; cucumber 0.13 ppm; egg 0.02 ppm; grain, aspirated fractions 0.70 ppm; goat, fat 0.02 ppm; goat, kidney 0.20 ppm; goat, liver 0.05 ppm; goat, meat 0.02 ppm; goat, meat byproducts, except kidney and liver 0.04 ppm; grass, forage 10.0 ppm; grass, hay 0.20 ppm; horse, fat 0.02 ppm; horse, kidney 0.20 ppm; horse, liver 0.05 ppm; horse, meat 0.02 ppm; horse, meat byproducts, except kidney and liver 0.04 ppm; leaf petioles, subgroup 4B, 0.10 ppm; melon, subgroup 9A, 0.10 ppm; milk 0.02 ppm; okra 0.10 ppm; onion, bulb, subgroup 3-07A, 0.10 ppm; onion, green, subgroup 3-07B, 2.0 ppm; peanut 0.20 ppm; peanut, hay 20.0 ppm; peanut, meal 0.40 ppm; poultry, fat 0.02 ppm; poultry, meat 0.02 ppm; poultry, meat byproducts 0.05 ppm; pumpkin 0.10 ppm; safflower, seed 0.10 ppm; sesame, seed 0.13 ppm; sheep, fat 0.02 ppm; sheep, kidney 0.20 ppm; sheep, liver 0.05 ppm; sheep, meat 0.02 ppm; sheep, meat byproducts, except kidney and liver 0.04 ppm; sorghum, grain, forage 1.0 ppm; sorghum, grain, grain 0.3 ppm; sorghum, grain, stover 4.0 ppm; sorghum, sweet, stalk 4.0 ppm; soybean, forage 5.0 ppm; soybean, hay 8.0 ppm; soybean, seed 0.20 ppm; spinach 0.50 ppm; squash, winter 0.10 ppm; sunflower, seed 0.50 ppm; sunflower, meal 1.0 ppm; tomato, paste 0.30 ppm; turnip, greens 1.8 ppm; vegetable, foliage of legume, except soybean, subgroup 7A, 15.0 ppm; vegetable, fruiting, group 8, except tabasco pepper, 0.10 ppm; vegetable, legume, group 6, 0.30 ppm; vegetable, root, except sugar beet, subgroup 1B, except carrot, 0.30 ppm; vegetable, tuberous and corm, subgroup 1C, 0.20 ppm. ***[40 CFR 180.368(c)(1)]:*** pepper, nonbell 0.50 ppm. ***[40 CFR 180.368(c)(2)]:*** pepper, tabasco 0.50 ppm. ***[40 CFR 180.368(d)(1)]:*** animal feed, nongrass, group, 18 ppm; 1.0 ppm; barley, grain 0.10 ppm; barley, hay 0.80 ppm; barley, straw 0.80 ppm; buckwheat, grain 0.10 ppm; millet, forage 0.50 ppm; millet, grain 0.10 ppm; millet, hay 0.80 ppm; millet, straw 0.80 ppm; oat, forage 0.50 ppm; oat, grain 0.10 ppm; oat, hay 0.80 ppm; oat, straw 0.80 ppm; rice, grain 0.10 ppm; rye, forage 0.50 ppm; rye, grain 0.10 ppm; rye, straw 0.80 ppm; wheat, forage 0.50 ppm; wheat, grain 0.10 ppm; wheat, hay 0.80 ppm; wheat, straw 0.80 ppm. ***[40 CFR 180.368(d)(2)]:*** animal feed, nongrass, group, 18 ppm; 1.0 ppm; barley, grain 0.10 ppm; barley, hay 0.50 ppm; barley, straw 0.50 ppm; buckwheat, grain 0.10 ppm; millet, forage 0.50 ppm; millet, grain 0.10 ppm; millet, hay 0.50 ppm; millet, straw 0.50 ppm; oat, forage 0.50 ppm; oat, grain 0.10 ppm; oat, hay 0.50 ppm; oat, straw 0.50 ppm; rice, grain 0.10 ppm; rye, forage 0.50 ppm; rye, grain 0.10 ppm; rye, straw 0.50 ppm; wheat, forage 0.50 ppm; wheat, grain 0.10 ppm; wheat, hay 0.50 ppm; wheat, straw 0.50 ppm.

Human toxicity (long-term)[101]: Very low–100.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low –1117.14617 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Health Advisory: Category: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer, Endocrine disruptor (S!)

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Description: Metolachlor is a colorless to off-white or tan to brown, oily liquid. Slightly sweet odor. Molecular weight = 283.81; Specific gravity (H_2O:1) = 1.12 @ 20 °C; Boiling point = 100 °C. It is stable to ~300 °C; Vapor pressure = 1.5×10^5 mmHg @ 20 °C. Flash point = 110 °C(cc)[86]. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. High solubility in water; solubility = 510 ppm @ 20 °C.

Incompatibilities: Oxidizers, strong acids, nitrate.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 100 ppb[93]; EPA Health Advisory: 700 μg/L; State Drinking Water Guidelines: Wisconsin 15 μg/L; Minnesota 300 μg/L; Minnesota 800 μg/L for Metolachlor-ESA (ethane sulfonic acid) or Metolachlor-OXA (oxanilic acid); Connecticut 10 μg/L; Maine 100 μg/L; Massachusetts 100 μg/L; Florida 110 μg/L. Canadian Drinking Water Standards: MAC 0.05 mg/L EU Drinking Water Guidelines (MAC) = 0.01 mg/L.

Determination in Water: Extraction with methylene chloride followed by separation by gas chromatography and measurement using a nitrogen-phosphorus detector. Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation; through the unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin. Signs of human intoxication from metolachlor and/or its formulations (presumably following acute deliberate or accidental exposures) include abdominal cramps, anemia, ataxia, dark urine, methemoglobinemia, cyanosis, hypothermia, collapse, convulsions, diarrhea, gastrointestinal irritation, jaundice, weakness, nausea, shock, sweating, vomiting, central nervous system depression, dizziness, dyspnea, liver damage, nephritis, cardiovascular failure, skin irritation, dermatitis, sensitization dermatitis, eye and mucous membrane irritation, corneal opacity and adverse reproductive effects. LD_{50} (oral, rats) = <3 g/kg[86]; LD_{50} (dermal, rat) = >3.5 g/kg.

Long Term Exposure: May cause tumors. Limited evidence of carcinogenicity animals[83]. Possible skin sensitizer

Points of Attack: Blood; skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Test for methemoglobinemia. Complete blood count. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to physician or authorized medical personnel:* Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: For liquids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Metolcarb M:1320

Use Type: Insecticide, Acaricide

CAS Number: 1129-41-5

Formula: $C_9H_{11}NO_2$; $C_6H_4(CH_3)OCONHCH_3$

Synonyms: Carbamic acid, methyl-, 3-methylphenyl ester; Carbamic acid, methyl-, 3-tolyl ester; Carbophen; *m*-Cresyl methylcarbamate; *m*-Cresyl ester of *N*-methylcarbamic acid; *m*-Cresyl methyl carbamate; Dicresyl; Dicresyl *N*-methylcarbamate; Metholcarb; Methylcarbamic acid *m*-toyl ester; 3-Methylphenyl-*N*-methylcarbamate; *m*-Methylphenyl methylcarbamate; MTMC; *m*-Tolyester kyseliny methyl karbaminove; *m*-Tolyl-*N*-methylcarbamate; 3-Tolyl-*N*-methylcarbamate

Trade Names: DRC 3341®; KUMIAI®; METACRATE®; S 1065®; SOGATOX DUST® 22; TSUMACIDE®; TSUMAUNKA®; VADEN®

Chemical class: Carbamate (N-methyl)

EPA/OPP PC Code: Not assigned

California DPR Chemical Code:

HSDB Number: 6416

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: FC8050000

EC Number: 214-446-0 [*Annex I Index No.:* 0666-056-00-2]

Uses: Metolcarb is an insecticide for the control of rice green leafhoppers, plant-hoppers, codling moth, citrus mealy bug, onion thrips, fruit flies, bollworms and aphids. Not registered for use in the U.S. Not listed for use in EU countries[115].

Regulatory Authority and Advisory Information: Acute Oral Category: 2, WARNING

Health Advisory: Nerve Toxin (S!)

EPA Hazardous Waste Number (RCRA No.): P190

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Non-wastewater (mg/kg), 1.4

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R51/53; Safety phrases: S2; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Metolcarb is a colorless crystalline solid. Molecular weight = 165.21; Boiling point = 240; Freezing/Melting point = 74–77.8 °C; Flash point >100 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Highly soluble in water.

Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. May form explosive materials with phosphorus pentachloride.

Permissible Exposure Limits in Air: No standards found.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Metolcarb is a carbamate insecticide. Signs and symptoms of poisoning by carbamates are similar to those for organic phosphorus compounds. Symptoms of poisoning by organic phosphorus compounds include headache, giddiness, nervousness, blurred vision, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, myosis, tearing, salivation and other excessive respiratory tract secretion, vomiting, cyanosis, uncontrollable muscle twitches followed by muscular weakness, convulsions, coma, loss of reflexes, and loss of muscular control. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Metolcarb exhibits high oral and skin toxicity, and moderate inhalation toxicity. Some carbamates appear to be carcinogenic, teratogenic, and/or mutagenic. Carbamates are cholinesterase inhibitors. LD_{50} (oral, rat) = >250 mg/kg; LD_{50} (dermal, rat) = 900 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. Also consider complete blood count and chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Metribuzin M:1330

Use Type: Herbicide

CAS Number: 21087-64-9

Formula: $C_8H_{14}N_4OS$

Synonyms: 4-Amino-6-*tert*-butyl-3-(methylthio)-1,2,4-triazin-5-one; 4-Amino-6-*tert*-butyl-3-methylthio-As-triazin-5-one; 4-Amino-6-(1,1-dimethylethyl)-3-(methylthio)-1,2,4-triazin-5-(4H)-one; Metribuzina (Spanish); 1,2,4-Triazin-5-(4H)-one, 4-amino-6-(1,1-dimethylethyl)-3-(methylthio)-; As-triazin-5(4H)-one,4-amino-6-*tert*-butyl-3-(methylthio)-

Trade Names: AUTHORITY®; AXIOM® Metribuzin; BAY 61597®; BAY DIC 1468®; BAYER 6159H®; BAYER 6443H®; BAYER 94337®; BOUNDARY®; CANOPY®; CONQUEST®; DIC 1468®; DOMAIN®; LEXONE®; LEXONEEX®; PREVIEW®[C]; PYTHON®; SENCOR®; SENCORAL®; SENCOREX®; SENCORER®; VAPCOR®

Chemical class: Triazinone

EPA/OPP PC Code: 101101

California DPR Chemical Code: 1692

HSDB Number: 6844

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: XZ2990000

EC Number: 244-209-7 [*Annex I Index No.:* 606-034-00-8]

Uses: Metribuzin is a selective triazine herbicide which inhibits photosynthesis of susceptible plant species. It is used for control of annual grasses and numerous broadleaf weeds in asparagus, potatoes, lucerne, peas, lentils, soya beans, sugar cane, sainfoin, pineapples and cereals. It is applied to fallow lands. Metribuzin is available as liquid suspension, water dispersible granular, and dry flowable formulations.

U.S. Maximum Allowable Residue Levels for Metribuzin (40 CFR 180.332): alfalfa, forage 2 ppm; alfalfa, hay 7 ppm; asparagus 0.1 ppm; barley, grain 0.75 ppm; barley, hay 7 ppm; barley, pearled barley 3 ppm; barley, straw 1 ppm; carrot, roots 0.3 ppm; cattle, fat 0.7 ppm; cattle, meat 0.7 ppm; cattle, meat byproducts 0.7 ppm; corn, field, forage 0.1 ppm; corn, field, grain 0.05 ppm; corn, field, stover 0.1 ppm; corn, pop, grain 0.05 ppm; corn, sweet, forage 0.1 ppm; corn, sweet, kernel plus ppm; cob with husks removed 0.05 ppm; corn, sweet, stover 0.1 ppm; egg 0.01 ppm; goat, fat 0.7 ppm; goat, meat 0.7 ppm; goat, meat byproducts 0.7 ppm; grass, forage 2 ppm; grass, hay 7 ppm; hog, fat 0.7 ppm; hog, meat 0.7 ppm; hog, meat byproducts 0.7 ppm; horse, fat 0.7 ppm; horse, meat 0.7 ppm; horse, meat byproducts 0.7 ppm; lentil 0.05 ppm; milk 0.05 ppm; pea 0.1 ppm; pea, dry 0.05 ppm; pea, dry, seed 0.05 ppm; pea, field, hay 4 ppm; pea, field, vines 0.5 ppm; pea, succulent 0.1 ppm; potato 0.6 ppm; potato, chips 3 ppm; poultry, fat 0.7 ppm; poultry, meat 0.7 ppm; poultry, meat byproducts 0.7 ppm; sainfoin, forage 2 ppm; sainfoin, hay 7 ppm; sheep, fat 0.7 ppm; sheep, meat 0.7 ppm; sheep, meat byproducts 0.7 ppm; soybean, forage 4 ppm; soybean, hay 4 ppm; soybean, seed 0.3 ppm; sugarcane, cane 0.1 ppm; sugarcane, molasses 2 ppm; tomato 0.1 ppm; wheat, bran 3 ppm; wheat, forage 2 ppm; wheat, germ 3 ppm; wheat, grain 0.75 ppm; wheat, hay 7 ppm; wheat, middlings 3 ppm; wheat, shorts 3 ppm; wheat, straw 1 ppm.

Human toxicity (long-term)[101]: Very low–200.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–7683.76758 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Safe Drinking Water Act: Priority List (55 FR 1470)

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R9; R22; R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: Metribuzin is a white crystalline solid. Mild, sulfurous odor. Molecular weight = 214.31; Specific gravity (H_2O:1) =1.28 @ 20 °C; Boiling point = (decomposes) 132 °C; Freezing/Melting point = 125–127 °C; Vapor pressure = 4×10^7 mmHg. Highly soluble in water; solubility = 1.2×10^3 ppm. Available in various concentrations (4%, 50%, 75%, etc.). Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Decomposition starts in temperatures >125 °C. Strong oxidizers. When heated to decomposition, forms oxides of nitrogen and sulfur.

Permissible Exposure Limits in Air: OSHA PEL: None
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA, not classifiable as a human carcinogen

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 70 μg/L; State Drinking Water Guidelines: Maine 175 μg/L; Florida 180 μg/L; Minnesota 200 μg/L; Wisconsin 250 μg/L. Canadian Drinking Water Standards: MAC 0.08 mg/L.

Determination in Water: Solvent extraction with methylene chloride followed by exchange to acetone, separation by gas chromatography and measurement with a thermionic bead detector. Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Metribuzin can affect you when breathed in and by passing through your skin. Acute poisoning can cause difficult breathing and drowsiness. High exposures may cause upset stomach, fatigue, and depression of the central nervous system, causing poor coordination, tremors and weakness. LD_{50} (oral, rat) = 1100 mg/kg[83]; (dermal, rat) = >2 g/kg.

Long Term Exposure: Repeated or high exposure may cause liver enzyme changes, goiter, and affect thyroid function.

Points of Attack: Central nervous system, thyroid and liver.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. If symptoms develop or overexposure is suspected, the following may be useful: Thyroid function test.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposures *over 5 mg/m^3*, use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator with a pesticide cartridge. Greater protection is provided by a powered-air purifying respirator. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Store in tightly closed containers in a cool, dry area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Triazine pesticides, solid, toxic, require a shipping label of "poisonous materials." They usually fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Extinguish fire using an agent suitable for type of surrounding fire. Metribuzin itself does not burn. Hazardous decomposition includes nitrogen oxides and sulfur oxides. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions;

also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Metsulfuron-methyl M:1345

Use Type: Herbicide
CAS Number: 74223-64-6
Formula: $C_{14}H_{15}N_5O_6S$
Synonyms: Benzoic acid, 2-[((((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl)amino)sulfonyl]-methyl ester; Methyl-2-[[(4-methoxy-6-methyl-1,3,5-triazyn-2-yl)aminocarbonyl]aminosulfonyl]benzoate; Methyl 2-[((((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl) amino) sulfonyl]benzoate; Methyl 2-[3-(4-methoxy-6-methyl-1,3,5-triazin-2-yl)ureidosulphonyl]benzoate
Trade Names: ALLIE®; ALLY®; ALLY-20DF®; ANSWER®; BRUSH-OFF®; CANVAS®; CIMARRON®; DMC® WEED CONTROL; DPD 63760H®; DPX 6376®; DPX-T 6376®; ESCORT®; FINESSE®; GROPPER®; NUP®; PARTISAN®; PASTURE® MD; RIVERDALE®; ROSULFURON®
Chemical class: Sulfonylurea
EPA/OPP PC Code: 122010
California DPR Chemical Code: 2222
HSDB Number: 6849
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: DH3563000
EC Number: 616-063-8 [*Annex I Index No.:* 613-139-00-2]
Uses: Metsulfuron-methyl is a pre-emergence and post-emergence herbicide used to control annual grasses, brush, woody plants and broadleaf weeds. It can be applied to cereals including barley, rye and wheat and to pastures. It is primarily used to control brush, woody plants and broadleaf weeds on rights-of-way, fence rows, storage areas, highways and other non-crop areas.
U.S. Maximum Allowable Residue Levels for metsulfuron-methyl and its metabolite methyl 2-[[[[(4-methoxy-6-methyl-1-,3,5-triazin-2-yl)amino]carbonyl]amino]sulfonyl]-4-hydroxybenzoate. [40 CFR 180.428(a)(1)]: in or on the following raw material agricultural commodities: barley, grain 0.1 ppm; barley, hay 20.0 ppm; barley, straw 0.3 ppm; grass, fodder 15.0 ppm; grass, forage 15.0 ppm; grass, hay 15.0 ppm; sorghum, grain, forage 0.2 ppm; sorghum, grain, grain 0.1 ppm; sorghum, grain, stover 0.2 ppm; sugarcane, cane 0.05 ppm; wheat, forage 5.0 ppm; wheat, grain 0.1 ppm; wheat, hay 20.0 ppm; and wheat, straw 0.3 ppm. ***For metsulfuron-methyl [40 CFR 180.428(a)(2)]:*** in or on the following raw agricultural commodities: cattle, fat 0.1 ppm; cattle, kidney 0.5 ppm; cattle, meat 0.1 ppm; cattle, meat byproducts 0.1 ppm; goat, fat 0.1 ppm; goat, kidney 0.5 ppm; goat, meat 0.1 ppm; goat, meat byproducts 0.1 ppm; hog, fat 0.1 ppm; hog, kidney 0.5 ppm; hog, meat 0.1 ppm; hog, meat byproducts 0.1 ppm; horse, fat 0.1 ppm; horse, kidney 0.5 ppm; horse, meat 0.1 ppm; horse, meat byproducts 0.1 ppm; milk 0.05 ppm; sheep, fat 0.1 ppm; sheep, kidney 0.5 ppm; sheep, meat 0.1 ppm; and sheep, meat byproducts 0.1 ppm.
Human toxicity (long-term)[101]: Very low–1750.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Very low–31167.38603 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans
Acute Oral Category: 3, CAUTION
Health Advisory: Developmental/Reproductive Toxin
Marine pollutant: IMDG, some formulations
Environmental hazard: IATA, some formulations
European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S60; S61 (see Appendix 1)
Description: White, off-white or pale yellow crystalline solid. Slight, sweet odor; ester-like. Molecular weight = 381.37; Specific gravity (H_2O:1) = 1.47; Freezing/Melting point = 158 °C; 163 °C; Vapor pressure = 3×10^{12} mmHg @ 25 °C. Soluble in water; solubility = 108 mg/L @ 25 °C.
Incompatibilities: Strong oxidizers. Stable in air to about 140 C. It is hydrolyzed in acid solutions.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause reproduction problems.

Points of Attack: Reproductive cells.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or from exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl, halosulfuron, primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Offer surplus and non-recyclable solutions to a licensed disposal company. Dissolve or mix the pesticide with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber.

Mevinphos M:1350

Use Type: Insecticide, Acaricide

CAS Number: 7786-34-7

Formula: $C_7H_{13}O_6P$

Synonyms: 2-Butenoic acid, 3-[(dimethoxyphosphinyl) oxy]-, methyl ester; α-2-Carbomethoxy-1-methylvinyl dimethyl phosphate; 2-Carbomethoxy-1-methylvinyl dimethyl phosphate; α-(-2-Carbomethoxy-1-methylvinyl) dimethyl phosphate; 2-Carbomethoxy-1-methylvinyl dimethyl phosophate, α isomer; 2-Carbomethoxy-1-propen-2-yl dimethyl phosphate; CMDP; Crotonic acid, 3-hydroxy-, methyl ester, dimethyl phosphate; Crotonic acid, 3-hydroxy- methyl ester, dimethyl phosphate, *(E)*-; 3-[(Dimethoxy phosphinyl) oxy]-2-butenoic acid methyl ester; *O,O*-dimethyl-*O*-(2-carbomethoxy-1-methylvinyl) phosphate; *O,O*-Dimethyl 1-carbomethoxy-1-propen-2-yl phosphate; Dimethyl-1-carbomethoxy-1-propen-2-yl phosphate; Dimethyl (2-methoxycarbonyl-1-methylvinyl) phosphate; Dimethyl methoxycarbonylpropenyl phosphate; Dimethyl (1-methoxycarboxypropen-2-yl) phosphate; *O,O*-Dimethyl *O*-(1-methyl-2-carboxyvinyl) phosphate; Dimethyl phosphate of methyl 3-hydroxy-*cis*-crotonate; Duraphos; ENT 22,374; 3-hydroxycrotonic acid methyl ester dimethyl phosphate; Menite; *cis*-2-Methoxycarbonyl-1-methylvinyl dimethylphosphate; 2-Methoxycarbonyl-1-methylvinyl dimethyl phosphate; (*cis*-2-Methoxycarbonyl-1-methylvinyl) dimethyl phosphate; 1-Methoxycarbonyl-1-propen-2-yl dimethyl phosphate; Methyl-3-((dimethoxyphosphinyl)oxy)-2-butenoate, α-isomer; Methyl 3-[(dimethoxyphosphinyl) oxy]-2-butenoate; Methyl 3-(dimethoxyphosphinyloxy) crotonate; Methyl 3-hydroxy-α-crotonate dimethyl phosphate; Methyl-3-hydroxy-α-crotonate, dimethyl phosphate ester; Methyl 3-hydroxycrotonate dimethyl phosphate ester; NSC 46470; *cis*-Phosdrin; Phosfene; Phosphene; Phosphoric acid, dimethyl ester with methyl 3-hydroxycrotonate; Phosphoric acid, (1-methoxycarboxypropen-2-yl) dimethyl ester

Trade Names: AI3-22374®; APAVINPHOS®; CASWELL No. 160B®; CENTURY-CIDE®[C]; COMPOUND 2046®; DURHAM®[C]; EXCELCIDE®[C]; GESFID®; GESTID®; PD 5®; HELENA PHOSDRIN®[C]

Chemical class: Organophosphate

EPA/OPP PC Code: 015801

California DPR Chemical Code: 480

HSDB Number: 777

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: GQ5250000

EC Number: 232-095-1 [*Annex I Index No.:* 015-020-00-5]

Uses: Mevinphos is an organophosphate insecticide used to control a broad spectrum of insects, including aphids, grasshoppers, leafhoppers, cutworms, caterpillars, and many other insects on a wide range of field, forage, vegetable, and fruit crops. It is also an acaricide that kills or controls mites and ticks. It acts quickly both as a contact insecticide, acting through direct contact with target pests, and as a systemic insecticide which becomes absorbed by plants on which insects feed. Not approved for use in EU countries[115]. Not registered for use in the U.S.

Human toxicity (long-term)[101]: High–1.75 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.96183 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: ACGIH A4, not classified as a human carcinogen; EPA Deferred classification

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin. Mutagen

Classified for restricted use, limited to use by or under the direct supervision of a certified applicator. All emulsifiable concentrates and liquid concentrates. Psycodid filter fly formulations, and 2% dusts ***(40 CFR 162.31)***.

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500 lb (227 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R27/28; R50/53; safety phrases: S1/2; S23; S28; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Mevinphos is a pale yellow to orange high-boiling liquid. Weak odor. Commercial products available as an emulsifiable concentrate. Molecular weight = 224.17; Specific gravity (H_2O:1) = 1.25 @ 20 °C; Boiling point = (decomposes) 243 °C; 280 °C; Freezing/Melting point = 6.7 °C (*trans-*); 21 °C (*cis-*); Vapor pressure: 0.0001 mmHg @ 20 °C; Flash point = 79.5 °C (oc). Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations. Commercial product is a mixture of the *cis-* and *trans-*isomers. Insecticide may be absorbed on a dry carrier. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Decomposes in heat, producing phosphoric acid and phosphorus oxides fumes. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Corrosive to cast iron, some stainless steels and brass. Attacks some forms of plastics, rubber and coating.

Permissible Exposure Limits in Air: NIOSH IDLH: 4 ppm

Conversion factor: 1 ppm = 9.17 mg/m^3 @ 25 °C & 1 atm

OSHA PEL: 0.1 mg/m^3 TWA [skin]

NIOSH REL: 0.01 ppm/0.1 mg/m^3 TWA; 0.03 ppm/0.3 mg/m^3 STEL [skin]

ACGIH TLV®[1]: 0.01 mg/m^3 measured as inhalable fraction and vapor TWA [skin]; not classifiable as a human carcinogen; BEI$_A$ issued as Acetylcholinesterase inhibiting pesticides

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.3 mg/m^3
PAC-2: 4 mg/m^3
PAC-3: 36.6 mg/m^3

DFG MAK: 0.01 ppm/0.093 mg/m^3 TWA; Peak Limitation Category II(2) [skin]

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 1.8 μg/L

Determination in Water: Log K$_{ow}$ = <0.1.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Cholinesterase inhibitor and fast-acting poison. Mevinphos may affect the nervous system, causing convulsions, respiratory failure. This material is super toxic; the probable oral lethal dose for humans is <5 mg/kg, or a taste (<7 drops) for a 150 lb person. It has direct and immediate effects whether it is swallowed, inhaled, or absorbed through the skin. Symptoms include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, dizziness, runny nose, tightness in the chest, blurring and dimming of vision, slurring of speech, twitching of muscles, mental confusion, disorientation, difficulty breathing, blueing of skin, convulsions, coma, and death. Delayed pulmonary edema may occur after inhalation. LD$_{50}$ (oral, rat) = 3.5 mg/kg; (dermal, rat) = >4000 mg/kg;.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; mevinphos may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Neurotoxic.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:*

Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European

Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, and nitrogen. May be fatal if inhaled, ingested or absorbed through the skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Extra care must be exercised as the material in an organic solvent is highly flammable.

Mexacarbate M:1360

Use Type: Insecticide, Molluscicide

CAS Number: 315-18-4

Formula: $C_{12}H_{18}N_2O_2$

Synonyms: Carbamate,4-dimethylamino-3,5-xylyln-methyl-; Carbamic acid, methyl-, methylcarbamate (ester); Carbamic acid, methyl-, 4-(dimethylamino)-3,5-xylyl ester; 4-(Dimethylamine)-3,5-xylyln-methylcarbamate; 4-(Dimethylamino)-3,5-dimethylphenol methylcarbamate (ester); 4-(Dimethylamino)-3,5-dimethylphenyl *N*-methylcarbamate; 4-(Dimethylamino)-3,5-xylenol,methylcarbamate (ester); 4-Dimethylamino-3,5-xylylmethylcarbamate; 4-Dimethylamino-3,5-xylyl *N*-methylcarbamate; 4-(*N,N*-Dimethylamino)-3,5-xylyl *N*-methylcarbamate; 5-Dimethylphenol methylcarbamate ester; ENT 25766; Methylcarbamic acid, 4-(dimethylamino)-3,5-xylyl ester; Methyl-4-dimethylamino-3,5-xylylcarbamate; Methyl-4-dimethylamino-3,5-xylyl ester of carbamic acid; NCI-C00544; OMS-47; Phenol, 4-(dimethylamino)-3,5-dimethyl-methylcarbamate (ester); 3,5-Xylenol, 4-(dimethylamino)-, methylcarbamate; Mexacarbato (Spanish)

Trade Names: DOWCO® 139)[C]; ZACTRAN®; ZECTANE®; ZECTRAN®; ZEXTRAN®

Chemical class: Carbamate (N-methyl)

EPA/OPP PC Code: 044201

California DPR Chemical Code: 623

HSDB Number: 1042

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: FC0700000

EC Number: 206-249-3 [*Annex I Index No.:* 006-054-00-1]

Uses: It is a insecticide and molluscicide for non-agricultural uses, e.g., lawn and turf, flowers, gardens, vines, forest lands, woody shrubs and trees. It is not used commercially in the U.S. Not listed for use in EU countries[115]. There are 14 global suppliers[97].

Fish toxicity (threshold)[101]: Intermediate–31.03658 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: IARC, Group 3 not classifiable as to its carcinogenicity in human.

Poison (oral) Category: 1, DANGER-POISON

Health Advisory: Nerve Toxin, Tumorigen, Mutagen, Reproductive Toxin

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

EPA Hazardous Waste Number (RCRA No.): P128

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Non-wastewater (mg/kg), 1.4

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: T+, Xn, N; risk phrases: R21; R28; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

Description: Mexacarbate is a white to tan crystalline solid. It may be dissolved in a liquid solvent. Odorless. Molecular weight = 222.30; Boiling point = (decomposes); Freezing/Melting point = 85 °C; Vapor pressure = 6×10 ^{6}mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Practically insoluble in water.

Incompatibilities: Decomposes (hydrolyzes) in alkaline media. Subject to photo-decomposition in the solid state[IARC]. Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. May form explosive materials with phosphorus pentachloride.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1.3 mg/m^3
PAC-2: 14 mg/m^3
PAC-3: 14 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <2.7. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin, and/or contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Extremely toxic: probable oral lethal dose for humans is 5–50 mg/kg; between 7 drops and 1 teaspoonful for a 70 kg person (150 lb). Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Contact may cause burns to skin and eyes. Symptoms of carbamate poisoning resemble those of parathion. This material is similar to carbaryl; symptoms of carbaryl exposure include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, sweating, lassitude and weakness. Runny nose and sensation of tightness in chest may occur with inhalation exposures. Blurring or dimness of vision, tearing, eye muscle spasm, loss of muscle coordination, slurring of speech, and twitching of muscles may also occur. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Acute effects: Narcotic; Cholinesterase toxin; Respiratory toxin, acute effects other than severe or moderate irritation; Eye other than irritation; Brain; Gastrointestinal tract; Nervous system toxin. LD_{50} (oral, rat) = <20 mg/kg; LD_{50} (dermal, rat) = >1500 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Mexacarbate may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Chronic effects: Developmental/Reproductive Toxin; Liver; Nervous system toxin.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. Also consider complete blood count and chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont^{TM} Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. For liquids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Molinate M:1405

Use Type: Herbicide

CAS Number: 2212-67-1

Formula: $C_9H_{17}NOS$

Synonyms: 1*H*-Azepine-1-carbothioic acid, hexahydro-*S*-ethyl ester; Carbamic acid, hexamethylenethio-, *S*-ethyl ester; Carbamothioic acid, *N,N*-hexamethylene-, *S*-ethyl ester; Caswell No. 44; *S*-Ethyl azepane-1-carbothioate; *S*-Ethyl ester hexahydro-1*H*-azepine-1-carbothioioate; *S*-Ethyl hexahydro-1*H*-azepine-1-carbothioate; *S*-Ethyl hexahydro-1-carbothioic; ethyl 1-hexamethyleneiminecarbothiolate; *S*-Ethyl 1-hexamethyleneiminothiocarbamate; *S*-Ethyl *N,N*-hexamethyleneiminothiocarbamate; *S*-Ethyl *N*-hexamethyleneiminothiocarbamate; *S*-Ethyl perhydroazepin-1-carbothioate;*S*-Ethylperhydroazepine-1-thiocarboxylate

Trade Names: ARROSOLO®; FELAN®; HIGALNATE®; HYDRAM®; JALAN®; MALERBANE-GIAVONI-L®; ORDAM®; ORDRAM®; R-4572®; RICECO; SAKKIMOL®; STAUFFER R 4,572®; YALAN®; YULAN®

Chemical class: Thiocarbamate

EPA/OPP PC Code: 041402

California DPR Chemical Code: 449

HSDB Number: 873

UN/NA & ERG Number: UN2902/151

RTECS® Number: CM2625000

EC Number: 218-661-0 [*Annex I Index No.:* 613-051-00-4]

Uses: Molinate is a selective herbicide used on rice for the control of water grass and other weeds.

U.S. Maximum Allowable Residue Levels for Molinate (40 CFR 180.228): rice and rice straw 0.1 ppm.

Human toxicity (long-term)[101]: High–1.40 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–568.94463 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Suggestive evidence of carcinogenicity, but not sufficient to assess human potential; EU GHS Category 2: Suspected human carcinogen

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin (TRI)

Acute Oral Category: 4, Caution, not acutely toxic

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive)

EPA Hazardous Waste Number (RCRA No.): U365

RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Non-wastewater (mg/kg), 1.4

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R20/22; R36/38; R40; R43; R48/22; R50/53; R63; safety phrases: S2; S36/37; S46; S60; S61 (see Appendix 1)

Description: Clear or amber liquid. Aromatic, spicy odor. Molecular weight = 187.32; Specific gravity (H_2O:1) = 1.065 @ 20 °C; 1.5156 @ 30 °C; Boiling point = 202 °C @ 10 mm; Freezing/Melting point = –25 °C; Vapor pressure = 5.7×10^{3} mmHg @ 25 °C; Flash point = >140 °C. Soluble in water; solubility = 970 mg/L @ 21 °C.

Incompatibilities: Reacts violently with powerful oxidizers such as calcium hypochlorite. Photosensitivity; unstable in light. Stable at temperatures <200 °C. Corrosive to black iron, drum steel, stainless steel 304 and brass, but not to glass, aluminum, or stainless steel 316. Flammable gases are generated by the combination of thiocarbamates with aldehydes, nitrides, and hydrides. Thiocarbamates are incompatible with acids, peroxides, and acid halides.

Permissible Concentration in Water: State Drinking Water Standards: California 20 μg/L; State Drinking Water Guidelines: Florida 14 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Some thiocarbamates may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may cause respiratory failure, resulting in death. LD_{50} (oral, rat) = 350–450 mg/kg; (dermal, rat) = >5000 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause personality changes with depression, anxiety, irritability.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a dark, secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sdium bcarbonate, etc.). Stable when stored in glass or polyethylene containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, liquid, toxic, n.o.s., require a shipping label of "poisonous materials." This material falls in DOT Hazard Class 6.1. Technical name required.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. For liquids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. If allowed, incineration with effluent gas scrubbing (carbon dioxide may be released) is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Myclobutanil M:1470

Use Type: Fungicide

CAS Number: 88671-89-0

Formula: $C_{15}H_{17}ClN_4$

Synonyms: α-Butyl-α-(4-chlorophenyl)-1*H*-1,2,4-triazole-1-propanenitrile; Caswell No. 723 K; 2-(4-Chlorophenyl)-2-(1*H*-1,2,4-triazole-1-ylmethyl)hexanenitrile; 2-*p*-Chlorophenyl-2-(1*H*-1,2,4-triazole-1-ylmethyl)hexanenitrile; 1*H*-1,2,4-Triazole-1-propanenitrile, α-butyl-α-(4-chlorophenyl)

Trade Names: EAGLE®; NOVA®; NU-FLOW®; RALLY®; LAREDO®; RH 3866®; SYSTHANE® TECHNICAL

Chemical class: Azole; Triazole

EPA/OPP PC Code: 128857

California DPR Chemical Code: 2245

HSDB Number: 6708

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: XZ5257000

EC Number: 410-400-0

Uses: Widely used to control powdery mildew, rust, sclerotina, spot blight, rot, black rot and similar fungi on a variety of food and non-food crops.

U.S. Maximum Allowable Residue Levels for Myclobutanil [40 CFR 180.443(a)]: almond 0.1 ppm; almond, hulls 2.0 ppm; apple 0.5 ppm; apple, dry pomace 5.0 ppm; apple, wet pomace 5.0 ppm; asparagus 0.02 ppm; banana, postharvest 4.0 ppm; bean, snap, succulent 1.0 ppm; caneberry subgroup 13A, 2.0 ppm; cattle, fat 0.05 ppm; cattle, liver 1.0 ppm; cattle, meat 0.1 ppm; cattle, meat byproducts, except liver 0.02 ppm; cherry, sweet 5.0 ppm; cherry, tart 5.0 ppm; cotton, undelinted seed 0.02 ppm; currant 3.0 ppm; egg 0.02 ppm; fruit, stone (except cherry) 2.0 ppm; goat, fat 0.05 ppm; goat, liver 1.0 ppm; goat, meat 0.1 ppm; goat, meat byproducts, except liver 0.2 ppm; gooseberry 2.0 ppm; grain, aspirated fractions 35 ppm; grape pomace (wet and dry) 10.0 ppm; grape 1.0 ppm; grape, raisin 10.0 ppm; grape, raisin, waste 25.0 ppm; hog, fat 0.05 ppm; hog, liver 1.0 ppm; hog, meat 0.1 ppm; hog, meat byproducts, except liver 0.2 ppm; hop, dried cones 10 ppm; horse, fat 0.05 ppm; horse, liver 1.0 ppm; horse, meat 0.1 ppm; horse, meat byproducts, except liver 0.2 ppm; mayhaw 0.70 ppm; milk 0.2 ppm; peppermint, tops 3.0 ppm; plum, prune, dried 8.0 ppm; poultry, fat 0.02 ppm; poultry, meat 0.02 ppm; poultry, meat byproducts 0.02 ppm; sheep, fat 0.05 ppm; sheep, liver 1.0 ppm; sheep, meat 0.1 ppm; sheep, meat byproducts, except liver 0.2 ppm; soybean, forage 3.5 ppm; soybean, hay 15 ppm; soybean, refined oil 0.40 ppm; soybean, seed 0.25 ppm; spearmint, tops 3.0 ppm; strawberry 0.50 ppm; tomato 0.30 ppm; tomato, puree 0.50 ppm; tomato, paste 1.0 ppm; vegetable, cucurbit, group 9, 0.20 ppm; ***[40 CFR 180.443(d)]:*** Animal feed, nongrass, group 18, 0.03 ppm; grain, cereal, forage, fodder and straw, group 16, 0.03 ppm; grain, cereal, group 15, 0.03 ppm; vegetable, brassica, leafy, group 5, 0.03 ppm; vegetable, foliage of legume, group 7, 0.03 ppm; vegetable, fruiting, group 8, 0.03 ppm; vegetable, leafy, except brassica, group 4, 0.03 ppm; vegetable, leaves of root and tuber, group 2, 0.03 ppm; vegetable, legume, group 6, 0.03 ppm; vegetable, root and tuber, group 1, 0.03 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for human

California Proposition 65 Chemical: Developmental/Reproductive toxin (male)

Health Advisory: Developmental/Reproductive Toxin

Acute Oral Category: 3, CAUTION (human, fatal >30 gm)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R36; R50/53; R63; safety phrases: S2; S26; S36/37; S46; S60; S61 (see Appendix 1)

Description: White to pale yellow crystalline solid. Molecular weight = 288.78; Specific gravity (H_2O:1) = 1.24; Boiling point = 391 °C; 465 °C; Freezing/Melting point = 65 °C; Vapor pressure = 10^{8} mmHg @ 25 °C; Vapor pressure = 1.57×10^{6} mmHg @ 0 °C; Flash point = 235 °C. Soluble in water; solubility = 142 mg/L @ 25 °C.

Incompatibilities: Decomposes on exposure to strong light. Incompatible with oxidizers. The triazoles are sensitive to heat, friction, and impact. Sensitivity varies with the type substitution to the triazole ring. Metal chelated and halogen substitution of the triazol ring make for a particularly heat sensitive material. Azido and nitro derivatives have been employed as high explosives. No matter the derivative these materials should be treated as explosives[88].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Method: USGS-NWQL O-2002-01; Procedure: gas chromatography/mass spectrometry; Matrix: filtered natural-water; Detection limit: 0.0011 μg/L. Log K_{ow} = >2.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, inhalation, dermal and eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. Causes irreversible eye damage. Harmful when inhaled, swallowed, or absorbed through skin. Poisonous if swallowed. Contact may irritate skin and cause eye irritation and possible severe injury. Avoid inhalation. LD_{50} (oral, rat) = 1600 mg/kg; (dermal, rat) = >2 g/kg.

Long Term Exposure: Evidence of reproductive and developmental effects.

Points of Attack: Eyes, skin. This chemical may damage the male reproductive glands.

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Production of effects on the reproductive system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned. Do not allow water to get inside containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: See "Incompatibilities" section. Hazardous decomposition includes toxic oxides of nitrogen and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions;

also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

N

Nabam N:0050

Use Type: Fungicide, Algaecide, Herbicide, Microbiocide
CAS Number: 142-59-6
Formula: $C_4H_6N_2Na_2S_4$
Synonyms: Carbamodithioic acid, 1,2-ethanediylbis-, disodium salt; Carbamic acid, ethylenebis (dithio-), disodium salt; Disodium ethylenebis(dithiocarbamate); DSE; EBDC, disodium salt; EBDC, Sodium salt; 1,2-ethanediylbis(carbamodithioic acid), disodium salt; Ethylenebis(dithiocarbamic acid), disodium salt; Nabame; Nabasam (obsolete)
Trade Names: AMA-30®, Kemira Chemical (Finland); CAMBELL'S® NABAM SOIL FUNGICIDE; CARBON D®; NALCO D-62C44®; CHEM-BAM®; DITHANE A-40®; DITHANE A-46®; DITHANE D-14®[C]; NAFUN-IPO®; NALCO® D-62C44; PARZATE®; SPRING-BAK®
Chemical class: Dithiocarbamate
EPA/OPP PC Code: 014503
California DPR Chemical Code: 417
HSDB Number: 1170
UN/NA & ERG Number: UN3077(solid)/171; UN2771 (solid)/151
RTECS® Number: FA6825000
EC Number: 205-547-0 [*Annex I Index No.:* 006-014-00-3]
Uses: Nabam is a broad-spectrum fungicide/bactericide/algaecide used to prevent crop damage by fungi, to protect harvested products from deterioration, and as an industrial microbiocide. As a result of the U.S. EPA review of nabam in 1989, all food uses were voluntarily canceled by the manufacturers except for one FDA-regulated food use on sugar mill grinding, crusher and/or diffuser systems, e.g., processing water systems. Registered only for non-food application. Not approved for use in EU countries[115]. Registered for use in the U.S. and Canada.

Regulatory Authority and Advisory Information:
California Proposition 65 Chemical: Developmental/Reproductive toxin (3/30/1999)
Acute Oral Category: 2, WARNING
Health Advisory: Mutagen, Developmental/Reproductive Toxin
47 FR 47669 (10/27/82); 54 FR 50020 (12/04/89); (55 FR 7935 (03) 06/90) [Environmental Protection]
California Chemical List of Lists (February 1997)
EPA Hazardous Waste Number (RCRA No.): U114
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
Marine pollutant (49CFR, Subchapter 172.101, Appendix B)
European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R37; R43; R50/53; safety phrases: S2; S8; S24/26; S46; S60; S61 (see Appendix 1)

Description: Colorless crystalline solid (when pure). Light amber crystalline solid or 22% wettable powder solution. Slight odor of sulfide. Molecular weight = 256.34; Specific gravity (H_2O:1) = 1.14 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = decomposes before melting @ 196 °C; Vapor pressure = very low; negligible. Hazard Identification (based on NFPA-704 M Rating System): Health Hazards (Blue): 2; Flammability (Red): 0; Reactivity (Yellow): 0. Molecular weight = 256.34; Boiling point = decomposes; Freezing/Melting point = decomposes when heated, without melting; Specific gravity: 1.14 @ 20 °C (solid). Highly soluble in water; solubility = $>2\times10^5$ mg/L.
Incompatibilities: Combustible material. Dust may form explosive mixture in air. Water, acid, oxidizing materials. Heat, or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide. Flammable gases are generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Corrosive to iron, copper brass and zinc metals, especially in the presence of moisture. Heat alkalies (lime), moisture can cause decomposition. Decomposes on prolonged storage; by moisture, light, and heat. Degradation produces ethylene thiourea.
Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = Negative; dissociates in water –4.24 (est)[83]. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms
Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. Exposure may cause skin sensitization. LD_{50} (oral, rat) = 395 mg/kg[86]; 1400 mg/kg[83].
Long Term Exposure: Evidence of reproductive and developmental effects. May cause skin sensitization.
Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes. Repeated or prolonged contact with skin may result in dermatitis (red inflamed skin).

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Production of effects on the reproductive system. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive- pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Thiocarbamate and dithiocarbamate pesticides, solid, toxic require a label of "poisonous materials." They usually fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon, and sulfur. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. A potential candidate for liquid injection incineration at a temperature range of 650 to 1,600 °C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1,600 °C and residence times of seconds for liquids and gases, and hours for solids[83].

Naled N:0100

Use Type: Insecticide, Fungicide, Bactericide, Acaricide

CAS Number: 300-76-5

Formula: $C_4H_7Br_2Cl_2O_4P$

Synonyms: BRP; 1,2-Dibromo-2,2-dichloroethyl dimethyl phosphate; *O,O*-dimethyl-*O*-(1,2-dibromo-2,2- dichloroethyl)phosphate; Dimethyl 1,2-dibromo-2,2-dichloroethyl phosphate; *O,O*-Dimethyl *O*-2,2-dichloro-1,2-dibromoethyl phosphate; ENT 24,988; Ethanol, 1,2-dibromo-2,2-dichloro-, dimethyl phosphate; OMS 75; Phosphoric acid, 1,2-dibromo-2,2-dichloroethyl dimethyl ester

Trade Names: AI3-24988®; ARTHODIBROM®; BROMCHLOPHOS®; BROMEX®; DIBROM®; FLYKILLER®; LUCANAL®; HIBROM®; ORTHO® 4355; ORTHODIBROM®; ORTHODIBROMO®; PROKIL® Naled; TRUMPET®

Chemical class: Organophosphate

EPA/OPP PC Code: 034401

California DPR Chemical Code: 418

HSDB Number: 1148

UN/NA & ERG Number: UN3018 (liquid)/152; UN2783 (solid)/152

RTECS® Number: TB9450000

EC Number: 206-098-3 [*Annex I Index No.:* 015-055-00-6]

Uses: Naled is a fast-acting, nonsystemic contact and stomach insecticide used to control aphids, mites, mosquitoes, and flies on crops and in greenhouses, mushroom houses, animal and poultry houses, kennels, food-processing plants, and aquaria and in outdoor mosquito control. Liquid formulations can be applied to greenhouse heating pipes to kill insects by vapor action. It has been used by veterinarians to kill parasitic worms (other than tapeworms) in dogs. Naled may no longer be used in and around the home by residents or professional applicators. Naled is available in dust, emulsion concentrate, liquid, and ULV formulations. Also used in cooling towers, veterinary medicine, pulp and paper mill systems, hospitals, swimming pools, and bathrooms. A U.S. EPA restricted Use Pesticide (RUP). Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Naled and its conversion product 2,2-dichlorovinyl dimethyl phosphate, expressed as naled, resulting from the application of the pesticide to growing crops or from direct application to livestock and poultry [40 CFR 180.215 (a) (1)]: in or on the following raw agricultural commodities: almond, hulls 0.5 ppm; almond 0.5 ppm; bean (dry) 0.5 ppm; bean, succulent 0.5 ppm; beet, sugar, roots 0.5 ppm, beet, sugar, tops 0.5 ppm; broccoli 1 ppm; Brussels sprouts 1 ppm; cabbage 1 ppm; cauliflower 1 ppm; celery 3 ppm; collards 3 ppm; cotton, undelinted seed 0.5 ppm; cucumber 0.5 ppm; eggplant 0.5 ppm; grapefruit 3 ppm; grape 0.5 ppm; grass, forage 10 ppm; hop 0.5 ppm; kale 3 ppm; legume, forage 10 ppm; lemon 3 ppm; lettuce 1 ppm; melon 0.5 ppm; orange, sweet 3 ppm; peach 0.5 ppm; pea (succulent) 0.5 ppm; pepper 0.5 ppm; pumpkin 0.5 ppm; safflower, seed 0.5 ppm; spinach 3 ppm; squash, summer 0.5 ppm; squash, winter 0.5 ppm; strawberry 1 ppm; Swiss chard 3 ppm; tangerine 3 ppm; tomato 0.5 ppm; turnip, greens 3 ppm; and walnut 0.5 ppm. ***[40 CFR 180.215 (a) (2)]:*** in or on all raw agricultural commodities, except those otherwise listed in this section, from use of the pesticide for area pest (mosquito and fly) control: 0.5 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans; ACGIH A4, not classified as a human carcinogen

Health Advisory: Nerve toxin, Mutagen, Skin irritant/sensitizer, Developmental/Reproductive Toxin (TRI)

Acute Oral Category: 2, WARNING

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R21/22; R36/38; R50; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Naled is a white crystalline solid (when pure) or light straw-colored liquid (above 26.7 °C). Slightly pungent insecticide odor. Molecular weight = 380.79; Specific gravity (H_2O:1) = 1.96 @ 25 °C; Boiling point = (decomposes) 110 °C; 273 °C; Freezing/Melting point = 26.7 °C; Vapor pressure = 2×10^{-4} mm @ 20 °C; flash point = >100 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 1. Soluble in water; solubility = 1.5 mg/L (no temperature specified)[83,USDA]. Hydrolyzed in water.

Incompatibilities: Reacts with alkaline media. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Hydrolyzed in presence of water. Degraded by sunlight. Decomposes when heated, on contact with acids, acid fumes, bases, producing fumes of hydrogen chloride, hydrogen bromide, phosphorus oxides. Reacts with acids, strong oxidizers in sunlight. Corrosive to metals; attacks some forms of plastics, rubber, and coating.

Permissible Exposure Limits in Air:

NIOSH IDLH: 200 mg/m^3

OSHA PEL: 3 mg/m^3 TWA

NIOSH REL: 3 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.1 mg/m^3 inhalable fraction and vapor [skin, sensitizer]; not classifiable as a human carcinogen; BEI_A issued as Acetylcholinesterase inhibiting pesticide.

No Protective Action Criteria (PAC) available.

DFG MAK: 1 mg/m^3, measured as the, inhalable fraction TWA; Peak Limitation Category II(2); [skin] danger of skin sensitization; Pregnancy Risk Group C.

Determination in Air: No method available.

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 14 μg/L.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. Irritates the eyes, skin, and respiratory tract. May affect the nervous system, causing convulsions, respiratory failure. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. High exposure can result in death. Highly toxic; a probable human lethal dose may be between 1 teaspoon and 1 ounce. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 80–450 mg/kg; (dermal, rat) = 800 mg/kg[83].

Long Term Exposure: May cause skin allergy. Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage and testicular degeneration. Neurotoxic.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes, blood cholinesterase, testicles.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride, hydrogen bromide and oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

1-Naphthaleneacetamide N:0105

Use Type: Plant growth regulator

CAS Number: 86-86-2

Formula: $C_{12}H_{11}NO$

Synonyms: *N*-Acetyl-1-naphthylamine; NAAM; NAD; Naphthalene-acetamide(1-); 2-(1-Naphthyl)acetamide; α-Naphthaleneacetamide; α-Naphthylacetamide; 1-Naphthylacetamide

Trade Names: AMACTONE®; AMID-THIN W®; FRUITONE®; ROOTONE® (component, with Indole-3-butyric acid and 1-Naphthaleneacetic acid); ROSETONE®; TRANSPLANTONE® (component, with 1-Naphthaleneacetic acid)

Chemical class: Botanical; Auxin

EPA/OPP PC Code: 056001

California DPR Chemical Code: 422

RTECS® Number: QJ0590000

EC Number: 201-704-1

Uses: 1-Naphthaleneacetamide is an agent for thinning fruit sets in apples and pear. Not currently registered for use in EU countries[115] (pending). Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for indole-3-butyric acid: An exemption from the requirement of a tolerance is established for residues of auxins [40 CFR 180.1158]: in or on all food commodities when used as plant regulators on plants, seeds, or cuttings and on all food commodities after harvest in accordance with good agricultural practices.

Regulatory Authority and Advisory Information:

Acute Oral Category: 3, CAUTION

European/International Regulations: Hazard Symbol: Xn, Xi; risk phrases: R22; R36/37/38; safety phrases: S1/2; S24/25; S26; S37/39; S45 (see Appendix 1)

Description: White needles or crystalline solid. Odorless. Molecular weight = 185.23; Boiling point = (decomposes); Freezing/Melting point = sublimes @ 181 ºC. Soluble in water; solubility >15 ppm.

Incompatibilities: Incompatible with oxidizers and alkaline materials. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Decomposes in temperatures above 180 °C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, eye contact.

Harmful Effects and Symptoms

Short Term Exposure: An eye irritant. May cause irritation to the skin and respiratory tract. May be harmful if swallowed. LD_{50} (oral, rat) = 1700 mg/kg; (dermal, rat) = >2 g/kg.

Long Term Exposure: May affect liver and kidney function.

Points of Attack: Liver, kidneys, eyes.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Not regulated.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. May be combustible at high temperatures. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: If allowed, incineration with effluent gas scrubbing is recommended. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

1-Naphthaleneacetic acid N:0108

Use Type: Plant growth regulator

CAS Number: 86-87-3

Formula: $C_{12}H_{10}O_2$

Synonyms: ANA; NAA; Naphthaleneacetic acid(1-); α-Naphthaleneacetic acid; Naphthalene-1-acetic acid; α-Naphthylacetic; Naphthylacetic acid; α-Naphthylacetic acid; 1-Naphthylacetic acid; α-Naphthyleneacetic acid

Trade Names: AGRONAA®; ALCO® NAA; ALPHA-SPRA®; AMCOTONE® APPL-SET®; CELMONE®; DESTRUXOL®; DIP'N GROW®; FRUITONE®; GOLDENGRO®; HORMEX®; KLINGTITE®; LIQUI-STIK®; NAA 800®; NAFUSAKU®; NIAGARA-STIK®; NU-TONE®; PARMONE®; PHYMONE®; PIMACOL-SOL®; PLANOFIX®; PLUCKER®; PRIMACOL®; RHIZOPON B ROOTING POWDER; ROOTONE® (component, with Indole-3-butyric acid and 1-Naphthaleneacetamide); STAFAST®; STIK®; STOP-DROP®; TEKKAM®; TIPOFF®; TRANSPLANTONE® (component, with 1-Naphthaleneacetamide); TRE-HOLD®; VARDHAK®

Chemical class: Botanical; Auxin

EPA/OPP PC Code: 056002

California DPR Chemical Code: 423

HSDB Number: 2038

RTECS® Number: QJ0875000

EC Number: 201-705-8

Uses: An agent for thinning fruit sets in apples, pears, olives and some citrus. Induces root formation on cuttings and transplants. Inhibits fruit drops. Not currently registered in EU countries[115] (pending). Registered for use in the U.S. and Canada.

U.S. Maximum Allowable Residue Levels for 1-Naphthaleneacetic Acid [40 CFR 180.155 (a)]: apple 1.0 ppm; cherry, sweet 0.1 ppm; olive 0.1 ppm; orange 0.1 ppm; pear 1.0 ppm; pineapple 0.05 ppm; quince 1.0 ppm; tangerine 0.1 ppm.

Human toxicity (long-term)[101]: Very low–350.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–4918.96611 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Health Advisory: Mutagen, Skin irritant/sensitizer

Acute Oral Category: 3, CAUTION

Description: White crystals, needles, powder, or colorless liquid. Odorless. Molecular weight = 186.21; Boiling point = (decomposes) 322 °C; 352 °C; Freezing/Melting point = 134 °C; vapor pressure = very low; negligible. Soluble in water.

Incompatibilities: Incompatible with oxidizers, chlorates nitrates, peroxides, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Determination in Water: Log K_{ow} = 2.6. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Dusts may cause skin, and respiratory tract irritation. Eye irritation may be severe. Ingestion may cause upset stomach and affect central nervous system. LD_{50} (oral, rat) = 1000–>1750 mg/kg; (dermal, rat) = >2 g/kg.

Long Term Exposure: Possible blood toxin; may cause lower blood cell count. May be a developmental and reproductive toxin.

Points of Attack: Blood, central nervous system, eyes.

Medical Surveillance: Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Not regulated.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Napropamide N:0173

Use Type: Herbicide

CAS Number: 15299-99-7

Formula: $C_{17}H_{21}NO_2$

Synonyms: *N,N*-Diethyl-2-(1-naphthalenyloxy)propanamide; 2-(1-Naphthoxy)-*N,N*-diethylpropionamide; 2-(α-Naphthoxy)-*N,N*-diethylpropionamide

Trade Names: COLZOR TRIO® (dimethachlor+napropamide+clomazone); DEVRINOL®; NAPROGUARD®; WAYLAY®; R-7165®

Chemical class: Amide Herbicide; Alkanamide

EPA/OPP PC Code: 103001

California DPR Chemical Code: 1728

HSDB Number: 6710

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: UE3600000

EC Number: 239-333-3

Uses: A General Use Pesticide (GUP) that is compatible with many other fungicides and herbicides. Used to control broadleaf weeds and annual grasses on a variety of crops including vegetables, fruit trees, fruit bushes, oil seed rape, vines, sunflowers, olives, tobacco and mint.

U.S. Maximum Allowable Residue Levels for negligible residues (N) of the herbicide N,N-Diethyl-2-(1-naphthalenyloxy)propionamide [40 CFR 180.328(a)]: in or on the following raw agricultural commodities: almond, hulls 0.1(N) ppm; artichokes 0.1 ppm; asparagus 0.1 ppm; avocados 0.1 ppm; basil 0.1 ppm; brassica (cole) leafy vegetables 0.1 ppm; coffee beans 0.1(N) ppm; cucurbits vegetables 0.1 ppm; figs 0.1(N) ppm; fruits, citrus 0.1(N) ppm; fruits, pome 0.1(N) ppm; fruits, small 0.1(N) ppm; fruits, stone 0.1(N) ppm; kiwifruit 0.1 ppm; marjoram 0.1 ppm; mint 0.1 ppm; nuts 0.1(N) ppm; olives 0.1 ppm; persimmons 0.1 ppm; pistachio nuts 0.1 ppm; rhubarb 0.1 ppm; rosemary 0.1 ppm; savory, summer 0.1 ppm; savory, winter 0.1 ppm; sweet potato 0.1 ppm and vegetables, fruiting, 0.1(N) ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.328(b)]:*** in or on the following raw agricultural commodities: pomegranates 0.1 ppm. (N) = negligible amount of residue.

Regulatory Authority and Advisory Information:

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S2; S61 (see Appendix 1)

Description: Colorless crystalline solid (pure). Technical form is tan to brown solid. Molecular weight = 271.35; Specific gravity (H2O:1) = 1.18; Boiling point = 317 °C; Freezing/Melting point = 73.5 °C; Vapor pressure = 1.72×10^{-7} mm @ 20 °C[83,USDA]. Soluble in water; solubility = 73 mg/L @ 20 °C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salt.

Permissible Exposure Limits in Air:

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 800 ppb[14].

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal and eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the respiratory tract. LD_{50} (oral, rat) = >4500 mg/kg; (dermal, rat) = >2 g/kg.

Long Term Exposure: Possible liver and kidney toxin.

Points of Attack: Liver, kidneys.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential for exposure to amides exists, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers; strong acids; strong alkalies. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: The name of this material is not on the DOT list of materials[19] for label and packaging standards. However, based on regulations, it may be classified as an Environmentally hazardous substances, solid, n.o.s. This chemical requires a shipping label of "CLASS 9." It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Napropamide decomposes forming toxic and corrosive gases, including oxides of nitrogen and carbon. This chemical is a combustible solid. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Small amounts may be destroyed by alkaline hydrolysis. Admixture with alkali can be followed by soil burial. Larger quantities can be disposed of by incineration in admixture with acetone or xylene and using effluent gas scrubbing.

Naptalam N:0175

Use Type: Herbicide

CAS Number: 132-66-1; 132-67-2 (Na salt)

Formula: $C_{18}H_{13}NO_3$; $C_{18}H_{12}NNaO_3$ (Na salt)

Synonyms: Benzoic acid, 2-[(1-naphthalenylamino) carbonyl]-; Benzoic acid, 2-[(α-naphthalenylamino) carbonyl]-; Naftalame; 2-[(1-Naphthalenylamino) carbonyl] benzoic acid; *N*-1-Naphthylphthalamate; α-Naphthylphthalamic acid; *N*-1-Naphthylphthalamic acid; Naptalame; NPA; Phthalamic acid, *N*-1-naphthyl-

Trade Names: ALANAP®[C]; ALANAPE®; ANCRACK®; DYANAP®; GRELUTIN®; MORCRAN®; NAPTRO®; NIP-A-THIN®; PEACH-THIN®; RESCUE®[C]; 6Q8®; SOLO®

Chemical class: Amide Herbicide; Phthalamate

EPA/OPP PC Code: 030702; 030703 (Na salt)

California DPR Chemical Code: 2998

HSDB Number: 1742; 5619 (Na salt)

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: TH7351000 (Na salt)

EC Number: 205-073-4 [*Annex I Index No.:* 607-248-00-4] (Na salt)]

Uses: Used as a selective pre-emergence herbicide to control broadleaf weeds and grasses in soybeans, cucumbers, melons, peanuts and woody ornamentals. Not currently registered for use in the U.S. or EU countries[115]. There are 25 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Naptalam from application of its sodium salt [40 CFR 180.297]: in or on the following agricultural commodities: peanut hulls 0.1 ppm; and cantaloups, cranberries, cucumbers, muskmelons, peanuts, peanut hay, soybeans, soybean hay, and watermelons 0.1 ppm (negligible residues).

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen (includes Na salt)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive, sodium salt]

European/International Regulations: Hazard Symbol: Xn; N risk phrases: R20; R50; safety phrases: S2; S22; S24/25 (see Appendix 1)

Description: Purple crystalline solid or powder. Commercial product is usually an aqueous solution. Unpleasant odor. Molecular weight = 291.32; 313.29 (Na salt); Specific gravity (H_2O:1) = 1.37 @ 20 °C; 1.386 (Na salt); Freezing/Melting point = 185 °C; 202 °C; Vapor pressure = <3 mmHg @ 0 °C; Autoignition temperature = 560 °C (Na salt). Soluble in water.

Incompatibilities: Incompatible with oxidizers, chlorates nitrates, peroxides, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Determination in Water: Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Absorbed through the unbroken skin, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May be toxic if absorbed through the skin. Corrosive, can cause serious eye damage; can cause irritation to the eyes, skin and respiratory tract. High levels of exposure may cause pulmonary edema, a medical emergency that may be delayed for several hours. Harmful if swallowed; may cause burns to the digestive tract, mouth, throat and stomach. LD_{50} (oral, rat) = 1770 mg/kg[83]; (dermal, rat) = >2 g/kg.

Long Term Exposure: Eye problems may develop.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust,

vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until and expert verifies that the area has been properly cleaned.
Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.
Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as a hazardous waste in a landfill approved and licensed for the disposal of pesticides. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Nicosulfuron N:0295

Use Type: Herbicide
CAS Number: 111991-09-4
Formula: $C_{15}H_{18}N_6O_6S$
Synonyms: 2-[((((4,6-Dimethoxy-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]-*N,N*-dimethyl-3-pyridinecarboxamide; 3-Pyridinecarboxamide, 2-[((((4,6-dimethoxy-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]-*N,N*-dimethyl-
Trade Names: ACCENT®; BASIS®; CELEBRITY®; CHALLENGER®; DASUL®; DPX 79406® Herbicide (with Rimsulfuron); DPX-V9636®; GHIBLI®; LAMA®; MATRIX® Herbicide (with Rimsulfuron); MILAGRO®; MISTRAL®; MOTIVEL®; NISSHIN®; SAMSON®; STEADFAST® (nicosulfuron+rimsulfuron)
Chemical class: Sulfonylurea
EPA/OPP PC Code: 129008
California DPR Chemical Code: 3829
HSDB Number: 7950
UN/NA & ERG Number: UN3082 (liquid)/171
RTECS® Number: US4615000
EC Number: Not assigned
Uses: Used as a post-emergence herbicide to control a variety of weeds on field corn and popcorn crops. Some formulations may be U.S. EPA restricted Use Pesticides (RUP). Approved for use in EU countries[115].
U.S. Maximum Allowable Residue Levels for Nicosulfuron [40 CFR 180.454 (a)]: cattle, fat 0.01 ppm; cattle, meat 0.01 ppm; cattle, meat byproducts 0.05 ppm; corn, field, forage 0.1 ppm; corn, field, grain 0.1 ppm; corn, field, stover 0.1 ppm; corn, pop, grain 0.1 ppm; corn, pop, stover 0.1 ppm; corn, sweet, forage 0.1 ppm; corn, sweet, kernel plus cob with husks removed 0.1 ppm; corn, sweet, stover 0.1 ppm; goat, fat 0.01 ppm; goat, meat 0.01 ppm; goat, meat byproducts 0.05 ppm; grass, forage 9.0 ppm; grass, hay 25.0 ppm; horse, fat 0.01 ppm; horse, meat 0.01 ppm; horse, meat byproducts 0.05 ppm; milk 0.01 ppm; sheep, fat 0.01 ppm; sheep, meat 0.01 ppm; sheep, meat byproducts 0.05 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans
Acute Oral Category: 4, Caution
Description: White crystalline solid or powder. Phenolic odor. Molecular weight = 410.41; Specific gravity (H_2O:1) = 1.45 @ 20 °C; Boiling point = (decomposes) 165 °C; Freezing/Melting point = 141–144° C; 172 °C; Henry's Law constant = 4.13×10^{-18} atm-m^3/mol @ 25 °C[83,USDA]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Highly soluble in water; solubility = 0.25 g/L @ 25 °C; 1.2×10^4 mg/L @ 25 °C[83,USDA].
Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Decomposed >165 °C.
Determination in Water: Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, dermal contact, ingestion.
Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic,

reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: May cause skin, eye and respiratory tract irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or from exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl, halosulfuron, primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes fluorine and nitrogen oxides. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Nicotine N:0300

Use Type: Insecticide

CAS Number: 54-11-5

Formula: $C_{10}H_{14}N_2$

Synonyms: ENT 3,424; 1-Methyl-2-(3-pyridyl)pyrrolidine; 3-(*N*-Methylpyrrolidino)pyridine; 3-(1-Methyl-2- pyrrolidinyl)pyridine; (s)-3-(1-Methyl-2-pyrrolidinyl)pyridine; 1-3-(1-Methyl-2-pyrrolidyl)pyridine; (-)-3-(1-Methyl-2-pyrrolidyl)pyridine; Nicotina (Spanish); 1-Nicotine; Nicotine alkaloid; Pyridine, 3-(1-methyl-2-pyrrolidinyl)-; Pyridine, (s)-3-(1-methyl-2-pyrrolidinyl)-and salts; Pyridine, 3-(tetrahydro-1-methylpyrrol-2-yl); β-Pyridyl-α-*N*-methylpyrrolidine; 3-(1-Methyl-2-pyrrolidyl) pyridine; Di-tetrahydronicotyrine

Trade Names: BLACK LEAF®; CAMPBELL'S NICO-SOAP®; DESTRUXOL ORCHARD SPRAY®; EMONIB®; FLUX MAAG®; FUMETO-TENDUST®; BAC®; MACH-NIC®; NIAGARA P. A. DUST®; NICODUST®; NICOFUME®; NICOCIDE®; ORTHO N-4 DUST®; XL ALL INSECTICIDE®

Chemical class: Botanical; Alkaloid

EPA/OPP PC Code: 056702

California DPR Chemical Code: 75

HSDB Number: 1107

UN/NA & ERG Number: UN1654/151

RTECS® Number: QS5250000

EC Number: 200-193-3 [*Annex I Index No.:* 614-001-00-4]

Uses: Nicotine is used in some drugs and insecticides. Classified for restricted use as an insecticide, limited to use by or under the direct supervision of a certified applicator. Not listed for use in EU countries[115]. Registered for use in the U.S. and Canada. A U.S. EPA restricted Use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Nicotine (40 CFR 180.167): cucumber 2 ppm; lettuce 2 ppm; tomato 2 ppm.

Regulatory Authority and Advisory Information:

Health Advisory: Agricultural Chemical; Mutagen, Developmental/Reproductive Toxin, as nicotine and salts

California Proposition 65 Chemical: Listed; Developmental/Reproductive Toxin (4/1/1990)

Acute Oral Category: 1, DANGER–POISON

AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)EPA

Hazardous Waste Number (RCRA No.): No. P075

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R25; R27; R51/53; safety phrases: S1/2; S36/37; S45; S61 (see Appendix 1)

Description: Nicotine is a pale yellow to dark brown, oily liquid. Slight, fishy odor when warm. It is also available as a powder. Molecular weight = 162.23; Specific gravity (H_2O:1) = 1.01 @ 20 °C; Boiling point = 249 °C; Freezing/Melting point = –78.9 °C; Vapor pressure = 0.08 mmHg @ 20 °C; Flash point = 95 °C (cc); Autoignition temperature = 244 °C[17]. Explosive limits: LEL = 0.7%; UEL = 4.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Soluble in water; solubility = 10^6 mg/L @ 25 °C.

Incompatibilities: Strong oxidizers and strong acids. Attacks some forms of plastics and rubbers.

Permissible Exposure Limits in Air:

OSHA PEL: 0.5 mg/m^3 TWA [skin]

NIOSH REL: 0.5 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.5 mg/m^3 TWA [skin]

NIOSH IDLH: 5 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.5 mg/m^3

PAC-2: 3.5 mg/m^3

PAC-3: 35 mg/m^3

DFG MAK: [skin]

Determination in Air: XAD-2; workup with ethyl acetate, analysis by gas chromatography/NPD; NIOSH IV, Method #2544[18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <1.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin. Even small exposures can cause increased heart rate, increased blood fat levels, and change vital hormone levels. May affect the cardiovascular system and central nervous system, resulting in convulsions and respiratory failure. Nicotine is classified as super toxic. There is a fundamental difference between acute toxicity from use of nicotine as insecticide or from ingestion, and chronic toxicity that may be caused by prolonged exposure to small doses as occurs in smoking. Maternal smoking during pregnancy is associated with increased risk of spontaneous abortion, low birth weight and still-birth. Acute exposure to nicotine may result in headache, dizziness, confusion, agitation, restlessness, lethargy, seizures, a coma. Victims may experience hypertension (high blood pressure), tachycardia (rapid heart rate), and tachypnea (rapid respirations), followed by hypotension (low blood pressure), bradycardia (slow heart rate), and respiratory depression. Cardiac arrhythmias may also occur. Gastrointestinal effects include nausea, vomiting, abdominal pain or burning sensation, and diarrhea. Increased salivation, lacrimation (tearing), and sweating may be noted. High levels, far above the OEL, may result in death. LD_{50} (oral, rat) = 188 mg/kg; (dermal, rat) = 25–140 mg/kg[83].

Long Term Exposure: Animal tests show that this substance possibly causes toxic effects upon human reproduction. Nicotine was found as a co-carcinogen in animal.

Points of Attack: Central nervous system, cardiovascular system, lungs, GI tract and reproduction system. Has been shown to be a teratogen in animals; may be a teratogen in humans. Causes fat deposits in the arteries (reducing blood supply to many body organs). This increases the risk of heart attack, stroke, and many other poor circulation problems. Chronic high blood pressure can also result.

Medical Surveillance: Before beginning employment and at regular times after that, the following is recommended: Blood test for nicotine (only accurate shortly after exposure); consider test to evaluate typical exposures as well as for suspected overexposure or if symptoms are present. Even those who have smoked for a long time can reduce the risk of developing health problems by stopping.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to physician or authorized medical personnel:* The use of atropine might be considered, depending on symptom.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Possibility of dermal and/or eye contact. Wear eye protection to prevent any possibility of eye contact. Employees should wash immediately when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *5 mg/m^3:* Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Nicotine must be stored to avoid contact with strong oxidizers (such as chlorine, bromine and fluorine), strong acids (such as hydrochloric, sulfuric and nitric), since violent reactions occur. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of 5 gallons or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: A combustible liquid. Hazardous decomposition includes oxides of nitrogen and carbon as well as other highly toxic fumes. Nicotine is a combustible liquid. Extinguish with foam, dry chemical, or carbon dioxide extinguishers. Water may cause frothing if it gets below surface of liquid and turns to steam. However, water fog gently applied to surface will cause frothing which will extinguish the fire. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices.

Nicotine sulfate N:0310

Use Type: Insecticide, Miticide, Veterinary medicine

CAS Number: 65-30-5

Formula: $C_{10}H_{18}N_2O_8S_2$; $C_{10}H_{14}N_2 \cdot 2H_2SO_4$

Synonyms: ENT 2,435; 1-1-Methyl-2-(3-pyridyl)-pyrrolidine sulfate; (*S*)-3-(1-Methyl-2-pyrrolidinyl)pyridine sulfate (2:1); 1-3-(1-Methyl-2-pyrrolidinyl)pyridine sulfate; Nicotine sulfate (2:1); Nicotine sulphate; Nicotine sulphate (2:1); Pyridine, 3-(1-methyl-2-pyrrolidinyl)-, (*S*)-, sulfate (2:1); Pyrrolidine, 1-methyl-2-(3-pyridyl)-, sulfate; Sulfato de nicotina (Spanish)

Chemical class: Botanical; Alkaloid

EPA/OPP PC Code: 056703

California DPR Chemical Code: 430

HSDB Number: 805

UN/NA & ERG Number: UN1658 (solution)/151; UN3445 (solid)/151

RTECS® Number: QS9625000

EC Number: 200-606-7[*Annex I Index No.:* 614-002-00-X]

Uses: Nicotine sulphate is an insecticide of plant origin and is effective against a wide variety of insect pests. It is also used in veterinary medicine as an anthelmintic and external parasiticide. It is used to kill aphids, thrips, bugs, worms, leaf-hoppers and similar sucking insects which attack and destroy fruit, vegetables, crops and even flowers. It is also effective against lice, mites, and ticks. No longer registered in the U.S. or in European countries. There are more than 20 global suppliers[97].

Regulatory Authority and Advisory Information:

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)

Health Advisory: Developmental/Reproductive Toxin

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations (*nicotine salts*): Hazard Symbol: T+, N; risk phrases: R26/27/28; safety phrases: S1/2; S13; S28; S45 (see Appendix 1)

Description: Nicotine sulfate is a white crystalline solid or powder. Odorless. Commercial product may be an aqueous solution. It is usually clear and colorless. Molecular weight = 418.56; 422.55[HSDB,EPA]; Specific gravity

(H_2O:1) = 1.15 @ 20 °C; Freezing/Melting point = (decomposes); Vapor pressure = 10^{-5} mmHg @ 25 °C; Autoignition temperature = 244 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Soluble in water.

Incompatibilities: Incompatible with oxidizing materials. Keep away from heat.

Permissible Exposure Limits in Air:

OSHA PEL: 0.5 mg/m^3 TWA [skin], as nicotine
NIOSH REL: 0.5 mg/m^3 TWA [skin], as nicotine
ACGIH TLV®[1]: 0.5 mg/m^3 TWA [skin], as nicotine
NIOSH IDLH: 5 mg/m^3
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.82 mg/m^3
PAC-2: 9 mg/m^3
PAC-3: 9 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Very toxic by inhalation, dermal and/or eye contact, ingestion. The liquid irritates the eyes and skin. Inhalation irritates nose and throat. May affect the central nervous system, causing convulsions and respiratory failure. Exposure at high concentrations may result in death. Onset of acute poisoning is rapid. Symptoms include nausea, salivation, abdominal pain, vomiting, diarrhea, cold sweat, headache, dizziness, disturbed hearing and vision, mental confusion, marked weakness, faintness and prostration, lowered blood pressure, difficult breathing, and weak, rapid and irregular pulse. It is classified as super toxic. Death is possible from respiratory failure caused by paralysis of the respiratory muscles. LD_{50} (oral, rat) = 90 mg/kg; (dermal, rat) = 285 mg/kg.

Long Term Exposure: Animal tests show that this substance possibly causes toxic effects upon human reproduction. LD_{50} (mouse, oral) = 8.54 mg/kg.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.82 mg/m^3. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Metal containers involving the transfer of 5 gallons or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: *Solid:* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Use HEPA vacuum or wet method to reduce dust during clean up. Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after cleanup is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Solution: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. To clean up, do not touch spilled material; stop leak if possible. Use water spray to reduce vapors. *Small spills*: take up with sand or other noncombustible absorbent material and place into containers for disposal. Small dry spill: with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposition includes oxides of nitrogen, sulfur, carbon, and other toxic fumes. As for nicotine, extinguish with alcohol foam, dry chemical, or carbon dioxide. Large fires can be extinguished with water spray, fog, or foam. Wear positive-pressure breathing apparatus and special protective clothing. Dike fire-control water; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Norflurazon N:07100

Use Type: Herbicide

CAS Number: 27314-13-2

Formula: $C_{12}H_9ClF_3N_3O$

Synonyms: Caswell No. 195AA; 4-Chloro-5-(methylamino)-2-[3-(trifluoromethyl)phenyl]-3(2H)-pyridazinone; 4-Chloro-5-methylamino-2-(3-trifluoromethylphenyl) pyridazin-3-one; 4-Chloro-5-(methylamino)-2-(α,α,α-trifluoro-m-tolyl)-3(2H)-pyridazinone; 4-Chloro-5-methylamino-2-(α,α,α-trifluoro-*m*-tolyl) pyridazinone-3(2H)-one; 4-Chloro-5-(methylamino)-2-[3-(trifluoromethyl)phenyl]-3(2H)-pyridazinone; Dodecylbenzenesulfonic acid, triethanolamine salt; Monomethflurazone; Norflurazon pyridazine herbicide; 3(2H)-Pyridazinone, 4-chloro-5-(methylamino)-2-[3-(trifluoromethyl)phenyl]-; 3(2H)-Pyridazinone, 4-chloro-5-(methylamino)-2-(α,α,α-trifluoro-*m*-tolyl)-; Triethanolamine dodecylbenzenesulfonate

Trade Names: EVITAL®; H 9789®; SAN 9789 H®; SAN 97895®; SOLICAM®; TELOK®[C]; TRIETHANOLAMINE DBS®; ZORIAL®

Chemical class: Pyridazinone (fluorinated)

EPA/OPP PC Code: 105801

California DPR Chemical Code: 2019

HSDB Number: 6845

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: UR6150000

EC Number: 248-397-1

Uses: Norflurazon is a selective preemergent herbicide used to control germinating annual grasses, sedges, rushes and broadleaf weeds in fruits (cranberries, citrus, cherries, nectarines, apricots), grape vines, vegetables, nuts, cotton, peanuts, soybeans, and various nonagricultural and industrial areas. Forbidden for use in the EU after 7/25/2003. Registered for use in the U.S. Manufactured in the US by Clariant Corporation, North Carolina.

U.S. Maximum Allowable Residue Levels for Norflurazon (40 CFR 180.356): alfalfa, forage 3.0 ppm; alfalfa, hay 5.0 ppm; alfalfa, seed 0.1 ppm; almond 0.1 ppm; almond, hulls 1.0 ppm; apple 0.1 ppm; apricot 0.1 ppm; asparagus 0.05 ppm; avocado 0.2 ppm; blackberry 0.1 ppm; blueberry 0.2 ppm; cattle, fat 0.1 ppm; cattle, liver 0.25 ppm; cattle, meat 0.1 ppm; cattle, meat byproducts 0.1 ppm; cattle, meat byproducts except liver 0.1 ppm; cherry 0.1 ppm; citrus, dried pulp 0.4 ppm; citrus, molasses 1.0 ppm; cottonseed 0.1 ppm; cotton, undelinted seed 0.1 ppm; cranberry 0.1 ppm; dried citrus pulp 0.4 ppm; filbert 0.1 ppm; goat, fat 0.1 ppm; goat, liver 0.25 ppm; goat, meat 0.1 ppm; goat, meat byproducts 0.1 ppm; goat, meat byproducts except liver 0.1 ppm; grape 0.1 ppm; hog, fat 0.1 ppm; hog, liver 0.25 ppm; hog, meat 0.1 ppm; hog, meat byproducts 0.1 ppm; hog, meat byproducts except liver 0.1 ppm; hop, fresh 1.0 ppm; horse, fat 0.1 ppm; horse, liver 0.25 ppm; horse, meat 0.1 ppm; horse, meat byproducts 0.1 ppm; horse, meat byproducts 0.1 ppm; milk 0.1 ppm; nectarine 0.1 ppm; peach 0.1 ppm; peanut 0.05 ppm; peanut,vines

1.5 ppm; Peanut, hay 5.5 ppm; pear 0.1 ppm; pecan 0.1 ppm; plums (fresh prunes) 0.1 ppm; poultry, fat 0.1 ppm; poultry, meat 0.1 ppm; poultry, meat byproducts 0.1 ppm; raspberry 0.1 ppm; sheep, fat 0.1 ppm; sheep, liver 0.25 ppm; sheep, meat 0.1 ppm; sheep, meat byproducts 0.1 ppm; sheep, meat byproducts except liver 0.1 ppm; soybean 0.1 ppm; soybean, forage 1.0 ppm; soybean, hay 1.0 ppm; walnut 0.1 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Potential Ground Water Pollutant [California FAC Section 13149]

Acute Oral Category: 4, Caution, not acutely toxic

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White to gray-brown crystalline solid or powder. Odorless. Molecular weight = 303.67; Specific gravity (H_2O:1) = 1.45; Freezing/Melting point = 184 °C; Vapor pressure = 2.3×10^{-8} mm @ 20 °C. Slightly soluble in water; solubility = 30 mg/L.

Incompatibilities: Rapidly degraded by strong light; UV. Incompatible with oxidizers, chlorates nitrates, peroxides.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 10 ppb[14].

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact may irritate skin and cause eye irritation and possible severe injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. Poisonous if swallowed. LD_{50} (oral, rat) = >5 g/kg; (dermal, rat) = >7.5 g/kg.

Long Term Exposure: May cause liver cancer. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Liver, ovary, uterus, thyroid; central nervous system, bones.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Liver function tests. See medical help if poisoning is suspected or if redness, itching, burning of skin or eyes develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Possible Human Carcinogen: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Careful, a possible carcinogen. For solids, *small spill*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. For a *large spill* evacuate downwind at least 100 meters/330 feet. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Keep combustibles (wood, paper, oil, etc.) away from spilled material. Do not allow water to get inside containers. *Small dry spill*: with clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Large spill*: dike far ahead of liquid spill for later disposal. Following product recovery, flush area with water. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other noncombustible material and transfer to containers.

Fire Extinguishing: Hazardous decomposition includes toxic gases, including oxides of nitrogen, carbon, hydrogen fluoride and hydrogen chloride gases. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Oryzalin O:0138

Use Type: Herbicide
CAS Number: 19044-88-3
Formula: $C_{12}H_{18}N_4O_6S$
Synonyms: Benzenesulfonamide, 4-(dipropylamino)-3,5-dinitro-; Caswell No. 623A; 3,5-Dinitro-N^4,N^4-dipropyl sulfanilamide; 3,5-Dinitro-N^4,N^4-dipropylsulfanilamide; 3,5-Dinitro-N^4,N^4-dipropyl sulphanilamide; 4-(Dipropylamino)-3,5-dinitrobenzene sulfonamide; Sulfanilamide, 3,5-dinitro-N^4,N^4-dipropyl-
Trade Names: AGVALUE®; COMPOUND 67019®; DIRIMAL®; EL-119®; EXCEL-S-PLUS®; EXPEDITE®; FLEXLAN®; NATIONS AG II®; ORYZA®; PRO-TECK®; ROUT®; RYCELAN®; RYZELAN®; SNAPSHOT®; SURFLAN®; TURF FERTILIZER®; XL 2G®
Chemical class: 2,6-Dinitroaniline
EPA/OPP PC Code: 104201
California DPR Chemical Code: 1868
HSDB Number: 6858
UN/NA & ERG Number: UN1596 (Dinitroanilines)/153; UN3077(solid)/171
RTECS® Number: WO9350000
EC Number: 242-777-0
Uses: Oryzalin is used to control annual grasses, herbaceous plants, woody shrubs, vines and broadleaf weeds on fruit and nut trees, soya beans, peas, sweet potatoes, berries, vine and crops, cotton, Christmas tree plantations, commercial/industrial and recreation area lawns, golf course turf, residential lawns and turf, ornamental and/or shade trees, nonagricultural rights-of-way, nonagricultural uncultivated and industrial areas, power stations, paths/patios and paved areas.
U.S. Maximum Allowable Residue Levels for Oryzalin [40 CFR 180.304 (a)]: in or on the following raw agricultural commodities: almond, hulls 0.05 ppm; avocados 0.05 ppm; citrus fruits 0.05 ppm; fig 0.05 ppm; kiwifruit 0.05 ppm; nut, tree, group 0.05 ppm; olive 0.05 ppm; pistachio 0.05 ppm; pome fruits 0.05 ppm; pomegranates 0.05 ppm; small fruits 0.05 ppm; and stone fruits 0.05 ppm. ***[40 CFR 180.304 (b)]:*** in or on the following raw agricultural commodities: guava 0.05 ppm; and papayas 0.05 ppm.
Regulatory Authority and Advisory Information:
U.S. EPA Carcinogens, Likely to be a human carcinogen
Health Advisory: Mutagen.
Acute Oral Category: 4, Caution
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
Regulations: Hazard Symbol: Xn, N; risk phrases: R40; R43; safety phrases: S2; S50/53 (see Appendix 1).

Description: Yellow-orange crystalline solid or powder. Odorless. Molecular weight = 346.36; Specific gravity (H_2O:1) = 1.2; Boiling point = (decomposes); Freezing/Melting point = 138 °C; Vapor pressure = 1.2×10^{-8} mm @ 20 °C. Low solubility in water; solubility = 2.49 mg/L.
Incompatibilities: Incompatible with oxidizers and alkaline materials. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Decomposes at 265 °C releasing toxic oxides of nitrogen, sulfur and carbon. Decomposed by strong ultraviolet light.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution. State Drinking Water Guidelines: Florida 350 μg/L.
Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms
Short Term Exposure: Slight irritant to skin, eyes and mucous membranes. Dermatitis may develop. Potential liver, kidney, and spleen toxin. LD_{50} (oral, rat) = >7 g/kg; (dermal, rat) = >2 g/kg.
Long Term Exposure: May cause skin sensitization. This chemical can bio-accumulate. A potential human carcinogen.
Points of Attack: Liver, kidney, spleen, skin.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Kidney, spleen, and liver function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Dinitroanilines react with cellulose-based and expanded polymeric absorbents[88]. Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Expanded Polymeric[88]. Wear

protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: (1) Color Code-Yellow Stripe: Reactivity Hazard; Store separately in an area isolated from flammables, combustibles, or other yellow-coded materials. (2) Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, strong acids, strong bases and other incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9. Dinitroanilines require a label of "poisonous materials." They usually fall into Hazard Group 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposes above 250°C releasing toxic oxides of nitrogen, sulfur and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Oxadiazon O:0154

Use Type: Herbicide

CAS Number: 19666-30-9

Formula: $C_{15}H_{18}Cl_2N_2O_3$

Synonyms: 2-*tert*-Butyl-4-(2,4-dichloro-5-isopropoxyphenyl-δ(sup2)-1,3,4-oxadiazoline-5-one; 5-*tert*-Butyl-3-(2,4-dichloro-5-isopropoxyphenyl)-1,3,4-oxadiazol-2(3*H*)-one; 2-*tert*-Butyl-4-(2,4-dichloro-5-isopropoxyphenyl)-δ(*sup2*)-1,3,4-oxadiazolin-5-one; 2-*tert*-Butyl-4-(2,4-dichloro-5-isopropyloxyphenyl)-1,3,4-oxadiazolin-5-one; CASWELL No. 624A; 3-(2,4-Dichloro-5-isopropyloxy-phenyl)-δ(sup4)4-5-(*tert*-butyl)-1,3,4-oxadiaz oline-2-one; 3-(2,4-Dichloro-5-(1-methylethoxy)phenyl)-5-(1,1-dimethylethyl)-1,3,4-oxadiazol-2(3*H*)-one; δ(sup2)2-1,3,4-Oxadiazolin-5-one, 2-*tert*-butyl-4-(2,4-dichloro-5-isopropyloxyphenyl)-; 1,3,4-Oxadiazol-2(3*H*)-one, 3-(2,4-dichloro-5-(1-methylethoxy)phenyl)-5-(1,1-dimethylethyl)-; Oxadiazone; 1,3,4-Oxazol-2(3*H*)-one, 3-[2,4-dichloro-5-(1-methylethoxy)phenyl]-5-(1,1-dimethylethyl)-

Trade Names: CARPETMAKER®; CHIP SHOT®[C]; GOLD KIST®; PAR EX®; PRO GROW®; REGAL O-O®; REGALSTAR®; RONSTAR®; RP-17623®; TURFIC®; VERTAGREEN®; WILBRO®

Chemical class: Oxadiazolinone; Oxidiazole

EPA/OPP PC Code: 109001; (597900 old EPA code number)

California DPR Chemical Code: 2017

HSDB Number: 6936

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: RO0874000

EC Number: 243-215-7 [*Annex I Index No.:* 606-045-00-8]

Uses: A pre-emergence and early post-emergence control for annual grasses, sedges and broadleaf weeds. Originally registered for use on turf and ornamentals and has wide use on golf courses.

U.S. Maximum Allowable Residue Levels for Oxidiazon its metabolites (2-tert-butyl-4-(2,4-dichloro-5-hydroxyphenyl)delta2-1,3,4-oxadiazolin-5-one) and 2-carboxy isopropyl-4-(2,4-dichloro-5-isopropoxyphenyl)delta2-1,3,4-oxadiazolin-5-one) [40 CFR 180.346]: in or on raw agricultural commodities as follows: (N) negligible residues milk fat 0.1 ppm; (N) negligible residue in the meat, fat, and meat byproducts of cattle: goats, hogs, horses, and sheep 0.01 ppm. (N) = negligible amount of residue.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

California Proposition 65 Chemical: Carcinogen (7/1/1991) and developmental toxin (5/15/1998)

Health Advisory: Mutagen

Acute Oral Category: 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: Colorless crystalline solid. Odorless. Molecular weight = 345.22; Boiling point = 281.5 °C; Freezing/Melting point = 89 °C; Vapor pressure = 1.15×10^{-7} mm @ 20 °C[83,USDA]. Low solubility in water; solubility = 0.7 mg/L @ 20 °C.

Incompatibilities: Dust forms explosive mixture in air. Incompatible with oxidizers.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May irritate the eyes and skin. LD_{50} (oral, rat) = >3 g/kg[83]; (dermal, rat) = >2 g/kg.

Long Term Exposure: Frequent or prolonged exposure may cause cancer. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause liver problems. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, blood, bones; may affect fetus.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Test for anemia, liver function tests. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Possible Human Carcinogen: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Careful, a possible carcinogen. For solids, *small spill*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. For a *large spill* evacuate downwind at least 100 meters/330 feet. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Keep combustibles (wood, paper, oil, etc.) away from spilled material. Do not allow water to get inside containers. *Small dry spill*: with clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Large spill*: dike far ahead of liquid spill for later disposal. Following product recovery, flush area with water. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers.

Fire Extinguishing: Hazardous decomposition includes toxic gases, including oxides of nitrogen, carbon, hydrogen fluoride and hydrogen chloride gases. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended.

Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Oxamyl O:0170

Use Type: Insecticide, Nematicide, Acaricide

CAS Number: 23135-22-0 (solid); 97502-85-7 (flammable liquid)

Formula: $C_7H_{13}N_3O_3S$

Synonyms: 2-(Dimethylamino)-N[((methylamino)carbonyl)oxy]2-oxoethanimidothioicacidmethylester;2-Dimethylamino-1-(methylamino)glyoxal-*O*-methylcarbamoylmonoxime; *N,N*-Dimethyl-α-methylcarbamoyloxyimino-α-(methylthio)acetamide; *N,N*-dimethyl-*N*-[(methylcarbamoyl)oxy]-1-thiooxamimidic acid methyl ester; Methyl-2-(dimethylamino)-*N*-[((methylamino)carbonyl)oxy]-2-oxoethanimidothioate; Methyl-1-(dimethylcarbamoyl)-*N*-(methylcarbamoyloxy)thioformimidate; *S*-Methyl-1-(dimethylcarbamoyl)-*N*-[(methylcarbamoyl)oxy]thioformimidate; Methyl-*N,N'*-dimethyl-*N*-[(methylcarbamoyl)oxy]-1-thiooxamimidate

Trade Names: BLADE®; D-1410®; DPX 1410®; INSECTICIDE-NEMACIDE 1410®; OXAMYL CARBAMATE INSECTICIDE®; THIOXAMYL®; VYDATE®; VYDATE® 10G; VYDATE L®; VYDATE INSECTICIDE/NEMATICIDE®; VYDATE OXAMYL INSECTICIDE/NEMATOCIDE®[C]

Chemical class: Carbamate (N-methyl)

EPA/OPP PC Code: 103801

California DPR Chemical Code: 1910

HSDB Number: 6453

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: RP2300000

EC Number: 245-445-3 [006-059-00-9]

Uses: A systemic and contact insecticide/acaricide and nematicide, oxamyl is a restricted use pesticide used on apples, bananas, carrots, celery, citrus, cotton, cucumbers, eggplants, garlic, ginger, muskmelon (including cantaloupe and honeydew melon), onion (dry bulb), peanuts, pears, peppers, peppermint, pineapples, plantains, potatoes, pumpkins, soybeans, spearmint, squash, sweet potatoes, tobacco, tomatoes, watermelons, yams. Oxamyl is also used on non-bearing apple, cherry, citrus, peach, pear, and tobacco. It is applied directly onto plants or the soil surface. It is available in both liquid and granular form, but the granular form is banned in the U.S. It has no residential use. Registered for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Oxamyl and its oxime metabolite N,N-dimethyl-N-hydroxy-1-thiooxamimidate calculated as oxamyl [40 CFR 180.303(a)(1)]: in or on the following food commodities: apple 2.0 ppm; banana 0.3 ppm; cantaloupe 2.0 ppm; celery 3.0 ppm; cottonseed 0.2 ppm; cucumber 2.0 ppm; eggplant 2.0 ppm; fruit, citrus 3.0 ppm; melon, honeydew 2.0 ppm; peanut 0.2 ppm; peanut 0.2 ppm; peanut, hay 2.0 ppm; pear 2.0 ppm; peppermint, hay 10.0 ppm; pepper, bell 3.0 ppm; pepper, non-bell 5.0 ppm; pineapple 1.0 ppm; potatoe 0.1 ppm; pumpkin 2.0 ppm; root crop vegetables 0.1 ppm; soybean 0.2 ppm; spearmint, hay 10.0 ppm; squash, summer 2.0 ppm; squash, winter 2.0 ppm; tomatoe 2.0 ppm, and watermelon 2.0 ppm. ***[40 CFR 180.303(a)(1)]:*** as a result of application of the insecticide to growing pineapples, pineapple 6 ppm; bran 6 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans.

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin (S!)

EPA Hazardous Waste Number (RCRA No.): P194

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Non-wastewater (mg/kg), 0.28

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

European/International Regulations: Hazard Symbol: T+, Xn, N; risk phrases: R21; R26/28; R51/53; safety phrases: S1/2; S36/37; S45; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to water.

Description: Oxamyl is a white crystalline solid. Sulfur- or garlic-like odor. Molecular weight = 219.29; Specific gravity (H_2O:1) = 0.98 @ 25 °C; Boiling point = (decomposes) 310 °C; Freezing/Melting point = 100–102 °C; Vapor pressure = 2.98×10^{-4} mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Highly soluble in water; solubility = 29 g/L.

Incompatibilities: Aeration, sunlight, alkalinity, and higher temperatures increase the rate of decomposition[88]. Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. May form explosive materials with phosphorus pentachloride. Corrosive.

Permissible Exposure Limits in Air:

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.15 mg/m^3
PAC-2: 1.7 mg/m^3
PAC-3: 4.75 mg/m^3

Permissible Concentration in Water: Federal Drinking Water Guidelines: 200 μg/L; State Drinking Water Guidelines:

Arizona 180μg/L; Maine 175μg/L; State Drinking Water Standard: California 50μg/L.

Determination in Water: Log K_{ow} = <–0.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact can cause skin and eye irritation. Acute exposure to oxamyl usually leads to a cholinergic crisis. Signs and symptoms may include increased salivation, lacrimation (tearing), perspiration, spontaneous defecation, and spontaneous urination. Pinpoint pupils, blurred vision, tremor, muscle twitching, mental confusion, convulsions, and coma may occur. Gastrointestinal symptoms include abdominal pain, diarrhea, nausea, and vomiting. Bradycardia (slow heart rate) is common. Dyspnea (shortness of breath) and pulmonary edema may also occur. Classified by the World Health Organization as highly hazardous. Has also been rated as extremely to super-toxic. Acute oral exposure (ingestion) to oxamyl has caused death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = <6 mg/kg; (dermal, rat) = >1500 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This neurotoxin may damage the nervous system, causing numbness and/or weakness in the hands and feet. Repeated exposure may cause personality changes with depression, anxiety, and irritability. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, liver, plasma and red blood cell cholinesterase.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. Also consider complete blood count and chest x-ray following acute overexposure. Consider liver function test.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: (1) Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. (2) Color Code-Blue (solid): Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. *Solid: On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Oxycarboxin O:0175

Use Type: Fungicide

CAS Number: 5259-88-1

Formula: $C_{12}H_{13}NO_4S$

Synonyms: Carboxin sulfone; DCMOD; 2,3-Dihydro-5-carboxanilido-6-methyl-1,4-oxathiin-4,4-dioxide; 5,6- 5,6-Dihydro-2-methyl-1,4-oxathiin-3-carboxanilide 4,4-dioxide; 5,6-Dihydro-2-methyl-*N*-phenyl-1,4-oxathiin-3-carboxamide-4,4-dioxide; 1,4-Oxathiin-3-carboxanilide, 5,6-dihydro-2-methyl-, 4,4-dioxide; 1,4-Oxathiin-3-carboxamide, 5,6-dihydro-2-methyl-*N*-phenyl-, 4, 4-dioxide; Oxycarboxine

Trade Names: CARBOJECT®[C]; DYNAM®; F461®;

FUNGISOL®[C]; PLANTVAX®; PLANT WAX®; VITAVEX®

Chemical class: Carboxamide

EPA/OPP PC Code: 090202

California DPR Chemical Code: 1434

HSDB Number: 1747

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: RP4900000

EC Number: 226-006-2 [*Annex I Index No.*: [006-060-00-4]

Uses: Registered as a foliar systemic fungicide for use against rust on carnations and greenhouse geranium. Not approved for use in EU countries[115]. Registered for use in the U.S. and Canada.

Regulatory Authority and Advisory Information:

Acute Oral Category: 3, CAUTION

Health Advisory: Developmental/Reproductive Toxin (TRI)

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R52/53; safety phrases: S2; S61 (see Appendix 1)

Description: Oxycarboxin is a white corrosive solid. Molecular weight = 290.42; 267.30; Specific gravity (H_2O:1) = 1.40 @ 20 °C; Boiling point = 528 °C; Freezing/Melting point = 121 °C; Vapor pressure = 3.2×10^{-11} mmHg @ 25 °C; Flash point = 220 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Slightly soluble in water; solubility = 0.3 g/L @ 25 °C.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Can become unstable in acidic and alkaline media. Combustible; dust may form explosive mixture with air. Corrosive, may attack some metals, rubbers, and plastics.

Determination in Water: Log K_{ow} = <1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion dermal and/or eye contact. May penetrate unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. Harmful if ingested. May cause skin, eye, and respiratory tract irritation.

LD_{50} (oral, rat) = >2 g/kg; (dermal, rat) = >5 g/kg[83].

Long Term Exposure: May affect reproduction, DNA.

Points of Attack: Skin, eyes, reproductive system.

Medical Surveillance: Comprehensive preplacement or initial medical and work histories with emphasis on reproductive experience and menstrual history. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of the responsible physician, they are indicated. Employees shall be counseled by a health officer or physician to ensure that each employee is aware that this chemical has been implicated in the production of effects on the reproductive system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with oxycarboxin you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon and sulfur. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Oxyfluorfen O:0205

Use Type: Herbicide

CAS Number: 42874-03-3

Formula: $C_{15}H_{11}ClF_3NO_4$

Synonyms: Benzene, 2-chloro-1-(3-ethoxy-4-nitrophenoxy)-4-(trifluoromethyl)-; Caswell No. 188AAA; 2-Chloro-1-(3-ethoxy-4-nitrophenoxy)-4-(trifluoromethyl)benzene; 2-Chloro-4-trifluoromethyl-3'-ethoxy-4'-nitrodiphenyl ether; 2-Chloro-α,α,α-trifluoro-*p*-tolyl-3-ethoxy-4-nitrophenyl ether; Ether, 2-chloro-α,α,α-trifluoro-*p*-tolyl-3-ethoxy-4-nitro phenyl; Oxyfluorfene; Oxyfluorofen

Trade Names: EDGER®; FIRE POWER® (glyphosate + oxyfluorfen); GALIGAN®; GOAL®; HADAF®; KLEENUP®; KOLTAR®; MON-78095®; RH-2915®; RH-915®; ROUT® (with oryzalin); TRIOX®

Chemical class: Diphenyl ether

EPA/OPP PC Code: 111601; (288600 old EPA code number)

California DPR Chemical Code: 1973

HSDB Number: 7507

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: DV4725000

EC Number: 255-983-0

Uses: Oxyfluorfen is used for broad-spectrum pre-emergence and post-emergent control of annual broadleaf and grassy weeds in a variety of tree fruit, nut, vine, and field crops. The largest agricultural markets are wine grapes and almonds. Also used on ornamental and forestry sites. Oxyfluorfen is also used for weed control in landscapes, patios, driveways, and similar non-crop areas in residential, highway and rights-of-way sites. Not approved for use in EU countries[115]. Registered for use in the U.S. and Canada.

U.S. Maximum Allowable Residue Levels for Oxyfluorfen [40 CFR 180.381 (a)]: almond, hulls 0.1 ppm; artichoke, globe 0.05 ppm; avocado 0.05 ppm; banana (including plantain) 0.05 ppm; broccoli 0.05 ppm; cabbage 0.05 ppm; cattle, fat 0.05 ppm; cattle, meat byproducts 0.05 ppm; cattle, meat 0.05 ppm; cauliflower 0.05 ppm; cocoa bean, dried bean 0.05 ppm; coffee, bean 0.05 ppm; corn, grain 0.05 ppm; cotton, undelinted seed 0.05 ppm; dates 0.05 ppm; egg 0.05 ppm; feijoa 0.05 ppm; fig 0.05 ppm; fruit, pome, group 11, 0.05 ppm; fruit, stone, group 12, 0.05 ppm; goat, fat 0.05 ppm; goat, meat byproducts 0.05 ppm; goat, meat 0.05 ppm; grape 0.05 ppm; hog, fat 0.05 ppm; hog, meat byproducts 0.05 ppm; hog, meat 0.05 ppm; horseradish 0.05 ppm; horse, fat 0.05 ppm; horse, meat byproducts 0.05 ppm; horse, meat 0.05 ppm; kiwifruit 0.05 ppm; nut, tree, group 14, 0.05 ppm; olive 0.05 ppm; onion, dry bulb 0.05 ppm; milk 0.05 ppm; mint hay (peppermint and spearmint) 0.1 ppm; persimmon 0.05 ppm; pistachio 0.05 ppm; pomegranate 0.05 ppm; poultry, fat 0.05 ppm; poultry, meat byproducts 0.05 ppm; poultry, meat 0.05 ppm; sheep, fat 0.05 ppm; sheep, meat byproducts 0.05 ppm; sheep, meat 0.05 ppm; soybean 0.05 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.381(b)]:*** blackberry 0.05 ppm; chickpea, seed 0.05 ppm; guava 0.05 ppm; papaya 0.05 ppm; raspberry 0.05 ppm; taro, corm and leaves 0.05 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Acute Oral Category: 4, Caution, Not acutely toxic

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Orange to deep red-brown crystalline solid or powder. Smoke-like odor. Molecular weight = 361.70; Specific gravity (H_2O:1) = 1.49; Boiling point = (decomposes) 330 °C; Freezing/Melting point = 85 °C; Vapor pressure = 2.1×10^{-7} mm @ 20 °C. Henry's Law constant = 1.2×10^{-6} atm-m^3/mol @ 25 °C (est)[83]. Slightly soluble in water; solubility = 0.098 ppm.

Incompatibilities: Decomposes >330 °C releasing toxic hydrogen fluoride, hydrogen chloride and nitrogen oxides.

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >10 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. Workers exposed to chlorophenoxy compounds over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affects human reproduction.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, spleen, kidney, reproduction system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Diphenyl ether derivatives may react with the following absorbent materials: Cellulose-Based; Expanded Polymeric[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/ Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a refrigerator or a cool, dry place. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all sources of ignition and dampen spilled material with 60–70% acetone to avoid airborne dust. Use HEPA vacuum or wet method to reduce dust during clean up. Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides, hydrogen fluoride, hydrogen chloride, and fluorine. This chemical is a combustible solid, but does not readily ignite. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Small quantities may be landfilled but large quantities should be incinerated. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

P

Paclobutrazol P:0025

Use Type: Plant growth regulator
CAS Number: 76738-62-0
Formula: $C_{15}H_{20}ClN_3O$
Synonyms: 1-*tert*-Butyl-2-(*p*-chlorobenzyl)-2-(1,2,4-triazol-1-yl)ethanol; (2RS,3RS)-1-(4-Chlorophenyl)-4,4-dimethyl-2-(1*H*-1,2,4-triazol-1-yl) pentan-3-ol; (±)-R*,R*-β-[(4-Chlorophenyl) methyl]-α-(1,1-dimethylethyl)-1*H*-1,2,4-triazol-1-ethanol
Trade Names: BONZI®; CLIPPER®; CULTAR®; ICI-PP 333®; MON-7325®[C]; PARLAY®; PICCOLO®; PP 333®; PROFILE®; TURF MANAGER®
Chemical class: Azole; Triazole
EPA/OPP PC Code: 125601
California DPR Chemical Code: 2259
UN/NA & ERG Number: UN1325 (flammable solid, organic)/133
RTECS® Number: XZ4803300
EC Number: 266-325-7 [*Annex I Index No.:* 616-379-6]
Uses: Used by arborists to maintain deciduous and broadleaf trees near buildings, reduce the growth of trees near power lines, and extend the longevity of trees on sites with limited natural resource.
Human toxicity (long-term): Very low–175.00 ppb, Health Advisory
Fish toxicity (threshold): Very low–4075.70930 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen
Acute Oral Category: 3, CAUTION
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R20/22; R51/53; R63; safety phrases: S2; S60, S61 (see Appendix 1)
Description: White crystalline, flammable solid. Odorless. Molecular weight = 293.78; Specific gravity (H_2O:1) = 1.21; Boiling point = 385 °C; 460 °C; Freezing/Melting point = 164 °C; Vapor pressure = 7.5×10^{-9} mm @ 20 °C; Flash point = 233 °C[U of Akron]. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 2, Reactivity 3. Low solubility in water; solubility = 37 ppm.
Incompatibilities: Keep away from all sources of ignition. Contact with strong oxidizers may cause fire or explosion. The triazoles are sensitive to heat, friction, and impact. Sensitivity varies with the type substitution to the triazole ring. Metal chelated and halogen substitution of the triazol ring make for a particularly heat-sensitive material. Azido and nitro derivatives have been employed as high explosives. No matter the derivative these materials should be treated as explosives[88].
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Irritates skin, eyes and respiratory tract. May be able to penetrate the unbroken skin. LD_{50} (oral, rat) = >1 g/kg; LD_{50} (dermal, rat) = >1 g/kg.
Long Term Exposure: Developmental/Reproductive Toxin in animals. May cause reproductive and fetal effects.
Medical Surveillance: A suspected reproductive toxin. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.
Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Keep away from sparks and other sources of ignition. Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Store in a refrigerator and under nitrogen gas. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of 5 gallons or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Flammable solid, organic, n.o.s. It usually falls in Hazard Class 4.1 and Packing Group II.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned. Do not allow water to get inside containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Treat this material as explosive. Hazardous decomposition includes toxic oxides of nitrogen and hydrogen chloride gas. Use dry chemical, water spray, alcohol-resistant foam, carbon dioxide extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

California DPR Chemical Code: 1601

HSDB Number: 1668

UN/NA & ERG Number: UN2781/151

RTECS® Number: DW1960000 (cation); DW2275000 (dichloride); DW2280000 (diiodide); DW2010000 (dimethylsulfate)

EC Number: 225-141-7; 217-615-7 [*Annex I Index No.:* 613-090-00-7]

Uses: Paraquat is a quaternary nitrogen herbicide widely used for broadleaf weed control. It is a quick-acting, non-selective compound, that destroys green plant tissue on contact and by translocation within the plant. It has been employed for killing marijuana in the U.S. and in Mexico. It is also used as a crop desiccant and defoliant, and as an aquatic herbicide. It is used in many formulations with other herbicides, e. g., simazine and diquat. Paraquat dichloride is registered for the control of weeds and grasses in agricultural and non-agricultural areas. It is used as a preplant or pre-emergence herbicide on vegetables, grains, cotton, grasses, sugarcane, peanuts, potatoes, and on areas for tree plantation establishment. Paraquat is applied as a directed spray post-emergence herbicide around fruit crops, vegetables, trees, vines, grains, soybeans, and sugarcane. It is used for dormant season applications on clover and other legumes, and for chemical fallow. It is also used as a desiccant or harvest aid on cotton, dry beans, soybeans, potatoes, sunflowers, sugarcane and as a post-harvest desiccant on tomatoes. It is applied to pine trees to induce resin soaking. Paraquat dichloride is also used on non-crop areas such as public airports, electric transformer stations and around commercial buildings to control weeds. Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Paraquat derived from application of either the bis(methyl sulfate) or the dichloride salt (both calculated as the cation) in or on the following food commodities: [40 CFR 180.205(a)]: Acerola 0.05 ppm; almond, hulls 0.5 ppm; animal feed, nongrass, group 18, forage 75. 0 ppm; animal feed, nongrass, group 18, hay 210.0 ppm; artichoke, globe 0.05 ppm; asparagus 0.5 ppm; avocado 0.05 ppm; banana 0.05 ppm; barley, grain 0.05 ppm; barley, hay 3.5 ppm; barley, straw 1.0 ppm; beet, sugar, roots 0.5 ppm; beets, sugar, tops 0.05 ppm; berry group 13, 0.05 ppm; cacao bean, bean 0.05 ppm; carrot, roots 0.05 ppm; cattle, fat 0.05 ppm; cattle, kidney 0.5 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts, except kidney 0.05 ppm; coffee, bean, green 0.05 ppm; corn, field, forage 3.0 ppm; corn, field, grain 0.1 ppm; corn, field, stover 10.0 ppm; corn, pop, grain 0.1 ppm; corn, pop, stover 10.0 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; cotton, gin byproducts 110.0 ppm; cotton, undelinted seed 3.5 ppm; cowpea, forage 0.1 ppm; cowpea, hay 0.4 ppm; cranberry 0.05 ppm; egg 0.01 ppm; endive 0.05 ppm; fig 0.05 ppm; fruit, citrus, group 10, 0.05 ppm; fruit, pome, group 11, 0.05 ppm; fruit, stone, group 12, 0.05 ppm; ginger 0.1 ppm; goat, fat 0.05 ppm; goat, kidney 0.5 ppm; goat, meat 0.05 ppm; goat, meat byproducts, except kidney 0.05 ppm; grain, aspirated fractions 65.0 ppm; grape 0.05 ppm; grass, forage 90.0 ppm; grass, hay 40.0 ppm; guar, seed 0.5 ppm; guava 0.05 ppm; hog, fat 0.05 ppm; hog, kidney 0.5 ppm; hog, meat 0.05 ppm; hog, meat byproducts, except kidney 0.05 ppm; hop, dried cones 0.5 ppm; horse, fat 0.05 ppm; horse, kidney 0.5 ppm; horse, meat 0.05 ppm; horse, meat byproducts, except kidney 0.05 ppm; kiwifruit 0.05 ppm; lentil, seed 0.3 ppm; lettuce 0.05 ppm; milk 0.01 ppm; nut, tree, group 14, 0.05 ppm; okra 0.05 ppm; olive 0.05 ppm; onion, bulb 0.1 ppm; onion, green 0.05 ppm; papaya 0.05 ppm; passionfruit 0.2 ppm; pea and bean, dried shelled, except soybean, subgroup 6C, except guar bean 0.3 ppm; pea and bean, succulent shelled, subgroup 6B, 0.05 ppm; pea, field, hay 0.8 ppm; pea, field, vines 0.2 ppm; peanut 0.05 ppm; peanut, hay 0.5 ppm; peppermint, tops 0.5 ppm; persimmon 0.05 ppm; pineapple 0.05 ppm; pineapple, process residue 0.25 ppm; pistachio 0.05 ppm; potato 0.5 ppm; rhubarb 0.05 ppm; rice, grain 0.05 ppm; rice, straw 0.06 ppm; safflower, seed 0.05 ppm; sheep, fat 0.05 ppm; sheep, kidney 0.5 ppm; sheep, meat 0.05 ppm; sheep, meat byproducts, except kidney 0.05 ppm; sorghum, forage, forage 0.1 ppm; sorghum, grain, forage 0.1 ppm; sorghum, grain, grain 0.05 ppm; soybean, forage 0.4 ppm; soybean, hay 10.0 ppm; soybean, hulls 4.5 ppm; soybean, seed 0.7 ppm; spearmint, tops 0.5 ppm; strawberry 0.25 ppm; sugarcane, cane 0.5 ppm; sugarcane, molasses 3.0 ppm; sunflower, seed 2.0 ppm; turnip, greens 0.05 ppm; turnip, roots 0.05 ppm; vegetable, brassica, leafy, group 5, 0.05 ppm; vegetable, cucurbit, group 9, 0.05 ppm; vegetable, fruiting, group 8, 0.05 ppm; vegetable, legume, edible podded, subgroup 6A, 0.05 ppm; wheat, forage 0.5 ppm; wheat, grain 1.1 ppm; wheat, hay 3.5 ppm; wheat, straw 50.0 ppm; ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.205(c)]:*** cassava 0.05 ppm; pea, pigeon, seed 0.05 ppm; tanier 0.05 ppm; taro, corm 0.1 ppm; tyfon 0.05 ppm; yam, true, tuber 0.05 ppm.

Human toxicity (long-term): High

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Health Advisory: Mutagen, Very toxic by Inhalation (EU)

Acute Oral Category: 2, WARNING

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg) as paraquat dichloride
Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg) as paraquat dichloride
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0% as paraquat dichloride
European/International Regulations (*dichloride*): Hazard Symbol: T+, N; risk phrases: R24/25; R26; R36/37/38; R48/25; R50/53; safety phrases: S1/2; S22; S28; S36/37/39; S45; S60; 61 (see Appendix 1)

Description: Paraquat is a yellow solid. Aqueous solution is red. Faint, ammonia-like odor. Molecular weight = 186.25; 186.12; Specific gravity (H_2O:1) = 1.24 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 298 °C (decomposes). Hazard Identification (based on NFPA-704 M Rating System): (paraquat) Health 4, Flammability 0, Reactivity 0. Soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Paraquat dichloride is a quaternary ion which usually is used as the dichloride salt. Molecular weight = 257.18. Highly soluble in water.

Incompatibilities: Keep away from strong oxidizers, alkylaryl-sulfonate wetting agents, strong bases (hydrolysis). Decomposes in heat (>175–180 °C) and in the presence of ultraviolet light[9], producing nitrogen oxides, hydrogen chloride; deadly phosgene gas may be formed. May cause pitting of some metals.

Permissible Exposure Limits in Air: NIOSH IDLH = 1.0 mg/m^3
OSHA PEL: 0.5 mg/m3 TWA, respirable dust [Skin]; vacated 1989 OSHA PEL 0.1 mg/m3 TWA, [Skin] is still enforced in some states (dichloride)
NIOSH REL: 0.1 mg/m3 TWA, respirable fraction [Skin] (dichloride)
ACGIH TLV: 0.5 mg/m3 TWA, respirable fraction [Skin]. Excursion Limit Recommendation: Excursions in worker exposure levels may exceed 3 times the TLV-TWA for no more than a total of 30 minutes during a work day, and under no circumstances should they exceed 5 times the TLV-TWA, provided that the TLV-TWA is not exceeded.
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.1 mg/m^3
PAC-2: 0.1 mg/m^3
PAC-3: 1.5 mg/m^3

Determination in Air: Sample collection by mixed cellulose ester membrane filter; Water; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5003[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 3 ppb[93]; EPA Health Advisory: 30 μg/L; State Drinking Water Guidelines: Arizona 3 μg/L; Maine 3 μg/L; Florida 315 μg/L. Canadian Drinking Water Standards: IMAC 0.01 mg/L

Determination in Water: Log K_{ow} = Negative (>–4.0). Unlikely to bioaccumulate in marine organisms. *Paraquat dichloride*: Freezing/Melting point = 300 °C (decomposition)

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Effects occur in two stages, immediate and delayed. Caution is advised. Exposure to paraquat may be fatal; there is no effective antidote. Signs and symptoms of acute exposure to paraquat may be severe and include nausea, vomiting, diarrhea, and abdominal pain. A burning sensation of the mouth and esophagus with possible ulceration may occur following ingestion. Eye exposure may result in corneal opacification (cloudiness). Dermatitis and nail atrophy may occur following dermal and/or eye contact. Delayed effects include transient reversible liver injury, acute renal failure and progressive pulmonary fibrosis with associated dyspnea (shortness of breath) and pulmonary edema. Progressive pulmonary fibrosis associated with dyspnea and pulmonary edema may be delayed and occur in a few days or up to 2 weeks following exposure to paraquat. Absorbed through the skin and can lead to symptoms as listed in the following paragraph. In addition, can cause fingernail discoloration and damage (which returns to normal when exposure stops), irritation, redness, swelling and burning. Exposure through ingestion may cause burning of the mouth and throat, nausea, vomiting, abdominal pain, diarrhea and damage to the kidneys, heart and liver. Lung damage, leading to death, may occur. One half ounce of a 20% solution has caused death. Ingestion can also cause lung hemorrhage and fibrosis. The substance may cause effects on the lungs, kidneys, liver, cardiovascular system and gastrointestinal tract, resulting in impaired functions, tissue lesions. LD_{50} (oral, rat) = <400 mg/kg[83]; LD_{50} (dermal, rat) = >2 g/kg[83].

Long Term Exposure: Repeated or prolonged contact with skin may cause damage and possible loss of the fingernails, and can lead to dry and cracking skin with blistering. Repeated or prolonged exposure to the aerosol can cause lung irritation, lung damage; bronchitis may develop. Can cause scarring of the lungs, leading to breathlessness. Can damage the liver, kidneys and affect the heart. In 2011 this chemical and rotenone were linked to the potential for Parkinson's disease.

Points of Attack: Eyes, skin, respiratory system, heart, liver, kidneys and gastrointestinal tract.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. EKG. Consider chest x-ray following acute overexposure. Chemical users should be cautioned about the use of alcohol, which can increase liver damage. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water, or bentonite clay in water, or activated charcoal in water, and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray. Obtain authorization and/or further instructions from the local hospital for performance of other invasive procedures. Rush to a health care facility.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 0.1 mg/m^3. NIOSH: *Up to 1 mg/*m^3*:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; * or PaprOvHie (APF = 25) (any powered air-purifying respirator with an organic vapor cartridge in combination with a high-efficiency particulate filter); * or Sa (APF = 10) (any supplied-air respirator); * or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue (solid): Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. This chemical is inactivated by inert clays and anionic surfactants. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers; alkylaryl-sulfonate wetting agents; light. Where possible, automatically pump material from drums or other storage containers to process containers. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of this chemical should be grounded and bonded. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Bipyridilium pesticides, solid, toxic, require a shipping label of "poisonous materials." They fall in DOT Hazard Class 6.1 and Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Hazardous decomposition includes nitrogen oxides. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Remove and isolate contaminated clothing at the site. If water pollution occurs, notify appropriate authorities. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills:* with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen. Procedures for bipyridilium pesticides are as follows. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or car/trailer loads*: isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Paraquat is rapidly inactivated in soil. It is also inactivated by anionic surfactants. Therefore an effective and environmentally safe disposal method would be to mix the product with ordinary household detergent and bury the mixture in clay soil. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices.

Chemical class: Organophosphate

EPA/OPP PC Code: 057401, 057501, 057503

California DPR Chemical Code: 459

HSDB Number: 197

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152; UN1967 (Parathion and compressed gas mixture)/123

RTECS® Number: TF4550000

EC Number: 200-271-7 [*Annex I Index No.:* 015-034-00-1]

Uses: The U.S. EPA announced in November, 2000, the cancellation of ethyl parathion immediately on seed corn and the eventual phase out for its use in other pesticide products by the end of 2000. By the end of October, 2003, the U.S. EPA phased out its use to control insects and mites on alfalfa, barley, corn, canola, sorghum, soybeans, sunflowers and wheat. Also used to control nuisance birds. Not listed for use in EU countries[115]. Not registered for use in the U.S. There are 25 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Parathion (40 CFR 180.121): Alfalfa, forage 1.25 ppm; alfalfa, hay 5 ppm; almond 0.1 ppm; almond, hulls 3 ppm; barley 1 ppm; bean, dry 1 ppm; beet, sugar 0.1 ppm; beet, sugar, tops 0.1 ppm; cabbage 1 ppm; clover 1 ppm; corn 1 ppm; corn, forage 1 ppm; cotton, undelinted seed 0.75 ppm; cranberry 1 ppm; cucumber 1 ppm; currant 1 ppm; date, dried fruit 1 ppm; dewberry 1 ppm; eggplant 1 ppm; endive 1 ppm; fig 1 ppm; grass, forage 1 ppm; hop 1 ppm; hop, dried cones 1 ppm; oat 1 ppm; onion 1 ppm; pea, dry 1 ppm; pea, field, vines 1 ppm; peanut 1 ppm; pecan 0.1 ppm; potato 0.1 ppm; rapeseed, seed 0.2 ppm; rice 1 ppm; rye 0.5 ppm; soybean 0.1 ppm; soybean, hay 1 ppm; sunflower, seed 0.2 ppm; sweet potato 0.1 ppm; walnut 0.1 ppm; wheat 1 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen; IARC, Group 3 not classifiable as to its carcinogenicity in humans; ACGIH A4, not classified as a human carcinogen

Acute Oral Category: 1, DANGER–POISON.

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive]

US DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] [parathion (all formulations: aerosols, dustable powder (DP), emulsifiable concentrate (EC), granules (GR) and wettable powders (WP) of this substance are included, *except* capsule suspensions (CS)]

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R24; R26/28; R48/25; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Parathion is a clear liquid when fresh; pale yellow to dark brown liquid with a garlic-like odor. Commercial parathion products often contain hydrocarbon solvents, such as xylene or toluene, which themselves can cause toxicity. Commercial formulations use carrier solvents that may change the physical properties shown. Molecular weight = 291.27; Specific gravity (H_2O:1) = 1.27 @ 20 °C; Boiling point = 375 °C; 157–162 °C @ 6 mmHg (for CW agent); Freezing/Melting point = 6.1 °C; also listed @ 2.9 °C for chemical warfare (CW) agent; Flash point = 195 °C (oc);120–160 °C (in flammable media). Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0. Slightly soluble in water; solubility = 24 mg/L.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Attacks some plastics, rubbers, and coatings. Rapidly hydrolyzed by alkalis.

Permissible Exposure Limits in Air: IDLH value is 10 mg/m^3 *Warning:* The odor threshold of parathion is five times the OSHA PEL (0.1 mg/m^3) and *does not provide adequate warning of hazardous concentrations*.

OSHA PEL: 0.1 mg/m^3 TWA [skin]

NIOSH REL: 0.05 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.05 mg/m^3 TWA, inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI; 0.05 mg[creatinine]/g in urine, end-of-shift.

NIOSH IDLH: 10 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.14 mg/m^3

PAC-2: **1.5** mg/m^3

PAC-3: **2** mg/m^3 The NIOSH[2]

*AEGLs (Acute Emergency Guideline Levels) and ERPGs (Emergency Response Planning Guideline) are in **bold face**.

DFG MAK: 0.1 mg/m^3 measured as the, inhalable fraction TWA; Peak Limitation Category II(8) [skin]; Pregnancy

Risk Group D; BAT: 100 μg[*p*-nitrophenol]/L in urine after several shifts (sampling time)

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 4 ppb[107]. Clean Water Act Requirement: Freshwater aquatic organisms and their uses should not be affected unacceptably if the four day average concn of parathion does not exceed 0.013 μg/L more than once every three years on the average and if the one hour average concentration does not exceed 0.065 μg/L more than once every three years on the average. State Drinking Water Guidelines: Arizona 30 μg/L; Maine 0.2 μg/L; Florida 42 μg/L; California 40 μg/L. Canadian Drinking Water Standards: MAC 0.05 mg/L

Determination in Water: Log K_{ow} = >3.5. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms: Persons whose skin or clothing is contaminated with liquid or powdered parathion can cause secondary contamination by direct contact. Severely Restricted for use in EU as parathion-ethyl. See also parathion methyl.

Short Term Exposure: An acetylcholinesterase inhibitor. Systemic toxicity due to parathion can result from all routes of exposure. Symptoms include abdominal cramps, vomiting, diarrhea, pinpoint pupils and blurred vision, excessive sweating, salivation and lacrimation, wheezing, excessive tracheobronchial secretions, agitation, seizures, bradycardia or tachycardia, muscle twitching and weakness, and urinary bladder and fecal incontinence. Seizures are much more common in children than in adults. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. This material is extremely toxic; the probable oral lethal dose is 5–50 mg/kg, or between 7 drops and 1 teaspoonful for a 150 lb person. As little as 1 drop can endanger life if splashed in the eye. Toxicity is highest by inhalation. People at special risk are those with a history of glaucoma, cardiovascular disease, hepatic disease, renal, disease, or central nervous system abnormalities. Some additional details on short-term exposure to parathion are as follows: *Inhalation:* Occasional human exposures at concentrations of 0.1–0.8 mg/m^3 did not give rise to any symptoms. Occasional human exposure@ 1.5–2.0 mg/m^3 resulted in nausea and vomiting. Higher exposures can give rise to dizziness, blurred vision, wheezing, excessive salivation, and muscle and abdominal cramps. An estimated 10 to 20 mg (1/1500 ounce) may cause death. *Skin:* However, many human poisonings have occurred through extensive dermal contact at unspecified levels. This is the greatest hazard for some workers. Symptoms of poisoning include nausea, vomiting, weakness, blurring of vision and muscle cramps. NIOSH lists the following symptoms of exposure: irritation eyes, skin, respiratory system; miosis; rhinorrhea (discharge of thin nasal mucous); headache; chest tightness, wheezing, laryngeal spasm, salivation, cyanosis; anorexia, nausea, vomiting, abdominal cramps, diarrhea; sweating; muscle fasiculation, weakness, paralysis; giddiness, confusion, ataxia; convulsions, coma; low blood pressure; cardiac irregular/irregularities. Death can result from loss of consciousness, coma, excessive bronchial secretions, respiratory depression and cardiac irregularity. Delayed pulmonary edema may occur after inhalation. Parathion toxicity depends on metabolic activation; thus, symptoms may be delayed for 6 to 24 hours following exposure. LD_{50} (oral, rat) = 2 mg/kg; LD_{50} (dermal, rat) = 71 mg/kg.

Long Term Exposure: Persistent weakness and impaired memory have been reported to occur from low-level exposures to organophosphates in the absence of acute cholinergic effects. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. *Carcinogenicity[83]:* The International Agency for Research on Cancer has determined that parathion is not classifiable as to its carcinogenicity to humans. However, EPA lists parathion as a Possible human carcinogen. *Reproductive and developmental effects:* Studies have been reported in which parathion was embryo-toxic and feto-toxic in rodents. There are no studies addressing reproductive or developmental effects in humans exposed to parathion. Cholinesterase inhibitor; cumulative effect is possible.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, eyes, skin and blood cholinesterase.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Toxicity of parathion depends on metabolic activation; thus, symptoms may be delayed for 6 to 24 hours after exposure. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Also consider complete blood count and chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: (1) Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents; and combustible materials. Sources of ignition, such as smoking and open flames, are prohibited where thei chemical is handled, used, or stored, Use only non-sparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded. Procedures for the handling, use and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. (2) Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

California DPR Chemical Code: 2739
HSDB Number: 5554 as nonanoic acid
UN/NA & ERG Number: UN3265/153
RTECS® Number: RA6650000
EC Number: 203-931-2 [*Annex I Index No.:* 607-197-00-2]

Uses: Pelargonic acid occurs naturally in many plants and animals. It is used to control the growth of weeds and as a blossom thinner for apple and pear trees. It is also used as a food additive; as an ingredient in solutions used to commercially peel fruits and vegetables.

U.S. Maximum Allowable Residue Levels for Nonanoic acid [40 CFR 180.940(b)]: Residues are exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food. (b) When used as ingredients in an antimicrobial pesticide formulation may be applied to: Dairy processing equipment, and food-processing equipment and utensils. Limit: when ready for use, the end-use concentration is not to exceed 90 ppm. ***[40 CFR 180.940 (c)]:*** (c) The following chemical substances when used as ingredients in an antimicrobial pesticide formulation may be applied to: Food-processing equipment and utensils. Limit: when ready for use, the end-use concentration is not to exceed 90 ppm.

Regulatory Authority and Advisory Information: Acute Oral Category: 4, Caution.
Health Advisory: Skin irritant/sensitizer
European/International Regulations: Hazard Symbol: C; risk phrases: R34; safety phrases: S1/2; S26: S28; S36/37/39; S45 (see Appendix 1)
WGK (German Aquatic Hazard Class): 1-Slightly water polluting

Description: Colorless or yellowish, combustible, oily liquid. Faint odor. Molecular weight 158.27; Specific gravity (H_2O:1) = 0.9055 @ 20 °C; Boiling point = 255 °C; Freezing/Melting point = 12.4 °C; Boiling point = 255.5 °C; Vapor pressure = 1.65×10^{-3} mmHg @ 25 °C; Flash point = >125 °C; Autoignition temperature = 400 °C; Explosive limits: LEL = 0.9%; UEL = 5.9%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Slightly soluble in water; solubility 250 mg/L @ 25 °C.

Incompatibilities: Heated vapors may form explosive mixture with air. May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with strong bases and silver compounds; mixture with some silver compounds may form explosive salts of silver oxalate.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 20 mg/m^3
PAC-2: 220 mg/m^3
PAC-3: 1300 mg/m^3

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation; ingestion; dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. This material can cause irritation and chemical burns to the skin, eyes, and respiratory and digestive tracts. May cause permanent eye damage. Very harmful if swallowed. Repeated or prolonged dermal contact may cause dermatitis. Inhalation may cause lung edema, a medical emergency that can be delayed up to 72 hours. LD_{50} (oral, rat) = 15 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Dermatitis; serious problems with the digestive tract and respiratory tracts.

Points of Attack: Skin, eyes, respiratory tract.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals.

Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 20 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fitting.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Poisonous and irritating gasses are released in fire, including oxides of carbon. *On a small fire:* use dry chemical powder, carbon dioxide or water spray. *On a large fire:* use water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Penconazole P:0186

Use Type: Fungicide

CAS Number: 66246-88-6

Formula: $C_{13}H_{15}C_{12}N_3$
Synonyms: 1*H*-1,2,4-Triazole,1-[2-(2,4-dichlorophenyl)pentyl]-; 1-[2-(2,4-Dichlorophenyl)pentyl]-1*H*-1,2,4-triazole; (RS)-1-[2-(2,4-Dichlorophenyl)-*N*-pentyl]-1*H*-1,2,4-triazole
Trade Names: AWARD®; CGA-71818®; ONMEX®; TOPAS®; TOPAS-C®; TOPAS-MZ®; TOPAZ®; TOPAZE®; TOPAZE-C®; TOPENCO 100EC®
Chemical class: Azole; Triazole
EPA/OPP PC Code: 128999
UN/NA & ERG Number: UN1915/127
RTECS® Number: XZ4615000
EC Number: 266-275-6
Uses: Penconazole is a systemic fungicide used to control powdery mildew. It is used on apples and grapes and other fruits, hops, tobacco, ornamentals and on vegetables. Not currently registered in the U.S. Reported to be used in most European countries. Currently, there are more than 30 global suppliers[97].
Regulatory Authority and Advisory Information: Acute Oral Category: 3, CAUTION.
Health Advisory: Developmental/Reproductive Toxin
Endocrine disruptor: Listed as a potential ED by the German Federal Environmental Agency
Description: Penconazole is a white powder. Molecular weight = 284.21; Specific gravity (H_2O:1) = 1.27 @ 20 °C; Boiling point = 415 °C; Freezing/Melting point = 57 °C; Vapor pressure = 3.7×10^{-7} mmHg @ 25 °C; Flash point = 205 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Soluble in water.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Ingestion, dermal and/or eye contact. May be absorbed through the unbroken skin.
Harmful Effects and Symptoms
Short Term Exposure: Poisonous if swallowed. Contact may irritate skin and cause eye irritation and possible severe injury. Avoid inhalation. LD_{50} (oral, rat) = <2 g/kg; LD_{50} (dermal, rat) = >3 g/kg.
Long Term Exposure: A potential Endocrine disruptor that can affect thyroid, prostate and testes, weight.
Medical Surveillance: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.
Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Refrigerate. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.
Shipping: This material may be classified as an Environmentally hazardous substances, solid, n.o.s. It usually falls in Hazard Class 9.
Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned. Do not allow water to get inside containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways,

notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon and hydrogen chloride gas. Use water spray, dry chemical, carbon dioxide; or Halon extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

Pencycuron P:0187

Use Type: Fungicide

CAS Number: 66063-05-6

Formula: $C_{19}H_{21}ClN_2O$

Synonyms: 1-(*p*-Chlorobenzyl)-1-cyclopentyl-3-phenylurea; *N*-[(4-Chlorophenyl)-methyl]-*N*-cyclopentyl-*N*′-phenylurea; Urea, *N*-[(4-chlorophenyl)methyl]-*N*-cyclopentyl-*N*′-phenyl-

Trade Names: BAY® NTN-19701; BAYER® NTN-19701; MONCEREN®; NTN-19701®; PENCYCURONE®

Chemical class: Phenylurea; Substituted urea

EPA/OPP PC Code: 128823

UN/NA & ERG Number: UN3002 (liquid phenylurea)/151

RTECS® Number: YS644000

EC Number: 266-275-6

Uses: Pencycuron is a non-systemic fungicide with specific control against fungicidal diseases (*Rhizoctonia solani* and *Pellicularia)* in potatoes, sugar beets, rice, cotton and ornamentals. Not currently registered in the U.S. Used in most European countries. There are more than 30 global suppliers[97].

Regulatory Authority and Advisory Information: Acute Oral Category: 4, Caution, Not acutely toxic

Description: Red liquid. Molecular weight = 328.87; Specific gravity (H_2O:1) = 1.01 @ 20 °C; Boiling point = 286 °C; Freezing/Melting point = 129.5–135 °C; Vapor pressure = 2.7×10^{-11} mmHg @ 25 °C; Flash point = 273 °C. Practically insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Noncorrosive to metals.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Dermal contact may cause allergic reaction. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin, lungs.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with pencycuron you should be trained on its proper handling and storage.

Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenyl urea pesticides, solid, toxic, require a label of "poisonous materials." This compound falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon; corrosive and toxic fumes of hydrogen chloride and hydrogen cyanide gases and flammable hydrogen gas. This chemical is combustible. Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate in a unit with effluent gas scrubbing. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Pendimethalin P:0188

Use Type: Herbicide

CAS Number: 40487-42-1

Formula: $C_{13}H_{19}N_3O_4$

Synonyms: Aniline, 3,4-dimethyl-2,6-dinitro-*N*-(1-ethylpropyl)-; Benzenamine, 3,4-dimethyl-2,6-dinitro-*N*-(1-ethylpropyl)-; Benzenamine, *N*-(1-ethylpropyl)-3,4-dimethyl-2,6-dinitro-; Caswell No. 454BB; 2,5-Dinitro-*N*-(1-ethylpropyl)-3,4-xylidine; 3,4-Dimethyl-2,6-dinitro-*N*-(1-ethylpropyl) aniline; *N*-(1-Ethylpropyl)-2,6-dinitro-3,4-xylidine; *N*-(1-Ethylpropyl)-3,4-dimethyl-2,6-dinitrobenzenamine; *N*-(1-Ethylpropyl)-3,4-dimethyl-2,6-dinitroanaline; Pendimethaline; *N*-(3-Pentyl)-3,4-dimethyl-2,6-dinitroaniline; Tendimethalin; 3,4-Xylidine, 2,6-dinitro-*N*-(1-ethylpropyl)-

Trade Names: AC 92553®; ACCOTAB®; BULLET® (pendimethalin + cyanazine); GO-GO-SAN®; HERBADOX®; PAY-OFF®; PENOXALIN®; PENOXALINE®; PROWL®; SIPAXOL®; SQUADRON® (with imazaquin); STOMP®; TATA PANIDA®; VALOR®; WAY-UP®

Chemical class: 2,6-Dinitroaniline

EPA/OPP PC Code: 108501; (454300 old EPA code number)

California DPR Chemical Code: 1929

HSDB Number: 6721

UN/NA & ERG Number: UN1596 (Dinitroanilines)/153

RTECS® Number: BX5470000

EC Number: 254-938-2 [*Annex I Index No.:* 609-402-00-X]

Uses: Pendimethalin is a selective pre-emergence and post-emergence herbicide used on various agricultural and non-agricultural sites to control broadleaf weeds and grassy weeds in crops such as apricot, carrot, cherry, corn, cotton, fig, garbanzos, garlic, olive, onion, nectarine, peach, pear, pecan, plum, rice and prune, and noncrop areas. It is applied to soil preplant, pre-emergence, and post-emergence with ground and aerial equipment.

U.S. Maximum Allowable Residue Levels for Pendimethalin including its metabolites and degradates, in or on the commodities. Compliance with the tolerance levels specified in the following table below is to be determined by measuring only pendimethalin, and its metabolite, 4-[(1-ethylpropyl) amino]-2-methyl-3,5-dinitrobenzyl alcohol, calculated as the stoichiometric equivalent of pendimethalin, in or on the following commodities: [40 CFR 180.361(a)]: Alfalfa, forage 3.5 ppm; alfalfa, hay 4.0 ppm; alfalfa, seed 0.10 ppm; almond, hulls 0.4 ppm; apple, wet pomace 0.20 ppm; artichoke, globe 0.1 ppm; asparagus 0.15 ppm; beans 0.10 ppm; bean, forage 0.10 ppm; bean, hay 0.10 ppm; brassica head and stem, subgroup 5-A, 0.1 ppm; carrot 0.5 ppm; citrus, oil 0.5 ppm; corn, field, forage 0.1 ppm; corn, field, grain 0.1 ppm; corn, field, stover 0.1 ppm; corn, pop, grain 0.1 ppm; corn, sweet, forage 0.1 ppm; corn, sweet, kernel plus cob with husks removed 0.1 ppm; corn, sweet, stover 0.1 ppm; cotton, gin byprducts 3.0 ppm; cotton, undelinted seed 0.1 ppm; crayfish 0.05 ppm; fruit, citrus, group 10, 0.1 ppm; fruit, pome, group 11, 0.10 ppm; fruit, stone, group 12, 0.10 ppm; garlic 0.1 ppm; grape 0.1 ppm; grass forage, fodder, and hay crop group 17, forage 20 ppm; grass forage, fodder, and hay crop group 17, hay 13 ppm; grass forage, fodder, and hay crop group 17, straw 4.0 ppm; juneberry 0.10 ppm; leek 0.20 ppm; nut, tree, group 14, 0.1 ppm; olive 0.1 ppm; onion, bulb 0.1 ppm; onion, green 0.20 ppm; onion, welsh 0.20 ppm; peanut 0.1 ppm; peanut, hay 0.1 ppm; peas (except field peas) 0.10 ppm; peppermint, oil 1.0 ppm; peppermint, tops 0.2 ppm; Pistachio 0.1 ppm; pomegranate

0.10 ppm; potato 0.1 ppm; rice, grain 0.1 ppm; rice, straw 0.1 ppm; shallot 0.2 ppm; sorghum, forage 0.1 ppm; sorghum, grain, grain 0.1 ppm; sorghum, grain, stover 0.1 ppm; soybean, forage 0.1 ppm; soybean, hay 0.1 ppm; soybean, seed 0.1 ppm; spearmint, oil 1.0 ppm; spearmint, tops 0.2 strawberry 0.10 ppm; sugarcane, cane 0.1 ppm; sunflower, seed 0.1 ppm; vegetable, fruiting, group B, 0.10 ppm; wheat, grain 0.10 ppm; wheat, forage 3.0 ppm; wheat, hay 0.60 ppm; wheat, straw 0.30 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Acute Oral Category: 3, CAUTION

Health Advisory: Tumorigen, Endocrine disruptor (S!)

EPA Acceptable Daily Intake (ADI) Oral Reference Dose (RfD) = 0.04 mg/kg/day

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R43; R50/53; safety phrases: S2; S24; S29; S37; S60; S61 (see Appendix 1)

Description: Yellow-orange crystalline solid. Mild nut-like odor. Commercial product is available as an emulsifiable concentrate. Molecular weight = 281.33; Specific gravity (H_2O:1) = 1.19 @ 25 °C; Boiling point = (decomposes) 330 °C; Freezing/Melting point = 55–58 °C; Vapor pressure = 9.4×10^{-6} mmHg @ 25 °C. Slightly soluble in water; solubility = 0.32 mg/L @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Reacts with oxidizers, acids and alkaline materials. Contact with strong oxidizers may cause fire and explosions.

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 280 μg/L; Florida 280 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Method: USGS-NWQL O-1126-95; Procedure: gas chromatography-mass spectrometry with select-ion monitoring; Matrix: natural water; Detection limit: 0.018 μg/L. Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Absorbed through the unbroken skin. Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Irritates and possibly burns the skin, eyes, and respiratory tract. Eye contact may cause irritation, burning sensation, burns, and visual damage; inflammation of the conjunctiva, corneal opacity and slight physiologic dilatation of the pupils. Dermal contact causes irritation and possible burns. Rapidly absorbed through the unbroken skin and can be fatal. Causes irritation of the mucous membrane and upper respiratory tract. May cause violent sneezing and coughing. May cause increased perspiration, elevated temperature, breathing, and heart rate; headache, weakness, nausea, abdominal pain, vomiting. Systemic intoxication is cumulative and has been fatal. High levels of exposure may be fatal. Inhalation may cause damage to the circulatory system and heart resulating in possible death due to cardiac failure. May be fatal if swallowed. Causes gastrointestinal irritation with nausea, vomiting and diarrhea. Symptoms are similar to those of acute inhalation. May cause liver and kidney damage. LD_{50} (oral, rat) = 1050–3180 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause tumors. Thyroid toxin. This material is capable of bioaccumulating. May cause cancer. Skin sensitizer.

Points of Attack: Thyroid gland. Skin, kidneys, liver.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Evaluation of thyroid function. Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develops. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Expanded Polymeric[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: (1) Color Code-Yellow Stripe: Reactivity Hazard; Store separately in a area isolated from flammables, combustibles, or other yellow-coded materials. (2) Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, strong acids; strong bases and other incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dinitroanilines require a label of "poisonous materials." They usually fall into Hazard Group 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Poisonous gases released in fire included oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; water spray; alcohol foam or polymer foam extinguishers. Heated vapors in confined spaces can explode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers can explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See 40 CFR Parts 261.3 for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations. Organic pesticides, whether of botanical or synthetic origin, can be destroyed by incineration equipped with scrubbers to remove acid wastes.

Pentachlorophenol P:0240

Use Type: Fungicide, Herbicide, Slimicide, Wood preservative

CAS Number: 87-86-5

Formula: C_6HCl_5O; C_6Cl_5OH

Synonyms: 1-Hydroxypentachlorobenzene; NCI-C54933; NCI-C55378; NCI-C56655; PCP; Penchlorol; Penta; Pentachlorofenol; Pentachlorophenate; 2,3,4,5,6-Pentachlorophenol; Pentachlorophenol, technical; Pentaclorofenol (Spanish); Phenol, pentachloro-

Trade Names: (The U.S. EPA lists 626 active and canceled/transferred labels for this chemical) CHEM-TOL®; CHLON®; CHLOROPHEN®; CRYPTOGIL OL®; DOWCIDE® 7; DOWICIDE® 7; DOW PENTACHLOROPHENOL DP-2 ANTIMICROBIAL®; DURA TREET II®; DUROTOX®; EP 30®; FORPEN-50®; FUNGIFEN®; GLAZD-PENTA®; GRUNDIER ARBEZOL®; LAUXTOL®; LIROPREM®; ONTRACK WE HERBICIDE®; ORTHO TRIOX®; OSMOSE WPC®; PENTACHLOROPHENOL, DOWICIDE EC-7®; PENTACHLOROPHENOL, DP-2®; PENTACON®; PENTA-KIL®; PENTA READY®; PENTASOL®; PENWAR®; PERATOX®; PERMACIDE®; PERMAGARD®; PERMASAN®; PERMATOX DP-2®;

PERMATOX PENTA®; PERMITE®; POL NU®; PREVENTOL P®; PRILTOX®; SANTOBRITE®; SANTOPHEN®; SINITUHO®; TERM-I-TROL®; THOMPSON'S WOOD FIX®; WATERSHED WP®; WEEDONE®; WOODTREAT A®

Chemical class: Chlorinated phenol

EPA/OPP PC Code: 063001 and 600021

California DPR Chemical Code: 465 Not registered

HSDB Number: 894

UN/NA & ERG Number: UN3155/154

RTECS® Number: SM6300000

EC Number: 201-778-6 [*Annex I Index No.:* 604-002-00-8]

Uses: Pentachlorophenol (PCP) is a commercially produced insecticide, fungicide, and slimicide. Since 1984 it has been restricted to certified applicators and is no longer available to the general public. It is primarily used to protect timber from fungal rot and wood-boring insects, but may also be used as a pre-harvest defoliant in cotton, a general pre-emergence herbicide, and as a biocide in industrial water systems. Not approved for use in EU countries[115]. Not registered for use in the U.S. There are 48 global suppliers[97].

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; EU GHS Category 2: Suspected human carcinogen.; ACGIH A3 Confirmed animal carcinogen with unknown relevance to humans

California Proposition 65 Chemical: Cancer (1/1/1990)

Health Advisory: Tumorigen, Mutagen, Reproductive Toxin, Skin irritant/sensitizer, Very toxic by Inhalation (EU); Endocrine disruptor (S!)

Acute Oral Category: 1, DANGER–POISON

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] (as pentachlorophenol and its salts and esters)

European/International Regulations: Hazard Symbol: T+, Xi, N: risk phrases: R24/25; R26; R36/37/38; R40; R50/53; safety phrases: S1/2; S22; S36/37; S45; S52; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Pentachlorophenol is a colorless to white crystalline solid. It has a phenolic or benzene-like odor; pungent when hot. Commercial products may be flammable. The Odor Threshold in water = 1600 μg/L and the taste threshold in water is 30 μg/L. Molecular weight = 266.33; Specific gravity (H_2O:1) = 1.978 @ 22 °C; Boiling point = (decomposes) 308.9 °C; Freezing/Melting point = 174 °C; 188 °C (anhydrous); Vapor pressure = 0.0003 mmHg @ 25 °C; Flash point = 134 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Practically insoluble in water; solubility in water = 14 mg/L @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Reacts violently with strong oxidizers, acids, alkalies and water. Decomposes >300 °C. Flammable hydrogen gas may be generated, and the heat from reaction may ignite the gas. May generate heat on contact with bases. Heating may initiate dangerous polymerization. Corrosive in the presence of moisture; contact with metals may cause the release of flammable and explosive hydrogen gas.

Permissible Exposure Limits in Air: Odor thresholds[83] for PCP solution @ 30 °C = 857 μg/L & @ 60 °C = 12,000 μg/L.

NIOSH IDLH: 2.5 mg/m^3

OSHA PEL: 0.5 mg/m^3 TWA[skin]

NIOSH REL: 0.5 mg/m^3 TWA[skin]

ACGIH TLV®[1]: 0.5 mg/m^3 TWA[skin]; BEI: 2 mg[total *PCP*]/g creatinine in urine/prior to last shift of work-week; 5 mg [free PCP]/L in plasma/end of shift; confirmed animal carcinogen with unknown relevance to humans.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1.4 mg/m^3

PAC-2: 15 mg/m^3

PAC-3: 150 mg/m^3

DFG MAK: [skin] Carcinogen Category 2

Determination in Air: Sample collection by mixed cellulose ester membrane filter in series with ethylene glycol bubbler, analysis by high-performance liquid chromatography with ultraviolet detection. NIOSH IV, Method #5512[18]

Permissible Concentration in Water: Federal Drinking Water Guidelines: 0.9 ppb[93]; State Drinking Water Guidelines: Arizona 220 μg/L; Maine 3 μg/L; Minnesota 1 μg/L.

Determination in Water: Methylene chloride extraction followed by gas chromatography with electron capture or halogen specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625). Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Easily absorbed through the unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin and respiratory tract. May affect the cardiovascular system. *Inhalation:* Levels of 1 mg/m^3 can cause severe irritation of the nose, throat and lungs. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Breathing dust or particulates tainted with pentachlorophenol can give rise to sneezing. *Skin:* A 0.04% solution can cause pain and inflammation at point of contact. Chloracne, a skin disorder, has been observed in workers in pentachlorophenol manufacturing plants and wood-preserving operations. Profuse sweating and elevated temperature are symptoms of poisoning due to prolonged contact. Excessive skin exposure has caused human death. *Eyes:* Levels of 1 mg/m^3 may be irritating and excessive contact can lead to loss of sight due to corneal damage. *Ingestion:* The lethal human dose is approximately equal to 1 teaspoon for a 150 lb person. Ingestion of 4 to 8 ounces followed by prompt emergency treatment still produced symptoms of poisoning which included rapid breathing followed by a decrease in breathing rate, abdominal pain, reduced blood pressure, excessive and slurred speech and weakness. Heart failure may result from acute inhalation. LD_{50} (oral, rat) = <30 mg/kg; LD_{50} (dermal, rat) = 100–300 mg/kg.

Long Term Exposure: Irritation of eyes, throat, nose and upper lungs has been reported by individuals using pentachlorophenol as an insecticide for periods of a few years. Chemical acne has been associated with prolonged exposure to this compound. A liver and thyroid toxin. May affect the central nervous system, kidneys, liver, lungs. May be a carcinogen in humans. May damage the developing fetus. There is limited evidence that pentachlorophenol is a teratogen in animals. Increases in liver, adrenal gland, and nasal tumors have been found in laboratory animals exposed to high doses of pentachlorophenol. Possible cancer hazard based on tests with laboratory animals. The U.S. EPA has determined that pentachlorophenol is a probable human carcinogen and the International Agency for Cancer Research (IARC) considers it possibly carcinogenic to humans. Some studies have found an increase in cancer risk in workers exposed to high levels of technical-grade pentachlorophenol for a long period of time, but other studies have not found this. We do not know if exposure to pentachlorophenol will result in birth defects or other developmental effects in people. Death, low body weights, decreased growth, and skeletal effects have been observed in laboratory animals exposed to high levels of pentachlorophenol during development. Bioaccumulates in the body. Animal studies have reported that fetal effects/abnormalities may occur when maternal toxicity is seen. Chronic exposure has resulted in an increase prevalence of conjunctivitis, sinusitis, bronchitis, polyneuritis, and dermatitis. Exposure may cause blood effects and bone marrow damage. Chronic exposure may cause lung damage. Laboratory experiments have resulted in mutagenic effects.

Points of Attack: Eyes, skin, respiratory system, cardiovascular system, heart, liver, kidneys and central nervous system. Cancer site in animals: liver.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. If symptoms develop or overexposure is suspected, the following may be useful: Urine test for pentachlorophenol. Liver and kidney function tests. Refer to the NIOSH Criteria Documents #78-174 and #76-147 on Manufacturing, formulating, and working safely with pesticide.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Nitrile, polyvinyl chloride, and Tychem® (from E.I. du Pont de Nemours & Company) are among the recommended protective materials. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >1.4 mg/m^3. NIOSH: *2.5 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or PaprOvHie (APF = 25) (any powered air-purifying respirator with an organic vapor cartridge in combination with a high-efficiency particulate filter); or Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) (any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Pentachlorophenol must be stored to avoid contact with strong oxidizers (such as chlorine, bromine, and fluorine) because violent reactions occur. Where possible, automatically transfer material from drums or other storage containers to process containers. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of this chemical should be grounded and bonded. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pentachlorophenol requires a shipping label of "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride, oxides of carbon, and chlorinated phenols. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration (600° to 900 °C) coupled with acequate scrubbing and ash disposal facilities. Alternatively pentachlorophenol in wastewaters, for example, may be recovered and recycled.

Peracetic acid P:0290

Use Type: Fungicide, Herbicide, Nematicide, Rodenticide, Microbiocide
CAS Number: 79-21-0
Formula: $C_2H_4O_3$; CH_3COOOH
Synonyms: Acido peracetico (Spanish); Acetic peroxide; Acetyl hydroperoxide; Ethaneperoxoic acid; Hydrogen peroxide and peroxyacetic acid mixture; Hydroperoxide, acetyl; Monoperacetic acid; Peroxyacetic acid
Trade Names: DESOXON 1®; ESTOSTERIL®; OSBON AC®; OXYMASTER®; PROXITANE®
Chemical class: Inorganic compound
EPA/OPP PC Code: 063201
California DPR Chemical Code: 2291
HSDB Number: 1106
UN/NA & ERG Number: UN3107/145
RTECS® Number: SD8750000
EC Number: 201-186-8 [*Annex I Index No.:* 607-094-00-8]
Uses: This compound is used as bactericide and fungicide, especially in food processing, a reagent in making caprolactam and glycerol; an oxidant for preparing epoxy compounds; a bleaching agent; a sterilizing agent; and a polymerization catalyst for polyester resins. Not approved for use in EU countries[115]. Registered for use in the U.S. and Canada.
U.S. Maximum Allowable Residue Levels for Peracetic acid [40 CFR 180-940(a)]: Residues are exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food. (a) When used as ingredients in an antimicrobial pesticide formulation may be applied to: Food-contact surfaces in public eating places, dairy-processing equipment, and food-processing equipment and utensils. Limit: When ready for use, the end-use concentration is not to exceed 58 ppm. ***[40 CFR 180-940(b)]***: (b) When used as ingredients in an antimicrobial pesticide formulation may be applied to: Dairy processing equipment, and food-processing equipment and utensils. Limit: When ready for use, the end-use concentration is not to exceed 315 ppm. ***[40 CFR 180-940 (c)]:*** (c) When used as ingredients in an antimicrobial pesticide formulation may be applied to: Food-processing equipment and utensils. Limit: When ready for use, the end-use concentration is not to exceed 315 ppm.
Regulatory Authority and Advisory Information:
Health Advisory: Skin irritant/sensitizer; Highly Reactive Substance and Explosive[15].
Acute Oral Category: 3, CAUTION
Clean Air Act: Accidental Release Prevention/Flammable substances (Section 112[r], Table 3), TQ = 10,000 lb (4540 kg)
Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500 lb (227 kg)
Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: T, H; risk phrases: R5; R23/24/25; R34; safety phrases: S1/2; S3; S27; S36 (see Appendix 1)
WGK (German Aquatic Hazard Class): 2-Hazard to waters
Description: Peracetic acid is a flammable colorless liquid. Transported and stored in diluted solution with acetic acid (often 40%) and hydrogen peroxide (usually 5%) to prevent explosion. Molecular weight = 76.06; Specific gravity (H_2O:1) = 1.15 @ 20 °C; Boiling point = 105 °C (violent decomposition @ 110 °C); Freezing/Melting point = 0.1 °C; Flash point = 41.3 °C (oc); 56 °C (32% in dilute acetic acid and <6% hydrogen peroxide); LEL (Lower Explosive Limit) = 16,000 ppm; Autoignition temperature = 198 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 4 (Oxidizer). Highly soluble in water.
Incompatibilities: Peracetic acid is a powerful oxidizer. Keep away from combustible materials. Thermally unstable, it decomposes violently @ 110 °C. Concentrated material is shock- and friction-sensitive. May explode if concentration exceeds 56% of carrier, due to evaporation. Isolate from other stored material, particularly accelerators, oxidizers, organic or combustible materials, olefins, hydrogen peroxide, acetic anhydride, reducing substances. Keep away from acids, alkalies, heavy metals, organic material.
Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: $\mathbf{0.52}_{\mathbf{A}}$ mg/m^3
PAC-2: $\mathbf{1.6}_{\mathbf{A}}$ mg/m^3
PAC-3: $\mathbf{15}_{\mathbf{A}}$ mg/m^3
Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values.
DFG MAK: Carcinogen Category 3B; See section X(a)
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = –1.07 (est.)[83]. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, ingestion, skin and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Eye contact can cause severe irritation and burns; may cause permanent damage. Irritates the

respiratory tract. Contact may burn the skin. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Signs and symptoms of acute ingestion of peracetic acid may include corrosion of mucous membranes of mouth, throat, and esophagus with immediate pain and dysphagia (difficulty swallowing), ingestion may cause gastrointestinal tract irritation. This is a very toxic compound. The probable human oral lethal dose is 50–500 mg/kg, or between 1 teaspoon and 1 ounce for a 150 lb persons. LD_{50} (oral, rat) = <2000 mg/kg; LD_{50} (dermal, rabbit) = 500 mg/kg. May cause severe gastrointestinal tract irritation and renal failure, Vapours may cause dizzines.

Long Term Exposure: There is limited evidence that PAA causes cancer of the lungs. High or repeated exposure may affect the liver and kidney. May cause tumors.

Points of Attack: Liver, kidneys and lungs.

Medical Surveillance: Liver and kidney function tests. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is *conscious*, administer water, or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Butyl rubber and Viton are recommended. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA $> 0.52_A$ mg/m^3 Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values. *Where there is no REL, at any detectable concentration:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, air-purifying respirator with organic vapor cartridge(s)]; CcrFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Red Stripe: Flammability Hazard: Do not store in the same area as other flammable materials. This chemical is also corrosive and caustic. Prior to working with this chemical you should be trained on its proper handling and storage. Keep in a cool, well-ventilated area, separated from organic and combustible materials. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of 5 gallons or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage regulations. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organic peroxides type E, liquid, require a shipping label of "ORGANIC PEROXIDE." They fall in DOT Hazard Class 5.2.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Avoid breathing vapors. Do not touch the spilled material; shut off all ignition sources and stop the leak if this can be done without risk. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Do not use spark-generating metals or organic materials for sweeping up or handling spilled material. Dispose of the absorbed peroxyacetic acid solution, in small quantities at a time, by placing it on the ground in a remote outdoor area and igniting with a long torch. Empty containers should be washed with a 10% sodium hydroxide solution. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid and a powerful oxidizer that can increase the activity of an existing fire. Containers may explode in fire. It explodes @ 110 °C and is shock-sensitive, particularly if organic solvents are used in place of acetic acid as a carrier. Hazardous decomposition includes oxides of carbon. Fight fires from an explosion-resistant location. In advanced or massive fires, area should be evacuated. *For small fires:* use dry chemical, carbon dioxide; water spray; or foam. *For large fires:* flood area with water. If fire occurs in the vicinity of this compound, water should be used to keep containers cool. Clean up and salvage operations should not be attempted until all of the peroxyacetic acid solution has cooled completely. Keep unnecessary people away; wear self-contained breathing apparatus and full protective clothing. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Phenmedipham P:0335

Use Type: Herbicide

CAS Number: 13684-63-4

Formula: $C_{16}H_{16}N_2O_4$

Synonyms: Carbamic acid, (3-methylphenyl)-, 3-[(methoxycarbonyl)amino]phenyl ester; 3-[(Methoxycarbonyl)amino]phenyl *N*-(3-methylphenyl)carbamate; Carbanilic acid, *m*-methyl-, ester with methyl-*m*-hydroxycarbanilate (8CI); Fenmedifam; Carbanilic acid, *m*-hydroxy-, metnyl ester, *m*-methylcarbanilate (ester) (8CI); *m*-Hydroxycarbanilic acid methyl ester *m*-methylcarbanilate; Methyl *m*-hydroxycarbanilate m-methylcarbanilate; 3-(Methylphenyl)carbamic acid 3-[(methoxycarbonyl)amino]phenyl ester; Methyl 3-(*m*-tolylcarbamoyloxy)phenylcarbamate; 3-Methoxycarbonylaminophenyl *N*-3'-methylphenylcarbamate; Phenmediphame

Trade Names: AIMSAN®; BETAMIX® (phenmedipham+desmedipham); BETANAL®; CQ 1451® (phenmedipham+desmedipham+ethofumesate); EC herbicide (phenmedipham+desmedipham+ethofumesate); EP 452®; KEEPER®; KEMIFAM®; MSS HERBASAN®; NA 305® (phenmedipham+desmedipham+ethofumesate); NA 308® (phenmedipham+desmedipham+ethofumesate); POWERTWIN® (phenmedipham+ethofumesate); PROGRESS® (phenmedipham+desmedipham+ethofumesate); S-4075®; SCHERING 4072®; SN 38584®; SPIN-AID®; SYNBETAN-P®; TWIN®; VANGARD®

Chemical class: Bis-Carbamate; Carbamate

EPA/OPP PC Code: 098701

California DPR Chemical Code: 675

HSDB Number: 1402 as Betanal

UN/NA&ERG Number: UN2757 (solid)/151; UN3077(solid)/171; UN3082 (liquid)/171

RTECS® Number: FD9050000

EC Number: 237-199-0 [*Annex I Index No.:* 616-106-00-0]

Uses: A post-emergence herbicide for control of annual broadleaf weeds and grasses in sugar beets, spinach, strawberries, and sunflowers.

U.S. Maximum Allowable Residue Levels for Phenmedipham (40 CFR 180.278): beet, garden, roots (N) negligible residue 0.2 ppm; beet, sugar, rootd, and tops 0.1 ppm; spinach 0.5 ppm. (N) = negligible amount of residue.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Health Advisory: Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 4, Caution, Not acutely toxic

European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: Colorless crystalline solid, or needles; white powder. Odorless. Commercial product is available as an emulsifiable concentrate. Molecular weight = 300.31; Specific gravity (H_2O:1) = 0.28 g/cm^3 @ 20 °C; Boiling point = (decomposes) 145 °C; Freezing/Melting point = 139–144 °C; Vapor pressure = 1×10^{-11} mmHg @ 25 °C; Flash point = 73 °C. Very slightly soluble in water; solubility = 1 to 5 mg/mL @ 21 °C; 4.7 mg/L @ 25 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Decomposes >145 °C. Esters react with acids to liberate heat along with alcohols and acids. Strong oxidizing acids may cause a vigorous reaction that is sufficiently exothermic to ignite the reaction products. Heat is also generated by the interaction of esters with caustic solutions. Flammable hydrogen is generated by mixing esters with alkali metals and hydrides. Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. Forms carbon monoxide and toxic nitrogen oxides when heated to decomposition.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Skin absorption, ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = >7 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. Frequent expsure may cause liver damage. May cause skin dermatitis or allergy.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Storage: Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1. This material may also be classified as environmentally hazardous substances, solid or liquid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

d-Phenothrin P:0364

Use Type: Insecticide

CAS Number: 26002-80-2

Formula: $C_{23}H_{26}O_3$

Synonyms: AI3-29062; Caswell No. 652B; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-,(3-phenoxyphenyl) methyl ester; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methylpropenyl)-, *m*-phenoxybenzyl ester; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, (3-phenoxyphenyl)methyl ester; 2,2-Dimethyl-3-(2-methyl-1-propenyl) cyclopropanecarboxylic acid (3-phenoxyphenyl)methyl ester; ENT 27972; EPA Fenotrina (Spanish); Fenothrin, (±)-; (+)-*cis-,trans*-Fenothrin; Fenothrin, (+)-*cis,trans*-; Fenothrin, Forte; (+)-*cis,trans*-phenothrin; Phenothrin; 3-Phenoxybenzyld-*Z/E* chrysanthemate; 3-Phenoxybenzyl *d-Z/E* chrysanthemate; 3-Phenoxybenzyl *D-cis,trans*-chrysanthemate; 3-Phenoxybenzyl *cis,trans*-chrysanthemate; 3-Phenoxybenzyl (1RS)-*cis,trans*-chrysanthemate; 3-Phenoxybenzyl (±)-*cis,trans*-chrysanthemate; *m*-Phenoxybenzyl 2,2-dimethyl-3-(2-methylpropenyl)cyclopropanecarboxylate; 3-Phenoxybenzyl 2-dimethyl-3-(methylpropenyl) cyclopropanecarboxylate; 3-Phenoxybenzyl (1RS,3RS; 1RS,3SR)-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate; 3-Phenoxybenzyl(1RS)-*cis,trans*-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate; 3-Phenoxybenzyl(1RS)-*(Z),(E)*-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate

Trade Names: FORTE®; MULTICIDE-2154®; OMS 1809®; OMS 1810®; PHENOXYTHRIN®; PT-515; S-2539®; SUMETHRIN®; SUMITHRIN®; WELLCIDE®

Note: The U.S. EPA currently lists 724 active or canceled products, 242 of which are active. Most products are for residential flying insect control, e.g., fleas, wasps, flies, mosquitoes. Not approved for use in EU countries[115]. Registered for use in the U.S. and Canada.

Chemical class: Pyrethroid

EPA/OPP PC Code: 069005

California DPR Chemical Code: 2093

HSDB Number: 3922

UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151

RTECS® Number: GZ1975000

EC Number: 207-404-5

Uses: Used world-wide to control household insects and to protect stored grain. It is frequently formulated with other insecticides and is formulated in a number of carriers (aerosols, oil, dust, emulsifiable concentrates), and in powders, shampoos and lotion.

Regulatory Authority and Advisory Information: Health Advisory: Mutagen, Endocrine disruptor (S!)
Acute Oral Category: 4, Caution
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xi; risk phrases: R36; R38; safety phrases: S2 (see Appendix 1)

Description: Pale yellow to yellow-brown liquid. Molecular weight = 350.44; Specific gravity (H_2O:1) = 1.06 @ 20 °C; Boiling point = 293 °C; Vapor pressure = 1×10^{-7} mmHg @ 25 °C; Flash point =105. Henry's Law constant = 6.8×10^{-6} atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water.

Incompatibilities: Keep away from alkaline materials. May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air: NIOSH[2]
IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA
STEL set by HSE[33] = 10 mg/m^3.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18], as pyrethroid.

Permissible Concentration in Water: Acceptable Daily Intake (ADI) =0.02 mg/kg as pyrethroid

Determination in Water: Log K_{ow} = >6.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethroids can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system, causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). Skin irritant/sensitizer. LD_{50} (oral, rat) = >5 g/kg[83]; LD_{50} (dermal, rat) = >2 g/kg[83].

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse

Points of Attack: Respiratory system, skin, central nervous system, liver and kidneys.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to their sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

o-Phenylphenol P:0470

Use Type: Fungicide, Disinfectant, Microbiocide

CAS Number: 90-43-7

Formula: $C_{12}H_{10}O$

Synonyms: (1,1'-Biphenyl)-2-ol; 2-Biphenylol; *o*-Biphenylol; (1,1'-biphenyl)-2-ol; *o*-Diphenylol; *o*-Hydroxybiphenyl; 2-Hydroxybiphenyl; *o*-Hydroxydiphenyl; 2-Hydroxydiphenyl; 2-Hydroxy-1,1'-biphenyl; NCI-C50351; OPP; Orthohydroxydiphenyl; Orthophenylphenol; Orthoxenol; 2-Phenylphenol; *o*-Xenol

Trade Names: ANTHRAPOLE 73®; DOWCIDE-1®; Invalon OP®; KIWI LUSTR-277®; NECTRYL®; PREVENTOL-O Extra®; REMOL TRF®; TETROSIN OE®; TETROSIN OE-N®; TORSITE®; TUMESCAL OPE®

Chemical class: Phenol; Alkylphenol

EPA/OPP PC Code: 064103

California DPR Chemical Code: 448

HSDB Number: 1753
UN/NA & ERG Number: UN2430/153
RTECS® Number: DV5775000
EC Number: 201-993-5 [*Annex I Index No.:* 604-020-00-6]
Uses: Used to make fungicides. Also used to make dye stuffs and rubber chemicals, but used primarily as a disinfectant cleaner. Registered for use in the U.S. and U.K.
U.S. Maximum Allowable Residue Level o-Phenylphenol [40 CFR 180.129(a)]: Tolerances are established for combined residues of the fungicide *o*-phenylphenol and sodium *o*-phenylphenate, each expressed as *o*-phenylphenol, from post-harvest application in or on the following crops: Apple 25 ppm; cantaloupe (NMT 10 ppm in edible portion) 125 ppm; cantaloupe, pulp 10 ppm; carrot, roots 20 ppm; cherry 5 ppm; citus fruits 10 ppm; cucumber 10 ppm; lemon 10 ppm; nectarine 5 ppm; orange 10 ppm; pepper, bell 10 ppm; peach 20 ppm; pear 25 ppm; pineapple 10 ppm; plum, fresh prune 20 ppm; sweet potato, roots 15 ppm; tomato 10 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; IARC, Group 3 not classifiable as to its carcinogenicity in humans
California Proposition 65 Chemical: Carcinogen (8/4/2000).
Health Advisory: Mutagen, Reproductive & Developmental Toxin (TRI), Skin irritant/sensitizer
Acute Oral Category: 3, CAUTION
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
California Proposition 65 Chemical: Cancer (8/4/2000)
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R36/37/38; R50; safety phrases: S2; S22; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 2-Hazard to waters
Description: *o*-Phenylphenol is a white to lavender crystalline solid. Combustible. Molecular weight = 170.21; Specific gravity (H_2O:1) = 1.213 @ 25 °C; Boiling point = 275 °C @ 760 mmHg[88]; Freezing/Melting point = 57.5 °C; Vapor pressure = 1 mmHg @ 100 °C[88]; Flash point = 123.9 °C(cc)[88]; Autoignition temperature = 530 °C; Explosive limits: LEL = 1.4%; UEL = 9.5%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Soluble in water; solubility = <0.1 mg/mL @ 20.5 °C.
Incompatibilities: Reacts with boranes, alkalies, aliphatic amines, amides, nitric acid, sulfuric acid. Keep away from oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.).
Permissible Concentration in Air: NIOSH IDLH = 2.5 mg/m^3
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 10 mg/m^3
PAC-2: 110 mg/m^3
PAC-3: 400 mg/m^3
DFG MAK: No numerical value established. Other data may be available.
Permissible Concentration in Water: State Drinking Water Guidelines: Florida 18 μg/L. Runoff from spills or fire control may cause water pollution.
Routes of Entry: Inhalation, dermal contact, ingestion.
Harmful Effects and Symptoms
Short Term Exposure: This material can cause skin irritation. It can cause serious eye irritation with burning; may cause damage to the corneas. Ingestion may cause irritation of the gastro-intestinal tract; nausea, vomiting and diarrhea. Inhalation of dust may cause irritation of the mucous membrane and upper respiratory tract. Based on animal studies, 5 oz would be lethal to a 150 lb healthy adult. LD_{50} (oral, rat) = 550–850 mg/kg[83]; LD_{50} (dermal, rat) = >500 mg/kg[83].
Long Term Exposure: Bladder, kidney and liver toxin. May cause reproductive and fetal effects. Tests on laboratory animals have resulted in tumors and mutagenic effects. May cause reproductive and fetal effects. May cause contact dermatitis.
Points of Attack: Eyes, bladder, kidneys, liver, reproductive system.
Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Bladder, kidney, and liver tests.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested
Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.
Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or

European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF-50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Alkylphenols, solid, n.o.s. (including C2-C12 homologues) require a level of "corrosive material." They fall in Hazard Class 8.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Hazardous decomposition includes oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Phorate P:0520

Use Type: Insecticide, Acaricide, Nematicide

CAS Number: 298-02-2

Formula: $C_7H_{17}O_2PS_3$

Synonyms: *O,O*-Diethyl *S*-ethylmercaptomethyl dithiophosphonate; *O,O*-Diethyl *S*-ethylthio methyldithiophosphonate; *O,O*-Diethylethylthiomethyl phosphorodithioate; *O,O*-Diethyl *S*[(ethylthio)methy] phosphorodithioate; *O,O*-Diethyl *S*-(ethylthio)methyl phosphorodithioate; *O,O*-Diethyl *S*-ethylthiomethyl thiothionophosphate; ENT 24,042; Forato (Spanish)

Trade Names: AASTAR®[C]; AC 3911®; AGRIMET®; AMERICAN CYANAMID 3,911®; EL 3911®; EXPERIMENTAL INSECTICIDE 3911®; GEOMET®; GRAMTOX®; GRANUTOX®; L 11/6®; METAPHOR®; PHORATE-10G®; PHORIL®; RAMPART®; TERRACLOR®; TERRATHION GRANULES®; THIMENOX®; THIMET®; THEMET®; UMET®; VEGFRU®; VERGFRU FORATOX®

Chemical class: Organophosphate

EPA/OPP PC Code: 057201

California DPR Chemical Code: 478

HSDB Number: 1183

N/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TD9450000

EC Number: 206-052-2 [*Annex I Index No.:* 015-033-00-6]

Uses: Phorate is an organophosphorus insecticide and acaricide used to control a wide variety of sucking and chewing insects, leafhoppers, leafminers, mites, some nematodes, and rootworms. It is used on many crops, including root and field crops such as corn, cotton, coffee, potatoes, sugar beets, beans, peanuts, wheat, some ornamental and herbaceous plants, and bulb. In the U.S., 80% of the annual use of phorate is applied to corn, potatoes and cotton. It is available in granular and emulsifiable concentrate formulations. Phorate has been shown to be responsible for a large number of bird kills and it is extremely toxic to mammals. Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Phorate (40 CFR 180.206): bean 0.1 ppm; beet, sugar, roots 0.3 ppm; beet, sugar, tops 3 ppm; coffee, bean 0.02 ppm; corn, forage 0.5 ppm; corn, grain 0.1 ppm; corn, sweet, kernel plus 0.1 ppm; cob with husks removed ppm; cotton, undelinted seed 0.05 ppm; hop 0.5 ppm; peanut 0.1 ppm; potato 0.5 ppm; sorghum, grain, grain 0.1 ppm; sorghum, grain, stover 0.1 ppm; soybean 0.1 ppm; sugarcane, cane 0.1 ppm; wheat, grain 0.05 ppm; wheat, hay 1.5 ppm; wheat, straw 0.05 ppm.

Human toxicity (long-term)[101]: High–3.50 ppb, Health Advisory

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans; ACGIH A4, not classified as a human carcinogen

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 1, DANGER–POISON

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPA Hazardous Waste Number (RCRA No.): P094

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.021; Non-wastewater (mg/kg), 4.6

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8140(2); 8270(10)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10 lb (4.54 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R27/28; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

Description: Phorate is a clear mobile liquid. Offensive, skunk-like odor. Molecular weight = 260.39; Specific gravity (H_2O:1) = 1.156 @ 25 °C; Boiling point = 125–127.22 °C @ 2 mmHg[83]; 143 °C; Freezing/Melting point = –42.78 °C; Vapor pressure = 8.4×10^{-4} @ 20 °C; Flash point = 160 °C[9]. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 50 0.005%[9].

Incompatibilities: Keep away from water, alkalis. Hydrolyzed in the presence of moisture and by alkalis; may produce toxic oxides of phosphorus and sulfur. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 0.05 mg/m^3 TWA; 0.2 mg/m^3 STEL [skin]

ACGIH TLV®[1]: 0.05 mg/m^3 TWA, inhalable fraction and vapor; [skin] not classifiable as a human carcinogen; BEI_A issued for Acetylcholinesterase inhibiting pesticides.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.04 mg/m^3

PAC-2: **0.040**$_{\mathbf{A}}$ mg/m^3

PAC-3: **0.12**$_{\mathbf{A}}$ mg/m^3

Subscript $_A$ = 60 minute AEGL.

Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 1.0 ppb[107]. State Drinking Water Guidelines: Maine 3.5 μg/L; Florida 1.4 μg/L.

Determination in Water: Log K_{ow} = >3.5. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Acute exposure to phorate may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may occur, although hypertension (high blood pressure) is not uncommon. Dyspnea (shortness of breath) may be followed by respiratory collapse. Giddiness is common. This material is one of the more toxic organophosphorus insecticides. It is a cholinesterase inhibitor that acts on the nervous system, and produces toxicity similar to parathion. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 2 mg/kg; LD_{50} (dermal, rat) = 3–6 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; phorate may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. May cause brain damage.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont^{TM} Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.04 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Stable at room temperature for 2+ years. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires*: use dry chemical, carbon dioxide or water spray. *Large fires:* use dry chemical, fog, or regular foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Phosmet P:0560

Use Type: Insecticide, Acaricide
CAS Number: 732-11-6
Formula: $C_{11}H_{12}NO_4PS_2$
Synonyms: (*O,O*-Dimethyl-phthalimidiomethyl-dithiophosphate); *O,O*-Dimethyl *S*-(*N*-phthalimidomethyl)dithiophosphate; *O,O*-Dimethyl *S*-phthalimidomethylphosphorodi thioate; ENT 25,705; Fosmet (Spanish); *N*-(Mercaptomethyl) phthalimide *S*-(*O,O*-dimethyl phosphorodithioate); Phosphorodithioic acid, *S*-[(1,3-dihydro-1,3-dioxo-isoindol-2-yl)methyl] *O,O*-dimethyl ester; Phosphorodithioic acid, *O,O*-dimethyl ester, *S*-ester with *N*-(mercaptomethyl)phthalimide; Phthalimide, *N*-(mercaptomethyl)-, *S*-ester with *O,O*-dimethylphosphorodithioate; Phthalimido *O,O*-dimethyl phosphorodithioate; Phthalimidomethyl *O,O*-dimethyl phosphorodithioate
Trade Names: APPA®; DECEMTHION®; DELPHOS®; FESDAN®; FIREBAN®; FTALOPHOS®; IMIDAN®; KEMOLATE®; PERCOLATE®; PMC®; PROLATE®[C]; R 1504®; SAFIDON®; SMIDAN®; STARBAR CATTLE DUST®[C]; STAUFFER R 1504®; VET-KEM®; ZEOCON®
Chemical class: Organophosphate
EPA/OPP PC Code: 059201
California DPR Chemical Code: 335
HSDB Number: 1734
UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152; UN3077(solid)/171; UN3082 (liquid)/17[88] depending on formulation.
RTECS® Number: TE2275000
EC Number: 211-987-4 [*Annex I Index No.:* 015-101-00-5]
Uses: Phosmet is a non-systemic insecticide used on both plants and animals. It is mainly used on apple trees for control of coddling moth, though it is also used on a wide range of crops including alfalfa, nuts, grapes, blueberries, peas, potatoes, fruit crops, ornamentals, and vines for the control of aphids, suckers, mites, fire ants and fruit flies. The compound is also an active ingredient in some dog collars. It is used as an insecticide on swine and cattle.
U.S. Maximum Allowable Residue Levels for Phosmet [40 CFR 180.261 (a)]: Alfalfa 40 ppm; almond, hulls 10 ppm; apple 10 ppm; apricot 5 ppm; blueberry 10 ppm; cattle, fat 0.2 ppm; cattle, meat 0.2 ppm; cattle, meat byproducts 0.2 ppm; cherry 10 ppm; cotton, undelinted seed 0.1 ppm; crabapple 20 ppm; cranberry 10 ppm; fruit, stone, group 12 5 ppm; goat, fat 0.2 ppm; goat, meat 0.2 ppm; goat, meat byproducts 0.2 ppm; grape 10 ppm; hog, fat 0.2 ppm; hog, meat 0.2 ppm; hog, meat byproducts 0.2 ppm; horse, fat 0.2 ppm; horse, meat 0.2 ppm; horse, meat byproducts 0.2 ppm; kiwifruit 25 ppm; nectarine 5 ppm; nuts 0.1 ppm; pea 0.5 ppm; pea, field, hay 10 ppm; pea, field, vines 10 ppm; peach 10 ppm; pear 10 ppm; pistachio 0.1 ppm; plum, prune, fresh 5 ppm; potato 0.1 ppm; sheep, fat 0.2 ppm; sheep, meat 0.2 ppm; sheep, meat byproducts 0.2 ppm; sweet potato, roots 10 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.261 (c)]:*** Crabapple 20 ppm; pistachio 0.1 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicty: EPA Suspected human carcinogen; Suggestive evidence of carcinogenicity, but not sufficient to assess human carcinogenic potential
Acute Oral Category: 2, WARNING
Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin
Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4,540 kg), removed December 27, 2004
Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg). 12/27, 2004, deleted from EHS list
U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates
MARINE POLLUTANT (49CFR, Subchapter 172.101, Appendix B)
European/International Regulations: Not classified in Annex I, but the following may apply: Hazard Symbol: T+, N; risk phrases: R21/22; R25; R50/53; safety phrases: S2; S22; S36/37; S60; S61 (see Appendix 1)
Description: Phosmet is an off-white to pink crystalline solid. Commercial product is available in granular form or an emulsifiable concentrate. Offensive odor. Molecular weight = 317.32; Specific gravity (H_2O:1) = 1.03 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 71.67 °C. Hazard; Vapor pressure = 1×10^{-3} mmHg @ 50 °C; Flash point = ~200 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 2. Slightly soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Not compatible with other pesticides under alkaline conditions. Contact with water, steam or moisture forms phthalic acids. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Slightly corrosive to metals in the presence of moisture. Imides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic imides with strong reducing agents. Imides are extremely weak bases (weaker than water). React with strong bases to form salts. That is, they can react as acids.
Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.049 mg/m^3
PAC-2: 0.54 mg/m^3
PAC-3: 55 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 140 μg/L.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ηg/L. Log K_{ow} = ~3.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed by the eyes and unbroken skin.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Irritates the eyes and skin on contact. This material is a highly toxic organophosphate; the probable oral lethal dose for humans is 50–500 mg/kg, or between 1 teaspoon and 1 oz for a 150 lb person. It is a cholinesterase inhibitor and has central nervous system effects. Oral lethal doses in humans have been reported at 50 mg/kg. Acute exposure to phosmet may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may occur, although hypertension (high blood pressure) is not uncommon. Dyspnea (shortness of breath) may be followed by respiratory collapse. Giddiness is common. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = >90 mg/kg; LD_{50} (dermal, rat) = >1000 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; phosmet may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: SCBA >0.049 mg/m^3 *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1; Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. This material may be combustible and containers may explode in fire. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with this material will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Phosphine P:0580

Use Type: Fumigant, Insecticide

CAS Number: 7803-51-2

Formula: H_3P; PH_3

Alert: Phosphine is extremely flammable and explosive; it may ignite spontaneously on contact with air.

Synonyms: Celphos; Delicia; Detia Gas-EX-B; Fosfamia (Spanish); Hydrogen phosphide; Phosphine gas; Phosphorus trihydride; Phosphorus hydride; Phosphorated hydrogen;Phostoxin

Trade names: ECO_2 FUME TM®; $VAPORPH_3OS$®

Chemical class: Inorganic compound

EPA/OPP PC Code: 066500

California DPR Chemical Code: 3541

HSDB Number: 1233

UN/NA & ERG Number: UN2199/119

RTECS® Number: SY7525000

EC Number: 232-260-8 [*Annex I Index No.:* 015-181-00-1]

Uses: Phosphine gas is used indoors to control a broad spectrum of insects for non-food/non-feed commodities in sealed containers or structures. There are no homeowner or agricultural row crop uses for this product. The end-use product is a poisonous liquefied gas under pressure, and is A U.S. EPA restricted Use Pesticide (RUP) due to the acute inhalation toxicity of phosphine gas. Phosphine is only occasionally used in industry, and exposure usually results accidentally as a byproduct of various processes. Exposures may occur when acid or water comes in contact with metallic phosphides (aluminum phosphide, calcium phosphide). These two phosphides are used as insecticides or rodenticides for grain, and phosphine is generated during grain fumigation. Phosphine may also evolve during the generation of acetylene from impure calcium carbide, as well as during metal shaving, sulfuric acid tank cleaning, rustproofing, and ferrosilicon, phosphoric acid and yellow phosphorus explosive handling. U.S. EPA restricted Use Pesticide (RUP). Currently listed as "pending" in the EU.

U.S. Maximum Allowable Residue Levels for Phosphine (40 CFR 180.225): Almond 0.1 ppm; animal feed 0.1 ppm; avocado 0.01 ppm; banana 0.01 ppm; barley, grain 0.1 ppm; cabbage, chinese, bok choy 0.01 ppm; cacao bean, dried bean 0.1 ppm; cashew 0.1 ppm; citron, citrus 0.01 ppm; coffee, bean 0.1 ppm; corn, field, grain 0.1 ppm; corn, pop, grain 0.1 ppm; cotton, undelinted seed 0.1 ppm; date, dried fruit 0.1 ppm; dill, seed 0.01 ppm; eggplant 0.01 ppm; endive 0.01 ppm; filbert 0.1 ppm; grapefruit 0.01 ppm; kumquat 0.01 ppm; lemon 0.01 ppm; lettuce 0.01 ppm; lime 0.01 ppm; mango 0.01 ppm; millet, grain 0.1 ppm; mushroom 0.01 ppm; nut, brazil 0.1 ppm; oat, grain 0.1 ppm; okra 0.01 ppm; orange 0.01 ppm; papaya 0.01 ppm; peanut 0.1 ppm; pecan 0.1 ppm; pepper, black, post-harvest 0.01 ppm; pepper, pimento 0.01 ppm; pepper, red, post-harvest 0.01 ppm; pepper, white, post-harvest 0.01 ppm; persimmon 0.01 ppm; pistachio 0.1 ppm; processed food 0.01 ppm; raw agricultural commodities 0.01 ppm; rice, grain 0.1 ppm; rye, grain 0.1 ppm; safflower, seed 0.1 ppm; salsify, tops 0.01 ppm; sesame, post-harvest 0.1 ppm; sorghum, grain 0.1 ppm; soybean, seed 0.1 ppm; sunflower, seed 0.1 ppm; sweet potato 0.01 ppm; tangelo 0.01 ppm; tangerine 0.01 ppm; tomato 0.01 ppm; vegetable, legume, group 6 0.01 ppm; walnut 0.1 ppm; wheat, grain 0.1 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Health Advisory: Mutagen, Lung Damaging agent

Acute Oral Category: 1, DANGER–POISON

87-86-5

CLEAN AIR ACT: Hazardous Air Pollutants (Title I, Part A, Section 112); Accidental Release Prevention/Flammable substances, (Section 112[r], Table 3), TQ = 5,000 lb (2270 kg)

EPA HAZARDOUS WASTE NUMBER (RCRA No.): P096

SUPERFUND/EPCRA 302 Extremely Hazardous Substances: TPQ = 500 lb (227 kg)

SUPERFUND/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

US DOT 49CFR172.101, Inhalation Hazardous Chemical

European/International Regulations: Hazard Symbol: T+, F, H, N; risk phrases: R12; R17; R26; R34; R50; safety phrases: S1/2; S28; S36/37; S45; S61; S63 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Phosphine is colorless poisonous and flammable (extremely explosive) liquefied compressed gas that ignites at a very low temperature. Odorless when pure, otherwise, it has the odor of garlic or the foul odor of decaying fish. The Odor Threshold is 0.14 ppm, a level at which humans detect the odor of phosphine; *it does not provide sufficient warning of dangerous concentrations*. Molecular weight = 34.00; Specific gravity (H_2O:1) = 0.746 @ 90 °C[83]; Boiling point = –87.78 °C @ 760 mmHg; Freezing/Melting point = –132.78 °C[83]; Relative vapor density (air = 1): 1.18; Vapor pressure = >760 mmHg @ 20 °C; Flash point = (flammable gas) 104.4 °C; Autoignition temperature (depends on concentration and diluent) = 38–100 °C. Explosive limits: LEL = 1.7% Dangerous fire hazard from spontaneous chemical reaction.; UEL = 98% (est.)[17]. Dangerous fire hazard from spontaneous chemical reaction. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 4, Reactivity 2. Slightly soluble in water; solubility = 25 ml/100 ml @ 17 °C.

Incompatibilities: Reacts with water*, air, acids, moisture, oxidizers, oxygen, chlorine, nitrogen oxides, metal nitrates, halogens, halogenated hydrocarbons, copper and many other substances, causing fire and explosion hazard. May ignite spontaneously on contact with air at or about 55 °C. Corrosive; attacks many metals.

Permissible Exposure Limits in Air: Odor threshold: 0.9 ppm

NIOSH IDLH: 50 ppm

Conversion factor: 1 ppm = 1.39 mg/m^3 @ 25 °C & 1 atm

OSHA PEL: 0.3 ppm/0.4 mg/m^3 TWA

NIOSH REL: 0.3 ppm/0.4 mg/m^3 TWA; 1 ppm/1 mg/m^3 STEL

ACGIH TLV®[1]: 0.3 ppm/0.42 mg/m^3 TWA; 1 ppm/1.4 mg/m^3 STEL

DFG MAK: 0.1 ppm/0.14 mg/m^3 TWA; Peak Limitation Category II(2); Pregnancy Risk Group C

Protective Action Criteria (PAC) Phosphine Ver. 27[89]

TEEL-0: 0.3 ppm

PAC-1: 1 ppm

PAC-2: $\mathbf{2.0}_A$ ppm

PAC-3: $\mathbf{3.6}_A$ ppm

Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values.

Determination in Air: Beaded carbon*; H_2O_2/buffer; Ion chromatography; OSHA Method #ID180. Collection on silver nitrate impregnated cellulose pad to give free silver which is converted to the nitrate, then to the sulfide which is analyzed colorimetrically; See also NIOSH #332, Phosphine

Permissible Concentration in Water: No criteria set, but EPA[32] has suggested a permissible ambient goal of 5.5 μg/L based on health effects.

Determination in Water: Log K_{ow} = <– 0.3. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin and/or eye contact with the liquid. Most phosphine exposures occur by inhalation of the gas or ingestion of metallic phosphides, but dermal exposure to phosphides can also cause systemic effect.

Harmful Effects and Symptoms

Short Term Exposure: *Warning*: Highly toxic phosphine gas may evolve from vomitus and feces of victim. May be fatal if inhaled, ingested, or absorbed through the skin. *Inhalation:* Inhalation is the major route of phosphine toxicity. Phosphine is a respiratory tract irritant that attacks primarily the cardiovascular and respiratory systems causing cardiac arrhythmias and peripheral vascular collapse, cardiac arrest and failure, and pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. *Skin/eye contact:* Phosphides may be absorbed dermally, especially through unbroken skin, and can cause systemic toxicity by this route. Phosphine gas produces no adverse effects on the skin or eyes, and contact does not result in systemic toxicity. Phosphine is a super-toxic gas with a probable oral lethal dose of 5 mg/kg or 7 drops for a 150 lb person. An air concentration of 3 ppm is safe for long term exposure, 500 ppm is lethal in 30 minutes, and concentration of 1000 ppm is lethal after a few breaths. Contact with liquefied or compressed phosphine gas may cause frostbite. *Ingestion:* Ingestion of phosphine is unlikely because it is a gas at room temperature. Ingestion of metallic phosphides can produce phosphine intoxication when the solid phosphide contacts gastric acid. Contact with the liquid may cause frostbite. Phosphine interferes with enzymes and protein synthesis, primarily in the mitochondria of heart and lung cells. As a result, effects may include hypotension, reduction in cardiac output, tachycardia, oliguria, anuria, cyanosis, pulmonary edema, tachypnea, jaundice, hepatosplenomegaly, ileus, seizures, and diminished reflexes. Acute exposure to phosphine usually results in headache, cough, tightness and pain in the chest, shortness of breath, dizziness, lethargy, and stupor. Fatigue, muscle pain, chills, tremors, loss of coordination, seizures, and coma may be seen. Gastrointestinal symptoms include nausea, vomiting, abdominal pain, and diarrhea. Renal (kidney) damage, hepatic (liver) damage, and jaundice may also occur.

Long Term Exposure: Chronic exposure to very low concentrations may result in anemia, bronchitis, gastrointestinal disturbances, and visual, speech, and motor disturbances. Chronic exposure may be more serious for children because of their potential longer latency period. Chronic poisoning may cause toothache, swelling of the jaw, spontaneous fractures of bones. May cause anemia. May damage the liver and kidneys. The effects are cumulative. Although most survivors of acute phosphine exposure show no permanent disabilities, damage due to insufficient blood supply to the heart and brain has been reported. Subacute poisoning resulting from exposure for a few days may cause reactive airways dysfunction syndrome (RADS) months later.

Points of Attack: Liver, kidney, and respiratory system.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure. Liver function tests. Typically, liver injury does not become evident until 48 to 72 hours after exposure. Findings may include jaundice, enlarged liver, elevated serum transaminases, and increased bilirubin in the blood. Analysis of blood gases may reveal combined respiratory and metabolic acidosis. Also, there have been reports of significant hypomagnesemia and hypermagnesemia associated with massive focal myocardial damage.

First Aid: There is no antidote for phosphine toxicidty. Brush all visible particles from clothes, skin, and hair. Remove and double-bag contaminated clothing and personal belongings. Thoroughly flush exposed skin and hair with water for 3 to 5 minutes, then wash with mild soap. Rinse thoroughly with water. Use caution to avoid hypothermia when decontaminating children or the elderly. Use blankets or similar warmers when appropriate. If phosphides have been ingested, *do not induce vomiting*. Phosphides will release phosphine in the stomach; therefore, watch for signs similar to those produced by phosphine inhalation. Administer a slurry of activated charcoal at 1 g/kg (adult). *Note to physician or authorized medical personnel: Advanced treatment;* In cases of respiratory compromise, secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed, begin fluid administration. For adults, bolus 1000 mL/hour intravenous saline or lactated Ringer's solution if blood pressure is under 80 mmHg; if systolic pressure is over 90 mmHg, an infusion rate of 150 to 200 mL/hour is sufficient. For children with compromised perfusion, administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Decontamination: *This is very important*. The rapid physical removal of a chemical agent is essential. If you don't have the equipment and training, don't enter the hot or the warm zone to rescue and/or decontaminate victims. Medical personnel should wear the proper PPE. If the victim can't move, decontaminate without touching and without entering the hot or the warm zone. Metallic phosphides on clothes, skin, or hair can off-gas phosphine after contact with water or moisture, so a risk of secondary contamination may be present. Have the victim remove clothing; and seal contaminated clothes and personal belongings in a sealed double bag. For skin exposure to the metallic phosphides, scrape or brush all visible particles from the skin and hair. Use clean water from any source; if possible, use a hose (spray or fog to prevent injury to the victim) or other system to avoid touching the victim. Don't wait for soap or for the victim to remove clothing, begin washing immediately. Do not delay decontamination to obtain warm water; time is of the essence; use cold water instead. Immediately flush the eyes with water for at least 15 minutes. Use caution to avoid hypothermia in children and the elderly. Persons exposed only to phosphine gas do not pose substantial risks of secondary contamination. *Warning*: Highly toxic phosphine gas may evolve from vomitus and feces of victim. Rinse the eyes, mucous membranes, or open wounds with sterile saline or water and then move away from the hot zone in an upwind and up hill direction.

Personal Protective Methods: Reacts with the following absorbent materials: Mineral-Based and Clay-Based[88]. Wear full protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Here, for example, [with acknowledgement to CAMEO/NOAA & DuPont™] is a list of Normalized Breakthrough Times in minutes: Tychem® F =10 min or less; Tychem® ThermoPro =10 min or less; Tychem® BR= >480; Tychem® LV = >480; Tychem® Responder® CSM = >480; Tychem® TK = >480; Tychem® Reflector® = >480. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear gas-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >1 ppm. NIOSH: *Up to 3 ppm:* Sa (APF = 10) (any supplied-air respirator). *Up to 7.5 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode). *Up to 15 ppm:*

GmFS (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern]; SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 50ppm:* Sa: Pd,Pp (APF = 1000) (any supplied-air respirator operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFS (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration is not a danger. Phosphine must be stored to avoid contact with oxidizers (such as perchlorates, peroxides, permanganates, chlorates and nitrates); strong acids (such as hydrochloric, sulfuric, and nitric); oxygen and halogenated hydrocarbons, since violent reactions occur. Store in tightly closed containers from physical damage. Use only non-sparking tools and equipment, especially when opening and closing containers of phosphine. Procedures for the handling, use and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phosphine requires a shipping label of "POISON GAS, FLAMMABLE GAS." It usually falls in Hazard Class 2.3. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner. STN 49 201 60.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Establish forced ventilation to keep levels below explosive limit. Stop the flow of gas if it can be done safely. If source of leak is a cylinder and the leak cannot be stopped in place, remove leaking cylinder to a safe place in the open air, and repair leak or allow cylinder to empty. Keep this chemical out of confined space, such as a sewer, because of the possibility of explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (from a small package or a small leak from a large package)
First: isolate in all directions (feet/meters) 3000/1000
Then: Protect persons downwind (miles/kilometers)
Day 0.4/0.6
Night 1.5/2.4

Large spills (from a large package or from many small packages)
First: isolate in all directions (feet/meters) 2500/800
Then: Protect persons downwind (miles/kilometers)
Day 2.7/4.4
Night 5.6/8.9

Fire Extinguishing: Phosphene evolves hydrogen and ignites on contact with many materials. This chemical is a flammable gas. Hazardous decomposition includes oxides of phosphorus and phosphonic acid. Specially trained personnel may use fog lines to cool exposures and let the fire burn itself out. If material is on fire or involved in a fire, do not extinguish unless flow can be stopped; use water in flooding quantities as fog; cool all affected containers with flooding quantities of water; apply water from as far a distance as possible; solid streams of water may be ineffective; use "alcohol" foam, carbon dioxide or dry chemical. Wear full protective clothing including self-contained breathing apparatus; rubber gloves; boots, and bands around legs, arms, and waist. No skin surface should be exposed. For massive fires in cargo areas, use unmanned hose holders or monitor nozzles. Move containers from fire area. The gas is heavier than air and may travel along the ground to an ignition source. Container may explode in heat of fire. Vapors are heavier than air and will collect in low areas. Vapors are heavier than air and may travel long distances, to a source of ignition, and flash back. Closed containers may rupture violently when heated. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If cylinders are exposed to excessive heat from fire or flame contact, withdraw immediately to a secure location. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. A potential candidate for rotary kiln incineration at a temperature range of 820 to 1,600 °C and residence times of seconds for liquids and gases, and hours for solids. A potential candidate for fluidized bed incineration at a temperature range of 450 to 980 °C and residence times of seconds for liquids and gases, and longer for solids[83]. *Warning:* Highly toxic gas, may be spontaneously flammable in air. Surplus gas or leaking cylinder can be vented slowly to air in a safe, open area or gas burnt off through a suitable burner in a fume cupboard. Recommendable methods: Evaporation & open burning. Not recommendable method: Landfill. Peer-review: Dilute with much air prior to evaporation[UN]. Once used, VAPORPH$_3$OS Phosphine fumigant cylinders are to be returned only to an authorized distributor or their designated point of return. This applies to all cylinders, regardless of the quantity of material remaining in the cylinder[83]. Controlled discharges of phosphine may be passed through 10% NAOH solution in a scrubbing tower. The product may be discharged to a sewer.

Picloram P:0710

Use Type: Herbicide

CAS Number: 1918-02-1

Formula: $C_6H_3Cl_3N_2O_2$

Synonyms: 4-Aminotrichloropicolinic acid; 4-Amino-3,5,6-trichloro-2-picolinic acid; 4-Amino-3,5,6-trichloropicolinic acid; 4-Amino-3,5,6-trichloro-2-pyridinecarboxylic acid; ATCP; NCI-C00237; NSC 233899; Picolinic acid, 4-amino-3,5,6-trichloro-; 2-Pyridine carboxylic acid, 4-amino-3,5,6-trichloro-; 3,5,6-Trichloro-4-aminopicolinic acid

Trade Names: ACCESS®; AMDON®; AMDON GRAZON®; BOROLIN®; GRAZON® Picloram; K-PIN®; PATHWAY®; TORDON®[C]; TORDON® 101 MIXTURE; TORDON® 10 K; TORDON® 22 K

Chemical class: Pyridinecarboxylic acid; Picolinic Acid; Pyridine Carboxylic acid; Pyridine; Pyralid

EPA/OPP PC Code: 005101

California DPR Chemical Code: 593

HSDB Number: 1151

UN/NA & ERG Number: Not listed

RTECS® Number: TJ7525000

EC Number: 217-636-1

Uses: Picloram is a systemic herbicide used for control of woody plants and a wide range of broad-leaved weeds along roads, power lines and long right-of-ways. Most grasses are resistant to picloram, so it is used in range management programs to control noxious weeds and brush. It is used to prepare sites for tree planting. Picloram is formulated either as an acid (technical product), a potassium or triisopropanolamine salt, or an isooctyl ester, and is available as either soluble concentrates, pellets, or granular formulations. During the Vietnam war, a herbicide named *Agent White* was used to control vegetation. It was a mixture of 2,4-D, triisopropanolamine salt and picloram. A U.S. EPA restricted Use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Picloram [40 CFR 180.292 (a)]: Barley, grain 0.5 ppm; barley, pearled barley 3.0 ppm; barley, straw 1.0 ppm; cattle, fat 0.4 ppm; cattle, meat 0.4 ppm; cattle, meat byproducts 15 ppm; egg 0.05 ppm; goat, fat 0.4 ppm; goat, meat 0.4 ppm; goat, meat byproducts 15 ppm; grain, aspirated fractions 4.0 ppm; grass, forage 400 ppm; grass, hay 225 ppm; hog, fat 0.05 ppm; hog, meat 0.05 ppm; hog, meat byproducts 0.05 ppm; horse, fat 0.4 ppm; horse, meat 0.4 ppm; horse, meat byproducts 15 ppm; milk 0.25 ppm; oat, forage 1.0 ppm; oat, grain 0.5 ppm; oat, groats/rolled oats 3.0 ppm; oat, straw 1.0 ppm; poultry, fat 0.05 ppm; poultry, meat 0.05 ppm; poultry, meat byproducts 0.05 ppm; sheep, fat 0.4 ppm; sheep, meat 0.4 ppm; sheep, meat byproducts 15 ppm; wheat, bran 3.0 ppm; wheat, forage 1.0 ppm; wheat, germ 3.0 ppm; wheat, grain 0.5 ppm; wheat, middlings 3.0 ppm; wheat, shorts 3.0 ppm; wheat, straw 1.0 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans; IARC, Group 3 not classifiable

as to its carcinogenicity in humans; ACGIH A4, not classified as a human carcinogen; NCI Carcinogen (positive, rat; negative, mouse)[9]
Acute Oral Category: 4, Caution, Not acutely toxic
Health Advisory: Mutagen, Developmental/Reproductive Toxin
Safe Drinking Water Act: MCL, 0.5 mg/L; MCLG, 0.5 mg/L; Regulated chemical (47 FR 9352) as pichloram
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: Picloram is a fine beige crystalline solid or a white powder. Chlorine-like odor. It is probably combustible. Molecular weight = 241.46; Specific gravity (H_2O:1) = 1.083 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = (decomposes) 200–214 °C; Vapor pressure = 6.15×10^{-7} mmHg @ 35 °C. Very slight solubility in water; solubility = <0.1 mg/L @ 20 °C; 425 ppm @ 25 °C.

Incompatibilities: Picloram may be sensitive to prolonged exposure to light or UV. Aqueous solutions may be decomposed by light. Picloram is incompatible with strong oxidizing agents, strong acids, acid chlorides, and acid anhydrides. Reacts with hot concentrated alkali (hydrolyzes), strong bases. Attacks some metals in high temperatures, including mild steel.

Permissible Exposure Limits in Air: NIOSH NIOSH REL:15 mg/m^3 TWA, total dust; 5 mg/m^3 respirable fraction.
ACGIH TLV®[1]: 10 mg/m^3 TWA, 20 mg/m^3 STEL
NIOSH conducted a limited evaluation of the literature and concluded that the documentation cited by OSHA was inadequate to support the proposed PEL (as an 8-hour TWA) of 10 mg/m^3.

Determination in Air: Filter; none; Gravimetric; NIOSH IV, Particulates NOR: Method #0500 (total); Method #0600 (respirable).[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 500 μg/L; State Drinking Water Guidelines: Arizona 49 μg/L; Minnesota 500 μg/L. Canadian Drinking Water Standards: IMAC 0.19 mg/L.

Determination in Water: Log K_{ow} = <1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Exposure can cause nausea. LD_{50} (oral, rat) = >8 g/kg; LD_{50} (dermal, rat) = >4 g/kg.

Long Term Exposure: Picloram should be handled as a carcinogen with extreme caution. It may damage the testes. May affect the kidneys and liver. In animals: liver, kidney changes.

Points of Attack: Eyes, skin, respiratory system, liver and kidneys. Cancer site in animals: liver, uterus, pituitary gland. May cause tumors.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Liver and kidney function test.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following absorbent materials: Mineral-Based and Clay-Based[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dry material not listed.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the liquid spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon, hydrogen chloride and chlorine gases. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.
