NOTICE TO BE READ BY ALL USERS OF THIS PUBLICATION

Great care has been taken in the preparation of this reference work and, to the best knowledge of the Publisher and the Editors, the information contained herein is factual and accurate and the opinions expressed are those of qualified experts. This publication is not intended as a primary source of research information. This publication is a generic summary, designed to give the user a basic level of background information about the substances in question. Data are offered in this work solely for your consideration, investigation, and verification. The information and data are not to be taken as a warranty or representation for which the Publisher or Editors assume legal responsibility. Furthermore, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences from, such information. The Publisher and Editors make no representations and assume no liability for any direct, incidental or consequential damages resulting from its use. The reader must accept therefore that this work has no legal status and cannot be relied upon in any legal proceedings. Mention of trade names or commercial products in the work does not constitute endorsement or recommendation for use by the Publisher or Editors. All registered Trademarks, Service marks, and proprietary names are the property of the owner.

This reference is intended to provide information about chemical hazards and guidelines for those trained in the proper use, application, and storage of hazardous materials, including pesticides and agricultural chemicals. It is also for those trained to respond to hazardous materials spills, leaks, and accidents involving those materials. As with any reference, it cannot include all information or discuss all situations that might occur. It cannot be assumed that all necessary warnings and precautionary measures are contained in this work, and that other, or additional, information or assessments may not be required. Most of all, it cannot replace the training and experience of qualified and prepared professionals, including first-response personnel. Because information may not be available for some chemicals, an absence of data does not necessarily mean that a substance is not hazardous. For major incidents, it will be necessary to obtain additional detailed information from other resources as well as more expertise from those with extensive training. Neither the Publisher nor the Editors assume any liability or responsibility for completeness or accuracy of the information presented or any damages of any kind alleged to result in connection with, or arising from, the use of this work.

Final determination of the suitability of any information for use contemplated by any user of this work, and the manner of that use, is the sole responsibility of the user. Any use of these data and information must be determined by the user to be in accordance with applicable federal, state, territorial, and local laws, and regulations. The Publisher and Editors recommend that anyone intending to use any toxic, hazardous chemical, and/or carcinogenic material mentioned in this work should satisfy themselves as to such suitability, and that the user can meet all applicable safety and health standards. The Publisher and the Editors strongly encourage all readers, and users of chemicals, to adhere to, and follow, the manufacturers' or suppliers' current instructions, labels, technical bulletins, material safety data sheets (MSDSs), for specific use, handling, protection (including the use of personal protective equipment and eye protection), and storage of all chemical materials, as well as the labels on original pesticide containers, listing ingredients, care and use directions, and first aid for poisoning. The Publisher and Editors also strongly recommend that users obtain expert advice before implementing procedures involving any hazardous chemicals, materials, or carcinogens.

DEDICATION

Stanley A. Green

About the Editor

Richard P. Pohanish is the author of numerous technical and scientific works, including *Wiley Guide to Chemical Incompatibilities*, Third Edition*, HazMat Data for First Response, Transportation, Storage, and Security*, Second Edition, and (with Stanley A. Greene) *The Hazardous Substance Resource Guide, Second Edition,* which was selected by the American Library Association as a Notable Reference in 1994. Mr. Pohanish is also the editor of the best-selling *Sittig's Handbook of Toxic and Hazardous Chemicals and Carcinogens, Sixth Edition, Volumes I and II,* also published by Elsevier, Inc., and *Machinery's Handbook Pocket Companion* published by Industrial Press.

Preface to the Second Edition

For more than thirty years *Sittig's Handbook of Toxic and Hazardous Chemicals and Carcinogens* has been helping occupational, environmental, and emergency professionals by providing critical information in an easy-to-use and portable format. It is the objective and special challenge of this volume, a companion to *Sittig's Handbook*, to focus on more than 450 pesticides and agricultural chemicals and to offer the reader help and guidance in identifying and evaluating hazards associated with this important class of chemicals. The second edition of *Sittig's Handbook of Pesticides and Agricultural Chemicals* offers essential advice on dealing with the protection of working people – factory workers and field hands – emergency personnel and the public. This handbook is an important addition to the collections of all who come in contact with pesticides and agricultural chemicals at work or at home.

This second edition provides critical information on many of the most-used pesticide materials and agricultural chemical products of special interest. In keeping with the format and spirit of *Sittig's Handbook of Toxic and Hazardous Chemicals and Carcinogens*, this work continues to cover regulated chemicals – which implies recognition by various government agencies and/or rule-making body – and to present new and valuable information within a handy single-volume handbook. The main body of this work consists of a series of monographs of products arranged in alphabetical order. All monographs are organized in a format similar to those found in *Sittig's Handbook* with common names, chemical synonyms, trade names, chemical formulae, U.S. EPA (United States Environmental Protection Agency) pesticide codes, EEC (European Economic Community) number, RTECS® (Registry of Toxic Effects of Chemical Substances), CAS (Chemical Abstract Service) numbers, and other unique identifiers so that all who may have contact with or interest in these pesticides can easily find needed information. For example, the "Regulatory Authority and Advisory Information" section has been expanded, now containing current U.S. federal citations as well as selected European and Californian (the largest agricultural state) sources. The latter includes potential groundwater pollutants and the latest California Proposition 65 information related to carcinogen and developmental dangers of specific products. Also added are European and International hazard data, including important regulatory mandates and safety warnings, symbol codes, risk and safety phrases and, where assigned, WGK (German Aquatic Class) values, Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)]; List of Stockholm Convention Persistent Organic Pollutants (POPs). Many records contain special warnings, including notes and reminders to health care professionals. Detailed discussions on all possible solutions to problems are not feasible in the limited space available. Nevertheless, it is hoped the guidance and data provided will be of value to a broad audience of interests: formulators, distributors, applicators, regulators, news outlets, worker protection professionals, and all responsible for the proper disposal of pesticide and agricultural products. Many of the first edition's directories have been eliminated. So much of this information is not urgently needed by most users and is widely available on the Internet. Data are furnished, to the extent currently available, in a multi-section uniform format to make it easy for users who wish to find information quickly or to compare data within various records in any or all of these important categories:

- Chemical Name
- Use Type
- CAS Number
- Formula
- Alert
- Synonyms
- Trade Names
- Chemical Class
- EPA/OPP PC Code
- California DPR Chemical Code
- HSDB Number
- UN/NA ERG Number
- RTECS® Number
- EC Numbers (includes Annex I Index numbers where assigned)
- Uses
- U.S. Maximum Allowable Residue Levels (with CFR citations)
- Human toxicity (long-term)
- Fish toxicity (threshold)
- Regulatory Authority and Advisory Information
- Description (appearance, odor, physical properties, fire data, and water solubility)
- Incompatibilities
- Permissible Exposure Limits in Air
- Determination in Air
- Permissible Concentration in Water
- Determination in Water
- Routes of Entry
- Harmful Effects and Symptoms
- Short Term Exposure
- Long Term Exposure
- Points of Attack
- Medical Surveillance
- First Aid
- Personal Protective Methods
- Respirator Selection
- Storage
- Shipping
- Spill Handling
- Fire Extinguishing
- Disposal Method Suggested
- References

It should be noted that a “regulated chemical” need not indicate that it is a “registered product.” Products are constantly being registered, canceled, or transferred in the United States by the Environmental Protection Agency (EPA). Nevertheless these “canceled” products may be acceptable for use on crops in other countries. If, for example, when pesticides are used on food products imported into the United States, they may be subjected to inspection by the U.S. Department of Agriculture (USDA) at ports of entry.

Although every effort has been made to produce an accurate and highly useful handbook, the author appreciates the need for constant improvement. Any comments, corrections, or advice from readers and users of this book are welcomed by the author, who asks that all correspondence be submitted in writing and mailed to the publisher, who maintains a file for reprints and future editions.

ACKNOWLEDGMENTS

First of all, a special thanks to Stanley A. Greene, who inspired and was the lead author of the first edition. I wish to thank the following individuals and institutions for their generous help with the first edition of this work. Wendy Kramer, Administrative Librarian, and Judith Foster, Information Technology Assistant, both at the USDA Agriculture Research Service, Eastern Region Research Center in Wyndmoor, PA; and Ken Pfeiffer, Pest Management Specialist/Agronomist, USDA/NRCS National Water and Climate Center. The library staff at the Delaware Valley College in Doylestown, PA, was most helpful in explaining the information needs of professionals in the agriculture industry. The author would like to thank some individuals and institutions, without whose expertise and generous help the 2nd edition would not have been possible. Much of the data for this volume was compiled by utilizing important documents and databases of agencies of federal, state, and foreign governments and prominent professional and advisory organizations. In particular, I want to acknowledge the good work of the United States Environmental Protection Agency (EPA), United States Department of Labor: Occupational Safety and Health Administration (OSHA), The National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention (CDC), The Agency for Toxic Substances and Disease Registry (ATSDR), The National Library of Medicine (NLM), United States Department of Energy (DOE), National Toxicolgy Program (NTP), United States Department of Energy, United States Department of Agriculture, National Oceanic and Atmospheric Administration (NOAA), and The National Fire Protection Association (NFPA). At the U.S. Coast Guard Headquarters I wish to thank the recently-retired Alan Schneider, D.Sc., of the Marine Technical and Hazardous Materials Division. Thanks to the American Conference of Governmental Industrial Hygienists (ACGIH) for granting permission to use threshold limit values (TLVs) from their booklet entitled *Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices.* This booklet is revised on an annual basis. Also thanks to Dr. Andrew Greene of the University of Hertfordshire for his help and allowing me to use parts of the University’s *Pesticide Properties Database* (PPDB) developed by the Agriculture & Environment Research Unit (AERU), University of Hertfordshire, funded by UK national sources and the EU-funded FOOTPRINT project (FP6-SSP-022704). I am also grateful to my publisher, Matthew Deans, and his excellent staff at Elsevier, Oxford, UK. I appreciate the vigilant care of Peter Gane and Nicky Carter in preparing this work for publication.

Introduction

A pesticide is any substance or mixture of substances intended to preserve crops by preventing, destroying, repelling, or mitigating a pest. Though often misunderstood to refer only to insecticides, the term "pesticide" also applies to herbicides, rodenticides, fungicides, miticides, and various other pest control substances and formulations. Under many laws, including those of the United States (FIFRA), a pesticide is also any substance or formulation intended for use as a plant regulator, defoliant, or desiccant. And, because they are designed to kill or otherwise adversely affect living organisms, pesticides are inherently toxic and most of them create some risk of harm to humans, animals, useful insects, such as bees, or the environment At the same time, pesticides are important and useful to society because they can preserve crops by killing potential disease-causing organisms and control insects, rodents, weeds, and other pests[94].

Following are important facts and trends about the global market for pesticides and its single largest market, the United States. In February 2011 the EPA's report, *Pesticide Industry Sales and Usage: 2006 and 2007 Market Estimates*, contained the latest statistics on agricultural and nonagricultural use and sales of pesticides. The previous report on pesticide industry sales and usage was published by the EPA in 2001. Approximately 5.2 billion pounds of pesticides were used worldwide in both 2006 and 2007 and world expenditures on pesticides totaled more than $35.8 billion in 2006 and more than $39.4 billion in 2007. By comparison, in 2001 worldwide expenditures totaled more than $32 billion. Herbicides accounted for the largest portion of total use, followed by other pesticides, insecticides, and fungicides. In 2007, the United States accounted for 22% of total world pesticide amount used and sales amounted to approximately $12.5 billion, or almost one-third of the world's overall expenditures. Eighty percent of all U.S. pesticide use was in agriculture. Between 2000 and 2007 total pounds of U.S. pesticides used decreased by 8% from 1.2 to 1.1 billion pounds. From 2002 to 2007 use of conventional pesticides decreased about 3% and the decrease was down 11% from 1997 to 2007[94].

Among the top 10 pesticides used in the agricultural market (in terms of pounds applied) were the herbicides glyphosate, atrazine, metolachlor-S, acetochlor, 2,4-D, and pendimethalin, and the fumigants metam-sodium, dichloropropene, methyl bromide, and chloropicrin. Herbicides were also the most widely used type of pesticide in the home and garden and industrial, commercial, and governmental market sectors, and the herbicides 2,4-D and glyphosate were the most widely used active ingredients[94].

The toxic chemicals problem in the United States, and indeed in all the world, is frightening and news stories abound. According to the Food and Agricultural Organization of the United Nations Programme on the Prevention and Disposal of Obsolete Pesticides, "half a million tons (tonnes) of obsolete pesticides are scattered throughout the developing world. These toxic chemicals, often stored outdoors in leaking containers, are seeping into the soil and water." In the U.S. alone, nearly five million chemical poisonings occur annually, resulting in thousands of deaths. According to the U.S. EPA, poison control centers respond to more than 3.6 million calls each year (approximately one call every eight seconds). According to the American Association of Poison Centers and data collected from poison centers, nearly 150,000 calls are made with concerns about exposure to common household pesticides. About half of these calls involve young children. Still fresh in one's mind is the world's worst industrial accident on the night of December 2, 1984. In Bophal, India, an estimated 7500 to 8000 people died initially, and more than 25,000 total, from a leak of methyl isocyanate gas. Methyl isocyanate is used as an intermediate chemical in the production of carbamate pesticides. Local news outlets frequently report incidents that do not reach national attention. In the mid-90s near Bakersfield, California, 22 farm workers, including three pregnant women, were affected when a crop-dusting plane applied a mixture of chlorpyrifos, fenpropathrin, and profenofos to a neighboring cotton field. In addition, as many as 225 farm workers in nearby grape fields were exposed from the "air drift." Most were hospitalized and later released. In another, more recent incident (June 2013 in Wilsonville, Oregon), a massive bumblebee kill occurred. It was reported to be the largest mass poisoning of its kind documented to date and it impacted an estimated 50,000 bumble bees (300-plus colonies) following application of a relatively new and controversial group of chemicals known as of neonics (neonicotinoids are similar to nicotine). Neonics were used to control sticky residue-secreting insects on ornamental linden trees. The trees were sprayed because the aphids were a nuisance to parked automobiles. These chemicals are the subject of a recent ban (limited, for the time being, to 2 years) in the European Union[114].

The widespread use of pesticides and other chemicals on our food supply and other crops is a constant, potential threat to the health and economic livelihood of millions of farm workers. In the U.S. alone this workforce is estimated to be approximately 2.5 million, with California employing more than 600,00. These workers face the highest rate of chemical-related illness of any occupational group in a workplace. Moreover, in many cases, collateral exposure in their homes and drinking water occurs. It can be assumed that not all cases are reported and that pesticides can have a long-term effect on workers and their families, including cancer, neurological disorders, and infertility, from run-off into their water supply, from ambient air, and from living in or near fields that have been treated with pesticides. Readers may find that some of the products covered in this volume's monographs may be "unregistered" or "canceled" for use in some countries. Nevertheless, many of these pesticides may be legally manufactured, formulated, and supplied by one country and sold to customers in other countries. In other words, "canceled" or "non-registered" "obsolete" or "banned" products may still be acceptable for use somewhere in the world; and, for that reason, these have been included. The use of this reference is not meant to be a substitute for environmental or workplace hazard communication programs required by regulatory bodies such as U.S. EPA, USDA, or OSHA, and/or any other U.S., foreign, or international regulatory agencies. If data are required for legal purposes, the original source documents and appropriate agencies, which are referenced, should be consulted.

How to Use This Book

More than 400 pesticide and agricultural chemical substances are profiled in this reference work and the information is organized into sections described here. When a category is omitted from a monograph, it usually indicates a lack of available information; and, rather than indicate "no information." that category has been removed to conserve space for additional pesticide materials.

Chemical Name: Each record is arranged alphabetically by a chemical name used by regulatory and advisory bodies. In most cases, this is not a product or trade name. See also "Synonyms" and "Trade Names" below.

Use Type: The general agricultural use is given, e.g., herbicide, insecticide, fungicide, rodenticide, miticide, fertilizer, biocide, etc. The U.S. Department of Agriculture recognizes the following types of pesticides that are related because they are used against the same type of pests.

- Acaricides: Kill mites, ticks, and spiders that feed on plants and animals. Also called miticides.
- Algicides: Control algae in lakes, canals, swimming pools, water tanks, and other sites.
- Antifouling agents: Kill or repel organisms that attach to underwater surfaces, such as boat bottoms.
- Antimicrobials: Kill microorganisms (such as bacteria and viruses).
- Attractants: Attract pests, e.g., to lure an insect or rodent to a trap. Food is not considered a pesticide when used as an attractant.
- Avicides: Kill birds.
- Biopesticides: These are certain types of pesticides derived from such natural materials as animals, plants, bacteria, and certain minerals.
- Biocides: Kill microorganisms.
- Defoliants: Cause leaves or other foliage to drop from a tree or growing plant, usually to facilitate harvest. Various highly persistent types have been used by the military.
- Desiccants: Promote drying of living tissues, such as unwanted plant tops.
- Disinfectants and sanitizers: Kill or inactivate disease-producing microorganisms on inanimate objects.
- Fungicides: Kill fungi (including blights, mildews, molds, and rusts).
- Fumigants: Produce gas or vapor intended to destroy pests in buildings or soil.
- Herbicides: Kill weeds, grasses and other plants that grow where they are not wanted. May be organic or inorganic.
- Insect growth regulators: Disrupt the molting, maturity from pupal stage to adult, or other life processes of insects.
- Insecticides: Kill insects and arthropods.
- Miticides: Kill mites, ticks, and spiders that feed on plants and animals. Also called acaricides.
- Microbial pesticides: Microorganisms that kill, inhibit, or out-compete pests, including insects or other microorganisms.
- Molluscicides: Kill snails and slugs.
- Nematicides: Kill nematodes (microscopic, worm-like organisms that feed on plant roots).
- Ovicides: Kill eggs of insects and mites.
- Pheromones: Biochemicals used to disrupt the mating behavior of insects.
- Piscicides: Kill fish.
- Plant growth regulators: Substances (excluding fertilizers or other plant nutrients) that alter the expected growth, flowering, or reproduction rate of plants.
- Predacides: Kill vertebrate predators.
- Repellents: Repel pests, including insects (such as mosquitoes) and birds.
- Rodenticides: Control mice and other rodents.
- Synergists: Improve the performance of another pesticide. Usually an inert ingredient.

CAS Number: The CAS number is a unique identifier assigned to each chemical registered with the Chemical Abstracts Service (CAS) of the American Chemical Society. CAS numbers, in the format nnn…-nn-n, [two or more numeric characters (dash) two numeric characters (dash) followed by a single numeric check digit]. CAS numbers should always be used in conjunction with substance names to ensure positive identification and avoid confusion with like-sounding names, e.g., benzene (71-43-2) and benzine (8032-32-4). This 2nd edition contains some alternate CAS numbers that may now be considered related, retired, obsolete and/or widely and incorrectly used in the literature. In this section, the first CAS number(s), before the word "alternate," is considered (based on several sources) to be the correct CAS number(s). Ultimately, it is the responsibility of the user to find and use the correct number.

Formula: Generally, this has been limited to a commonly used one-line empirical or atomic formula. In most cases for organic compounds, the Hill system has been used, showing number of carbons (if present), number of hydrogens (if present), and then alphabetically by element.

Alert: This section serves as a notice of particularly dangerous attributes of a chemical or pesticide, such as phosphine.

Synonyms: This section contains scientific, product, trade, and other synonym names that are commonly used for each pesticide substance. Most of these names are registered trade names that are the legal property of their owners and carry the registration mark ®. Some synonyms are provided in other major languages other than English, including Spanish. In some cases, "trivial" and nicknames (such as MEK for methyl ethyl ketone) have been included because they are commonly used in general communications and in the workplace. This section is important because the various "regulatory" lists published by federal, state, international, and advisory bodies and agencies do not always use the same name for a specific hazardous substance. Every attempt has been made to ensure the accuracy of the synonyms and trade names found in this volume, but errors are inevitable in compilations of this magnitude. Please note that this volume may not include the names of all products currently in commerce, particularly mixtures, that may be formulated from regulated chemicals.

The synonym Appendix 2 contains all synonym names listed in alphabetical order. It should be noted that organic chemical prefixes and interpolations such as (α-) alpha-, (β-) beta-, (γ-) gamma-, (δ-) delta-, (*o*-) ortho-, (*m*-) meta-, (*p*-) para-, *(sec*-) secondary-, *trans*-, *cis*-, (*n*-) normal-, and numbers (1-; 1,2-), etc. are not conventionally used when searching for a chemical name. In other words, these prefixes are not treated as part of the chemical name for the purposes of alphabetization. Users should use the substance name without the prefix. For example, to locate *n*-Butane, search for Butane; to locate 3,3´-Dichlorobenzidine, search for Dichlorobenzidine; and to locate α-Cyanotoluene or *alpha*-Cyanotoluene, search for Cyanotoluene.

Trade Names: Most of the registered trade names included in this work were registered at one time or are in current use. In many cases, the trade names are also sold in foreign markets. Where available, trade names of pesticides made by foreign manufacturers and marketed primarily in foreign countries are also included. Many trade names are formulations that include the product and may not be the pure material that is subject of the monograph.

Chemical Class: This field describes pesticide family, i.e., carbamate, organophosphate, triazine, etc.

EPA/OPP PC Code: This field contains a unique six-digit numerical pesticide code assigned by the U.S. EPA.

California DPR Chemical Code: This field contains the unformatted numerical pesticide code assigned by the California Department of Pesticide Registration (DPR).

HSDB Number: *The Hazardous Substances Data Bank* (HSDB) is a database of the United States National Library of Medicine's (NLM) *Toxicology Data Network* (TOXNET). Accessible, free of charge, this database contains more than 5000 hazardous chemical records including many pesticides. All records can be searched by chemical names, partial names, synonyms, CAS numbers, etc. This HSDB number is provided to users of this handbook who may require quick access to additional and more detailed information on chemical substances and their toxicology, emergency handling, exposure, personal protection, etc. There are a few (about 21) pesticides without assigned HSDB numbers.

UN/NA & ERG Number: The UN and DOT hazard identification (ID) number are assigned to chemical substances by the U.S. Department of Transportation (DOT) and the United Nations Committee of Experts on the Transport of Dangerous Goods. The numbers are usually identical. The ID number format is "UNnnnn" or "NA nnnn". This ID number identifies regulated substances and must appear on shipping documents, the exterior of packages, and on specified containers. Identification numbers containing a UN prefix are also known as United Nations numbers and are authorized for use with all international shipments of hazardous materials. The "NA" prefix is used for shipments between Canada and the United States *only*, and may *NOT* be used for other international shipments. *The Emergency Response Guide*, ERG, is issued every 4 years and is a joint publication of the Departments of Transportation of the United States (U.S. DOT), Canada [Transport Canada (TC)], and Mexico [Secretariat of Communications and Transportation (SCT)]. Also, Argentina's Chemistry Information Center for Emergencies (CIQUIME) is a publication collaborator. The ERG number comes from the 170 first-responder "Guides" found in the orange-colored section of the ERG. These Guide numbers provide general and evacuation information on how to initially respond (normally in the first 30 minutes) to incidents involving hazardous chemicals.

RTECS Number: The RTECS numbers (Registry of Toxic Effects of Chemical Substances) are unique identifiers assigned and published by NIOSH. The RTECS number in the format "AAnnnnnnn" (two alphabetic characters followed by seven numeric characters) may be useful for online searching for additional toxicologic information on specific substances. It can, for example, be used to provide access to the MEDLARS® computerized literature retrieval services of the National Library of Medicine (NLM) in Washington DC. The RTECS number and the CAS number may serve to narrow down online searches.

EC Number: The European Commission number is a unique seven-digit identification code used within the European Union (EU) by regulatory authorities of the European Environment Agency (EEA) and others to control commercially available chemical substances. The EC number supersedes the outmoded EINECS, ELINCS and NLP numbers and appears in the format NNN-NN-N[r] with the final number (-N[r]) being the check digit. EU numbers start as follows: 2 or 3 (2XX-XXX-X or 3XX-XXX-X) for chemical substances belonging to EINECS (Existing Chemicals); 4 (4XX-XXX-X) for chemical substances belonging to ELINCS (New Chemicals), 5 (5XX-XXX-X) for chemical substances belonging to NLP (No-Longer Polymers). Use of these identification numbers for hazardous materials will (a) serve to verify descriptions of chemicals; (b) provide for rapid identification of materials when it might be inappropriate or confusing to require the display of lengthy chemical names on vehicles; (c) aid in speeding communication of information on materials from accident scenes and in the receipt of more accurate emergency response information; and (d) provide a means for quick access to immediate emergency response information in the "*The Emergency Response Guide (ERG)*."[31] In this latter volume, the various compounds have assigned "ID" numbers (or identification numbers) which correspond closely, but not always precisely, to the UN listing[20].This section also includes *Annex I, Index number* for the Export and Import of Dangerous Chemicals found in Annex I of Regulation (EC) No 689/2008.

Uses: This is a brief summary of agricultural applications and uses found for the substance in other fields. For specific crops, target insects, weeds, varmints and fungi, the user is referred to the reference sources cited at the end of each chemical listing. In many cases, the pesticides are not registered for use in the U.S. but are used in other countries.

U.S. Maximum Allowable Residue Levels: These are the tolerance levels for individual crops. The tolerance levels are established by the EPA and reported in 40 CFR 180. Tolerances are defined by EPA as "The maximum amount of a pesticide allowable in a food or feed product before it is considered adulterated, usually specified in parts per million (ppm)." Readers are cautioned that these levels are for country-wide usages and are reviewed and modified frequently to reflect regulatory changes, petitions by individual companies, or scientific developments; consequently, be encouraged to verify the tolerances in the EPA web site. State exceptions to the federal standards are not included here.

Human toxicity (long-term): This field contains three items: The hazard rating/long-term toxicity level (ppb)/toxicity type. This represents a relative long-term toxicity index for humans. The hazard ratings (Extra High, High, Intermediate, Low, Very Low) are indicators of the relative risk to humans. The figure in ppb is calculated with respect to humans by the U.S. EPA. The last item in this field is the toxicology "type" for the value expressed in ppb. Toxicities are based on availability in the priority order: MCL, HA, and CHCL. HA is used for Cancer Groups C, D, E, and Unclassified. CHCL is used for Cancer Groups A, B1 and B2 when MCL is unavailable.

- MCL (EPA's Maximum Contaminant Level). Maximum permissible long-term pesticide concentration allowed in a public water source.
- HA (Health Advisory). Determined by the U.S. EPA Office of Water (OW). The concentration of a chemical in drinking water that is not expected to cause any adverse non-carcinogenic effects over the lifetime exposure with a margin of safety. In accordance with OW policy, Health Advisories are not calculated for chemicals that are known or probable carcinogens (EPA Cancer class A and B).
- CHCL* (Chronic Human Carcinogen Level, calculated). The concentration at which there is a 1 in 100,000 probability of contracting cancer. A CHCL provides a concentration comparable to an MCL.

Fish toxicity (threshold): This field contains three items: The hazard rating/toxicity threshold (ppb)/toxicity type. The hazard rating (Extra High, High, Intermediate, Low, Very Low) is based on Maximum Acceptable Toxicant Concentration (MATC), the soluble pesticide toxicity level for fish that is an indicator of the relative risk to the environment. The hazard rating is followed by the fish toxicity threshold for an active ingredient expressed in parts per billion (ppb) and determined empirically by performing long-term or life-stage toxicity tests. The final item in this field contains the type of toxicity for the toxicity threshold (MATC).

Regulatory Authority and Advisory Information: Contains a listing of major regulatory and advisory lists containing the chemical of concern, including U.S. EPA, NTP, OSHA, U.S. DOT, ACGIH, DFG, WGK, and the EC GHS. Also included is information specific to the state of California, which has the largest agricultural economy in the United States and annually employs more than 600,000 workers. Many law or regulatory references in this work have been abbreviated. For example, Title 40 of the Code of Federal Regulations, Part 261, subpart 32 has been abbreviated as 40CFR261.32. The symbol "§" may be used as well to designate a "section" or "part." European/International Hazard Symbols, Risk Phrases, and Safety Phrases: Explanation of these symbols and phrases can be found in Appendix 1. The Globally Harmonized System of Classification and Labeling of Chemicals (GHS) has been phased in by many countries.

- Carcinogenicty: The EPA has evaluated chemicals for their carcinogenic potential according to *Fact Sheet: EPA's GUIDELINES FOR CARCINOGEN RISK ASSESSMENT (March 29, 2005)*. Under EPA's 1986 risk assessment guidelines, the weight-of-evidence (WOE) for carcinogenicity is described by categories "A through E," Group A for known human carcinogens through Group E for agents with evidence of noncarcinogenicity.
- *Carcinogenic to Humans*: The Guidelines recommend this descriptor when there is convincing epidemiologic evidence demonstrating causality between human exposure and cancer, or exceptionally when there is strong epidemiological evidence, extensive animal evidence, knowledge of the mode of action, and information that the mode of action is anticipated to occur in humans and progress to tumors.
- *Likely to be Carcinogenic to Humans*: The Guidelines recommend this descriptor when the available tumor effects and other key data are adequate to demonstrate carcinogenic potential to humans, but does not reach the weight-of-evidence for the descriptor "carcinogenic to humans."
- *Suggestive Evidence of Carcinogenic Potential*: The Guidelines recommend this descriptor when the

evidence from human or animal data is suggestive of carcinogenicity, which raises a concern for carcinogenic effects but is judged not sufficient for a stronger conclusion.

- *Inadequate Information to Assess Carcinogenic Potential*: The Guidelines recommend this descriptor when available data are judged inadequate to perform an assessment.
- *Not Likely to be Carcinogenic to Humans*: The Guidelines recommend this descriptor when the available data are considered robust for deciding that there is no basis for human hazard concern.
- NTP: 12th Report on Carcinogens, 2011 [Department of Health and Human Services (DHHS) National Toxicology Program].
- Chemicals on California's Proposition 65 List. *The Safe Drinking Water and Toxic Enforcement Act of 1986* requires that the Governor revise and republish at least once per year the list of chemicals known to the State to cause cancer or reproductive toxicity. This list, *Chemicals Known to the State to Cause Cancer or Reproductive Toxicity,* describes the type of toxicity (cancer and/or male and/or female developmental), the CAS number, and the date listed or delisted. The information shown was revised as of July 26, 2013. For updated information, see http://www.oehha.ca.gov/prop65/prop65_list/files/P65single061104a.pdf.
- Acute Oral Category and label signal word: The Category number is based on the LD^{50}. The LD_{50} value is a statistical estimate of the number of mg of toxicant per kg of body weight required to kill 50% of a large population of test animals. This value provides a "snapshot" of the toxicity category for acute oral dosage only. Readers should be aware that acute dermal, inhalation, primary eye, and primary skin irritation may be higher or lower and must protect themselves accordingly. The EPA assigns a signal word that is a description of the short-term (acute) toxicity of a formulated product. It must be displayed on product labels to alert users to potential hazards. There are four categories of signal words; their levels are shown below. Formulated products contain both active and inert or other ingredients. Examples of inert ingredients are carriers, stickers, solvents, and adjuvants.

Source: 40CFR156.64 (February 12, 2002)
Toxicity (oral) Category: 1, DANGER-Poison
Toxicity (oral) Category: 2, WARNING
Toxicity (oral) Category: 3, CAUTION
Toxicity (oral) Category: 4, Caution

- Health Advisory: Lists known and suspected Nerve Toxin(s), Endocrine Disruptor(s), Mutagen(s), Reproductive Hazard(s), Skin Irritants/sensitizer(s), Developmental toxin(s). Nerve Toxins contain ingredients determined to inhibit the action of cholinesterase, an important enzyme involved in nervous system operation of animal and human nervous systems. Endocrine Disruptors are compounds that "interfere with the synthesis, secretion, transport, binding, action, or elimination of natural hormones in the body that are responsible for the maintenance of homeostasis (normal cell metabolism), reproduction, development, and/or behavior." Many endocrine disruptors are thought to mimic hormones, such as estrogen or testosterone. They have chemical properties similar to hormones that allow binding to hormone-specific receptors on the cells of target organs. More information on endocrine effects can be found at the EPA Endocrine home page at http://www.epa.gov.endocrine. The absence of these designation does not mean a pesticide is free of these characteristics. It may mean that its ingredients have not been completely evaluated or that insufficient data are available to make a determination. Similarly, classification of pesticides may be changed when new data become available. A substance with an air pollutant standard set or recommended by OSHA and/or NIOSH,[58] ACGIH,[1] DFG[3]. The OSHA limits are the enforceable pre-1989 PELs. The transitional limits that were vacated by court order have not been included. The NIOSH and ACGIH airborne limits are recommendations that do not carry the force of law in the United States but are used as standards in may countries.
- Potential Ground Water Pollutant (California): Pesticides labeled for agricultural, outdoor institutional, or outdoor industrial use that are designated as having the potential to pollute ground water listed in Sections 13149 and 12811 of the Food and Agricultural Code (FAC).
- A substance whose allowable concentrations in workplace air are adopted or proposed by the American Conference of Government Industrial Hygienists (ACGIH)[1]. DFG [Deutsche Forschungsgemeinschaft (German Research Society)][3]. Substances whose allowable concentrations in air and other safety considerations have been considered by OSHA and NIOSH[2].
- Substances that are specifically regulated by OSHA under 29CFR1910.1001 to 29CFR1910.1050.
- Highly hazardous chemicals, toxics, and reactives regulated by OSHA's "*Process Safety Management of Highly Hazardous Chemicals*" under 29CFR1910.119, Appendix A. Substances that are Hazardous Air Pollutants (Title I, Part A, §112) as amended under 42USC7412. This list provided for regulating at least 189 specific substances using technology-based standards that employ Maximum Achievable Control Technology (MACT) standards; and possibly health-based standards if required at a later time. §112 of the Clean Air Act (CAA) requires emission control by the EPA on a source-by-source basis.
- Regulated Toxic Substances and Threshold Quantities for Accidental Release Prevention. These appear as Accidental Release Prevention/Flammable Substances, Clean Air Act (CAA) §112(r), Table 3, TQ (threshold quantity) in pounds and kilograms under 40 CFR68.130. The accidental release prevention regulations apply to stationary sources that have present more than a threshold quantity of a CAA §112(r) regulated substance.

- Clean Air Act (CAA) Public Law 101–549, Title VI, *Protection of Stratospheric Ozone*, Subpart A, Appendix A, class I and Appendix B, Class II, Controlled Substances, (CFCs) Ozone depleting substances under 40CFR82.
- Clean Water Act (CWA). Priority toxic water pollutants defined by the U.S. Environmental Protection Agency for 65 pollutants and classes of pollutants which yielded 129 specific substances[6].
- Chemicals designated by EPA as "Hazardous Substances"[4] under the Clean Water Act (CWA) 40CFR116.4, Table 116.4A.
- Clean Water Act (CWA) §311 Hazardous Materials Discharge Reportable Quantities (RQs). This regulation establishes reportable quantities for substances designated as hazardous (see §116.4, above) and sets forth requirements for notification in the event of discharges into navigable waters. Source: 40 CFR117.3, amended at 60FR30937.
- Clean Water Act (CWA) §307 List of Toxic Pollutants. Source: 40CFR401.15.
- Clean Water Act (CWA) §307 Priority Pollutant List. This list was developed from the List of Toxic Pollutants classes discussed above and includes substances with known toxic effects on human and aquatic life, and those known to be, or suspected of being, carcinogens, mutagens, or teratogens. Source: 40CFR423, Appendix A.
- Clean Water Act, §313 Water Priority Chemicals. Source: 57FR41331.
- RCRA Maximum Concentration of Contaminants for the Toxicity Characteristic with Regulatory levels in mg/L. Source: 40CFR261.24.
- RCRA Hazardous Constituents. Source: 40CFR261, Appendix VIII. Substances listed have been shown, in scientific studies, to have carcinogenic, mutagenic, teratogenic or toxic effects on humans and other life forms. This list also contains RCRA waste codes. The words, "waste number not listed" appears when a RCRA number is NOT provided in Appendix VIII.

Characteristic Hazardous Wastes	
Ignitability	A nonaqueous solution containing less than 24% alcohol by volume and having a closed cup flashpoint below 60 °C/140 °F using Pensky-Martens tester or equivalent. An ignitible compressed gas. A non-liquid capable of burning vigorously when ignited or causes fire by friction, moisture absorption, spontaneous chemical changes at standard pressure and temperature. An oxidizer. See §261.21.
Corrosivity	Liquids with a pH equal to or less than 2 or equal to or more than 12.5 or which corrode steel at a rate greater than 6.35 mm (0.25 in) per year @ 55 °C/130 °F. See §261.22.
Reactivity	Unstable substances that undergo violent changes without detonating. Reacts violently with water or other substances to create toxic gases. Forms potentially explosive mixtures with air. See §261.23.
Toxicity	A waste that leaches specified amounts of metals, pesticides, or organic chemicals using Toxicity Characteristic Leaching Procedure (TCLP). See §261, Appendix II, and §268, Appendix I.
Listed Hazardous Wastes	
"F" wastes	Hazardous wastes from nonspecific sources §261.31.
"K" Wastes	Hazardous wastes from specific sources §261.32.
"U" Wastes	Hazardous wastes from discarded commercial products, off-specification species, container residues §261.34. Covers some 455 compounds and their salts and some isomers of these compounds.
"P" Wastes	Acutely hazardous wastes from discarded commercial products, off-specification species, container residues §261.33. Covers some 203 compounds and their salts plus soluble cyanide salts.

Note: If a waste is not found on any of these lists, it may be found on state hazardous waste lists.

RCRA Maximum Concentration of Contaminants for the Toxicity Characteristic. Source: 40CFR261.24, Table I. These are listed with regulatory level in mg/L and "D" waste numbers representing the broad waste classes of ignitability, corrosivity, and reactivity.

EPA Hazardous Waste code(s), or RCRA number, appears in its own field. Acute hazardous wastes from commercial chemical products are identified with the prefix "P." Nonacutely hazardous wastes from commercial chemical products are identified with the prefix "U."

RCRA Universal Treatment Standards. Lists hazardous wastes that are banned from land disposal unless treated to meet standards established by the regulations. Treatment standard levels for wastewater (reported in mg/L) and nonwastewater [reported in mg/kg or mg/L TCLP (Toxicity Characteristic Leachability Procedure)] have been provided. Source: 40CFR268.48 and revision, 61FR15654.

RCRA Ground Water Monitoring List. Sets standards for owners and operators of hazardous waste treatment, storage, and disposal facilities, and contains test methods suggested by the EPA (see Report SW-846) followed by the Practical Quantitation Limit (PQL) shown in parentheses. The regulation applies only to the listed chemical; and, although both the test methods and PQL are provided, they are *advisory only*. Source: 40CFR264, Appendix IX.

Safe Drinking Water Act (SDWA) Maximum Contaminant Level Goals (MCLG) for Organic Contaminants. Source: 40CFR141 and 40CFR141.50, amended 57FR31776.

- Maximum Contaminant Levels (MCL) for Organic Contaminants. Source: 40CFR141.61.
- Maximum Contaminant Level Goals (MCLG) for Inorganic Contaminants. Source: 40CFR141.51.
- Maximum Contaminant Levels (MCL) for Inorganic Contaminants. Source: 40CFR141.62.
- Maximum Contaminant Levels for Inorganic Chemicals. The maximum contaminant level for arsenic applies only to community water systems. Compliance with the MCL for arsenic is calculated pursuant to §141.23. Source: 40CFR141.11.
- Secondary Maximum Contaminant Levels (SMCL). Federal advisory standards for the states concerning substances that effect physical characteristics (i.e., smell, taste, color, etc.) of public drinking water systems. Source: 40CFR143.3.
- CERCLA Hazardous Substances ("RQ" Chemicals). From Consolidated List of Chemicals Subject to the Emergency Planning and Community Right-to-Know Act (EPCRA) and §112(r) of the Clean Air Act, as Amended. Source: EPA 550-B-98-017 *Title III List of Lists*.
- Releases of CERCLA hazardous substances in quantities equal to or greater than their reportable quantity (RQ), are subject to reporting to the National response Center under CERCLA. Such releases are also subject to state and local reporting under §304 of SARA Title III (EPCRA). CERCLA hazardous substances, and their reportable quantities, are listed in 40CFR302, Table 302.4. RQs are shown in pounds and kilograms for chemicals that are CERCLA hazardous substances. For metals listed under CERCLA (antimony, arsenic, beryllium, cadmium, chromium, copper, lead, nickel, selenium, silver, thallium, and zinc), no reporting of releases of the solid is required if the diameter of the pieces of solid metal released is 100 micrometers (0.004 inches) or greater. The RQs shown apply to smaller particles.
- EPCRA §302 Extremely Hazardous Substances (EHS). From Consolidated List of Chemicals Subject to the Emergency Planning and Community Right-to-Know Act (EPCRA) and §112(r) of the Clean Air Act, as Amended. Source: EPA 550-B-98-017 *Title III List of Lists*. The presence of Extremely Hazardous Substances in quantities in excess of the Threshold Planning Quantity (TPQ) requires certain emergency planning activities to be conducted. The Extremely Hazardous Substances and their TPQs are listed in 40CFR355, Appendices A & B. For chemicals that are solids, there may be two TPQs given (e.g., 500/ 10,000). In these cases, the lower quantity applies for solids in powder form with particle size less than 100 microns; or, if the substance is in solution or in molten form. Otherwise, the higher quantity (10,000 pounds in the example) TPQ applies.
- EPCRA §304 Reportable Quantities (RQ). In the event of a release or spill exceeding the reportable quantity, facilities are required to notify State Emergency Response Commissions (SERCs) and Local Emergency Planning Committees (LEPCs). From Consolidated List of Chemicals Subject to the Emergency Planning and Community Right-to-Know Act (EPCRA) and §112(r) of the Clean Air Act, as Amended. Source: EPA 550-B-98-017 *Title III List of Lists*.
- EPCRA §313 Toxic Chemicals. From Consolidated List of Chemicals Subject to the Emergency Planning and Community Right-to-Know Act (EPCRA) and §112(r) of the Clean Air Act, as Amended. Source: EPA 550-B-98-017 *Title III List of Lists*. Chemicals on this list are reportable under §313 and §6607 of the Pollution Prevention Act. Some chemicals are reportable by category under §313. Category codes needed for reporting are provided for the EPCRA§313 categories. Information and Federal Register (FR) references have been provided where a chemical is subject to an administrative stay, and not reportable until further notice.
- From "*Toxic Chemical Release Inventory Reporting Form R and Instructions, Revised 2005 Version,*" EPA document 260-B-06-001 was used for *de minimis* concentrations, toxic chemical categories.
- Chemicals which EPA has made the subject of Chemical Hazard Information Profiles or "CHIPS" review documents.
- Chemicals which NIOSH has made the subject of "Information Profile" review documents on "Current Intelligence Bulletins."

- Carcinogens identified by the National Toxicology Program of the U.S. Department of Health and Human Services at Research Triangle Park, NC[10].
- Substances regulated by EPA[7] under the major environmental laws: Clean Air Act, Clean Water Act, Safe Drinking Water Act, RCRA, CERCLA, EPCRA, etc. A more detailed list appears above. Substances with environmental standards set by some international bodies including those in Europe and Canada[43].
- Also new in the 2nd edition are the water hazard classifications from the German Federal Water Management Act on Water Hazard Classification, *Verwaltungsvorschrift Wassergefährdende Stoffe* (VwVwS). This law requires all chemical substances be evaluated for their detrimental impact on the physical, chemical, or biological characteristics of water. Substances can be classified as non-hazardous to water (*nwg, nicht wassergefährdende*) or assigned to one of three numeric water hazard classes, WGK-1: low hazard to waters (low polluting to water), WGK-2: hazard to waters (water pollutant), or WGK-3: severe hazard to waters (severe pollutant). The English acronym for WGK is WHC (water hazard class). This work uses the German acronym "WGK" so there is no confusion as to its source. Material Safety Data Sheets (MSDS) that use these water hazards also use the German acronym. If additional guidance or compliance assistance is needed, you are encouraged to use the information resources found in the *Appendix.* In particular, the *Directory of Industrial and Professional Agrichemical and Food-related Organizations*, the *Directory of Hotlines, Databases and Web Sites*, and the *Agrichemical Web Sites* directory provide gateways into a wealth of information on agrichemicals and food safety much too extensive to be included in this reference work. In addition, each state in the U.S. has its own statutes and regulations. Their agencies can be located in the *Directory of State Regulatory Agencies*.

Description: This section contains a quick summary of physical properties of the substance including state (solid, liquid or gas), color, odor description, molecular weight, density, boiling point, freezing/melting point, vapor pressure, flash point, autoignition temperature, explosion limits in air, Hazard Identification (based on NFPA-704 M Rating System) in the format: Health (ranked 1 to 4), Flammability (ranked 1 to 4 1 to 4), Reactivity (ranked 1 to 4) (see also below for a detailed explanation of the System and Fire Diamond), and solubility or miscibility in water. This section may also contain special and relevant comments about the substance. Terms in this section are also defined in the glossary.

Odor threshold: This is the lowest concentration in air that most humans can detect by smell. Some value ranges are reported. The value cannot be relied on to prevent over-exposure, because human sensitivity to odors varies over wide limits, some chemicals cannot be smelled at toxic concentrations, odors can be masked by other odors, and some compounds rapidly deaden the sense of smell.

Molecular weight: The MW as calculated from the molecular formula using standard elemental molecular weights (e.g. carbon = 12.1).

Boiling point at 1 atm: The value is the temperature of a liquid when its vapor pressure is 1 atm. For example, when water is heated to 100 °C/212 °F its vapor pressure rises to 1 atm and the liquid boils. The boiling point at 1 atm indicates whether a liquid will boil and become a gas at any particular temperature and sea-level atmospheric pressure.

Melting/Freezing point: The melting/freezing point is the temperature at which a solid changes to liquid or a liquid changes to a solid. For example, liquid water changes to solid ice at 0 °C/32 °F. Some liquids solidify very slowly even when cooled below their melting/freezing point. When liquids are not pure (for example, salt water) their melting/freezing points are lowered slightly.

Flash point: This is defined as the lowest temperature at which vapors above a volatile combustible substance will ignite in air when exposed to a flame. Depending on the test method used, the values given are either Tag Closed Cup (cc) (ASTM D56) or Cleveland Open Cup (oc) (ASTM D93). The values, along with those in *Flammable Limits in Air* and *Autoignition temperature* below, give an indication of the relative flammability of the chemical. In general, the open cup value is slightly higher (perhaps 10 to 15 °F higher) than the closed cup value. The flash points of flammable gases are often far below 0° (F or C) and these values are of little practical value, so the term "flammable gas" is often used instead of the flash point value.

Autoignition Temperature: This is the minimum temperature at which the material will ignite without a spark or flame being present. Values given are only approximate and may change substantially with changes in geometry, gas, or vapor concentrations, presence of catalysts, or other factors.

Flammable Limits in Air: The percent concentration in air (by volume) is given for the LEL (lower explosive-flammable limit in air, % by volume) and UEL (upper explosive flammable limit in air, % by volume), at room temperature, unless other specified. The values, along with those in "Flash point" and "Autoignition temperature," give an indication of the relative flammability of the chemical.

NFPA Hazard Classifications: The NFPA 704 Hazard Ratings (Classifications) are based on those found in "*Fire Protection Guide to Hazardous Materials*," 2001 edition, National Fire Protection Association, Quincy, MA, ©1994. The classifications are defined in Table 1 below.

Table 1 Explanation of NFPA Hazard Classifications

HEALTH HAZARD (blue)	
Classification and Definition	
4	Materials which on very short exposure could cause death or major residual injury (even though prompt medical treatment was given), including those that are too dangerous to be approached without specialized protective equipment.
3	Materials which on short exposure could cause serious temporary or residual injury (even though prompt medical treatment was given), including those requiring protection from all bodily contact.
2	Materials that, on intense or continued (but not chronic) exposure, could cause temporary incapacitation or possible residual injury, including those requiring the use of protective clothing that has an independent air supply.
1	Materials which on exposure would cause irritation but only minor residual injury, including those requiring the use of an approved air-purifying respirator.
0	Materials that on exposure under fire conditions offer no hazard beyond that of ordinary combustible material.
FLAMMABILITY (red)	
Classification number and Definition	
4	This degree includes flammable gases, pyrophoric liquids, and Class IA flammable liquids. Materials which will rapidly or completely vaporize at atmospheric pressure and normal ambient temperature, or which are readily dispersed in air and which will burn readily.
3	Includes Class IB and IC flammable liquids and materials that can be easily ignited under almost all normal temperature conditions.
2	Materials that must be moderately heated before ignition will occur and includes Class II and Class IIIA combustible liquids and solids and semi-solids that readily give off ignitable vapors.
1	Materials that must be preheated before ignition will occur, such as Class IIIB combustible liquids, and solids and semi-solids whose flash point exceeds 200 °F/93.4 °C, as well as most ordinary combustible materials.
0	Materials that will not burn.
REACTIVITY (yellow)	
Classification and Definition	
4	Materials that, in themselves, are readily capable of detonation, explosive decomposition or explosive reaction at normal temperatures and pressures.
3	Materials that, in themselves, are capable of detonation, or explosive reaction, but require a strong initiating source or heating under confinement. This includes materials that are sensitive to thermal and mechanical shock at elevated temperatures and pressures and materials that react explosively with water.
2	Materials that are normally unstable and readily undergo violent chemical change, but are not capable of detonation. This includes materials that can undergo chemical change with rapid release of energy at normal temperatures and pressures. This also includes materials that may react violently with water or that may form potentially explosive mixtures in water.
1	Materials that are normally stable, but that may become unstable at elevated temperatures and pressures and materials that will react with water with some release of energy, but not violently.
0	Materials that are normally stable, even under fire exposure conditions, and that do not react with water.

Table 1 Explanation of NFPA Hazard Classifications—cont'd

OTHER (white)
Classification and Definition
~~W~~ – Materials which react so violently with water that a possible hazard results when they come in contact with water, as in a fire situation. Similar to Reactivity Classification 2.
Oxy – Oxidizing material; any solid or liquid that readily yields oxygen or other oxidizing gas, or that readily reacts to oxidize combustible materials.
It should be noted that OSHA and DOT have differing definitions for the term "flammable liquid" and "combustible liquid." DOT defines a flammable liquid as one which, under specified procedures, has a flashpoint of 140 °F/60 °C or less. A combustible liquid is defined as "having a flashpoint above 140 °F/ 60 °C and below 200 °F/93 °C." OSHA defines a combustible liquid as having a flash point above 100 °F/37.7 °C.

Incompatibilities: Important, potentially hazardous incompatibilities of each substance are listed where available. Where a hazard with water exists, it is described. Reactivity with other materials is described, including structural materials such as metal, wood, plastics, cement, and glass. The nature of the hazard, such as severe corrosion, formation of a flammable gas, is described. This list is by no means complete or all-inclusive. In some cases a very small quantity of material can act as a catalyst and produce violent reactions such as polymerization, disassociation and condensation. Some chemicals can undergo rapid polymerization to form sticky, resinous materials, with the liberation of much heat. The containers may explode. For these chemicals the conditions under which the reaction can occur are given.

Permissible Exposure Limits in Air: The permissible exposure limit (PEL) has been cited as the federal standard where one exists. Inasmuch as OSHA has made the decision to enforce only pre-1989 PELs, we decided to use these values rather than the transitional limits that were vacated by court order. Except where otherwise noted, the PELs are 8-hour work-shift time-weighted average (TWA) levels. Ceiling limits, Short Term Exposure Limits (STEL), and TWAs that are averaged over other than full work-shifts are noted.

The Short-Term Exposure Limit (STEL) values are derived from NIOSH[58], ACGIH[1], and HSE[33] publications. This value is the maximal concentration to which workers can be exposed for a period up to 15 minutes continuously without suffering from: irritation; chronic or irreversible tissue change; or narcosis of sufficient degree to increase accident proneness, impair self-rescue, or materially reduce work efficiency, provided that no more than four excursions per day are permitted, with at least 60 minutes between exposure periods, and provided that the daily TWA also is not exceeded. The "Immediately Dangerous to Life or Health" (IDLH) concentration represents a maximum level from which one could escape within 30 minutes without any impairing symptoms or any irreversible health effects. However, the 30-minute period is meant to represent a MARGIN OF SAFETY and is NOT meant to imply that any person should stay in the work environments any longer than necessary. In fact, every effort should be made to exit immediately. The concentrations are reported in either parts per million (ppm) or milligrams per cubic meter (mg/m^3).

Most U.S. specifications on permissible exposure limits in air have come from ACGIH[1] or NIOSH[2]. In the U.K. the Health and Safety Executive has set forth Occupational Exposure Limits[33]. In Germany the DFG has established Maximum Concentrations in the workplace[3]. This section also contains numerical values for allowable limits of various materials in ambient air[60] as assembled by the U.S. EPA. Where available, this field contains legally enforceable airborne Permissible Exposure Limits (PELs) from OSHA. It also contains recommended airborne exposure limits from NIOSH, ACGIH, and international sources and special warnings when a chemical substance is a Special Health Hazard Substance. Each is described below. TLVs have not been developed as legal standards and the ACGIH does not advocate their use as such. The TLV is defined as the time-weighted average (TWA) concentration for a normal 8-hour work-day and a 40-hour work-week, to which nearly all workers may be repeatedly exposed, day after day, without adverse effects. A ceiling value (TLV-C) is the concentration that should not be exceeded during any part of the working exposure. If instantaneous monitoring is not feasible, then the TLV-C can be assessed by sampling over a 15-minute period except for those substances that may cause immediate irritation when exposures are short. As some people become ill after exposure to concentrations lower than the exposure limits, this value cannot be used to define exactly what is a "safe" or "dangerous" concentration. ACGIH threshold limit values (TLVs) are reprinted with permission of the American Conference of Governmental Industrial Hygienists, Inc., from the booklet entitled, *Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices.* This booklet is revised on an annual basis. No entry appears when the chemical is a mixture; it is possible to calculate the TLV for a mixture only when the TLV for each component of the mixture is known and the composition of the mixture by weight is also known. According to ACGIH, "Documentation of the Threshold Limit Values and Biological Exposure Indices, 7th Edition" is necessary to fully interpret and implement the TLVs.

OSHA Permissible Exposure Limits (PELs) are found in Tables Z-1, Z-2, and Z-3 of OSHA, "General Industry Air Contaminants Standard (29CFR1910.1000)" that were effective on July 1, 2001 and which are currently enforced by OSHA.

Unless otherwise noted, PELs are the Time-Weighted Average (TWA) concentrations that must not be exceeded during any 8-hour shift of a 40-hour work-week. An OSHA ceiling concentration must not be exceeded during any part of the work-day; if instantaneous monitoring is not feasible, the ceiling must be assessed as a 15-minute TWA exposure. In addition there are a number of substances from Table Z-2 that have PEL ceiling values that must not be exceeded except for a maximum peak over a specified period (e.g., a 5- minute maximum peak in any 2 hours).

NIOSH Recommended Exposure Limits (RELs) are Time-Weighted Average (TWA) concentrations for up to a 10-hour work day during a 40-hour work week. A ceiling REL should not be exceeded at any time. Exposure limits are usually expressed in units of parts per million (ppm), i.e., the parts of vapor (gas) per million parts of contaminated air by volume at 25 °C/77 °F and one atmosphere pressure. For a chemical that forms a fine mist or dust, the concentration is given in milligrams per cubic meter (mg/m^3).

Protective Action Criteria (PAC) are emergency exposure limits developed by the U.S. Department of Energy (DOE) for 3387 chemicals in revision 27, published February 2012. These exposure limits can be used to estimate the consequences of the uncontrolled release of hazardous materials and to plan for emergency response. These PACs have been added to the 2nd edition because other well-established exposure limits in air are available for a only a limited number of chemicals from other governmental and advisory sources. PAC values are given in parts per million (ppm) for volatile liquids and gases; in milligrams per cubic meter (mg/m^3) for solids, particulates, solids, and nonvolatile liquids. Chemicals for which there are Acute Emergency Guideline Levels (AEGLs) and Emergency Response Planning Guidelines (ERPGs) have their values displayed in **bold** font. TEELs are intended for use until AEGLs or ERPGs are adopted for chemicals. For additional information see http://www.atlintl.com/DOE/teels/teel.html.

PAC Definitions:[SCAPA]

There are subtle difference in the definitions of AEGLs, ERPGs, and TEELs and major differences in how they are developed and issued. Differences in their definitions include:

AEGLs pertain to the "general population, including susceptible individuals," but ERPGs and TEELs pertain to "nearly all individuals."

AEGLs are defined as the level "above which" certain health effects are expected, while ERPGs and TEELs are defined as the level "below which" certain health effects are not expected.

Acute Emergency Guideline Levels (AEGLs) are defined as follows:

- *AEGL-1:* the airborne concentration (expressed as ppm or mg/m^3) of a substance above which it is predicted that the general population, including susceptible individuals, could experience notable discomfort, irritation, or certain asymptomatic, nonsensory effects. However, these effects are not disabling and are transient and reversible upon cessation of exposure.
- *AEGL-2:* the airborne concentration (expressed as ppm or mg/m^3) of a substance above which it is predicted that the general population, including susceptible individuals, could experience irreversible or other serious, long-lasting, adverse health effects or an impaired ability to escape.
- *AEGL-3:* the airborne concentration (expressed as ppm or mg/m^3) of a substance above which it is predicted that the general population, including susceptible individuals, could experience life-threatening adverse health effects or death.

Emergency Response Planning Guidelines (ERPGs) are defined as follows:

- *ERPG-1*: the maximum concentration in air below which it is believed nearly all individuals could be exposed for up to one hour without experiencing other than mild transient adverse health effects or perceiving a clearly defined objectionable odor.
- *ERPG-2*: the maximum concentration in air below which it is believed nearly all individuals could be exposed for up to one hour without experiencing or developing irreversible or other serious health effects or symptoms that could impair their abilities to take protective action.
- *ERPG-3*: the maximum concentration in air below which it is believed nearly all individuals could be exposed for up to one hour without experiencing or developing life-threatening health effects.

Temporary Emergency Exposure Limits (TEELs) are defined as follows:

- *TEEL-0*: the threshold concentration below which most people will experience no adverse health effects.
- *TEEL-1:* the airborne concentration (expressed as ppm or mg/m^3) of a substance above which it is predicted that the general population, including susceptible individuals, could experience notable discomfort, irritation, or certain asymptomatic, nonsensory effects. However, these effects are not disabling and are transient and reversible upon cessation of exposure.
- *TEEL-2:* the airborne concentration (expressed as ppm or mg/m^3) of a substance above which it is predicted that the general population, including susceptible individuals, could experience irreversible or other serious, long-lasting, adverse health effects or an impaired ability to escape.
- *TEEL-3:* the airborne concentration (expressed as ppm or mg/m^3) of a substance above which it is predicted that

the general population, including susceptible individuals, could experience life-threatening adverse health effects or death.

- TEELs are intended for use until AEGLs or ERPGs are adopted for chemicals.
- There are three levels of PAC value (1 to 3) where each successive value is associated with an increasingly severe effect from a higher level of exposure. Each level is defined as follows:
  PAC-1: Mild, transient health effects.
  PAC-2: Irreversible or other serious health effects that could impair the ability to take protective action.
  PAC-3: Life-threatening health effects.

Additional information on PAC values values, and links to other sources of information, can be found on the webpage for the *Subcommittee for Consequence Assessment and Protective Action (SCAPA)*: http://orise.orau.gov/emi/scapa/teels.htm.

The German MAK (DFG MAK values are conceived and applied as 8-hour time-weighted average (TWA) values[3].

Determination in Air: The citations to analytical methods are drawn from various sources, such as the *NIOSH Manual of Analytical Methods*[18]. In addition, methods have been cited in the latest U.S. Department of Health and Human Services publications including the *"NIOSH Pocket Guide to Chemical Hazards"* August, 2006

Permissible Concentrations in Water: The permissible concentrations in water are drawn from various sources, including: The National Academy of Sciences/National Research Council, Safe Drinking Water Committee Board on Toxicology and Environmental Health Hazards, *Drinking Water and Health*, 1980[16]. The priority toxic pollutant criteria published by U.S. EPA 1980[6]. The multimedia environmental goals for environmental assessment study conducted by EPA[32]. Values are cited from this source when not available from other sources. The U.S. EPA has come forth with a variety of allowable concentration levels: For allowable concentrations in "California List" wastes[38]. The California List consists of liquid hazardous wastes containing certain metals, free cyanides, polychlorinated biphenyls (PCBs), corrosives with a pH of less than or equal to 2.0, and liquid and nonliquid hazardous wastes containing halogenated organic compounds (HOCs). For regulatory levels in leachates from landfills[37]. For concentrations of various materials in effluents from the organic chemicals and plastics and synthetic fiber industries[51]. For contaminants in drinking water[36]. For National Primary and Secondary Drinking Water Regulations[62]. In the form of health advisories for 16 pesticides,[47] 25 organics,[48] and 7 inorganics[49]. For primary drinking water standards starting with a priority list of 8 Volatile Organic Chemicals[40]. State drinking water standards and guidelines[61] as assembled by the U.S. EPA.

Determination in Water: The sources of information in this field have been primarily U.S. EPA publications including the test procedures for priority pollutant analysis[25] and later modifications[42]. Octanol/water partition information is from various sources and it is controversial from the standpoint of reliability.

The octanol/water partition coefficient (commonly denoted K_{ow}) is a dimensionless concentration ratio (measurement) of the water-repulsing property of an organic compound. The higher the repulsion of a compound, the less soluble it is. The K_{ow} is used to estimated a substance's potential to harm the environment. Generally speaking, higher values have a greater chance of causing harm to the environment and accumulating in living tissue, especially values of 3.0 or higher. The U.S. EPA (2009) defines it as "A coefficient representing the ratio of the solubility of a compound in octanol (a non-polar solvent) to its solubility in water (a polar solvent). The higher to K_{OW}, the more non-polar the compound. Log K_{OW} is generally used as a relative indicator of the tendency of an organic compound to adsorb to soil. Log K_{OW} values are generally inversely related to aqueous solubility and directly proportional to molecular weight."

Routes of Entry: The toxicologically important routes of entry of each substance are listed. In other words, the way in which the people or experimental animals were exposed to the chemical is listed, e.g. eye contact, skin (or dermal) contact, inhalation, ingestion. Many of these are taken from the *NIOSH Pocket Guide*[2], and the NLM's *Hazardous Substance Data Bank*, but are drawn from other sources as well.

Harmful Effects and Symptoms: These are primarily drawn from NIOSH, EPA publications, data and state fact sheets and are supplemented by information from the draft criteria documents for priority toxic pollutants[26] and from other sources. The other sources include: EPA Chemical Hazard Information Profiles (CHIPS) cited under individual entries, NIOSH Information Profiles cited under individual entries, EPA Health and Environmental Effect Profiles cited under individual entries. Particular attention has been paid to cancer as a "harmful effect" and special effort has been expended to include current data on carcinogenicity. See also "Regulatory Authority and Advisory Bodies" section. See above.

Short Term Exposure: This section contains warnings and symptoms of exposure occurring over a short period of time, depending on route(s) of exposure: skin or eye contact, inhalation, or ingestion. This term is not to be confused with "Short-term Exposure Limit," which is a recommended exposure limit suggested by ACGIH and others and is defined as "maximum concentration to which workers can be exposed for a short period of time (15 minutes) for only four times throughout the day with at least one hour between exposures." This information can be found, if available, in the section entitled "Permissible Exposure Limits in Air." Also included under this heading is the LD_{50} for animals in mg/kg. The term LD50 (LD_{50}) signifies that about 50% of the animals given the specified dose will die. In most cases, the LD_{50} is for rat (or rabbit in fewer cases), administered orally and to the skin. Dangers extend fro Category I (most dangerous) to Category IV. See below:

Toxicity Categories				
Study	**Category I or 1**	**Category II or 2**	**Category III or 3**	**Category IV or 4**
Acute Oral	Up to & including 50 mg/kg	>50 thru 500 mg/kg	>500 thru 5000 mg/kg	>5000 mg/kg
Acute Dermal	Up to & including 200 mg/kg	>200 thru 2000 mg/kg	>2000 thru 5000 mg/kg	>5000 mg/kg

Source: 40 CFR156.64 (February 12, 2002)

Long Term Exposure: Where there is evidence that the chemical can cause cancer, mutagenic effects, teratogenic effects, or a delayed injury to vital organs such as the liver or kidney, a description of the effect is given.

Points of Attack: This category is based, in part, on the "Target Organs" in the *NIOSH Pocket Guide*[2] but the title has been changed as many of the points of attack are not organs (blood, for example). This is human data unless otherwise noted.

Medical Surveillance: This information is often drawn from various sources, including NIOSH publications[27], databases, and fact sheets, including *New Jersey State Fact Sheets*[70] on individual chemicals. Some time the information comes from a number of sources including databases and manufacturer's MSDSs. Where additional information is desired in areas of diagnosis, treatment and medical control, the reader is referred to a private publication[28] which is adapted from the products of the *NIOSH Standards Completion Program*.

First Aid: Guides and guidance to first aid found in this work should *NOT* be construed as authorization to emergency personnel to perform the procedures or activities indicated or implied. Care of persons exposed to toxic chemicals must be directed by a physician or other recognized professional or authority. Simple first aid procedures are listed for response to eye contact, skin contact, inhalation, and ingestion of the toxic substance as drawn to a large extent from the *NIOSH Pocket Guide*[2] but supplemented by information from recent commercially available volumes in the U.S.,[29] in the U.K., and in Japan[24] as well as from various state fact sheets and the *Emergency Response Guide* (ERG). They deal with exposure to the vapor (gas), liquid, or solid and include inhalation, ingestion (swallowing) and contact with eyes or skin. The instruction "Do NOT induce vomiting" is given if an unusual hazard is associated with the chemical being sucked into the lungs (aspiration) while the patient is vomiting. "*Seek medical attention*" or "*Call a doctor*" is recommended in those cases where only competent medical personnel can treat the injury properly. In all cases of human exposure, seek medical assistance as soon as possible. In many cases, medical advice has been included for guidance only.

Personal Protective Methods: This information is drawn heavily from NIOSH publications[2][77] and supplemented by information from the U.S.,[29] the U.K. and Japan[24]. There are indeed other "personal protective methods" which space limitations prohibit describing here in full. One of these involves limiting the quantities of carcinogens to which a worker is exposed in the laboratory. The items listed are those recommended by (a) NIOSH and/or OSHA, (b) manufacturers, either in technical bulletins or in material safety data sheets (MSDS), (c) the Chemical Manufacturers Association (CMA), or (d) the National Safety Council (NSC), for use by personnel while responding to fire or accidental discharge of the chemical. They are intended to protect the lungs, eyes, and skin.

Respirator Selection: The 2nd edition, like its predecessors, presents respirator selection with a full text description where available. For each line a maximum use concentration (in ppm, mg/m^3, μg/m^3, fibers/m^3, or mppcf), condition (e.g., escape) followed by the NIOSH code and full text related to respirator recommendations. All recommended respirators of a given class can be utilized at any concentration equal to or less than the class's listed maximum use concentration. Respirator selection should follow recommendations that provide the greatest degree of protection. Respirator codes found in the *NIOSH Pocket Guide* have been included to ease updating.

All respirators selected must be approved by NIOSH under the provisions of 42CFR84, 29CFR1910.134, or European Standard EN149. The current listing of NIOSH/MSHA certified respirators can be found in the *NIOSH Certified Equipment List*, which is available on www.cdc.gov/niosh/npptl/topics/respirators/cel. For firefighting, only self-contained breathing apparatuses with full facepieces operated in pressure-demand or other positive-pressure modes are recommended for all chemicals in the *NIOSH Pocket Guide*. In the case of pesticides that might be used as weapons of mass destruction, use only SCBA respirators certified by NIOSH for CBRN environments. CBRN stands for "Chemical, Biological, Radiological, and Nuclear."

Pesticides are not identified as such in the respirator selection tables. For those substances that are pesticides, the recommended air-purifying respirator must be specifically approved by NIOSH/MSHA. Specific information on choosing the appropriate respirator will be provided on pesticide labels. Approved respirators will carry a "TC" number prefix, which signifies they have been tested and certified for a specific level of protection. New respirators may carry a "TC-84A" prefix in compliance with 42 CFR 84 for testing and certifying non-powered, air-purifying, particulate-filter respirators. The new Part 84 respirators have passed a more demanding certification test than the old respirators (e.g., dust and mist [DM], dust, fume and mist [DFM], spray paint, pesticide, etc.) certified under 30 CFR 11.

Additionally, a complete respirator protection program should be implemented including all requirements in

29CFR1910.134 and 42CFR84. At a minimum, a respirator protection program should include regular training, fit-testing, periodic environmental monitoring, maintenance inspection, and cleaning. The selection of the actual respirator to be used within the classes of recommended respirators depends on the particular use situation, and should only be made by a knowledgeable person. Remember, air-purifying respirators will not protect from oxygen-deficient atmospheres. For firefighting, only self-contained breathing apparatuses with full facepieces operated in pressure-demand or other positive-pressure modes are recommended for all chemicals in the *NIOSH Pocket Guide*.

Storage: The 2nd edition now provides, as general guidance, a color-coded classification system similar to those often found in commerce and laboratories. It is the objective of any chemical storage classification system to prevent accidental combination of two (2) or more incompatible materials or conditions that might be stored or occur in the same space. To prevent an unwanted and possibly dangerous reaction, chemicals must be separated by space and/or physical barriers. Chemical storage areas should be appropriately labeled. Users must be careful to check the MSDS for both additional and specific information. Some chemical entries contain multiple storage codes because the chemical profile may fit more than a single category. This section is merely a guide and cannot replace the judgement of qualified personnel.

Code	**Hazard**
Red	Flammables (Flash point <100 °F)
Blue	Health Hazards/Toxics/Poisons
Yellow	Reactives/Oxidizers
White	Contact Hazards
Green*	General Storage

*Note**: For General Storage, the colors Gray and Orange may also be used by some facilities companies.

- Chemical containers that are not color-coded should contain hazard information on the label. Check the MSDS to learn what personal protective equipment is required when using the substance.
- *Red*: Flammability Hazard: Store in a flammable (liquid or materials) storage area or approved cabinet away from ignition sources and corrosive and reactive materials.
- Blue: Health Hazard/Toxics/Poisons: Store in a secure poison location.
- Yellow: Reactive Hazard; Store in a location separate from other materials, especially flammables and combustibles.
- White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location.
- Green (or Gray or Orange): General storage may be used. Generally, for flammability, health, and corrosivity with an NFPA rating of no higher than “2."
- Chemicals with labels that are colored and diagonally striped may react with other chemicals in the same hazard class. See MSDS for more information.
- Red Stripe: Flammability Hazard: Store separately from all other flammable materials. *Example:* sodium metal.
- Yellow Stripe: Reactivity Hazard; Store separately in a area isolated from flammables, combustibles, or other yellow coded materials. *Example*: reducing agents.
- White stripe: Contact Hazard; not compatible with materials in solid white category. Store separately. *Exampl*e: Bases.

Other data in this field are drawn from, or based on, various resources, including the NFPA,[17] from Japanese sources[24] and from publications such as the *Hazardous Substance Fact Sheets* published by the New Jersey Department of Health and Senior Services[70].

Shipping: The shipping guidance offered herein does not replace the training requirements of the Department of Transportation and in no way guarantees that you will be in full compliance with the Department of Transportation Regulations. *Labeling*: This section refers to the type label or placard required by regulation on any container or packaging of the subject compound being shipped. In some cases a material may require more than one hazardous materials label. *Quantity limitation:* This section lists quantities of material that may be shipped on passenger aircraft, rail, and cargo aircraft. Materials in certain hazard classes may be shipped under the small-quantities exception (see ***49 CFR 173.4***) with specific approval from the Associate Administrator for Hazardous Materials Safety, Department of Transportation. *Hazard class or division:* This number refers to the division number or hazard class that must appear on shipping papers. This information is drawn from DOT publications[19] as well as U.N. publications[20] and also NFPA publications[17], FEMA[78], CHRIS[86], HSDB[83]. The U.S. Department of Transportation[19] has published listings of chemical substances which give a hazard classification and required labels. The U.S. DOT listing now corresponds with the U.N. listing[20] and specifies first a hazard class of chemicals as defined in the following table, and then a packing group (I, II or III) within each of the classes. Where shown the packing group is for the active ingredient and not the formulation, especially those containing dangerous and flammable carriers and/or organic chemicals such as acetone, kerosene, naphthas, etc.

Spill Handling: Spill or leak information provided is intended to be used only as a guide. The term *Issue warning* is used when the chemical is a poison, has a high flammability, is a water contaminant, is an air contaminant (so as to be hazardous to life), is an oxidizing material, or is corrosive. *Restrict access* is used for those chemicals that are unusually and immediately hazardous to personnel unless they are protected properly by appropriate protective clothing, eye protection, and respiratory protection equipment, etc. *Evacuate area* is used primarily for unusually poisonous chemicals or those that ignite easily. *Mechanical containment* is used for water-insoluble chemicals that float and do not evaporate readily. *Should be removed* is used for chemicals that cannot be allowed to disperse because of potentially harmful effects on humans or on the ecological system in general. The term is not used unless there is a reasonable chance of preventing dispersal, after a discharge or leak, by chemical and physical treatment. *Chemical and physical treatment* is recommended for chemicals that can be removed by skimming, pumping, dredging, burning, neutralization, absorption, coagulation, or precipitation. The corrective response may also include the use of dispersing agents, sinking agents, and biological treatment. *Disperse and flush* is used for chemicals that can be made non-hazardous to humans by simple dilution with water. In a few cases the response is indicated even when the compound reacts with water because, when proper care is taken, dilution is still the most effective way of removing the primary hazard. This material safety data sheet information is drawn from a variety of sources including New Jersey Department of Health and Senior Services *Hazardous Substance Fact Sheets*[70] and EPA *Profiles on Extremely Hazardous Substances*[82].

Fire Extinguishing: Fire information provided is intended to be used only as a guide. Certain extinguishing agents should not to be used because the listed agents react with the chemical and have the potential to create an additional hazard. Many chemicals decompose or burn to give off toxic and irritating gases. Such gases may also be given off by chemicals that vaporize in the heat of a fire without either decomposing or burning. If no entry appears, the combustion products are thought to be similar to those formed by the burning of oil, gasoline, or alcohol; they include carbon monoxide (poisonous), carbon dioxide, and water vapor. Specific combustion products are usually not well known over the wide variety of conditions existing in fires; some may be hazardous. This information is drawn from NFPA publications[17], FEMA[78], CHRIS[86], HSDB[83], and other sources. The formation of flammable vapor clouds or dense smoke, the possibility of polymerization, and explosions is stated in this section and/or the incompatibility section.

Disposal Method Suggested: The disposal methods for various chemical substances have been drawn from various sources, including government documents[22][79].

References: The general bibliography for this volume follows the pesticide monographs. It includes both general reference sources and references dealing with analytical methods. The references at the end of individual chemical records are generally restricted to references dealing only with that particular compound; and references which, in turn, contain bibliographies giving references to the original literature.

Key to Abbreviations, Symbols, and Acronyms

Key to Abbreviations, Symbols, and Acronyms

α-	Greek letter alpha; used as a prefix to denote the carbon atom in a straight chain compound to which the principal group is attached.
as-	Prefix for asymmetric
ACGIH	American Conference of Governmental Industrial Hygienists
ANSI	American National Standards Institute
approx.	Approximately
ASTDR	Agency for Toxic Substances and Disease Registry
asym-	Prefix for asymmetric
@	at
atm.	Atmosphere
β	Greek letter beta
BP	Boiling point
C	Centigrade
[C]	Canceled (use registration)
CAA	Clean Air Act
CAAA	Clean Air Act Amendments of 1990
carc.	Carcinogen
CAS	Chemical Abstract Service
cc	Closed cup; cubic centimeter
CEPA	Canadian Environmental Protection Act
CERCLA	Comprehensive Environmental Response, Compensation, And Liability Act
CFR	Code of Federal Regulations
CHCL	Chronic Human Carcinogen Level
CHEMTREC	Chemical Manufacturers Association (CMA) Transportation Emergency Center
cis-	(Latin, on this side). Indicating one of two geometrical isomers in which certain atoms or groups are on the same side of a plane.
comp.	Compound
CWA	Clean Water Act
cyclo-	(Greek, circle). Cyclic, ring structure; as cyclohexane
Δ *or* δ	Greek letter delta
deriv.	Derivative
DFG	Deutsche Forschungsgemeinschaft
DOT	U.S. Department of Transportation
DOT ID	U.S. Department of Transportation Identification Numbers
Ed.	Editor(s)
EEC	European Economic Community
EHS	Extremely Hazardous Substances
EINECS	European Inventory of Existing Commercial Substances
EPA	U.S. Environmental Protection Agency
EPCRA	Emergency Planning and Community Right-to-Know Act
EXTOXNET	Extension Toxicology Network
F	Fahrenheit
FDA	U.S. Food and Drug Administration
FEMA	Federal Emergency Management Agency
FIFRA	Federal Insecticide, Fungicide, and Rodenticide Act
FR	Federal Register
GUP	General Use Pesticide
h	Hour(s)
HAPs	Hazardous Air Pollutants (CAA)
HCFC	Hydrochlorofluorocarbons
HCS	Hazard Communication Standard
HOC	Halogenated Organic Compounds
HSE	Health and Safety Executive (United Kingdom)
IARC	International Agency for Research on Cancer
ICSC	International Chemical Safety Cards
IDLH	Immediately Dangerous to Life or Health
IPCS	International Programme on Chemical Safety
iso-	(Greek, equal, alike). Usually denoting an isomer of a compound.
kg	Weight in kilograms (one thousand grams)
L or l	Liter(s)
lb	Weight in pound(s)
LEL	Lower explosive (flammable) limit in air, % by volume at room temperature or other temperature as noted
LEPC	Local Emergency Planning Committees
m-	An abbreviation for "*meta-*," a prefix used to distinguish between isomers or nearly related compounds
m^3	Cubic meter
MACT	Maximum Achievable Control Technology (CAA)
MAK	Airborne exposure limit used by the Deutsche Forschungsgemeinschaft (DFG)
MATC	Maximum Acceptable Toxicant Concentration
MCLs	Maximum Contaminant Levels (SDWA)
MCLGs	Maximum Contaminant Level Goals (SDWA)
m^3	Cubic meter
mg	Milligram
μ	Micro

µg	Microgram(s)
min	Time in minute(s)
mppcf	Million particles per cubic foot
MSDS	Material Safety Data Sheets
mbyp	Meat byproducts
n-	Abbreviation for "*normal*," referring to the arrangement of carbon atoms in a chemical molecule prefix for normal
N-	Symbol used in some chemical names, indicating that the next section of the name refers to a chemical group attached to a nitrogen atom. The bond to the nitrogen atom.
(N)	Neligible
NCEH	National Center for Environmental Health (CDC)
NCI	National Cancer Institute
NFPA	National Fire Protection Association
NIOSH	National Institute for Safety and Occupational Health
NOAEL	No-Adverse-Effect-Level
n.o.s.	Not otherwise specified
NPRI	National Pollutant Release Inventory (Canada)
NTP	National Toxicology Program (U.S.)
o-	Abbreviation for *ortho* -, a prefix used to distinguish between isomers or nearly related compounds.
o.c. or oc	Open cup
OPP	Office of Pesticides Programs (USEPA)
OSHA	Occupational Safety and Health Administration
Oxy	Oxidizer or oxidizing agent
p-	Abbreviation for for *para-*, a prefix used to distinguish between isomers or nearly related compounds.
PEL	Permissible Exposure Limit (OSHA)
post-h	Post harvest
pot. carc	Potential carcinogen
PPOTW	Publicly Owned Treatments Works
PP	Polypropylene
ppb	Parts per billion
PPE	Personal Protective Equipment
ppm	Parts per million
PQL	Practical Quantitation Limit (RCRA)
prim-	Prefix for primary
®	Symbol for a registered trademark or proprietary product
RED	Reregistration Eligibility Decision (EPA)
REL	Recommended Exposure Limits (NIOSH)
RQ	Reportable Quantity
RTECS®	Registry of Toxic Effects of Chemical Substances
RTK	Right-to -Know
RUP	Regulated Use Pesticide
SARA	Superfund Amendments and Reauthorization Act
SCBA	Self-contained breathing apparatus
SDWA	Safe Drinking Water Act
sec-	Prefix for secondary
SERC	State emergency response commissions
SMCL	Secondary Maximum Contaminant Levels (SDWA)
soln.	Solution
STEL	Short-Term Exposure Limit
sus. carc.	Suspected Carcinogen
sym-	Abbreviation for "*symmetrical*," referring to a particular arrangement of elements within a chemical molecule
t-	Prefix for tertiary
TRK	Technical Guiding Concentrations (DFG) for workplace control of carcinogens.
temp.	Temperature
tert-	Abbreviation for "*tertiary*," referring to a particular arrangement of elements within a chemical molecule
TLV®	Threshold Limit Value (ACGIH)
™	Symbol for trademark
TQ	Threshold Quantity
trans-	(Latin, across). Indicating one of two geometrical isomers in which certain atoms or groups are on opposite sides of a plane.
TRI	Toxics Release Inventory
TSCA	Toxic Substances Control Act
TWA	Time-Weighted Average
UEL	Upper explosive (flammable) limit in air, % by volume at room temperature or other temperature as noted
unsym-	Prefix for "*asymmetric*."
USDA	U.S. Department of Agriculture
USPHS	U.S. Public Health Service
VOCs	Volatile Organic Compounds
WHO	World Health Organization
>	Symbol for "greater than"
<	Symbol for "less than"
°	Degrees of temperature
%	Percent
§	Symbol for "section." Used in regulatory matters.
(S!)	Symbol for "Suspected."
(?)	Symbol for "Questionable."

A

Abamectin A:0010

Use Type: Acaricide, Miticide, Insecticide, Anthelmentic
CAS Number: 71751-41-2; 65195-55-3 (B_{1a}); 65195-56-4 (B_{1b}); 15555-91-8 (benzoate)
Formula: $C_{95}H_{142}O_{28}$; $C_{48}H_{72}O_{14}$ (B_{1a}); $C_{47}H_{70}O_{14}$ (B_{1b})
Synonyms: Avermectin; Avermectin B_{1a}; Avermectin B_{1a}+Avermectin B_{1b} mixture (80/20%)
Trade Names: ABACIDE®; AFFIRM®; AVID®, AVID-EC®; AVOMEC®; DYNAMEC®; INJECT-A-CIDE AV®; MK 936®(B_{1A}); BOVITIN®; DORATECT®; DUOMECTIN®; DUOTIN®; ENDECTO®; ENZEC®; L 676,863® (B_{1A}); MK 0936®; MK 936®; PARAFOIL®; VERTIMEC®, VERTIMIL®; VIVID®; ZECTIN®; ZEPHEYR®; ZEPHYR®
Chemical Class: Avermectins; Macrocyclic lactone
EPA/OPP PC Code: 122804
California DPR Chemical Code: 2254
HSDB Number: 6941
UN/NA&ERG Number: UN2811 (solid)/154
RTECS® Number: CL1203000
EC Number: [*Annex I Index No.* 606-143-00-0]
Uses: Used on fruit, vegetable and ornamental crops; pears, citrus fruits, and nut crops; to control mite and insect pests, and also to control household and lawn insects, including fire ants. Approved by the EPA for use in ash trees for control of emerald ash borer. A U.S. EPA restricted Use Pesticide (RUP).
Human toxicity (long-term)[101]: High–2.80 ppb, Health Advisory.
Fish toxicity (threshold)[101]: Extra High–0.00570 ppb, MATC (Maximum Acceptable Toxicant Concentration).
Correction and removal of text
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans
California Proposition 65 Chemical: Developmental toxin (12/3/2010)
Health Advisory: Nerve toxin (S!), Endocrine disruptor (S!)
Acute Oral Category: 1, DANGER-Poison. According to the EPA, most "formulated" products containing abamectin as an ingredient are of low toxicity to mammals.
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: T+, N; risk phrases: R26/28; R48/23/25; R50/53; R63; safety phrases: S2; S28; S36/37; S45; S60; S61.
Description: Abamectin is an off-white to yellow crystalline solid from methanol. A mixture of 80% B_{1a} and 20% B_{1b}. Odorless. Molecular weight = 887.11; Specific gravity (H_2O:1) = 1.158 @ 21 °C; Freezing/Melting point = 150–155 °C. Vapor pressure = negligible, 1.5×10^{-9} mmHg; Flash point = 135–150 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3; Flammability 1; Reactivity 0. Practically insoluble in water; solubility = 3.5×10^{-4} g/100 mL.
Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution. Highly toxic to aquatic organisms.
Routes of Entry: Inhalation, ingestion, dermal contact.
Harmful Effects and Symptoms
Short Term Exposure: Technical product: Contact with eyes or skin may cause irritation and/or injury. May be absorbed through the skin. Very toxic when swallowed: doses of 100 mg/kg or more may be fatal to humans. Inhalation should be avoided. Stimulates the release of γ-aminobutyric acid, an inhibitory neurotransmitter, resulting in paralysis. Very high doses may cause respiratory failure with possible death. LD_{50} (oral, rat) = 11 mg/kg.; LD_{50} (dermal, rat) = >330 mg/kg.
Long Term Exposure: Possible Reproductive Toxin. May be a neurotoxin[83]. Possible damage to the central nervous system.
Points of Attack: Skin, eyes, central nervous system, brain.
Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks;

Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

Respirator Selection: Reacts with the following absorbent materials: Cellulose-Based; Dirt/Earth[88]. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison (Toxic): Store in a secure, locked and cool, ventilated area. Prior to working with this chemical you should be trained on its proper handling and storage. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of "Toxic, solids, organic, n.o.s." It usually falls in Hazard Class 6.1(a). Technical name required.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the event of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Prior to implementing land disposal of waste residue (including waste sludge), consult with environmental regulatory agencies for guidance on acceptable disposal practices[83]. Abamectins are rapidly broken down in pond water from 4 days to 4 weeks in pond sediment. Abamectin breaks down in soil by the process of photo degradation. The process may take from 1 week to 2 months depending on its location, on the surface or under it.

Acephate A:0080

Use Type: Insecticide

CAS Number: 30560-19-1

Formula: $C_4H_{10}NO_3PS$

Synonyms: Acetylphosphoramidothoic acid, *O,S*-dimethyl ester; ENT-27822; *O,S*-Dimethyl acetylphos-phoramidothioate; *O,S*-Dimethyl acetic phosphoramidothioate, *N*-[Methoxy (methylthio)phosphinoyl] acetamide; Phosphoramidothoic acid, *N*-acetyl-,*O,S*,-dimethyl ester

Trade Names: ACECAP SYSTEMIC INSECTICIDE IMPLANTS®; ACEFAL 75 PS®; ACEHERO®; ACEPHATE 97 EG®; ACEPHATE 75SP®; ACEPHATE PCO SP INSECTICIDE®; ACESUL®; ACE-TOX®; ACHERO®; ACIFAT®; ADDRESS®; AIMTHENE®; AMCOTHENE®; ASATAF®; ASIFY®; ATTACK®; CHEVRON RE 12420®; CLEAN CROP ACEPHATE 80 DF SEED PROTECTORANT®; DREXEL ACEPHATE 75 WSP®; DREXEL ACEPHATE PCO SP INSECTICIDE®; FATEL®; FORPHATE®, FORWARD®; KITRON®; KORANDA® (acephate+fenvelerate); LANCER®; ORCEPHATE®; ORTHENE®; ORTHENE 755®;

ORTHO 12420®; ORTRAN®; ORTRIL®; PACE®; PAYLOAD®; PILARTHENE®; PINPOINT®; PRECISE ACEPHATE®; RACET®; RE 12420®; SAPHATE®; 75 SP®; VALENT ORTHENE TECHNICAL®; VEGFRU TARGET®

Chemical Class: Organophosphate

EPA/OPP PC Code: 103301

California DPR Chemical Code: 1685

HSDB Number: 6549

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TB4760000

EC Number: 250-241-2 [*Annex I Index No.:* 015-079-00-7]

Uses: Acephate is a general use contact and systemic insecticide. Not approved for use in EU countries[115]. Actively registered in the U.S., homeowner use for lawns is discontinued except for treatment of fire ant mounds. Other indoor treatment has been discontinued. Used on green and lima beans, Brussels sprouts, cauliflower, celery, cotton, cottonseed, cranberries, head lettuce, macadamia nuts, peanuts, bell- and non-bell peppers, peppermint, spearmint, tobacco, and soybeans (Special Local Need Registration required in Mississippi and Texas only). Also used to control cockroach (spot treatment only) in residential and industrial buildings and insect control in forests, and on ornamental plants and to target armyworms, aphids, beetles, bollworms, borers, budworms, cankerworms, crickets, cutworms, fire ants, fleas, grasshoppers, leafhoppers, loopers, mealybugs, mites, moths, roaches, spiders, thirps, wasps, weevils, whiteflies, etc.

U.S. Maximum Allowable Residue Levels for Acephate and its cholinesterase-inhibiting metabolite O,S-dimethyl phosphoramidothioate in or on raw agricultural commodities as follows: [40 CFR 180.108(a)]: bean (succulent and dry form, of which not >1 ppm is *o,s*-dimethyl phosphoramidothioate) 3 ppm; brussels sprouts (of which not >0.5 ppm is *o,s*-dimethyl phosphoramidothioate) 3.0 ppm; cattle, fat 0.1 ppm; cattle, meat byproducts 0.1 ppm; cattle, meat 0.1 ppm; cauliflower (of which not >0.5 ppm is *o,s*-dimethyl phosphoramidothioate) 2.0 ppm; celery (of which not >1 ppm is *o,s*-dimethyl phosphoramidothioate) 10 ppm; cotton, undelinted seed 2 ppm; cotton, hulls 4 ppm; cotton, meal 8 ppm; cranberry (of which not >0.1 ppm is *o,s*-dimethyl phosphoramidothioate) 0.5 ppm; egg 0.1 ppm; goat, fat 0.1 ppm; goat, meat byproducts 0.1 ppm; goat, meat 0.1 ppm; hog, fat 0.1 ppm; hog, meat byproducts 0.1 ppm; hog, meat 0.1 ppm; horse, fat 0.1 ppm; horse, meat byproducts 0.1 ppm; horse, meat 0.1 ppm; lettuce, head (of which not >1 ppm is *o,s*-dimethyl phosphoramidothioate) 10 ppm; milk 0.1 ppm; mint hay (of which not >1 ppm is *o,s*-dimethyl phosphoramidothioate) 15.0 ppm; peanut 0.2 ppm; pepper (of which not >1 ppm is *o,s*-dimethyl phosphoramidothioate) 4.0 ppm; poultry, fat 0.1 ppm; poultry, meat byproducts 0.1 ppm; poultry, meat 0.1 ppm; sheep, fat 0.1 ppm; sheep, meat byproducts 0.1 ppm; sheep, meat 0.1 ppm; soybean, meal 4 ppm; soybean 1 ppm. ***[40 CFR 180.108(a)(2)]:*** in or on all food items (other than those already covered by a higher tolerance as a result of use on growing crops) in food handling establishments. The acephate may be present as a residue from applications of acephate in food handling establishments, including food service, manufacturing and processing establishments, such as restaurants, cafeterias, supermarkets, bakeries, breweries, dairies, meat slaughtering and packing plants, and canneries. ***[40 CFR 180.108(c)]:*** nut, macadamia 0.05 ppm.

Human toxicity (long-term)[101]: High–2.80 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–2725.54621 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Acute Oral Category: 3, CAUTION

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin

Potential Ground water Pollutant [California FAC Section 13145(d)/12811, active]

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates.

European/International Regulations: Hazard Symbol: Xn; risk phrases: R22; safety phrases: S2; S36 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters.

Description: Colorless crystalline solid (80% or more pure) or white powder (technical). Has an odor of rotten cabbage or mercaptans (like sulfur). Molecular weight = 183.17; Specific gravity (H_2O:1) = 1.347 @ 20 °C; Freezing/Melting point = 92-93 °C; 82–89 °C (technical grade 80 to 90% purity); Vapor pressure = 1.7×10^{-6} mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Soluble in water; solubility = 800 mg/kg @20 °C.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Acephate emits toxic oxides of phosphorus, nitrogen, and sulfur when heated to decomposition. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV(18), Method #5600, Organophosphorus pesticides.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, dermal contact, passes through the skin

Harmful Effects and Symptoms

Acephate can cause cholinesterase inhibition in humans–it can overstimulate the nervous system-causing nausea, dizziness, confusion, and, at very high exposures (e.g., accidents or major spills), respiratory paralysis and death[118].

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. Contact may cause burns to skin and eyes. Eye pupils appear small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. Delayed pulmonary edema may occur after inhalation. LD_{50} = (rat, oral) 1.4 g/kg[9]; LD_{50} (dermal, rat) = >2.5 g/kg[83].

Long Term Exposure: May cause cancer. Cholinesterase inhibitor; cumulative effect is possible. A neurotoxin. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause skin sensitization; reproductive effects. A neurotoxin. May cause reproductive and fetal effects.

Points of Attack: Skin, respiratory system, central nervous system, cardiovascular system, blood cholinesterase. Reproductive cells.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this pesticide, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid require a “poisonous materials” label. This chemical falls in Hazard Class 6.1.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. Combustible material: may burn but does not ignite readily. Containers may explode when heated. Runoff may pollute waterways. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Highly toxic, may be fatal if inhaled, swallowed or absorbed through skin. Contact with molten substance may cause severe burns to skin and eyes. Avoid any skin contact. Effects of contact or inhalation may be delayed. Runoff from fire control or dilution water may be corrosive and/or toxic and cause pollution. *Small fire*: dry chemical, carbon dioxide or water spray. *Large fire*: dry chemical, carbon dioxide, or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads*: fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the event of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Alkaline hydrolysis or incineration. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Acetamiprid A:0145

Use Type: Insecticide
CAS Number: 135410-20-7
Formula: $C_{10}H_{11}ClN_4$
Synonyms: (1E)-*N*-[(6-chloro-3-pyridinyl)methyl]-*N*'-cyano-*N*-methylethanimidamide; *N*-cyano-*N*'-(2-chloro-5-pyridylmethyl)-*N*'-methylacetamidine; (1E)-*N*-[(6-chloro-3-pyridinyl)methyl]-*N*'-cyano-*N*-methylacetamidine; Ethanimidamide, *N*-((6-chloro-3-pyridinyl)methyl)-*N*'-cyano-*N*-methyl-,(E)-
Chemical Class: Neonicotinoid
EPA/OPP PC Code: 099050
California DPR Chemical Code: 5762
HSDB Number: 7274
UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151
RTECS® Number: KJ4235200
EC Number: [*Annex I Index No.:* 608-032-00-2]
Uses: This class of pesticides are chemically related to nicotine and used on corn and soybean seeds and are used to control sucking and chewing insects, and soil insects including aphids, beetles, fruit moth, leaf-hoppers and -miners, thrips, whiteflies[83]. Also used to control fleas on domestic animals.

U.S. Maximum Allowable Residue Levels for residues of the insecticide Acetamiprid [40 CFR 180.578(a)(1)]: in or on the following commodities: canola, seed 0.010 ppm; citrus, dried pulp 1.20 ppm; cotton, gin byproducts 20.0 ppm; cotton, undelinted seed 0.60 ppm; fruit, citrus group 0.50 ppm; fruit, pome group 1.0 ppm; grape 0.20 ppm; mustard, seed 0.010 ppm; tomato, paste 0.40 ppm; vegetable, brassica, leafy, group 5, 1.20 ppm; vegetable, fruiting, group 8, 0.20 ppm; and vegetable, leafy, except brassica, group 4, 3.00 ppm. ***Tolerances are established for the combined residues of the insecticide acetamiprid N1-[(6-chloro-3-pyridyl)methyl]-N2-cyano-N1-methylacetamidine and N1-[(6-chloro-3-pyridyl)methyl]-N2-cyano-acetamidine in [40 CFR 180.578(a)(2)]:*** or on the following commodities: cattle, fat 0.10 ppm; cattle, meat 0.10 ppm; cattle, meat byproducts 0.20 ppm; egg 0.010 ppm; goat, fat 0.10 ppm; goat, meat 0.10 ppm; goat, meat byproducts 0.20 ppm; hog, fat 0.10 ppm; hog, meat 0.10 ppm; hog, meat byproducts 0.20 ppm; horse, fat 0.10 ppm; horse, meat 0.10 ppm; horse, meat byproducts 0.20 ppm; milk 0.10 ppm; poultry, fat 0.010 ppm; poultry, liver 0.050 ppm; poultry, meat 0.010 ppm; sheep, fat 0.10 ppm; sheep, meat 0.10 ppm; and sheep, meat byproducts 0.20 ppm.

Human toxicity (long-term)[101]: 490 ppb, Health Advisory.
Fish toxicity (threshold)[101]: 27,153 ppb, MATC (Maximum Acceptable Toxicant Concentration).
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans.
Acute Oral Category: 3, CAUTION
Potential Ground Water Pollutant (California)
USEPA/OPP Oral reference dose (RfD) = 0.01 mg/kg/day
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R52/53; safety phrases: S2; S46; S61

Description: White crystalline solid or powder. Commercially available as an amber colored gel. Odorless. Molecular weight = 222.67; Specific gravity (H_2O:1) = 1.330 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 99–103 °C; Vapor pressure = 4.4×10^{-5} mmHg @ 25 °C (est.)[83]; Henry's Law constant = 6.9×10^{-8} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Solubility in water @ 25 °C = 3.48×10^3 mg/L @ pH5; 2.95×10^3 mg/L @ pH 7, 3.96×10^3 mg/L @ pH 9[83].

Incompatibilities: This material may be combustible; powder may form explosive mixture with air. Keep away from strong oxidizers, acids and alkaline media.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 500 ppb[14]. State Drinking Water Guidelines: Maine 497 μg.

Determination in Water: Log K_{ow} = –0.9. @ 20 °C. Negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Highly toxic. May be harmful if inhaled, ingested, or absorbed through the unbroken skin. Effects of inhalation or dermal contact may be delayed. May be fatal if inhaled. May cause irritation to the eyes. LD_{50} (oral, rat) = 146–450 mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Long Term Exposure: May cause liver and kidney problems.

Points of Attack: Liver, kidneys

Medical Surveillance: Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In the case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88].

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until cleanup is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. This chemical is combustible; it may burn but does not easily ignite. Use dry chemical powder extinguishers, water spray, foam, carbon dioxide. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. If this material cannot be disposed of according to label instructions, it may be dissolved or mixed with a combustible solvent and burned in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Noncombustible containers should be compacted and buried under more than 16 inches/40 cm of soil[83].

Acetic acid A:0160

Use Type: Herbicide, Fungicide, Microbiocide; Metabolite, Veterinary Medicine

CAS Number: 64-19-7

Formula: $C_2H_4O_2$

Synonyms: Acetic acid, glacial; Acido acetico (Spanish); Ethanoic acid; Ethylic acid; Glacial acetic acid (pure compound); Methane carboxylic acid; Mixed acid etch (5-2-2); Mixed acidetch (6-1-1); Vinegar (4–6% solution in water); Vinegar acid

Trade Names: ACETUM®; ACI-JEL®; ECOCLEAR®; NATURAL WEED SPRAY® No. One; VOSOL®

Chemical Class: Unclassified

EPA/OPP PC Code: 044001

California DPR Chemical Code: 933

HSDB Number: 40

UN/NA & ERG Number: UN2789 (glacial or >80% acid, by mass)/132; UN2790 (10–80% acid, by mass)/153

RTECS® Number: AF1225000

EC Number: 200-580-7 [*Annex I Index No.:* 607-002-00-6]

Uses: A herbicide used to control grasses, woody plants and broad-leaf weeds on hard surface and in areas where crops are not normally grown; as a veterinary medicine.

U.S. Maximum Allowable Residue Levels for Acetic acid [40 CFR 180.1001(c)]: Residues of acetic acid are exempted from the requirement of a tolerance when used as a catalyst in accordance with good agricultural practices as inert (or occasionally active) ingredients in pesticide formulations applied to growing crops or to raw agricultural commodities after harvest. ***[40 CFR 180.1001(e)]:*** Residues are exempted from the requirement of a tolerance when used as a catalyst (Limit: not more than 0.5% of pesticide formulation) in accordance with good agricultural practices as inert (or occasionally active) ingredients in pesticide formulations applied to animals.

Human toxicity (long-term)[101]: Very low–50,000 ppb, Health Advisory.

Fish toxicity (threshold)[101]: Low–510 ppb, MATC (Maximum Acceptable Toxicant Concentration).

Regulatory Authority and Advisory Information:

U.S. EPA Gene-Tox Program, Negative: Histidine reversion Ames test

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer

Acute Oral Category: 4, Caution

Clean Water Act: 40CFR116.4 Hazardous Substances; RQ 40CFR117.3 (same as CERCLA)

Superfund/EPCRA 40CFR302.4, Appendix A, Reportable Quantity (RQ): 5000 lb (2270 kg)

European/International Regulations: Hazard Symbol: C; risk phrases: R10; R35; safety phrases: S1/2; S23; S26; S45 (see Appendix 1).

WGK (German Aquatic Hazard Class): 1-Low hazard to waters.

Description: Acetic acid is a colorless liquid or crystals. Sour, vinegar-like odor. Pure compound is a solid below 17 °C. The commercial agricultural product is available as an emulsifiable concentrate; often used in an aqueous solution for spraying. Odor threshold = 0.016 ppm. Glacial acetic acid contains 99% acid. Molecular weight = 60.08; Specific gravity (H_2O:1) = 1.051@ 20 °C; Boiling point = 117.9 °C[A2]; Melting/Freezing point = 16.611 °C[88]; Electrical conductivity = 6×10^5 pS/m; Critical pressure = 57.1 atm; Heat of combustion = –3136 cal/g[A2]; Vapor pressure = 11 mmHg @ 20 °C[A2]; Flash point = 39 °C[17] (glacial); Autoignition temperature = 463 °C (glacial)[17]; 516.11 °C[88]. Explosive limits: LEL = 4.0%; UEL = 19.9%. Hazard Identification (based on NFPA-704 M Rating System): (glacial) Health 3, Flammability 2, Reactivity 0. Freely soluble in water; may produce some heat and an irritating odor.

Potential Exposure: Acetic acid is widely used as a chemical feedstock for the production of vinyl plastics, acetic anhydride, acetone, acetanilide, acetyl chloride, ethyl alcohol, ketene, methyl ethyl ketone, acetate esters, and cellulose acetates. It is also used alone in the dye, rubber, pharmaceutical, food preserving, textile, and laundry industries. It is utilized, too, in the manufacture of Paris green, white lead, tint rinse, photographic chemicals, stain removers, insecticides and plastics.

Incompatibilities: Vapor forms explosive mixture with air. Violent reaction with oxidizers, organic amines, and bases, such as hydroxides and carbonates. Incompatible with strong acids; aliphatic amines; alkanolamines, isocyanates, alkylene oxides; epichlorohydrin, acetaldehyde, 2-aminoethanol, ammonia, ammonium nitrate, chlorosulfonic acid, chromic acid; ethylene diamine, ethyleneimine, halides, peroxides, perchlorates, perchloric acid, permanganates, phosphorus isocyanate, phosphorus trichloride, potassium *tert*-butoxide, and xylene. Attacks cast iron, stainless steel, and other metals, forming flammable/explosive hydrogen gas. Will attack many forms of rubber or plastic.

Permissible Exposure Limits in Air: Conversion factor: 1 ppm = 2.46 mg/m^3 @ 25 °C & 1 atm

OSHA PEL: 10 ppm/25 mg/m^3 TWA

NIOSH REL: 10 ppm/25 mg/m^3 TWA; 15 ppm/37 mg/m^3 STEL

ACGIH TLV®[1]: 10 ppm/25 mg/m^3 TWA; 15 ppm/37 mg/m^3 ppm STEL

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: $\mathbf{5}_\mathbf{E}$ ppm
PAC-2: $\mathbf{35}_\mathbf{E}$ ppm
PAC-3: $\mathbf{250}_\mathbf{E}$ ppm

Subscript "E" corresponding to ERPGs (Emergency Response Planning Guideline) are in **bold face**.

DFG MAK: 10 ppm/25 mg/m^3 TWA; Peak Limitation Category I(2)
NIOSH IDLH: 50 ppm.

Determination in Air: Use NIOSH Analytical Method (IV) #1603, OSHA Analytical Method 186SG.

Permissible Concentration in Water: No U.S. limit has been established. However, EPA·[32] has proposed an ambient environmental goal of 345 μg/L based on health effects.

Determination in Water: Acetic acid in water may be determined by titration. Harmful to aquatic life. Octanol-water coefficient: Unlikely to bioaccumulate in marine organisms. –0.2 to –0.31. The following wastewater treatment technologies have been investigated for acetic acid: activated carbon; reverse osmosis[83].

Routes of Entry: Inhalation, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Can cause severe irritation, burns, and permanent eye damage. Skin contact can cause severe irritation and burns. Breathing can cause irritation of the mouth, nose, and throat; coughing, and shortness of breath. Higher exposures can cause bronchopneumonia and pulmonary edema, a medical emergency. LD_{50} (oral, rat) = 3300 –3530 mg/kg; LD_{50} (dermal, rabbit) = 1060 mg/kg.

Long Term Exposure: Repeated exposure may cause bronchitis to develop, with cough, phlegm, and/or shortness of breath. Repeated skin exposure can cause thickening and cracking of the skin, particularly the skin of the hands. Chronic exposure may result in pharyngitis and catarrhal bronchitis. Ingestion, though not likely to occur in industry, may result in penetration of the esophagus, bloody vomiting, diarrhea, shock, hemolysis; and hemoglobinuria which is followed by anuria. Repeated or prolonged exposure to acetic acid may cause darkening, irritation of the skin, erosion of the exposed front teeth, and chronic inflammation of the nose, throat and bronchi.

Points of Attack: Respiratory system, skin, eyes, teeth.

Medical Surveillance: lung function tests. Consider chest x-ray following acute overexposure. Consideration should be given to the skin, eyes, teeth, and respiratory tract in placement or periodic examinations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash with soap immediately. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. If swallowed, do not induce vomiting. Transfer promptly to a medical facility. Medical observation recommended for 24 to 48 hours following inhalation overexposure, as pulmonary edema may be delayed.

Personal Protective Methods: Contact lenses should not be worn when working with acetic acid. Prevent skin contact; **8 hr** (More than 8 hours of resistance to breakthrough >0.1 micron>g/cm^2/min): Butyl rubber (gloves, suits, boots), Teflon™ gloves, suits, boots; Viton™, 4H™, and Silver Shield™ gloves, Responder™ suits; Trychem 1000™ suits; **4 hr** (At least 4 but <8 hours of resistance to breakthrough >0.1 micron>g/cm^2/min.) Neoprene™, Barricade®. Remove clothing immediately if wet or contaminated with liquids containing 50% and promptly remove if liquid contains 10–49% acetic acid. Provide emergency eyewash if liquids containing >5% acetic acid are involved, drench if >50% acetic acid is involved.

Respirator Selection: SCBA >5 ppm. NIOSH/OSHA: *50 ppm:* Sa:Cf$^{£}$ (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv$^{£}$ (APF = 25) [any powered, air-purifying respirator with organic vapor cartridge(s)]; CcrFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front-or back-mounted acid gas canister]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front-or back-mounted organic vapor canister]; or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front-or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note*$^{£}$: Substance causes eye irritation or damage; eye protection needed.

Storage: (1) Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. (2) Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Should be stored in cool dry place away from heat and incompatible substances listed above. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Store pesticides in original containers, complete with labels listing ingredients, use

directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: *Acetic acid >80%:* Should be labeled "CORROSIVE, FLAMMABLE LIQUID." Hazard Class 8, 3. *Acetic acid 10-80%:* Should be labeled "CORROSIVE," shipped in glass and polyethylene carboys, metal drums, aluminum tank cars and wooden barrels. It falls in Hazard Class 8. Do not transport with human food or animal feedstuffs.

Spill Handling: Warn other workers of spill. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand, or similar material and deposit in sealed containers, and transport to outdoor location. With expert help, cautiously neutralize spilled liquid with lime or sodium bicarbonate. Wash away remainder with plenty of water (extra personal protection: chemical protection suit including self-contained breathing apparatus). Alternatively cover with soda ash and then flush to sewer with water[24]. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least for solids. *If tank, rail car or tank truck is involved in a fire*, *isolate* for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters (0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or alcohol-resistant foam. Vapors are heavier than air and will collect in low areas. Vapors in confined areas may explode when exposed to fire. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Acetochlor A:0175

Use Type: Herbicide

CAS Number: 34256-82-1

Formula: $C_{14}H_{20}ClNO_2$

Synonyms: Acetamide, 2-chloro-*N*-(ethoxymethyl)-*N*- (2-ethyl-6-methylphenyl)-; *O*-Acetotoluidide, 2-chloro- *N*-(ethoxymethyl)-6'-ethyl-; Azetochlor; 2-chloro-*N*-(ethoxymethyl)-6'-ethyl-*O*-acetotoluidide; 2-Chloro-*N*-(ethoxymethyl)-*N*-(2-ethyl-6-methylphenyl) acetamide; 2'-Ethyl-6'-methyl-*N*-(ethoxymethyl)-2-chloroacetanilide

Trade Names: ACENIT®; CP 55097®; DEGREE®; ERUNIT®; FULTIME®; GUARDIAN®; HARNESS®; KEYSTONE LA®; MG 02®; MON 097®; MON 58420®; NEVIREX®; RELAY®; SACEMID®; SURPASS®; TOPHAND®; TOPNOTCH®; TROPHEE®; TROPHY®; WINNER®

Chemical Class: Chloroacetanilide; Chloroacetamide

EPA/OPP PC Code: 121601

California DPR Chemical Code: 2349

HSDB Number: 6550

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: AB5457000

EC Number: 251-899-3 [*Annex I Index No.:* 616-037-006]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Approval pending in the EU. A pre-emergence herbicide for control of annual grasses and broadleaf weeds. It is used on cabbage, citrus cops, coffee, all types of corn, cotton, green peas, maize, onion, peanuts, potatoes, vineyards, sugar cane, and sugar beets, among others. It is compatible with most other pesticides.

U.S. Maximum Allowable Residue Levels for Acetochlor including its metabolites and degradates, in or on the commodities listed below. Compliance

with the tolerance levels specified below is to be determined by measuring only acetochlor and its metabolites containing the ethyl methyl aniline (EMA) moiety and the hydroxyethyl methyl aniline (HEMA) moiety. Both parent and the named metabolites shall be determined as ethyl methyl aniline (EMA) and hydroxyethyl methyl aniline (HEMA), and calculated as the stoichiometric equivalents of acetochlor, in or on the following commodities [40CFR180.470(a)]: corn, field, forage 4.5 ppm; corn, field, grain 0.05 ppm; corn, field, stover 2.5 ppm; corn, pop, grain 0.05 ppm; corn, pop, stover 2.5 ppm; corn, sweet, forage 1.5 ppm; corn, sweet, kernels plus cob with husks removed 0.05 ppm; corn, sweet, stover 1.0 ppm; cotton, gin byproducts 4.0 ppm; cotton, undelinted seed 0.6 pmp; sorghum, grain, forage 1.6 pmp; sorghum, grain, grain 0.05 ppm; sorghum, grain, stover 1.7 pmp; soybean, meal 1.2 pmp; soybean, seed 1.0 ppm.

Tolerances are established for indirect or inadvertent residues of acetochlor, including its metabolites and degradates, in or on the raw agricultural commodities in this section when present therein as a result of application of acetochlor to the growing crops listed above of this section. Compliance with the tolerance levels specified below is to be determined by measuring only acetochlor and its metabolites containing the ethyl methyl aniline (EMA) moiety and the hydroxyethyl methyl aniline (HEMA) moiety. Both parent and the named metabolites shall be determined as ethyl methyl aniline (EMA) and hydroxyethyl methyl aniline (HEMA), and calculated as the stoichiometric equivalents of acetochlor, in or on the following commodities[40CFR180.470(d)]: animal feed, nongrass, group 18, forage 1.3 pmp; animal feed, nongrass, group 18, hay 3.5 ppm; beet, sugar, root 0.05 ppm; beet, sugar, tops 0.05 ppm; grain, cereal, forage, fodder and straw, group 16, except corn, grain sorghum, rice and wheat, forage 0.5 ppm; grain, cereal, forage, fodder and straw, group 16, except corn, grain sorghum, rice and wheat, hay 2.0 ppm; grain, cereal, forage, fodder and straw, group 16, except corn, grain sorghum, rice and wheat, stover 0.1 ppm; grain, cereal, forage, fodder and straw, group 16, except corn, grain sorghum, rice and wheat, straw 0.3 pmp; grain, cereal, group 15, except corn, grain sorghum, rice, and wheat, grain 0.05 ppm; pea and bean, dried shelled, except soybean, subgroup 6C, 0.05 ppm; potato 0.05 ppm; soybean, forage 0.7 pmp; soybean, hay 1.0 ppm; sunflower, seed 0.05 ppm; wheat, forage 0.5 ppm; wheat, grain 0.02 wheat, hay 2.0 ppm; wheat, straw 0.1 ppm.

Human toxicity (long-term)[101]: Intermediate–20.71006 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Low–187.34840 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans; IARC Group 2b, probable carcinogen

California Proposition 65 Chemical: Carcinogen (1/1/1989)

Acute Oral Category: 3, CAUTION

Health Advisory: Skin irritant/sensitizer, Endocrine disruptor (S!)

European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R20; R37/8; R43; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Acetochlor is a thick, oily, amber, blue or purplish liquid. Sweet, aromatic odor. Molecular weight = 269.77; Specific gravity (H_2O:1) = 1.1 gm/ml @ 25 °C; Boiling point = 171 °C; Freezing/Melting point = 1 °C; Vapor pressure = 3.4×10^{-8} mmHg @ 25 °C; Flash point = >93 °C; 160 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 1. Moderately soluble in water; solubility = 233 mg/L; 400 ppm @ 25 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc). Hydrolyzed by strong acids; strong alkalies; bases; alkaline reagents. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Slightly corrosive to some steels. May attack some forms of plastic, rubber, and coatings.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 10 ppb[14].

Determination in Water: Log K_{ow} = >3.5. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, dermal contact; absorbed through the intact skin.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin sensitization. Attacks central nervous system. May cause apprehension, anxiety, confusion, nervous excitation; dizziness; headache; numbness and weakness in limbs; muscle twitching, tremors; nausea and vomiting; slow, shallow respiration, bluish face; convulsions; loss of consciousness; breathing stops; death. LD_{50} (oral, rabbit) = 600 mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Long Term Exposure: A potential human carcinogen. May cause skin sensitization.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Employees shall be counseled by the physician to ensure that each employee is aware that this chemical has been implicated in the production of effects on the reproductive system. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Directly, irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Get medical aid immediately. Have physician check for possible delayed damage. Skin: Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. Shampoo hair promptly if contaminated; protect eyes. Do not scrub skin or hair, since this can increase absorption through the skin. Rinse thoroughly with water. Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs many organochlorines; therefore, items such as leather shoes, gloves, and belts should be discarded. If the skin is swollen or inflamed, cool affected areas with cold compresses. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. The patient is at risk of central nervous system depression or seizures, which may lead to pulmonary aspiration during vomiting. If the victim is conscious and able to swallow, *administer an aqueous slurry of activated charcoal at 1 gm/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. The efficacy of activated charcoal for some organochlorine poisoning (such as chlordane) is uncertain. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by Poison Control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately remove the victim from the contaminated area to fresh air. For inhalation exposures, monitor for respiratory distress. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. If breathing is difficult, administer 100% humidified supplemental oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA-or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Spill Handling: First, remove all sources of ignition. For liquids, isolate spill or leak area in all directions for at least 50 meters /150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Storage: Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are

expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Acifluorfen A:0360

Use Type: Herbicide

CAS Number: 50594-66-6; 62476-59-9 (sodium salt)

Formula: $C_{14}H_7ClF_3NO_5$; $F_3C\text{-}C_6H_3(Cl)\text{-}O\text{-}C_6H_3(NO_2)(COOH)$

Synonyms: Acifluorfene; Benzoic acid, 5-(2-chloro-4-(trifluoromethyl)phenoxy)-2-nitro-; 5-(2-Chloro-4-(trifluoromethyl)phenoxy)-2-nitrobenzoic acid; 5-(2-Chloro-α-α-α-trifluoro-*p*-tolyloxy)-2-nitrobenzoic acid; Sodium acifluorfen

Trade Names: ASIF®; BLAZER®; CARBOFUORFEN®; KLEENUP® Grass and Weed Killer; RH-6201; SCEPTER O.T. HERBICIDE®; STATUS®; STORM®; ULTRA BLAZER®

Chemical Cass: Nitrophenyl ether (diphenolic ether)

EPA/OPP PC Code: 114401; sodium salt: 114402, 209800

California DPR Chemical Code: 2218 as sodium salt

HSDB Number: 6551 (sodium salt)

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: DG5643200

EC Number: 256-634-5 [*Annex I Index No.:* 604-041-00-0]; 263-560-7 [*Annex I Index No.:* 604-041-00-0] (sodium salt)

Uses: Used to control pre-emergent and post-emergent broadleaf weeds and grasses in soybean, peanut, pea and rice crops. It is also registered for use by homeowners as a spot treatment on driveways, sidewalks, and patios. It should not be mixed with oils, surfactants, liquid fertilizers, and other pesticides. Not approved for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Aacifluorfen, sodium and its metabolites (the corresponding acid, methyl ester, and amino analogues) [40CFR180.383]: in or on the following raw agricultural commodities: Peanut 0.1 ppm; Rice, grain 0.1 ppm; Rice, straw 0.2 ppm; Soybean, seed 0.1 ppm; Strawberry 0.05 ppm.

Human toxicity (long-term)[101]: (Na salt) High–10 ppb, Health Advisory.

Fish toxicity (threshold)[101]: (Na salt) Very low–1500 ppb, MATC (Maximum Acceptable Toxicant Concentration).

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans at high doses; Not likely to be carcinogenic to humans at Low Doses; IARC:[12] Animal Sufficient Evidence, Human Inadequate Evidence, *possibly carcinogenic to humans*, Group 2b.

California Proposition 65 Chemical: Cancer (1/1/90) (CAS: 62476-59-9, *sodium salt*)

Health Advisory: Mutagen (sodium salt), Developmental/Reproductive Toxin

SARA 313: Form R *de minimis* Concentration Reporting Level: 1.0% (sodium salt)

European/International Regulations (*includes sodium*): Hazard Symbol: Xn, Xi, N; risk phrases: R22; R38; R41; R50/53; safety phrases: S2; S24; S39; S60; S61 (see Appendix 1)

Description: Acifluorfen is a combustible, off-white to light tan solid. The sodium salt is a white or brown crystalline powder. Molecular weight = 361.65; Specific gravity $(H_2O{:}1) = 1.647$ @ 20 °C; Freezing/Melting point = 152–157 °C [23]; 124–125 °C (sodium salt)[88]; Flash point = >200 °C;. Vapor pressure = 6.8×10^{-8} mmHg @ 25 °C. Highly soluble in water. The sodium salt is also soluble in water.

Incompatibilities: Strong oxidizers. Avoid contact with all sources of ignition.

Permissible Exposure Limits in Air: Not established

Permissible Concentration in Water: State Drinking Water Guidelines: Maine 3.5 μg/L; Florida 1 μg/L.

Determination in Water: Method: USGS-NWQL O-1131-95; Procedure: high-performance liquid chromatography using ultraviolet spectrometry; Analyte: acifluorfen-sodium; Matrix: filtered natural-water; Detection limit: 0.008 μg/L.

Routes of Entry: Inhalation, dermal contact, ingestion

Harmful Effects and Symptoms

Short Term Exposure: Acifluorfen is a moderate dermal and eye irritant.

Long Term Exposure: A known animal carcinogen. Similar chlorinated diphenyl ethers have caused liver damage in laboratory animals. LD_{50} (oral, male rat) = 2025 mg/kg; (oral, femal rat) = 1370 mg/kg.

Points of Attack: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause skin and liver effects.

Medical Surveillance: The sodium salt of this chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Incompatible with Cellulose-Based and Expanded Polymeric Absorbents[88]. Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent dust cloud. Avoid inhalation of asbestos dust. *Small Dry Spill:* With clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Small Spill:* Take up with sand or other non-combustible absorbent material and place into containers for later disposal. *Large Spill*: Dike far ahead of liquid spill for later disposal. Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent entry into waterways, sewers, basements or confined areas.

Fire Extinguishing: This chemical is a combustible solid. Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen fluoride and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressurestreams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Alachlor A:0480

Use Type: Herbicide
CAS Number: 15972-60-8; 15972-50-8
Formula: $C_{14}H_{20}ClNO_2$
Synonyms: Al3-51506; Acetamide, 2-chloro-*N*-(2,6-diethylphenyl)-*N*-(Methoxymethyl)-; Acetanilide, 2-chloro-2',6'-diethyl-*N*-methoxymethyl)-; Alachlore; α-Chloro-2',6'-diethyl-*N*-(methoxymethyl)acetanilide; 2-Chloro-*N*-(2,6-diethylphenyl)-*N*-(methoxymethyl) acetamide; Metachlor; Methachlor; *N*-(Methoxymethyl)2,6-diethylchloro acetamide
Trade Names: AGIMIX® Araclor; ALAGAM®; ALAGAN®; ALANEX®; ALAPAZ®, suspended; ALAZINE®; ALATOX 480®; ALCLOR 48 LE®; CHIMICHLOR®; LARIAT®; LASAGRIN®; LASSAGRIN®; LASSO®; LASSO MICRO-TECH®; METACHLOR®; PARTNER® Arachlor; PILLARZO®; SANACHLOR®
Chemical Class: Chloroacetanilide; Chloroacetamide
EPA/OPP PC Code: 090501
California DPR Chemical Code: 678
HSDB Number: 1014
UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151
RTECS® Number: AE1225000
EC Number: 240-110-8 [*Annex I Index No.:* 616-015-00-6]
Uses: A pre-emergence herbicide for corn, soybeans, and peanuts, and other field crops. It is a selective systemic herbicide, absorbed by germinating shoots and by roots. It works by interfering with a plant's ability to produce protein and by interfering with root elongation. It is available as granules or emulsifiable concentrate. Alachlor is used in mixed formulations with atrazine, glyphosate, trifluralin, and imaquin. Not approved for use in the EU. A U.S. EPA restricted Use Pesticide (RUP).
U.S. Maximum Allowable Residue Levels for Alaclor and its metabolites calculated as alachlor (40 CFR 180.249): in or on bean, dry, seed 0.1 ppm; bean, forage 0.2 ppm; bean, hay 0.2 ppm; bean, lima, succulent 0.1 ppm; cattle, fat 0.02 ppm; cattle, meat byproducts 0.02 ppm; cattle, meat 0.02 ppm; corn, forage 0.2 ppm; corn, fresh, kernel plus cob with husks removed 0.05 ppm; corn, grain 0.2 ppm; corn, stover 0.2 ppm; Egg 0.02 ppm; goat, fat 0.02 ppm; goat, meat byproducts 0.02 ppm; goat, meat 0.02 ppm; Hog, fat 0.02 ppm; hog, meat byproducts 0.02 ppm; hog, meat 0.02 ppm; horse, fat 0.02 ppm; horse, meat byproducts 0.02 ppm; horse, meat 0.02 ppm; milk 0.02 ppm; peanut 0.05 ppm; poultry, fat 0.02 ppm; poultry, meat byproducts 0.02 ppm; poultry, meat 0.02 ppm; sheep, fat 0.02 ppm; sheep, meat byproducts 0.02 ppm; sheep, meat 0.02 ppm; sorghum, forage 2.0 ppm; sorghum, grain (milo) 0.1 ppm; sorghum, grain, stover 1.0 ppm; soybean 0.2 ppm.
Human toxicity (long-term)[101]: High–2.00 ppb, MCL (Maximum Contaminant Level)
Fish toxicity (threshold)[101]: Intermediate–26.19584 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans (in high doses); Not likely to be carcinogenic to humans (low doses); EU GHS Category 2: Suspected human carcinogen; ACGIH: A3, Confirmed animal carcinogen with unknown relevance to humans.
California Proposition 65 Chemical: Cancer (1/1/1989)
Acute Oral Category: 3, CAUTION
Health Advisory: Mutagen, Endocrine disruptor (S!)
Potential Ground water Pollutant [California FAC Section 13145(d)/12811, active]
Safe Drinking Water Act, MCL, 0.002 mg/L; MGLC, zero; Regulated chemical (47 FR 9352)
Superfund/EPCRA 40CFR302.4, Appendix A, Reportable Quantity (RQ): 1 lb (0.454 kg), SARA 313: Form R *de minimis* Concentration Reporting Level: 1.0%
European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R22; R40; R43; R50/53; safety phrases: S2; S36/37; S46; S60; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters
Description: Alachlor is a white to cream-colored solid. Molecular weight = 269.79; Specific gravity (H_2O:1) = 1.1 g/cm^3; Boiling point = 399 °C; Freezing/Melting point = 40–41 °C[88]; Vapor pressure = 1.5×10^{-6} mmHg @ 25 °C; Flash point = 137 °C (cc). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Low solubility in water; solubility = 250 mg/L @ 25 °C.
Incompatibilities: Hydrolyzed on contact with acid or alkaline media. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Corrosive to iron and steel. Decomposes in temperatures >100 °C.
Permissible Exposure Limits in Air: ACGIH TLV®[1]: 1 mg/m^3 TWA (inhalable fraction and vapor; sensitization). Excursion Limit Recommendation: Excursions in worker exposure levels may exceed 3 times the TLV-TWA for no more than a total of 30 minutes during a work day, and under no circumstances should they exceed 5 times the TLV-TWA, provided that the TLV-TWA is not exeeded A3: Confirmed animal carcinogen with unknown relevance to humans. A3, confirmed animal carcinogen with unknown relevance to humans.
Determination in Air: OSHA PV2035; Procedure: high-performance liquid chromatography; Detection limit: 0.005 mg/m^3; NIOSH 5602, Issue 1; Procedure: gas chromatography with electron capture detector; Detection limit: 0.05 μg/sample; NIOSH 9200, Issue 1; Procedure: gas chromatography with electron capture detector; Detection limit: 0.01 μg/mL; NIOSH 9201, Issue 1; Procedure: gas chromatography with electron capture detector; Detection limit: 0.0025 μg/mL.
Permissible Exposure Limits in water: Federal Drinking Water Standards: EPA 2 μg/L; State Drinking Water Guidelines: Minnesota 5 μg/L; Arizona 0.15 μg/L; Maine 7 μg/L; Minnesota (Alachlor-oxanilic acid) 70 μg/L; Minnesota (Alachlor-ethane sulfonic acid) 70 μg/L. MCLG = 0; MCL = 2 ppb.

Determination in Water: May be accomplished by liquid-liquid extraction gas chromatographic procedure[47]. Log K_{ow} = >3.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms: No effects found in human studies[47]. Exhibits relatively low acute oral toxicity. However, alachlor feeding studies have demonstrated oncogenic effects including lung tumors in mice, and stomach, thyroid and nasal turbinate tumors in rats.

Short Term Exposure: Toxic by dermal contact, ingestion, and inhalation. Eye contact may cause severe irritation or permanent injury. Dermal contact may irritate and burn skin. May cause skin sensitization and alergic skin reaction. LD_{50} (oral, rat) = 930 mg/kg; LD_{50} (dermal, rabbit) = >1200 mg/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin sensitization. May cause liver damage. A suspected endocrine disruptor and carcinogen; developmental toxin. A possible lung, kidney and liver toxin. Mutagen; human mutation data reported. May cause tumors.

Points of Attack: Liver, skin, lungs, kidneys, DNA.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Lung, liver and kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In the event of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required. IMO Pollution Category B.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapors. Take up with diatomite, clay, expanded mineral, foamed glass, or synthetic treated absorbent material and deposit in sealed containers for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. For *large spills* seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides and hydrogen chloride. This chemical is not flammable, but may support combustion. Stay upwind of fire. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: This compound is hydrolyzed under strongly acid or alkaline conditions, to chloroacetic acid, methanol, formaldehyde and 2,6-diethylanilne. Incineration is recommended as a disposal procedure. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Techniques for alachlor removal from potable water have been reviewed by EPA[47] but the data revealed no superior method. Improper disposal of pesticides is a violation of federal law. Dispose in accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Uses: A U.S. EPA restricted Use Pesticide (RUP). Not approved for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Aldicarb and its cholinesterase-inhibiting metabolites 2-methyl 2-methylsulfinyl)propionaldehyde O-(methylcarbamoyl)oxime & 2-methyl-2-(methylsulfonyl)propionaldehyde O-(methylcarbamoyl) oxime [(40 CFR 180.269 (a)]: in or on the following food commodities: beans (dry) 0.1 ppm; beets, sugar 0.05 ppm; beets, sugar, tops 1 ppm; cattle, fat 0.01 ppm; cattle, meat byproducts 0.01 ppm; cattle, meat 0.01 ppm; citrus pulp, dried 0.6 ppm; coffee beans 0.1 ppm; cottonseed 0.1 ppm; cotton, hulls 0.3 ppm; goat, fat 0.01 ppm; goat, meat byproducts 0.01 ppm; goat, meat 0.01 ppm; grapefruit 0.3 ppm; hog, fat 0.01 ppm; hog, meat byproducts 0.01 ppm; hog, meat 0.01 ppm; horse, fat 0.01 ppm; horse, meat byproducts 0.01 ppm; horse, meat 0.01 ppm; lemon 0.3 ppm; lime 0.3 ppm; milk 0.002 ppm; oranges 0.3 ppm; peanuts 0.05 ppm; pecans 0.5 ppm; potato 1 ppm; sheep, fat 0.01 ppm; sheep, meat byproducts 0.01 ppm; sheep, meat 0.01 ppm; sorghum, bran 0.5 ppm; sorghum, fodder 0.5 ppm; sorghum, grain 0.2 ppm; soybeans 0.02 ppm; sugarcane 0.02 ppm; sugarcane, fodder 0.1 ppm; sugarcane, forage 0.1 ppm; sweet potato 0.1 ppm.

Human toxicity (long-term)[101]: High–7.00 ppb, MCL (Maximum Contaminant Level)
Fish toxicity (threshold)[101]: High–3.75027 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans; IARC Group 3, unclassifiable as to its carcinogenicity in humans, 1991

Acute Oral Category: 1, DANGER–POISON
Health Advisory: Nerve Toxin, Mutagen, Endocrine disruptor (S!)
Potential Ground water Pollutant [California FAC Section 13145(d)/12811, active]
U.S. EPA Hazardous waste number (RCRA No.): P070
RCRA 40CFR261, Appendix 8; 40CFR261.11 Hazardous Constituents
RCRA Land Ban Waste Restrictions
Safe Drinking Water Act, MCL, 0.003 mg/L; MCLG 0.001 mg/L; Regulated chemical (47 FR 9352). CERCLA/SARA 40CFR302, Extremely Hazardous Substances: TPQ = 100 /10,000 lb (45.4/4540 kg)
Superfund/EPCRA 40CFR302.4, Appendix A, Reportable Quantity (RQ): CERCLA 1 lb (0.454 kg), SARA 313: Form R *de minimis* Concentration Reporting Level: 1.0%
US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)
European/International Regulations: Hazard Symbol: T+, N; risk phrases: R24; R26/28; R50/53; safety phrases: S1/2; S22; S36/37; S45; S60; S61 (see Appendix 1).
WGK (German Aquatic Hazard Class): No value assigned.

Description: Aldicarb is a noncombustible, white crystalline solid with a slight sulfurous odor. Molecular weight = 190.28; Specific gravity (H_2O:1) = 1.195 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 98–101.1 °C; Vapor pressure = 3.5×10^{-5} mmHg @ 20 °C. Relative vapor density (air = 1) = 6.59. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Slightly soluble in water; solubility = 0.6% @ 20 °C.

Incompatibilities: Carbamates are incompatible with strong oxidizing acids, peroxides, and hydro-peroxides; strong reducing agents such as hydrides; strong acids and bases. Contact with nitrides or chemically active metals (aluminum, copper, magnesium, neptunium, sodium, tin, titanium, zinc, etc.) causes the release of potentially explosive hydrogen gas and a metal salt. Rapidly hydrolyzed in acid and alkaline media.

Permissible Exposure Limits in Air: The American Industrial Hygiene Association (AIHA/WEEL) recommends a TWA level of 0.07 mg/m^3, and warns that aldicarb can be absorbed through the skin, thereby increasing exposure.

Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.027 mg/m^3
PAC-2: 0.3 mg/m^3
PAC-3: 9.5 mg/m^3

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 7 μg/L (includes sulfoxide and sulfone); State Drinking Water Standards: Illinois 2 μg/L (includes sulfone), 4 μg/L (sulfoxide); New York 3 μg/L; 2 μg/L (sulfone), 4 μg/L (sulfoxide); State Drinking Water Guidelines: Arizona 9 μg/L; Maine 7 μg/L (sulfone); California 7 μg/L; Minnesota 1 μg/L; Wisconsin 10 μg/L; Massachusetts 3 μg/L, *2* ∝g/L (sulfone), 4 μg/L (sulfoxide). Canadian Drinking Water Standards (MAC): 0.009 mg/L.

Determination in Water: Aldicarb may be determined in water by gas-liquid chromatography with flame photometric detection after oxidation to the sulfone (aldoxycarb) by peracetic acid or 3-chloro-perbenzoic acid. Colorimetric methods have also been used based on hydrolysis to hydroxyl-amine, which is oxidized to nitrous acid, the latter used to diazotize sulfanilic acid which is then coupled to give a dye[23]. Log K_{ow} = <1.5. Although this chemical is an environmental hazard, it is unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This chemical is one of the most highly toxic pesticides. It can be harmful or fatal if swallowed, inhaled or absorbed through the skin. Exposure can cause rapid severe poisoning with headache, blurred vision, sweating, nausea, abdominal pain, vomiting, diarrhea, loss of coordination, and death. In severe cases, unconsciousness and convulsions may occur. The probable oral lethal dose for humans is <5 mg/kg, or a taste (<7 drops) for a 150-lb person; it is extremely toxic by both oral and dermal routes. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = 650–930 μg/kg; (dermal, rabbit) = >5–20 mg/kg. The lethal dose for the sulfoxide is similar.

Long Term Exposure: May affect the immune system. Aldicarb is a questionable carcinogen with no firm human evidence. May cause reproductive and fetal effects. A neurotoxin. May cause tumors.

Points of Attack: Skin, lungs, immune system; Reproductive cells. Central nervous system.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Note to physician or authorized medical personnel. Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *SCBA* > 0.027 mg/m^3. *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. A regulated, marked area should be established where aldicarb is handled, used, or stored. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled “poisonous materials.” It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. *On small fire*, use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire*, use water spray, fog or alcohol resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Aldoxycarb A:0505

Use Type: Insecticide, Acaricide, Nematicide

CAS Number: 1646-88-4

Formula: $C_7H_{14}N_2O_4S$

Synonyms: Aldicarb sulfone; Carbamic acid, methyl-, *O*-[(2-methyl-2-(methylsulfonyl)propylidene)amino] derivative; ENT AI 3-29261; 2-Methyl-2-(methylsulfonyl)propanal-*O*-[(methylamino)carbonyl]oxime; 2-Methyl-2-(methylsulfonyl)propionaldehyde-*O*-(methylcarbamoyl)oxime; Propanal, 2-methyl-2-(methylsulfonyl)-, *O*-[(methylamino)carbonyl]oxime

Trade Names: ALDICARB SULFONE®; TEMIK SULFONE®; SULFOCARB®; STANDAK®; UC-21865®

Chemical Class: Carbamate (*N-methyl*)

EPA/OPP PC Code: 110801; 216900

California DPR Chemical Code: 2265

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: UE2080000

EC Number: 216-710-0

Uses: Used to control honey locust, gall midge and other insects and mites on cotton, potatoes, sugar beets and ornamentals. Applied to the soil by soluble mixture or spikes. Not listed for use in EU countries[115].

Human toxicity (long-term)[101]: High–7.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Very low–7683.76758 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin[103]

U.S. EPA Hazardous waste number (RCRA No.): P203

Description: Aldecarb sulfone is a white, crystalline solid. Slight sulfur odor. Molecular weight = 222.27; Freezing/Melting point = 141 °C; Vapor pressure = 12 mmHg @ 25 °C; 1.0×10^{-4} mmHg. Highly soluble in water; solubility = 1000 ppm @ 20 °C.

Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. May react violently with bromine, ketones. Incompatible with azo dyes, caustics, ammonia, amines, boranes, hydrazines, strong oxidizers.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 7 μg/L; State Drinking Water Standards: Illinois 2 μg/L; New York 2 μg/L; Maine 7 μg/L; Massachusetts23 μg/L Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = –0.6. Negative. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = 20 mg/kg; LD_{50} (dermal, rat) = >1000 mg/kg[83].

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. *If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Note to physician or authorized medical personnel. Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Allethrin A:0520

Use Type: Insecticide

CAS Number: 584-79-2 (I); 497-92-7 (II); 23031-36-9 (Prallethrin); 28434-00-6 (*S*-Bioallethrin); 28057-48-9 (Bioallethrin)

Formula: $C_{19}H_{26}O_3$ (I); $C_{10}H_{26}O_5$ (II)

Synonyms: Allethrolone ester of chrysanthemum dicarboxylic acid monomethyl ester (II); (+)-Allelrethonyl; (+)-*cis,trans*-chrysanthemate; *d*-Allethrin; Allethrin I; Allyl cinerin; Allyl homolog of cinerin I; *d*, l-2-allyl-4-hydroxy-3-methyl-2-cyclopenten-1-one-*dl*-chrysanthemum monocarboxylate; 3-Allyl-4-keto-2-methylcyclopentenyl chrysanthemummonocarboxylate 3; 3-Allyl-2-methyl-4-*oxo*-2-cyclopenten-1-yl chrysanthemate; *d1*-3-allyl-2-methyl-4-oxocyclopent-2-enyl *dl-cis trans* chrysanthemate; Allylrethronyl *dl-cis*-trans-chrysanthemate; Bioaltrina; Cinerin I allyl homolog; *d*-Cisallethrin; (±)-*cis,trans*-Chrysanthemumic acidester of (±) allethrolone; Depallethrin; EBT; ENT 17,510 (II); FDA 1446; 3-(3-Methoxy-2-methyl-3-*oxo*-1-propenyl)-2,2-dimethylcyclopropanecarboxylic acid 2 methyl-4-*oxo*-3-(2-propenyl)-2-cyclopenten-1-yl ester (II); Necarboxylic acid

Trade Names: BIOALLETHRIN®; BIOALLETHRIN TECHNICAL®; *d*-CISALLETHRIN®; ESBIOTHRIN®; EXTHRIN® FMC 249®; NIA 249®; OMS 468®; PYNAMIN®; PYNAMIN-FORTE®; PYRESIN®; PYRESYN®; PYREXCEL®; PYROCIDE®; SBP 1382/BIOALLETHRIN CONCENTRATE®

Chemical Class: Pyrethroid

EPA/OPP PC Code: 004001 (Allethrin); 004002 (Allethrin Coil); 004003 [Bioallethrin (a mixture of *d-cis-trans*-Allethrin and *S*-Bioallethrin)]; 004004 (*S*-Bioallethrin); 004005 (*d-cis-trans*-Allethrin); 128722 (Prallethrin)

California DPR Chemical Code: 12 (Allethrin); 90012 (Allethrin, other related)

HSDB Number: 1511 for allethrins

UN/NA & ERG Number: UN3352 (liquid)/151

RTECS® Number: GZ1925000; GZ1472000 (*S*-Bio-allethrin)

EC Number: 209-542-4 [*Annex I Index No.:* 006-025-00-3] (I)

Uses: Allethrin is used almost exclusively to control flying and crawling insects in homes and industrial locations. Used extensively in pet animal shampoos, to treat lice in humans and in home and industrial sprays for flying insects, mosquitos, etc. It is available as mosquito coils, mats, oil formulations and as an aerosol spray. It may be hazardous to the environment; special attention should be given to fish and honey bees. Not currently registered in the U.S. Not approved for use in EU countries[115]. Depending on CAS registry number there are probably >100 global suppliers[97].

Human toxicity (long-term)[101]: 3.5 ppb, Health Advisory.

Fish toxicity (threshold)[101]: 0.18 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Acute Oral Category: 2, WARNING

Health Advisory: Nerve Toxin (S!), Endocrine disruptor (S!)

European/International Regulations [584-79-2 (I)]: Hazard Symbol: Xn, N; risk phrases: R20/22; R50/53; safety phrases: S2; S36; S46; S60; S61

WGK (German Aquatic Hazard Class): No value assigned

Description: Allethrins are synthetic analogs of naturally occurring insecticides. Clear, yellow to amber, oily liquids which is also available as wettable powder or granules. Sprays may be dissolved in xylene or kerosene. Slight aromatic odor. Practically insoluble in water (I & II). Molecular weight = 302.39 (*S*-bioallethrin); Specific gravity (H_2O:1) = 1.02 @ 20 °C; Boiling point = 282 °C; Flash point = 85 °C. Henry's Law constant = 1×10^{-7} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0.

Incompatibilities: Strong alkalies and oxidizers. Unstable in light, UV, air, and in alkaline conditions.

Permissible Exposure Limits in Air: Conversion factor:
1 mg/m^3 = 0.081 ppm @ 25 °C
NIOSH[2] IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA
STEL set by HSE(33) = 10 mg/m^3

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008(18), as pyrethroid.

Permissible Concentration in Water: Acceptable Daily Intake (ADI) =0.02 mg/kg as pyrethroid.

Determination in Water: Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Skin and eye contact causes irritation and burns. Inhalation can cause respiratory tract irritation with coughing and wheezing, tearing and runny nose. High exposure may cause dizziness, shaking, irritability, seizures, and unconsciousness. Allethrin may cause effects on the nervous system. LD_{50} (oral, rat) = 700–1100 mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Long Term Exposure: May cause skin allergy. If the allergy develops, very low future exposure can cause itching and skin rash. Allethrin may cause an asthma-like allergy. Future exposure can cause asthma attacks with shortness of breath, wheezing, cough and/or chest tightness. Allethrin can cause bronchitis to develop with cough, phlegm, and/or shortness of breath. This chemical may cause liver and kidney damage. There is no evidence that allethrin affects reproduction[2]. See also pyrethrins. Potential mutagen.

Points of Attack: Skin, lungs, liver, and kidneys

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9]. Liver and kidney function tests. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Remove nonimpervious clothing immediately if wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m^3:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Allethrin is a liquid toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III. STN: 49-411-12

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. Use dry chemical, carbon dioxide, or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Aluminum phosphide A:0710

Use Type: Fumigant, Fungicide, Rodenticide, Insecticide

CAS Number: 20859-73-8; 1302-45-0; 71751-04-7

Formula: AlP

Alert: Metallic phosphides on clothes, skin, or hair can react with water or moisture to generate phosphine gas. Vomitus containing phosphides can also off-gas phosphine. Phosphine is extremely flammable and explosive; it may ignite spontaneously on contact, with air.

Synonyms: AIP; Aluminum monophosphide; Caswell No. 031; Fosfuro aluminico (Spanish)

Trade Names: AL-PHOS®; CELPHIDE®; CELPHOS®; DELICIA®; DETIA®; DETIA-EX-B®; DETIA GAS EX®; DETIA-GAS-EX-B®; DELICIA GASTOXIN; FARMOZ®; FUMITOXIN®; PHOSTOXIN®; PHOSTOXIN-A®; QUICKPHOS®; QUICK TOX®; RENTOKIL GASTION®

Chemical Class: Inorganic toxic metals; Inorganic phosphide

EPA/OPP PC Code: 066501

California DPR Chemical Code: 484

HSDB Number: 6035

UN/NA & ERG Number: UN3048 (aluminum phosphide pesticides)/157

RTECS® Number: BD1400000

EC Number: 244-088-0 [*Annex I Index No.:* 015-004-00-8]

Uses: Used as an insecticidal fumigant for grain, peanuts, processed food, animal feed, leaf tobacco, cottonseed, and as space fumigant for flour mills, warehouses and railcars. It is also used in baits for rodent and mole control in crops. Used as a source of phosphine; in semiconductor research. Zinc phosphide is often mixed with bait food such as cornmeal, which can be a danger to pets and children. When phosphides are ingested or exposed to moisture, they release phosphine gas. A U.S. EPA restricted Use Pesticide (RUP). Metallic phosphides on clothes, skin, or hair can react with water or moisture to generate phosphine gas.

U.S. Maximum Allowable Residue Levels for Aluminum Phosphide [40 CFR 180.225(a)(1)]: Note: The following residue limits are for phosphine compounds that produce phosphine gas: almond 0.1 ppm; animal feed 0.1 ppm; avocado 0.01 ppm; banana (incl. plantains) 0.01 ppm; barley, grain 0.1 ppm; brazil nuts 0.1 ppm; cabbage, chinese, bok choy 0.01 ppm; cacao bean, dried 0.1 ppm; cashew 0.1 ppm; citron, citrus 0.01 ppm; coffee, bean 0.1 ppm; corn, field, grain 0.1 ppm; corn, pop, grain 0.1 ppm; cotton, undelinted seed 0.1 ppm; date, dried 0.1 ppm; dill, seed 0.01 ppm; eggplant 0.01 ppm; endive 0.01 ppm; filbert 0.1 ppm; grapefruit 0.01 ppm; kumquat 0.01 ppm; lemon 0.01 ppm; lettuce 0.01 ppm; lime 0.01 ppm; mango 0.01 ppm; millet, grain 0.1 ppm; mushroom 0.01 ppm; oat, grain 0.1 ppm; okra 0.01 ppm; orange 0.01 ppm; papaya 0.01 ppm; peanut 0.1 ppm; pecan 0.1 ppm; pepper, black, post-harvest 0.01 ppm; pepper, red, post-harvest 0.01 ppm; pepper, white, post-harvest 0.01 ppm; persimmon 0.01 ppm; pimentos 0.01 ppm; pistachio 0.1 ppm; processed food 0.01 ppm; raw agricultural commodities 0.01 ppm; rice, grain 0.1 ppm; rye, grain 0.1 ppm; safflower, seed 0.1 ppm; salsify, tops 0.01 ppm; sesame, post-harvest 0.1 ppm; sorghum, grain, grain 0.1 ppm; soybean, seed 0.1 ppm; sunflower, seed 0.1 ppm; sweet potato 0.01 ppm; tangelo 0.01 ppm; tangerine 0.01 ppm; tomato 0.01 ppm; vegetable, legume ppm; (crop group 6), exc soybeans 0.01 ppm; walnut 0.1 ppm; wheat, grain 0.1 ppm. ***[40 CFR 180.225(a)(2)]:*** Tolerances are established for residues of the fumigant in or on all RACs resulting from preharvest treatment of pest burrows in agricultural and non-crop land areas. All raw agricultural commodities resulting from preharvest treatment of pest burrows, 0.01 ppm. ***[40 CFR 180.225(a)(3)]*** Residues resulting from fumigation of processed foods: Processed foods, 0.01 ppm. ***[40 CFR 180.225(a)(4)]*** Residues resulting from fumigation of animal feed: Animal feed, 0.1 ppm. ***[40 CFR 180.225(a)(5)]*** To ensure safe use of this pesticide, it must be used in compliance with the labeling conforming to that registered by the U.S. Environmental Protection Agency (EPA) under FIFRA. Labeling shall bear a restriction to aerate the finished food/feed for 48 hours before it is offered to the consumer, unless EPA specifically determines that a different time period is appropriate. Where appropriate, a warning shall state that under no condition should any formulation containing aluminum or magnesium phosphide be used so that it will come in contact with any processed food, except processed brewer's rice, malt, and corn grits stored in breweries for use in the manufacture of beer.

Regulatory Authority and Advisory Information

Carcinogenicity[83]: ACGIH A4, not classified as a human carcinogen

Department of Homeland Security Screening Threshold Quantity (pounds): Sabotage/Contamination Hazard: A placarded amount (commercial grade)

Acute Oral Category: 1, DANGER–POISON

US DOT 49CFR172.101, Inhalation Hazardous Chemical

U.S. EPA Hazardous Waste Number (RCRA No.): P006[5]

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500 lb (228 kg)

CERCLA Reportable Quantity (RQ): 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: F, T+, H, N; risk phrases: R15/29; R28; R32; R50; safety phrases: S1/2; S3/9/14; S28, S30; S36/37; S43; S45; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Aluminum phosphide is a pyrophoric, dark gray or dark yellow crystalline solid. Molecular weight = 57.96; Specific gravity (H_2O:1) = 2.85 @ 25 °C; Freezing/Melting point ≥ 1000 °C; Decomposes in water, forming poisonous and flammable (potentially explosive) phosphine gas. NFPA-704 Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 4, Reactivity 2, Water–violently reactive; dangerous when wet.

Incompatibilities: A strong reducing agent. Forms toxic and potentially explosive phosphine gas with moist air and water. Reacts violently with oxidizers, water, carbon dioxide, and foam fire extinguishers; generates high heat. Contact with water and bases rapidly releases highly toxic and flammable phosphine gas and heat. Contact with steam and acids may be violent. Pyrophoric; aluminum alkyls can ignite spontaneously in moist air. Contact with metals may release flammable hydrogen gas.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 2 mg[Al]/m^3 soluble salts and alkyls

ACGIH TLV: 2 mg[Al]/m^3, respirable fraction; A4, not classified as a human carcinogen. Excursion Limit Recommendation: Excursions in worker exposure levels may exceed 3 times the TLV-TWA for no more than a total of 30 minutes during a work day, and under no circumstances should they exceed 5 times the TLV-TWA, provided that the TLV-TWA is not exceeded.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.42 ppm
PAC-2: $\mathbf{2.0}_A$ ppm
PAC-3: $\mathbf{3.6}_A$ ppm

Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values.

OSHA PEL: None

NIOSH REL: 2 mg/m^3 aluminum, soluble salts

The NIOSH[2] recommended airborne exposure limit for soluble aluminum salts (measured as aluminum) is 2 mg/m^3 TWA for a 10-hour workshift. ACGIH recommends the same criterion for an 8-hour workshift[1]. *Note:* Metallic phosphides on clothes, skin, or hair can react with water or moisture to generate phosphine gas (colorless gas; odor of garlic or decaying fish). *Warning*: Highly toxic phosphine gas may evolve from vomitus and feces of victim. For *phosphine*: OSHA PEL = 0.3 ppm (averaged over an 8-hour workshift) NIOSH[2] IDLH (immediately dangerous to life or health) = 50 ppm ERPG-2 (Emergency Response Planning Guideline) (maximum airborne concentration below which it is believed nearly all individuals could be exposed for up to 1 hour without experiencing or developing irreversible or other serious adverse health effects or symptoms that could impair an individuals's ability to take protective action) = 0.5 ppm.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 50-200[Al]μg/L; State Drinking Water Standards: California 1000[Al]μg/L; State Drinking Water Guidelines: Arizona 73 [Al]μg/L; Maine 1430 [Al]μg/L; California 200 [Al]μg/L. EU Drinking Water Guidelines (MAC) = 200 [Al]μg/L.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: A severe health hazard. Irritates the eye, skin and respiratory tract. Inhalation can cause lung irritation with coughing, wheezing, and shortness of breath. Affects metabolism and the central nervous system; exposure can lead to death. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Acute toxicity occurs primarily by the inhalation route when aluminum phosphide decomposes into the toxic gas phosphine. The human median lethal dose for aluminum phosphide has been reported to be 20 mg/kg. Symptoms of phosphine gas poisoning include restlessness, headache, dizziness, fatigue, nausea, vomiting, coma, convulsions; lowered blood pressure, pulmonary edema, respiratory failure, and disorders of the kidney, liver, heart, and brain may be observed. LD_{50} (oral, rat) = 8.7–14 mg/kg; LD_{50} (dermal, rat) = >450 mg/kg.

Long Term Exposure: This chemical may cause lung, kidney, and liver damage. It may be able to cause skin rash or eczema.

Points of Attack: Central nervous system, liver, kidney, lungs.

Medical Surveillance: Lung, liver, kidney, and nervous system function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomitMedical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note to physician or authorized medical personnel (Advanced Treatment for phosphine exposure): In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed begin fluid administration. For adults, bolus 1000 mL/hour intravenous saline or lactated Ringer's solution if blood pressure is under 80 mmHg; if systolic pressure is over 90 mmHg, an infusion rate of 150 to 200 mL/hour is sufficient. For children with compromised perfusion administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.442 ppm. Where potential exists for exposures over 2 mg/m^3 (aluminum), use a NIOSH/MSHA- or European Standard EN149-approved respirator equipped with particulate (dust/fume/mist) filters. Particulate filters must be checked every day before work for physical damage, such as rips or tears, and replaced as needed, or where any potential for exposures to phosphine gas exist, use a NIOSH/MSHA- or European Standard EN149-approved gas mask (Approval number TC-14-98) equipped with a canister offering protection against phosphine, chlorine, hydrogen sulfide, organic vapors, acid gases, and dusts and mists. If the potential for exposure to more than 15 ppm of phosphine gas exists, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode. See phosphine entry.

Storage: (1) Color Code-Yellow Stripe (*strong reducing agent*): Reactivity Hazard; Store separately in a area isolated from flammables, combustibles, or other yellow-coded materials. (2) Color Code-Red: Flammability Hazard: Store in a flammable materials storage area. (2) Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a noncombustible, non-sprinklered building or location, in tightly closed containers in a cool well-ventilated area away from all forms of moisture and strong acids. Aluminum phosphide decomposes in water, forming phosphine gas. Consult the entry on phosphine for more information. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Aluminum phosphide requires a shipping label of "DANGEROUS WHEN WET, POISONOUS/TOXIC MATERIALS." It usually falls in Hazard Class 4.3 and 6.1 (subsidiary), and usually Packing Group I. Highly dangerous. STN: 49-163-05.

Spill Handling: Decomposes in moist air and in water, releasing toxic gaseous phosphine, which may ignite. It is included as a water reactive despite the fact that the coating applied to the particles in the pesticide application is likely to slow the hydrolysis. Based on a scenario where the chemical is spilled into an excess of water (at least 5 fold excess of water), half of the maximum theoretical yield of phosphine gas will be created in 15 minutes. Shut off ignition; no flares, smoking, or flames in hazard area. Do not touch spilled material. Do not get water on spilled material or inside container. Dike spill for later disposal. Blanket release with dry sand, clay, or ground limestone. Shovel small spill into clean, dry container, and cover. Move containers from spill area. Avoid breathing dust. Wear appropriate protective clothing and use appropriate respiratory protection. Cover large powder spill with plastic sheet or tarp to minimize spreading. Clean up only under supervision of an expert. DOT warns that this chemical is spilled in water: Dangerous from 0.5 to 10 km (0.3–6.0 miles) downwind. Clean up and disposal must be supervised by a specialist. For spills, clean up and emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA) or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical-resistant suit. DuPont™ Tychem® has been suggested in the literature. Eliminate all ignition sources. Avoid touching or walking through spilled material. Stop leak if you can do it without risk. Avoid getting water on spilled substance or inside containers. Use water spray to reduce vapors or divert vapor cloud drift. Avoid allowing water runoff to contact spilled material. Cover small spill non-combustible and DRY materials such as lime, earth, sand or soda ash followed with plastic sheet to minimize spreading or contact with rain. Dike for later disposal; do not apply water unless directed to do so[ERG].

Small spills (From a small package or a small leak from a large package)

when spilled in water:

First: isolate in all directions (feet/meters) 300/100
Then: Protect persons downwind (miles/kilometers)
Day 0.3/0.5
Night 1.2/1.9

Large spills (From a large package or from many small packages)

First: isolate in all directions (feet/meters) 2000/600
Then: Protect persons downwind (miles/kilometers)
Day 3.6/5.8
Night 7.0+/11.0+

Fire Extinguishing: This chemical is a combustible solid. Hazardous decomposition includes deadly phosphine, and oxides of phosphorus and aluminum. Keep unnecessary people away; isolate hazard area and deny entry. Stay upwind; keep out of low areas. Move container from fire area if you can do so without risk[ERG]. Violent reaction with extinguishing agents such as water, halogenated agents, water-based foams, and carbon dioxide. On small fires, use dry chemical, soda ash or lime. Do not use any agent with an acid reaction (i. e., carbon dioxide or halogenated agents); toxic and flammable phosphine gas will be released[83]. Small fires can be extinguished with dry chemical, soda ash; clay, or ground limestone, or use an approved Class D extinguisher *Large fires:* withdraw from area and let fire burn. Wear protective suits, gloves, boots, and self-contained breathing apparatus when fighting fires involving zinc phosphide. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. Wear self-contained breathing apparatus when fighting fires involving this material. If contact with the material is anticipated, wear full protective clothing. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

Disposal Method Suggested: Must be supervised and handled by a specialist. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Allow to react slowly with moisture in the open, being sure that phosphine gas evolved is dissipated. Alternatively, mix with dry diluent and incinerate at temperature above 1000 °C with effluent gas scrubbing. Must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Use Type: Herbicide
CAS Number: 834-12-8
Formula: $C_9H_{17}N_5S$
Synonyms: A 1093; AI3-60365; Amyphyt; Cemerim; 2-Ethylamino-4-isopropylamino-6-methylmercarpo-*S*-triazine; Caswell No. 431; 2 Ethylamino- 4-isopropylamino-6-methylthio-*S*-triazine; 2-Ethylamino-4-isopropylamino-6-methylthio-1, 3, 5-triazine;2-(Ethylamino)-4-(isopropylamino)-6-(methylthio)-1,3,5-triazine; 2-(Ethylamino)-4-(isopropylamino)-6-(methylmercapto)-*S*-triazine; 2-(Ethylamino)-4-(isopropylamino)-6-(methylthio)-*S*-triazine; *N*-Ethyl-*N*-isopropyl-6-methylthio-1,3,5-triazine-2,4-diamine; N^2-Ethyl-N^4-isopropyl-6-methylthio-1,3,5-triazine-2,4-diamine; *N*-Ethyl-*N*'-isopropyl-6-methylthio-1,3,5-triazine-2,4-diyldiamine; *N*-Ethyl-*N*'-(1-methylethyl)-6-(methylthio)-1,3,5,-triazine-2,4-diamine; *N*-Ethyl-*N*'-(1-methylethyl)-6-(methylthio)-1,3,5-triazine-2,4-diamine; 2-Methylmercapto- 4-ethylamino-6-isopropylamino-*S*-triazine; 2-Methylmercapto- 4-isopropylamino-6-ethylamino-*S*-triazine; 2-Methylthio-4-ethylamino- 6-isopropylamino-*S*-triazine; NSC 163044; 2-Triazine, 2-ethylamino-4- isopropylamino-6-methylthio-; 1,3,5-Triazine-2, 4-diamine, *N*-ethyl-*N*'-(1-methylethyl)-6-(methylthio)-; *S*-Triazine, 2-(ethylamino)-4-(isopropylamino)-6-(methylthio)-; *S*-Triazine, 2-ethylamino-4-isopropylamino-6-methylthio-
Trade Names: AMESIP®; AMERTREX®; AMETREX; AMETRON SC®; AMETRYNE TECHNICAL®; AMIGAN®; AMULEX; CRISATRINE®; CRISATRINA®; DORUPLANT®; EVIK®; G-34162®; GESAPAX®; HERBIPAK®; KRISMAT®; OXON PRIMATOL Z 80®; SANCOPAX®; TRINATOX-D®
Chemical Class: Triazine
EPA/OPP PC Code: 080801
California DPR Chemical Code: 18
HSDB Number: 1710
UN/NA & ERG Number: UN2763/151
RTECS® Number: XY91000000
EC Number: 212-634-7 [*Annex I Index No.:* 613-010-00-0]
Uses: Ametryn is a herbicide which inhibits photosynthesis and other enzymatic processes. It is used to control broadleaf weeds and annual grasses in pineapple, sugarcane and bananas. Uses are being supported in the U.S. only for the following agricultural crops: field corn, popcorn, sugarcane, and pineapple (EPA, 2005). Used in premixes with atrazine, diuron, simazine, and terbutryn. Not approved for use in the EU.
U.S. Maximum Allowable Residue Levels for Ametryn: [40CFR180258(a)]: banana 0.25 ppm; corn, forage 0.5 ppm; corn, fresh, kernel plus cob with husks removed 0.25 ppm; corn, grain 0.25 ppm; corn, stover 0.5 ppm; pineapple 0.25 ppm; pineapple, fodder 0.25 ppm; pineapple, forage 0.25 ppm; sugarcane, cane 0.25 ppm; sugarcane, fodder 0.25 ppm; sugarcane, forage 0.25 ppm; tanier 0.25 ppm; yams, true, tuber 0.25 ppm. ***[40CFR180258(c)]*** cassava, root 0.1 ppm.
Human toxicity (long-term)[101]: Low–60.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Very low–989.94257 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Data are inadequate for an assessment of human carcinogenic potential
Health Advisory: Nerve Toxin (S!), Mutagen, Developmental/Reproductive Toxin
Acute Oral Category: 3, CAUTION
Superfund/EPCRA 40CFR302.4, Appendix A, Reportable Quantity (RQ): 100 lb (45.5 kg), 40CFR372.65: Form R *de minimis* Concentration Reporting Level: 1.0%
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S36; S60; S61 (see Appendix 1)
Description: Ametryn is a white crystalline powder. Ametryn is available as an 80% emulsifiable concentrate, flowable wettable powder and a wettable powder. Molecular weight = 227.32; Freezing/Melting point = 88–89 °C[88]; Specific gravity (H_2O:1) = 1.19 @ 20 °C; Vapor pressure = 2.5×10^{-6} mmHg. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Soluble in water; solubility = 200 mg/l @ 20 °C.
Incompatibilities: Incompatible with oxidizers, acids, acid chlorides, acid halides, isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides. Contact with strong reducing agents such as halides may generate a flammable gas. Organosulfides are incompatible with acids, diazo and azo compounds, halocarbons, isocyanates, aldehydes, alkali metals, nitrides, hydrides, and other strong reducing agents. Reactions with these materials generate heat and in many cases hydrogen gas. Many of these compounds may liberate hydrogen sulfide upon decomposition or reaction with an acid. Amines are chemical bases. They neutralize acids to form salts plus water. These acid-base reactions are exothermic. The amount of

heat that is evolved per mole of amine in a neutralization is largely independent of the strength of the amine as a base.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 60μg/L; State Drinking Water Guidelines: Maine 60μg/L; Florida 60μg/L.

Determination in Water: Extraction with methylene chloride may be followed by gas chromatography using a nitrogen phosphorus detector. The detection limits are in the range of 0.1 to 2.0μg/L. Log K_{ow} = ~ 3.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, dermal and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: Ametryn is an eye and skin irritant. It is mildly toxic by dermal and/or eye contact. Harmful if swallowed or inhaled. LD_{50} (oral, rat) = 550–1600 mg/kg[83]; LD_{50} (dermal, rabbit) = >2000 mg/kg[83].

Long Term Exposure: It may cause liver degeneration.

Points of Attack: Liver

Medical Surveillance: Herbicides: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong acids. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Triazine pesticides, solid, toxic, n. o. s. require a label of "poisonous materials." They fall in Hazard Class 6.1 and in Packing Group III.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Avoid inhalation of dust; wear respirator. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers. (ERG, 2012) Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Granular activated carbon will remove ametryn from water. Soil Adsorption Index (K_{oc}) = 300.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon and sulfur. Wear positive-pressure self-contained breathing apparatus when fighting fires involving this herbicide. Avoid breathing dusts and fumes from burning material. Keep upwind. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire*: use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Aminocyclopyrachlor A:0745

Use Type: Herbicide

CAS Number: 858956-08-8; 858954-83-3 (methyl ester); 858956-35-1 (potassium salt)

Formula: $C_8H_8ClN_3O_2$

Synonyms: 6-Amino-5-chloro-2-cyclopropyl-4-pyrimidinecarboxylic acid; 6-Amino-5-chloro-2-cyclopropylpyrimidine-4-carboxylic acid

Trade names: IMPRELlIS®; Ortho MAT28; SG Herbicide; DPX-MAT28; VIEWPOINT HERBICIDE; STREAMLINE HERBICIDE; WEED & FEED

Chemical Class: Pyralid

EPA/OPP PC Code: 288008

California DPR Chemical Code: 5998

HSDB Number: 7981

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

Uses: In August 2010, EPA conditionally registered the active ingredient aminocyclopyrachlor for pesticide applications. In August 2011, the EPA issued a Stop Sale, Use or Removal Order for the herbicide Imprelis (which contains the active ingredient aminocyclopyrachlor), which may be causing injury to certain species of evergreen trees, particularly Norway spruce and white pine[83]. Aminocyclopyrachlor is being registered for uses of general weed and brush control on private, public and military lands including sod farms, uncultivated non-agricultural areas such as airports, highways, railroads, golf courses, lumber yards, wildlife habitats, multi-family residential complexes, recreation areas, utility rights of way, with residential use specified for lawn/turf[83]. For control of weeds in cool-season lawn grasses, especially bluegrass. Not listed for use in EU countries[115].

Regulatory Authority and Advisory Information:

Description: Cream to light tan granules or brown liquid with a vinegar-like odor. Molecular weight = 213.62; Specific gravity (H_2O:1) = @ 20 °C; Dissociation constant (pKa) = 4.65 @ 20 °C[83]; Vapor pressure = 3.7×10^{-8} mmHg @ 25 °C[83]. Henry's Law constant = 3.4×10^{-12} atm-m^3/mol @ 25 °C (est)[83]. Soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Dust may form explosive mixture with air. Keep away from strong oxidizers, heat and flame. *Methyl ester*: May react with acids to liberate heat along with alcohols and acids. Strong oxidizing acids may cause a vigorous reaction that is sufficiently exothermic to ignite the reaction products. Heat is also generated by the interaction of esters with caustic solutions. Flammable hydrogen is generated by mixing esters with alkali metals and hydrides. As an ester, it will hydrolyze to form sulfur dioxide and alcohols; reaction is more rapid under basic conditions. It may react exothermically with acids to generate alcohols. Heat will be generated by interaction with basic or caustic solutions. Flammable hydrogen is generated by mixing with alkali metals and hydrides.

Permissible Exposure Limits in Air: AEL*: 5 mg/m^3 8 & 12 hr. TWA (respirable dust)

AEL*: 10 mg/m^3 8 & 12 hr. TWA (total dust)

Determination in Air: See Analytic Laboratory Methods in the Hazardous Substance Data Bank Number 7981.

*AEL = DuPont™'s (AEL) Acceptable Exposure Limit. Where governmentally imposed occupational exposure limits which are lower than the AEL are in effect, such limits shall take precedence.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = –2.5. Negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the skin, eyes, and respiratory tract. LD_{50} (oral, rat) = >5 g/kg.; LD_{50} (dermal, rat) = >5 g/kg[83].

Long Term Exposure: Unknown. Potential health effects of pyralid herbicide contaminants in foods have not been fully investigated.

First Aid: Eyes: First check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. *Immediately* transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop. Skin: *Immediately* flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, *immediately* call a physician and be prepared to transport the victim to a hospital for treatment.

Inhalation: *Immediately* leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, self-contained breathing apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing. Ingestion: *Do not induce vomiting.* If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and *immediately* call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Immediately* transport the victim to a hospital.

Personal Protective Methods: Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]

Storage: Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, acids, water, or combustible materials. Do not contaminate water, food or feed by disposal. Store product in original container only in a location inaccessible to children and pets. Not for use or storage in or around the home[DuPontTM]. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride fumes. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See 40 CFR Parts 261.3 for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations.

Aminopyralid A:0747

Use Type: Herbicide

CAS Number: 150114-71-9

Formula: $C_6H_4Cl_2N_2O_2$

Synonyms: 4-Amino-3,6-dichloropicolinic acid; 4-Amino-3,6-dichloropyridine-2-carboxylic acid; 4-Amino-3,6-

dichloro-2-pyridinecarboxylic acid; 2-Pyridinecarboxylic acid, 4-amino-3,6-dichloro-

Trade names: BANISH®; FOREFRONT®; HALCYON®; MILESTONE® VM; PHARAOH®; PRO-BANISH®; RUNWAY®; SYNERO®; UPFRONT®

Chemical Class: Pyridinecarboxylic acid; Picolinic acid; Pyridine Carboxylic acid

EPA/OPP PC Code: 005100

California DPR Chemical Code: 5927

HSDB Number: 7939

UN/NA & ERG Number:

Uses: A systemic, post-emergence herbicide for industrial vegetation and pastures. Used to control woody plants, clovers, and thistles. This herbicide is absorbed by roots and leaves. Not listed for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for for residues of the herbicide aminopyralid including its metabolites and degradates, in or on the following commodities. Compliance with the tolerance levels specified below is to be determined by measuring only aminopyralid. [40 CFR 180.610(a)(1)]: corn, field, forage 0.30 ppm; corn, field, grain 0.20 ppm; corn, field, stover 0.20 ppm; grain, aspirated fractions 0.2 ppm; grass, forage 25 ppm; grass, hay 50 ppm; wheat, bran 0.1 ppm; wheat, forage 2.0 ppm; wheat, grain 0.04 ppm; wheat, hay 4.0 ppm; wheat, straw 0.25 ppm. ***[40 CFR 180.610(a)(2)]:*** cattle, fat 0.02 ppm; cattle, kidney 0.3 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts, except kidney 0.02 ppm; goat, fat 0.02 ppm; goat, kidney 0.3 ppm; goat, meat 0.02 ppm; goat, meat byproducts, except kidney 0.02 ppm; horse, fat 0.02 ppm; horse, kidney 0.3 ppm; horse, meat 0.02 ppm; horse, meat byproducts, except kidney 0.02 ppm; milk 0.03 ppm; sheep, fat 0.02 ppm; sheep, kidney 0.3 ppm; sheep, meat 0.02 ppm; sheep, meat byproducts, except kidney 0.02 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, not likely to be carcinogenic to humans.

EPA Oral reference dose (RfD) = 0.05 mg/kg/day

Acute Oral Category: 4, Caution; The technical product is in Category I, DANGER–POISON (human, fatal <1 teaspoon/5 gm).

Description: Yellowish to off-white powder. Odorless. Commercial products may be available as a flammable concentrated emulsion, oil in water, that may be mixed with water for spraying. Molecular weight = 207.026; Specific gravity (H_2O:1) = 1.72 @ 20 °C[83]; Boiling point = (decomposes); Freezing/Melting point = 161.75–165.23 °C[83]; 163.5 °C[Dow]; Vapor pressure = 1.59×10^{-10} mmHg @ 25 °C; Henry's Law constant = 1.74×10^{-12} atm-m^3/mol @ 25 °C (est)[83]. Soluble in water; solubility = 205 g/L @ pH = 7.

Incompatibilities: Dust may form explosive mixture with air. Keep away from strong oxidizers and strong acids, and isothiocyantes. May be flammable and corrosive.

Determination in Water: Log K_{ow} = >–2.0–<–3.0 @ pH 7. Negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: An irritant. May be able to pass through the unbroken skin. Contact may cause eye damage. Lower levels may cause irritation of the skin, and respiratory tract. May be harmful if swallowed or inhaled. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: High levels may cause stomach ulcers.

Points of Attack: Gastrointestinal tract. Mucosal lining of the stomach.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following absorbent materials: Mineral-Based and Clay-Based[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, acids, water, or combustible materials. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Depending on formulation, the dry material may be classified as Environmentally hazardous substances, solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the liquid spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon, hydrogen chloride and chlorine gases. *Small fires:* dry chemical, carbon dioxide; water spray; or alcohol foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Amitraz A:0940

Use Type: Insecticde, Acaricide, Veterinary medicine

CAS Number: 33089-61-1

Formula: $C_{19}H_{23}N_3$

Synonyms: A13-27967; Amitraze; Amitraz estrella; *N,N*-Bis(2,4-xylyliminomethyl)methylamine; 1,5-Di-(2,4-dimethylphenyl)-3-methyl-1,3,5-triazapenta-1,4-diene; *N'*-(2,4-Dimethylphenyl)-3-methyl-1,3,5-triazapenta-1,4-diene; *N'*-(2,4-Dimethylphenyl)-*N*-[((2,4-dimethylphenyl) imino)methyl]-*N*-methylmethanimidamide; *N,N*-Di-(2,4-xylyliminomethyl)methylamine; ENT 27967; Formamidine, *N*-methyl-*N'*-2,4-xylyl-*N*-(*N*-2,4-xylylformimidoyl)-; *N*-Methylbis(2,4-xylyliminomethyl) amine; 2-Methyl-1,3-di(2,4-xylylimino)-2-azapropane; *N,N'*-[(Methylimino)dimethylidyne]bis(2,4-xylidine); *N,N'*-[(Methylimino)dimethylidyne]d-2,4-xylidine; NSC 324552; OMS 1820; R. D.27419; 2,4-Xylidine, *N,N'*-(methyliminodimethylidyne)bis-

Trade Names: AAZDIENO®; ACARAC®; ACADREX®; ARMY®; AZODIENO®; BAAM®; BOOTS BTS 27419®; BTS 27,419®; BUMETRAN®; COYOTE®; DANICUT®; ECTODEX®; EDRIZAN®; EDRIZAR®; GARIAL®; ISTAMBUL®; MITABAN®; MITAC®; OVASYN®; OVIDREX®; PARSEC®; ROTRAZ®; SENDER®; TAC-PLUS®; TACTIK®; TRIATIX®; TRIATOX®; TUDY®; VAPCOZIN TAKTIC®; UPJOHN U-36059®

Chemical Class: Formamidine

EPA/OPP PC Code: 106201

California DPR Chemical Code: 2016

HSDB Number: 6939

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: ZF0480000

EC Number: 251-375-4 [*Annex I Index No.:* 612-086-00-2]

Uses: Registered for control of pear psylla on pears, whitefly and mites on pears and cotton; cattle, dogs, sheep, and hog dip to control ticks, mange mites, lice and other pests. Not permitted on apples. Used to control red spider mites, leaf miners, scale insects, and aphids. Also used on cotton to control bollworms, white fly, leaf worms, and tobacco budworms. Not registered for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for amitraz and its metabolites containing the 2,4-dimethylaniline moiety (calculated as the parent) in or on the following food commodities: [40 CFR 180.287]: cattle, fat 0.1 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts 0.2 ppm; cotton, undelinted seed (there are no U.S. registrations on cottonseed as of may 3, 2006) 1.0 ppm; hog, fat 0.1 ppm; hog, kidney 0.1 ppm; hog, liver 0.1 ppm; hog, meat 0.05 ppm; hog, meat byproducts 0.3 ppm; milk 0.03 ppm; milk, fat 0.2 ppm.

Human toxicity (long-term)[101]: Extra high–0.30973 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Very low–12422.37656 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

California Proposition 65 Developmental/Reproductive toxin (3/3/1999)

Health Advisory: Nerve Toxin (S!), Developmental/ Reproductive Toxin

Acute Oral Category: 2, WARNING

CERCLA/SARA 40CFR372.65: Form R *de minimis* Concentration Reporting Level: 1.0%

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R36; R38; R48/22; R43; R50/53; safety phrases: S2; S22; S24; S36/37; S60; S61 (see Appendix 1)

Description: Amitraz forms white to pale yellow needle-like crystals. Commercial product is available as an emulsifiable concentrate and wettable powder. Liquid formulations may contain flammable organic solvents. Molecular weight = 293.45; Specific gravity (H_2O:1) = 1.129 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 86–87 °C; Vapor pressure = 2.6×10^{-6} mmHg. Practically insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Unstable in acidic media. Decomposes on burning, producing toxic fumes including nitrogen oxides. When stored for prolonged periods, slow decomposition occurs.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, skin

Harmful Effects and Symptoms

Short Term Exposure: This chemical is poisonous if ingested or absorbed through the skin. Eye or dermal contact can cause irritation. It may affect the central nervous system. May cause sedation with slow heart beat, low blood pressure, low body temperature. Because amitraz has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. LD_{50} (oral, rat) = <500 mg/kg; LD_{50} (dermal, rabbit) = >200 mg/kg[83].

Long Term Exposure: Prolonged or repeated exposure may cause organ damage. May affect the central nervous system and liver. Amitraz metabolizes to 2,4-dimethylaniline, which is a potential human carcinogen. May cause skin sensitization.

Points of Attack: Eyes, skin, central nervous system

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following kinds of absorbents: Mineral- and Clay-Based[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area, away from fertilizers, seed, and other pesticides, flammable materials and sources of heat and flame. Do not reuse containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line). Soil Adsorption Index (K_{oc}) = 1000 Estimate.

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR 165 recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Amitrole A:0945

Use Type: Herbicide, Plant growth regulator
CAS Number: 61-82-5
Formula: $C_2H_4N_4$
Synonyms: Aminotriazole; 2-Aminotriazole; 3-Aminotriazole; 3-Amino-*S*-triazole; 3-Amino-1,2,4-triazole; 2-Amino-1,3,4-triazole; 3-Amino-1*H*-1,2,4-triazole; ATA; Caswell No. 040; ENT 25445; 1,2,4-Triazol-3-amine; Triazolamine; 1*H*-1,2,4-Triazol-3-amine; *S*-Triazole, 3-amino-; δ-2-1,2,2,4-Triazoline, 5-imino-; 1*H*-1,2,4-Triazol-3-ylamine
Trade Names: AMITRIL®; ATLAZIN®; ATLAZINE® FLOWABLE; AT®; 3-AT®; AT-90®; ATRAFLOW PLUS®; AZAPLANT®; AZAPLANT KOMBI®; AZOLAN®; AZOLE®; BOROFLOW® A/ATA; CAMPAPRIM® A 1544; CDA SIMFLOW PLUS®; CHIPMAN® PATH; CYTROLE®; DIUROL® AMITROLE; DOMATOL®; ELMASIL®; EMISOL®; FARMCO®; HERBAZIN PLUS SC®; HERBICIDE® TOTAL; MASCOT HIGHWAY®; MSS AMINOTRIAZOLE®; MSS SIMAZINE®; ORGA-414®; RADOXONE® TL; RAMIZOL®; RASSAPRON®; SIMAZOL®; SIMFLOW PLUS®; SOLUTION CNCENTREE T271®; SYNCHEMICALS® TOTAL WEED KILLER; SYNTOX®; TORAPRON®; VOROX®; WEEDAR®; WEEDAZIN®; WEEDAZOL TL ®; WEEDOCLOR®
Chemical Class: Azole; Triazole
EPA/OPP PC Code: 004401
California DPR Chemical Code: 20
HSDB Number: 2953
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: XZ3850000
EC Number: 200-521-5 [*Annex I Index No.:* 613-011-00-6]
Uses: A non-food use herbicide for control of grasses, woody plants and broad-leaf weeds on hard surface and in areas where crops are not normally grown.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen; ACGIH A3 Confirmed animal carcinogen with unknown relevance to humans
California Proposition 65 Chemical: Carcinogen (7/1/1987)
Acute Oral Category: 4, Caution
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)
EPA Hazardous Waste Number (RCRA No.): U011
RCRA Land Ban Waste Restrictions
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R48/22; R51/53; R63; safety phrases: S2; S36/37; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Amitrol is a colorless to off white crystalline solid. Odorless when pure. Commercial product is available in flakes, as an emulsifiable concentrate, and wettable powder. Molecular weight = 84.08; Specific gravity (H_2O:1) = 1.1138 @ 20 °C[88]; Boiling point = (decomposes); Freezing/Melting point = 158.89 °C[88]; Vapor pressure = 4.4×10^{-7} mmHg @ 20 °C[83]; 2.4×10^{-4} mmHg @ 60 °C. Highly soluble in water; solubility = 2.6×10^{5} ppm @ 25 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Dusts may form explosive mixture with air. The triazoles are sensitive to heat, friction, and impact. Sensitivity varies with the type substitution to the triazole ring. Metal chelated and halogen substitution of the triazol ring make for a particularly heat-sensitive material. Azido and nitro derivatives have been employed as high explosives. No matter the derivative these materials should be treated as explosives[88]. Incompatible with strong oxidizers, strong acids, and light (decomposes). Corrosive to iron, aluminum, and copper.

Permissible Exposure Limits in Air: NIOSH IDLH: Potential occupational carcinogen

OSHA PEL: None; Vacated 1989 OSHA PEL0.2 mg/m³ is still enforced in some states.

NIOSH REL: 0.2 mg/m³

ACGIH TLV: 0.2 mg/m³ A3 Confirmed animal carcinogen with unknown relevance to humans. Excursion Limit Recommendation: Excursions in worker exposure levels may exceed 3 times the TLV-TWA for no more than a total of 30 minutes during a work day, and under no circumstances should they exceed 5 times the TLV-TWA provided that the TLV-TWA is not exeeded.

DFG MAK: 0.2 mg/m³, total dust

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.6 mg/m³
PAC-2: 8.2 mg/m³
PAC-3: 220 mg/m³

Determination in Air: NIOSH Method #0500(18)

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <–1.0. Negative. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Amitrol can be absorbed through the skin, thereby increasing exposure. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. LD_{50} (oral, rat) = >2.5 g/kg; LD_{50} (dermal, rat) = >2.5 g/kg.

Long Term Exposure: Causes liver, thyroid, and pituitary cancer in animals. May damage the developing fetus. May cause liver, thyroid gland (possible goiter or underactive thyroid), and pituitary gland damage. Carcinogenicity is the primary observed effect. Amitrole is carcinogenic in mice and rats, producing thyroid and liver tumors following oral or subcutaneous administration.

Points of Attack: Liver, thyroid, and pituitary gland. Suspected reproductive toxin; may impair the reproductive capabilities in men and/or women.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Before beginning employment and at regular times after that, the following is recommended: Physical examination of the thyroid and thyroid function tests (T_4, TSH, and T_3). If symptoms develop or overexposure is suspected, the following may be useful: Liver function tests. Pituitary gland function tests. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group II or III.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressurestreams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

Anthraquinone A:1390

Use Type: Repellent, Seed treatment

CAS Number: 84-65-1

Formula: $C_{14}H_8O_2$

Synonyms: 9,10-Anthracenedione; Anthradione; 9,10-Anthraquinone; Antraquinona (Spanish); 9,10-Dioxoanthracene; Anthradione

Trade Names: (*p*)ANTHRAPEL®; FLIGHT CONTROL-PLUS®; HOELITE®; MORKIT®; REPELL®

Chemical Class: Unclassified

EPA/OPP PC Code: 122701

California DPR Chemical Code: 5229

HSDB Number: 2074

UN/NA & ERG Number: UN1325/133; UN3143/151

RTECS® Number: CB4725000

EC Number: 201-549-0

Uses: Used as a seed dressing or protectant. Banned in EU.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: IARC:[12] Group 2b possible carcinogen to humans.

California Proposition 65 Chemical: Cancer (9/28/2007)

Health Advisory: Mutagen

Atmospheric Standards: ***[40 CFR 60.489]:*** Anthraquinone is produced, as an intermediate or a final product, by process units covered under standards of performance for equipment leaks of Volatile Organic Compounds (VOC) in the Synthetic Organic Chemical Manufacturing Industry (SOCMI).

TSCA 40CFR704.30; 40CFR716.120(a) List of substances; 40CFR712.30(m); 40CFR799.500 Testing Requirements. Export notification required by §12(b)

WGK (German Aquatic Hazard Class): 1-Low hazard to waters.

Description: Anthraquinone is a combustible, light yellow to green crystalline solid. Molecular weight = 208.22; Specific gravity (H_2O:1) = 1.438 @ 20 °C; Boiling point = 378.89–381.11 °C; Freezing/Melting point = (sublimes) 286.11 °C; Vapor pressure = 1 @ 190 °C; Flash point = 185 °C (cc)[17]. Autoignition temperature = 650 °C. Explosive limits: LEL = 0.8%; UEL 4.75%. NFPA 704 M Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Very slightly soluble in water; solubility = <1 mg/L @ 22.8 °C.

Incompatibilities: A weak acid. Incompatible with alkaline material and bases. Contact with strong oxidizers may cause fire and explosions.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.87 mg/m^3
PAC-2: 9.6 mg/m^3
PAC-3: 57 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, inhalation, dermal contact; absorbed through the unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: Can be absorbed through the skin, thereby increasing exposure. Eye or dermal contact can cause irritation. An allergen, may cause skin irritation and sensitization. Severe poisoning may cause seizures and coma. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >500 mg/kg.

Long Term Exposure: May cause skin allergy. It may be mutagenic and cause tumors.

Points of Attack: Skin and lungs. May cause reproductive, chromosome, and DNA damage.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 0.87 mg/m^3 NIOSH: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents, and combustible materials. Sources of ignition, such as smoking and open flames, are prohibited where the chemical is handled, used, or stored. Use only non-sparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Flammable solids, organic, n. o. s. Hazard Class 4.1, Packing Group II or III. Technical name required.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with toluene to avoid airborne dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. This chemical is a combustible solid. Use dry chemical, water spray, or alcohol-resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Antimycin A A:1490

Use Type: Fungicide, Piscicide

CAS Number: 1397-94-0 (A-); 11118-72-2 (Antimycin/Fintrol); 518-75-2 (Antimycin/Citrinin); 642-15-9 (A_1-Dimidin); 522-70-3 (A_3-); 27220-59-3 (A_4-) *Note:* Both A_1 CAS numbers are found in RTECS, with the same chemical formula, although EPA regulates only 1397-94-0 as Antimycin A

Formulas: $C_{28}H_{40}N_2O_9$ (Antimycin A_1); $C_{26}H_{36}N_2O_9$ (Antimycin A_3); $C_{25}H_{34}N_2O_9$ (Antimycin A_4)

Synonyms: Antimicina A (Spanish); Antimycin A; Antipiricullin; Dihyrosamidin; Isovaleric acid-8-ester with 3-formamido-*N*-(7-hexyl-8-hydroxy-4,9-dimethyl-2,6-dioxo-1,5-dioxonan-3-yl)salicylamide isovaleric acid 8 ester

Trade Names: FINTROL®; VIROSIN®

Chemical Class: Antibiotic; Natural product

EPA/OPP PC Code: 6314

California DPR Chemical Code: 1001; 2001(1397-94-0)

HSDB Number: 6417

UN/NA & ERG Number: UN2811 (toxic solid, organic, n. o. s.)/154

RTECS® Number: CD0350000

EC Number: 208-257-2 (Antimycin/Citrinin) (CAS 518-75-2)

Uses: A U.S. EPA restricted Use Pesticide (RUP). May also be used as an insecticide.

Regulatory Authority and Advisory Information: *518-75-2 (Antimycin/Citrinin)*

IARC: Animal Inadequate Evidence; Human No Adequate Data, *not classifiable as carcinogenic to humans*, Group 3

Health Advisory: Mutagen

CERCLA/SARA 40CFR302 Extremely Hazardous Substances: TPQ = 1000/10,000 lb (454/4540 kg)[7]

CERCLA Reportable Quantity (RQ): 1 lb (0.454 kg)

WGK (German Aquatic Hazard Class): 3-Highly water polluting (*Antimycin A*-)

Description: Antimycin ($A_3C_{26}H_{36}N_2O_9$) and antimycin A_1 ($C_{28}H_{40}N_2O_9$) are crystalline solids. Molecular weight = 548.71 (A); 520.64 (A_3-); 506.6 (A_4-); Freezing/Melting point = 170–175 °C; 149–150 °C (A_1); 174–175 °C (A_3); Vapor pressure = 1×10^{-5} mmHg @ 25 °C. These substances are complex 9-membered (2 oxygens and 7 carbons) ring derivatives with complex side chains. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Insoluble in water.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.16 mg/m^3
PAC-2: 1.8 mg/m^3
PAC-3: 5.5 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion and intramuscular

Harmful Effects and Symptoms

Short Term Exposure: Subcutaneous, intravenous, and intraperitoneal route poisons. Moderately toxic by ingestion and intramuscular routes. LD_{50} (oral rat) = <1 to 28 mg/kg(9); LD_{50} (dermal, rat) = 25 mg/kg.

Long Term Exposure: May be mutagenic[9].

Points of Attack: Reproductive system, DNA

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.16 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides. *Fire involving storage or vehicular tanks: isolate* for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire*: dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads*: fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

HSDB Number: 413

UN/NA & ERG Number: UN2763/151

RTECS® Number: XY5600000

EC Number: 217-617-8 [*Annex I Index No.:* 613-068-00-7]

Uses: Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP). In 2009 a report from the Natural Resources Defense Council (NRDC) reported that atrazine is the most commonly detected pesticide in U.S. waters. Atrazine is a selective pre- and post-emergence herbicide used for the control of broadleaf and grassy weeds in crops, such as corn (field and sweet), guava, hay, macadamia nuts, range grasses for the establishment of permanent grass cover on range lands and pastures in Oklahoma, Nebraska, Texas and Oregon, wheat, residential and recreational turf and sod farms, sorghum, sugarcane, pineapples, and Christmas trees and ornamentals. It is also used in forestry and, at higher application rates, for non-selective weed control in non-crop areas. It is the most widely used pesticide in the United States. Use data from 1900 to 1997 indicate that approximately 76.5 million pounds of atrazine active ingredient is used domestically each year. Certified herbicide workers may spread atrazine on crops or crop lands as a powder, liquid, or in a granular form. Atrazine is usually used in the spring and summer months. For it to be active, atrazine needs to dissolve in water and enter the plants through their roots. It then acts in the shoots and leaves of the weed to stop photosynthesis. Atrazine is taken up by all plants, but in plants not affected by atrazine it is broken down before it can have an effect on photosynthesis. Atrazine degrades into hydroxy compounds and chlorotriazine degradates. The application of atrazine to crops as a herbicide accounts for almost all of the atrazine that enters the environment, but some may be released from manufacture, formulation, transport, and disposal. Atrazine does not tend to accumulate in living organisms such as algae, bacteria, clams, or fish, and, therefore, does not tend to build up in the food chain. Atrazine can be applied by ground boom sprayer, aircraft, tractor-drawn spreader, rights-of-way sprayer, hand-held sprayer, backpack sprayer, lawn handgun, push-type spreader, and bellygrinder.

U.S. Maximum Allowable Residue Levels for Atrazine [40 CFR 180.220]: cattle, fat 0.02 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts 0.02 ppm; corn, field, forage 15 ppm; corn, field, grain 0.20 ppm; corn, field, stover 0.5 ppm; corn, pop, forage 1.5 ppm; corn, pop, grain 0.20 ppm; corn, pop, stover 0.5 ppm; corn, sweet, forage 15 ppm; corn, sweet, kernel plus cob with husks removed 0.20 ppm; corn, sweet, stover 2.0 ppm; goat, fat 0.02 ppm; goat, meat 0.02 ppm; goat, meat byproducts 0.02 ppm; grass, forage 4.0 ppm; grass, hay 4.0 ppm; guava 0.05 ppm; horse, fat 0.02 ppm; horse, meat 0.02 ppm; horse, meat byproducts 0.02 ppm; milk 0.02 ppm; nut, macadamia 0.20 ppm; sheep, fat 0.02 ppm; sheep, meat 0.02 ppm; sheep, meat byproducts 0.02 ppm; sorghum, forage, forage 15 ppm; sorghum, grain forage 15 ppm; sorghum, grain, grain 0.20 ppm; sorghum, grain, stover 0.50 ppm; sugarcane, cane 0.20 ppm; wheat, forage 1.5 ppm; wheat, grain 0.10 ppm; wheat, hay 5.0 ppm; wheat, straw 0.50 ppm. ***[40 CFR 180.220 (d)]*** vegetable, leafy, except brassica, group 4, 0.25 ppm.

Human toxicity (long-term)[101]: High–3.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Intermediate–88.31816 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans; ACGIH A4, not classified as a human carcinogen.

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer, Endocrine disruptor (Known)

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13149)

U.S. EPA TSCA Section 8(e) Risk Notification, 8EHQ-0892-8894

Safe Drinking Water Act: 40CFR141.61(c)5, MCL, 0.003 mg/L; 40CFR141.50(b)7, MCGL 0.003 mg/L; 40CFR142.62, Variances and Exceptions from the MCLs; 40CFR9352 Regulated Chemical; 40CFR141.24, Requirements for Sampling and Analytical Testing; 40CFR 141.32 Public Notification Requirements

CERCLA/SARA 40CFR372.65: Form R *de minimis* Concentration Reporting Level: 0.1%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases R43; R48/22; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Atrazine is a white, odorless, crystalline solid or powder. Commercial products are often mixed with a flammable liquid, such as methanol. Specific gravity (H_2O:1) = 1.19 @ 20 °C (solid); = 215.72; Boiling point = decomposes; Freezing/Melting point = 175–177 °C; Specific gravity (H_2O:1) = 1.19; Vapor pressure = 3×10^{-7}. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0; Solution in methanol: Health 2, Flammability 3, Reactivity 0. Slightly soluble in water; solubility 0.003%. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers, acids, acid chlorides, acid halides, isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides. Contact with strong reducing agents such as halides may generate a flammable gas.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 5 mg/m^3 TWA

ACGIH TLV®[1]: 5 mg/m^3 TWA; not classifiable as a human carcinogen

No Protective Action Criteria (PAC) available.

DFG MAK: 2 mg/m^3, inhalable fraction TWA; Peak Limitation Category II(8) (2004)

Determination in Air: Use OSHA versatile sampler-2; Reagent; Gas chromatography/Electron capture detection; NIOSH #5602(18)

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 3 μg/L; State Drinking Water Standards: California 1 μg/L; State Drinking Water Guidelines: Arizona 3 μg/L; Minnesota 3 μg/L.

Determination in Water: Analysis of atrazine is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen-phosphorus-containing pesticides in water samples. In this method, approximately 1 L of sample is extracted with methylene chloride. The extract is concentrated, and the compounds are separated using capillary column GC. Measurement is made using a nitrogen phosphorus detector. The method detection limit has not been determined for this compound, but it is estimated that the detection limits for the method analytes are in the range of 0.1 to 2 μg/L. Log K_{ow} = >2.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal contact; passing through the unbroken skin

Harmful Effects and Symptoms

Short Term Exposure: Contact may cause congestion of heart, lungs and kidneys; low blood pressure; muscle spasms; weight loss; damage to adrenal glands, and skin and severe eye irritation. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. LD_{50} (oral, rat) = 1900 mg/kg; LD_{50} (dermal, rat) = >3000 mg/kg.

Long Term Exposure: Atrazine interrupts regular hormone function, causing birth defects, reproductive tumors, and weight loss in mothers and embryos. Atrazine may cause skin sensitization and allergy. Atrazine has the potential to cause weight loss, cardiovascular damage, retinal and some muscle degeneration, and mammary tumors from a lifetime exposure at levels above the MCL. There is the increased risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects of atrazine on the hypothalamic pituitary gonadal axis. May be a neurotoxin.

Points of Attack: Eyes, skin, respiratory system, central nervous system, liver, kidneys. May cause reproductive and fetal effects.

Medical Surveillance: Evaluation by a qualified allergist. Examination of the nervous system. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure;

Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Should be stored in tightly closed containers away from strong acids. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Triazine pesticides, solid, toxic, n. o. s. require a shipping label of “poisonous materials.” Triazines fall in Hazard Class 6.1.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Collect spilled dry material in the most convenient and safe manner and deposit in sealed containers for reclamation or for disposal in an approved facility. Absorb liquid containing atrazine in vermiculite, dry sand, earth, or similar material. Treatment technologies which will remove atrazine from water include activated carbon adsorption, ion exchange, reverse osmosis, ozone oxidation and ultraviolet irradiation. Conventional treatment methods have been found to be ineffective for the removal of atrazine from drinking water. Limited data suggest that aeration would not be effective in atrazine removal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index K_{oc} = 100.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and nitrogen oxide. Extinguish fire using an agent suitable for the type of surrounding fire; atrazine itself does not burn. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or car/trailer loads:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Atrazine is hydrolyzed by either acid or base. The hydroxy compounds are generally herbicidally inactive, but their complete environmental effects are uncertain. However, the method appears suitable for limited use and quantities of triazine. Atrazine underwent >99% decomposition when burned in a polyethylene bag, and combustion with a hydrocarbon fuel would appear to be a generally suitable method for small quantities. Combustion of larger quantities would probably require the use of a caustic wet scrubber to remove nitrogen oxides and HCl from the product gases.

Auramine A:1620

Use Type: Fungicide

CAS Number: 492-80-8; 2465-27-2 (hydrochloride salt)

Formula: $C_{17}H_{21}N_3$; $(CH_3)_2N\text{-}C_6H_4CNH\text{-}C_6H_4\text{-}N(CH_3)_2$

Synonyms: Apyonine auramarine base; Auramina (Spanish); Auramine base; Auramine *N* base; Auramine OAF; Auramine O base; Auramine SS; Basic Yellow 2; Baso Yellow 124; Benzeneamine, 4,4'-cabonimidoyl-bis[*N*-dimethyl-; C. I. Solvent Yellow 34; Brilliant Oil Yellow; 4,4'-carbonimidoylbis(*N,N*-dimethylbenzenamine); C. I.41000B; C. I. Basic Yellow 2, free base; C. I. Solvent Yellow 34; 4,4'-Dimethylaminobenzophenonimide; Glauramine; 4,4-(Imidocarbonyl)bis(*N,N*-dimethylaniline); Tetramethyldiaminodiphenylacetimine; Yellow pyoctanine

Trade Names: WAXOLINE YELLOW O®

Chemical Class: Unclassified

EPA/OPP PC Code: 039501

California DPR Chemical Code: 702

HSDB Number: 2935

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: BY3500000; BY3675000 (hydrochloride salt)

EC Number: 207-762-5 [*Annex I Index No.:* 612-096-00-7]; 219-567-2 Not listed in Annex I (*hydrochloride*)

Uses: Auramine is used industrially as a dye or dye intermediate for coloring textiles, paper, and leather. Also used as an antiseptic (a powerful antiseptic in ear and nose surgery and in gonorrhea treatment)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: IARC: Animal Sufficient Evidence, Human Sufficient Evidence, *carcinogenic to humans*, Group 1; *Technical grade*: Human Possibly Carcinogenic, *possibly carcinogenic to humans*, Group 2b, 1998

California Proposition 65 Chemical: Cancer (7/1/1987)

Health Advisory: Mutagen (*hydrochloride*)

U.S. EPA Hazardous Waste Number (RCRA No.): U014 (as C. I. Solvent Yellow 34)

Superfund/EPCRA 40CFR302.4, Appendix A, Reportable Quantity (RQ): 100 lb (45.4 kg)

CERCLA/SARA 40CFR372.65: Form R *de minimis* Concentration Reporting Level: 0.1%

European/International Regulations (*492-80-8 and salts*): Hazard Symbol: Xn, N; risk phrases: R22; R36; R40; R51/53; safety phrases: S2; S36/37; S61 (see Appendix 1)

Description: Auramine is a yellow crystalline powder or flaky material. Molecular weight = 267.4; 321.85 (*hydrochloride*) Freezing/Melting point = 136 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0; (*hydrochloride*) Health 3, Flammability 0, Reactivity 0. Insoluble in water.

Incompatibilities: Strong oxidizers. Emits nitrogen oxides and hydrogen chloride when heated to decomposition

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) ver.27

2465-27-2

PAC-1: 0.49 mg/m^3
PAC-2: 5.4 mg/m^3
PAC-3: 53 mg/m^3

technical grade and hydrochloride

DFG MAK: [skin] Carcinogen Category 2

No numerical occupational exposure limits (OELs) have been established. However, auramine may be a carcinogen; there may be no safe level of exposure. This chemical can be absorbed through the skin, thereby increasing the potential for exposure. Zero in New York, North Dakota[60] in ambient air.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin absorption. Low-level dermal exposure to the consumer may occur but would be limited to any migration of auramine from fabric, leather, or paper goods.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate the eyes, and may cause damage. Skin absorption may result in dermatitis and burns, nausea and vomiting.

Long Term Exposure: Commercial auramine is carcinogenic in mice and rats after oral administration, producing liver tumors, and after subcutaneous injection in rats, producing local sarcomas. May cause reproductive and fetal effects.

Points of Attack: Liver, bladder. Reproductive cells.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Monthly urinalysis. Physical exam every 6 months focused on bladder.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention.

Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *Where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with auramine you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group I or II.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Cover with sand and soda ash. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters (0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incinerate in furnace with afterburner and scrubber[24].

Azadirachtin A:1625

Use Type: Insecticides, Nematicide

CAS Number: 11141-17-6

Formula: $C_{35}H_{44}O_{16}$

Synonyms: Azadirachtin A; Dimethyl (3S,3aR,4S,5S,5aR,5a + 1R,7aS,8R,10S,10aS)-8-acetoxy-3,3a,4,5,5a,5a + 1,7a,8,9,10-decahydro-3,5-dihydroxy-4-

((1S,3S,7S,8R,9S,11R)-7-hydroxy-9-methyl-2,4,10-trioxatetracyclo(6.3.1.0 + 3.7.0 + 9.11) dodec-5-en-11-yl)-4-methyl-10((E)-2-methylbuy-2-enoyloxy)-1H,7H-naphtho(1,8a,8-bc:4,4a-c')difuran-3,7a-dicarboxylate; Dimethyl (2aR-(2aalpha,3beta,4beta(1aR*,2S*,3aS*,6aS*,7S*,7aS*),4abeta,5alpha,7aS*,8beta(E),10beta,10aalpha,10bbeta))-10-(acetyloxy)octahydro-3,5-dihydroxy-4-methyl-8-((2-methyl-1-oxo-2-butenyl)oxy)-4-(3a,6a,7,7a-tetrahydro-6a-hydroxy-7a-methyl-2,7-methanofuro(2,3-b)oxireno(e)oxepin-1a(2H)-yl)-1H,7H-naphtho(1,8-bc:4,4a-c')difuran-5,10a(8H)-dicarboxylate

Trade Names: ALIGN®; AZATIN EC®; AZATIN®-XL PLUS; AZATROL EC®; AMAZIN® ECOZIN® EI-783®; MARGOSAN-O®; NEEM®; NEEMAZAL®; ORNAZIN® SALANNIN®; SUPERNEEM®; TURPLEX®

Chemical Class: Tetranortriterpenoid; Botanical

EPA/OPP PC Code: 121701

California DPR Chemical Code: 2328

HSDB Number: 7372

UN/NA & ERG Number: UN3077(solid)/171

Uses: Azadirachtin is an extract of fruit from the Neem tree, which is largely grown in India. It is used as a commercial insect growth regulator that controls the metamorphosis process as the insect passes from the larva stage to the pupa stage. The Neem tree also yields extracts from its bark, leaves and wood that are used in medicine and cosmetics.

U.S. Maximum Allowable Residue Levels for Azadirachtin 40 CFR 180.1119]: An exemption from the requirement of a tolerance is established for the biochemical azadirachtin, which is isolated from the berries of the Neem tree (*Azadirachta indica*), when used as a pesticide at 20 grams or less per acre on all raw agricultural commodities.

Human toxicity (long-term)[101]: Very low–225.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–4.46000 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Acute Oral Category: 4, Caution

Description: Light beige to yellowish microcrystalline solid or powder. A yellow to amber viscous liquid. Strong onion or garlic odor. Characteristic odor. Molecular weight = 720.69; Specific gravity (H_2O:1) = 1.508 @ 20 °C; Boiling point = >750 °C; Freezing/Melting point = 155–158 °C; Flash point = 245 °C; Henry's Law constant = 2.8×10^{-25} atm-m^3/mole @ 25 °C (est)[83]. Low solubility in water.

Determination in Water: Log K_{ow} = <1.5. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Neem seed oil is used as a traditional remedy in India and Malaysia, where it has caused poisoning (sometimes fatal), occasional diarrhea, nausea and general discomfort when given orally as an anthelmintic.

Five to ten ml of the oil given orally to children against minor ailments caused vomiting, drowsiness, tachypnea with acidotic respiration, and polymorphonuclear leukocytosis, and encephalopathy developed within hours of ingestion. Seizures, associated with coma, developed in some cases. Autopsy demonstrated pronounced fatty acid infiltration of the liver and proximal renal tubules, with mitochondrial damage, and cerebral edema, changes consistent with Reye's syndrome[Krieger].

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided. LD_{50} (oral, rat) = >4 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Toxicological properties of this chemical have not been fully investigated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as environmentally hazardous substances, solid or liquid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Azinphos-methyl A:1650

Use Type: Insecticide, Acaricide

CAS Number: 86-50-0

Formula: $C_{10}H_{12}N_3O_3PS_2$

Synonyms: Benzotriazine derivative of a methyl dithiophosphate; Benzotriazinedithiophosphoric acid dimethoxy ester; DBD; *S*-(3,4-Dihydro-4-oxobenzo [*a*][1,2,3] triazin-3-ylmethyl) *O,O*-dimethyl phosphorodithioate; *S*-(3,4-Dihydro-4-oxobenzol[d][1,2,3]triazin-3-ylmethyl) *O,O*-dimethyl phosphorodithioate; *S*-(3,4-Dihydro-4-oxo-1,2,3-benzotriazin-3-ylmethyl) *O,O*-dimethyl hosphorodithioate; Dimethoxy ester of (4-*oxo*-1,2,3-benzotriazin-3(4*H*)-yl) methyl ester of dithiophosphoric acid; *O,O*-Dimethyl-*S*-(1,2,3-bezotriazinyl-4-keto) methylphosphorodithioate; *O,O*-Dimethyl-*S*-(3,4-dihydro-4-keto-1,2,3-bezotriazinyl-3-methyl) dithiophosphate; *O,O*-Dimethyl-*S*-(4-oxo-1,2,3-bezotriazin-3(4H)-yl methyl)phosphorodithioate; Dimethyldithiophosphoric acid *N*-methylbenzazimide ester; *O,O*-Dimethyl-*S*-(4-oxo-3H-1,2,3-benzotriazine-3-methyl) phosphorodithioate; *O,O*-Dimethyl-*S*-(4-oxo-benzotriazino-3-methyl)phosphorodithioate; *O,O*-Dimethyl-*S*-(4-oxo-1,2,3-benzotriazino(3)-methyl) thiophosphorodithioate; *O,O*-Dimethyl-*S*-oxo-1,2,3-benzotriazin-3-(4H)-yl-methyl) phosphodithioate; Ent 23,233; 3-(Mercaptomethyl)-1,2,3-benzotriazin-4(3H)-one-*O,O*-dimethyl phosphorodithioate; 3-(Mercaptomethyl)-1,2,3-benzotriazin-4(3H)-one-*O,O*-dimethyl phosphorodithioate-*S*-ester; Methyl azinphos; *N*-methylbenzazimide, dimethyldithiophosphoric acid ester; Methyl guthion; NCI-C00066

Trade Names: ACIFON®; AZINPHOS-METHYL GUTHION®; BAY 9027®; BAYER 17147®; CARFENE®; COTNION-METHYL®; CRYSTHION 2L®; CRYSTHYON®; DBD®; GOTHNION®; GUSATHION®; GUSATHION M®; GUTHION®; R 1582®

Chemical Class: Organophosphate

EPA/OPP PC Code: 058001

California DPR Chemical Code: 314

HSDB Number: 1171

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TE1925000

EC Number: 201-676-1 [*Annex I Index No.:* 015-039-00-9]

Uses: Not approved for use in EU countries[115]. Azinphos-methyl liquids with a concentration greater than 13.5% are classified as a U.S. Restricted Use Pesticides (RUP) Insecticide used to control certain chewing and sucking insects in forestry settings, on fruits and fruit trees, vines, nuts, vegetables, cereals, maize, cotton, ornamentals, soy beans, tobacco, rice, coffee, sugar cane, and other crops. Also used as an intermediate in the manufacture, formulation and application of insecticides and acaricides. There are 31 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Azinphos-methyl [40 CFR 180.154 (a)]: in or on the following raw agricultural commodities: alfalfa 2.0 ppm; alfalfa, hay 5.0 ppm; almond 0.2 ppm; almond, hulls 5.0 ppm; apple 1.5 ppm; bean, snap, succulent 2.0 ppm; birdfoot trefoil 2.0 ppm; blackberry 2.0 ppm; blueberry 5.0 ppm; boysenberry 2.0 ppm; broccoli 2.0 ppm; Brussels sprouts 2.0 ppm; cabbage 2.0 ppm; cauliflower 2.0 ppm; celery 2.0 ppm; cherry 2.0 ppm; clover 2.0 ppm; clover, hay 5.0 ppm; cotton, undelinted seed 0.5 ppm; crabapple 1.5 ppm; cranberry 0.5 ppm; cucumber 2.0 ppm; eggplant 0.3 ppm; filbert 0.3 ppm; fruit, citrus, group 10, 2.0 ppm; grape 4.0 ppm; loganberry 2.0 ppm; melon 2.0 ppm; onion 2.0 ppm; parsley, leaves 5.0 ppm; parsley, turnip rooted, roots 2.0 ppm; peach 2.0 ppm; pear 1.5 ppm; pecan 0.3 ppm; pepper 0.3 ppm; pistachio 0.3 ppm; plum, prune 2.0 ppm; potato 0.2 ppm; quince 1.5 ppm; raspberry 2.0 ppm; spinach 2.0 ppm; strawberry 2.0 ppm; sugarcane, cane 0.3 ppm (Expiration/Revocation Date: 6/30/00); tomato, postharvest 2.0 ppm; trefoil, birdsfoot, hay 5.0 ppm; and walnut 0.3 ppm.

Human toxicity (long-term)[101]: Intermediate–10.50 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.28636 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA: Not likely to be carcinogenic to humans.

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin.

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Clean Water Act: 40CFR116.4 Hazardous Substances; 40CFR117.3, RQ (same as CERCLA) as guthion

CERCLA/SARA 40CFR355, Extremely Hazardous Substances: TPQ = 100 /10,000 lb (45.4/4540 kg)

Superfund/EPCRA 40CFR302.4, Appendix A, Reportable Quantity (RQ): 1 lb (0.454 kg)

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B) severe pollutant

US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates

European/International Regulations: Hazard Symbol: T+, T, Xi, N; risk phrases: R24; R26/28; R43; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Azinphos-methyl is a brown, waxy solid or colorless, crystalline material. Its technical form is a brown waxy solid. There are various formulation types registered with the EPA, including ready-to-use, dusts, flowable concentrates, emulsifiable concentrates, wettable powders, granules, and water-dispersable granules. Molecular weight = 317.34; Specific gravity (H_2O:1) = 1.44 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 72.8–73.9 °C; Vapor pressure = neglible @ 20 °C[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Very low solubility in water; solubility = <1 mg/mL @ 19 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May be dissolved in flammable solvent; containers may explode at elevated temperatures. Incompatible with oxidizers, chlorates, nitrates, peroxides, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: NIOSH IDLH: 10 mg/m^3

OSHA PEL: 0.2 mg/m^3 TWA; [skin]

NIOSH REL: 0.2 mg/m^3 TWA; [skin]

ACGIH TLV®[1]: 0.2 mg/m^3 TWA; [skin], not classifiable as a human carcinogen; BEI: Cholinesterase activity in red cells = 70% of individual's baseline, sample time discretionary

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.2 mg/m^3

PAC-2: 0.7 mg/m^3

PAC-3: 20 mg/m^3

DFG MAK: 0.2 mg/m^3, inhalable fraction; [skin] Peak limitation II(8)

Determination in Air: Collection by impinger or fritter bubbler, analysis by gas-liquid chromatography. OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method (IV) #5600, Organophosphorus pesticides.[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 10 ppb[14]. State Drinking Water Guidelines: Maine 11 μg/L.

Determination in Water: Pesticide residue methods which should be applicable involve hydrolysis with KOH in isopropanol to give anthranilic acid, which is diazotized and coupled to give a measurable color. NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = ~2.8–2.9. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Exposure can cause rapid, fatal organophosphorus poisoning. Inhalation can irritate the lungs, causing coughing and/or shortness of breath.

Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 4.6–11 mg/kg; LD_{50} (dermal, rat) = 175–220 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A neurotoxin; this chemical may damage the nervous system, causing weakness, "pins and needles," and poor coordination in arms and legs, with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Repeated exposure may cause personality changes of depression, anxiety, or irritability. May cause skin sensitization; tumors.

Points of Attack: Skin, respiratory system, lungs, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.2 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid, toxic, n. o. s. require a "poisonous materials" label. They usually fall in Hazard Class 6.1. STN: 49-215-26; Azinphos-methyl/Guthion (agricultural insecticides, not elsewhere classified, liquid); 49-215-27; Azinphos-methyl/Guthion(agricultural insecticides, not elsewhere classified, other than liquid); 49-215-28; Azinphos-methyl/Guthion(insecticides, other than agricultural, not elsewhere classified); 49-215-29; Azinphos-methyl mixture or Guthion mixture, liquid (agricultural insecticides, not elsewhere classified, liquid).

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Azoxystrobin A:1680

Use Type: Fungicide

CAS Number: 131860-33-8

Formula: $C_{22}H_{17}N_3O_5$

Synonyms: Azoksystrobin; Azoxistrobin; Azoxystrolin

Trade Names: ABOUND®; AMISTAR®; AMISTAR OPTI; AMISTAR PRO; BANKIT®; HERITAGE®; ICIA5504 80WG®; OLYMPUS®; ORTIVA®; PROTEGE®; PROTEGE-ALLEGIANCE WP®; PROTEGE-FL SEED APPLIED FUNGICIDE®; QUADRIS OPTI®; QUILT®; SOYGARD WITH PROTEGE®

Chemical Class: Strobilurin; β-Methoxyacrylates (derived from naturally occurring *strobilurins*)

EPA/OPP PC Code: 128810

California DPR Chemical Code: 4037

HSDB Number: 7017

UN/NA & ERG Number: UN3077 (solid)/171

EC Number: [*Annex I Index No.* 607-256-00-8]

Uses: Azoxystrobin has been processed as a Reduced Risk pesticide for Turf uses. Azoxystrobin is a systemic, broad-spectrum fungicide that was first introduced in 1998. It inhibits spore germination and is used on grape vines, cereals, potatoes, apples, bananas, citrus, tomatoes and other crops. Largest crop uses in California are on almonds, rice, pistachios, wine grapes, raisins and garlic. Among the diseases it controls are rusts, downey and powdery mildew, rice blast and apple scab. A U.S. EPA restricted Use Pesticide (RUP)

U.S. Maximum Allowable Residue Levels for Azoxystrobin [40 CFR 180.507 (a)]: acerola 2.0 ppm; almond, hulls 4.0 ppm; animal feed, nongrass, forage, group 18, 45 ppm animal feed, nongrass, hay, group 18, 120 ppm; artichoke, globe 4.0 ppm; asparagus 0.04 ppm; atemoya 2.0 ppm; avocado 2.0 ppm; banana (pre-harvest and post harvest) 2.0 ppm; (of which not more than 0.1 is contained in the pulp); barley, bran 6.0 ppm; barley, forage 25 ppm; barley, grain 3.0 ppm; barley, hay 15.0 ppm; barley, straw 7.0 ppm; biriba 2.0 ppm; brassica, head and stem, subgroup 5a, 3.0 ppm; brassica, leafy greens, subgroup 5b, 25 ppm; bushberry subgroup 13b, 3.0 ppm; caneberry subgroup 13a, 5.0 ppm; canistel 2.0 ppm; canola, seed 1.0 ppm; citrus, dried pulp 20.0 ppm; citrus, oil 40.0 ppm; cherimoya 2.0 ppm; coriander, leaves 30.0 ppm; corn, field, forage 12.0 ppm; corn, field, grain 0.05 ppm; corn, field, refined oil 0.3 ppm corn, field, stover 25.0 ppm; corn, pop, grain 0.05 ppm; corn, pop, stover 25.0 ppm; corn, sweet, forage 12.0 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; corn, sweet, stover 25.0 ppm; cotton, gin byproducts 45 ppm; cotton, undelinted seed 0.6 ppm; crambe, seed 0.5 ppm; cranberry 0.50 ppm; cucurbits 0.3 custard apple 2.0 ppm; feijoa 2.0 ppm; flax, seed 0.5 ppm; fruit, citrus, group 10, 10.0 ppm; fruit, stone 1.5 ppm; grain, aspirated fractions 420 ppm; grape 1.0 ppm; grass, forage 15 ppm; grass, hay 20 ppm; guava 2.0 ppm; herb subgroup 19a, dried leaves 260 ppm; herb subgroup 19a, fresh leaves 50 ppm; hop, dried cones 20.0 ppm; ilama 2.0 ppm; jaboticaba 2.0 ppm; jackfruit 2.0 ppm; juneberry 3.0 ppm; lingonberry 3.0 ppm; longan 2.0 ppm; loquat 2.0 ppm; lychee 2.0 ppm; mango 2.0 ppm; mustard, field, seed 0.5 ppm; mustard, indian, seed 0.5 ppm; mustard, seed 0.5 ppm; nut, tree, group 14, 0.02 ppm; okra 2.0 ppm; onion, bulb 1.0 ppm; onion, green 7.5 ppm; passionfruit 2.0 ppm; pawpaw 2.0 ppm; papaya 2.0 ppm; pea and bean, dried shelled, except soybean, subgroup 6c, 0.5 ppm; pea and bean, succulent shelled, subgroup 6b, 0.5 ppm; peanut 0.2 peanut, hay 15.0 ppm; peanut, refined oil 0.6 ppm;

pecan 0.01 ppm; peppermint, tops 30 ppm; persimmon 2.0 ppm; pistachio 0.50 ppm; potato 0.03 ppm; pulasan 2.0 ppm; rambutan 2.0 ppm; rapeseed, indian 0.5 ppm; rapeseed, seed 0.5 ppm; rice, grain 5.0 ppm; rice, hulls 20 ppm; rice, straw 12 rice, wild, grain 5.0 ppm; safflower, seed 0.5 ppm; salal 3.0 ppm; sapodilla 2.0 ppm; sapote, black 2.0 ppm; sapote, mamey 2.0 ppm; sapote, white 2.0 ppm; sorghum, forage 25 ppm; sorghum, grain 11 ppm; sorghum, stover 40 ppm; soursop 2.0 ppm; soybean, hay 55.0 ppm; soybean, hulls 1.0 ppm; soybean, seed 0.5 ppm; spanish lime 2.0 ppm; spearmint, tops 30 ppm; spice subgroup 19b, except black pepper 38 star apple 2.0 ppm; starfruit 2.0 ppm; strawberry 10 ppm; sugar apple 2.0 ppm; sunflower, seed 0.5 ppm; tamarind 2.0 ppm; tomato 0.2 ppm; tomato, paste 0.6 ppm; turnip, greens 25 ppm; vegetable, foliage of legume, group 7, 30.0 ppm; vegetable, fruiting, group 8 except tomato 2.0 ppm; vegetable, leafy, except brassica, group 4, 30.0 ppm; vegetable, leaves of root and tuber, group 2, 50.0 ppm; vegetable, legume, edible podded, subgroup 6a except soybean 3.0 ppm; vegetable, root, subgroup 1a, 0.5 ppm; vegetable, tuberous and corn, subgroup 1c, 0.03 ppm; watercress 3.0 ppm; wax jambu 2.0 ppm; wheat, bran 0.20 ppm; wheat, forage 25 ppm; wheat, grain 0.10 ppm; wheat, hay 15 ppm; wheat, straw 4.0 ppm. ***[40 CFR 180.507 (a) (2)]*** cattle, fat 0.03 ppm; cattle, meat 0.01 ppm; cattle, meat byproducts 0.07 ppm; goat, fat 0.03 ppm; goat, meat 0.01 ppm; goat, meat byproducts 0.07 ppm; hog, fat 0.010 ppm; hog, meat 0.01 ppm; hog, meat byproducts 0.010 ppm; horse, fat 0.03 ppm; horse, meat 0.01 ppm; horse, meat byproducts 0.07 ppm; milk 0.006 ppm; sheep, fat 0.03 ppm; sheep, meat 0.01 ppm; sheep, meat byproducts 0.07 ppm.

Human toxicity (long-term)[101]: Very low–1260.00 ppb, Health Advisory. Azoxystrobin is of low acute and chronic toxicity to humans, birds, mammals, and bees.[EPA]

Fish toxicity (threshold)[101]: Intermediate–54.86655 ppb, MATC (Maximum Acceptable Toxicant Concentration). Highly toxic to freshwater fish, freshwater invertebrates, and estuarine/marine fish, and very highly toxic to estuarine/marine invertebrates. The azoxystrobin degradate R234886 is practically nontoxic to Rainbow Trout and daphnids, while the degradates R402173 and R401553 may be slightly toxic to daphnids[83].

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA: Not likely to be carcinogenic to humans

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23; R50/53; safety phrases: S1/2; S22; S45; S60; S61 (see Appendix 1)

Description: Azoxystrobin is a white to beige crystalline solid. Odorless. Molecular weight = 403.38; Specific gravity (H_2O:1) = 1.384 @ 20 °C; Boiling point = >360[EU]; 581 °C; Freezing/Melting point = 116 °C; 118–119 °C; Vapor pressure = 8×10^{-13} mmHg @ 25 °C; pH = 7.14 (1% dispersion of Heritage fungicide); Low solubility in water; solubility = 6 mg/L.

Note: Boiling appears in the literature as 581, 581.3 and the EU listed it as "more than 360C."

Incompatibilities: Strong oxidizers. Dust may form explosive mixture with air.

Determination in Water: Log K_{ow} = ~ 3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Dermal contact and inhalation

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. May cause skin sensitization. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical®-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Chemically stable for at least 24 days at 54 °C.

Shipping: Varies with product being shipped: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group III. Environmentally hazardous substances usually fall in Hazard Class 9.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Cover with sand and soda ash. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and oxygen. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters (0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

B

Benfluralin B:0224

Use Type: Herbicide
CAS Number: 1861-40-1
Formula: $C_{13}H_{16}F_3N_3O_4$
Synonyms: Benefin; Benfluraline; Benzenamine; *N*-Butyl-*N*-ethyl-2,6-dinitro-4-(trifluoromethyl)-; *N*-Butyl-2,6-dinitro-*N*-ethyl-4-trifluoromethylaniline; *N*-Butyl-*N*-ethyl-2,6-dinitro-4-trifluoromethylbenzenamine; *N*-Butyl-*N*-ethyl-2,6-dinitro-4-(trifluromethyl)benzeneamine; *N*-Butyl-*N*-ethyl-2,6-dinitro-4-trifluoromethylaniline; *N*-Butyl-*N*-ethyl-*α,α,α*-trifluoro-2,6-dinitro-*p*-toluidine; Caswell No. 130; *p*-Toluidine,*N*-butyl-*N*-ethyl-*α,α,α*-trifluoro-2,6-dinitro-; *α,α,α*-Trifluoro-2,6-dinitro-*N,N*-ethylbutyl-*p*-toluidine
Trade Names: BALAN®; BALFIN®; BENEFEX®; BETHRODINE®; BHULAN®; BINNELL®; BONALAN®; CARPIDOR®; EL-110®; EMBLEM®; FLUBALEX®; PEL-TECH®; QUILAN®; TEAM; XL 2G
Chemical class: 2,6-Dinitroaniline
EPA/OPP PC Code: 084301
California DPR Chemical Code: 53
HSDB Number: 407 as benfluralin
UN/NA & ERG Number: UN1596 (Dinitroanilines)/153; UN3077(solid)/171
RTECS® Number: XU4550000
EC Number: 217-465-2
Uses: Selective pre-emergence herbicidal control of annual grasses and broad-leaf weeds. Used on alfalfa, red clover, seeded lettuce, trefoil; peanuts, certain tobaccos, vegetables such as endive, field and French beans and lentils.
U.S. Maximum Allowable Residue Levels for Benfluralin [(40 CFR 180.208 (a)]: alfalfa, forage 0.05 ppm (negligible); alfalfa, hay 0.05 ppm (negligible); alover, forage 0.05 ppm (negligible); alover, hay 0.05 ppm (negligible); lettuce 0.05 ppm (negligible); peanut 0.05 ppm (negligible); trefoil, birdsfoot, forage 0.05 ppm (negligible); trefoil, birdsfoot, hay 0.05 ppm.
Human toxicity (long-term)[101]: Very low–2100.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: High–3.08219 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Suggestive evidence of carcinogenicity, but not sufficient to assess human carcinogenic potential
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer
Acute Oral Category: 4, Caution
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
Description: Yellow-orange crystalline solid. Commercial product is available as an emulsifiable concentrate. Molecular weight = 335.31; Specific gravity (H_2O:1) = 1.278 @ 20 °C; Freezing/Melting point = 66 °C; Vapor pressure = 1×10^{-5} mmHg @ 20 °C; Flash point = <190 °C. Slightly soluble in water: solubility = 70 mg/L @ 25 °C; <1 mg/L @ 25 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Incompatible with strong oxidizers. Moderate heat causes decomposition that produces toxic vapors that can form an explosive mixture with air.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Ingestion, dermal contact; absorbed through the skin, inhalation of the dust or vapor when these materials are heated
Harmful Effects and Symptoms
Short Term Exposure: Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, yellowish tint to skin and lips, anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmia is commonly noted. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. Severe exposure can cause death from heart failure Dinitrobenzene materials are toxic to the blood; prevents hemoglobin from carrying oxygen. May be more toxic than aniline. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.
Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May damage the liver, kidneys and blood cells. This chemical may stain yellow the skin, eyes, and fingernails. Repeated exposure may cause anxiety, fatigue, insomnia, excessive perspiration, unusual thirst, weight loss and cataracts in the eyes. May affect the thyroid gland. May cause skin sensitization in some persons.
Points of Attack: Skin, bones, liver, kidneys, lungs, peripheral nervous system, eyes, thyroid gland, blood. May cause reproductive and fetal effects.
Medical Surveillance: Before beginning employment, at regular times after that and if symptoms develop or overexposure has occurred, the following may be useful: Exam of eyes for cataracts. Exam of skin and nails for staining. Liver and kidney function tests. Complete blood count.

Blood methemoglobin levels. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to Physician:* Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Personal Protective Methods: Dinitroanilines react with cellulose-based and expanded polymeric absorbents[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dinotroanilines require a label of "Poisonous material" and usually fall in Hazard Class 6.1. Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposition product includes oxides of nitrogen and carbon and hydrogen fluoride gas. This chemical is a combustible solid but does not readily ignite. Moderate heat causes decomposition that produces toxic vapors that form an explosive mixture with air. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Ultraviolet-radiation: This liquid herbicide is reported to be susceptible to decomposition by UV radiation[UN].

Benomyl B:0230

Use Type: Fungicide

CAS Number: 17804-35-2

Formula: $C_{14}H_{18}N_4O_3$

Synonyms: BBC; 2-Benzimidazolecarbamic acid, 1-(butylcarbamoyl)-, methyl ester; BNM; 1-(Butylamino) carbonyl-1*H*-benzimidazol-2-yl-, methyl ester; 1-(Butylcarbamoyl)-2-benzimidazolec arbamic acid, methyl ester; Carbamic acid, 1-(butylamino)carbonyl-1*H*-benzimidazol-2yl, methyl ester; Carbamic acid, methyl-, 1-(butylcarbamoyl)-2-benzimidazole ester; Caswell No. 075A; MBC; Methyl 1-(butylcarbamoyl)-2-benzimidazolyl carbamate

Trade Names: ABORTRINE®; AGROCITE®; ARILATE®; BBC 6597®; BENEX®; BENLAT®[C]; BENLATE®, withdrawn 5/7/01; BENLATE 50®; BENLATE 50W®; BENLATE 50WP®; BENOMYL® 50W; BENOSAN®; D 1991®[C]; F 1991®; FUNDAZOL®; FUNGICIDE 1991®; FUNGACIDE D-1991®; FUNGOCHROM®; TARSAN®; TERSAN®; TERSAN 1991®; UZGN®

Chemical class: Benzimidazole

EPA/OPP PC Code: 099101

California DPR Chemical Code: 1552

HSDB Number: 1655

UN/NA & ERG Number: UN3077 (solid)/171; UN1325 (flammable solid, organic)/133;

RTECS® Number: DD6475000

EC Number: 241-775-7 [*Annex I Index No.:* 613-049-00-3]

Uses: Used as a pre-harvest systemic fungicide and as a post-harvest dip. Used on arable and vegetable crops, apples, soft fruit, nuts, mushrooms, lettuce, tomatoes and turf. In California, the top five crops for which benomyl is used are pistachios, table and raisin grapes, almonds, strawberries and wine grapes. All uses of benomyl products in the United States was phased out with a deadline of December 31, 2003. Not approved for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Benomyl. and its metabolites containing the benzimidazole moiety (calculated as benomyl) (40 [CFR 180.294 (a)]: in or on the following raw agricultural commodities: almond hulls 1.0 ppm; apples (pre- and post-harvest) 7.0 ppm; apricots (pre- and post harvest) 15.0 ppm; bananas (pre- and post-harvest, not more than 0.2 ppm negligible residue, present in the pulp after the peel is removed and discarded) 1.0 ppm; barley, grain 0.2 ppm; barley, straw 0.2 ppm; beans 2.0 ppm; beans vine forage 50.0 ppm; beets, sugar, roots 0.2 ppm; beets, sugar, tops 15 ppm; blackberries 7.0 ppm; blueberries 7.0 ppm; boysenberries 7.0 ppm; broccoli 0.2 ppm, brussel sprouts 15.0 ppm; cabbage 0.2 ppm; carrots 0.2 ppm; cattle, fat 0.1 ppm; cattle, meat 0.1 ppm; cattle meat-by-products 0.1 ppm; cauliflower 0.2 ppm; celery 3.0 ppm; cherries (pre- and post-harvest) 15.0 ppm; Chinese cabbage 10.0 ppm; citrus, dried pulp 50.0 ppm; citrus fruit (pre- and post-harvest) 10.0 ppm; collards 0.2 ppm; corn, fresh (including kernel plus cob with husk removed) 0.2 ppm; corn, sweet fodder and forage 0.2 ppm; cucumbers 1.0 ppm; currants 7.0 ppm; dewberries 7.0 ppm; eggplants 0.2 ppm; eggs 0.1 ppm; garlic 0.2 ppm; goats, fat 0.1 ppm; goats, meat 0.1 ppm; goats, meat by-products 0.1 ppm; grapes 10.0 ppm; hogs, fat 0.1 ppm; hogs, meat 0.1 ppm; hogs, meat by-products 0.1 ppm; horses, fat 0.1 ppm; horses, meat 0.1 ppm; horses, meat by-products 0.1 ppm; kale 0.2 ppm, kohlrabi 0.2 ppm; loganberries 7.0 ppm; mangoes 3.0 ppm; melons 1.0 ppm; milk 0.1 ppm; mushrooms (pre- and post-harvest) 10.0 ppm; mustard greens 0.2 ppm; nectarines (pre- and post-harvest) 15.0 ppm; nuts 0.2 ppm (negligible residues); oats, grain 0.2 ppm; oats, straw 0.2 ppm; peaches (pre- and post-harvest) 15.0 ppm; peanuts 0.2 ppm; peanut forage 15.0 ppm; peanut hay 15.0 ppm; pears (pre- and post-harvest) 7.0 ppm; peppers 0.2 ppm; pineapples (post-harvest) 35.0 ppm; pistachios 0.2 ppm; plums (incl fresh prunes, pre- and post harvest) 15.0 ppm; poultry, fat 0.1 ppm; poultry, liver 0.2 ppm; poultry, meat 0.1 ppm; poultry, meat by-products 0.1 ppm; pumpkins 1.0 ppm; raisins 50.0 ppm; raspberries 7.0 ppm; rice 5.0 ppm; rice, hulls 20.0 ppm; rice straw 15.0 ppm; rutabagas 0.2 ppm; rye, grain 0.2 ppm; rye, straw 0.2 ppm; sheep, fat 0.1 ppm; sheep, meat 0.1 ppm; sheep, meat by-products 0.1 ppm; soybeans 0.2 ppm; spinach 0.2 ppm; squash, summer 1.0 ppm; squash, winter 1.0 ppm; strawberries 5.0 ppm; sweet potatoes 0.2 ppm; tomatoes 5.0 ppm; tomato products, concentrated 50.0 ppm; turnips, roots 0.2 ppm; wheat, grain 0.2 ppm; wheat, straw 15.0 ppm. ***Regional registration, as defined in section 180.1(n)* [*40 CFR 180.294(c)*]** in or on the following raw agricultural commodities: avocado 30. ppm; dandelions 10.0 ppm; papayas 3.0 ppm; pistachios 0.2 ppm; turnip greens 6.0 ppm; watercress 10.0 ppm.

Human toxicity (long-term)[101]: Intermediate–17.50 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–2.19089 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group C, possible human carcinogen; ACGIH A3 Confirmed animal carcinogen with unknown relevance to humans.

California Proposition 65 Chemical: Developmental/Reproductive toxin (male) (7/1/1991)

Acute Oral Category: 4, Caution

Health Advisory: Nerve Toxin (S!), Mutagen, Developmental/Reproductive Toxin (S!), Endocrine disruptor (S!)

EPA Oral reference dose (RfD) = 0.05 mg/kg/day

U.S. EPA Hazardous Waste Number (RCRA No.): U271

Superfund/EPCRA [40CFR 302 and 355, F R: 8/16/06, Vol 71, No. 158] Reportable Quantity (RQ): 10 lb (4.54 kg)

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Non-wastewater (mg/kg), 1.4

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)](as dustable powder formulations containing a combination of: Benomyl @ or >7%; carbofuran @ or >10%; thiram @ or >15%)

European/International Regulations: Hazard Symbol: T, N; risk phrases: R46; R60; R61; R37/38; R43; R50/53; safety phrases: S2; S53; S45; S60; S61 (see Appendix 1)

Description: Benomyl is a white crystalline solid with a faint acrid odor. Molecular weight = 290.36; Boiling point = (decomposes) without melting; Freezing/Melting point = (decomposes) ≥ 300 °C; Vapor pressure = 1×10^{-10} mmHg; Autoignition temperature = 220 °C; LEL (Lower Explosive Limit) = 0.5 g/L[88]; Hazard Identification (based on NFPA-704 M Rating System)*: Health 1, Flammability 2, Reactivity 0. Very slightly soluble in water; solubility = <1 mg/mL @ 20 °C. *Physical and toxicological properties may be affected by commercial formulations.

Incompatibilities: Strong bases [forms toxic oxides of nitrogen], strong acids, peroxides and oxidizers.

Permissible Exposure Limits in Air: OSHA PEL: 15 mg/m^3 total dust, TWA; 5 mg/m^3 respirable fraction, TWA

NIOSH REL: None established. See Appendix D of the *NIOSH Pocket Guide*

ACGIH TLV®[1]: 10 mg/m^3 TWA; not classifiable as a human carcinogen

No Protective Action Criteria (PAC) available.

DFG MAK: [skin] possible sensitization of skin; Germ Cell Mutagen Group: 3A (2005).

Determination in Air: Filter; none; Gravimetric; NIOSH IV[18] [Particulates NOR; #0500 (total), #0600 (respirable)]

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 350 μg/L.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion

Harmful Effects and Symptoms

Short Term Exposure: The substance irritates the skin eyes and upper respiratory system. Exposure could cause depression of the central nervous system and lack of muscular coordination. LD_{50} (oral, rat) = >9500 mg/kg; LD_{50} (dermal, rat) = >1000 mg/kg.

Long Term Exposure: May cause cancer. Repeated or prolonged contact may cause skin sensitization and allergy. Human mutation data reported. Also experimental and reproductive effect. May damage the male reproductive system; cause heritable genetic damage in humans. May be a neurotoxin.

Points of Attack: Eyes, skin, kidneys, liver, respiratory system, reproductive system. Central nervous system.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Recommendations from the physician may depend upon the specific compound, its chemical, physical and toxicity properties, the exposure level, length of exposure, and the route of exposure. Comprehensive physical examination with emphasis on the genito-urinary tract including testicle size and consistency in males. Semen analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

---

* *Note:* In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup

Storage: Color Code-Blue: Health Hazard: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, acids, water, or combustible materials. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9; FLAMMABLE SOLID, N. O. S., Hazard Class 4.1, Packing Group II.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with toluene to avoid dust, then transfer material to a suitable container. Use absorbent paper dampened with toluene to pick up remaining material. Wash surfaces well with soap and water. Seal all wastes in vapor-tight plastic bags for eventual disposal[52]. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 1900.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. Extinguish fires using an agent suitable for the type of surrounding fire; benomyl itself does not burn.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Bensulide B:0238

Use Type: Herbicide

CAS Number: 741-58-2

Formula: $C_{14}H_{24}NO_4PS_3$

Synonyms: Benzulfide; *O,O*-Bis(1-methylethyl)-*S*-[2-((phenylsulfonyl) amino)ethyl]pheosphorodithioate; *N*-[2-(*O,O*-Diisopropyldithiophosphoryl)ethyl]benzenesulfonamide; *N*-(*β*-*O,O*-Diisopropyl dithiophosphorylethyl) bezenesulfonamide; *S*-(*O,O*-Diisopropyl phosphorodithioate) ester of *N*-(2-mercaptoethyl)benzenesulfonamide; *N*-(2-Mercaptoethylbenzenesulfonamide)-*S*-(*O,O*-diisopropyl phosphorodithioate); Phosphorodithioic acid-*O,O*-bis(1-methylethyl)-*S*-[2-((phenylsulfonyl)amino)ethyl]ester

Trade Names: BENSUMEC®; BETAMEC®; BETASAN®; BETASAN®-E; BETASAN®-G; DISAN®; EXPORSAN®; KAYAPHENONE®; PREFAR®; PREFAR®-E; PRESAN®; PROTURF®; R-4461®; SAP (herbicide)

Chemical class: Organophosphate

EPA/OPP PC Code: 009801

California DPR Chemical Code: 70

HSDB Number: 393

UN/NA & ERG Number: UN3018 (liquid)/152

RTECS® Number: TE0250000

EC Number: 212-010-4 [*Annex I Index No.:* 015-083-00-9]

Uses: A selective pre-emergence herbicide used to control bluegrass, crabgrass and other annual grasses and broadleaf weeds in agriculture crops, cotton and turf. It is widely used on golf courses and home lawns. Target weeds also include barnyardgrass, burning nettle and canarygrass. Not approved for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Bensulide (40 CFR 180.241): in or on the following food commodities: carrots, roots 0.1 ppm (negligible residues); cucurbits, 0.1 ppm (negligible residues); onion, dry bulb 0.1 ppm (negligible residues); vegetable, fruiting 0.1 ppm (negligible residues); and vegetable, leafy 0.1 ppm (negligible residues).

Human toxicity (long-term)[101]: Intermediate–46.20 ppb, Health Advisory

Fish toxicity (threshold)[101]***:*** Intermediate–43.42721 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA, Not likely to be carcinogenic in humans.

Acute Oral Category: 2, WARNING

Health Advisory: Nerve toxin

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/R53; safety phrases: S2; S24; S36; S60; S61 (see Appendix 1)

Description: Amber, viscous liquid, or forms colorless or white crystalline solid below 34.4 °C. Combustible. Commercial product is available as an emulsifiable concentrate. Molecular weight = 397.49; Specific gravity (H_2O:1) = 1.25 @ 22 °C; Molecular weight = 397.54; Freezing/Melting point = 34 °C; Vapor pressure = 8×10^{-7} mmHg; 0.53 mmHg @ 20 °C. Flash point = 160 °C; Practically insoluble in water; solubility = 0.0025 g/ml @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers; chlorates nitrates, peroxides. Decomposes slowly in light and strong UV. Corrosive to copper, aluminum, magnesium, zinc. Slowly hydrolyzes in water, releasing ammonia gas and forming acetate salts. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Stable @ 80 °C for 50 hours; decomposes @ 200 °C in 18 – 40 hours.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV[18], Method #5600, Organophosphorus Pesticides

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal contact, passes through the skin

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 270–360 mg/kg; LD_{50} (dermal, rat) = 3500–4000 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. May be a neurotoxin; may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver and/or kideny damage. May be a skin sensitizer.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase. Liver, kidneys, skin.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid require a "Poisonous materials" label. They usually fall in Hazard Class 6.1.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, phosphorus, sulfur and carbon. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Bentazon B:0240

Use Type: Selective post-emergent herbicide

CAS Number: 25057-89-0; 50723-80-3 (sodium bentazon)

Formula: $C_{10}H_{12}N_2O_3S$

Synonyms: Bentazone; 1*H*-2,1,3-Benzothiadiazin-4(3*H*)-one,3-(1-methylethyl)-2,2-dioxide; 1*H*-2,1,3-Benzothiadiazin-4(3*H*)-one,3-isopropyl-2,2-dioxide(8CI); 3-Isopropyl-1H-2,1,3-benzothiadiazin-4(3H)-one-2,2-dioxide;3-Isopropyl-1*H*-benzo-2,1,3-thiadiazin-4-one-2,2-dioxide; 3-Isopropyl-1H-2,1,3-benzothiadiazin-4(3*H*)-one-2,2-dioxide; 3-(1-Methylethyl)-1*H*-2,1,3-benzothiazain-4(3*H*)-one-2,2-dioxide

Trade Names: ASAGIO®; BAS 351-H®; BASAGRAN®; BENDIOXIDE®; BENTA®; BLAST®; ENTRY®; LADDOK®; LEADER®; PLEDGE®; STORM®

Chemical class: Benzothiazinone

EPA/OPP PC Code: 275200

California DPR Chemical Code: 2999 (Bentazon); 1944 (Bentazon, sodium salt)

HSDB Number: 3430

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: DK9900000

EC Number: 246-585-8 [*Annex I Index No.:* 613-012-00-1]; 256-735-4 (sodium bentazon)

Uses: A post-emergence herbicide used to control broadleaf weeds in crops such as beans, corn, mint, soybeans, rice, and peanuts. All products formerly marketed in the U.S. contain the sodium salt of bentazon as the active ingredient, referred to as sodium bentazon. Also used in selective post-emergent control of broadlelaf weeds and sedges in alfalfa, asparagus, cereals, clover, digitalis, dry peas, flax, garlic, grasses, green lima beans, mint, onions, potatoes, snap beans for seed, sorghum, soybeans and sugarcane. Not currently registered in the U.S. It is reported to be used in most European countries.

U.S. Maximum Allowable Residue Levels for Bentazon and its 6- and 8-hydroxy metabolites [(40 CFR 180.355 (a)]: in or on the following food commodities: bean, dry seed 0.05 ppm; bean, succulent 0.5 ppm; cattle, meat-by-products 0.05 ppm; corn, field, forage 3 ppm; corn, field, grain 0.05 ppm; corn, field, stover 3 ppm; corn, pop, grain 0.05 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; cowpea, hay 3 ppm; cowpea, forage 3 ppm; mint 1 ppm; peanut 0.05 ppm; peanut, hay 3 ppm; peas, dry, seed 0.05 ppm; pea, field, hay 3 ppm; pea, field, vines 3 ppm; pea, succulent 3 ppm; rice, grain 0.05 ppm; rice, straw 3 ppm; sorghum, fodder 0.05 ppm; sorghum, forage 0.20 ppm; sorghum, grain 0.05 ppm; soybeans 0.05 ppm; soybeans, forage 3 ppm; soybeans, hay 0.3 ppm. ***[40 CFR 180.355(b)]*** bentazon and its metabolite 2 amino-*N*-isopropyl benzamide (AIBA) in or on the following food commodities: cattle, fat 0.05 ppm; cattle, meat-by-products (meat by-products) 0.05 ppm; cattle, meat 0.05 ppm; eggs 0.05 ppm; goats, fat 0.05 ppm; goats, meat-by-products 0.05 ppm; goats, meat 0.05 ppm; hogs, fat 0.05 ppm; hogs, meat-by-products 0.05 ppm; hogs, meat 0.05 ppm; milk 0.02 ppm; poultry, fat 0.05 ppm; poultry, meat-by-products 0.05 ppm; poultry, meat 0.05 ppm; sheep, fat 0.05 ppm; sheep, meat-by-products 0.05 ppm; sheep, meat 0.05 ppm.

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity in humans.

Potential Ground Water Pollutant [California FAC Section 13149)

Acute Oral Category: 3, CAUTION

Health Advisory: Developmental/Reproductive Toxin (S!); Skin irritant/sensitizer (S!)

Safe Drinking Water Act, 55FR1470 Priority List

European/International Regulations (*25057-89-0*): Hazard Symbol: Xi, Xn, N; risk phrases: R22; R36; R43; R52/53; safety phrases: S2; S24; S37; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Bentazon is a colorless to white crystalline powder. Commercial product can be a soluble concentrate that may be mixed with water and used as a spray. Molecular weight = 240.3; Boiling point = (decomposes); Freezing/Melting point = 137–139 °C; Vapor pressure = 10^{-3} @ 20 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Very slightly soluble in water; solubility = 490 mg/L @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Keep away from flammable materials, heat and flame. May form explosive mixture with air. Risk of fire and explosion if formulations contain flammable/explosive solvents.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 200 μg/L; State Drinking Water Standards: California 18 μg/L; Wisconsin 300 μg/L.

Determination in Water: Log K_{ow} = >2.5 Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, inhalation

Harmful Effects and Symptoms

Short Term Exposure: Avoid eye contact; may cause severe irritation or injury. May cause skin burns. LD_{50} (oral, rat) = 1100 mg/kg; LD_{50} (dermal, rat) = 2500[9] mg/kg.

Long Term Exposure: May be mutagenic. May cause skin sensitization.

Points of Attack: Reproductive material/DNA.

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.

Long Term Exposure: May be a Reproductive Toxin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *Where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved [for pesticides] self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in tightly closed containers in a cool, well-ventilated area away from flammable materials, sources of heat and fire. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (sodium bentazon) $K_{oc} = 34$.

Fire Extinguishing: Bentazon is not combustible, but may support combustion under fire conditions. Hazardous decomposition includes oxides of nitrogen, sulfur and carbon. Stay upwind of fire. Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

N-Benzaldenine B:0255

Use Type: Plant growth regulator

CAS Number: 1214-39-7

Formula: $C_{12}H_{11}N_5$

Synonyms: Adenine, *N*-benzyl-; 6-BAP; BAP; 6-Benzyladenine; Benzyladenine; *N*-Benzyladenine; N^6-Benzyladenine; Benzylaminopurine; N^6-(Benzylamino)purine; 6-(Benzylamino)purine; 6-(*N*-Benzylamino)purine; *N*-(Phenylmethyl)-1*H*-purin-6-amine; 1*H*-Purin-6-amine, *N*-(phenylmethyl)-; Promalin, component of (with Gibberellin D); Verdan senescence inhibitor

Trade Names: ABG® 3034; ACCEL®; AGTROL®; 6-BA®; BA® (growth stimulant); CHRYSAL BVB®; EXILIS®; PERLAN®; PROMALIN®; SD® 4901; SQ® 4609

Chemical class: Amine; Polyamine

EPA/OPP PC Code: 116901

California DPR Chemical Code: 2000 (N^6-Benzyladenine)

HSDB Number: 7667

UN/NA & ERG Number: UN3259/154

RTECS® Number: AU6252200

EC Number: 214-927-5

Uses: A plant growth regulator used to lengthen and enhance the shape of apples and to increase the fruit set in pears. It increases the yield of pistachios and tomatoes. Not listed for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for the biochemical plant regulator 6-benzyladenine (6-BA)[40 CFR 180.1150]: is exempt from the requirement of a tolerance in or on apple and pear when applied at a rate of ≤182 grams of active ingredient/acre/season, and in or on pistachio when applied at a rate of ≤60 grams of active ingredient/acre/season.

Regulatory Authority and Advisory Information: Health Advisory: Mutagen

Toxicity (oral) Category: 3, CAUTION

Description: Colorless to off-white or yellow powder. Corrosive. Molecular weight = 225.27; Freezing/Melting point = 233 °C; Vapor pressure = 2×10^{-11} mmHg @ 25 °C. Henry's Law constant = 9×10^{-14} atm-m^3/mol @ 25 °C (est). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Low solubility in water.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. May release heat on contact with water. Solid and corrosive amines are chemical bases. Neutralize acids to form salts plus water in exothermic reactions. May be incompatible with isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides, and acid halides. May generate flammable gaseous hydrogen in combination with strong reducing agents, such as hydrides[88].

Permissible Concentration in Water: Runoff from fire control or dilution water may be corrosive and/or toxic and cause pollution.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation of dust, dermal and/or eye contact.

Harmful Effects and Symptoms: Toxic; inhalation, ingestion or dermal contact with material may cause severe injury or death. Contact with molten substance may cause severe burns to skin and eyes. Avoid any dermal and/or eye contact. Effects of contact or inhalation may be delayed.

Short Term Exposure: Corrosive to the eyes, skin, and respiratory tract. Contact can cause burns and permanent damage. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. May be harmful if swallowed. LD_{50} (oral, rat) = 1300 mg/kg[83]; LD_{50} (dermal, rabbit) = 5 mg/kg[83]. LD_{50} (inhalation, rabbit) = 5 mg/L/1 hour[83].

Long Term Exposure: NIOSH warns this may be mutagenic.

Points of Attack: Lungs, eyes, Reproductive material/DNA

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. Administer oxygen if breathing is difficult. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor dermal contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or dermal contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. *Eyes*: Check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. Transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop. *Skin*: Flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, call a physician and be prepared to transport the victim to a hospital for treatment. *Inhalation:* Leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, self-contained breathing apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing. *Ingestion*: *Do not induce vomiting.* If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Do not induce vomiting.* Immediately transport the victim to a hospital.

Personal Protective Methods: Reacts with the following kinds of absorbents: Mineral- and Clay-Based[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Stay upwind. Keep out of low areas. Ventilate enclosed areas. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible. Remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Prevent entry into waterways, sewers, basements or confined areas. Sweep up or vacuum powdered material, being careful not to raise dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. *Do not get water inside containers*. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Amines, solid, corrosive, n.o.s., or Polyamines, solid, corrosive n.o.s. require a label of “CORROSIVE MATERIAL.” They fall in Hazard Class 8 and Packing Group I, II, II.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes poisonous oxides of nitrogen and carbon. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Benzoic acid B:0370

Use Type: Fungicide, Insecticide

CAS Number: 65-85-0

Formula: $C_7H_6O_2$; C_6H_5COOH

Synonyms: Acido benzoico (Spanish); Benzenecarboxylic acid; Benzeneformic acid; Benzenemethanoic acid; Benzoate; Carboxybenzene; Carboxylbenzene; Dracyclic acid; Oracylic acid; Phenyl carboxylic acid; Phenylformic acid

Trade Names: RETARDER BA®; MICROL® Preservative; TENN-PLAS®; RETARDEX®; SALVO LIQUID®; SALVO POWDER®; TULSA®

Chemical class: Benzoic Acid

EPA/OPP PC Code: 009101

California DPR Chemical Code: 1329

HSDB Number: 704

UN/NA & ERG Number: UN9094/153; UN3077(solid)/171

RTECS® Number: DG0875000

EC Number: 200-618-2

Uses: Used in the manufacture of benzoates; plasticizers, benzoyl chloride, alkyd resins, in the manufacture of food preservatives, in use as a dye binder in calico printing; in curing of tobacco, flavors, perfumes, dentifrices, standard in analytical chemistry. Not currently registered for use in the U.S. Benzoic acid is currently used in about a dozen European countries.

U.S. Maximum Allowable Residue Levels for Benzoic acid [40 CFR 180.1001(c)]: Residues of benzoic acid are exempted from the requirement of a tolerance when used as a preservative for formulation in accordance with good agricultural practices as inert (or occasionally active) ingredients in pesticide fomulations applied to growing crops or to raw agricultural commodities after harvest. [*40 CFR 180.1001(e)*] Benzoic acid is exempted from the requirement of a tolerance when used as a preservative for formulations in accordance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to animals.

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen.

Health Advisory: Skin irritant/sensitizer, Mutagen

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

CERCLA Reportable Quantity (RQ): 5000 lb (2270 kg)

European/International Regulations: Not listed in Annex 1.

WGK (German Aquatic Hazard Class): 1-Low hazard to waters.

Description: Benzoic acid is a white crystalline or flaky solid with a faint, pleasant odor. Molecular weight = 122.12; Specific gravity (H_2O:1) = 1.316 @ 28 °C[86]; Boiling point = 249.2 °C[86]; 248.89 °C[88]; Freezing/Melting point = 122.39 °C[88]; Specific gravity (H_2O:1) = 1.316 @ 28 °C (solid); Relative vapor density (air = 1) = 4.21; Vapor pressure = <0.076 mmHg @20 °C; Flash point = 121.1 °C (cc); Autoignition temperature = 572.8 °C; Explosive limits: LEL = 1.8%; UEL 7.9%. Henry's Law constant = 3.3 × 10^{-8} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Soluble in water (forms a weak acid); solubility = <1 mg/mL @ 20 °C.

Incompatibilities: Incompatible with strong oxidizers, caustics, ammonia, amines, isocyanates. Dust from dry material or vapor from molten material may form explosive mixture with air. Water solution is a weak acid; may cause corrosion of metals and produce explosive hydrogen gas.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 2.1 mg/m^3

PAC-2: 31 mg/m^3

PAC-3: 830 mg/m^3

Determination in Water: Log K_{ow} = <2.0. @ 20 °C. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation and ingestion

Harmful Effects and Symptoms

Short Term Exposure: Irritating to skin, eyes (possibly severe), and mucous membranes. Dermal contact may cause irritation, skin rash, or burning feeling on contact. Ingestion causes nausea and G. I. troubles. For most people, ingestion of 1/10 to 2/10 ounce will have no effect although some sensitive people may experience allergic reactions. Larger amounts may cause stomach upset. Information from animal studies shows that about 6 ounces may be lethal to a 150 pound person. LD_{50} (oral, rat) =1700–2100 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin sensitization. Mutation data reported.

Points of Attack: Skin, eyes, and mucous membranes.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Gloves: Neoprene and butyl rubber; Coveralls: Responder®, Tychem®; TK; Trellchem HPS & VPS. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA 2.1 mg/m^3. Bureau of Mines dust respirator; when melted material present, use eye protection and organic respirator for fumes[86]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store away from excessive heat. Benzoic acid must be stored to avoid contact with strong oxidizers (such as chlorine, bromine and fluorine), since violent reactions occur. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Vapor may explode if ignited in an enclosed area. Solutions should be neutralized with soda ash. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Then flush the area with water. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposition products in fire include toxic gases of benzene and phenol and oxides of carbon. Benzoic acid is a combustible solid. Benzoic acid may burn, but does not readily ignite. High levels of dust may form an explosive concentration in air. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Bifenox B:0472

Use Type: Herbicide

CAS Number: 42576-02-3

Formula: $C_{14}H_9Cl_2NO_5$

Synonyms: Benzoic acid, 5-(2,4-dichlorophenoxy)-2-nitro-, methyl ester; 5-(2,4-Dichlorophenoxy)-nitrobenzoic acid, methyl ester; 2,4-Dichlorophenyl 3-(methoxycarbonyl)-4-nitrophenyl ether; Methyl 5-(2,4-dichlorophenoxy)-2-nitrobenzoate

Trade Names: ALIBI®; FOX®; MODOWN®[C]; MC-4379®; SABINE®

Chemical class: Diphenyl ether

EPA/OPP PC Code: 104301; (285200 former EPA code number)

California DPR Chemical Code: 1953

HSDB Number: 6567

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: DG7890000

EC Number: 255-894-7

Uses: Used to control a variety of broadleaf weeds and grasses in legumes such as soybeans and peanuts, and post- emergent weed control in wheat, barley and sugar beets. Not currently registered in the U.S. However, it is used in 21 European countries and there are 27 global suppliers[97].

Regulatory Authority and Advisory Information: AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides

Acute Oral Category: 4, Caution

European/International Regulations: Not listed in Annex 1(42576-02-3)

Description: Yellow to beige crystalline solid or powder. Slight odor. Molecular weight =342.13; Specific gravity (H_2O:1) = 1.16 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 83–85 °C; Vapor pressure = 2.4×10^{-6} mmHg @ 25 °C; Flash point = >200 °C. Practically insoluble in water.

Incompatibilities: Strong oxidizers. When heated to decomposition, emits nitrogen oxides and chlorine gas. Slightly corrosive to active metals such as aluminum.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, skin/eyes contact

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. LD_{50} (oral, rat) = >5 g/kg.; LD_{50} (dermal, rat) = >20000 mg/kg.

Long Term Exposure: Workers exposed to chlorophenoxy compounds over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Diphenyl ether derivatives may react with the following absorbent materials: Cellulose-Based; Expanded Polymeric[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers, acids, water, or combustible materials. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Absorb liquid containing this chemical in vermiculite, dry sand, earth, or similar material. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Chemical class: Pyrethroid

EPA/OPP PC Code: 128825

California DPR Chemical Code: 2300

HSDB Number: 6568

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: GZ12278000

Uses: A broad-spectrum insecticide. Registered to control cone worms, seed bugs, seed worms and other insects and mites on rangeland, forests and right-of-ways. It is also used to control household and lawn pests. A U.S. EPA restricted Use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Bifenthrin [(40CFR180.442(a)(1)]: Almond, hulls 2.0 ppm; artichoke, globe 1.0 ppm; banana (there are no U.S. registrations as of April 30, 2003) 0.1 ppm; beet, garden, roots 0.45 ppm; beet, garden, tops 15 ppm; brassica, head and stem, subgroup 5A, except cabbage 0.6 ppm; brassica, leafy greens, subgroup 5B, 3.5 ppm; bushberry subgroup 13-07B, 1.8 ppm; cabbage 4.0 ppm; caneberry subgroup 13A, 1.0 ppm; cattle, fat 1.0 ppm; cattle, meat byproducts 0.10 ppm; cattle, meat 0.5 ppm; coriander, dried leaves 25 ppm; coriander, leaves 6.0 ppm; coriander, seed 5.0 ppm; corn, field, forage 3.0 ppm; corn, field, grain 0.05 ppm; corn, field, stover 5.0 ppm; corn, pop, grain 0.05 ppm; corn, pop, stover 5.0 ppm; corn, sweet, forage 3.0 ppm; corn, sweet, kernel plus cob with husk removed 0.05 ppm; corn, sweet, stover 5.0 ppm; eggplant 0.05 ppm; egg 0.05 ppm; fruit, citrus, group 10, 0.05 ppm; goat, fat 1.0 ppm; goat, meat byproducts 0.10 ppm; goat, meat 0.5 ppm; grain, aspirated fractions 70 ppm; grape 0.2 ppm; groundcherry 0.5 ppm; herb subgroup 19A, 0.05 ppm; hog, fat 1.0 ppm; hog, meat byproducts 0.10 ppm; hog, meat 0.5 ppm; hop, dried cones 10.0 ppm; horse, fat 1.0 ppm; horse, meat byproducts 0.10 ppm; horse, meat 0.5 ppm; leafy petioles subgroup 4B, 3.0 ppm; lettuce, head 3.0 ppm; mayhaw 1.4 ppm; milk, fat (reflecting 0.1 ppm; ppm in whole milk 1.0 ppm; nut, tree, group 14, 0.05 ppm; okra 0.50 ppm; pea and bean, dried shelled, except soybean, subgroup 6C, 0.15 ppm; pea and bean, succulent shelled, subgroup 6B, 0.05 ppm; peanut 0.05 ppm; pear 0.5 ppm; pepino 0.5 ppm; pepper, bell 0.5 ppm; pepper, nonbell 0.5 ppm; pistachio 0.05 ppm; poultry, fat 0.05 ppm; poultry, meat byproducts 0.05 ppm; poultry, meat 0.05 ppm; radish, tops 4.5 ppm; rapeseed, seed 0.05 ppm; sheep, fat 1.0 ppm; sheep, meat byproducts 0.1 ppm; sheep, meat 0.5 ppm; soybean, hulls 0.50 ppm; soybean, refined oil 0.30 ppm; soybean, seed 0.2 ppm; spinach 0.2 ppm; strawberry 3.0 ppm; tomato 0.15 ppm; turnip, greens 3.5 ppm; vegetable, cucurbit, group 9, 0.4 ppm; vegetable, legume, edible podded, subgroup 6A, 0.6 ppm; vegetable, root, subgroup 1B except sugar beet and garden beet 0.10 ppm; vegetable, tuberous and corm, subgroup 1C, 0.05 ppm. [*(40CFR180.442(a)(2)*]: a tolerance of 0.05 ppm is established for residues of bifenthrin as follows: (i) in or on all food/feed items (other than those covered by a higher tolerance as a result of use on growing crops) in food/feed handling establishments. (ii) The insecticide may be present as a residue from application in food handling establishments, including food service, manufacturing and processing establishments, such as restaurants, cafeterias, supermarkets, bakeries, breweries, dairies, meat slaughtering and packing plants, and canneries, feed handling establishments including feed manufacturing and processing establishments, in accordance with the following prescribed conditions: (A) application shall be limited to general surface and spot and/or crack and crevice treatment in food/feed handling establishments where food/feed and food/feed products are held, processed, prepared and served. General surface application may be used only when the facility is not in operation provided exposed food/feed has been covered or removed from the area being treated. Spot and/or crack and crevice application may be used while the facility is in operation provided exposed food/feed is covered or removed from the area being treated prior to application. Spray concentration shall be limited to a maximum of 0.06 percent active ingredient. Contamination of food/feed or food/feed contact surfaces shall be avoided. (B) To ensure safe use of the insecticide, its label and labeling shall conform to that registered with the U.S. Environmental Protection Agency and shall be used in accordance with such label and labeling.

Human toxicity (long-term)[101]***:*** Intermediate–10.50 ppb, Health Advisory

Fish toxicity (threshold)[101]***:*** Extra high–0.06197 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group C, possible human carcinogen
Acute Oral Category: 2, WARNING
Health Advisory: Nerve Toxin (S!), Developmental Toxin: Developmental/Reproductive Toxin (TRI); Endocrine disruptor (S!)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Off white to pale tan waxy substance. Faint, sweet odor. Molecular weight = 422.9; Specific gravity (H_2O:1) = 1.2125 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 51 °C; 57 – 63 °C; Vapor pressure = 1.8×10^{-7} mmHg; Flash point = 165 °C(oc). Practically insoluble in water; solubility = <0.1 mg/L.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds, lime and ordinary soaps. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air: NIOSH(2) IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA
STEL set by HSE[33] = 10 mg/m^3.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18], as pyrethroid.

Permissible Concentration in Water: Acceptable Daily Intake (ADI) =0.02 mg/kg as pyrethroid. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >6.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the skin, eyes, and respiratory tract. Skin sensitizer. Overexposure may cause tremors and staggered gait. LD_{50} (oral, rat) = 53–210 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May be a nerve poison. A suspected carcinogen and endocrine disputer.

Points of Attack: Bones, central nervous system; endocrine system (suspected).

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In the case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m³:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and hydrogen fluoride and hydrogen chloride gases. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Bitertanol B:0555

Use Type: Fungicide

CAS Number: 55179-31-2

Formula: $C_{20}H_{23}N_3O_2$

Synonyms: β-[(1,1'-Biphenyl)-4-yloxy]-α-(1,1-dimethylethyl)-1*H*-1,2,4-triazole-1-ethanol; 1*H*-1,2,4-Triazole-1-ethanol, β-[(1,1'-biphenyl)-4-yloxy]-α-(1,1-dimethylethyl)-

Trade Names: BAYCOR®; BAY KWG 0599®; BAYMAT-SPRAY®; BILOXAZOL®; KWG 0599®; SIBUTOL®, (with Fuberidazole)

Chemical class: Azole; Triazole

EPA/OPP PC Code: 117801

UN/NA & ERG Number: UN2811/154

RTECS® Number: XZ4803050

EC Number: 259-513-5

Uses: A fungicide used to control a variety of diseases. Used as control for prunes when drying. Not currently registered in the U.S. or EU countries[115] (pending). Used in many European, South American, Far Eastern and African countries, a well as in Australia for use on beans (all types) and various ornamentals. More than 20 global suppliers[97].

Regulatory Authority and Advisory Information: Acute Oral Category: 3, CAUTION
Health Advisory: Endocrine disruptor (S!)

Description: Colorless crystalline solid. Aromatic odor. Slightly soluble in water; solubility = 5 ppm @ 20 °C. Molecular weight 337.48; Freezing/Melting point = 126 °C; Vapor pressure 10^{-5} mmHg @ 20 °C.

Incompatibilities: The triazoles are sensitive to heat, friction, and impact. Sensitivity varies with the type of substitution to the triazole ring. Metal chelated and halogen substitution of the triazol ring make for a particularly heat-sensitive material. Azido and nitro derivatives have been employed as high explosives. No matter the derivative these materials should be treated as explosives[88].

Determination in Water: Log K_{ow} = >4.0. Values greater than 3.0 may bioaccumulate in marine organisms.

Routes of Entry: Ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous if swallowed. Contact may irritate skin and cause eye irritation and possible severe injury. Avoid inhalation. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May impair fertility in humans.

Points of Attack: May cause harm to the unborn child.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Refrigerate. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Toxic, solids, organic, n.o.s. require a label of “poisonous materials.” This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary.First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned. Do not allow water to get inside containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

Bromacil B:0640

Use Type: Herbicide

CAS Number: 314-40-9; *(alt.)* 154670-12-9

Formula: $C_9H_{13}BrN_2O_2$

Synonyms: Bromacil 1.5; Bromazil; 5-Bromo-3-*sec*-butyl-6-methyluracil; 5-Bromo-6-methyl-3-(1-methylpropyl)-2,4-(1H,3H)-pyrimidinedione; 5-Bromo-6-methyl-3-(1-methylpropyl)-2,4(1H,3H)-pyrimidinedione; Cynogan; 2,4(1H,3H)-Pyrimidinedione, 5-bromo-6-methyl-3-(1-methylpropyl)-; Uracil, 5-Bromo-3-*sec*-butyl-6-methyl

Trade Names: BOREA®; BOROCIL EXTRA®; α-BROMACIL 80 WP®; BROMAX®; CROPTEX ONYX®; CYNOGEN®; DuPont™ HERBICIDE 976®; EEREX®; FENOCIL®; HERBICIDE 976®; HIBOR; HYDON®; HYVAR®; HYVAR-X®; HYVAR X BROMACIL®; HYVAR X-L®; HYVAR X WEED KILLER®; HYVAR X-WS®; ISOCIL®; KROVAR®; NALKIL®; ROUT®; URAGAN®; URAGON®; UROX®; UROX B WATER SOLUBLE CONCENTRATE WEED KILLER®; UROX HX GRANULAR WEED KILLER®; WEED-BROOM® (mixture of DSMA, Bromacil & 2,4-D)

Chemical class: Uracil

EPA/OPP PC Code: 012301

California DPR Chemical Code: 83

HSDB Number: 1522

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: YQ9100000

EC Number: 206-245-1

Uses: Bromacil is used primarily for the control of annual and perennial grasses and broadleaf weeds, both nonselectively on noncrop lands and selectively for weed-control in citrus and pineapple crops. The top five applications in California for which this is used are oranges, lemons, grapefruit, and right-of-ways and landscapes. A limit of 0.1 mg/kg of agricultural products is set in several countries[35]. Not approved for use in EU countries.

US. Maximum Allowable Residue Levels for Bromacil (40 CFR 180.210): fruit, citrus 0.1 ppm; pineapple 0.1 ppm.

Human toxicity (long-term)[101]: Low–90.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–6485.34001 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, possible human carcinogen; ACGIH A3 Confirmed animal carcinogen with unknown relevance to humans

California Proposition 65 Chemical: Bromacil, lithium salt, developmental (5/18/ 1999)

Health Advisory: Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13149)

Safe Drinking Water Act: Priority List (55FR1470)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Bromacil is a noncombustible colorless, crystalline solid. It may be commercially available in granular, water-soluble, wettable powder or as a flammable liquid formulation (in ethanol or methanol). Molecular weight = 261.12; Specific gravity (H_2O:1) = 1.55 @ 25 °C; Boiling point = (sublimes); Freezing/Melting point = 158.3 °C (sublimes); Vapor pressure = 0.0008 mmHg @ 25 °C (NIOSH); 3.1×10^{-7} mmHg[83]; Flash point (*in ethanol or methanol*) = 44 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0; (*in ethanol or methanol*): Health 1, Flammability 2, Reactivity 0. Solid material is highly soluble in water. Commercial formulations use carrier solvents that may alter the physical properties shown.

Incompatibilities: Aqueous solution is a weak acid. Incompatible with strong acids, oxidizers, heat. Decomposes slowly in strong acids. Emits toxic fumes of nitrogen oxides and bromine and when heated to decomposition

Permissible Exposure Limits in Air: Conversion factor: 1 ppm = 10.68 mg/m^3 @ 25 °C & 1 atm

OSHA PEL: None

NIOSH REL: 1 ppm/10 mg/m^3 TWA

ACGIH 10 mg/m^3 TWA, confirmed animal carcinogen with unknown relevance to humans.

No Protective Action Criteria (PAC) available.

Determination in Air: Filter; none; Gravimetri; NIOSH Methods (IV) #0500, Particulates NOR (total).[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 70 ppb[14]. State Drinking Water Guidelines: Arizona 80 μg/L; Maine 70 μg/L.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, upper respiratory system, lungs. Inhalation can cause irritation, coughing and wheezing. LD_{50} (oral, rat) = <5000 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Has caused thyroid affects in animals

Points of Attack: Eyes, skin, respiratory system, thyroid

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Thyroid function tests. Consider x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following kinds of absorbents: Mineral- and Clay-Based[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash- or dust-proof chemical goggles (depending on physical state of material) and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Color Code-Green: General storage may be used. Prior to working with bromacil you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong acids; oxidizers, heat and open flame. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Absorb liquid containing bromacil in vermiculite, dry sand, earth, or similar material. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index K_{oc} = 32.

Fire Extinguishing: Bromacil may burn, but does not readily ignite; may be ignited by heat or open flame. Dust may cause an explosion. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Bromacil should be incinerated in a unit operating @ 850 °C equipped with gas scrubbing equipment.

Bromadiolone B:0650

Use Type: Rodenticide

CAS Number: 28772-56-7

Formula: $C_{30}H_{23}BrO_4$

Synonyms: 2H-1-Benzopyran-2-one, 3-(3-[4'-bromo(1,1'-biphenyl)-4-yl]-3-hydroxy-1-phenylpropyl-4-hydroxy-; Bromadialone; 3-[3-(4'-bromo(1,1'-biphenyl)-4-yl)3-hydroxy-1-phenylpropyl]-4-hydroxy-2H-1-benzopyran-2-one;3-[3-(4'-Bromobiphenyl)-4-yl]3-hydroxy-1-phenylpropyl)-4-hydroxy-coumarin; 3-[α-(ρ-(ρ-Bromophenyl)-β-hydroxyphenethyl)benzyl]-4-hydroxy-coumarin; Coumarin, 3-[3-(4'-bromo-1,1'-biphenyl-4-yl)-3-hydroxy-1-phenylpropyl]-4-hydroxy-; Coumarin, 3-[α-(ρ-(ρ-bromophenyl)-β-hydroxyphenethyl) benzyl]-4-hydroxy-

Trade Names: BOLDO®; BOOT HILL®; BROMONE®; CANADIEN 2000®; CONTRAC®; HAWK®; LM-637®; MAKI®; RAT ARREST®; RAT FREE®; RATIMUS®; RENTOKIL DEADLINE®; SLAYMOR®; SUPER-CAID®; SUPER-ROZOL®; SUP'ORATS®; TERMUS®

Chemical class: Coumarin

EPA/OPP PC Code: 112301; (208500 & 214600 use code No. 112001)

California DPR Chemical Code: 2135

HSDB Number: 6458

UN/NA & ERG Number: UN3027/151; UN3026/151 (liquid)

RTECS® Number: GN4934700

EC Number: 206-245-1

Uses: Bromadiolone is used as an anticoagulant rodenticide and used as bait for rodent control against house mice, roof rats and warfarin-resistant Norway rats. It is also authorized by USDA for use in official establishments operating under the Federal meat, poultry, shell egg grading and egg products inspection program.

Regulatory Authority and Advisory Information: Acute Oral Category: 1, DANGER–POISON

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)

CERCLA Reportable Quantity (RQ): 100 lb (45.4 kg)

Description: Bromadiolone is white to off-white (yellowish) powder. Molecular weight = 527.44[83]; Boiling point = (decomposes); Freezing/Melting point = 199–210 °C[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Low solubility in water.

Incompatibilities: Aqueous solution is a weak acid. May cause metal corrosion.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1 0.091 mg/m^3

PAC-2: 1 mg/m^3

PAC-3: 3.4 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Contaminant: potential groundwater. Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms. EU Drinking Water Guidelines (MAC) = 0.16 μg/L.

Routes of Entry: Ingestion, inhalation, skin and/or eye contact. Persons who are taking anticoagulants or are suffering from bleeding disorders must be protected from exposure.

Harmful Effects and Symptoms: The onset of the symptoms of poisoning may be delayed for a few days following ingestion. Typical symptoms of poisoning include increased bleeding. Coagulation problems may be detected by laboratory analyses only. Large exposures may cause excessive bleeding from minor cuts or abrasions, bleeding from the gums and/or blood in feces. Massive internal bleeding may result in shock. A victim with anemia and/or liver disease may have more severe and persistent poisoning that may be extremely difficult to control.

Short Term Exposure: Bromadiolone is very toxic by inhalation, contact with the skin and by ingestion. May cause eye irritation. Signs and symptoms of acute bromadiolone exposure: Bromadiolone is an anticoagulant. Hemorrhage is the most common effect and may be manifested by nose bleeding, gum bleeding, bloody stools and urine, ecchymoses (extravasations of blood into skin), and hemoptysis (coughing up of blood). Bruising is heightened. Abdominal and flank pains are also common. LD_{50} (oral, rat) = 490 μ/kg[9]; LD_{50} (dermal, rabbit) = >2000 μg/kg[9].

Long Term Exposure: May cause skin and eye irritation; gastroenteritis; inflammation of the stomach/intestinal mucous membranes. May cause liver or kidney damage.

First Aid: *Emergency Life-Support Procedures:* Acute exposure to this chemical may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. Inhalation Exposure: 1. Move victims to fresh air. Emergency personnel should avoid self-exposure to this chemical. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 4. RUSH to a health care facility. *Dermal/Eye Exposure:* 1. Remove victims from exposure. Emergency personnel should avoid self-exposure to this chemical. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Remove contaminated clothing as soon as possible. 4. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. 5. Wash exposed skin areas twice with soap and water. 6. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 7. RUSH to a health care facility.

Ingestion Exposure: 1. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 2. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 3. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of bromadiolone is unknown or suspected to be greater than 30 minutes, do not induce vomiting and RUSH to health care facility. 4. ipecac should not be administered to children under 6 months of age. ***Warning:*** Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If ANY uncertainty exists, RUSH to health care facility. 4. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Ambulate (walk) the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be re-administered. Continue to ambulate and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. 4. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (1/2 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (1/2 to 1 cup) of water. 5. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (1/2 to 1 oz) of cathartic; 50 to 100 g (1-3/4 to 3-1/2 oz) is recommended for adults. 6. *RUSH* to a health care facility[83].

Personal Protective Methods: Reacts with the following kinds of absorbents: Cellulose-Based. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.091 mg/m^3. SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with bromadiolone you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Coumarin derivatives, solid, toxic, n. o. s. have a DOT label requirement of "poisonous materials." Hazard Class 6.1; Packing Group I, II.

Toxic solids, organic, n. o. s. requires a shipping label of "poisonous materials."Hazard Class is 6.1.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other non-combustible absorbent material and place into containers for later disposal. *Small dry spills:* with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills:* dike far ahead of spill for later disposal.

Fire Extinguishing: Hazardous decomposition includes hydrogen bromide. This material may burn but does not ignite readily. *Small fires:* dry chemicals, carbon dioxide; water spray or foam. *Large fires:* water spray, fog or foam. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Bromoxynil B:0735

Use Type: Herbicide

CAS Number: 1689-84-5

Formula: $C_7H_3Br_2NO$; $C_{15}H_{17}Br_2NO$ (octanoate)

Synonyms: Bensonitrile, 3,5-dibromo-4-hydroxy-; Benzonitrile, 3,5-dibromo-4-hydroxy-; Butilchlorofos; Caswell No. 119; 2,6-Dibromo-4-cyanophenol; 2,6-Dibromo-4-hydroxybenzonitrile; 2,6-Dibromo-4-phenylcyanide; 3,5-Dibromo-4-hydroxybenzonitrile; 3,5-Dibromo-4-hydroxyphenyl cyanide; ENT 20,852; 4-Hydroxy-3,5-dibromobenzonitrile

Trade Names: BRIOTRIL®; BRUCIL®; BRITTOX®; BROMINAL®; BROMINEX®; BROMINAL®; BROMINAL ME-4®; BROMINIL®; BROMILIL PLUS®; Bromox 2E; BROMOTRIL®; BROMOXYNIL NITRILE HERBICIDE®; BRONATE®; BROXYNIL®; BUCTRIL® Bromoxynil; BUCTRIL® GEL HERBICIDE (octanoate); BUCTRIL® 4EC GEL (mixture of bromoxynil octanoate + bromoxynil heptanoate); BUCTRIL INDUSTRIAL®; CHIPCO BUCTRIL®; CHIPCO CRAB-KLEEN®; FLAGON®, 400 EC; HOBANE®; LABUCTRIL®; LITAROL®; M&B 10064®; MB 10064®; MB 10731® (octanoate); M&B 10731®; ME4 BROMINAL®; MERIT®; MEXTROL-BIOX®; MOXY 2E®; NCR CE EE DOV7® (octanoate); NU-LAWN WEEDER®; OXYTRIL M®; PARDNER®; SABRE®; TORCH®

Chemical class: Hydroxybenzonitrile

EPA/OPP PC Code: 035301; 035302 (octanoate)

California DPR Chemical Code: 2429

HSDB Number: 1523

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: DI3150000

EC Number: 216-882-7 [*Annex I Index No.:* 608-006-00-0]

Uses: A U.S. EPA restricted Use Pesticide (RUP). For post-emergent control of broadleaf weeds. Used on alfalfa, garlic, corn, sorghum, flax, cereals, turf and on pasture and rangelands.

Human toxicity (long-term)[101]: Intermediate–10.50 ppb, Health Advisory; (octanoate) Very low–140.00 ppb, Health Advisory.

Fish toxicity (threshold)[101]: Low–283.24412 ppb, MATC (Maximum Acceptable Toxicant Concentration); (octanoate) High–4.40230 ppb, MATC (Maximum Acceptable Toxicant Concentration).

U.S. Maximum Allowable Residue Levels for Bromoxynil [40CFR 180.324(a)(1)]: Alfalfa, forage 0.1 ppm; alfalfa, hay 0.5 ppm; barley, grain 0.05 ppm; barley, hay 9.0 ppm; barley, straw 4.0 ppm; corn, field, forage 0.3 ppm; corn, field, grain 0.05 ppm; corn, field, stover 0.2 corn, pop, grain 0.05 ppm; corn, pop, stover 0.2 flax, seed 0.1 ppm; garlic 0.1 ppm; grain, aspirated fractions 1.2 ppm; grass, forage 18 grass, hay 5.0 ppm; oat, forage 0.3 ppm; oat, grain 0.05 ppm; oat, hay 9.0 ppm; oat, straw 4.0 ppm; onion, bulb 0.1 ppm; peppermint, hay 0.1 ppm; rye, forage 1.0 ppm; rye, grain 0.05 ppm; rye, straw 2.0 ppm; sorghum, grain, forage 0.8 ppm; sorghum, grain, grain 0.2 ppm; sorghum, grain, stover 0.2 ppm; spearmint, hay 0.1 ppm; wheat, forage 1.0 ppm; wheat, grain 0.05 ppm; wheat, hay 4.0 ppm; wheat, straw 2.0 ppm. **[*40CFR 180.324(a)(2)*]**: cattle, fat 1 ppm; cattle, meat byproducts 3.5 ppm; cattle, meat 0.5 ppm; cotton, gin byproducts 7.0 ppm; cotton, hulls 5.0 ppm; cotton, undelinted seed 1.5 ppm; egg 0.05 ppm; goat, fat 1 ppm; goat, meat byproducts 3.5 ppm; goat, meat 0.5 ppm; hog, fat 1 ppm; hog, meat byproducts 3.5 ppm; hog, meat 0.5 ppm; horse, fat 1 ppm; horse, meat byproducts 3.5 ppm; horse, meat 0.5 ppm; milk 0.4 ppm; poultry, fat 0.05 ppm; poultry, meat byproducts 0.3 ppm; poultry, meat 0.05 ppm; sheep, fat 1 ppm; sheep, meat byproducts 3.5 ppm; sheep, meat 0.5 ppm.

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group C, possible human carcinogen

California Proposition 65 Chemical: Developmental toxin (10/1/1990)

Acute Oral Category: 2, WARNING

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0% (also, octanoate)

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R25; R26; R43; R50/53; R63; safety phrases: S1/2; S27/28; S36/37; S45; S63; S60; S61 (see Appendix 1)

Description: Colorless to white crystalline solid or tan powder. Odorless (pure). Molecular weight = 276.93; Boiling point = (sublimes) 135 °C @ 0.15 mmHg[88]; Freezing/Melting point = 194–195 °C; 360 °C (sodium or potassium salt); Vapor pressure = 4.5×10^{-8} mmHg @ 20 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Moderately soluble in water; solubility = 125 ppm @ 20 °C.

Incompatibilities: A weak acid; keep away from bases and alkalies. React with boranes, alkalies, aliphatic amines, amides, nitric acid, sulfuric acid. Keep away from oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc) and strong acids.

Permissible Exposure Limits in Air: NIOSH REL: *Nitriles:* 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

Determination in Air: Bromoxynil/bromoxynil octanoate, NIOSH: #5010. See NIOSH Criteria Document 78-212 NITRILES[18]

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 140 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: State Drinking Water Guidelines: Florida 140 μg/L. Log K_{ow} = >2.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact may cause burns to skin and eyes. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. May affect the iron metabolism, causing asphyxia. It is highly toxic. Forms cyanide in the body. Exposure results in headache, dizziness, rapid pulse, deep-rapid breathing, nausea, vomiting, unconsciousness, convulsions and sometimes death. May cause cyanosis (blue coloration of skin and lips caused by lack of oxygen). LD_{50} (oral, rat) = 80–190 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Chronic exposure over long periods may cause fatigue and weakness. Can cause same general symptoms as hydrogen cyanide but onset of symptoms is likely to be slower. May cause liver and kidney damage. May cause skin sensitization.

Points of Attack: Skin. In animals: liver, kidney damage. May be a nerve poison.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Liver and kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible[ERG]. Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/ Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves[ERG].

Respirator Selection: *Nitriles*: NIOSH, *10 ppm:* Sa (APF = 10) (any supplied-air respirator); *25 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); *50 ppm:* SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece); *250 ppm:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode. *Escape*: GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Issue poison warning.

First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.1/0.2
Night 0.1/0.2

Large spills (From a large package or from many small packages)

First: isolate in all directions (feet/meters) 200/60
Then: Protect persons downwind (miles/kilometers)
Day 0.3/0.5
Night 0.5/0.8

Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers. If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and hydrogen bromide gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Incineration with effluent gas scrubbing is recommended. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Bromoxynil octanoate B:0736

Use Type: Herbicide
CAS Number: 1689-99-2
Formula: $C_{15}H_{17}Br_2NO$
Synonyms: Bromoxynil octanoic acid ester; 2,6-Dibromo-4-cyanophenyl octanoate; 2,6-Dibromo-4-cyanophenyl ester, octanoic acid; 3,5-Dibromo-4-octanoyloxybenzonitrile; 4-Cyano-2,6-dibromophenyl octanoate; Octanoic acid ester of 3,5-dibromo-4-hydroxybenzonitrile
Trade Names: BROMINAL®-W; BUCTRIL® Bromoxynil octoate; NPH-1320®
Chemical class: Hydroxybenzonitrile
EPA/OPP PC Code: 035302
California DPR Chemical Code: 2163
HSDB Number: 7308
UN/NA&ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151
RTECS® Number: DI3325000
EC Number: 216-885-3 [*Annex I Index No.:* 608-107-00-0]
Uses: A U.S. EPA restricted Use Pesticide (RUP). Herbicide used for alfalfa seedlings, barley, corn, flax, garlic, grasses, mint, oats, onions, popcorn, rye, sorghum, triticale, wheat. See also below.
U.S. Maximum Allowable Residue Levels for Bromoxynil octanate [40 CFR 180.324(a)(1)]: Alfalfa, seeding 0.1 ppm; barley, grain 0.1 ppm; barley, straw 0.1 ppm; canarygrass, annual, seed 0.1 ppm; corn, field, stover 0.1 ppm; corn, fodder (green) 0.1 ppm; corn, grain 0.1 ppm; corn, grain, field 0.1 ppm; corn, stover 0.1 ppm; flax, seed 0.1 ppm; flax, straw 0.1 ppm; garlic 0.1 ppm; grass, canary, annual, straw 0.1 ppm; mint hay 0.1 ppm; oat, forage 0.1 ppm; oat, grain 0.1 ppm; oat, straw 0.1 ppm; onion, dry bulb 0.1 ppm; rye, forage 0.1 ppm; rye, grain 0.1 ppm; rye, straw 0.1 ppm; sorghum, forage 0.1 ppm; sorghum, grain 0.1 ppm; sorghum, grain, stover 0.1 ppm; wheat, forage 0.1 ppm; wheat, grain 0.1 ppm; and wheat, straw 0.1 ppm. ***[40 CFR 180.324(a)(2)]:*** cattle, fat 1 ppm; cattle, meat byproducts 3.5 ppm; cattle, meat 0.5 ppm; cotton gin byproducts 7.0 ppm; cotton, hulls 5.0 ppm; cotton, undelinted seed 1.5 ppm; egg 0.05 ppm; goat, fat 1 ppm; goat, meat byproducts 3.5 ppm; goat, meat 0.5 ppm; hog, fat 1 ppm; hog, meat byproducts 3.5 ppm; hog, meat 0.5 ppm; horse, fat 1 ppm; horse, meat byproducts 3.5 ppm; horse, meat 0.5 ppm; milk 0.1 ppm; poultry, fat 0.05 ppm; poultry, meat byproducts 0.3 ppm; poultry, meat 0.05 ppm; sheep, fat 1 ppm; sheep, meat byproducts 3.5 ppm; and sheep, meat 0.5 ppm.
Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group C, possible human carcinogen (as bromoxynil)
California Proposition 65 Chemical: Developmental toxin (5/18/1999)
Health Advisory: Endocrine disruptor (Confirmed)
Acute Oral Category: 3, CAUTION
European/International Regulations: Hazard Symbol: T, N; risk phrases: R22; R23; R43; R50/53; R63; safety phrases: S1/2; S36/37; S45; S60; S61; S63 (see Appendix 1)
Description: Colorless (when pure) to off-white creamy, waxy solid. Molecular weight = 403.15; Specific gravity (H_2O:1) = 1.64 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 45 °C; Vapor pressure = 4.8 × 10^{-6} mmHg. Slightly soluble in water; solubility = <1 mg/L @ 25 °C.
Incompatibilities: Keep away from alkalies and acids. Combustible; dust may form explosive mixture with air.
Permissible Exposure Limits in Air: NIOSH REL: *Nitriles:* 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.
Determination in Air: Bromoxynil/bromoxynil octanoate, NIOSH: #5010. See NIOSH Criteria Document 78-212 NITRILES[18]
Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Skin, inhalation, ingestion
Harmful Effects and Symptoms
Short Term Exposure: May cause irritation of the eyes, skin, and respiratory tract. May cause contact dermatitis and skin sensitization. LD_{50} (oral, rat) = 250 mg/kg[9]; LD_{50} (dermal, rat) = >2 g/kg.
Long Term Exposure: May cause reproductive and fetal effects. May cause skin sensitization.
Points of Attack: Skin. Reproductive cells.
Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Respirator Selection: *Nitriles*: NIOSH, *10 ppm:* Sa (APF = 10) (any supplied-air respirator); *25 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); *50 ppm:* SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece); *250 ppm:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode. *Escape*: GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Issue poison warning.
First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.1/0.2
Night 0.1/0.2

Large spills (from a large package or from many small packages)
First: isolate in all directions (feet/meters) 200/60
Then: Protect persons downwind (miles/kilometers)
Day 0.3/0.5
Night 0.5/0.8

Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers. If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label.

Fire Extinguishing: Containers may explode when heated. Hazardous decomposition includes toxic oxides of nitrogen and carbon, and hydrogen bromide gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Incineration with effluent gas scrubbing is recommended. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Brucine B:0740

Use Type: Rodenticide
CAS Number: 357-57-3
Formula: $C_{23}H_{26}O_4 \cdot 4H_2O$
Synonyms: Brucina (Spanish); (-)Brucine; (-)Brucine dihydrate; Brucine hydrate; L-Brucine; Dimethoxy strychnine; 2,3-Dimethoxystrichnidin-10-one; 2,3-Dimethoxystrychnine; 10,11-Dimethoxystrychnine; 10,11-Dimethylstrychnine; Strychnidin-10-one, 2,3-dimethoxy-(9CI); Strychnine, 2,3-dimethoxy-
Trade Names: DOLCO MOUSE CEREAL®; PIED PIPER MOUSE SEED® (Brucine)
Chemical Class: Alkaloid
EPA/OPP PC Code: 059303
HSDB Number: 307
UN/NA & ERG Number: UN1570/152
RTECS® Number: EH8925000
EC Number: 206-614-7 [*Annex I Index No.:* 614-006-00-1]
Uses: Used in the manufacture of other chemicals, in perfumes, as a medication for animals, and as a poison for rodents

Regulatory Authority and Advisory Information: U.S. EPA Hazardous Waste Number (RCRA No.): P018
CERCLA Reportable Quantity (RQ): 100 lb (45.4 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: (*anhydrous*) Hazard Symbol: T+; risk phrases: R26/28; R52/53; safety phrases: S1/2; S13; S45; S61
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Brucine is colorless to white, odorless, crystalline solid or powder. Very bitter taste. Molecular weight = 394.4[86]; 394.51[88]; Specific gravity (H_2O:1) = >1 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 177.78[88]; 178 °C[86]. Vapor pressure = 5.8 × 10^{-16} mmHg @ 25 °C[86]; Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Poor solubility in water; solubility = 1 g/1320 ml.

Incompatibilities: Reacts with strong oxidizers. Finely dispersed material in air may cause dust explosions.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.1 mg/m^3
PAC-2: 1.1 mg/m^3
PAC-3: 36 mg/m^3

Determination in Air: Use OSHA Sampling Method 0405.

Determination in Water: Log K_{ow} =<1.0. Unlikely to bioaccumulate in marine organisms. Highly toxic to marine organisms with long-term chronic effects to the environment.

Routes of Entry: Inhalation, ingestion, eye and/or dermal and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Highly toxic if dust, vapor or powder is inhaled or if it is swallowed. Irritates the eyes and respiratory tract. Exposure can cause headache, nausea, vomiting, ringing in the ears, disturbed vision, restlessness, excitement, twitching and convulsions, seizures, breathing difficulties. An alkaloid and a narcotic. Severe poisoning can cause paralysis, unconsciousness, and death. The probable fatal dose in adult is estimated @ 1 g. LD_{50} (oral, rat) = 90–150 mg/kg[9]; 1 mg/kg[86]

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following kinds of absorbents: Mineral- and Clay-Based[88]. Wear positive-pressure self-contained breathing apparatus (SCBA). Dust mask; goggles or face shield; rubber gloves. Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[-NOAA]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: SCBA >0.1 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon (monoxide and dioxide). *On a small fire:* use dry chemical, carbon dioxide or water spray. *On a large fire:* use water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. To dispose of this material, contact a licensed professional waste disposal service. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Buprofezin B:0745

Use Type: Insecticide, Acaricide, Insect growth regulator
CAS Number: 69327-76-0
Formula: $C_{16}H_{23}N_3OS$
Synonyms: 2-*tert*-Butylimino-3-isopropyl-5-phenylperhydro-1,3,5-thidiazin-4-one; 4*H*-1,3,5-Thiadiazin-4-one, 2-[(1,1-dimethylethyl)imino] tetrahydro-3-(1-methylethyl)-5-phenyl-
Trade Names: APPLAUD®; NNI-750®
Chemical Class: Unclassified
EPA/OPP PC Code: 275100
California DPR Chemical Code: 3947
HSDB Number: 7610
UN/NA&ERG Number: UN3077(solid)/171
RTECS® Number: XI2865000
Uses: For insect control in food crops and greenhouse ornamentals.
U.S. Maximum Allowable Residue Levels for residues of buprofezin [40 CFR 180.511(a)]: in or on the following food commodities: Acerola 0.30 ppm; almond 0.05 ppm; almond, hulls 2.0 ppm; apricot 9.0 ppm; atemoya 0.30 ppm; avocado 0.30 ppm; banana 0.20 ppm; bean, snap, succulent 0.02 ppm; berry, low growing, subgroup 13-07G, 2.5 ppm; birida 0.30 ppm; canistel 0.90 ppm; cattle, fat 0.05 ppm; cattle, kidney 0.05 ppm; cattle, liver 0.05 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts 0.05 ppm; cherimoya 0.30 ppm; citrus, dried pulp 7.5 ppm; citrus, oil 80 ppm; cotton, gin byproducts 20.0 ppm; cotton, undelinted seed 0.35 ppm; custard apple 0.30 ppm; feijoa 0.30 ppm; fruit, citrus, group 10, 2.5 ppm; fruit, pome, group 11, 4.0 ppm; fruit, stone, group 12, except apricot and peach 1.9 ppm; goat, fat 0.05 ppm; goat, kidney 0.05 ppm; goat, liver 0.05 ppm; goat, meat 0.05 ppm; goat, meat byproducts 0.05 ppm; grape 2.5 ppm; guave 0.30 ppm; hog, fat 0.05 ppm; hog, kidney 0.05 ppm; hog, liver 0.05 ppm; hog, meat 0.05 ppm; hog, meat byproducts 0.05 ppm; horse, fat 0.05 ppm; horse, kidney 0.05 ppm; horse, liver 0.05 ppm; horse, meat 0.05 ppm; horse, meat byproducts 0.05 ppm; llama 0.30 ppm; jaboticaba 0.30 ppm; lettuce, head 6.0 ppm; loganberry 0.30 ppm; lychee 0.30 ppm; mango 0.90 ppm; milk 0.01 ppm; okra 4.0 ppm; olive 3.5 ppm; olive, oil 4.8 papaya 0.90 ppm; passionfruit 0.30 ppm; peach 9.0 ppm; pepper, nonbell 4.0 ppm; pistachio 0.05 ppm; pulasan 0.30 ppm; radicchio 6.0 ppm; rambutan 0.30 ppm; sapodilla 0.90 ppm; sapote, black 0.90 ppm; sapote, mamey 0.90 ppm; sheep, fat 0.05 ppm; sheep, kidney 0.05 ppm; sheep, liver 0.05 ppm; sheep, meat 0.05 ppm; sheep, meat byproducts 0.05 ppm; soursop 0.30 ppm; Spanish lime 0.30 ppm; star apple 0.90 ppm; starfruit 0.30 ppm; sugar apple 0.30 ppm; vegetable, cucurbit, group 9, 0.50 ppm; vegetable, fruiting, group 8, except nonbell pepper 1.3 ppm; vegetable, leafy, except brassica, group 4, except head lettuce and radicchio 35 ppm; wax jambu 0.30 ppm.
Regulatory Authority and Advisory Information: Acute Oral Category: 3, CAUTION
Health Advisory: Mutagen
Description: White crystalline powder. Molecular weight = 305.44; Specific gravity (H_2O:1) = 1.178 @ 20 °C; Boiling point = 350 °C; Freezing/Melting point = 105–106 °C; Vapor pressure = 2 × 10^{-6} mmHg @ 25 °C; Flash point = °C. Very slightly soluble in water.
Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Dust may form explosive mixture with air.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Ingestion, inhalation, dermal contact; absorbed through the unbroken skin.
Harmful Effects and Symptoms
Short Term Exposure: Causes moderate eye, skin, and possibly respiratory irritation. Harmful if swallowed. LD_{50} (oral, rat) = >3 g/kg; LD_{50} (dermal, rat) = >5 g/kg.
Long Term Exposure: Ingestion of excessive amounts of buprofezin may induce subdued mood and diminished muscular coordination. May cause a slightly enlarged abdomen.
Points of Attack: May affect the chromosomes; breakdown of the DNA.
Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye

wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposes at about 200 °C releasing toxic oxides of nitrogen, sulfur and carbon. This chemical is a combustible solid but does not readily ignite. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Butachlor B:0757

Use Type: Herbicide

CAS Number: 23184-66-9

Formula: $C_{17}H_{26}ClNO_2$

Synonyms: Butoxymethyl; *N*-(Butoxymethyl)-2-chloro-*N*-(2,6-diethylphenyl)acetamide; 2-Chloro-2',6'-diethyl-*N*-(butoxymethyl)acetanalide; *N*-(Butoxymethyl)-2-chloro-2',6'-diethylacetanilide;Acetanilide, 2-chloro-2',6'-diethyl-*N*-(butoxymethyl)-; Acetamide, *N*-(butoxymethyl)-2-chloro-*N*-(2,6-diethylphenyl)-

Trade Names: BUTANEX®; BUTANOX®; CP 53619®; HILTACHLOR®; LAMBAST®; MACHETE®; MACHETTE®; PILLARSET®; RASAYANCHLOR®; WEEDOUT®; VENDAVAL®

Chemical Class: Chloroacetamide

EPA/OPP PC Code: 112301

California DPR Chemical Code: 4056

HSDB Number: 6865

UN/NA&ERG Number: UN3082 (liquid)/171

RTECS® Number: AE1200000

EC Number: 245-477-8

Uses: Used for pre-emergence control of annual grasses, sedges and broadleaf weeds in rice crops. Used primarily in Asia, South America, Europe and Africa. Not registered for use in the U.S. Not approved for use in EU countries[115].

Human toxicity (long-term)[101]: Very low–259.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–14.47908 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Acute Oral Category: 3, CAUTION

Health Advisory: Mutagen
Marine Pollutant: IMDG
SARA 311/312: Acute Health Hazard
WGK (German Aquatic Hazard Class): No value assigned (estimated) 2-Hazard to waters.

Description: Light yellow or amber oily liquid. Molecular weight = 311.85; Specific gravity (H_2O:1) = 1.070 @ 4 °C; Freezing/Melting point –5 °C; Boiling point = (decomposes) 156 °C @ 0.66 mmHg; 196 °C @ 0.5 mmHg; Vapor pressure = 4.5×10^{-8} mmHg; Flash point = 100 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 0, Flammability 1, Reactivity 1. Low solubility in water; solubility = 20 mg/L @ 20 °C

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 259 μg/L; Maine 26 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Apprehension, anxiety, confusion, nervous excitation; dizziness; headache; numbness and weakness in limbs; muscle twitching, tremors; nausea and vomiting; slow, shallow respiration, bluish face; convulsions; loss of consciousness; breathing stops; death.

LD_{50} (oral, rat) = >1.5 g/kg; LD_{50} (dermal, rabbit) = >3 g/kg.

Points of Attack: May be fatal if inhaled, ingested, or absorbed through the skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Directly irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Get medical aid immediately. Have physician check for possible delayed damage. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. Shampoo hair promptly if contaminated; protect eyes. Do not scrub skin or hair, since this can increase absorption through the skin. Rinse thoroughly with water. Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs many organochlorines; therefore, items such as leather shoes, gloves, and belts should be discarded. If the skin is swollen or inflamed, cool affected areas with cold compresses. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. The patient is at risk of central nervous system depression or seizures, which may lead to pulmonary aspiration during vomiting. If the victim is conscious and able to swallow, *administer an aqueous slurry of activated charcoal at 1 g/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. The efficacy of activated charcoal for some organochlorine poisoning (such as chlordane) is uncertain. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately remove the victim from the contaminated area to fresh air. For inhalation exposures, monitor for respiratory distress. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. If breathing is difficult, administer 100% humidified supplemental oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Combustible material. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For liquids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Butralin B:0805

Use Type: Herbicide; plant growth regulator
CAS Number: 33629-47-9
Formula: $C_{14}H_{21}N_3O_4$
Synonyms: Aniline, *N-sec*-butyl-4-*tert*-butyl-2,6-dinitro-; Benzenamine, 4-(1,1-dimethylethyl)-*N*-(1-methylpropyl)-2,6-dinitro-; Butalin; Butraline; *N-sec*-Butyl-4-*tert*-butyl-2,6-dinitroaniline; Dibutalin; 4-(1,1-Dimethylethyl)-*N*-(1-methylpropyl)-2,6-dinitrobenzenamine; Dimethyl-ethyl-*N*-(1-methylpropyl)-2,6-dinitrobenzeneamine[4-(1,1-)]; Rutralin
Trade Names: A-820®[C]; 72-A34®; AMCHEM 70-25®[C]; AMCHEM A-280®[C]; AMEX®[C]; AMEX 820®[C]; AMEXINE®[C]; NO CRAB®[C]; SECTOR®; STIFLE®; TAMEX®; ZITSAOSOL®
Chemical class: 2,6-Dinitroaniline
EPA/OPP PC Code: 106501
California DPR Chemical Code: 1756
HSDB Number: 7355
UN/NA & ERG Number: UN1596 (Dinitroanilines)/153; UN3082 (liquid)/171; UN3077(solid)/171
RTECS® Number: BW9500000
EC Number: 251-607-4

Uses: Not approved for use in EU countries[115]. Actively registered for use in the U.S. Butralin is used as a plant growth regulator on tobacco after the tobacco is topped. All tobacco is topped to stimulate desirable chemical and physical characteristics but it also stimulates the growth of suckers. All uses on food crops were canceled in January, 1991, and all uses on turf and ornamental grasses were voluntarily canceled in March, 1997. It may be used on food crops, broadleaf weeds and ornamentals in some countries. Butralin has been found effective in destroying opium poppy crops.

Human toxicity (long-term): Low–70.00 ppb, Health Advisory

Fish toxicity (threshold): Intermediate–42.17178 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer.
Acute Oral Category: 3, CAUTION
Marine pollutant, IMO/IMDG

Description: Butralin is a yellow-orange crystalline solid or liquid. Commercial product is available as an emulsifiable concentrate. Molecular weight = 295.34; Specific gravity (H_2O:1) = 1.05 @ 20 °C; Flash point = >100 °C; 65 °C (cc)[MSDS]. Henry's Law constant = 4.9×10^{-6} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Slightly soluble in water; solubility = <1.0 ppm. Some formulations may contain petroleum distillate. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); strong acids

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal contact, ingestion

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the eyes, skin, or respiratory tract. May be toxic if ingested or upon dermal and/or eye contact. LD_{50} (oral, rat) = 1.5–2.5 g/kg; LD_{50} (dermal, rabbit) = 200 mg/kg[9].

Long Term Exposure: May cause reproductive and fetal effects.

Points of Attack: Reproductive cells. Chromosomes/DNA.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Dinitroanilines react with cellulose-based and expanded polymeric absorbents[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: For nuisance exposures use type P95 (US) or type P1 (EU EN 143) particle respirator. For higher-level use type OV/AG/P99 (US) or type ABEK-P2 (EU EN 143) respirator cartridges. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Storage: Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents; and combustible materials. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where the chemical is handled, used, or stored. Use only non-sparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dinitroanilines require a label of "poisonous materials." They usually fall into Hazard Group 6.1. Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For dinitroaniline solids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. *If tank, rail car or tank truck is involved in spill*, isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition products include oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Do not reuse container.

Butylate B:0860

Use Type: Herbicide

CAS Number: 2008-41-5

Formula: $C_{11}H_{23}NOS$

Synonyms: Bis(2-methylpropyl)carbamothioic acid-*S*-ethyl ester; Butilate; Diisobutylthiocarbamic acid-*S*-ethyl ester; Diisocarb; *S*-Ethyl *N,N*-diisobutylthiocarbamate; *S*-Ethyl bis(2-methylpropyl)carbamothioate; Ethyl-*N,N*-diisobutylthiocarbamate; *S*-Ethyldiisobutyl thiocarbamate; Ethyl-*N,N*-diisobutyl thiolcarbamate

Trade Names: ANELDA PLUS®; ANELDAZIN®; ANELIROX®; ATRA-BUTE®[C] Nov.1992; BUTILATE®; GENATE®[C] August 1994; R-1910®[C] Dec.1987; STAUFFER R-1910®[C] Dec.1987; SUTAN®[C] Sept.1994; SUTAZINE®[C] Dec.1987; TOMAHAWK®

Chemical class: Thiocarbamate

EPA/OPP PC Code: 041405

California DPR Chemical Code: 565

HSDB Number: 1714

UN/NA & ERG Number: UN3006 (liquid)/151; UN3082 (liquid)/171

RTECS® Number: EZ7525000

EC Number: 217-916-3

Uses: Classified as a General Use Pesticide (GUP) with applications limited to corn fields. Not approved for use in EU countries[115]. A selective herbicide for use on field corn, sweet corn, and popcorn to control grassy and broadleaf weeds and seeds in the soil prior to sowing a crop. Often applied in combination with atrazine and/or cyanazine.

U.S. Maximum Allowable Residue Levels for Butylate, Federal Register (67FR49689-49691, July 31, 2002): "By itself, butylate poses no risk concerns within the limits of the existing tolerances, which will remain in effect at 0.1 ppm for all registered commodities; however, the Agency intends to revise the commodity definitions in accordance with current Agency administrative practice."

Human toxicity (long-term)[101]: Very low–400.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–22.61732 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Health Advisory: Nerve Toxin (S!), Severe eye irritant

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive)

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.003; Non-wastewater (mg/kg), 1.4

Description: Butylate is a clear liquid with an aromatic odor. Molecular weight = 217.38; Specific gravity (H_2O:1) = 0.938; Boiling point = >250 °C; 137.5 °C @ 21 mmHg; Freezing/Melting point = 138 °C; Vapor pressure = 1.3×10^{-2} mmHg; 170 mmHg @ 20 °C; Flash point 110 °C (oc). Low solubility in water; solubility = 44 mg/L.

Incompatibilities: Hydrolyzed by strong acids and alkalies. UV light causes derogation. Thermally stable up to 200 °C. Flammable gases are generated by the combination of thiocarbamates with aldehydes, nitrides, and hydrides. Thiocarbamates are incompatible with acids, peroxides, and acid halides.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 35 μg/L; State Drinking Water Guidelines: Florida 350 μg/L; Maine 350 μg/L; Wisconsin 400 μg/L.

Determination in Water: Analysis of butylate is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen- and phosphorus-containing pesticides in water samples. In this method, approximately 1 L of sample is extracted with methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using a nitrogen-phosphorus detector. The method detection limit has not been determined for butylate, but it is estimated that the detection limits for analytes included in this method are in the range of 0.1 to 2 μg/L. Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Can cause serious eye irritation. May cause skin and respiratory irritation. LD_{50} (oral, rat) = >3 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: An EPA Category I eye irritant. May be weakly neurotoxic.

Points of Attack: Eyes, Central nervous system. Possible mutagen. Reproductive cells.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any MSHA/NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter) or SCBAE (any appropriate escape-type, self-contained breathing apparatus). All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in the NIOSH/NPPTL Certified Equipment List, which is available on the NIOSH Web site.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Thiocarbamate and Dithiocarbamate pesticides, solid, toxic require a label of "poisonous materials." This material usually falls in Hazard Class 6.1.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 400.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Hydrolysis and landfill: For each 2.265 kg of actual carbaryl, add 0.906 kg of flake caustic (sodium hydroxide) (this amount was stated to be a 50% excess over the minimum required) and allow about 24 hr for completion of the reaction. The first step of the degradation would be: aryl-O-CO-NHR + H_2O–NaOH → aryl-OH- + (HO-CO-NHR). The carbamic acid at the right would decompose to the amine and carbon dioxide in neutral solution, or to sodium carbonate in excess base. In excess base the phenol would be converted to the salt, that is, NaO-aryl. Phenolic decomposition products of some carbamate pesticides may, under some circumstances, persist in the environment and harm specific ecosystems. Hence, the hydrolysis should be followed by soil burial of the products in disposal. Containers: Group I (combustible) Containers from organic or metallo-organic pesticides (except organic mercury, lead, cadmium, or arsenic compounds) should be disposed of in pesticide incinerators or in specified landfill sites. Group II (Non-combustible) Containers from organic or metallo-organic pesticides (except organic mercury, lead, cadmium, or arsenic compounds) must first be triple-rinsed. Containers that are in good condition may be returned to the manufacturer or formulator of the pesticide product, or to a drum reconditioner for reuse with the same type of pesticide product, if such reuse is legal under Department of Transportation regulations [e.g. 49 CFR 173.28]. Containers that are not to be reused should be punctured. and transported to a scrap metal facility for recycling, disposal or burial in a designated landfill [40 CFR 165][UN].

CAS Number: 2425-06-1; 2939-80-2 (cis-)
Formula: $C_{10}H_9Cl_4NO_2S$
Synonyms: 4-Cyclohexene-1,2-dicarboximide, *N*-(1,1,2,2-Tetrachloroethyl)thiol-1*H*-Isoindole-1,3(2*H*)-dione,3A,4,7,7A-tetrahydro-2-(1, 1,2, 2-tetrachloroethyl) thio-; *N*-[(1,1,2,2-Tetrachloroethyl) thio]-4-cyclohexene-1, 2-dicarboximide *N*-[(1, 1, 2, 2-Tetrachloroethyl) thio]-4-cyclohexene-1,2-dicarboximide *N*-[(1,1,2,2-Tetrachloroehtyl)-thio]4-cyclohexene-1,2-dicarboximide; *N*-1,1,2,2-Tetrachloroethylmercapto-4-cyclohexene-1,2-carboximide; *N*-[(1, 1, 2, 2-Tetrachloroethyl) sulfenyl]-*cis*-4-cyclohexene-1, 2-dicarboximide; *N*-(1,1,2,2-Tetrachloroethylthio)-4-cyclohexene-1, 2-dicarboximide
Trade Names: CAPTATOL®; CAPTOFOL®; CRISFOLATAN®; DIFOLATAN®[C]; DIFOCAP®[C]; DIFOSAN®; FOLCID®; HAIPEN®; KENOFOL®; MERPAFOL®; ORTHO® 5865[C]; PILLARTAN®; SANSEAL®; SANSPOR®; SANTAR-SM®; SULFONIMIDE®; SULPHEIMIDE®
Chemical class: Phthalimide; Carboximide
EPA/OPP PC Code: 081701; 081702 (unspecified isomer)
California DPR Chemical Code: 292
HSDB Number: 340
UN/NA & ERG Number: UN2773 (Phthalimide derivative pesticides, solid, toxic)/151
RTECS® Number: GW4900000
EC Number: 219-363-3 [*Annex I Index No.:* 613-046-00-7]
Uses: Captafol is a General Use Pesticide and used for the control of practically all forms of fungal diseases except powdery mildew. It is also used as a seed protectorant on cotton, rice and peanut crops. Not registered for use in the U.S. or in EU countries[115]. There are 20 global suppliers[97].
U.S. Maximum Allowable Residue Levels for Captafol (40 CFR 180.267): in or on the following food commodities: onion, 0.1 ppm; potato, 0.5 ppm; and tomato, 15 ppm.
Human toxicity (long-term)[101]: 6.6 ppb, CHCL (Chronic Human Carcinogen Level)
Fish toxicity (threshold)[101]: High–1.75895 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen; GHS (1A, 1B) Known or presumed human carcinogen.
California Proposition 65 Chemical: Carcinogen (10/1/1988)
Acute Oral Category: 1, DANGER–POISON
Health Advisory: Nerve Toxin (S!), Mutagen, Developmental/Reproductive Toxin
European/International Regulations: Hazard Symbol: T, Xi, N; risk phrases: R43; R45(2); R50/53; safety phrases: S2; S53; S45; S60; S61 (see Appendix 1)
Description: Captafol is a colorless, white, or pale yellow crystalline solid. Weak, mercaptan odor (like sulfur). Commercial product is available as a wettable powder. Molecular weight = 349.09; Freezing/Melting point = 160–161 °C (dangerous decomposition); Vapor pressure = 8×10^{-6} mmHg @ 20 °C[9]. Practically insoluble in water; solubility = 1.6 ppm @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Reacts violently with bases, causing fire and explosion hazard. Not compatible with strong acids or acid vapor, oxidizers. Strong alkaline conditions contribute to instability. Attacks some metals. Imides react with azo- and diazo-compounds, generating toxic gases. Contact with organic imides and reducing agents releases flammable gases. Imides are extremely weak bases (weaker than water). They react as acids with strong bases, forming salts.
Permissible Exposure Limits in Air: OSHA PEL: None
NIOSH REL: 0.1 mg/m^3 TWA [skin]; Limit exposure to lowest feasible concentration. NIOSH considers this chemical to be a potential occupational carcinogen as defined by the OSHA carcinogen policy [29 CFR 1990].
ACGIH TLV®[1]: 0.1 mg/m^3 TWA [skin], not classifiable as a human carcinogen.
No Protective Action Criteria (PAC) available.
Australia: TWA 0.1 mg/m^3, 1993; Belgium: TWA 0.1 mg/m^3, 1993; Denmark: TWA 0.1 mg/m^3 [skin], 1999; France: VME 0.1 mg/m^3 [skin], carcinogen, 1993; Norway: TWA 0.1 mg/m^3, 1999; Switzerland: MAK-W 0.1 mg/m^3 [skin], 1999; United Kingdom: TWA 0.1 mg/m^3, carcinogen, 2000.
Permissible Concentration in Water: State Drinking Water Guidelines: Florida 100 μg/L. Runoff from spills or fire control may cause water pollution. Highly toxic to fish and other aquatic organisms.
Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, ingestion, skin
Harmful Effects and Symptoms
Short Term Exposure: Irritates eyes, skin and respiratory tract. Captafol can affect you when breathed in and by passing through your skin. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. Captafol may cause an asthma-like allergy. Future exposures can cause asthma attacks with shortness of breath, wheezing, cough, and/or chest tightness. Exposure can irritate the skin. It can

also cause a skin allergy to develop. Exposure to the sun (or other ultraviolet light) after exposure to captafol may cause severe rash with itching, swelling, and blistering. LD_{50} (oral, rat) = >5 g/kg.; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Repeated or prolonged contact cause skin sensitization, dermatitis, allergic conjunctivitis and periorbital edema. Repeated or prolonged inhalation exposure may cause asthma. The substance may have damaging effects on the liver and kidneys. Captafol is a probable carcinogen in humans. There is some evidence that it causes liver cancer in humans and it has caused kidney cancer in animals. Captafol may cause mutations. Handle with extreme caution. May cause tumors.

Points of Attack: Skin, respiratory system, liver and kidneys, chromosomes/DNA.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function test; lung function test. Skin testing with dilute Captafol may help diagnose allergy, if done by a qualified allergist. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: *Clothing:* Avoid dermal contact with captafol. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. *Eye Protection:* Wear dust-proof goggles when working with powders or dust, unless full facepiece respiratory protection is worn. Use splash-proof chemical goggles and face shield when working with liquids containing captafol.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive- pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Green: General storage may be used. Prior to working with captafol you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from heat, acids, acid fumes or strong oxidizers (such as peroxides, chlorates, perchlorates, nitrates and permanganates), since violent reactions occur. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Captafol fits the category of "Phthalimide derivative pesticides, solid, toxic." Commercial formulations use different carrier solvents which may change physical properties and affect Packing Group. It requires a shipping label of "poisonous materials." Hazard Class is 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. If Captafol is in liquid or slurry form, absorb it with vermiculite, dry sand, earth or a similar material. Dispose of the absorbing material in an approved facility. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Captafol decomposes on heating, producing toxic and corrosive fumes, including hydrogen chloride and oxides of nitrogen and sulfur. This chemical is a noncombustible solid but it may be dissolved in a flammable liquid. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. A report by the U.N. suggests "The hydrolysis products are not fungicidally active." All organic pesticides, whether of botanical or synthetic origin, can be destroyed by incineration equipped with scrubbers to remove acid wastes.

Chemical class: Thiophthalimide

EPA/OPP PC Code: 081301

California DPR Chemical Code: 104

HSDB Number: 951

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: GW5075000

EC Number: [*Annex I Index No.:* 613-044-00-6]

Uses: Most uses of captan on food crops in the United States have been canceled since 1989. It is still used in apple production, almonds and strawberries. It is often applied to packing and shipping boxes for fruits and vegetables. Captan is rapidly degraded in natural soil by chemical as well as biologic means (estimated half-life, days to weeks). It is also used as a preservative for awnings, draperies and leather, as a root dip and seed treatment. It is also added to paints, wallpaper paste, plastic and leather goods. There are over 320 federally registered pesticide products that contain captan.

U.S. Maximum Allowable Residue Levels for Captan [40 CFR 180.103(a)]: almond 0.25 ppm; almond, hulls 75.0 ppm; animal feed, nongrass, group 18, 0.05 ppm; apple 25.0 ppm; apricot 10.0 ppm; blueberry 20.0 ppm; caneberry, subgroup 13A, 25.0 ppm; cherry, sweet 50.0 ppm; cherry, tart 50.0 ppm; cotton, undelinted seed 0.05 ppm; dill, seed 0.05 ppm; flax, seed 0.05 ppm; grape 25.0 ppm; grain, cereal, forage, fodder and straw, group 16, 0.05 ppm; grain, cereal, group 15, 0.05 ppm; grass, forage 0.05 ppm; grass, hay 0.05 ppm; nectarine 25.0 ppm; okra 0.05 ppm; peach 15.0 ppm; peanut 0.05 ppm; peanut, hay 0.05 ppm; pear 25.0 ppm; plum, prune, fresh 10.0 ppm; rapeseed, forage 0.05 ppm; rapeseed, seed 0.05 ppm; safflower, seed 0.05 ppm; sesame, seed 0.05 ppm; strawberry 20.0 ppm; sunflower, seed 0.05 ppm; vegetable, brassica leafy, group 5, 0.05 ppm; vegetable, bulb, group 3, 0.05 ppm; vegetable, cucurbit, group 9, 0.05 ppm; vegetable, foliage of legume, group 7, 0.05 ppm; vegetable, fruiting, group 8, 0.05 ppm; vegetable, leafy, except brassica, group 4, 0.05 ppm; vegetable, leaves of root and tuber, group 2, 0.05 ppm; vegetable, legume, group 6, 0.05 ppm; vegetable, root and tuber, group 1, 0.05 ppm; ***captan and its metabolite 1,2,3,6-tetrahydrophthalimide (THPI), measured***

***at THPI* [*40 CFR 180.103(b)*]** cattle, fat 0.15 ppm; cattle, meat 0.20 ppm; cattle, meat byproducts 0.30 ppm; goat, fat 0.15 ppm; goat, meat 0.20 ppm; goat, meat byproducts 0.30 ppm; hog, fat 0.15 ppm; hog, meat 0.20 ppm; hog, meat byproducts 0.30 ppm; horse, fat 0.15 ppm; horse, meat 0.20 ppm; horse, meat byproducts 0.30 ppm; milk 0.10 ppm; sheep, fat 0.15 ppm; sheep, meat 0.20 ppm; sheep, meat byproducts 0.30 ppm.

Human toxicity (long-term)*[101]*: Very low–145.83333 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)*[101]*: Intermediate–25.36705 ppb, MATC (Maximum Acceptable Toxicant Concentration).

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA, Likely to be carcinogenic to humans following prolonged, high-level exposures; EU GHS Category 2: Suspected human carcinogen; IARC, Group 3 not classifiable as to its carcinogenicity in humans

California Proposition 65 Chemical: Cancer (1/1/1990)

Health Advisory: Severe eye irritant, Nerve Toxin (S!), Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 3, CAUTION

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)

Reportable Quantity (RQ): 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: T, Xi, N; risk phrases: R23; R40; R41; R43; R50; safety phrases: S1/2; S26; S29; S36/37/39; S45; S61 (see Appendix 1)

Description: Captan, when pure, is a colorless crystalline solid. The technical grade is a cream to yellow powder with a strong odor. It is commonly dissolved in water for use as a spray; however, it may be dissolved in a flammable or combustible "carrier." Molecular weight = 300.59; Specific gravity (H_2O:1) = 1.678; Boiling point = (decomposes) > 173 °C; Freezing/Melting point = 172.5 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 0. Very slightly soluble in water; solubility = 0.0003% @ 25 °C. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: Incompatible with tetraethyl pyrophosphate, parathion. Keep away from strong alkaline materials (e. g., hydrated lime) as captan may become unstable. May react with water, releasing hydrogen chloride gas. Corrosive to metals in the presence of moisture. Imides react with azo- and diazo-compounds, generating toxic gases. Contact with organic imides and reducing agents releases flammable gases. Imides are extremely weak bases (weaker than water). They react as acids with strong bases, forming salts.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: Carcinogen 5 mg/m^3 TWA; Limit exposure to lowest feasible concentration. NIOSH considers this chemical to be a potential occupational carcinogen as defined by the OSHA carcinogen policy [29 CFR 1990].

ACGIH TLV®[1]: 5 mg/m^3 TWA, inhalable fraction [sensitizer]; confirmed animal carcinogen with unknown relevance to humans.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 15 mg/m^3
PAC-2: 29 mg/m^3
PAC-3: 400 mg/m^3

Determination in Air: OSHA versatile sampler-2; Reagent; High-pressure liquid chromatography/Ultraviolet detection; IV NIOSH Method #5601[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 91 μg/L; Florida 250 μg/L; California 1.5 μg/L; Maine 146 μg/L. A no-adverse-effect level of drinking water has been calculated by NAS/NRC as 0.35 mg/L.

Determination in Water: Log K_{ow} = 2.35 2.8. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Dermal contact, inhalation of dust, ingestion

Harmful Effects and Symptoms

Short Term Exposure: The substance is a severe eye irritant and will irritate the skin (50 mg/kg/day). LD_{50} (oral, rat) = >2000 to 9000 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Repeated or prolonged contact with skin may cause skin allergy to develop. Once this occurs, even very small future exposures can cause itching and a skin rash. Exposure may cause tumors, mutations or damage the developing fetus; however, this needs further study. Animal studies have found the development of cancer in animals. Whether captan is a human cancer hazard may require further study.

Points of Attack: Eyes, skin, respiratory system, gastrointestinal tract, liver, kidneys. Cancer Site in animals: duodenal tumors. May cause reproductive and fetal effects.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA: 15 mg/m^3. NIOSH: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water, heat and incompatible materials. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically pump liquid from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9. STN: 49 611 67; Captan (agricultural insecticides, not elsewhere classified, liquid); 49 611 64; Captan (agricultural insecticides, not elsewhere classified, other than liquid); 49 611 10; Captan (insecticides, not elsewhere classified, other than agricultural).

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Absorb liquid containing this chemical in vermiculite, dry sand, earth, or similar material. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 200.

Fire Extinguishing: Captan may burn, but does not ignite readily. Use dry chemical, carbon dioxide, or foam extinguishers. *Do not use water*. At high temperatures, captan decomposes and produces poisonous gases, including oxides of sulfur and nitrogen, hydrogen chloride and phosgene. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Captan decomposes fairly readily in alkaline media (pH>8). It is hydrolytically stable at neutral or acid pH but decomposes when heated alone at its Freezing/Melting point. Alkaline hydrolysis is recommended.

Chemical class: Carbamate (N-methyl)
EPA/OPP PC Code: 056801
California DPR Chemical Code: 105
HSDB Number: 952
UN/NA & ERG Number: UN2757 (solid)/151
RTECS® Number: FC5950000
EC Number: 200-555-0; [*Annex I Index No.:* 006-011-00-7]
Uses: Carbaryl is one of the most widely used insecticides in agriculture, professional turf management and ornamental production, as well as in residential pet, lawn, and garden markets. It controls over 100 species of insects that infect citrus, cotton, nuts, and forest and ornaments trees, as well as poultry and livestock. Carbaryl also is used as a mosquito adulticide. It is available in a variety of formulations bait, dust, wettable powders, granules, dispersions and suspensions. Washington State, for example, has a Special Local Needs registration to control burrowing shrimp in oyster beds. A U.S. EPA restricted Use Pesticide (RUP). Banned for use in EU countries[115].
***U.S. Maximum Allowable Residue Levels for Carbaryl* [*40 CFR 180.169 (a)(1)*]:** alfalfa, forage 50 ppm; alfalfa, hay 75 ppm; almonds, hulls 50 ppm; apple, wet pomace 15 ppm; asparagus 15 ppm; banana 5.0 ppm; beet, sugar, roots 0.5 ppm; beet, sugar, tops 25 ppm; bushberry subgroup 13-07B, 3.0 ppm; cabbage 21 ppm; cactus, fruit 5.0 ppm; cactus, pads 12 ppm; canebery subgroup 13-07B, 12.0 ppm; citrus, oil 20 ppm; clover, forage 50 ppm; clover, hay 70 ppm; corn, field, forage 30 ppm; corn, field, grain 0.02 ppm; corn, field, stover 20 ppm; corn, pop, grain 0.02 ppm; corn, pop, stover 20 ppm; corn, sweet, forage 185 ppm; corn, sweet, kernel plus cob with husks removed 0.1 ppm; corn, sweet, stover 215 ppm; cranberry 3.0 ppm; dandelion, leaves 22 ppm; endive 10 ppm; flax, seed 0.5 ppm; fruit, citrus, group 10, 10 ppm; fruit, pome, group 11, 12 ppm; fruit, stone, group 12, 10 ppm; grain, aspirated fractions 70 ppm; grape 10 ppm; grape, raisin 12 ppm; grass, forage 100 ppm; grass, hay 15 ppm; leaf petiole subgroup 4B, 3.0 ppm; lettuce 10 ppm; millet, proso, grain 1.0 ppm; millet, proso, straw 20 ppm; nut, tree group 14, except walnut, 0.1 ppm; okra 4.0 ppm; olive 10 ppm; oyster 0.25 ppm; parsley, leaves 22 ppm; pea and bean, dried shelled, except soybean, subgroup 6C, 1.0 ppm; peanut 0.05 ppm; peanut, hay 20 ppm; pineapple 2.0 ppm; pistachio 0.1 ppm; rice, grain 15 ppm; rice, hulls 30 ppm; rice, straw 60 ppm; sorghum grain, forage 30 ppm; sorghum grain, grain 10 ppm; sorghum grain, stover 30 ppm; soybean, forage 15 ppm; soybean, hay 15 ppm; soybean, seed 0.5 ppm; spinach 22 ppm; strawberry 4.0 ppm; sunflower, seed 0.5 ppm; sweet potato, roots 0.2 ppm; trefoil, forage 15 ppm; trefoil, hay 25 ppm; vegetable, brassica, leafy, group 5, except cabbage, 10 ppm; vegetable, cucurbit, group 9, 3.0 ppm; vegetable, foliage of legume, subgroup 7A, except soybean, 60 ppm; vegetable, fruiting, group 8, 5.0 ppm; vegetable, leaves of root and tuber, group 2, except sugar beet tops, 75 ppm; vegetable, legume, edible podded, subgroup 6A, 10 ppm; vegetable, root and tuber, group 1, except sugar beet and sweet potato, 2.0 ppm; walnut 1.0 ppm; wheat, forage 30 ppm; wheat, grain 1.0 ppm; wheat, hay 30 ppm; wheat, straw 20 ppm. **[*40 CFR180.169(a)(2)*]** cattle, fat 0.5 ppm; cattle, meat 1.0 ppm; cattle, meat byproducts 3.0 ppm; goat, fat 0.5 ppm; goat, meat 1.0 ppm; goat, meat byproducts 3.0 ppm; hog, fat 0.5 ppm; hog, meat 1.0 ppm; hog, meat byproducts 3.0 ppm; horse, fat 0.5 ppm; horse, meat 1.0 ppm; horse, meat byproducts 3.0 ppm; milk 1.0 ppm; sheep, fat 0.5 ppm; sheep, meat 1.0 ppm; sheep, meat byproducts 3.0 ppm. **[*40 CFR180.169(a)(3)*]** including its metabolites 1-naphthol (naphthyl sulfate), 5,6-dihydro-dihydroxycarbaryl and 5-methoxy-6-hydroxycarbaryl, calculated as 1-naphthyl *N*-methylcarbamate in or on the food commodity: milk at 0.3 ppm. **[*40, CFR 180.169(a)(4)*]** fruit, pome: 10.0 ppm; ppm; pineapple: 2.0 ppm; ppm.
***Regional registration, as defined in section 180.1(n)* [*40CFR180.169(c)*]:** dillweed, fresh leaves: 0.2 ppm.
Human toxicity (long-term)*[101]*: Low–70.00 ppb, Health Advisory
Fish toxicity (threshold)*[101]*: Intermediate–27.39896 ppb, MATC (Maximum Acceptable Toxicant Concentration).
Regulatory Authority and Advisory Information:
Carcinogenicty: EPA, Likely to be carcinogenic to humans; EU GHS Category 2: Suspected human carcinogen.

California Proposition 65 Chemical: Cancer: (2/5/2010); Developmental/Reproductive toxin (male) (8/720/09)
Acute Oral Category: 2, WARNING
Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
Air Pollutant Standard Set: Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.006; Nonwastewater (mg/kg), 0.14
Reportable Quantity (RQ): 100 lb (45.4 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R20/22; R40; R50; safety phrases: S2; S36/37; S46; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Carbaryl is a white or grayish, odorless, crystalline solid; or various other forms including liquid and paste. Molecular weight = 201.22; Specific gravity (H_2O:1) = 1.228; Boiling point = 210 °C (decomposes below BP); Freezing/Melting point = 145 °C; Vapor pressure = $<4 \times 10^{-5}$ mmHg @ 25 °C; Flash point = about 200 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 0.01%.

Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas.

Permissible Exposure Limits in Air:
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA; not classifiable as a human carcinogen
NIOSH IDLH: 100 mg/m^3
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 1.5 mg/m^3
PAC-2: 100 mg/m^3
PAC-3: 600 mg/m^3
DFG MAK: 5 mg/m^3 measured as the, inhalable fraction TWA; Peak Limitation Category II(4) [skin].

Determination in Air: OSHA versatile sampler-2; Reagent; High-pressure liquid chromatography/Ultraviolet detection; IV NIOSH Method #5601; also NIOSH Method #5006[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 70 ppb; State Drinking Water Guidelines: Arizona 700 μg/L; Maine 70 μg/L; Wisconsin 960 μg/L; Florida 700 μg/L; California 700 μg/L.

Determination in Water: Log K_{ow} = 2.36. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact or eye contact, skin absorption

Harmful Effects and Symptoms

Short Term Exposure: Carbaryl is an acetylcholinesterase inhibitor. Carbaryl irritates the eyes, skin, and respiratory tract. The hot liquid may cause severe skin burns. The signs and symptoms of exposure to carbaryl can be nausea, vomiting, mild abdominal cramping, dimness of vision, dizziness, headache, difficulty in breathing, and weakness. The substance may affect the nervous system, resulting in convulsions and respiratory failure. The effects may be delayed. Single doses of up to about 140 mg (0.005 oz) have been reported to cause no effect. However, a single dose of about 200 mg has caused stomach pain and excessive sweating. Individual responses may vary. Several milliliters (0.1 fluid oz) of an 80% solution of carbaryl has caused nausea, salivation, headache, tremors, and excessive tearing 500 ml (1 pint) of a 80% solution has resulted in death. LD_{50} (oral, rat) = <500 mg/kg; LD_{50} (dermal, rat, rabbit) = >2 g/kg.

Long Term Exposure: The major health problem associated with occupational exposure to carbaryl is related to its inhibition of the enzyme cholinesterase in the central, autonomic and peripheral nervous systems. The inhibition of cholinesterase allows acetylcholine to accumulate at these sites and thereby leads to over-stimulation of innervated organs. Carbaryl may affect the liver, kidneys and nervous system. It may cause mutations and be a teratogen in humans. There is limited evidence that it reduces fertility in both males and females. A neurotoxin. May cause birth defects. A skin sensitizer and may cause tumors.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, blood cholinesterase, reproductive system. Liver, kidneys.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Comprehensive physical examination with emphasis on the genito-urinary tract including testicle size and consistency in males. Semen analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. NIOSH recommends that workers subject to carbaryl exposure have comprehensive preplacement medical examinations, with subsequent annual medical surveillance. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 1.5 mg/m^3 *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.).

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition products include oxides of nitrogen and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Carbendazim C:0434

Use Type: Fungicide

CAS Number: 10605-21-7

Formula: $C_9H_9N_3O_2$

Synonyms: BCM; Benzimidazole-2-carbamic acid, methyl ester; *N*-2-(Benzimidazolyl) carbamate; 2-Benzimidazolecarbamic acid, methyl ester; 1*H*-Benzimidazol-2-ylcarbamic acid methyl ester; BMC; Carbamic acid, 1*H*-benzimidazole-2-yl-, methyl ester; MBC; 2-(Methoxycarbonylamino)-benzimidazol; 2-(Methoxycarbonylamino)-benzimidazole; Methyl 1*H*-benzemedazol-2-yl carbamate; Methyl 2-benzimidazolecarbamate; Methyl benzimidazole-2-yl carbamate

Trade Names: ABACOL®; AIMCOZIM; BAS® 3460; BAS® 67054; BATTAL®; BAVISTIN®; BENDAZIM®; CARBATE®; CARBENDAZIME®; CARBENDAZOL®; CARBENDAZOLE®; CARBENDAZYM®; CARBENDOR; CEKUDAZIM®; CORBEL; CTR® 6669; CUSTOS®; DEFENSOR®; DELSENE®; DEROSAL®; E-965®; DERROPRENE®; EQUITDAZIN®; FUNGISOL®; HOE 17411®; LIGNASAN®; IMISOL®; KEMDAZIN®; MERGAL®; PILLARSTIN®; POLYPHASE®; RODAZIM®; STEMPOR®; SUPERCARB, TRITICOL®; TRITICOL®; U-32.104®

Chemical class: Benzimidazole; Carbamate ester-amine

EPA/OPP PC Code: 128872

California DPR Chemical Code: 2176

HSDB Number: 6581

UN/NA & ERG Number: UN3082 (liquid)/171; UN2757(solid)/151

RTECS® Number: DD6500000

EC Number: 234-323-0 [*Annex I Index No.:* 613-048-00-8]

Uses: Carbendazim is a systemic fungicide used as a drench to control a broad range of fungi in cereals, vegetables, oilseed rape, sugar beets, grapes, tomatoes, pome fruit and stone fruit. It is also used in post-harvest storage and as treatment in seed pre-planting, frequently in combination with other fungicides. In some areas, it has been used to combat Dutch elm disease.

Human toxicity (long-term)[101]***:*** High–7.00 ppb, Health Advisory

Fish toxicity (threshold)[101]***:*** High–1.44530 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Cancinogenicity: EPA Group C, Possible human carcinogen

Health Advisory: Nerve Toxin, Mutagen Reproductive Toxin, Endocrine disruptor (S!)

Acute Oral Category: 4, Caution

U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B)

European/International Regulations: Hazard Symbol: T, N; risk phrases: R46; R60; R61; safety phrases: S50/S53; S53; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Colorless crystalline solid or light-gray powder. Commercially supplied as dry concentrate that is mixed with water for spraying. Molecular weight = 191.21; Boiling point = decomposes; Specific gravity (H_2O:1) = 1.452; Freezing/Melting point = (decomposes) 300–305 °C; Vapor pressure 4.9×10^{-10} mmHg @ 20 °C. Slightly soluble in water; solubility = 5.8 ppm @ 24 °C; 4.8 ppm @ pH 7.

Determination in Water: Log K_{ow} = <1.5. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, bases, peroxies and hydroperoxides, and strong reducing agents such as hydrides. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = 1.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Skin absorption, ingestion, inhalation

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = >9000. Low toxicity.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. May be a liver toxin.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.

Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below pre-employment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.).

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition products include oxides of nitrogen and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On* *large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Carbofuran C:0440

Use Type: Insecticide, Acaricide, Nematicide

CAS Number: 1563-66-2

Formula: $C_{12}H_{15}NO_3$

Synonyms: 7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-, methylcarbamate; Carbamic acid, methyl-, 2,2-dimethyl-2,3-dihydrobenzofuran-7-yl ester; Carbofurano (Spanish); 2,3-Dihydro-2,2-dimethylbenzofuranyl-7-*N*-methylcarbamate; 2,3-Dihydro-2,2-dimethyl-7-benzofuranolmethylcarbamate; 2,3-Dihydro-2,2-dimethyl-7-benzofuranol-*N*-methylcarbamate; 2,3-Dihydro-2,2-dimethylbenzofuranyl-7-*N*-methylcarbamate; 2,3-Dihydro-2,2-dimethylbenzofuran-7-yl methylcarbamate; 2,2-Dimethyl-7-coumaranyl *N*-methylcarbamate; 2,2-Dimethyl-2,2-dihydrobenzofuranyl-7 *N*-methylcarbamate; 2,2-Dimethyl-2,3-dihydro-7-benzofuranyl-*N*-methylcarbamate; ENT 27,164; Methyl carbamic acid 2,3-dihydro-2,2-dimethyl-7-benzofuranyl ester; NSC 167822

Trade Names: A13-27164®; AU'ULTRAMICIN®; BAY 704143®; BAY 78537®; BRIFUR®; CARBODAN®; CARBOSIP 5G®; CRISFURAN®; CURETERR®; CHINUFUR®; D 1221®; DIAFURAN®; FMC 10242®; FURACARB®; FURADAN®; FURAN®; FURODAN®; KENFURAN®; KENOFURAN®; NEX®; NIA-10242; NIAGARA 10242; NIAGARA NIA-10242; PILLARFURAN®; RAMPART®; YALTOX®

Chemical class: Carbamate (N-methyl)

EPA/OPP PC Code: 090601

California DPR Chemical Code: 106

HSDB Number: 1530

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: FB9450000

EC Number: 006-026-00-9

EC Number: 216-353-0

Uses: Carbofuran is a broad-spectrum carbamate pesticide that kills insects, mites, and nematodes on contact or after ingestion. It is used against soil and foliar pests of field, fruit, vegetable, and forest crops. Carbofuran, granule form, is banned in the U.S. A U.S. EPA restricted Use Pesticide (RUP). Not approved for use in EU countries[115]. There are 40 global suppliers[97].[97]. According to the Ecological Incident Investigation System, carbofuran has been responsible for more avian deaths than any other pesticide.

U.S. Maximum Allowable Residue Levels for Carbofuran and its carbamate metabolite-2,3-dihydro-2,2-dimethyl-3-hydroxy-7-benzofuranyl- N-methylcarbamate, and its phenolic metabolites 2,3-dihydro-2,2-dimethyl-7-benzofuranol, 2,3-dihydro-2,2-dimethyl-3,-oxo-7-benzofuranol and 2,3-dihydro-2,2-dimethyl-3,7-benzofurandiol in or on the following raw agricultural commodities*[*40CFR 180.254(a)*]*: alfalfa, forage (of which not>5 ppm are carbamates) 10 ppm; alfalfa, hay (of which not>20 ppm are carbamates) 40 ppm; banana 0.1 ppm; barley, grain (of which not>0.1 ppm is carbamates) 0.2 ppm; barley, straw (of which not>1.0 ppm is carbamates) 5.0 ppm; beet, sugar, roots 0.1 ppm; beet, sugar, tops (of which not>1 ppm is carbamates) 2 ppm; coffee, bean, green 0.1 ppm; corn, forage (of which not>5 ppm are carbamates) 25 ppm; corn, grain (including popcorn) (of which not>0.1 ppm is carbamates) 0.2 ppm; corn, stover (of which not>5 ppm are carbamates) 25 ppm; corn, sweet, kernel plus cob with husks removed (of which not>0.2 ppm is carbamates) 1.0 ppm; cotton, undelinted seed (of which not>0.2 ppm; is carbamates) 1.0 ppm; cranberry (of which not>0.3 ppm is carbamates) 0.5 ppm; cucumber (of which not>0.2 ppm is carbamates) 0.4 ppm; grape (of which not>0.2 ppm is carbamates) 0.4 ppm; grape, raisin (of which not>1.0 ppm is carbamates) 2.0 ppm; grape, raisin, waste (of which not>3.0 ppm is carbamates) 6.0 ppm; melon (of which not>0.2 ppm is carbamates) 0.4 ppm; milk (of which not>0.02 ppm is carbamates) 0.1 ppm; oat, grain (of which not>0.1 ppm is carbamates) 0.2 ppm; oat, straw (of which not>1.0 ppm is carbamates) 5.0 ppm; pepper (of which not>0.2 ppm is carbamates) 1 ppm; potato (of which not>1 ppm is carbamates) 2 ppm; pumpkin (of which not>0.6 ppm is carbamates) 0.8 ppm; rice, grain 0.2 ppm; rice, straw (of which not>0.2 ppm is carbamates) 1 ppm; sorghum, forage (of which not>0.5 ppm is carbamates) 3 ppm; sorghum, grain, grain 0.1 ppm; sorghum, grain, stover (of which not>0.5 ppm is carbamates) 3 ppm; strawberry (of which not>0.2 ppm is carbamates) 0.5 ppm; soybean (of which not>0.2 ppm is carbamates) 1.0 ppm; soybean, forage (of which not>20.0 ppm are carbamates) 35.0 ppm; soybean, hay (of which not>20.0 ppm are carbamates) 35.0 ppm; squash (of which not>0.6 ppm is carbamates) 0.8 ppm; sugarcane, cane 0.1 ppm; sunflower, seed (of which not>0.5 ppm is carbamates) 1.0 ppm; wheat, grain (of which not>0.1 ppm is carbamates) 0.2 ppm; wheat, straw (of which not>1.0 ppm is carbamates) 5.0 ppm. ***Regional registration, as defined in section 180.1(n)* [*40CFR 180.254©)*]*:** in or on the following raw agricultural commodity: artichoke, globe (of which not>0.2 ppm is carbamates) 0.4 ppm; none canola, seed (of which not>0.2 ppm is carbamates) 1.0 ppm. **[*40 CFR 180.3(e)*]**: pesticide chemicals that cause related pharmacological effects will be regarded, in the absence of evidence to the contrary, as having an additive deleterious action. Many pesticide chemicals within the following groups have related pharmacological effects. Chlorinated organic pesticides, arsenic-containing chemicals, metallic dithiocarbamates, cholinesterase-inhibiting pesticides. Where residues from two or more chemicals in the same class are present in or on a raw agricultural commodity the tolerance for the total of such residues shall be the same as that for the chemical having the lowest numerical tolerance in this class, unless a higher tolerance level is specifically provided for the combined residues by a regulation in this part.

Human toxicity (long-term)[101]: Intermediate–40.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Intermediate–17.59989 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA, Not likely to be carcinogenic in humans; ACGIH A4, not classified as a human carcinogen.

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive]

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.006; Nonwastewater (mg/kg), 0.14

Safe Drinking Water Act: MCL, 0.04 mg/L; MCLG, 0.04 mg/L; Regulated chemical (47 FR 9352)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4540 kg)

Reportable Quantity (RQ): 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] (as dustable powder formulations containing a combination of: Benomyl @ or>7%; carbofuran @ or>10%; thiram @ or>15%)

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R26/28; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Carbofuran is white, odorless crystalline solid. Molecular weight = 221.28; Specific gravity (H_2O:1) = 1.18 @ 20 °C; Boiling point = 149 °C (decomposes); Freezing/Melting point = 151 °C; Vapor pressure = 3×10^{-6} mmHg @ 25 °C; 2×10^{-5} mmHg @ 33 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Soluble in water; solubility = 0.07%

Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 0.1 mg/m^3 TWA

ACGIH TLV®[1]: 0.1 mg/m^3 TWA, inhalable fraction and vapor; BEI issued; not classifiable as a human carcinogen (2001)

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.1 mg/m^3
PAC-2: 0.43 mg/m^3
PAC-3: 0.57 mg/m^3

Australia: TWA 0.1 mg/m^3, 1993; Belgium: TWA 0.1 mg/m^3, 1993; Denmark: TWA 0.1 mg/m^3, 1999; France: VME 0.1 mg/m^3, 1993; India: TWA 0.1 mg/m^3, 1993; Norway: TWA 0.1 mg/m^3, 1999; Poland: MAC (TWA) 0.1 mg/m^3, 1999; the Netherlands: MAC-TGG 0.1 mg/m^3, 2003; United Kingdom: TWA 0.1 mg/m^3, 2000; Argentina, Bulgaria, Columbia, Jordan, South Korea, New Zealand, Singapore, Vietnam: ACGIH TLV®: not classifiable as a human carcinogen.

Permissible Concentration in Water: EPA, Federal Drinking Water Standards: EPA 40 μg/L; State Drinking Water Standards: California 18 μg/L; State Drinking Water Guidelines: Arizona 36 μg/L; Maine 35 μg/L.

Determination in Water: Analysis of carbofuran is by a high-performance liquid chromatographic procedure used for the determination of N-methyl carbamoyloximes and N-methylcarbamates in drinking water (U.S. EPA 1984). In this method, the water sample is filtered and a 400 ∝l aliquot is injected into a reverse-phase HPLC column. Separation of compounds is achieved using gradient elution chromatography. After elution from the HPLC column, the compounds are hydrolyzed with sodium hydroxide. The methylamine formed during hydrolysis is reacted with *o*-phthalaldehyde (OPA) to form a fluorescent derivative which is detected using a fluorescence detector. The method detection limit has been estimated to be approximately 0.9 μg/L for carbofuran. Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, dermal contact

Harmful Effects and Symptoms

Short Term Exposure: Moderately to highly hazardous, depending on formulation. Carbofuran may affect the nervous system, resulting in convulsions and respiratory failure. Acetylcholinesterase inhibitor. Exposure may result in death. The effects may be delayed and exposed personnel should be kept under medical observation. Symptoms include headache, giddiness, blurred vision, weakness; nausea, cramps, diarrhea, chest discomfort, sweating, contraction of pupils, tearing; salivation, blue lips, lungs and abdomen fill with fluid, convulsions, coma, loss of reflexes and sphincter control. This material is extremely poisonous. May be fatal if swallowed, inhaled, or absorbed through skin. Contact may burn skin or eyes. Probable lethal oral dose to humans 5 to 50 mg/kg or 7 drops to 1 teaspoon for 150 lb. person. LD_{50} (oral, rat) = <50 mg/kg.

Long Term Exposure: The major health problem associated with occupational exposure to carbaryl is related to its inhibition of the enzyme cholinesterase in the central, autonomic and peripheral nervous systems. The inhibition of cholinesterase allows acetylcholine to accumulate at these sites and thereby leads to over-stimulation of innervated organs. The signs and symptoms observed as a consequence of exposure to carbaryl in the workplace environment are manifestations of excessive cholinergic stimulation, e.g., nausea, vomiting, mild abdominal cramping, dimness of vision, dizziness, headache, difficulty in breathing, and weakness. Carbofuran may affect the immune system

Points of Attack: Central nervous system, peripheral nervous system, blood cholinesterase level.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1−2 weeks while red blood cell levels may be reduced for 1−3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Effects may be delayed; keep victim under observation.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Respirator Selection: SCBA > 0.1 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.).

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition products include oxides of nitrogen and carbon. *On small fire*: use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire* *involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chemical class: Carboxamide; Oxathiin

EPA/OPP PC Code: 090201

California DPR Chemical Code: 1755

HSDB Number: 1532

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: RP4550000

EC Number: 226-031-1

Uses: Carboxin is a General Use Pesticide (GUP) and is used as a seed protectant. It is often used in combination with other fungicides such as thiram or captan. Carboxin is a systemic anilide fungicide. It is used as a seed treatment for control of smut, rot, and blight on barley, oats, rice, cotton, vegetables, corn and wheat. It is also used to control fairy rings on turf grass. Carboxin may be used to prevent the formation of these diseases or may be used to cure existing plant diseases. Also used as a wood preservative.

U.S. Maximum Allowable Residue Levels for Carboxin (40 CFR 180.301): barley, grain 0.2 ppm; barley, straw 0.2 ppm; bean,dry, seed 0.2 ppm; bean, forage 0.5 ppm; bean, hay 0.5 ppm; bean, straw 0.5 ppm; bean, succulent 0.2 ppm; canola, seed 0.03 ppm; cattle, fat 0.1 ppm; cattle, meat 0.1 ppm; cattle, meat byproducts 0.1 ppm; corn, forage 0.2 ppm; corn, fresh, including sweet corn, kernel plus cob with husks removed 0.2 ppm; corn, grain 0.2 ppm; corn, stover 0.2 ppm; cotton, undelinted seed 0.2 ppm; egg 0.01 ppm; goat, fat 0.1 ppm; goat, meat 0.1 ppm; goat, meat byproducts 0.1 ppm; hog, fat 0.1 ppm; hog, meat 0.1 ppm; hog, meat byproducts 0.1 ppm; horse, fat 0.1 ppm; horse, meat 0.1 ppm; horse, meat byproducts 0.1 ppm; milk 0.01 ppm; oat, forage 0.5 ppm; oat, seed 0.2 ppm; oat, straw 0.2 ppm; onion, dry bulb 0.2 ppm; peanut 0.2 ppm; peanut, hay 0.2 ppm; poultry, fat 0.1 ppm; poultry, meat 0.1 ppm; poultry, meat byproducts 0.1 ppm; rice, grain 0.2 ppm; rice, straw 0.2 ppm; safflower, seed 0.2 ppm; sheep, fat 0.1 ppm; sheep, meat 0.1 ppm; sheep, meat byproducts 0.1 ppm; sorghum, forage 0.2 ppm; sorghum, grain, 0.2 ppm; sorghum, grain, stover 0.2 ppm; soybean 0.2 ppm; wheat, forage 0.5 ppm; wheat, grain 0.2 ppm; and wheat, straw 0.2 ppm.

Human toxicity (long-term)[101]: Extra high–0.91 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–1.06008 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA, Not likely to be carcinogenic to humans.

Health Advisory: Mutagen

Toxicity (oral) Category: 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R21/22; R36/37/38; R20/21/22; R43; R50/53; safety phrases: S1/2; S26; S36; S36/37, S60; S61 (see Appendix 1)

Description: Carboxin is a white crystalline solid. Usually dissolved in water. Molecular weight = 235.32; Specific gravity (H_2O:1) = 1.7; Freezing/Melting point = 91.5–92.5 °C (depending on crystal structure); Vapor pressure = 1.78×10^{-7} mmHg; Flash point = 200 °C. Moderately soluble in water; solubility = 10 g/100 mL.

Incompatibilities: Aqueous solution is a strong acid; keep away from bases and strong oxidizers. Will corrode metals in the presence of moisture and may release explosive hydrogen gas.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 700 μg/L

Determination in Water: Analysis of carboxin is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen-phosphorus containing pesticides in water samples. In this method, approximately 1 liter of sample is extracted with methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using a nitrogen-phosphorus detector. The method detection limit has not been determined for carboxin but it is estimated that detection limits for analyses included in this method are in the range of 0.1 to 2 μg/L. Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. May be an acetylcholinesterase inhibitor. LD_{50} (oral, rat) = >500–2500 mg/kg[14]; LD_{50} (dermal, rat) = >1 g/kg.

Long Term Exposure: A possible mutagen. May cause reproductive and fetal effects. May cause liver and kidney effects.

Points of Attack: Liver, kidney, skin. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive- pressure mode).

Storage: Color Code-Blue: Health Hazard: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Cartap hydrochloride C:0555

Use Type: Insecticide

CAS Number: 15263-52-2; 22042-59-7

Formula: $C_7H_{15}N_3O_2N_2S_2Cl$; $C_7H_{16}ClN_3O_2S_2$

Synonyms: 1,3-Bis(carbamoylthio)-2-(*N,N*-dimethylamino)propane hydrochloride; Carbamothioic acid-*S,S'*-[2-(Dimethylamino)-1,3-propanediyl]ester, monohydrochloride; Cartap monohydrochloride; *S,S'*-[2-(Dimethylamino)trimethylene]bis(thiocarbamate)hydrochloride; Thiocarbamic acid-*S,S*-[2-(dimethylamino) trimethylene]ester hydrochloride

Trade Names: CADAN®; CALDAN®; KRITAP®; NTD 2®; PADAN®; PATAP®; SANVEX®; THIOBEL®; TI-1258®; VEGETOX®

Chemical class: Nereistoxin insecticide

EPA/OPP PC Code: 041415

HSDB Number: 6583

UN/NA & ERG Number: UN2811/154

RTECS® Number: FD1225000

EC Number: 239-309-2 [*Annex I Index No.:* 616-017-00-7]

Uses: Cartap hydrochloride is used to control chewing and sucking insects on many crops, including rice, potatoes, cabbage and other vegetables, soy beans, peanuts, sunflowers, maize, sugar beet, wheat, pearl barley, pome fruit, stone fruit, citrus fruit, vines, chestnuts, ginger, tea, cotton, and sugar cane. Not currently registered in the U.S. or registered for use in EU countries[115]. There are approximately 15 global suppliers[97].

Regulatory Authority and Advisory Information:

Health Advisory: Mutagen, Developmental/Reproductive Toxin.

Acute Oral Category: 2, WARNING

U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B)

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R21/22; R50/R53; safety phrases: S60; S61 (see Appendix 1)

Description: Colorless solid or powder. Mild odor. Molecular weight = 273.826; Specific gravity (H_2O:1) = 1.42 @ 20°C; Freezing/Melting point = 180°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Soluble in water.

Incompatibilities: When heated to decomposition or on contact with acids or acid fumes, may produce highly toxic carbon oxides, hydrogen chloride gas, nitrogen oxides, sulfur oxides; deadly phosgene gas may be formed. Attacks, copper, iron, zinc; and may cause pitting of some other metals.

Routes of Entry: Inhalation, skin, ingestion

Harmful Effects and Symptoms:

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = 250 – 340 mg/kg; LD_{50} (dermal, rat) = >1000 mg/kg.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do NOT induce vomiting*. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended

Note to physician or authorized medical personnel. Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical Note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[NOAA]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with cartap hydrochloride you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: Toxic, solids, organic, n.o.s. require a label of “poisonous materials.” This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen sulfur and carbon and hydrogen chloride gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Chloramben C:0600

Use Type: Herbicide

CAS Number: 133-90-4

Formula: $C_7H_5Cl_2NO_2$

Synonyms: 3-Amino-2,5-dichlorobenzoic acid; Benzoic acid, 3-amino-2,5-dichloro-; Chlorambed; Chlorambene; Chloramben, aromatic carboxylic acid; Chloramben benzoic acid herbicide; Benzoic acid, 3-amino-2,5-dichloro-; 3-Amino-2,6-dichlorobenzoic acid; 2,5-Dichloro-3-aminobenzoic acid; NCI-C00055

Trade Names: ACP-M-728®; AMBEN®; AMBIBEN®; AMIBEN®[C]; AMIBIN®; AMOBEN®; ORNAMENTAL WEEDER®[C]; VEGABEN®; VEGIBEN®[C]; WEEDONE® GARDEN WEEDER

Chemical class: Benzoic acid

EPA/OPP PC Code: 029901

California DPR Chemical Code: 2184 Not currently registered.

HSDB Number: 564 as Amiben

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: DG1925000

EC Number: 205-123-5

Uses: A herbicide for grasses, and broadleaf weeds. Mostly used on soybeans, and also on corn, beans, asparagus, pumpkins, peanuts, sunflowers, peppers, cotton, sweet potatoes, squash, melons, hardwood trees, and some conifers. Not approved for use in EU countries[115]. Not registered for use in the U.S. There are 51 global suppliers[97].

Human toxicity (long-term)[101]: Very low–100.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–1584.89319 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Acute Oral Category: 4, Caution

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Reportable Quantity (RQ): 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Chloramben is a colorless crystalline solid. Odorless. Molecular weight = 206.03; Freezing/Melting point = 200–201 °C; Vapor pressure = 6.8×10^{-3} mmHg @ 100 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Highly soluble in water; solubility = 690 ppm @ 25 °C.

Incompatibilities: Rapidly decomposed by light. Strong acids and acid fumes

Permissible Exposure Limits in Air:

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 11 mg/m^3

PAC-2: 120 mg/m^3

PAC-3: 690 mg/m^3

Permissible Concentration in Water: Federal Drinking Water Guidelines: 100 ppb[93] A lifetime health advisory of 0.105 mg/L has been determined by EPA (see reference below).

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passes through the skin

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. The available data on chloramben are very sparse. Much additional information is needed regarding its chronic toxicity, teratogenicity, and carcinogenicity before limits can be confidently set. No-observed-adverse-effect doses for chloramben were 15 mg/kg/day. Based on these data an ADI was calculated at 0.015 mg/kg/day. A mutagen and acetylcholinesterase inhibitor. LD_{50} (oral, rat) = 3750 mg/kg; 5500 mg/kg. Low toxicity.

Long Term Exposure: There is evidence that this chemical causes cancer in animals. It may cause cancer of the liver. Repeated exposure may cause skin rash with itching.

Points of Attack: Skin, liver. May cause reproductive and fetal effects.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Liver function tests. Examination by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA 11 mg/m^3. When thresholds for carcinogens that would protect 100% of the population had not been identified, NIOSH usually recommended that occupational exposures to carcinogens be limited to the lowest feasible concentration. To ensure maximum protection from carcinogens through the use of respiratory protection, NIOSH also recommended that only the most reliable and protective respirators be used. *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter ck-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with chloramben you should be trained on its proper handling and storage. Store in a cool, dry place or a refrigerator, and avoid contact with strong acids, acid fumes and light. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Chloramben is stable to heat, oxidation, and hydrolysis in acidic or basic media. The stability is comparable to that of benzoic acid. Wet oxidation or incineration are recommended disposal methods.

Chlordane C:0630

Use Type: Insecticide
CAS Number: 57-74-9; 12789-03-6 (technical grade chemical)
Formula: $C_{10}H_6Cl_8$
Synonyms: Chlordan; Clordano (Spanish); Cortilan-Neu; Dichlorochlordene; ENT 9,932; ENT 25,552-x; 4,7-Methanoindan, 1,2,3,4,5,6,7,8 ,8-octachloro-2,3,3a,4,7,7a-hexahydro-; 4,7-Methano-1H-indene,1,2,4,5,6,7,8,8-octachloro-2,3,3a,4,7, 7a-hexahydro-; 4,7-Methanoindan, 1,2,4,5,6,8,8-octachloro 3a,4,7,7a-tetrahydro; NCI-C00099; Octachlor; Octachlorodihydrodicyclopentadiene; 1,2,4,5, 6,7,8,8-Octachloro-2,3,3a,4,7,7a-hexahydro-4,7-methanoindene; 1,2,4,5,6,7,8,8-Octachloro-2,3,3a,4,7,7a-hexahydro-4,7-methano-1H-indene; 1,2,4,5,6,7,8,8-Octachloro-3a,4,7,7a-hexahydro-4,7-methylene indane; Octachloro-4,7-methanohydroindane; Octachloro-4,7-methanotetrahydroindane; 1,2,4,5,6,7,8,8-Octachloro-4,7-methano-3a,4,7,7a-tetrahydroindane; 1,2,4,5,6,7,8,8-Octachloro-3a,4,7,7a-tetrahydro-4,7-methanoindan; 1,2,4,5,6,7,8,8-Octachloro-3a,4,7,7a-tetrahydro-4,7-methanoindane; 1,2,4,5,6,7,10,10-Octachloro-4,7,8,9-tetrahydro-4,7-methyleneindane
TradeNames:ASPON-CHLORDANE®;BELT®;CD68®; CHLORINDAN®; CHLOR KIL®; CHLORODANE®; CORODANE®; CHLORTOX®; DOWCHLOR®[C]; DOW-KLOR®[C]; GOLD CREST®[C]; KILEX LINDANE®; HCS 3260®; KYPCHLOR®; M 140®; M 410®; NIRAN®; OCTACHLOR®; OKTATERR®; OMS 1437®; ORTHO-KLOR®[C]; SD 5532®; SHELL SD-5532®[C]; SYNKLOR®; TAT®; TAT CHLOR® 4; TERMEX®; TOPICHLOR® 20; TOPICLOR®; TOXICHLOR®; VELSICOL® 1068[C]
Chemical class: Organochlorine
EPA/OPP PC Code: 058201, 058202 (technical grade)
California DPR Chemical Code: 130
HSDB Number: 802
UN/NA & ERG Number: UN2761 (solid)/151; UN2996 (liquid)/151; UN2995 (Organochlorine pesticides, liquid, toxic, flammable, flash point not <23 °C)/131
RTECS® Number: PB9800000
EC Number: 200-349-0 [*Annex I Index No.:* 602-047-00-8]
Uses: Not approved for use in EU countries[115]. Since 1988, the use and commercial production of chlordane (except for export) has been prohibited in the United States and other countries. The only commercial use still permitted is for fire ant control in power transformers. Chlordane is a broad-spectrum insecticide of the group of polycyclic chlorinated hydrocarbons called cyclodiene insecticides. Chlordane has been used extensively since the 1950s for termite control, as an insecticide for homes and gardens, and as a control for soil insects during the production of crops such as corn. Both the uses and the production volume of chlordane have decreased extensively since the issuance of a registration suspension notice for all food crops and home and garden uses of chlordane by the U.S. Environmental Protection Agency. However, significant commercial use of chlordane for termite control continues. Special groups at risk include children as a result of milk consumed; fishermen and their families because of the high consumption of fish and shellfish, especially freshwater fish; persons living downwind from treated fields; and persons living in houses treated with chlordane pesticide control agents.
Human toxicity (long-term)[101]: High–2.00 ppb, MCL (Maximum Contaminant Level)
Fish toxicity (threshold)[101]: Extra high–0.04936 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity: EPA Group B2, Probable human carcinogen; EU GHS Category 2: Suspected human carcinogen.
California Proposition 65 Chemical: Cancer (1/1/1988)
Acute Oral Category: 2, WARNING
Health Advisory: Nerve Toxin, Endocrine disruptor (confirmed), Mutagen, Reproduction Hazard
Persistent Organic Pollutants (UN)
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR423, appendix A, Priority Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92); Toxic Pollutant (Section 401.15) as technical mixture and metabolites

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 1000 lb (454 kg)
Reportable Quantity (RQ): 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B), severe pollutant

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] and POPs: Annex A (Elimination)

European/International Regulations: (*57-74-9*) Hazard Symbol: Xn, N; risk phrases: R21/22; R40; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Chlordane is a colorless, or light-yellow or amber, thick liquid. It has a pungent, chlorine-like odor. *Warning:* Odor generally provides inadequate warning of hazardous concentrations. Formulations include dusts, emulsifiable concentrates, granules, oil solutions, and wettable powders. The solid is not flammable[86]. Molecular weight = 409.78; Specific gravity (H_2O:1) = 1.6 @ 25 °C; Boiling point = 175 °C; Freezing/Melting point = 104–107 °C; Vapor pressure = 0.00001 mmHg; Practically insoluble in water; solubility = 0.0001%. The *commercial grade* of chlordane is a noncombustible liquid, but may be utilized in flammable solutions: Flash point = 56 °C has been found in the literature, but his may vary depending on the carrier used. Hazard Identification (based on NFPA-704 M Rating System): *(in a flammable solution such as n-hexane)* Health 3, Flammability 3, Reactivity 0; (*dry*) Health 3; Flammability 1; Reactivity 0. Practically insoluble in water.

Incompatibilities: Contact with strong oxidizers may cause fire and explosions. High heat and contact with alkaline solutions cause decomposition with the production of toxic fumes including chlorine, phosgene, hydrogen chloride. Attacks iron, zinc, plastics, rubber and coatings.

Permissible Exposure Limits in Air: The NIOSH(2) IDLH level = 100 mg/m^3

OSHA PEL: 0.5 mg/m^3 TWA [skin]

NIOSH REL: 0.5 mg/m^3 TWA [skin]. NIOSH considers this chemical to be a potential occupational carcinogen as defined by the OSHA carcinogen policy [29 CFR 1990]. See *NIOSH Pocket Guide*, Appendix A.

ACGIH TLV®[1]: 0.5 mg/m^3 TWA [skin]; confirmed animal carcinogen with unknown relevance to humans

NIOSH IDLH: 100 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

57-74-9

PAC-1: 4.5 mg/m^3
PAC-2: 50 mg/m^3
PAC-3: 500 mg/m^3

DFG MAK: 0.5 mg/m^3, inhalable fraction [skin]; Peak limitation II(8); Carcinogen Category 3B

Determination in Air: Filter/Chromosorb tube-102; Toluene; Gas chromatography/Electrochemical detection; NIOSH IV, Method #5510[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 1.0 ppb[93]. The U.S. EPA recommends that a child should not drink water with more than 60 parts of chlordane per billion parts of drinking water (60 ppb) for longer than 1 day. To protect freshwater aquatic life: 0.0043 μg/L as a 24-hour average, not to exceed 2.4 μg/L at any time. To protect saltwater aquatic life: 0.0040 μg/L as a 24-hour average, never to exceed 0.09 μg/L. To protect human health: preferably zero. An additional lifetime cancer risk of 1 in 100,000 is presented by a concentration of 0.0046 μg/L[6]. The U.S. EPA[47] has found a lowest-observed-adverse-effect-level (LOAEL) of 0.045 mg/kg body weight/day which results in a lifetime health advisory of 2 μg/L. It is strongly advised not to let the chemical enter into the environment because it persists. The substance may cause long-term effects in the aquatic environment.

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Gas chromatography (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625). Log K_{ow} = <3.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Chlordane is absorbed well by the lungs and gastrointestinal tract and through intact skin. Exposure by any route can cause systemic effects.

Harmful Effects and Symptoms

Short Term Exposure: Significant chlordane exposure by any route disrupts the transmission of nerve impulses, resulting in central nervous system excitation, convulsions, and respiratory depression. Chlordane is absorbed well through intact skin. Early formulations contained impurities that were skin and mucous-membrane irritants. Common symptoms of chlordane poisoning include headache, nausea, excitability, confusion, and muscle tremors that may precede convulsions. Chlordane can irritate the eyes and skin and can cause burns on contact. Skin rash or acne may develop. Exposure can cause blurred vision, nausea, headache, abdominal pain and vomiting, Exposure at high levels may result in disorientation, tremors, convulsions, respiratory failure and death. Medical observation is indicated. Symptoms include increased sensitivity to stimuli, tremors, muscular incoordination, and convulsions with or without coma. Fatal oral dose to adult humans is between 6 and 60 g with onset of symptoms within 45 minutes to several hours after ingestion, although symptoms have occurred following very small doses either orally or by skin exposure. Some reports of delayed development of liver disease, blood disorders and upset stomach. Chlordane is considered to be borderline between a moderately and highly toxic substance. The LD_{50} (oral, rat) = 283 mg/kg.

Long Term Exposure: Chronic chlordane exposure can cause permanent alterations of nervous system function, including problems with memory, learning, thinking, sleeping, personality changes, depression, numbness in the extremities, headache, and sensory and perceptual changes. It has been suggested that chronic exposure can cause blood disorders, but these disorders were not shown to have an increased incidence in heavily exposed groups of workers. Besides blood disorders, jaundice has been reported in persons living in homes treated with chlordane for termite control, but liver-function tests were normal in workers who manufactured chlordane. Chronic exposures may be more serious for children because of their potential longer latency period. The U.S. EPA has determined that technical-grade chlordane is a likely human carcinogen. Chlordane is structurally similar to rodent carcinogens and chronic chlordane exposure can cause hepatocellular carcinoma in several strains of mice. *Reproductive and Developmental Effects:* The TERIS database states that no epidemiologic studies have reported birth defects among infants born to mothers exposed to chlordane during pregnancy. Chlordane is excreted in breast milk. Prenatal exposure to chlordane has been reported for a few cases of neuroblastoma, blood dyscrasias, and depressed cell-mediated immunity, but no direct link with the chemical was established. Chlordane induces liver enzymes and enhances metabolism of steroid hormones, including oral contraceptives; sterility has been reported in animals. May cause tumors.

Points of Attack: Central nervous system, eyes, lungs, liver, kidneys, skin. May cause reproductive and fetal effects.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. Examination by a qualified allergist. Complete blood count

First Aid: Persons exposed only to chlordane vapor do not pose risks of secondary contamination to others. Persons whose skin or clothing is contaminated with liquid or powdered chlordane can cause secondary contamination by direct contact. *Inhalation:* Monitor for respiratory distress. If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. Administer 100% humidified supplemental oxygen if breathing is difficult. *Basic Decontamination:* Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs chlordane; therefore, items such as leather shoes, gloves, and belts should be discarded. If there has been direct contact with liquid or powdered chlordane, flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. **Do not scrub**, since this can increase absorption through the skin. Rinse thoroughly with water. *Eyes:* Irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Keep victims (adults or children) warm and quiet to avoid triggering seizures and the complication of hypothermia. *Ingestion:* Do not induce vomiting. If the victim is conscious and able to swallow, administer an aqueous slurry of activated charcoal at 1 g/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. (The efficacy of activated charcoal for chlordane poisoning is uncertain.)

Note to physician or authorized medical personnel: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. To control metabolic acidosis, treat with sodium bicarbonate under medical base control (adult dose = 1 ampule; pediatric dose = 1 mEq/kg). Patients who are comatose, hypotensive, or have seizures or cardiac dysrhythmias should be treated according to advanced life support protocols. High concentrations of chlordane can increase cardiac irritability; use caution with cardiac or bronchial sensitizing agents

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. 8 hr (more than 8 hours of resistance to breakthrough $>0.1\,\mu g/cm^2/min$): CPF3™ suits, Trellchem HPS™ suits; **4 hr** (at least 4 but <8 hours of resistance to breakthrough >0.1 $0.1\,\mu g/cm^2/min$): Teflon™ gloves, suits, boots. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquid, wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA PAC-1: 4.5 mg/m^3. NIOSH: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-ressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Flammable material: (1) Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Store in tightly closed containers in a cool, well-ventilated area. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from heat and incompatible materials. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of 5 gallons or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. (2) Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with chlordane you should be trained on its proper handling and storage. Chlordane must be stored to avoid contact with strong oxidizers (such as perchlorates, peroxides, permanganates, chlorates and nitrates), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Organochlorine pesticides, liquid or solid (Nonflammable), require a "poisonous materials" label. They fall in Hazard Class 6.1. Organochlorine pesticides, liquid, toxic, flammable, flash point not <23 °C require both a "poisonous materials" and a "flammable material" label. They fall in Hazard Class 6.1. Labels 6.1, 3.

Spill Handling: Do not touch spilled material. Use water spray to reduce vapors. Stay upwind. Avoid breathing vapors. Wear positive-pressure breathing apparatus and full protective clothing. Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. *Small spills*: absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. *Large spills*: dike far ahead of spill for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition may include oxides of carbon and chlorine, phosgene, hydrogen chloride gas. If the flammable or combustible commercial material catches fire: CAUTION: This material may have a very low flash point: Use of water spray when fighting fire may be inefficient. *Small fire:* dry chemical, CO_2, water spray or alcohol-resistant foam. *Large fire:* water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or vehicular loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

For nonflammable solid or liquid: *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or car/trailer loads:* if tank, rail car or tank truck is involved in a fire, isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Chlordane is dehydrochlorinated in alkali to form "nontoxic" products, a reaction catalyzed by traces of iron, but the reaction is slow. The environmental hazards of the products are uncertain. Chlordane can be dechlorinated by sodium in isopropyl alcohol. The UN recommends incineration methods for disposal of chlordane. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorethoxyfos C:0645

Use Type: Insecticide
CAS Number: 54593-83-8
Formula: $C_6H_{11}Cl_4O_3PS$
Synonyms: *O,O*-Diethyl *O*-(1,2,2,2-tetrachloroethyl) phosphorothioate; *O,O*-Diethyl *O*-(1,2,2,2-tetrachloroethyl) thionophosphate; Phosphorothioic acid, *O,O*-diethyl *O*-(1,2,2,2-tetrachloroethyl)ester
Trade Names: DPX-43898®; FORTRESS 2.5G; FORTRESS® 5G; SD 208304®
Chemical class: Organophosphate
EPA/OPP PC Code: 129006
California DPR Chemical Code: 5106 Not currently registered
HSDB Number: 7131
UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)
RTECS® Number: TF6150000
Uses: Chlorethoxyfos is a restricted use organophosphate insecticide registered for use in the U.S. on field corn, seed corn, sweet corn, and popcorn for the control of corn rootworms, wireworms, cutworms, seed corn maggots, white grubs, and symphylans. A U.S. EPA restricted Use Pesticide (RUP). Not listed for use in EU countries[115].
U.S. Maximum Allowable Residue Levels for Chlorethoxyfos (40 CFR 180.486): in or on the following raw agricultural commodities: corn, field, forage 0.01 ppm; corn field, grain 0.01 ppm; corn, field, stover 0.01 ppm; corn, pop, grain 0.01 ppm; corn, pop, stover 0.01 ppm; corn, sweet, kernel plus cob with husks removed 0.01 ppm; corn, sweet, forage 0.01 ppm; and corn, sweet, stover (fodder) 0.01 ppm.
Human toxicity (long-term)[101]: High–4.20 ppb, Health Advisory
Fish toxicity (threshold): Extra high–0.40299 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity: EPA Group D, Not classifiable as a human carcinogen.
Acute Oral Category: 1, DANGER–POISON
Health Advisory: Nerve Toxin
U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates
Marine pollutant (in bulk by water)
European/International Regulations: Hazard Symbol: T+, Xi, N; risk phrases: R26/27/28; R36; R50/53; safety phrases: S26, S28; S36/37, S38, S45, S60; S61 (see Appendix 1)
Description: Gray to reddish-brown granular solid or colorless liquid. Mild sulfur-like odor. Molecular weight = 335.89; 235.06 (P-); Specific gravity (H_2O:1) = 1.41; Boiling point = 110 °C; Freezing/Melting point = (decomposes) 112 °C; Flash point = 127.6 °C; Vapor pressure = 8 × 10^{-4} mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Very low solubility in water; solubility < 1 mg/L @ 20 °C; (technical) 3 ppm. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.
Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.
Permissible Exposure Limits in Air: No standards have been set.
Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides[18].
Determination in Water: EAD Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.
Harmful Effects and Symptoms
Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay

tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Highly dangerous; can be fatal if inhaled, swallowed, or absorbed through the skin. Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 2 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May be a neurotoxin; may cause liver damage. Chronic exposure may cause respiratory paralysis and death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Poisonous and corrosive gases are produced in fire including hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. May also be mixed with flammable solvent and sprayed into an incinerator equipped with afterburner and scrubber. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorfenapyr C:0648

Use Type: Acaracide, Insecticide, Miticide

CAS Number: 122453-73-0

Formula: $C_{15}H_{11}BrClF_3N_2O$

Synonyms: Chlorphenapyr; 1*H*-Pyrrole-3-carbonitrile, 4-bromo-2-(4-chlorophenyl)-1-(ethoxymethyl)-5-(trifluoromethyl)-; 4-Bromo-2-(4-chlorophenyl)-1-(ethoxymethyl)-5-(trifluoromethyl)pyrrole-3-carbonitrile (IUPAC)

Trade Names: AC 303630®; CL 303630®; PHANTOM®; PIRATE® 3 F; PYLON®; SUMILARV® chlorfenapyr

Chemical class: Pyrrole (Pyrazole); Organofluorine

EPA/OPP PC Code: 129093

California DPR Chemical Code: 3938

HSDB Number: 7464

UN/NA & ERG Number: UN2811/154

Uses: Severely Restricted for use in EU. Active in U.S. as a foliar spray in greenhouses for ornamental crops and target pests including mites, caterpillar pests, thrips, and fungus gnats. No food use in U.S. Used on ornamental crops in commercial greenhouses to control mites, caterpillar pests, thrips and fungus gnats. Not for food use. Not an approved substance in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for chlorfenapyr: U.S. FINAL RULE, January 26, 2003: 1 ppm in or on raw agricultural commodities – vegetables, fruiting, group 8, which include: chili, postharvest; pepper, nonbell; tomato, paste; eggplant; pepper, nonbell; sweet tomato, puree; groundcherry; tomatillo; tomato, wet, pomace; pepino; tomato; vegetable, fruiting; pepper; tomato, concentrated products; vegetable, fruiting; group pepper, bell; tomato, dried pomace. U.S. FINAL RULE, January 26, 2005: A new tolerance of 0.01 ppm was established January 2005 for residues of in or on all food commodities as a result of application of chlorfenapyr to crack, crevice and spot applications in food/feed handling areas where food/feed products are prepared, held, processed, or served.

Regulatory Authority and Advisory Information:

Carcinogenicty: EPA, not sufficient to assess human carcinogenic potential

Health Advisory: Endocrine disruptor (S!), Testicular, Uterine

Acute Oral Category: 2, WARNING

European/International Regulations: Hazard Symbol: T, Xn, N; risk phrases: R22; R23; R50/53; safety phrases: S1/2; S13; S36/37; S45; S60; S61 (see Appendix 1)

Description: White (pure) or light tan to yellowish powdery solid. Characteristic halide or ketone odor. Molecular weight = 407.62; Specific gravity (H_2O:1) = 0.543; Freezing/Melting point = 91.5 °C; 101 °C; Vapor pressure = 7.4×10^{-8} mmHg @ 25 °C; Flash point = 221.5 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Low solubility in water; solubility (pH = 7) 0.14 mg/L.

Incompatibilities: Keep away from strong oxidizers.

Permissible Concentration in Water: GLC; HPLC (residues)

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, eye contact.

Harmful Effects and Symptoms

This pesticide contains both bromine and fluorine, a combination that has the potential to produce severe adverse effects – particularly to the brain [Fluoride Action Network].

Short Term Exposure: Contact with eyes may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = 441 mg/kg[83]; LD_{50} (dermal, rat) = >2 g/kg [83].

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause liver, brain, skin effects.

Points of Attack: Bones, brain, central nervous system.

Medical Surveillance: There is suggestive but no confirmative evidence of cancer from this material. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA) or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical-resistant suit. Suggested materials include Nitrile gloves; DuPont™ Tychem® suit fabrics[88].

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149. If risk assessment shows air-purifying respirators are appropriate use a full-face particle respirator type N99 (US) or type P2 (EN 143) respirator cartridges in addition to engineering controls. If the respirator is the primary or sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: If a small spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers. Dampen the spilled material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not re-enter the contaminated area until an expert verifies that the area has been properly cleaned.

Fire Extinguishing: Decomposition products include toxic oxides of carbon, oxides of nitrogen and carbon, hydrogen fluoride, hydrogen chloride, and hydrogen bromide gases. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire.

Disposal Method Suggested: The best method of disposal of small amounts of excess pesticides is to use them according to the directions on the label. If all of the remaining pesticide cannot be properly used, check with your local solid waste management authority, environmental agency, or health department to find out whether your community has a household hazardous waste collection program or a similar program for getting rid of unwanted, leftover pesticides. These authorities can also inform you of any local requirements for pesticide waste disposal.

Chlorimuron-ethyl C:0658

Use Type: Herbicide

CAS Number: 90982-32-4

Formula: $C_{13}H_{11}ClN_4O_6S$

Synonyms: Benzoic acid,2-[((((4-chloro-6-methoxy-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]-,ethyl ester; Caswell No. 193B; Chlorimuronethyl ester; Chlorimuronethyl [Ethyl-2-[(((4-chloro-6-methoxyprimidin-2-yl)-carbonyl)amino)sulfonyl]benzoate]; 2-[((((4-Chloro-6-methoxy-2-pyrimidinyl)amino) carbonyl)amino) sulfonyl]benzoic acid, ethyl ester; Ethyl-2-[(((4-chloro-6-methoxyprimidin-2-yl)-carbonyl)-amino) sulfonyl]benzoate; Ethyl 2-[((4-chloro-6-methoxypyrimidine-2-yl)aminocarbonyl)aminosulfonyl]benzoate; Ethyl 2-[((((4-chloro-6-methoxy-2-pyrimidinyl)amino)carbonyl) amino)sulfonyl]benzoate

Trade Names: AUTHORITY®; CANOPY® (chlorimuron-ethyl+Metribuzin); CLASSIC®; CONCERT® cancelled; DPX-F6025®; GEMINI®[C]; LOROX®[C]; PREVIEW®[C]; RELIANCE®; SKERMISH®, cancelled; SYNCHRONCY®; SYNCHRONY®[C]

Chemical class: Sulfonylurea; Pyrimidine derivative[88]

EPA/OPP PC Code: 128901

California DPR Chemical Code: 2458

HSDB Number: 6850

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: DG5095000

Uses: Used to control broadleaf weeds and annual morning glory in soybeans and peanuts. Not listed as registered for use in EU countries[115]. Registered for use in the U.S., except California. There are more than 25 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Chlorimuron-ethyl (40 CFR 180.429): peanuts 0.02 ppm; soybeans 0.05.

Human toxicity (long-term): Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold): Very low–1308.29960 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Acute Oral Category: 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless to off white or pale yellow crystals or powder. Some formulations are listed as "flammable" in the literature. Odorless. Molecular weight = 414.83; Specific gravity (H_2O:1) = 1.51 @25 °C; Freezing/Melting point = 181 °C; Vapor pressure = 4.0×10^{-12} mmHg @ 25 °C[83,USDA]. Henry's Law constant = 4.27×10^{-11} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Low solubility in water. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: Keep away from strong oxidizers, nitrates.

Determination in Water: Method: USGS-NWQL O-2060-01; Procedure: graphitized carbon-based solid-phase extraction and high-performance liquid chromatography/mass spectrometry; Analyte: chlorimuron-ethyl; Matrix: water; Detection limit: 0.0048. Log K_{ow} = 2.50[83]–>3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal contact, ingestion

Harmful Effects and Symptoms

Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: May cause skin and eye irritation. Dermal contact may cause allergic reaction. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >4000 mg/kg[83]; LD_{50} (dermal, rabbit) = >2000 mg/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies. May be a liver toxin.

Points of Attack: Skin, liver.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl, halosulfuron, primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose lung allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. *Flammable formula*: Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents, and combustible materials. Sources of ignition, such as smoking and open flames, are prohibited where the chemical is handled, used, or stored. Use only non-sparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, carbon, and hydrogen chloride gas. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlormequat chloride C:0710

Use Type: Plant growth regulator

CAS Number: 999-81-5

Formula: $C_5H_{13}Cl_2N$; $ClCH_2CH_2N(CH_3)_3Cl$

Synonyms: Ammonium, (2-chloroethyl)trimethyl; Chloride 2-chloro-*N,N,N*-trimethylethanaminium chloride; Choline dichloride; 2-Chloroethyl trimethylammonium chloride; Chlorcholinchlorid; Chlorcholine chloride; Chlormequat; Chlorocholine chloride; (*β*-Chloroethyl)trimethylammonium chloride; 2-Chloro-*N,N,N*-trimethylammonium chloride; (2-Chloroethyl)trimethylammonium chloride; 2-Chloro-*N,N,N*-ethyl)trimethylethanaminium chloride; Ethanaminium, 2-chloro-*N,N,N*-trimethyl-, chloride; NCI-C02960; Trimethyl-*β*-chlorethylammoniumchlorid; Trimethyl-*β*-chloroethyl ammonium chloride

Trade Names: AC 38555®; ADJUST®, ATLAS CHLORMEQUAT®; CCC PLANT GROWTH REGULANT®; 60-CS-16®; CYCLOCEL®; CYCOCEL®; CYCOCEL-EXTRA®; CYCOGAN®; CYCOGAN EXTRA®; CYOCEL®; EI 38,555®; HICO CCC®; HORMOCEL-2CCC®; INCRECEL®; LIHOCIN®; RETACEL®; RETACIL®; STABILAN®; TUR®; WR 62®

Chemical class: Quarternary ammonium salt

EPA/OPP PC Code: 018101

California DPR Chemical Code: 1512

HSDB Number: 1541

UN/NA & ERG Number: UN2811/154

RTECS® Number: BP5250000

EC Number: 007-003-00-6

Uses: Said to be effective for cereal grains, tomatoes, and peppers; cotton, grapes, mango, tobacco, vegetables. In California, major uses are in greenhouse plants and flowers and in nurseries, including geraniums, azaleas, hibiscus.

Regulatory Authority and Advisory Information: Acute Oral Category: 2, WARNING

Health Advisory: Nerve Toxin (S!), Mutagen, Skin irritant/sensitizer

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)

Reportable Quantity (RQ): 100 lb (45.4 kg)

European/International Regulations: Hazard Symbol: Xn; risk phrases: R21/22; safety phrases: S2; S36/37 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Chlormequat chloride is a white to yellowish crystalline solid with a fish-like odor. Molecular weight = 158.09; Freezing/Melting point = 245 °C (decomposes); Vapor pressure = 79×10^{-9} mmHg @ 20C°. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Highly soluble in water. Carrier solvents used in commercial products may alter physical and toxicological properties

Incompatibilities: Chlormequat chloride decomposes on heating or in fire, forming nitrogen oxides, carbon monoxide, and hydrogen chloride fumes. This chemical decomposes on heating with strong aqueous alkali solutions, forming trimethylamine and other gaseous products. Contact with strong oxidizers may cause fire and explosions. Attacks many metals in presence of water

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.64 mg/m^3
PAC-2: 7 mg/m^3
PAC-3: 11 mg/m^3

Permissible Concentration in Water:

Determination in Water: Log K_{ow} = <– 0.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, absorbed through the skin

Harmful Effects and Symptoms

There have been nearly 2700 incidents reported to the Opp incident data system (ids) and the California Department of Pesticide Regulation from 1982 to 2004 associated with exposure to end-use products containing quaternary ammonium compounds: most of the incidents are related to dermal, ocular and inhalation irritation. Allergic type reaction has also been reported in some incidents[83].

Short Term Exposure: Chlormequat chloride is an irritant and can be absorbed through the skin. Irritates the eyes and the respiratory tract. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Exposure can cause nausea and vomiting. Higher levels can cause slow or irregular heartbeat, tremors, seizures, and coma. This can be fatal. Chlormequat chloride may affect the nervous system. Quaternary ammonium compounds: Inhalation incident symptoms: respiratory irritation/burning, irritation to mouth, throat, nose; vomiting, nausea. Symptoms of exposure (from above data system): nausea, headache, and sore throat are the primary systemic effects that have been reported. The primary dermal effects that have been reported are rash, burning sensation, numbness, and itching. Allergic symptoms: hives and allergic contact dermatitis. Oral incident symptoms: abdominal pain, dizziness, and headache. Ocular incident symptoms: irritation, burning, eye pain, conjunctivitis, swelling eye and swelling of eyelid. LD_{50} (oral, rat) = 600 mg/kg; LD_{50} (dermal, rat) = >4000 mg/kg.

Long Term Exposure: May cause liver damage. May cause tumors. May cause reproductive and fetal effects.

Points of Attack: Lungs, liver, nervous system. Reproductive cells.

Medical Surveillance: Liver function tests. Consider chest x-ray following acute overexposure. EKG examination of the nervous system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Respirator Selection: SCBA > 0.64 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Store in a cool, dry area away from moisture, foodstuffs, acids, or oxidizers. Important to avoid high temperatures.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: Wear safety goggles, full work clothing and impervious gloves and boots. If vapors are present, wear a NIOSH- or CEN (UK)-approved respiratory protection. Floor area may be slippery. Contain spills with inert material such as dry earth or dry sand. Scoop into containers and seal up for proper disposal in accordance with all local, state, and federal laws.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire.

Disposal Method Suggested: High-temperature incineration. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chloroneb C:0915

Use Type: Fungicide

CAS Number: 2675-77-6

Formula: $C_8H_8Cl_2O_2$

Synonyms: Benzene, 1,4-dichloro-2,5-dimethoxy-; 1,4-Dichloro-2,5-dimethoxybenzene

Trade Names: CHLORAXYL® SEED TREATER; DELTA-COAT® II; DEMOSAN®; SOIL FUNGICIDE®-1823; TERSAN® SP; TERRANEB® SP; SOIL FUNGICIDE 1823®

Chemical class: Substituted benzene

EPA/OPP PC Code: 027301

California DPR Chemical Code: 135[97].

HSDB Number: 1542

UN/NA & ERG Number: UN2761/151 (organochlorine pesticide, solid, toxic); UN2996

RTECS® Number: CZ4750000

EC Number: 220-222-3

Uses: A systemic fungicide used to control snow mold on turf grass; used on cotton, sugar beets and bean seeds to control seedling disease. Not approved for use in EU countries[115]. Registered for use in the U.S. except California.

U.S. Maximum Allowable Residue Levels for Chloroneb and its metabolite 2,5-dichloro-4-methoxyphenol (calculated as chloroneb) (40 CFR 180.257): in or on the following food commodities: bean 0.1 ppm (N); bean, forage 2 ppm; beet, sugar, roots 0.1 ppm (N); beet, sugar, tops 0.1 ppm (N); cattle, fat 0.2 ppm; cattle, meat 0.2 ppm; cattle, meat byproducts 0.2 ppm; cotton, forage 2 ppm; cotton, undelinted seed 0.1 ppm (N); goat, fat 0.2 ppm; goat, meat 0.2 ppm; goat, meat byproducts 0.2 ppm; hog, fat 0.2 ppm; hog, meat 0.2 ppm; hog, meat byproducts 0.2 ppm; horse, fat 0.2 ppm; horse, meat 0.2 ppm; horse, meat byproducts 0.2 ppm; milk 0.05 ppm (N); sheep, fat 0.2 ppm; sheep, meat 0.2 ppm; sheep, meat byproducts 0.2 ppm; soybean 0.1 ppm (N); and soybean, forage 2 ppm. (2004). (N) = Negligible

Human toxicity (long-term)[101]: Low–91.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–530.91122 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Health Advisory: Mutagen

Description: Colorless crystalline solid. Musty odor. Molecular weight = 207.06; Specific gravity (H_2O:1) = 1.66; Boiling point = 268 °C; Freezing/Melting point = 133–135 °C; Vapor pressure = 3×10^{-3} mmHg. @ 20 °C. Low solubility in water.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Permissible Exposure Limits in Air: No standards established.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 91 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.4. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Overexposure symptoms include apprehension, anxiety, confusion, nervous excitation; dizziness; headache; numbness and weakness in limbs; muscle twitching, tremors; nausea and vomiting; slow, shallow respiration, bluish face; convulsions; loss of consciousness; breathing stops; death. LD_{50} (oral, rat) = >11 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause reproductive and fetal effects.

Points of Attack: Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Directly, irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Get medical aid immediately. Have physician check for possible delayed damage. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. Shampoo hair promptly if contaminated; protect eyes. **Do not scrub skin or hair**, since this can increase absorption through the skin. Rinse thoroughly with water. Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs many organochlorines; therefore, items such as leather shoes, gloves, and belts should be discarded. If the skin is swollen or inflamed, cool affected areas with cold compresses. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do not induce vomiting*. * In cases of ingestion, the patient is at risk of central nervous system depression or seizures, which may lead to pulmonary aspiration during vomiting. If the victim is conscious and able to swallow, *administer an aqueous slurry of activated charcoal at 1 g/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. The efficacy of activated charcoal for some organochlorine poisoning (such as chlordane) is uncertain. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do not give activated charcoal* <u>*before or with*</u> *ipecac syrup.* *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately remove the victim from the contaminated area to fresh air. For inhalation exposures, monitor for respiratory distress. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. If breathing is difficult, administer 100% humidified supplemental oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. At minimum, use Tyvek®-type disposable material. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149. Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i. e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88].

Storage: Color Code-Blue: Health Hazard/Poison. Store under ambient temperatures in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Keep away from all mineral acids and bases.

Shipping: "Pesticides, liquid, toxic, n. o. s.," or "Organochlorine pesticide, liquid, toxic," require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. This chemical is probably combustible. Should a spill occur while you are handling this chemical, *first remove all sources of ignition*, then you should dampen the solid spill material with 60–70% ethanol and transfer the dampened material to a suitable container. Use absorbent paper dampened with 60–70% ethanol to pick up any remaining material. Seal the absorbent paper, and any of your clothes, which may be contaminated, in a vapor-tight plastic bag for eventual disposal. Solvent wash all contaminated surfaces with 60–70% ethanol followed by washing with a soap and water solution. Do not re-enter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned.

Fire Extinguishing: Decomposition products include toxic hydrogen chloride gas. Fires involving this material can be controlled with a dry chemical, carbon dioxide or alcohol-resistant foam extinguisher. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorophacinone C:0940

Use Type: Rodenticide

CAS Number: 3691-35-8

Formula: $C_{23}H_{15}ClO_3$

Synonyms: 2-(*α*-*p*-Chlorophenylacetyl)indane-1,3-dione; 2-[(*p*-Chlorophenyl)phenylacetyl]-1,3-indandione; 1*H*-Indene-1,3(2*H*)-dione, 2-[(4-chlorophenyl)phenylacetyl]-; 1,3-Indandione, 2-[(*p*-chlorophenyl)phenylacetyl]-; 2-[2-Phenyl-2-(4-chlorophenyl)acetyl]-1,3-indandione

Trade Names: AFNOR®; CAID®; DELTA®; DRAT RAT BAIT®; ENDORATS®; LIPHADIONE®; LM 91®; MICROZUL®; MURIOL®; PARTOX®[C]; QUICK®; RAMUCIDE®; RANAC®; RATOMET®; RAVIAC®; ROZOL®[C]; TOPITOX®

Chemical Class: 1,3-Indandione

EPA/OPP PC Code: 067707

California DPR Chemical Code: 1625

HSDB Number: 6432

UN/NA & ERG Number: UN2811/154

RTECS® Number: NK5335000

EC Number: 223-003-0 [*Annex I Index No.:* 606-014-00-9]

Uses: This material is an anticoagulant rodenticide used around livestock and also on crops such as artichokes. Some brands are labeled for use indoors and outdoors for the control of mice, rats, moles, muskrats, voles and vampire bats. Not approved for use in EU countries[115]. Registered for use in the U.S. There are 24 global suppliers[97].

Human toxicity (long-term)[101]: Extra high–0.03500 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–27.64016 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Acute Oral Category: 1, DANGER–POISON

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)

Reportable Quantity (RQ): 100 lb (45.4 kg)

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R23; R27/28; R48/24/25; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

Description: Chlorophacinone is a white to pale yellow crystalline solid. Molecular weight = 374.82; Freezing/Melting point = 138 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Low solubility in water; solubility = 100 mg/L.

Permissible Exposure Limits in Air

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.091 mg/m^3
PAC-2: 1 mg/m^3
PAC-3: 1 mg/m^3

Determination in Water: Log K_{ow} = 2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, and dermal contact. Persons with who are taking anticoagulants or are suffering from bleeding disorders must be protected from exposure.

Harmful Effects and Symptoms

Chlorophacinone is an anticoagulant. Hemorrhage is the most common sign and may be manifested by nose and gum bleeding, bloody stools and urine, ecchymoses (extravasations of blood into skin), and hemoptysis (coughing up of blood). Bruising is heightened. Abdominal and flank pain may also occur. Chlorophacinone could be hazardous to other small mammals and birds if used indiscriminately. Persons with bleeding problems and children should not come in contact.

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Contact may cause burns to skin and eyes. Symptoms of exposure are similar to those of warfarin. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Symptoms develop after a few days or a few weeks or repeated ingestion and include nosebleed and bleeding gums; pallor and sometimes a rash; massive bruises, especially of the elbow, knees, and buttocks; blood in urine and feces; occasionally paralysis from cerebral hemorrhage; and hemorrhagic shock and death. Chlorophacinone is highly toxic orally and by skin adsorption. The probable oral lethal dose for humans is less than 5 mg/kg to 50 mg/kg, or between a taste (less than 7 drops) and 1 teaspoonful for a 150 lb (70 kg) person. LD_{50} (oral, rat) = 3.15 mg/kg.

Long Term Exposure: See above

Points of Attack: Blood, cardiovascular system

First Aid: *Emergency Life-Support Procedures:* Acute exposure to this chemical may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation Exposure:* Move victims to fresh air. Emergency personnel should avoid self-exposure to chlorophacinone. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. RUSH to a health care facility. *Dermal/Eye Exposure:* Remove victims from exposure. Emergency personnel should avoid self-exposure to chlorophacinone. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Remove contaminated clothing as soon as possible. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. Wash exposed skin areas twice with soap and water. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. RUSH to a health care facility. *Ingestion Exposure:* Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of chlorophacinone is unknown or suspected to be greater than 30 minutes, do not induce vomiting and RUSH to health care facility. Ipecac should not be administered to children under 6 months of age. ***Warning:*** Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If ANY uncertainty exists, RUSH to health care facility. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Walk the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be re-administered. Continue to ambulate and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. 4. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (1/2 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (1/2 to 1 cup) of water. 5. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (1/2 to 1 oz) of cathartic; 50 to 100 g (1-3/4 to 3-1/2 oz) is recommended for adults. 6. RUSH to a health care facility[83].

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 0.091 mg/m^3. NIOSH: SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: Indandione pesticides, solid, toxic, n. o. s., require a "poisonous materials" label. It usually falls in Hazard Class 6.1.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and hydrogen chloride gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration at high temperature with effluent gas scrubbing.

Chloropicrin C:0980

Use Type: Soil fumigant, Nematicide

CAS Number: 76-06-2

Formula: CCl_3NO_2

Synonyms: AI3-00027; Caswell No. 214; Chloroform, nitro-; Methane, trichloronitro-; Mycrolysin; NCI-C00533; Nitrotrichloromethane; Nitrochloroform; Trichloronitromethane; Trichlor

Trade Names: BROM-O-GAS®[C]; BROZONE®[C]; CHLOR-O-PIC®; DOWFUME®; FUM-A-CIDE® 15[C]; KLOP®; LARVACIDE®[C]; LARVACIDE 100®; METAPICRIN®; NAMFUME®[C]; NEMAX®; OG-25®; PESTMASTER® FUMIGANT 1[C]; PICFUME®; PIC-CHLOR® 16; PICRIDE®; PROFUME A®; PS®; TELONE®; TELONE® C[C]; TERR-O-CIDE® 15[C]; TERR-O-GAS®; TIMBERFUME II®; TRI-CLOR®[C]; TRI-CON®; TRI-FORM®; TRIFUME®[C];

Chemical class: Halo-organics

EPA/OPP PC Code: 081501

California DPR Chemical Code: 136

HSDB Number: 977

UN/NA & ERG Number: UN1580/154; UN1583 (Chloropicrin mixtures, n. o. s.)/154

RTECS® Number: PB6300000

EC Number: 200-930-9 [*Annex I Index No.:* 610-001-00-3]

Uses: Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP) as telone. Chloropicrin is used in the manufacture of the dye-stuff methyl violet and in other organic syntheses. It has been used as a chemical warfare gas. It is used as a preplant soil fumigant in seed beds and transplant nurseries for control of verticillium wilt, nematodes, weed seeds and insects. In grain elevators, it is used to control insects and rodents. The top four uses in California are on strawberries, tomatoes, bell peppers, and outdoor nursery plants.

U.S. Maximum Allowable Residue Levels for Chloropicrin (40 CFR 180.1008): Exempted from the requirement for residues when used as a fumigant for the following grains: barley, grain, post-harvest; buckwheat, grain, post-harvest; corn, field, grain, post-harvest; corn, pop, grain, post-harvest; oat, grain, post-harvest; rice, grain, post-harvest; rye, grain, post-harvest; sorghum, grain, post-harvest; wheat, grain, post-harvest

Human toxicity (long-term)[101]: Low–56.0 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–1.37795 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: ACGIH, A4, Not classified as a human carcinogen.

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin (S!), Mutagen

DOT Inhalation Hazard Chemicals

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

OSHA 29CFR1910.119, Appendix A. Process Safety List of Highly Hazardous Chemicals, TQ = 500 lb (227 kg)

Safe Drinking Water Act: Priority List (55 FR 1470)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: T+, Xn, Xi; risk phrases: R22; R26; R36/37/38; safety phrases: S1/2; S36/37; S38; S45 (see Appendix 1).

Description: Chloropicrin is a highly toxic and reactive, colorless to faint yellow, oily liquid. Sharp, penetrating (pepper-like) odor that causes tearing. Odor threshold = 1.1 ppm. Molecular weight = 164.38; Specific gravity (H_2O:1) = 1.66; Boiling point = 121 °C; Freezing/Melting point = – 64 °C; Vapor pressure = 16.9 mmHg @ 20 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 3. Slightly soluble in water; solubility = 0.2272 g/100 ml @ 0 °C; 0.1621 g/100 ml at 25 °C.

Incompatibilities: Can be self-reactive. Chloropicrin may explode when heated under confinement. Quickly elevated temperatures, shock, contact with alkali metals or alkaline earth may cause explosions. A strong oxidizer; violent reaction with reducing agents, aniline (especially in presence of heat), alcoholic sodium hydroxide, combustible substances, sodium methoxide, propargyl bromide, metallic powders. Liquid attacks some light metals, and some plastics, rubber and coatings.

Permissible Exposure Limits in Air:

NIOSH IDLH: 2 ppm; 300 ppm for 10 minutes can be lethal to humans[83,EPA]

Conversion factor: 1 ppm = 6.72 mg/m^3 @ 25 °C & 1 atm

OSHA PEL: 0.1 ppm/0.7 mg/m^3 TWA
NIOSH REL: 0.1 ppm/0.7 mg/m^3 TWA
ACGIH TLV®[1]: 0.1 ppm/0.67 mg/m^3 TWA; not classifiable as a human carcinogen
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: **0.5**$_{\mathbf{A}}$ ppm
PAC-2: **0.15**$_{\mathbf{A}}$ ppm
PAC-3: **1.4**$_{\mathbf{A}}$ ppm
Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values.
DFG MAK: 0.1 ppm/0.68 mg/m^3 TWA; Peak Limitation Category I(1)

Permissible Exposure Limits in Air: No standards established.

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 7.3 μg/L; California: 56 μg/L.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms. When liquid chloropicrin enters water, it mixes very slowly, falling to the bottom, where it breaks down in less than a day. Nevertheless, warn pollution control authorities and advise shutting water intakes. Chloropicrin is very poisonous to fish.

Routes of Entry: Inhalation, ingestion, eye and dermal contact

Harmful Effects and Symptoms:

Short Term Exposure: Chlorpicrin was used as poison gas in WW I. Exposure causes intense tearing of the eyes, headache, nausea and vomiting, diarrhea, and cough. Contact can severely irritate the skin, causing rash or burning sensation. Higher exposures can irritate and burn the lungs, causing a build-up of fluid (pulmonary edema), a medical emergency that can be delayed for several hours. This can cause death. The LD_{50} (oral, rat) = 37.5 mg/kg[14].

Long Term Exposure: Repeated exposure can damage the lungs, causing bronchitis. It may also damage the liver and kidneys. May cause tumors.

Points of Attack: Eyes, skin, respiratory system, liver, kidneys.

Medical Surveillance: Before beginning employment and at regular times after that, the following is recommended: Lung function test. If symptoms develop or overexposure has occurred, the following may be useful: Liver and kidney function tests. Consider chest x-ray following acute overexposure

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. The International Technical Information Institute recommends wearing Neoprene™ gloves. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > **0.5**$_{\mathbf{A}}$ ppm. Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values. NIOSH: *2 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOv (APF = 25) [any powered, air-purifying respirator with organic vapor cartridge(s)]; or CcrFOv (APF = 50) [any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s)]; or GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-, mounted organic vapor canister] or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance causes eye irritation or damage; eye protection needed.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with chloropicrin you should be trained on its proper handling and storage. Before entering confined space where chloropicrin may be present, check to make sure that an explosive concentration does not exist. Chloropicrin must be stored to avoid contact with strong oxidizers, such as chlorine or chlorine dioxide, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from heat. High temperatures or severe shock may cause an explosion, particularly with containers having capacities of greater than 30 gallons. Where possible, automatically pump liquid from drums or other storage containers to process containers. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: Chloropicrin must be labeled "poisonous materials." Hazard Class is 6.1. Technical name required.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean-up is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Initial isolation and protective action distances

Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (from a small package or a small leak from a large package)

Note: there is no specific information for "PS" Chloropicrin, used as a weapon in the current DOT tables.

First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
  Day 0.3/0.5
  Night 0.6/1.4

Large spills (from a large package or from many small packages)

First: isolate in all directions (feet/meters) 500/150
Then: Protect persons downwind (miles/kilometers)
  Day 1.2/1.9
  Night 2.1/3.3

Restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate the area of spill or leak.

Fire Extinguishing: Chloropicrin is a noncombustible liquid. However, in the case where a chloropicrin tank is adjacent to a fire, the tank will heat, causing extremely high pressurization and explosion. Evacuate area. Even if the tank doesn't fail, the safety valve may open, releasing chloropicrin, so evacuate. If necessary, fight fire from an explosion-resistant location. When heated, chloropicrin breaks down to poison gases such as phosgene (another good reason to evacuate), and at high temperature it can violently break down into several poisonous gases, including hydrogen chloride and nitrous vapors. The danger from a heated chloropicrin tank is too great to risk a manned fire fighting effort; if possible, an unattended fire monitor aimed at the upper part of the chloropicrin tank will cool the tank and may prevent tank failure. In general, it's best to use a spray or fog pattern rather than a solid stream, to avoid spreading the burning fuel around. If there is a reason that you have to extinguish a fire near a chloropicrin tank, use a fire fighting agent (water, ordinary foam, alcohol-resistant foam, or dry chemical) appropriate for that fuel. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration (816 °C, 0.5 second minimum for primary combustion; 1204 °C, 1.0 second for secondary combustion) after mixing with other fuel. The formation of elemental chlorine may be prevented by injection of steam or using methane as a fuel in the process. Chloropicrin reacts readily with alcoholic sodium sulfite solutions to produce methanetrisulfonic acid (which is relatively nonvolatile and less harmful). This reaction has been recommended for treating spills and cleaning equipment. Although not specifically suggested as a decontamination procedure, the rapid reaction of chloropicrin with ammonia to produce guanidine (LD_{50} = 500 mg/kg) could be used for detoxification. The Chemical Manufacturers' Association has suggested two procedures for disposal of chloropicrin: (a) Pour or sift over soda ash. Mix and wash slowly into large tank. Neutralize and pass to sewer with excess water. (b) Absorb on vermiculite. Mix and shovel into paper boxes. Drop into incinerator with afterburner and scrubber. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorothalonil C:1040

Use Type: Fungicide

CAS Number: 1897-45-6; 28343-61-5 (metabolite 4-hydroxy-2,5,6-trichloroisophthalonitrile)

Formula: $C_8Cl_4N_2$; $C_6Cl_4(CN)_2$

Synonyms: 1,3-Benzenedicarbonitrile,2,4,6,6-tetrachloro-; 1,3-Dicyanotetrachlorobenzene; Isophthalonitrile, tetrachloro; Metatetrachloro phthalodinitrile; NCI-C00102; 2,4,5,6-Tetrachloro-1,3-benzenedicarbonitrile; 2,4,5,6-Tetrachloro-1,3-dicyanobenzene; Tetrachloroisophthalonitrile; *meta*-Tetrachlorophthalodinitrile; Tetrachlorophthalodinitrile, *meta*-; Thalonil

Trade Names: ATLAS CROPGARD®; BANOL C®; BB CHLOROTHALONIL®; BOMmHgDIER®; BRAVO®; BRAVO® 6 F; BRAVO® 500; BRAVO® 6 F; BRAVO ULTREX®; BRAVO-W-75®; CHILTERN OLE®; CONTACT® 75; DAC® 2787; DACONIL®; DACONIL® 2787 FUNGICIDE; DACONIL® 2787 W; DACONIL® F; DACONIL® M; DACONIL® TURF; DACOSOIL®; DIVA FUNGICIDE®[C]; ECHO®; EXOTHERM®; EXOTHERM TERMIL®; FORTURF®; FUNGINIL®; IMPACT EXCEL®; JUPITAL®; NUOCIDE®; OLE®; PILLARICH®; POWER CHLOROTHALONIL® 50; REPULSE®; RIDOMIL GOLD/BRAVO®; SICLOR®; SIPCAM® UK ROVER 5000; SWEEP®; TER-MIL®; TPN®; TPN (PESTICIDE)®; TRIPART FABER®; TRIPART ULTRAFABER®; TUFFCIDE®

Chemical class: Substituted benzene; Chloronitrile

EPA/OPP PC Code: 081901

California DPR Chemical Code: 677

HSDB Number: 1546

UN/NA & ERG Number: UN3276/151

RTECS® Number: NT2600000

EC Number: 217-588-1 [*Annex I Index No.:* 608-014-00-4]

Uses: Chlorothalonil is a broad-spectrum fungicide. It is used on vegetables, peanuts, potatoes, small fruits, trees, turf, roses, ornamentals, and other crops. In California, the top crops are tomatoes, onions, celery, and landscaping. It targets fungal blights, needlecasts, and cankers on conifer trees. This is the second most used fungicide in the U.S. It can be found in formulations with many other pesticides

U.S. Maximum Allowable Residue Levels for Chlorothalonil and its metabolite 4-hydroxy-2,5,6-trichloroisophthalonitrile (CAS: 28343-61-5) (***40 CFR 180.275***): in or on the following food commodities: almond 0.05 ppm; almond, hulls 1.0 ppm; apricot 0.5 ppm; asparagus 0.1 ppm; banana (NMT 0.05 ppm in edible pulp) 0.5 ppm; bean (dry) 0.1 ppm; bean, snap, succulent 5 ppm; blueberry 1.0 ppm; broccoli 5 ppm; Brussels sprouts 5 ppm; cabbage 5 ppm; carrot, roots 1 ppm; cauliflower 5 ppm; celery 15 ppm; cherry, sweet 0.5 ppm; cherry, tart 0.5 ppm; cocoa bean, dried bean 0.05 ppm; coffee bean 0.20 ppm; corn, sweet, kernel plus cob with husks removed 1 ppm; cranberry 5.0 ppm; cucumber 5 ppm; mango 1.0 ppm; melon 5 ppm; mushroom 1.0 ppm; nectarine 0.5 ppm; onion, dry bulb 0.5 ppm; onion, green 5 ppm; papaya 15 ppm; parsnip, root 1 ppm; passionfruit 3 ppm; peach 0.5 ppm; peanut 0.3 ppm; pepper, nonbell (there are no registrations as of January, 2001) 5 ppm; pistachio 0.2 ppm; plum 0.2 ppm; plum, prune 0.2 ppm; potato 0.1 ppm; pumpkin 5 ppm; soybean 0.2 ppm; squash, summer 5 ppm; squash, winter 5 ppm; and tomato 5 ppm.

Human toxicity (long-term)[101]***:*** Intermediate–45.69190 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]***:*** High–4.41591 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group B2 Probable Human Carcinogen; EU GHS Category 2: Suspected human carcinogen

California Proposition 65 Chemical: Cancer (1/1/1989)

Health Advisory: Mutagen

Acute Oral Category: 2, WARNING

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Potential Inhalation Hazard

European/International Regulations: Hazard Symbol: T+, Xi, N; risk phrases: R26; R37; R40; R41; R43; R50/53; safety phrases: S1/2; S28; S36/37/39; S45; S60; S61

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

As a cyanide compound:

California Proposition 65 Chemical: Cancer (1/1/1989)

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: 40CFR423, appendix A, Priority Pollutants as cyanide, total

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B) *as cyanide mixtures*

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R26; R37; R40; R41; R43; R50/53; safety phrases: S1/2; S28; S36/37/39; S45; S60; S61 (see Appendix 1)

Description: Chlorothalonil is a combustible, white, odorless, crystalline solid. Commercial products may be formulated as water-dispersible granules, wettable powder, and/or dust. Molecular weight = 265.9; Specific gravity (H_2O:1) = 2.8; Boiling point = 350 °C; Freezing/Melting point = 260 °C; Vapor pressure = 5.7×10^{-7} mmHg @ 20 °C. Hazard Identification (Based on the NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Low solubility in water. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: Contact with strong oxidizers may cause a fire and explosion hazard. Slow hydrolysis at pH > 9.0. Thermal decomposition may include fumes of hydrogen cyanide.

Permissible Exposure Limits in Air:

IDLH level = 25 mg[CN]/m^3

NIOSH REL: Danger of sensitization of the skin; Carcinogen level 3B; *Nitriles*: 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.56 mg/m^3
PAC-2: 6.1 mg/m^3
PAC-3: 8.6 mg/m^3

DFG MAK: Danger of sensitization of the skin; Carcinogen level 3B

Determination in Air: NIOSH REL: (Nitriles) TWA 22 mg/m^3; NIOSH REL: (Nitriles) CL 4 mg/m^3/15minute. See also NIOSH Criteria Document 78-212 NITRILES[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 100 ppb[93]. Federal and State drinking water guidelines for cyanide/cyanide ion: Federal Drinking Water Guidelines: EPA 200 μg/L/cyanide ion; State Drinking Water Standards: California 150 μg/L; State Drinking Water Guidelines: Arizona 220 μg/L

Determination in Water: Analysis of chlorothalonil is by a gas chromatographic (GC) method applicable to the determination of certain chlorinated pesticides in water samples. In this method, approximately 1 liter of sample is extracted with methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using an electron capture detector. The method detection limit has not been determined for chlorothalonil, but it is estimated that the detection limits for analytes included in this method are in the range of 0.01 to 0.1 μg/L

Routes of Entry: Inhalation, dermal contact

Harmful Effects and Symptoms

Johnson et al. (1983) reported that chlorothalonil exposure resulted in contact dermatitis in 14 of 20 workers involved in woodenware preservation. The wood preservative used by the workers consisted mainly of "white spirit," with 0.5% chlorothalonil as a fungicide. Workers exhibited erythema and edema of the eyelids, especially the upper eyelids, and eruptions on the wrist and forearms. Results of patch test conducted with 0.1% chlorothalonil in acetone were positive in 7 of 14 subjects. Reactions ranged from a few erythematous papules to marked papular erythema with a brownish hue without infiltration. *Wilson et al. (1985)* gave chlorothalonil (98.1% pure with less than 0.03% hexachlorobenzene) to Fischer 344 rats (60/sex/dose) in their diet at dose levels of 0, 40, 80 or 175 mg/kg/day. Males were treated for 116 weeks, while females received the chemical for 129 weeks. Survival among the various groups was comparable. In both sexes, at the high dose level, there were significant decreases in body weights. In addition, there were also significant increases in blood urea nitrogen and creatinine, while there were decreases in serum glucose and albumin levels. In both sexes, there were dose-dependent increases in kidney carcinomas and adenomas at doses above 40 mg/kg/day. In the high-dose females, there was also a significant increase in stomach papillomas. The data show that, in the Fischer 344 rat, chlorothalonil is a carcinogen. The (oral, rat) = 10 g/kg (insignificantly toxic)

Short Term Exposure: Irritates the eyes, skin, respiratory tract. Inhalation can cause coughing, phlegm, and/or tightness in the chest. LD_{50} (oral, rat, male) = 422 mg/kg; LD_{50} (dermal, rat) = >10 g/kg[14].

Long Term Exposure: May cause cancer. Repeated or prolonged contact with skin may cause nose bleeding, skin sensitization and dermatitis with skin rash. May affect the kidneys and gastrointestinal tract. This chemical causes cancer of the kidneys in animals. May cause tumors; reproductive and fetal effects; neurotoxic.

Points of Attack: Skin, lungs and kidneys. Reproductive cells. Central nervous system.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Complete blood count. Lung function tests. Kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and

long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: SCBA > $0.56\,mg/m^3$. *Nitriles*: NIOSH, *10 ppm:* Sa (APF = 10) (any supplied-air respirator); *25 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); *50 ppm:* SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece); *250 ppm:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode. *Escape*: GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with chlorothalonil you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs; and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Nitriles, liquid, toxic, and Pesticides, solid, toxic, n. o. s. require a shipping label of "poisonous materials." They usually fall in Hazard Class 6.1. Technical name required.

Spill Handling: Issue a poison warning.

First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.1/0.2
Night 0.1/0.2

Large spills (from a large package or from many small packages)

First: isolate in all directions (feet/meters) 200/60
Then: Protect persons downwind (miles/kilometers)
Day 0.3/0.5
Night 0.5/0.8

Remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Dampen spilled material with acetone to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 1380[83].

Fire Extinguishing: Potential Inhalation Hazard: Hazardous decomposition includes hydrogen cyanide, hydrogen chloride and oxides of nitrogen and carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration in a unit operating @ 850 °C equipped with off-gas scrubbing equipment. An empty pesticide container can be as hazardous as a full one because of residues left inside.

Never reuse such a container. When empty, a pesticide container should be rinsed carefully three times and the rinsewater thoroughly drained back onto the sprayer or the container previously used to mix the pesticide. Use the rinsewater as a pesticide, following label directions. Replace the cap or closure securely. Dispose of the container according to label instructions. Do not puncture or burn a pressurized container like an aerosol – it could explode. Do cut or puncture other empty pesticide containers made of metal or plastic to prevent someone from reusing them. Wrap the empty container and put it in the trash after you have rinsed it[83].

Chloroxylenol C:1064

Use Type: Microbiocide

CAS Number: 88-04-0

Formula: C_8H_9ClO

Synonyms: Benzytol; 4-Chloro-3,5-dimethylphenol; 4-Chloro-3,5-xylenol; Chloro-*m*-xylenol; 3,5-Dimethyl-4-chlorophenol; Parachlorometaxylenol; *p*-Chloro-*m*-xylenol

Trade Names: BAR-FUNGAL PLUS®[C]; BIO SLIME®[C]; DESSON®; DETTOL®; ECOTRU®; ESPADOL®; HUSEPT®; HUSEPT EXTRA®; NIPACIDE®; OTTASEPT®[C]; OTTASEPT® EXTRA[C]; PCMX; RBA 777®

Chemical class: Chlorinated phenol

EPA/OPP PC Code: 086801

California DPR Chemical Code: 925

HSDB Number: 7427

UN/NA & ERG Number: UN2020 (chlorophenols, solid)/153; UN2021 (chlorophenols, liquid)/153

RTECS® Number: ZE685000

EC Number: 201-793-8 [*Annex I Index No.:* 604-038-00-4]

Uses: Chloroxylenol was first registered in the U.S. for use as a fungicide and is now applied as an antimicrobial for control of bacteria, algae and fungi in adhesives, emulsions, paints and wash tanks. It is registered for use in household and domestic dwellings, laundry equipment, bathrooms, diaper pails and in industrial water and aqueous systems. Not listed for use in EU countries[115]. Registered for use in the U.S. There are 64 global suppliers[97].

Regulatory Authority and Advisory Information:

EPCRA Section 313 (as chlorophenols) Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S61 (see Appendix 1)

Description: A white to beige crystalline powder. Phenolic odor. Molecular weight = 156.61; Specific gravity (H_2O:1) = 0.89 @ 20 °C; Boiling point = 246 °C; Freezing/Melting point = 116 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Slightly soluble in water.

Incompatibilities: Reacts with boranes, alkalies, aliphatic amines, amides, nitric acid, sulfuric acid. Keep away from oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc). Flammable hydrogen gas may be generated, and the heat from reaction may ignite the gas. May generate heat on contact with bases, acid chlorides or acid anhydrides. Heating may initiate dangerous polymerization.

Permissible Concentration in Water: No criteria set for this chemical; however, EPA recommends that drinking water contain not > 0.04 mg/L of 2-chlorophenol for a lifetime exposure for an adult, and 0.05 mg/L for a 1-day, 10-day, or longer exposure for a child.

Determination in Water: Log K_{ow} = 2.8–3.3. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, absorbed by skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Inhalation can cause severe irritation, burns to the nose and throat, headache, dizziness, vomiting, lung damage, muscle twitching, spasms, tremors, weakness, staggering and collapse. Dermal contact can cause severe irritation and burns. May be absorbed through the skin to cause or increase the severity of symptoms listed above. Eye contact may cause severe irritation. May cause burns. Ingestion may cause irritation, burns to the mouth and throat, low blood pressure, profuse sweating, intense thirst, nausea, abdominal pain, stupor, vomiting, red blood cell damage and accumulation of fluid in the lungs followed by pneumonia. May also cause restlessness and increased breathing rate followed by rapidly developing muscle weakness. Tremors, convulsions and coma can promptly set in and will continue until death. LD_{50} (oral, rat) = >3500 mg/kg. Low toxicity.

Long Term Exposure: Skin sensitivity may develop. May have effects on the blood, heart, liver, lung, kidney. The state of New Jersey lists at least one chlorophenol as a probable carcinogen in humans; may cause leukemia and soft tissue cancers in humans. The substance may cause effects on the central nervous system and bladder. Chlorophenols leave the body quickly, so they are not likely to accumulate in the mother's tissues or breast milk. There are no human studies on the effects of chlorophenols on developing fetuses. Studies in rats showed that chlorophenols can pass through the placenta and produce toxic effects on the developing fetuses. The most common problems in children are delayed hardening of the bones of the breastbone, spine, and skull.

Points of Attack: Eyes, skin (sensitizer), respiratory system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver function tests. Kidney function tests. Examination by a qualified allergist. EKG.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Chlorophenols, liquid or solid, require a shipping label of "poisonous materials" and fall in Hazard Class 6.1.

Spill Handling: Dampen the spilled material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not re-enter the contaminated area until an expert verifies that the area has been properly cleaned.

Fire Extinguishing: *On a small fire:* use dry chemical powder, carbon dioxide or water spray. *On a large fire:* use dry chemical, carbon dioxide, water spray, fog or alcohol - resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorpropham C:1068

Use Type: Herbicide, Plant growth regulator

CAS Number: 101-21-3

Formula: $C_{10}H_{12}ClNO_2$

Synonyms: Carbamic acid, (3-chlorophenyl)-, 1-methylethyl ester; Chlor-IFC; Chlor-IPC; *m*-Chlorocarbanilic acid, isopropyl ester; 3-Chlorocarbanilic acid, isopropyl ester; Chloro IPC; *N*-3-Chlorophenylisopropylcarbamate;

N-(3-Chlorophenyl)carbamic acid, isopropyl ester; (3-Chlorophenyl)carbamic acid, 1-methylethyl ester; Chloropropham; CICP; CI-IPC; CIPC; ENT 18,060; Isopropyl-*m*-chlorocarbanilate; Isopropyl-3-chlorophenylcarbamate; Isopropyl-*N*-(3-chlorophenyl) carbamate

Trade Names: ATLAS® CIPC 40; BEET-KLEEN® (with Fenuron® and isopropyl carbanilate); BUD-NIP®; CAMPBELL'S® CIPC 40%; CHLORO IPC®; ELBANIL®; FASCO® WY-HOE; FURLOE®; FURLOE® 4EC; JACK WILSON® CHLORO 51 (OIL); LIRO METOXON®; MIRVALE®; MORCRAN® (with *n*-1-naphthylphthalamic acid); MSS® CICP; NEXOVAL®; PREVENOL® 56; PREVENTOL®; PREVENTOL® 56; PREWEED®; RESIDUREN®; RESIDUREN® EXTRA; SPROUT NIP®; SPROUT-NIP® EC; SPUD-NIC®; SPUD-NIE®; STOPGERME®-S; TATERPEX®; TRIPEC® (with carbamic acid, phenyl-, 1-methylethyl ester); TRIHERBICIDE® CIPC; UNICROP® CIPC; WAREFOG®; Y3®

Chemical class: Carbamate

EPA/OPP PC Code: 018301

California DPR Chemical Code: 141

HSDB Number: 981

UN/NA & ERG Number: UN2757 (solid)/151; UN2992/151 (liquid)

RTECS® Number: FD8050000

EC Number: 202-925-7 [*Annex I Index No.:* 006-096-00-0]

Uses: Chlorpropham is a plant growth regulator that is used primarily in the U.S. to inhibit post-harvest potato sprouting. Other uses include pre-emergence control of grass weeds in alfalfa, beans, blueberries, cane berries, carrots, cranberries, ladino clover, garlic, seed grass, onions, spinach, sugar beets, tomatoes, safflower, soybeans, gladioli and woody nursery stock. It is used to control suckers in tobacco

Human toxicity (long-term)[101]: Very low–350.00 ppb, Health Advisory.

U.S. Maximum Allowable Residue Levels for Chlorpropham (40 CFR 180.275): Tolerances are established for residues of the plant regulator and herbicide CIPC (isopropyl m-chlorocarbanilate) and its metabolite 1-hydroxy-2-propyl 3'-chlorocarbanilate (calculated as CIPC) in or on the following raw agricultural commodities: potato, post-harvest 50 ppm.

Fish toxicity (threshold)[101]: Low–424.62703 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
Carcinogenicity: EPA Group E, evidence of non-carcinogenicity for humans; EU GHS Category 2: Suspected human carcinogen; IARC, Group 3 not classifiable as to its carcinogenicity in humans
Acute Oral Category: 4, Caution
Health Advisory: Nerve Toxin (S!)
AB 1803 Well monitoring chemical (CAL)
DHS drinking water action levels (CAL)
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R40; R48/22; safety phrases: S2; S36/37; S61 (see Appendix 1)

Description: Chlorpropham is a light-tan or crystalline solid or powder. Commercial liquid formulations can be supplied as liquids and as emulsifiable concentrates. Molecular weight 213.66; Specific gravity (H_2O:1) = 1.18 @ 30 °C; Boiling point = 149 °C @ 2 mmHg; Freezing/Melting point = 41–42 °C; Vapor pressure = 1.8 × 10^{-4} mmHg @ 20 °C; 2 mmHg @ 149 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Moderate solubility in water. Solubility 89 mg/L @ 25 °C.

Incompatibilities: Decomposes above 150 °C. Carbamates are incompatible with strong oxidizing acids, peroxides, and hydroperoxides; strong reducing agents such as hydrides; strong acids and bases. Contact with nitrides or chemically active metals (aluminum, copper, magnesium, neptunium, sodium, tin, titanium, zinc, etc.) causes the release of potentially explosive hydrogen gas and a metal salt.

Permissible Exposure Limits in Air: No standards set.

Determination in Water: Log K_{ow} = 3.5–3.9. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Skin absorption, ingestion, inhalation

References:

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. LD_{50} (oral, rat) = 1200 mg/kg.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver, kidney, spleen, bone marrow damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. In animals, kidney, spleen, liver, and bone marrow toxicity[103].

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Also consider complete blood count and chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.).

Shipping: The solid toxic carbamate should be labeled "poisonous materials." It falls into Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. For liquids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition products include oxides of nitrogen and carbon and hydrogen chloride gas. *On a small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On a large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chemical class: Organophosphate

EPA/OPP PC Code: 059101

California DPR Chemical Code: 253

HSDB Number: 389

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152; UN2784 (flammable liquid

RTECS® Number: TF6300000

EC Number: 220-864-4 [*Annex I Index No.:* 015-084-00-4]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Chlorpyrifos is one of the most widely used insecticides in the U.S., both around the home and in agriculture. A broad-spectrum insecticide, originally used primarily to kill mosquitoes but no longer registered for that use. Chlorpyrifos is effective in controlling cutworms, corn rootworms, cockroaches, grubs, flea beetles, flies, termites, fire ants, and lice. It is used as an insecticide on grain, cotton, field, fruit, nut and vegetable crops, as well as on lawns and ornamental plants. It is also registered for direct use on sheep and turkeys, for horse site treatment, dog kennels, domestic dwellings, farm buildings, storage bins, and commercial establishments. Chlorpyrifos acts on pests primarily as a contact poison, with some action as a stomach poison. It is available as granules, wettable powder, dustable powder and emulsifiable concentrate. Top crop uses in California include cotton, alfalfa, almonds, and oranges.

U.S. Maximum Allowable Residue Levels for Chlorpyrifos [40 CFR 180.342(a)(1)]: almond 0.2 ppm; almond, hulls 12.0 ppm; apple 1.5 ppm; bean, lima 0.05 ppm; bean, snap, succulent 0.05 ppm; beet, sugar, molasses 15.0 ppm; beet, sugar, dried pulp 5.0 ppm; beet, sugar, roots 1.0 ppm; beet, sugar, tops 8.0 ppm; blueberry 2 ppm (of which not > 1 ppm is chlorpyrifos); citrus, dried pulp 5.0 ppm; citrus, oil 25.0 ppm; corn, field, refined oil 3.0 ppm; corn, sweet, kernel plus cob with husks removed 0.1 ppm; cranberry 1.0 ppm; fruit, citrus 1.0 ppm; kiwifruit 2.0 ppm; nut, tree, group 14, 0.2 ppm; onion, dry buld 0.5 ppm; pepper 1.0 ppm; sorghum, forage 1.5 ppm; sorghum, grain, grain 0.75 ppm; sorghum, grain, stover 6.0 ppm; sunflower, seed 0.25 ppm; tomato 0.5 ppm; vegetable, brassica, leafy, group 5, 2.0 ppm; (of which not > 1.0 ppm; ppm is chlorpyrifos walnut 0.2. ***[40CFR 180.342(a)(2)]:*** alfalfa, forage 3 ppm; alfalfa, hay 13 ppm; banana 0.1 ppm; banana, pulp 0.01 ppm; broccoli 1 ppm; Brussels sprouts 1 ppm; cabbage 1 ppm; cabbage, chinese 1 ppm; cattle, fat 0.3 ppm; cattle, meat and meat byproducts 0.05 ppm; cauliflower 1 ppm; cherry 1 ppm; corn, field, grain 0.05 ppm; corn, forage and fodder 8 ppm; cotton, undelinted seed 0.2 ppm; cucumber 0.05 ppm; egg 0.01 ppm; Fig 0.01 ppm; goat, fat 0.2 ppm; goat, meat and meat byproducts 0.05 ppm; hog, fat 0.2 ppm; hog, meat and meat byproducts 0.05 ppm; horse, meat, fat, and meat byproducts 0.25 ppm; legume vegetables, succulent or dried (except soybean) 0.05 ppm; milk, fat 0.25 ppm; milk, whole 0.01 ppm; milling fractions (except flour) of wheat 1.5 ppm; mint, hay 0.8 ppm; mint oil 8 ppm; nectarine 0.05 ppm; peach 0.05 ppm; peanut oil 0.4 peanut 0.2 ppm; pear 0.05 ppm; plum 0.05 ppm; poultry, meat, fat, and meat byproducts (including turkeys) 0.1 ppm; pumpkin 0.05 ppm; radish 2 ppm; rutabagas 0.5 ppm; sheep, fat 0.2 ppm; sheep, meat and meat byproducts 0.05 ppm; soybean, forage 0.7 soybean, seed 0.3 ppm; strawberry 0.2 ppm; sweet potato, roots 0.05 ppm; turnip, greens 0.3 ppm; turnip 1 ppm; wheat, grain 0.5 ppm;

wheat, straw 6 wheat, forage 3 ppm. ***[40CFR 180.342(a)(3)]*** chlorpyrifos may be safely used in accordance with the following prescribed conditions. (i) Application shall be limited solely to spot and/or crack and crevice treatment in food handling establishments where food and food products are held, processed, prepared or served. Contamination of food or food contact surfaces shall be avoided. Food must be removed or covered during treatment. (ii) Spray concentration for spot treatment shall be limited to a maximum of 0.5 percent of the active ingredient by weight. A coarse, low-pressure spray shall be used to avoid atomization or splashing of the spray. (iii) Paint-on application for spot treatment shall be limited to a maximum of 2 percent of the active ingredient by weight. (iv) Crack and crevice treatment shall be limited to a maximum of 2 percent of the active ingredient by weight. Equipment capable of delivering a pin-stream of insecticide shall be used. (v) Application via adhesive strips shall contain a maximum of 10% by weight of the controlled-release product in food-handling establishments where food and food products are held, processed, prepared, or served. A maximum of 36 strips (or 5.15 grams of chlorpyrifos) is to be used per 100 square feet of floor space. the strips are not to be placed in exposed areas where direct contact with food, utensils, and food-contact surfaces would be likely to occur. (vi) To ensure safe use of the insecticide, its label and labeling shall conform to that registered by the U.S. Environmental Protection Agency, and it shall be used in accordance with such label and labeling. ***[40CFR 180.342(a)(4)]:*** A tolerance of 0.1 ppm is established for residues of chlorpyrifos *per se*, in or on food commodities (other than those already covered by a higher tolerance as a result of use on growing crops) in food service establishments where food and food products are prepared and served, as a result of the application of chlorpyrifos in microencapsulated form. (i) Application of a microencapsulated product shall be limited solely to spot and/or crack and crevice treatment in food handling establishments where food and food products are prepared and served. All treatments shall be applied in such a manner as to avoid contamination of food or food contact surfaces. (ii) Spray concentrations shall be limited to a maximum of 0.5 percent of the active ingredient by weight. (iii) For crack and crevice treatment, equipment capable of delivering a pin stream of spray directly into cracks and crevices or capable of applying small amounts of insecticide into cracks and crevices shall be used. (iv) For spot treatment, an individual spot shall not exceed 2 square feet. (v) To ensure safe use of the insecticide, its label and labeling shall conform to that registered by the U.S. Environmental Protection Agency, and it shall be used in accordance with such label and labeling.

Human toxicity (long-term)[101]: Intermediate–20.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.36660 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity: U.S. EPA Group E, evidence of non-carcinogenicity for humans.Acute Oral Category: 2, WARNING

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Reportable Quantity (RQ): 1 lb (0.454 kg)

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B), severe pollutant

US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates. European/International Regulations: Hazard Symbol: T, N; risk phrases: R24/25; R50/53; safety phrases: S1/2; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Chlorpyrifos is a colorless crystalline compound (liquid @ 43 °C). Commercial formulations may be combined with combustible liquids. It has a mild mercaptan odor (like sulfur); the odor is also described as like natural gas. Molecular weight = 350.59; Specific gravity (H_2O:1) = 1.40 (liquid @ 43 °C); Boiling point = (decomposes) 160 °C; Freezing/Melting point = 42.2 °C; Vapor pressure = 0.00003 mmHg @ 25 °C. Practically insoluble in water. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: Above 130 °C this chemical may undergo violent exothermic decomposition. The substance decomposes on heating at approximately 160 °C and on burning, producing toxic and corrosive fumes including hydrogen chloride, nitrogen oxides, phosphorus oxides, sulfur oxides. Reacts with strong acids, strong bases, causing hydrolysis. Attacks copper and brass.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 0.2 mg/m^3 TWA; 0.6 mg/m^3 STEL

ACGIH TLV®[1]: 0.1 mg/m^3 TWA inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI issued. (2000)

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.6 mg/m^3
PAC-2: 11 mg/m^3
PAC-3: 8.8 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 10 ppb[14].

Determination in Water: EAD Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L.

Routes of Entry: Skin absorption, inhalation of dust, ingestion.

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: May cause eye and skin irritation. Acetylcholinesterase inhibitor. Exposure at high levels may result in death. The effects may be delayed. Chlorpyrifos can affect you when breathed in and quickly enters the body by passing through the skin. Severe poisoning can occur from dermal contact. It is a moderately toxic organophosphate chemical. Exposure can cause rapid severe poisoning with headache, sweating, nausea and vomiting, diarrhea, loss of coordination, and death. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 95–270 mg/kg[83,USDA]; LD_{50} (dermal, rat) = >2 g/kg[83].

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A neurotoxin; chlorpyrifos may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Some studies, findings support the hypothesis that organophosphates, including chlorpyrifos and its metabolites, may contribute to ADHD and learning disabilities in children.

Points of Attack: Respiratory system, central nervous system, peripheral nervous system, plasma cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: *Clothing:* Avoid dermal contact with chlorpyrifos. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. *Eye Protection:* Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles and face shield when working with powders or dust, unless full facepiece respiratory protection is worn.

Respirator Selection: SCBA >0.6 mg/m^3. Where there is potential exists for exposures over *0.2 mg/m*^{3}, use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator with a pesticide cartridge. Greater protection is provided by a powered air-purifying respirator. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with chlorpyrifos you should be trained on its proper handling and storage. Chlorpyrifos must be stored to avoid contact with strong bases, or acids, or acid fumes, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from sources of heat.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. Absorb liquid containing chlorpyrifos in vermiculite, dry sand, earth, or similar material. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 6070.

Fire Extinguishing: Poisonous and corrosive gases are produced in fire including hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. This chemical may burn, but does not readily ignite. Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Heat above 130 °C may cause violent exothermic reaction. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: This compound is 50% hydrolyzed in aqueous methanol solution @ pH 6 in 1930 days, and in 7.2 days at pH 9.96. Spray mixtures of <1% concentration are destroyed with an excess of 5.25% sodium hypochlorite in <30 minutes @ 100 °C, and in 24 hours @ 30 °C. Concentrated (61.5%) mixtures are essentially destroyed by treatment with 100:1 volumes of the above sodium hypochlorite solution and steam in 10 minutes. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorpyrifos-methyl C:1073

Use Type: Insecticide
CAS Number: 5598-13-0
Formula: $C_7H_7Cl_3NO_3PS$
Synonyms: Clorpirifos metil (Spanish); Chlormethylfos; *O,O*-Dimethyl O-(3,5,6-trichloro-2-pyridyl)phosophorothioate; Dursban methyl; ENT 27,520; Methyl chlorpyrifos; Methyl dursban; NSC-60380; OMS 1155; Phosphorothioic acid, *O,O*-dimethyl O-(3,5,6-trichloro-2-pyridyl)ester; Trichlormethylfos
Trade Names: DOWCO-217®; NOLTRAN®; RELDAN®; RELDANE®, STORCIDE®; ZERTELL®
Chemical class: Organophosphate
EPA/OPP PC Code: 059102
California DPR Chemical Code: 2468
HSDB Number: 6981
UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152; UN3077 (solid)/171
RTECS® Number: TG0700000
EC Number: 227-011-5 [*Annex I Index No.:* 015-186-00-9]
Uses: Chlorpyrifos-methyl is used on stored grain (for protection of stored food, feed oil, and seed grains against injury from stored grain weevils, moths, borers, beetles and mealworms including granary weevil, rice weevil, red flour beetle, confused flour beetle, saw-toothed grain beetle, Indian meal moth, and Angoumois grain moth, lessor grain borers), seed treatment, grain bin and warehouse.[14] In 2000, the registrants of chlorpyrifos-methyl requested voluntary cancellation of their products rather than committing to develop additional data for reregistration
Human toxicity (long-term)[101]: Low–70.00 ppb, Health Advisory.
U.S. Maximum Allowable Residue Levels for Chlorpyrifos-methy (40 CFR 180.275): barley, grain 6.0 ppm; cattle, fat 0.5 ppm; cattle, meat 0.5 ppm; cattle, meat byproducts 0.5 ppm; eggs 0.1 ppm; goats, fat 0.5 ppm; goats, meat 0.5 ppm; goats, meat byproducts 0.5 ppm; hogs, fat 0.5 ppm; hogs, meat 0.5 ppm; hogs, meat products 0.5 ppm; horses, fat 0.5 ppm; horses, meat 0.5 ppm; horses, meat products 0.5 ppm; milk, fat (0.05 ppm (N) in whole milk) 1.25 ppm; oats, grain 6.0 ppm; poultry, fat 0.5 ppm; poultry, meat 0.5 ppm; poultry, meat byproducts 0.5 ppm; rice, grain 6.0 ppm; sheep, fat 0.5 ppm; sheep, meat 0.5 ppm; sheep, meat byproducts 0.5 ppm; sorghum, grain 6.0 ppm; wheat, grain 6.0 ppm; stored grains, including barley milling fractions (except flour) 90 ppm; oats milling fractions (except flour) 130 ppm; rice milling fractions (except flour) 30 ppm; sorghum milling fractions (except flour) 90 ppm; and wheat milling fractions (except flour) 30 ppm.
Fish toxicity (threshold)[101]: High–1.02425 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
NIOSH Category: Nerve Toxin, Skin irritant/sensitizer
Acute Oral Category: 3, CAUTION
U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R43; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters *as Chlorpyrifos*
Description: White or amber chrystalline solid. May be dissolved in a flammable or combustible carrier solvent. Molecular weight = 327.5; Specific gravity (H_2O:1) = 1.64; Freezing/Melting point = 46 °C; Vapor pressure = 4.2×10^{-5} mmHg @ 25 °C; Specific gravity (H_2O:1) = 1.39 @ 50 °C. Low solubility in water; solubility = 5 mg/L. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.
Incompatibilities: Strong oxidizers, strong acids and alkalies. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Corrosive to copper, brass, iron, and tin plate[88].
Permissible Exposure Limits in Air: No standards established.
Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides[18].
Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 1500–18508 mg/kg; LD_{50} (dermal, rat) = >3500 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver, cardiovascular and blood damage. Skin sensitizer. Some studies' findings support the hypothesis that organophosphates, including chlorpyrifos and its metabolites, may contribute to ADHD and learning disabilities in children.

Points of Attack: Skin. Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: *Clothing:* Avoid dermal contact with chlorpyrifos. Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. *Eye Protection:* Wear splash-proof chemical goggles and face shield when working with liquid, unless full facepiece respiratory protection is worn. Wear dust-proof goggles and face shield when working with powders or dust, unless full facepiece respiratory protection is worn.

Respirator Selection: Where potential exists for exposures over *0.2 mg/m*^{3}, use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator with a pesticide cartridge. Greater protection is provided by a powered air-purifying respirator. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with chlorpyrifos you should be trained on its proper handling and storage. Chlorpyrifos must be stored to avoid contact with strong bases, or acids, or acid fumes, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from sources of heat.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. Absorb liquid containing chlorpyrifos in vermiculite, dry sand, earth, or similar material. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 6070.

Fire Extinguishing: Poisonous and corrosive gases are produced in fire including hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. This chemical may burn, but does not readily ignite. Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Heat above 130 °C may cause violent exothermic reaction. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: This compound is 50% hydrolyzed in aqueous methanol solution @ pH 6 in 1930 days, and in 7.2 days at pH 9.96. Spray mixtures of <1% concentration are destroyed with an excess of 5.25% sodium hypochlorite in <30 minutes @ 100 °C, and in 24 hours @ 30 °C. Concentrated (61.5%) mixtures are essentially destroyed by treatment with 100:1 volumes of the above sodium hypochlorite solution and steam in 10 minutes. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chlorsulfuron C:1077

Use Type: Herbicide
CAS Number: 64902-72-3
Formula: $C_{12}H_{12}ClN_5O_4S$
Synonyms: 2-Chloro-*N*-[((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl]benzenesulfonamide; 2-Chloro-*N*-[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)aminocarbonyl]-benzenesulfonamide; 1-[(O-Chlorophenyl) sulfonyl)-3-(4-methoxy-6-methyl-*S*-triazin-2-yl)urea; Benzenesulfonamide, 2-chloro-*N*-[((4-methoxy-6-methyl-1,3, 5-triazin-2-yl)amino)carbonyl]-; Urea, 1-[(ochlorophenyl)sulfonyl]-3-(4-methoxy-6-methyl-*S*-triazin-2-yl)-
Trade Names: DPX 4189®; FINESSE®; GLEAN®; GLEAN 20DF®; LANDMARK® MP; LASHER®; RIVERDALE CORSAIR®; TELAR® DF
Chemical class: Sulfonylurea
EPA/OPP PC Code: 118601
California DPR Chemical Code: 2143
HSDB Number: 6847
UN/NA & ERG Number: UN3077 (solid)/171
RTECS® Number: YS6640000
EC Number: 265-268-5 [*Annex I Index No.:* 613-121-00-4]
Uses: A selective systemic herbicide used to control most broadleaf weeds and some annual grasses in wheat, barley, oats, duram, rye, triticale and flax. Applied to non-crop sites such as rights-of-way, fence rows and roadsides.
U.S. Maximum Allowable Residue Levels for Chlorsulfuron and its metabolite, 2-chloro-5-hydroxy-N-[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)aminocarbonyl]benzenesulfonamide [40 CFR 180.405(a)(1)]: in or on the following raw agricultural commodities: barley, grain 0.1 ppm; barley, straw 0.5 ppm; oat, forage 20.0 ppm; oat, grain 0.1 ppm; oat, straw 0.5 ppm; wheat, forage 20 ppm; wheat, grain 0.1 ppm; and wheat, straw 0.5 ppm. ***[40 CFR 180.405(a)(2)]:*** Tolerances are established for residues of chlorsulfuron in or on the following raw agricultural commodities: cattle, fat 0.3 ppm; cattle, meat 0.3 ppm; cattle, meat byproducts 0.3 ppm; goat, fat 0.3 ppm; goat, meat 0.3 ppm; goat, meat byproducts 0.3 ppm; grass, forage 11.0 ppm; grass, hay 19.0 ppm; hog, fat 0.3 ppm; hot, meat 0.3 ppm; hog, meat byproducts 0.3 ppm; horse, fat 0.3 ppm; horse, meat 0.3 ppm; horse, meat byproducts 0.3 ppm; milk 0.1 ppm; sheep, fat 0.3 ppm; sheep, meat 0.3 ppm; and sheep, meat byproducts 0.3 ppm.
Human toxicity (long-term)[101]: Very low–350.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Very low–45107.62902 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity: EPA Group E, evidence of non-carcinogenicity for humans.
California Proposition 65 Chemical: Developmental, female, (5/14/1999); "male" delisted 2013
Health Advisory: Developmental toxin.
Acute Oral Category: 4, Caution
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S60; S61 (see Appendix 1)
Description: Colorless, odorless crystals. Molecular weight = 357.79; Freezing/Melting point = 176 °C; decomposes @ 192 °C; Vapor pressure = 4.6×10^{-6} mmHg @ 20 °C. Soluble in water; solubility = 113 mg/L @ 25 °C.
Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. When heated to decomposition, emits oxides of sulfur and nitrogen and chlorine fumes.
Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 3.9 mg/m^3
PAC-2: 43 mg/m^3
PAC-3: 260 mg/m^3
Routes of Entry: Inhalation, dermal contact, ingestion
Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].
Short Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >5000 mg/kg; LD_{50} (dermal, rabbit) = >3000 mg/kg.
Long Term Exposure: May cause developmental problems.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications.

They should include lab and patch tests when necessary[83]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Urinary levels of the sulfonylurea herbicides reflect recent exposure. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl, halosulfuron, primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96].

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms:

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation of dust should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. May be harmful if swallowed. Dermal contact may cause allergic reaction. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rabbit) = >3 g/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. Hazardous decomposition includes sulfur oxides. Prevent water from entering containers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties and of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Cholecalciferol C:1086

Use Type: Rodenticide
CAS Number: 67-97-0
Formula: $C_{27}H_{44}O$
Synonyms: Colecalciferol; 7-Dehydrochloesterol; Oleovitamin D3; 9,10-Secocholesta-5,7,10(19)-trien-3-β-ol; 9,10-Secocholesta-5,7,10(19)-trien-3-ol, (3. β,5Z,7E)-; Vitamin D_3
Trade Names: DELSTEROL®; DEPARAL®; D3-VIGANTOL®; QUINTOX®; RAMPAGE®; RICKETON®; TRIVITAN®; VIGORSAN®; VITINC DAN-DEE-3®
Chemical class: Sterol
EPA/OPP PC Code: 202901; (208700 former EPA code)
California DPR Chemical Code: 2232
HSDB Number: 820
UN/NA & ERG Number: UN2811/154
RTECS® Number: VS2900000
EC Number: 200-673-2 [*Annex I Index No.:* 604-140-00-4]
Uses: Used in bait for vermin control. Vitamin D is a steroid hormone that has an important role in regulating body levels of calcium and phosphorus, and in mineralization of bone. Not approved for use in EU countries[115]. Registered for use in the U.S. and other countries.
Regulatory Authority and Advisory Information:
European/International Regulations: Hazard Symbol: T+; risk phrases: R24/25; R26; R48/25; safety phrases: S1/2; S28; S36/37; S45 (see Appendix 1)
WGK (German Aquatic Hazard Class): 2-Hazard to waters
Description: White or colorless crystalline solid. Odorless; Molecular weight = 384.62; Specific gravity (H_2O:1) = 0.963; Freezing/Melting point = 84–85 °C; 87 °C; Vapor pressure = 2.4×10^{-9} mmHg @ 25 °C (est.)[83]; Henry's Law constant = 2.3×10^{-4} atm-cu m/mole @ 25 °C(est.)[83]. Practically insoluble in water.
Incompatibilities: Keep away from strong oxidizers; moisture, light, air.
Permissible Exposure Limits in Air: No standards established.
Determination in Air: Liquid chromatography with ultraviolet detection.
Permissible Concentration in Water:
Determination in Water: Log K_{ow} = 10.2 (est.)[83]. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, ingestion, dermal contact.
Harmful Effects and Symptoms
Short Term Exposure: Massive doses are highly toxic to humans; may cause irritability, weakness, fatigue, sleepiness, headache, dry mouth, nausea, abdominal cramps, vomiting, constipation, diarrhea. LD_{50} (oral, rat) = 1426 mg/kg.
Long Term Exposure: May cause hypertension, kidney effects, anorexia, tinnitus.
Medical Surveillance: Tests for urinary calcium, phosphate, and albumin; Blood urea nitrogen (BUN) levels; serum cholesterol. There may be a decrease in serum alkaline phosphatase concentrations[83].
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.
Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Shipping: Toxic solids, organic n.o.s. require a "poisonous materials" label. It usually falls in Hazard Class 6.1 and Packing Group II or III.
Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.
Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition

sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Cinnamaldehyde C:1258

Use Type: Fungicide, Insecticide

CAS Number: 104-55-2; 14371-10-9 (*trans*-isomer)

Formula: C_9H_8O

Synonyms: Benzylideneacetaldehyde; Cassia aldehyde; Cinnamal; Cinnamyl aldehyde; Cinnimic aldehyde; NCI-C56111; Phenylacrolein; β-Phenylacrolein; 3-Phenylacrolein; 3-Phenylpropenal; 3-Phenyl-2-propenal; Mixture of cinnamaldehyde, cinnamyl alcohol, 4-methoxycinnamaldehyde, 3-phenyl-1-propanol, 4-methoxyphenethyl alcohol, indole, and 1,2,4-trimethoxybenzene. trans-isomer: (*E*)-Cinnamaldehyde; *trans*-Cinnamaldehyde; *trans*-Cinnamic aldehyde; *trans*-Cinnamylaldehyde; (*E*)-3-Phenylpropenal; (*E*)-3-Phenyl-2-propenal; 2-Propenal, 3-phenyl-, (*E*)-

Trade Names: ADIOS®; ZIMTALDEHYDE®; ZIMTALDEHYDE® LIGHT

Chemical class: Botanical

EPA/OPP PC Code: 040506; 040516 (*trans*-isomer)

California DPR Chemical Code: 2277

HSDB Number: 209 (CAS: 104-55-2)

UN/NA & ERG Number: UN8027/

RTECS® Number: GD6475000; GD6476000 (*trans*-isomer)

EC Number: 203-213-9

Uses: Used as an antifungal agent, corn rootworm attractant, and dog and cat repellent. Can be used on soil casing for mushrooms, row crops, turf and all food commodities. Not listed for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Cinnamaldehyde (40 CFR 180.1127 and 1156): Exempt from the requirement of a tolerance in or on the following raw agricultural commodities: the following field crops: alfalfa, clover, cotton, dandelion, peanuts (including hay), rice, sorghum (milo), soybeans, sunflower, sweet potatoes, and wheat; the following vegetable crops: asparagus, beans (including forage hay), beets, carrots, celery, cole crops (cabbage, broccoli, Brussels sprouts, cauliflower), collards (kale, mustard greens, turnip greens, kohlrabi), corn, fresh (field, sweet, pop, seed), corn fodder and forage, chinese cabbage, cowpeas, cucurbitis (cucumbers, squash, pumpkin), egg plant, endive (escarole), horseradish (radish, rutabagas, turnip roots), leafy greens (spinach, swiss chard), lettuce (head leaf), okra, parsley, parsnip, peas, peas with pods, peppers, potatoes, sugar beets, tomatoes; the following tree fruit, berry and nut crops: almonds, apples, apricots, berries, (blackberry, boysenberry, dewberry, loganberry, raspberry), blueberry, cherry, citrus (grapefruit, kumquat, lemon, lime, orange, tangelo, and tangerine), cranberry, grapes, melons (watermelon, honeydew, crenshaw, cantaloupe, casaba, persian), nectarines, pears, pecans, peaches, and strawberry as dispersed from the end-use product Corn Rootworm Bait, a pesticidal bait, in accordance with the prescribed conditions in paragraph (a) of this section, *July 13, 2009*; Cumulative yearly application cannot exceed 20 grams of each floral/attractant/acre/application; Exempted from the requirement of a tolerance in or on all food commodities, when used as a fungicide, insecticide, and algaecide in accordance with good agricultural practices, *July 21, 2009*.

Regulatory Authority and Advisory Information:

WGK (German Aquatic Hazard Class): 1-Low hazard to waters. (104-55-2)

Description: Combustible, yellowish, oily liquid (thickens on exposure to air). Strong pungent, spicy, cinnamon odor. Molecular weight = 132.15; 132.17 (*trans*); Specific gravity (H_2O:1) = 1.048–1.052 @ 25 °C; Freezing/Melting point = –7.5 °C; Boiling point = 253 °C; 252 °C (*trans*); Flash point = 120 °C (cc); Vapor pressure = 1 mmHg @ 76.1 °C, 40 mmHg @ 152 °C. Soluble in water.

Incompatibilities: May react violently with bromine, ketones. Incompatible with strong acids, azo dyes, caustics, ammonia, amines, boranes, hydrazines, strong oxidizers.

Permissible Exposure Limits in Air:

Protective Action Criteria (PAC) Ver. 27[89]

(CAS: 104-55-2)

PAC-1: 14 mg/m^3

PAC-2: 150 mg/m^3

PAC-3: 670 mg/m^3

[CAS: 14371-10-9 (*trans*-isomer)]

PAC-1: 5.5 ppm (30 mg/m^3)

PAC-2: 60 ppm (330 mg/m^3)

PAC-3: 120 ppm (660 mg/m^3)

Determination in Water: Log K_{ow} (CAS: 104-55-2) = 1.9. Unlikely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause severe irritation or injury. Skin sensitization may occur. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Has anesthetic properties. Fatal dose is between 1 oz and one lb/pt for a 150 lb person. LD_{50} (oral, rat) = >3000 mg/kg; LD_{50} (dermal, rat) = >1200 mg/kg[83].

Long Term Exposure: May cause tumors. Mutagen; may cause reproductive and fetal effects.

Points of Attack: Inhalation, dermal contact, ingestion. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: SCBA >14 mg/m^3 (CAS: 104-55-2); 5.5 ppm (30 mg/m^3) [14371-10-9 (*trans*-isomer)]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Spill Handling: Wastewater from contaminant suppression, cleaning of protective clothing/equipment, or contaminated sites should be contained and evaluated for subject chemical or decomposition product concentrations. Concentrations shall be lower than applicable environmental discharge or disposal criteria. Alternatively, pretreatment and/or discharge to a POTW is acceptable only after review by the governing authority. Due consideration shall be given to remediation worker exposure (inhalation, dermal and ingestion) as well as fate during treatment, transfer and disposal. If it is not practicable to manage the chemical in this fashion, it must meet Hazardous Material Criteria for disposal.

Fire Extinguishing: Irritating gases are produced in fire. Use dry chemical, carbon dioxide, or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Clethodim C:1263

Use Type: Herbicide
CAS Number: 99129-21-2
Synonyms: 2-Cyclohexen-1-one, 2-[1-(((3-chloro-2-propenyl)oxy)imino)propyl]-5-[2-(ethylthio)propyl]-3-hydroxy-; *(E)*-2-[1-(((3-Chloro-2-propenyl)oxy)imino)propyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexen-1-one
Trade Names: CLETODIME®; PRISM®; RE 45601; SELECT®
Chemical class: Cyclohexanedione; Cyclohexanone derivative
EPA/OPP PC Code: 121011
California DPR Chemical Code: 3566
HSDB Number: 7960
UN/NA & ERG Number: UN3082 (environmentally hazardous substances, liquid, n. o. s.)/171
Uses: Not approved for use in EU countries[115]. A selective post-emergence herbicide used to control annual and perennial grasses to a range of crops including cotton, flax, peanuts, soybeans, sugarbeets, potatoes, alfalfa, sunflowers and most vegetables.
U.S. Maximum Allowable Residue Levels for Clethodim [(40 CFR 180.458 (a)]: alfalfa, forage 6.0 ppm; alfalfa, hay 10 ppm; artichoke, globe 1.2 ppm; asparagus 1.7 ppm; bean, dry, seed 2.5 ppm; beet, sugar, molasses 1.0 ppm; beet, sugar, roots 0.20 ppm; beet, sugar, tops 1.0 ppm; brassica, head and stem, subgroup 5A, 3.0 ppm; brassica, leafy greens, subgroup 5B, 3.0 ppm; bushberry subgroup 13-07B, 0.20 ppm; caneberry subgroup 13-07A, 0.30 ppm; canola, meal 1.0 ppm; canola, seed 0.50 ppm; cattle, fat 0.2 ppm; cattle, meat 0.2 ppm; cattle, meat byproducts 0.2 ppm; clover, forage 10.0 ppm; clover, hay 20.0 ppm; corn, field, forage 0.2 ppm; corn, field, grain 0.2 ppm; corn, field, stover 0.2 ppm; cotton, meal 2.0 ppm; cotton, undelinted seed 1.0 ppm; cranberry 0.50 ppm; egg 0.2 ppm; flax, meal 1.0 ppm; flax, seed 0.6 ppm; goat, fat 0.2 ppm; goat, meat 0.2 ppm; goat, meat byproducts 0.2 ppm; herb subgroup 19A, 12.0 ppm; hog, fat 0.2 ppm; hog, meat 0.2 ppm; hog, meat byproducts 0.2 ppm; hops, dried cones 0.5 ppm; horse, fat 0.2 ppm; horse, meat 0.2 ppm; horse, meat byproducts 0.2 ppm; leaf petioles subgroup 4B, 0.60 ppm; leafy greens subgroup 4A, 2.0 ppm; melon subgroup 9A, 2.0 ppm; milk 0.05 ppm; mustard, seed 0.50 ppm; onion, bulb 0.20 ppm; onion, green 2.0 ppm; peach 0.20 ppm; peanut 3.0 ppm; peanut, hay 3.0 ppm; peanut, meal 5.0 ppm; peppermint, tops 5.0 ppm; potato 0.5 ppm; potato, granules/flakes 2.0 ppm; poultry, fat 0.2 ppm; poultry, meat 0.2 ppm; poultry, meat byproducts 0.2 ppm; radish, tops 0.70 ppm; safflower, meal 10.0 ppm; safflower, seed 5.0 ppm; sesame, seed 0.35 ppm; sheep, fat 0.2 ppm; sheep, meat 0.2 ppm; sheep, meat byproducts 0.2 ppm; soybean 10.0 ppm; soybean, soapstock 15.0 ppm; spearmint, tops 5.0 ppm; squash/cucumber subgroup 9B, 0.50 ppm; strawberry 3.0 ppm; sunflower, meal 10.0 ppm; sunflower, seed 5.0 ppm; turnip, greens 3.0 ppm; vegetable, fruiting group 8, 1.0 ppm; vegetable, legume, group 6, except soybean 3.5 ppm; vegetable, root, except sugar beet, subgroup 1B, 1.0 ppm; vegetable, tuberous and corm, subgroup 1C, 1.0 ppm.
Human toxicity (long-term)[101]: Low–70.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Very low–3210.91612 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
European/International Regulations: Hazard Symbol: Xn; risk phrases: R22 (see Appendix 1)
Description: Depending on purity, clethodim can range from amber to green-yellow viscous liquid. Commercial product may be in a flammable solvent*. Molecular weight = 359.91; Specific gravity (H_2O:1) = 0.965; Boiling point = (decomposes); Freezing/Melting point = – 80 °C; Vapor pressure = 3×10^{-9} mmHg @ 25 °C (est); Flash point = >60 °C; 72 °C*. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Soluble in water; solubility = 12 mg/L @ 25 °C (est.). *Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.
Incompatibilities: A weak acid, keep away from bases and alkalies. Incompatible with oxidizers. Decomposes at about 100 °C.
Determination in Air: Use high-performance liquid chromotography (HPLC).
Permissible Concentration in Water:
Determination in Water: Log K_{ow} = 4.21 (est.)[83]. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, dermal contact.
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >1100 mg/kg;1630 mg/kg.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped.

Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont^{TM} Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Wearing protective equipment, clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not re-enter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: Decomposition products in fire include toxic hydrogen chloride gas and oxides of carbon, nitrogen, and sulfur. *On a small fire:* use dry chemical powder, alcohol-resistant foam, carbon dioxide or water spray.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Clofentezine C:1265

Use Type: Miticide

CAS Number: 74115-24-5

Formula: $C_{14}H_8Cl_2N_4$

Synonyms: 3,6-Bis(2-chlorophenyl)-1,2,4,5-tetrazine; Bisclofentezin; NC-21314; 1,2,4,5-Tetrazine, 3,6-bis(2-chlorophenyl)-; NC

Trade Names: APOLLO®; OVATION®

Chemical class: Tetrazine

EPA/OPP PC Code: 125501

California DPR Chemical Code: 2249

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: XF6860000

EC Number: 277-228-2

Uses: A U.S. EPA restricted Use Pesticide (RUP). Used on a wide variety of crops – fruit, cereals, rangeland, ornamentals, etc

Human toxicity (long-term)[101]: High–9.10 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–7.00003 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Acute Oral Category: 4, Caution

SARA 311/312: Acute & Chronic health hazard

European/International Regulations: Hazard Symbol: N; risk phrases: R52; R53; safety phrases: S22; S24/25; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Magenta crystalline solid. Molecular weight = 303.15; Boiling point = (decomposes); Freezing/Melting point = 180 °C; Vapor pressure = 1×10^{-9} mmHg @ 20 °C. Low solubility in water.

Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); strong acids. Decomposes above 185 °C.

Determination in Water: Log K_{ow} = >3. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Can be absorbed by the skin. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >3 g/kg; LD_{50} (dermal, rat) = >1 g/kg.

Long Term Exposure: May cause liver and/or thyroid damage.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: *On a small fire:* use alcohol-resistant foam, dry chemical powder, carbon dioxide or water spray.*On a large fire:* use water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Clomazone C:1266

Use Type: Herbicide

CAS Number: 81777-89-1

Formula: $C_{12}H_{14}ClNO_2$

Synonyms: 2-[(2-Chlorophenyl)methyl]-4,4-dimethyl-3-isoxazolidinone; 2-(2-Chlorobenzyl)-4,4-dimethyl-1,2-oxazolidin-3-one; Dimethazone

Trade Names: CERANO®; COLZOR TRIO®; COMMAND®; COMMENCE®, DIBEL®; FMC® 57020; GAMBIT®; MAGISTER®; MERIT®; STRATEGY®

Chemical class: Oxazolidione

EPA/OPP PC Code: 125401

California DPR Chemical Code: 3537

HSDB Number: 6624 (as Dimethazone)

UN/NA & ERG Number: UN2902/151

RTECS® Number: NY2977000

Uses: Clomazone is a broad-spectrum herbicide used on rice, peas, pumpkins, soybeans, sweet potatoes, winter squash, cotton, tobacco and fallow wheat fields to control annual grasses and broadleaf weeds.

U.S. Maximum Allowable Residue Levels for Clomazone (40 CFR 180.425): in or on the following raw agricultural commodities: bean, snap, succulent 0.05 ppm; cabbage 0.1 ppm; cotton, undelinted seed 0.05 ppm; cucumber 0.1 ppm; pea (succulent) 0.05 ppm; pepper 0.05 ppm; peppermint, tops 0.05 ppm; pumpkin 0.1 ppm; rice, grain 0.02 ppm; rice, straw 0.02 ppm; soybean 0.05 ppm; spearmint, tops 0.05 ppm; squash, summer 0.1 ppm; squash, winter 0.1 ppm; sugarcane, cane 0.05 ppm; sweet potato, roots 0.05 ppm; vegetable, cucurbit, group 9, 0.05 ppm; and vegetable, tuberous and corm, except potato, subgroup 1D, 0.05 ppm.

Human toxicity (long-term)[101]***:*** Very low–301.00 ppb, Health Advisory

Fish toxicity (threshold)[101]***:*** Very low–3156.16718 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA: Not likely to be carcinogenic to humans.

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Description: Depending purity, it may be clear and colorless to pale yellow or brownish liquid. Commercially available as emulsifiable concentrates that can be dissolved in water. Molecular weight = 239.71; Specific gravity (H_2O:1) = 1.19; Boiling point = 275–282 °C; Freezing/ Melting point = 25–34 °C; Flash point = 105 °C; Vapor pressure = 1×10^{-4} mmHg @ 20. Highly soluble in water; solubility = >1000 mg/L. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Permissible Exposure Limits in Air: No occupational exposure limits have been established.

Permissible Concentration in Water:

Determination in Water: Log K_{ow} = 2.5–2.54. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Dermal, ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed.

LD_{50} (oral, rat) = <1500 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure:

Points of Attack:

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: PG III.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution. Do not re-enter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: *On a small fire:* use alcohol-resistant foam, dry chemical powder, carbon dioxide or water spray. *On a large fire:* use water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Clonitralid C:1268

Use Type: Molluscicide

CAS Number: 1420-04-8

Formula: $C_{15}H_{15}Cl_2N_3O_5$

Synonyms: 2-Aminoethanol salt of 2',5-dichloro-4'-nitrosalicylanilide; 5-Chloro-*N*-(2-chloro-4-nitrophenyl)-2-hydroxybenzamide with 2-aminoethanol (1:1); 5-Chloro-*N*-(2-chloro-4-nitrophenyl)-2-hydroxybenzamide, 2-aminoethanol salt; 2',5-Dichloro-4'-nitrosalicylanilide, 2-aminoethanol salt; 5,2'-Dichloro-4'-nitrosalicylanilide ethanolamine salt; 5,2-Dichloro-4-nitrosalicylicanilide-2-aminoethanol salt; 2',5-Dichloro-4'-nitrosalicyloylanilide ethanolamine salt; Ethanolamine salt of 5,2'-Dichloro-4'-nitrosalicyclicanilide; NCI-C00431; **Niclosamide**; 2-Aminoethanol salt of 5-chloro-*N*-(2-chloro-4-nitrophenyl)-2-hydroxybenzamide

Trade Names: BAY 73® and U.S. Fish and Wildlife Service; BAY 6076®; BAYER 73®; BAYER 25648®; BAYLUSCID®[C]; BAYLUSCIDE® and U.S. Fish and Wildlife Service; M 73®; MOLLUSCICIDE BAYER 73®; NICLOSAMIDE®; SR 73®

Chemical class: Chloronitrophenol derivative; Chlorinated aromatic amide

EPA/OPP PC Code: 077401

California DPR Chemical Code: 2472

HSDB Number: 4045

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: VN8575000

EC Number: 215-811-7; Not classified in Annex I

Uses: Niclosamide, the parent chemical, is a relatively selective, non-cumulative chlorinated aromatic amide pesticide. Clonitralid (ethanolamine salt of Niclosamide) is used principally against molluscs, especially fresh water snails and to control sea lamprey larvae and also as an antiparasitic drug in human, pets and livestock. Niclosamide is toxic to all fish species at 0.5 mg/L (48 hours). A U.S. EPA restricted Use Pesticide as Niclosamide. Limited to use by a certified applicator ***[40 CFR 152.175 (a) (7/1/94)]***. Not listed for use in EU countries[115]. Registered for use in the U.S.

Regulatory Authority and Advisory Information:

Health Advisory: Developmental/Reproductive Toxin

Acute Oral Category: 4, Caution

European/International Regulations: Hazard Symbol: Xn; risk phrases: R22; safety phrases: None found.

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Depending on purity, a bright yellow or brownish-yellow crystalline solid or powder. Odorless. Soluble in water. Molecular weight = 388.23; Freezing/Melting point = 191 °C; 216 °C; Vapor pressure = 8×10^{-8} mmHg @ 20 °C; 3×10^{-4} mmHg @ 20 °C. Practically insoluble in water; solubility = 0.2 mg/L @ 20 °C.

Incompatibilities: Incompatible with strong oxidizers; hydrolyzed by strong acids, and alkalies. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Decomposes at about 200–205 °C.

Determination in Water: Log K_{ow} = 1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Dermal contact, ingestion

Harmful Effects and Symptoms:

Short Term Exposure: May cause severe eye irritation. Ingestion may result in nausea and abdominal pain. May be absorbed through the mucous membrane. LD_{50} (oral, rat) = >5000 mg/kg; LD_{50} (dermal, rat) = >2000 mg/kg.

Long Term Exposure: May cause reproductive and fetal effects. May cause tumors, gastrointestinal discomfort, anorexia and hair loss.

Points of Attack: Gastrointestinal system. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Wearing protective clothing, dampen the spilled material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not re-enter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: Decomposition products include oxides of oxygen and nitrogen, hydrogen chloride gas, and possibly hydrogen cyanide. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Burn in incinerator specifically designed for pesticide disposal or dispose as a hazardous waste in a landfill approved and licensed for the disposal of pesticides. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Clopyralid C:1274

Use Type: Herbicide

CAS Number: 1702-17-6

Formula: $C_7H_3Cl_2NO_2$

Synonyms: 3,6-Dichloropicolinic acid; 3,6-Dichloro-2-pyridinecarboxylic acid; 2-Pyridinecarboxylic acid, 3,6-dichloro-; 3,6-Dichloro-2-picolinic acid; 3,6-DCP; Picolinic acid, 3,6-dichloro-

Trade Names: ACCENT®; CONFRONT®; CURTAIL®; CURTAIL M®; DOWCO®-290; HORNET®; LONTREL®; LONTREL® 3; LONTRIL® F; LONTRIL® T; MATRIGON®; MILLENNIUM®; NAF®-280; PARADIGM®; RECLAIM®; REDEEM®; RIVERDALE®; SCORPION®; STINGER®; TRANSLINE®; WIDEMATCH®; XRM-3972®

Chemical class: Pyridinecarboxylic acid; Pyridine compound; Chlorophenoxy; Pyralid

EPA/OPP PC Code: 117403

California DPR Chemical Code: 5135

HSDB Number: 6593

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: TJ750700

EC Number: 216-935-4 [*Annex I Index No.:* 607-231-00-1]

Uses: Clopyralid is used to control annual and perennial broadleaf weeds on rangeland, pastures, turf and lawns, rights-of-way and a few agricultural products such as sugar beets, oats, barley, mint and wheat.

U.S. Maximum Allowable Residue Levels for clopyralid (3,6-dichloro-2-pyridinecarboxylic acid): barley, forage 9.0 ppm; barley, grain 3.0 ppm; barley, straw 9.0 ppm; cattle (fat, meat, meat byproducts except kidney) 1.0 ppm; cattle (kidney) 12.0 ppm; eggs 0.1 ppm; goats (fat, meat, meat byproducts except kidney) 1.0 ppm; goats (kidney) 12.0 ppm; grasses (forage and hay) 500 ppm; hogs (fat, meat, meat byproducts) 0.2 ppm; horses (fat, meat, meat byproducts except kidney) 1.0 ppm; horses (kidney) 12.0 ppm; milk: 0.1 ppm: oats, forage 9.0 ppm; oats, grain 3.0 ppm; oats, straw 9.0 ppm: poultry (fat, meat, meat byproducts) 0.2 ppm; sheep (fat, meat, meat byproducts except kidney) 1.0 ppm; sheep (kidney) 12.0 ppm; sugar beets (roots and tops) 0.5 ppm; wheat, forage 9.0 ppm; wheat, grain 3.0 ppm; and wheat, straw 9.0 ppm. [***40 CFR 180.431(a) (7/1/91)***]. Barley, milled fractions (except flour), oats, milled fractions (except flour), and wheat, milled fractions (except flour) 12.0 ppm; sugar beet molasses 7.0 ppm [***40 CFR 186.1100(a) (7/1/1991)***].

Human toxicity (long-term)[101]: Very low–3500.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–20832.27357 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA: Not likely to be a carcinogen to humans.

Health Advisory: Developmental/Reproductive Toxin

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides

European/International Regulations: Hazard Symbol: Xi; risk phrases: R41; safety phrases: S2; S26; S39

Description: Odorless and colorless crystalline solid. Odorless. Available as a soluble concentrate that is usually mixed ith water. Combustible. Molecular weight = 192.00; Boiling point = (decomposes); Freezing/Melting point = 150–152 °C; Vapor pressure = 1×10^{-5} mmHg @ 25 °C; Flash point = >100 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. High solubility in water; solubility = 1000 ppm. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Solutions are strong acids; corrosive to aluminum, iron and tin. When heated to decomposition, this chemical may form nitrogen oxides and chlorine gas.

Determination in Water: Log K_{ow} = –3. Negative. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse persperation, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. Can cause permanent impairment of vision or irreversible damage. LD_{50} (oral, rat) = >2500 mg/kg. Low toxicity.

Long Term Exposure: Workers exposed to chlorophenoxy compounds (in the manufacturing process) over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver and kidney.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage.

Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the liquid spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution.

Fire Extinguishing: Decomposition products include oxides of carbon and nitrogen, hydrogen chloride and chlorine gases. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Copper naphthenate C:1385

Use Type: Fungicide, Insecticide

CAS Number: 1338-02-9

Formula: $C_{22}H_{14}CuO_4$

Synonyms: CNC; Copper uversol; Naphthenic acids, copper salts

Trade Names: CHAPCO® Cu-NAP; CUNAPSOL®; CUPRINOL®; TROYSAN® COPPER 8%; TROYSAN® COPPER 11.5%; WILTZ®-65; WITTOX®-C

Chemical class: Inorganic copper compound

EPA/OPP PC Code: 023102; (006000 and 006300 are old EPA code numbers)

California DPR Chemical Code: 153

HSDB Number: 245

UN/NA & ERG Number: UN1993/128

RTECS® Number: QK9100000

EC Number: 029-003-00-5

Uses: Mercaptan scavenger in technical pesticide. Not listed for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for copper naphthenate [40 CFR 180.920]: Residues are exempted from the requirement of a tolerance when used in accordance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to growing crops only. Limit: Not more than 2.5% of formulation; application limited to before edible portions of plants begin to form.

Regulatory Authority and Advisory Information:

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) (as copper compounds)

The "Director's List" (CAL/OSHA) (as copper compounds)

Clean Water Act: Toxic Pollutant (Section 401.15) as copper and compounds

RCRA Ground Water Monitoring List. Suggested test method(s) (PQL ug/L): 6010(60); 7210(200) Note: All species in the ground water that contain copper are included

EPCRA (Section 313): Includes any unique chemical substance that contains copper as part of that chemical's infrastructure. This category does not include copper phthalocyanide compounds that are substituted with only hydrogen, and/or chlorine, and/or bromine

Form R *de minimis* concentration reporting level: 1.0%

Description: Dark green, thick liquid or blue-green solid. Generally used only as a solution, usually in oils or mineral spirits. Gasoline-like odor (liquid). Insoluble in water; Specific gravity (H_2O:1) = 0.93 to 1.055 @ 25 °C; Boiling point = 154–202 °C. Flash point (typical) = 38 °C (cc); Autoignition temperature = 282.2 °C. Explosive limits (mineral spirits): LEL = 0.8%; UEL 5%[86]. Hazard Identification (based on NFPA-704 M Rating System): Health Hazards (Blue): 0; Flammability (Red): 2; Reactivity (Yellow): 0.

Incompatibilities: Flammable liquid. Forms explosive mixture with air. Reaction with strong oxidizers may be violent.

Permissible Exposure Limits in Air:

As copper

ACGIH TLV 0.2 mg/m^3 (fume); 1 mg/m^3 (dusts and mists); NIOSH/OSHA 0.1 mg/m^3 (fume); 1 mg/m^3 as (dusts and mists).

Determination in Air: Copper dusts and mists are collected on a filter, worked up with acid, measured by atomic absorption. See NIOSH Method #7029 for copper. For copper fume: filter collection, acid digestion, measurement by atomic absorption.

Permissible Concentration in Water: The U.S. EPA (6) has set a maximum of 1.0 mg/L in water to protect human health.

Determination in Water: Total copper may be determined by digestion followed by atomic absorption or by colorimetry (using neocuproine) or by Inductively Coupled Plasma Optical Emission Spectrometry. Dissolved copper may be determined by 0.45 μ filtration followed by the preceding methods.

Harmful Effects and Symptoms

Short Term Exposure: LD_{50} (oral, rat) = 4–6 g/kg.

Long Term Exposure: May cause mutations in humans. May damage the testes and decrease fertility in both males and females. May cause skin allergy and thickening of the skin; copper deposits can cause discoloration in the skin and hair, leaving a green color. Repeated exposure can cause shrinking of the lining of the inner nose with watery discharge, liver damage. Individuals with Wilson's disease absorb, retain, and store copper excessively

Points of Attack: Skin, reproductive system, liver.

Medical Surveillance: Serum and urine copper level. Liver and kidney tests. Examination by a qualified allergist. More than light alcohol consumption may exacerbate the liver damage caused by copper sulfate.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents, and combustible materials. Sources of ignition, such as smoking and open flames, are prohibited where thei chemical is handled, used, or stored, Use only non-sparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded.

Shipping: Flammable liquids, n.o.s. require a label of "FLAMMABLE LIQUIDS." They usually fall in Hazard Class 3 and Packing Group II.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area for at least 50 meters/50 feet in all directions. *Small spill*: consider initial downwind evacuation for at least 300 meters/1000 feet. *Eliminate* all ignition sources (no smoking, flares, sparks or flames in immediate area). All equipment used when handling the product must be grounded. Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. A vapor-suppressing foam may be used to reduce vapors. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Use clean non-sparking tools to collect absorbed material. *Large spill*: dike far ahead of liquid spill for later disposal. Water spray may reduce vapor; but may not prevent ignition in closed spaces.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and copper. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters /0.5 mile in all directions.

CAUTION: (1) This product may have a very low flash point: Use of water spray when fighting fire may be inefficient. (2) For mixtures containing alcohol or polar solvent, alcohol-resistant foam may be more effective. *Small fire*: dry chemical, CO_2, water spray or regular foam. *Large fire:* water spray, fog or regular foam. Do not use straight streams. Move containers from fire area if you can do it without risk. *Fire involving tanks or vehicle loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Copper-containing wastes can be concentrated through the use of ion-exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. Details of copper recovery from a variety of industrial wastes have been published. If recovery is not feasible, the copper can be precipitated by the use of caustics and the sludge deposited in a chemical waste landfill. Recommendable methods: Precipitation, solidification, landfill, discharge to sewer, & incineration. Peer-review: Precipitate copper with alkali, filter, solidify precipitate. (Do not use ammonia as alkali.) Cation exchange will allow recovery of copper. Eluate from cation exchanger can be passed through anion exchanger to remove (or reduce) naphthenic acid content. Exhausted ion-exchange resins can be landfilled. (Peer-review conclusions of an IRPTC expert consultation[UN].)

Copper oxychloride C:1388

Use Type: Fungicide

CAS Number: 1332-40-7; 1332-65-6; 1344-71-4; 74315-47-2

Formula: $Cl_2Cu_4H_6O_6$

Synonyms: Basic copper chloride; Basic cupric chloride; Blue copper; Copper chloride, basic; Copper chloride, mixed with copper oxide, hydrate; Copper chloride oxide; Copper chloride oxide, hydrate; Copper chloroxide; Copper OC fungicide; Cupric oxide chloride

Trade Names: AGRIZAN®; BASF® GRUNKUPFER; BLITOX®; BLITOX® 50; BLUE COPPER-50®; CHEMOCIN®; CHEMPAR®; COBOX®; COBOX BLUE®; COLLOIDOX®; COPPERSAN®; COPPESAN®; COPPESAN BLUE®; COPRANTOL®; COPREX®; COPROSAN BLUE®; COP-TOX®; COXYSAN®; CU-56®; CUPRAL 45®; CUPRAMAR®; CUPRAMER®; CUPRANTOL®; CUPRAVET®; CUPRAVIT®; CUPRAVIT® FORTE; CUPRAVIT GREEN®; CUPRICOL®; CUPRITOX®; CUPROKYLT®; CUPROL®; CUPROSAN®; CUPROSANA®; CUPROSAN BLUE®; CUPROVINOL; CUPROX®; CUPROXOL®; DEVICOPPER®; FALIGRUEN®; FYCOL 8®; FYTOLAN®; KAURITIL®; KILEX®; KT 35®; KUPRICOL®; KUPRIKOL®; MICROCOP®; MIEDZIAN®; MIEDZIAN 50®; NEORAM BLU®; OXICOB®; OXIVOR®; OXYCLOR®; OXYCUR®; PARRYCOP®; PEPROSAN; RECOP®; RHODIACUIVRE®; SUTOX®; TAMRAGHOL®; TRICOP 50®; VIRICUIVRE®; VITIGRAN®; VITIGRAN BLUE®

Chemical class: Inorganic copper

EPA/OPP PC Code: 008001

California DPR Chemical Code: 156

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: GL7020000

EC Number: 215-572-9

Uses: Used to control fungi on beets, fruit crops, grapes, olive trees, potatoes, vegetables, tomatoes, ornamental plants and many more. Used as a bird repellant.

U.S. Maximum Allowable Residue Levels for Copper Oxychloride ($Cu_2Cl(OH)_3$) [40 CFR 180.1021]: Raw agricultural commodities Exempted (as fungicide)

Regulatory Authority and Advisory Information:

Acute Oral Category: 2, WARNING

Clean Water Act: Toxic Pollutant (Section 401.15) as copper and compounds

RCRA Ground Water Monitoring List. Suggested test method(s) (PQL *ug*/L): 6010(60); 7210(200) Note: All species in the ground water that contain copper are included

EPCRA (Section 313): Includes any unique chemical substance that contains copper as part of that chemical's infrastructure

Form R *de minimus* concentration reporting level: 1.0%

Description: Bluish-green, odorless powder. Soluble in acids, ammonia; insoluble in water. Molecular weight = 427.12.

Incompatibilities: When heated to decomposition or on contact with acids or acid fumes, may produce highly toxic chloride fumes; deadly phosgene gas may be formed. May cause pitting of some metals.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, human) = 200 mg/kg.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent dust cloud. Avoid inhalation of asbestos dust. *Small dry spill:* with clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Small spill:* take up with sand or other non-combustible absorbent material and place into containers for later disposal. *Large spill*: dike far ahead of liquid spill for later disposal. Cover powder spill with plastic sheet or tarp to minimize spreading. Prevent entry into waterways, sewers, basements or confined areas.

Fire Extinguishing: Hazardous decomposition includes oxides of copper and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters (0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Copper-containing wastes can be concentrated through the use of ion-exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. Details of copper recovery from a variety of industrial wastes have been published. If recovery is not feasible, the copper can be precipitated by the use of caustics and the sludge deposited in a chemical waste landfill. Recommendable methods: Precipitation, solidification, landfill, discharge to sewer, & incineration. Peer-review: Precipitate copper with alkali, filter, solidify precipitate. (Do not use ammonia as alkali.) Cation exchange will allow recovery of copper. Eluate from cation exchanger can be passed through anion exchanger to remove (or reduce) naphthenic acid content. Exhausted ion-exchange resins can be landfilled. (Peer-review conclusions of an IRPTC expert consultation[UN].)

Copper sulfate C:1390

Use Type: Fungicide, Algaecide, Bactericide, Herbicide, Molluscicide

CAS Number: 7758-98-7; 7758-99-8 (pentahydrate)

Formula: CuO_4S, $CuSO_4$

Synonyms: Blue copper; Blue stone; Blue vitriol; Copper monosulfate; Copper sulfate (1:1); Copper(II) sulfate; Copper(2+) sulfate; Copper(2+) sulfate (1:1); Copper sulfate pentahydrate; Cu basic sulfate; Cupric sulfate anhydrous; Cupric sulphate; Griffin super Cu; Phyto-bordeaux; Roman vitriol; Sulfuric acid, copper(2+) Salt (1:1); Sulfate of copper; Tri-basic copper sulfate

Trade Names: AGRITOX®; BASICOP®; BCS COPPER FUNGICIDE®; BSC FLOWABLE®[C]; COPSIN®; CP BASIC SULFATE®; CUPROFIX®; FUNGI-SPERSE II[C]; SULTRACOB®; TNCS® 53; TRIANGLE®

Chemical class: Inorganic

EPA/OPP PC Code: 024408; 024401 (pentahydrate)

California DPR Chemical Code: 1778

HSDB Number: 2968 (pentahydrate)

UN/NA & ERG Number: UN9109; UN3077 (solid)/171

RTECS® Number: GL8800000; GL8900000 (pentahydrate)

EC Number: 231-847-6

Uses: Copper sulfate is a fungicide used to control bacterial and fungal diseases of fruit, vegetable, nut, and field crops. These diseases include mildew, leaf spots, blights, and apple scab. It is used as a protective fungicide (Bordeaux mixture) for leaf application and seed treatment. It is also used as an algaecide and herbicide, and to kill slugs and snails in irrigation and municipal water treatment systems. It has been used to control Dutch elm disease. It is available as a dust, wettable powder, or liquid concentrate. Used as a fungicide and algaecide, in veterinary medicine and others. Copper sulfate is also used to detect and to remove trace amounts of water from alcohols and organic compounds.

U.S. Maximum Allowable Residue Levels for copper sulfate pentahydrate [40 CFR 180.1001(b)]: When applied to growing crops, in accordance with good agricultural practice, cuprous oxide is exempt from the requirement of a tolerance. (7/1/2000).

Fish toxicity (threshold)[101]: High–2.85539 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: IARC: Animal Inadequate Evidence; Human Inadequate Evidence*, not classifiable as carcinogenic to humans*, Group 3; EPA: Not Classifiable as to human carcinogenicity

Health Advisory: Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 3, CAUTION

As copper compounds:

Clean Water Act: Toxic Pollutant (Section 401.15)

RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 6010 (60); 7210 (200) Note: All species in the ground water that contain copper are included

EPCRA (Section 313): Includes any unique chemical substance that contains copper as part of that chemical's infrastructure. This category does not include copper phthalocyanide compounds that are substituted with only hydrogen; and/or chlorine; and/or bromine. Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Copper sulfate is a greenish-white crystalline solid; the pentahydrate is blue powder or granules, or ultramarine crystalline solid. Molecular weight = 159.60; 249.70 (pentahydrate); Specific gravity (H_2O:1) = 2.284; Boiling point = 150 °C (pentahydrate) with – $5H_2O$; Freezing/Melting point = (decomposes) > 200 °C; decomposes > 110 °C (pentahydrate) with – $4H_2O$; copper sulfate decomposes to CuO @ 650 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Highly soluble in water; forms a bright blue solution.

Incompatibilities: Aqueous solution is an acid. May form explosive materials on contact with acetylene and nitromethane. Incompatible with strong bases, hydroxylamine, magnesium, zirconium, sodium hypobromite, hydrazine.

Permissible Exposure Limits in Air:

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 2.5 mg/m^3
PAC-2: 2.5 mg/m^3
PAC-3: 55 mg/m^3

pentahydrate

PAC-1: 12 mg/m^3
PAC-2: 60 mg/m^3
PAC-3: 1200 mg/m^3

NIOSH IDLH: 100 mg[Cu]/m^3

copper and its inorganic compounds

DFG MAK: 0.1 mg/m^3 measured as the inhalable fraction of the aerosol; Peak Limitation Category II(2); Pregnancy Risk Group C

Determination in Air: Copper dusts and mists are collected on a filter, worked up with acid, measured by atomic absorption. See NIOSH Method #7029 for copper[18]. For copper fume: filter collection, acid digestion, measurement by atomic absorption.

Permissible Concentration in Water: The permissible concentration of total recoverable copper in water to protect freshwater aquatic life is 5.6 μg/L as a 24 hr avg. The log of this concentration should not exceed the numerical value of log [0.94 In (hardness) – 1.23]. The corresponding value to protect saltwater aquatic life is 4.0 μg/l as a 24 hr average and should not exceed 23 μg/L at any time.

Short Term Exposure: *Inhalation:* May cause irritation to nose, throat and lungs, causing coughing and wheezing. *Skin:* May cause irritation of skin, localized coloration, itching and burns. *Eyes:* May cause severe irritation, inflammation, burns, excessive tissue fluid and a cloudy cornea; possible permanent damage. *Ingestion:* Poisonous if swallowed. May cause burning and metallic taste in mouth; blue skin coloration; intense inflammation of the stomach and intestines, abdominal pain; vomiting, diarrhea, blood in feces; headache, cold sweat; weak pulse; salivation, nausea, dehydration, low blood pressure; jaundice, and kidney failure. Death may result from a dose of a little as 1 teaspoon for a 150 pound person. LD_{50} (oral, rat) = 450–850 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause mutations in humans. May damage the testes and decrease fertility in both males and females. May cause skin allergy and thickening of the skin; copper deposits can cause discoloration in the skin and hair, leaving a green color. Repeated exposure can cause shrinking of the lining of the inner nose with watery discharge; liver damage. Individuals with Wilson's disease absorb, retain, and store copper excessively. May cause tumors.

Points of Attack: Skin, reproductive system; liver.

Medical Surveillance: Serum and urine copper level. Liver and kidney tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. More than light alcohol consumption may exacerbate the liver damage caused by copper sulfate. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately.

If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to Physician:* Empty stomach by lavage with 0.1% solution of potassium ferrocyanide or milk. Liver or kidney function tests may be indicated. May result in methemoglobinemia.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of skin contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Neoprene™ and polyvinyl chloride are among the recommended protective materials. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. When working with liquids, wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. When working with powders or dusts, wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *Copper dusts and mists: 5 mg/m^3*: Qm (APF = 25) (any quarter-mask respirator). *10 mg/m^3:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering face-pieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *25 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); PaprHie (APF = 25) (any powered, air-purifying respirator with a high-efficiency particulate filter). *50 mg/m^3*: 100 F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter); or PaprTHie (APF = 50) (any powered, air-purifying respirator with a tight-fitting face-piece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 mg/m^3:* SaF: Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape*: 100 F (APF = 50) (any air purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials.

Shipping: Environmentally hazardous substances, solid, n.o.s. This chemical requires a shipping label of "CLASS 9." It falls in Hazard Class 9[20][21].

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Hazardous decomposition includes oxides of sulfur. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Add soda ash to waste $CuSO_4$ solution; let stand 24 hours. Decant and neutralize solution before flushing to sewer. Landfill sludge[22]. Copper-containing wastes can be concentrated through the use of ion exchange, reverse osmosis, or evaporators to the point where copper can be electrolytically removed and sent to a reclaiming firm. Details of copper recovery from a variety of industrial wastes have been published. If recovery is not feasible, the copper can be precipitated by the use of caustics and the sludge deposited in a chemical waste landfill. Recommendable methods: Precipitation, solidification, landfill, discharge to sewer, & incineration. Peer-review: Precipitate copper with alkali, filter, solidify precipitate. (Do not use ammonia as alkali.) Cation exchange will allow recovery of copper. Eluate from cation exchanger can be passed through anion exchanger to remove (or reduce) naphthenic acid content. Exhausted ion-exchange resins can be landfilled. (Peer-review conclusions of an IRPTC expert consultation[UN].)

Coumaphos C:1420

Use Type: Insecticide, Nematocide; Veterinary medication
CAS Number: 56-72-4
Formula: $C_{14}H_{16}ClO_5PS$
Synonyms: 3-Chloro-7-hydroxy-4-methyl-coumarin *O,O*-diethyl phosphorothioate; 3-Chloro-7-hydroxy-4-methyl-coumarin-*O,O*-diethylphosphorothionate; 3-Chloro-7-hydroxy-4-methyl-coumarin *O*-ester with *O,O*-diethylphosphorothioate; 3-Chloro-4-methyl-7-coumarinyldiethyl phosphorothioate; *O*-3-Chloro-4-methyl-7-coumarinyl *O,O*-diethyl phosphorothioate; 3-Chloro-4-methyl-7-hydroxycoumarindiethyl thiophosphoric acid ester; 3-Chloro-4-methylumbelliferoneo-ester with *O,O*-diethyl phosphorothioate; Coumafos; *O,O*-Diethylo-(3-chloro-4-methyl-7-coumarinyl)phosphorothioate; *O,O*-Diethylo-(3-chloro-4-methylcoumarinyl-7) thiophosphate; *O,O*-Diethylo-(3-chloro-4-methyl-2-oxo-2H-benzopyran-7-yl)phosphorothioate; *O,O*-Diethyl-3-chloro-4-methyl-7-umbelliferone thiophosphate; *O,O*-Diethylo-(3-chloro-4-methylumbelliferyl)phosphorothioate; Diethyl-3-chloro-4-methylumbelliferyl thionophosphate; Diethylthiophosphoric acid ester of 3-chloro-4-methyl-7-hydroxycoumarin; ENT 17,957; NCI-C08662; Phosphorothioic acid, *O*-(3-chloro-4-methyl-2-oxo-2H-1-benzopyran-7-yl) *O,O*-diethyl ester; Phosphorothioic acid, *O,O*-diethyl ester, *O*-ester with 3-chloro-7-hydroxy-4-methylcoumarin
Trade Names: AGRIDIP®; ASUNTOL®; AZUNTHOL®; BAY® 21/199; BAYER® 21/199; BAYMIX®; BAYMIX® 50; CHECKMITE®; CO-RAL®[C]; DELICE®; MELDANE®; MELDONE®; MUSCATOX®; NEGASHUNT®; DIOLICE®; RESITOX®; SUNTOL®; UMBETHION®
Chemical class: Organophosphate
EPA/OPP PC Code: 036501
California DPR Chemical Code: 165
HSDB Number: 249
UN/NA & ERG Number: UN2783 (solid)/152
RTECS® Number: GN6300000
EC Number: 200-285-3 [*Annex I Index No.:* 015-038-00-3]
Uses: The U.S. EPA classifies the formulations 11.6% EC and 42% flowable concentrate end-use products as Restricted Use Pesticides (RUPs) because they pose a hazard of acute poisoning from ingestion. Coumaphos is an insecticide/acaricide used to control a wide variety of liver stock insects including cattle grubs, fleeceworms, lice scabies, flies, and ticks; the common ectoparasites of beef cattle, dairy cows, sheep, goats, horse, swine, and poultry as well as for screw worms in all these animals. The USDA uses coumaphos in dip vats along the U.S.-Texas border to control ticks that carry Texas Cattle Fever. It is added to cattle and poultry feed to control the development of fly larvae that breed in manure. It has applications in beekeeping.
U.S. Maximum Allowable Residue Levels for Coumaphos and its oxygen analog O,O-diethyl-O-3-chloro-4-methyl-2-oxo-2H-1-benzopyran-7yl phophate (40 CFR 180.189): in or on raw agricultural commodities as follows: 1.0 ppm in or on meat, fat, and meat byproducts of cattle, goats, hogs, horses, poultry, and sheep; 0.5 ppm residues in milk-fat reflecting negligible residues of milk; and 0.1 ppm in eggs.
Human toxicity (long-term)[101]: High–1.75 ppb, Health Advisory
Fish toxicity (threshold)[101]: Intermediate–16.96524 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity: EPA Group E, evidence of non-carcinogenicity for humans.
Acute Oral Category: 1, DANGER–POISON
Health Advisory: Nerve Toxin, Mutagen
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 100/10,000 lb (455/4540 kg)
Reportable Quantity (RQ): 10 lb (4.54 kg)
US DOT Regulated Marine Pollutant (49CFR172.101, appendix B), severe pollutant.
European/International Regulations: Hazard Symbol: T+, N; risk phrases: R 21; R28; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1).
WGK (German Aquatic Hazard Class): No value assigned.
Description: Coumaphos is a white to brownish crystalline solid with a slight sulfurous odor. Odor threshold = 0.02 ppm. Molecular weight = 362.78; Specific gravity (H_2O:1) = 1.47 @ 20 °C; Freezing/Melting point = 95 °C. Vapor pressure = 9.7×10^{-8} @20 °C.

Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Insoluble in water.

Incompatibilities: Reacts with piperonyl butoxide, oxidizers, strong bases. Slowly reacts with caustics to be hydrolyzed. Keep away from water and heat. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air:

ACGIH TLV®: 0.05 mg/m^3 TWA, inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI issued (2005)

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.275 mg/m^3
PAC-2: 3 mg/m^3
PAC-3: 13 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Mexico has set a maximum permissible concentration in estuaries of 0.02 mg/Liter.

Determination in Water: EAD Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L.

Routes of Entry: Inhalation, ingestion; this chemical can be absorbed through the skin, thereby increasing exposure

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Contact may cause burns to skin and eyes. Fatal skin absorption can occur even if there is no feeling of irritation after contact. Acetylcholinesterase inhibitor. Exposure can cause rapid, fatal organophosphate poisoning: with headache, sweating, nausea and vomiting, diarrhea, salivation, abdominal cramps, difficult breathing, stiffness of legs, blurring of vision, followed by loss of muscle coordination, muscle twitching, convulsions, coma, and death. May be fatal if inhaled, swallowed, or absorbed through skin. The effects may be delayed. Delayed pulmonary edema may occur after inhalation. The LD_{50} (oral, rat) = <50 mg/kg; LD_{50} (dermal, rat) = <1000 mg/kg.

Long Term Exposure: High or repeated exposure may cause nerve damage causing weakness, poor coordination in the arms and legs. May cause personality changes, depression, memory loss, or irritability. Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions and respiratory failure. May cause liver damage; tumors. A mutagen, may cause reproductive and fetal effects.

Points of Attack: Respiratory system, central nervous system, peripheral nervous system, plasma cholinesterase. Reproductive cells.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Also consider complete blood count and chest x-ray following acute overexposure. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. In cases of poisoning with this substance specific treatment is required; the appropriate means, including instructions, should be available.

Respirator Selection: SCBA > 0.275 mg/m^3. Where potential exists for exposure to coumaphos, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: Coumarin derivative pesticides, solid, toxic, requires a shipping label of "poisonous materials". This material falls in the Hazard Class 6.1. Regulated by US DOT as a severe marine pollutant.

Spill Handling: Do not touch spilled material; stop leak if you can do it without risk. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Use water spray to reduce vapors. *Small spills:* take up with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills:* with clean shovel, place material into clean, dry container and cover; move containers from spill area. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 18,000.

Fire Extinguishing: Poisonous and corrosive gases are produced in fire including hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. This material may burn but does not ignite easily. Extinguish with water, foam, carbon dioxide, or dry chemicals. This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Coumaphos can be decomposed by heating with concentrated alkali. Large amounts should be incinerated in a unit equipped with effluent gas scrubbing. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Coumatetralyl C:1430

Use Type: Rodenticide

CAS Number: 5836-29-3

Formula: $C_{19}H_{16}O_3$

Synonyms: 2H-1-Benzopyran-2-one, 4-hydroxy-3-(1,2,3,4-tetrahydro-1-naphthalenyl)-; Cumatetralyl; Coumarin, 4-hydroxy-3-(1,2,3,4-tetrahydro-1-naphthyl)-; ENE 11183; 4-Hydroxy-3-(1,2,3,4-tetrahydro-1-napthalenyl)-2H-1-benzopyran-2-one; 4-Hydroxy-3-(1,2,3,4-tetrahydro-1-naphthyl)coumarin; 3-(α-Tetral)-4-oxycoumarin; 3-(α-Tetrayl)-4-hydroxycoumarin; 3-(D-Tetrayl)-4-hydroxycoumarin

Trade Names: BAY® 25634; BAY ENE® 11183B; BAYER® 25,634; ENDOX®; ENDROCID®; ENDROCIDE®; RACUMIN®; RAUCUMIN® 57; RODENTIN®

Chemical class: Coumarin

EPA/OPP PC Code: 496100

UN/NA & ERG Number: UN3027/151

RTECS® Number: GN7630000

EC Number: 227-424-0 [*Annex I Index No.:* 607-059-00-7]

Uses: Coumatetralyl is used for rat control and functions as an anticoagulant, of the warfarin type, that does not induce bait-shyness. Not approved for use in EU countries or the U.S. There are 17 global suppliers[97].

Regulatory Authority and Advisory Information:

Acute Oral Category: 1, DANGER–POISON

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4540 kg)

Reportable Quantity (RQ): 500 lb (227 kg)

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R27/28; R48/24/25; R52/53; safety phrases: S1/2; S28; S36/37; S45; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Coumatetralyl is a yellowish-white, crystalline solid. Molecular weight = 292.35; Specific gravity (H_2O:1) = 1.34; Boiling point = 290 °C; Freezing/Melting point = 174 °C; Vapor pressure = 9×10^{-6} @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Low solubility in cold water; solubility 10 mg/L. May be soluble in hot water.

Incompatibilities: Oxidizers may cause fire and explosion hazard. Keep away from metals

Permissible Exposure Limits in Air:

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1.5 mg/m^3
PAC-2: 16.5 mg/m^3
PAC-3: 16.5 mg/m^3

Permissible Concentration in Water: No criteria set. Fish Tox = 16.96524000 ppb MATC (INTERMEDIATE); STV (Sediment Toxicity Value): VERY LOW.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal contact. Persons with who are taking anticoagulants or are suffering from bleeding disorders must be protected from exposure.

Harmful Effects and Symptoms:

The onset of the symptoms of poisoning may be delayed for a few days following ingestion. Typical symptoms of poisoning include increased bleeding. Coagulation problems may be detected by laboratory analyses only. Large exposures may cause excessive bleeding from minor cuts or abrasions, bleeding from the gums and/or blood in feces. Massive internal bleeding may result in shock. A victim with anemia and/or liver disease may have more severe and persistent poisoning that may be extremely difficult to control.

Short Term Exposure: Inhalation may cause symptoms described in long term exposure. Ingestion may cause gastrointestinal tract acute effects. With a single large ingested dose may cause hemorrhagic shock. This chemical can be absorbed through the skin, thereby increasing exposure or hemorrhagic effect. High exposure can cause death. LD_{50} (oral, rat) = 16.5 mg/kg (highly toxic).

Long Term Exposure: Chronic exposure may cause death by hemorrhagic shock. Absorption by the lungs or after a few days or few weeks of repeated ingestion may cause inhibition of prothrombin synthesis, nose bleeds and bleeding gums, hematoma, small reddish spots like a rash, bruises of the elbows, knees and buttocks, blood in urine and stools, anemia, occasional paralysis due to a stroke. Preexisting blood clotting disease or liver disease are aggravated by coumatetralyl exposure

First Aid: *Emergency Life-Support Procedures:* Acute exposure to this chemical may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation Exposure:* 1. Move victims to fresh air. Emergency personnel should avoid self-exposure to coumatetralyl. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 4. RUSH to a health care facility. *Dermal/Eye Exposure:* 1. Remove victims from exposure. Emergency personnel should avoid self-exposure to coumatetralyl. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Remove contaminated clothing as soon as possible. 4. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. 5. Wash exposed skin areas twice with soap and water. 6. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 7. RUSH to a health care facility. *Ingestion Exposure:* 1. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 2. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 3. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of coumatetralyl is unknown or suspected to be greater than 30 minutes, do not induce vomiting and RUSH to a health care facility. 4. Ipecac should not be administered to children under 6 months of age. ***Warning:*** Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If ANY uncertainty exists, RUSH to a health care facility. 4. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Walk the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be re-administered. Continue to ambulate and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. 4. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (1/2 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (1/2 to 1 cup) of water. 5. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (1/2 to 1 oz) of cathartic; 50 to 100 g (1-3/4 to 3-1/2 oz) is recommended for adults. 6. RUSH to a health care facility[83].

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash or dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 1.5 mg/m^3. Specific respirator(s) have not been recommended by NIOSH.

The following might be considered in and emergency: SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers.

Shipping: Coumarin derivative pesticides, solid, toxic, requires a shipping label of "poisonous materials." This material falls in the Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Do not touch spilled material. Use water spray to reduce vapors. With clean shovel place material into clean, dry container and cover. Dike far ahead of *large spills* for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. *Small fires:* dry chemical, carbon dioxide; water spray or foam. *Large fires:* water spray, fog or foam. Stay upwind, keep out of low areas. Wear positive-pressure breathing apparatus and special protective clothing. Fight fire from maximum distance. Dike fire-control water for later disposal. Hazardous decomposition includes oxides of carbon. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve in a solvent and burn in a furnace by spraying in the solution. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Crotoxyphos C:1485

Use Type: Insecticide, Acaricide

CAS Number: 7700-17-6

Formula: $C_{14}H_{19}O_6P$

Synonyms: Crotonic acid, 3-hydroxy-, α-methylbenzyl ester, dimethylphosphate, (*E*)-; (*E*)-3-; [(Dimethoxyphosphinyl) oxy]-2-butenoic acid 1-phenylethyl ester; *O,O*-Dimethyl-*O*-(1-methyl-2-carboxy-*α*-phenylethyl)vinyl phosphate; Dimethyl-*cis*-1-methyl-2-(1-phenylethoxycarbonyl)vinyl phosphate; Dimethyl phosphate ester of *α*-methylbenzyl-3-hydroxy-*cis*-crotonate; ENT 24,717; (*E*)-3-Hydroxycrotonic acid, *α*-methylbenzyl ester, dimethyl phosphate; 1-Methylbenzyl-3-(dimethoxyphosphinyloxo)isocrotonate; *α*-Methylbenzyl 3-(dimethoxyphosphinoxy)-*cis*-crotonate; *α*-Methylbenzyl-3-hydroxy-crotonate dimethyl phosphate; *cis*-2-(1-Phenylethoxy)carbonyl-1-methylvinyl dimethylphosphate

Trade Names: CIODRIN®; CIODRIN VINYL PHOSPHATE; CIOVAP®; COOP RTU® CATTLE SPRAY; CYODRIN®; CYPONA E. C. ®; DECROTOX®; DUO-KILL®; PANTOZOL-1®; SD 4294®; SHELL® SD 4294; VAPORIN® DAIRY SPRAY; VOLFAZOL®

Chemical class: Organophosphate

EPA/OPP PC Code: 058801

California DPR Chemical Code: 140

HSDB Number: 1592 as Ciodrin

UN/NA & ERG Number: UN3018 (liquid)/152; UN3077 (solid)/171

RTECS® Number: GQ5075000

EC Number: 331-720-2 [*Annex I Index No.:* 015-109-00-9]

Uses: A contact and stomach poison; controls flies, lice, and ticks on lactating dairy and beef cattle; may also be used on swine, goats, horses, and sheep. Not listed for use in EU countries[115]. Not approved for use in the U.S. There are 13 global suppliers.

Regulatory Authority and Advisory Information:
Health Advisory: Nerve Toxin, Mutagen
U.S. DOT 49CFR172.101, Inhalation Hazard Chemical
European/International Regulations: Hazard Symbol: T, N; risk phrases: R24/25; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

Description: Yellowish straw-colored liquid. Mild ester odor. Molecular weight = 314.27; Specific gravity (H_2O:1) = 1.19; 1.2 @ 15 °C; Boiling point = 135 °C @ 0.04 mmHg; Freezing/Melting point = 25.4 °C; Vapor pressure = 1.8×10^{-5} mmHg @ 20 °C. Highly soluble in water; solubility = 1200 ppm.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. Corrosive to some metals and plastics. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides[18].

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms:
Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Extremely toxic; a teaspoonful or less can cause death of 150 pound person. Symptoms of exposure include: small eye pupils; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 60 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration.

Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: Where potential exists for exposures over *0.2 mg/m*^{3}, use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator with a pesticide cartridge. Greater protection is provided by a powered air-purifying respirator. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Chlorpyrifos must be stored to avoid contact with strong bases, or acids, or acid fumes, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area away from sources of heat.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. Absorb liquid containing chlorpyrifos in vermiculite, dry sand, earth, or similar material. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 6070.

Fire Extinguishing: Poisonous gases are produced in fire including oxides of phosphorus and nitrogen. This chemical may burn, but does not readily ignite. Use dry chemical, carbon dioxide; water spray; or standard foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Heat above 130 °C may cause violent exothermic reaction. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: This compound is 50% hydrolyzed in aqueous methanol solution @ pH 6 in 1,930 days; and in 7.2 days at pH 9.96. Spray mixtures of <1% concentration are destroyed with an excess of 5.25% sodium hypochlorite in <30 minutes @ 100 °C, and in 24 hours @ 30 °C. Concentrated (61.5%) mixtures are essentially destroyed by treatment with 100:1 volumes of the above sodium hypochlorite solution and steam in 10 minutes. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Crufomate C:1490

Use Type: Insecticide, Anthelmintic (for cattle)
CAS Number: 299-86-5
Formula: $C_{12}H_{19}ClNO_3P$
Synonyms: 4-*t*-Butyl-2-chlorophenyl methyl methylphosphoramidate; ENT 25,602-x; *O*-Methyl *O*-2-chloro-4-*tert*-butylphenyl *N*-methylamidophosphate; Methylphosphoramidic acid,4-*t*-butyl-2-chlorophenyl methyl ester; Phenol,4-*t*-butyl-2-chloro-, ester with methyl methylphosphoramidate; Phosphoramidic acid, 4-*tert*-butyl-2-chlorophenylphosphor amidate; Phosphoramidic acid, methyl-,2-chloro-4-(1,1-dimethylethyl)phenyl methyl ester; Phosphoramidic acid, methyl-,4-*tert*-butyl-2-chlorophenyl
Trade Names: DOWCO® 132[C]; MONTREL®[C]; RUELENE®[C]; DRENCH®[C]; RULENE®[C]
Chemical class: Organophosphate
EPA/OPP PC Code: 012101
California DPR Chemical Code: 519
HSDB Number: 1547 as Ruelene
UN/NA & ERG Number: UN2783 (solid)/152
RTECS® Number: TB3850000
EC Number: 206-083-1 [*Annex I Index No.:*015-074-00-x]
Uses: All residue limits for crufomate, as listed in 40 CFR 180.295, were revoked by the U.S. EPA on June 9, 1993. All registered uses of crufomate in or on fat, meat, and meat byproducts of cattle, goats, and sheep were canceled It is applied as a spray on plants to kill insects, grubs, and worms on cattle. Not listed for use in EU countries[115].

Regulatory Authority and Advisory Information:
Carcinogenicity: ACGIH Not classified as a human carcinogen
Health Advisory: Nerve Toxin, Reproduction Hazard
US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R21/22; R50/R53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Crufomate is a white crystalline solid; the commercial product is a yellow oil. Molecular weight = 291.71; Specific gravity (H_2O:1) = 1.16; Boiling point = (decomposes) 118 °C; Freezing/Melting point = (decomposes) 63 °C. Insoluble in water.

Incompatibilities: The substance decomposes on heating, forming corrosive and toxic fumes of hydrogen chloride, nitrogen oxides and phosphorus oxides. Incompatible with strongly alkaline and strongly acidic media. Unstable over long periods in aqueous preparations or above 60 °C.

Permissible Exposure Limits in Air:
OSHA PEL: None
NIOSH REL: 5 mg/m^3 TWA; 20 mg/m^3 STEL
ACGIH TLV®[1]: 5 mg/m^3 TWA; not classifiable as a human carcinogen; BEI$_A$ issued: Acetylcholinesterase inhibiting pesticides
No Protective Action Criteria (PAC) available.

Determination in Air: Filter; none; Gravimetric; NIOSH IV Method #0500, Particulates NOR (total)[18]. OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: EAD Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L.

Routes of Entry: Skin absorption, inhalation of dust, ingestion

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Acetylcholinesterase inhibitor. Cruformate irritates the eyes, skin, and respiratory tract. Crufomate can affect you when breathed in and quickly enters the body by passing through the skin. Severe poisoning can occur from dermal contact. It is a moderately toxic organophosphate chemical. Exposure can cause effects on the nervous system, rapid severe poisoning with headache, sweating, nausea and vomiting, diarrhea, loss of coordination, convulsions, respiratory failure, and death. The health effects may be delayed. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 460 mg/kg.

Long Term Exposure: Exposure may affect the developing fetus. Crufomate may damage the testes. High or repeated exposure may cause nerve damage and poor coordination in arms and legs. Repeated exposure may cause personality changes of depression, anxiety, or irritability.

Points of Attack: Respiratory system, central nervous system, peripheral nervous system, plasma cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Poisonous and corrosive gases are produced in fire including hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Cyanamide C:1570

Use Type: Herbicide, Plant growth regulator

CAS Number: 420-04-2

Formula: CH_2N_2; H_2NCN

Synonyms: Amidocyanogen; Carbamonitrile; Carbimide; Carbodiimide; Cyanogen nitride; Cyanogenamide; Hydrogen cyanamide

Trade Names: DORMEX®; SKW 83010®

Chemical class: Unclassified

EPA/OPP PC Code: 014002; (011139 old EPA code number)
California DPR Chemical Code: 2238
HSDB Number: 1550
UN/NA & ERG Number: UN2811/154
RTECS® Number: GS5950000
EC Number: [*Annex I Index No.:* 615-013-00-2]
Uses: A U.S. EPA restricted Use Pesticide (RUP). Not currently approved for use in EU countries (re-submitted). Used primarily as a plant growth regulator. Cyanamide may be melted to give a dimer, dicyandiamide or cyanoguanidine. At higher temperatures it gives the trimer, melamine, a raw material for melamine-formaldehyde resins.
Regulatory Authority and Advisory Information:
Carcinogenicity: EPA Group C, Possible human carcinogen
Health Advisory: Reproductive Toxin.
European/International Regulations: Hazard Symbol: T; risk phrases: R21; R25; R36/38; R43; safety phrases: S1/2; S3; S22; S36/37; S45 (see Appendix 1)
WGK (German Aquatic Hazard Class): 2-Hazard to waters
As cyanide compounds:
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean Water Act: 40CFR423, appendix A, Priority Pollutants as cyanide, total
EPCRA (Section 313): x+CN- where x = H+or any other group where a formal dissociation may occur. For example, KCN or $Ca(CN)_2$. Form R *de minimis* concentration reporting level: 1.0%
US DOT Regulated Marine Pollutant (49CFR172.101, appendix B) as cyanide mixtures, cyanide solutions
WGK (German Aquatic Hazard Class): 2-Hazard to waters
Description: Cyanamide is a combustible crystalline solid, but it is usually found as a 25% liquid solution. Molecular weight = 42.04; Specific gravity (H_2O:1) = 1.282; Boiling point = decomposes @ 141 °C; Freezing/Melting point = 45 °C; Flash point = 141 °C (cc)[17]. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 3. Very highly soluble in water; solubility = 78% @ 15 °C.
Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Cyanamide may polymerize at temperatures above 122 °C, or on evaporation of aqueous solutions. Reacts with acids, strong oxidants, strong reducing agents and water, causing explosion and toxic hazard. Attacks various metals. Decomposes when heated above 49 °C, on contact with acids, bases, 1,2-phenylene diamine salts, and moisture, producing toxic fumes including nitrogen oxides and cyanides. Amides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic amides with strong reducing agents. Amides are very weak bases (weaker than water). Mixing amides with dehydrating agents such as phosphorus pentoxide or thionyl chloride generates the corresponding nitrile. The combustion of these compounds generates mixed oxides of nitrogen (NOx). This compound is decomposed by strong base or acid[88].
Permissible Exposure Limits in Air:
OSHA PEL: None
NIOSH REL: 2 mg/m^3 TWA
ACGIH TLV®[1]: 2 mg/m^3 TWA
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 2 mg/m^3
PAC-2: 2 mg/m^3
PAC-3: 3.3 mg/m^3
DFG MAK: 1 mg/m3, inhalable fraction TWA; Peak Limitation Category II(2) [skin]. Danger of skin sensitization; Pregnancy Risk Group C
Determination in Air: Filter; none; Gravimetric; NIOSH Methods (IV) #0500, Particulates NOR (total)
Determination in Water: Log K_{ow} = <– 1.0. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact
References:
Short Term Exposure: Cyanamide is caustic and severely irritates the eyes, skin, and respiratory tract, and may affect the liver. Ingestion or inhalation may cause transitory intense redness of the face, headache, vertigo, increased respiration, tachycardia and hypotensions. The adverse effects of cyanamide are potentiated by the ingestion of alcohol (beer, wine or liquor) within 1–2 days before or after exposure. Cyanamide is a highly reactive chemical and is a dangerous explosion hazard. LD_{50} (oral, rat) = 125 mg/kg; LD_{50} (dermal, rat) = 84 mg/kg.
Long Term Exposure: Repeated or prolonged contact may cause skin sensitization and allergy. Exposure may cause liver and nervous system damage. May cause reproductive and fetal effects.
Points of Attack: Liver and skin. Reproductive cells.
Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. If overexposure occurs or if illness is suspected, the following are recommended: Liver function tests. Exam of the nervous system. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large

quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Respirator Selection: SCBA > 2 mg/m^3. Where potential exists for exposures over 2 mg/m^3, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: (1) Color Code-Yellow: Reactive Hazard; Store in a location separate from other materials, especially flammables and combustibles. (2) Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool well-ventilated area away from acids or acid fumes. Cyanamide can be stored in glass containers if it is stabilized with phosphoric, acetic, sulfuric, or boric acid; it attacks iron and steel, copper and brass. Sources of ignition, such as smoking and open flames, are prohibited where cyanamide is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever cyanamide is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. Keep cyanamide out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Initial isolation and protective action distances: Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Small spills (from a small package or a small leak from a large package)
First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.1/0.1
Night 0.1/0.2

Large spills (from a large package or from many small packages)
First: isolate in all directions (feet/meters) 200/60
Then: Protect persons downwind (miles/kilometers)
Day 0.3/0.5
Night 0.5/0.9

Fire Extinguishing: Cyanamide may burn, but does not readily ignite. Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen cyanide gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Add excess alkaline calcium hypochlorite with agitation. Flush to sewer after 24 hours. Cyanamide can also be destroyed in an incinerator equipped with afterburner and scrubber.

Cyanazine C:1580

Use Type: Herbicide
CAS Number: 21725-46-2
Formula: $C_9H_{13}ClN_6$

Synonyms: 2-Chloro-4-((1-cyano-1-methylethyl)amino)-6-(ethylamino)-*s*-triazine; 2-Chloro-4-(1-cyano-1-methylethylamino)-6-ethylamino-1,3,5-triazine; 2-Chloro-4-ethylamino-6-(1-cyano-1-methyl)ethylamino-*s*-triazine; 2-(4-Chloro-6-ethylamino-1,3,5-triazin-2-ylamino)-2-methylpropionitrile; 2-[(4-Chloro-6-(ethylamino)-*S*-triazin-2-yl)amino]-2-methylpropionitrile; 2-[(4-Chloro-6-(ethylamino)-1,3,5-triazin-2-yl)amino]-2-methylpropanenitrile; 2-((4-Chloro-6-(ethylamino)-*s*-triazin-2-yl)amino)-2-methylpropanenitrile; Cyanazine triazine pesticide; Propanenitrile, 2-((4-Chloro-6-(ethylamino)-1,3,5-triazin-2-yl)amino)-2-methyl-; Propanenitrile, 2-((4-Chloro-6-(ethylamino)-*S*-triazin-2-yl)amino)-2-methyl-; *S*-Triazine, 2-chloro-4-ethylamino-6-(1-cyano-1-methyl)ethylamino-

Trade Names: BLADEX®[C]; BLADEX® 80WP[C]; BULLET®; CYCLE®; CY-PRO®[C]; CYNEX® 41[C]; DW 3418®; EXTRAZINE®[C]; FORTROL®; MATCH®; PAYZE®; SD 15418®; WL 19805®

Chemical class: Triazine; Nitrile

EPA/OPP PC Code: 100101

California DPR Chemical Code: 1640

HSDB Number: 6842

UN/NA & ERG Number: UN2763 (Triazine pesticides, solid, toxic)/151; UN 2998 (Triazine pesticide, liquid, toxic)/151

RTECS® Number: UG1490000

EC Number: 244-544-9 [*Annex I Index No.:* 613-013-00-7]

Uses: On August 2, 1995, the U.S. EPA announced a voluntary phase-out of the use of cyanazine. On January 6, 2000, the U.S. EPA announced the cancellation of all cyanazine registrations. It had been A U.S. EPA restricted Use Pesticide (RUP) because of its teratogenicity and because it has been found in groundwater. Not approved for use in EU countries[115]. Cyanazine is used as a pre- and post-emergent herbicide to control annual grasses and broadleaf weeds. It is used mostly on corn, some on cotton, and less than 1% on grain sorghum and wheat fallow. The compound is formulated as a wettable powder, a flowable suspension, or as granules. In California, major usages are on cotton, corn and corn for forage, almonds, and uncultivated agricultural areas. In 1995, cyanazine was the fourth most widely used synthetic pesticide in the U.S. Cyanazine, atrazine, and simazine are collectively referred to as the triazines and may be alternatively used for each other on corn and in some other situations.

Human toxicity (long-term)[101]: High–1.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–1411.45410 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group C, Possible human carcinogen

California Proposition 65 Chemical: Developmental/Reproductive toxin (4/1/1990)

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive)

Acute Oral Category: 2, WARNING

Safe Drinking Water Act: Priority List (55 FR 1470)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: 40CFR423, appendix A, Priority Pollutants as cyanide, total

U.S. EPA Hazardous Waste Number (RCRA No.): P030 as cyanides soluble salts and complexes, n. o. s. RCRA, 40CFR261, Appendix 8 Hazardous Constituents. as cyanides, soluble salts and complexes, n. o. s. EPCRA (Section 313): x+CN- where x = H+or any other group where a formal dissociation may occur. For example, KCN or Ca(CN)2. Form R *de minimis* concentration reporting level: 1.0%

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B) as cyanide mixtures, cyanide solutions or cyanides, inorganic, n. o. s. European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S37; S60; S61 (see Appendix 1)

Description: Cyanazine is an off-white to tan crystalline solid. Also available in other forms including a liquid. Molecular weight = 240.73; Freezing/Melting point = 167–169 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Soluble in water; solubility = >150 mg/L. Physical properties may be altered by carrier solvents used in commercial formulations.

Incompatibilities: Incompatible with oxidizers, acids, acid chlorides, acid halides, isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides. Contact with strong reducing agents such as halides may generate explosive flammable gas. Attacks metals in the presence of heat and moisture. Hydrolyzed by strong acids and strong bases.

Permissible Exposure Limits in Air:

NIOSH REL: (nitriles) 2 ppm, Ceiling Concentration, not to be exceeded in any 15-minute work period.

No Protective Action Criteria (PAC) available.

Determination in Air:

NIOSH(2) REL: (Nitriles) TWA 22 mg/m^3; NIOSH(2) REL: (Nitriles); ceiling limit 4 mg/m^3/15 minute. See also NIOSH Criteria Document 78-212 NITRILES

Permissible Concentration in Water: Federal Drinking Water Guidelines: 1 ppb[107]. Federal and State drinking water guidelines for cyanide/cyanide ion: Federal Drinking Water Guidelines: EPA 200 μg/L/cyanide ion; State Drinking Water Standards: California 150 μg/L; State Drinking Water Guidelines: Arizona 220 μg/L

Determination in Water: High-performance liquid chromatography is applicable to the determination of cyanazine in water according to EPA. Log K_{ow} = 2.2. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passing through the unbroken skin.

References:

Short Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Inhalation of dust can irritate the nose, throat and bronchial tubes.

Because this material has a low vapor pressure, significant inhalation of vapors is unlikely at ordinary temperatures. Contact can irritate the skin or eyes. Overexposure can cause weakness, nausea and difficulty breathing. LD_{50} (oral, rat) = 149 mg/kg; LD_{50} (dermal, rat) = 1200 mg/kg.
Long Term Exposure: Long term effects are unknown. Related chemicals in the triazine chemical groups can cause liver damage, reduce thyroid function and/or cause skin allergy. May cause reproductive toxicity in humans.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Liver function tests. Thyroid function tests. Evaluation by a qualified allergist.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.
Respirator Selection: *Nitriles*: NIOSH, *10 ppm:* Sa (APF = 10) (any supplied-air respirator); *25 ppm:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); *50 ppm:* SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece); *250 ppm:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive- pressure mode. *Escape*: GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, self-contained breathing apparatus).
Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with cyanazine you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from heat. Where possible, automatically pump liquid from drums or other storage containers to process containers.
Shipping: Triazine pesticides, solid, toxic, n. o. s. require a shipping label of "poisonous materials." These materials fall in Hazard Class 6.1 and Packing Groups III.
Spill Handling: Issue poison warning.

First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)

Day	0.1/0.2
Night	0.1/0.2

Large spills (from a large package or from many small packages)

First: isolate in all directions (feet/meters) 200/60
Then: Protect persons downwind (miles/kilometers)

Day	0.3/0.5
Night	0.5/0.8

First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. If appropriate, moisten to prevent dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Cyanazine decomposes in heat, producing very toxic fumes and gases of hydrogen cyanide, hydrogen chloride, ethyl chloride, ammonia, acetone, and ethylene. Cyanazine may burn, but does not readily ignite. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Cycloate C:1668

Use Type: Herbicide
CAS Number: 1134-23-2
Formula: $C_{11}H_{21}NOS$
Synonyms: Cyclohexylethylcarbamothioic acid-*S*-ethyl ester; Cyclohexylethylthiocarbamic acid-*S*-ethyl ester; *S*-Ethyl cyclohexylethylthiocarbamate; *S*-Ethyl-*N*-ethyl-*N*-cyclohexylthiolcarbamate; Hexylthiocarbam
Trade Names: ETSAN®; EUREX®; R-2063®; RO-NEET®; RO-NEET®-6E; RO-NEET® 10G; RONIT®; SABET®
Chemical class: Thiocarbamate
EPA/OPP PC Code: 041301
California DPR Chemical Code: 516
HSDB Number: 1712
UN/NA & ERG Number: UN3082 (environmentally hazardous substances, liquid, n. o. s.)/171
RTECS® Number: GU7200000
EC Number: 214-482-7
Uses: Used to control broadleaf weeds, annual and perennial grasses and nutgrass in spinach, beets, and sugar beets. Not approved for use in EU countries[115]. Actively registered in the U.S.
U.S. Maximum Allowable Residue Levels for Cycloate (40 CFR 180.212): [40 CFR 180.212(a)] (USEPA);beet, garden, root 0.05 ppm (negligible residue); beet, garden, tops 0.05 ppm (negligible residue); beet, sugar, roots 0.05 ppm (negligible residue); beet, sugar, tops 0.05 ppm (negligible residue); spinach 0.05 ppm (negligible residue).
Human toxicity (long-term)[101]: Intermediate–35.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Very low–658.46663 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
California Proposition 65 Chemical: Developmental/Reproductive toxin (3/19/1999)
Health Advisory: Mutagen
Acute Oral Category: 3, CAUTION
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Nonwastewater (mg/kg), 1.4
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xn; risk phrases: R22 (see Appendix 1)
Description: An oily, clear or amber to yellow liquid. Aromatic odor; Molecular weight 215.36; Specific gravity (H_2O:1) = 1.0 @ 20 °C; Boiling point = 145–146 °C @10 mmHg; Freezing/Melting point = 12 °C; Vapor pressure = 1.6 × 10^{-3} mmHg @ 20 °C. Flash

point = 100 °C; 139C (oc); Moderately soluble in water; solubility = 75–100 mg/L.

Incompatibilities: Reacts violently with powerful oxidizers such as calcium hypochlorite. Flammable gases are generated by the combination of thiocarbamates with aldehydes, nitrides, and hydrides. Thiocarbamates are incompatible with acids, peroxides, and acid halides.

Determination in Water: Log K_{ow} = 3.9–4.1. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

References:

Short Term Exposure: Some thiocarbamates may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. Low toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. LD_{50} (oral, rat) = 1700 mg/kg; LD_{50} (dermal, rat) = >2500 mg/kg.

Long Term Exposure: A nerve toxin; high or repeated exposures may cause nerve damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Examination of the nervous system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Eyes: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any MSHA/NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter) or SCBAE (any appropriate escape-type, self-contained breathing apparatus). All respirators selected must be approved by NIOSH under the provisions of 42 CFR 84. The current listing of NIOSH-certified respirators can be found in theNIOSH/NPPTL Certified Equipment List, which is available on the NIOSH Web site.

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, dry place away from ignition sources.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 400.

Fire Extinguishing: A combustible liquid. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. Poisonous gases and oxides of sulfur and nitrogen are produced in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Cycloheximide C:1730

Use Type: Fungicide; plant growth regulator
CAS Number: 66-81-9
Formula: $C_{15}H_{23}NO_4$
Synonyms: 3[2-(3,5-Dimethyl-2-oxocyclohexyl)-2-hydroxyethyl]glutarimide; NSC-185; 2,6-Piperidinedione, 4-(2-3,5-dimethyl-2-oxocyclohexyl)-2-hydroxyethyl-, (*IS*)-[1*α*(S*),3α,5β]-
Trade Names: ACTI-AID®[C]; ACTIDIONE®[C]; ACTIDIONE® TGF[C]; ACTIDONE®; ACTIDONE® PM; ACTIDONE® TGF; ACTISPRAY; HIZAROCIN®; KAKEN®; NARAMYCIN®; NARAMYCIN A®; NEOCYCLOHEXIMIDE®; U-4527
Chemical Class: Unclassified
California DPR Chemical Code: 5
HSDB Number: 1552
UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151
RTECS® Number: MA4375000
EC Number: 200-636-0 [*Annex I Index No.:* 631-140-00-8]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Used as an antibiotic, plant growth regulator, and protein synthesis inhibitor. Inhibits growth of many plant pathogenic fungi. Effective for control of powdery mildew on roses and many other ornamentals, rusts and leaf spots on lawn grasses, and azalea petal blight. Also used as a repellent for rodents and other animal pests and in cancer therapy. Not listed for use in EU countries[115].

Human toxicity (long-term): Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold): Very low–1308.29960 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
Reportable Quantity (RQ): 100 lb (45.4 kg)
Acute Oral Category: 1, DANGER–POISON
Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)
California Proposition 65 Chemical: Developmental/Reproductive toxin (1/1/1989)
European/International Regulations *(66-81-9)*: Hazard Symbol: T+, N; risk phrases: R61; R28; R51/53; R68; safety phrases: S53; S45; S61 (see Appendix 1).
WGK (German Aquatic Hazard Class): 3-Highly water polluting (CAS 66-81-9)

Description: Cycloheximide is a colorless crystalline substance. Molecular weight = 281.34[83]; Boiling point = 490 °C; Freezing/Melting point = 119.5–121.1 °C; Vapor pressure = 6×10^{-3} mmHg @ 25 °C; Flashpoint = 250 °C. Soluble in water; solubility = 10 to 50 mg/mL @20 °C[88].

Incompatibilities: Incompatible with oxidizers, acid anhydrides, strong bases. Imides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic imides with strong reducing agents. Imides are extremely weak bases (weaker than water). React with strong bases to form salts. That is, they can react as acids.

Permissible Exposure Limits in Air:
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.18 mg/m^3
PAC-2: 2 mg/m^3
PAC-3: 2 mg/m3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <0.75. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion and skin

Harmful Effects and Symptoms

Short Term Exposure: Contact can cause eye and skin irritation. Exposure can cause excessive salivation, nausea, vomiting, diarrhea, and elevated blood urea nitrogen (BUN). High exposures can also cause imbalance, tremors, seizures and coma. Extremely toxic. The probable oral lethal dose in humans is 5–50 mg/kg, or 7 drops to 1 teaspoonful for a 150-lb person. Signs of skin irritation may appear as much as 6 to 24 hours after exposure. LD_{50} (oral, rat) = 2–3.7 mg/kg.

Long Term Exposure: May cause mutations and damage the developing fetus. May cause liver and kidney damage.

Points of Attack: Reproductive system. Liver and kidneys

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours following dermal contact

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 0.18 mg/m^3. *Where there is a potential for overexposure:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizing agents; acid hydrides, and strong bases.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s. require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Avoid breathing dusts. Keep upwind. Wear self-contained breathing apparatus. Material is rapidly inactivated at room temperature by dilute alkali. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and nitrogen. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: High-temperature incinerator with flue gas scrubbing equipment.

Cyfluthrin C:1806

Use Type: Insecticide

CAS Number: 68359-37-5

Formula: $C_{22}H_{18}Cl_2FNO_3$

Synonyms: Cyano(4-fluoro-3-phenoxyphenyl)methyl 3-(2,2-dichloroethenyl)-2,2-dimethylcyclopropanecarboxylate; Cyclopropanecarboxylic acid, 3-(2,2-dichloroethenyl)-2,2-dimethyl-, cyano(4-fluoro-3-phenoxyphenyl)methyl ester; Cyclopropanecarboxylic acid, 2-(2,2-dichlorovinyl)-3,3-dimethyl-, ester with (4-fluoro-3-phenoxyphenyl)hydroxyacetonitrile; Cyfluthin; Cyfluthrine; Cyfoxylate

Trade Names: AZTEC®; ATTATOX®; BAY FCR 1272®; BAYTHROID®; BAYTHROID® H; BAYTHROID® TECHNICAL; BUG-B-GON®; CONTUR®; CYLATHRIN®; EULAN SP®; FCR 1272®; INTUDER®; INTUDER HPX®; LASER®; RENOUNCE®; RESPONSAR®; SOLFAC®; TEMPO®; TEMPO® H; TEMPO® 20WP

Chemical class: Pyrethroid

EPA/OPP PC Code: 128831

California DPR Chemical Code: 2223

HSDB Number: 6599

UN/NA & ERG Number: UN3352 (liquid)/151

RTECS® Number: GZ1253000

EC Number: 269-855-7 [*Annex I Index No.:*607-254-00-7]

Uses: Cyfluthrin is a non-systemic insecticide used to control a variety of chewing and sucking insects on cotton, hops, cereals, corn, peanuts, fruit, potatoes and other crops and vegetables. It is also used o control structural pests such as termites.

U.S. Maximum Allowable Residue Levels for Cyfluthrin [40 CFR 180.436(a)(1)]: alfalfa 5.0 ppm; alfalfa, hay 10.0 ppm; almonds, hulls 0.5 ppm; barley, bran 5.0 ppm; brassica, head and stem, subgroup 5A, 2.5 ppm; brassica, leafy greens, subgroup 5B, 7.0 ppm; carrots, roots 0.20 ppm; cattle, fat 10.0 ppm; cattle, meat 0.40 ppm; cattle, meat byproducts 0.40 ppm; citrus, dried pulp 0.3 ppm; citrus, oil 0.3 ppm; corn, field, forage 3.0 ppm; corn, field, milled byproducts 7.0 ppm; corn, field, refined oil 30.0 ppm; corn, field, stover 6.0 ppm; corn, pop, stover 6.0 ppm; corn, sweet, forage 15.0 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; corn, sweet, stover 30.00 ppm; cotton, hulls 2.0 ppm; cotton, refined oil 2.0 ppm; cotton, undelinted seed 1.0 ppm; egg 0.01 ppm; fruit, citrus, group 10, 0.2 ppm; fruit, pome, group 11, 0.5 ppm; fruit, stone, group 12, 0.3 ppm; goat, fat 10.0 ppm; goat, meat 0.40 ppm; goat, meat byproducts 0.40 ppm; grain, aspirated fractions 600 ppm; grain, cereal, group 15 ppm; 4.0 ppm; grape 1.0 ppm; grape, raisin 3.5 ppm; hog, fat 10.0 ppm; hog, meat 0.40 ppm; hog, meat byproducts 0.40 ppm; hop, dried cones 20.0 ppm; hop, vines 4.0 ppm; horse, fat 10.0 ppm; horse, meat 0.40 ppm; horse, meat byproducts 0.40 ppm; lettuce, head 2.0 ppm; lettuce, leaf 3.0 ppm; milk 1.0 ppm; milk, fat 30.0 ppm; mustard greens 7.0 ppm; nut, tree, group 14, 0.01 ppm; oat, bran 5.0 ppm; pea and bean, dried shelled, except soybean, subgroup 6C, 0.15 ppm; pea, dry, seed 0.15 ppm; pea, southern, succulent 0.25 ppm; peanut 0.0 ppm; peanut, hay 6.0 ppm; pepper 0.50 ppm; pistachio 0.0 ppm; poultry, fat 0.0 ppm; poultry, meat 0.01 ppm; poultry, meat byproducts 0.01 ppm; radish, roots 1.0 ppm; rice, bran 6.0 ppm; rice, hulls 18.0 ppm; rye, bran 5.0 ppm; sheep, fat 10.0 ppm; sheep, meat 0.40 ppm; sheep, meat byproducts 0.40 ppm; sorghum, grain, forage 2.0 ppm; sorghum, grain, stover 5.0 ppm; soybean, forage 8.0 ppm; soybean, hay 4.0 ppm; soybean, seed 0.03 ppm; sugarcane, cane 0.05 ppm; sugarcane, molasses 0.20 ppm; sunflower, forage 5.0 ppm; sunflower, seed 0.02 ppm; tomato 0.20 ppm; tomato, paste 0.5 ppm; tomato, pomace 5.0 ppm; turnips, greens 7.0 ppm; vegetable, cucurbit, group 9, 0.1 ppm; vegetable, fruiting, group 8, 0.5 ppm; vegetable, leafy greens, except brassica, group 4, 6.0 ppm; vegetable, tuberous and corn, subgroup 1C, 0.01 ppm; wheat, bran 6.5 ppm; wheat, forage 5.0 ppm; wheat, hay 6.0 ppm; wheat, shorts 11.0 ppm; wheat, straw 6.0.

Regional registration, as defined in section 180.1(n) [40 CFR 180.436(c)]: in or on the following raw agricultural commodities: grass, forage 6.0 ppm; grass, hay 8.0 ppm. A tolerance of 0.05 ppm in food commodities exposed to the insecticide during treatment of food-handling establishments where food and food products are held, processed, prepared, or served. Treatments may be made by general surface, spot, and/or crack and crevice applications. (9/24/2007).

Human toxicity (long-term)[101]: Very low–175.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.01330 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA, Not likely to be a human carcinogen

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Endocrine disruptor (S!)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R26/28; R50/53; safety phrases: S1/2; S28; S36/37/39; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Highly water polluting

Description: In pure form may be colorless crystalline solid or powder. Commercial is a yellowish paste or viscous, yellowish-brown oil. Aromatic odor. Molecular weight = 434.29; Specific gravity (H_2O:1) = 1.28; Boiling point = 210 °C (decomposes); Freezing/Melting point = 59 °C; 79 °C; Vapor pressure = 1.6×10^{-8} mmHg @ 20 °C; 3×10^{-4} mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Low solubility in water.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air: ACGIH TLV®[1]: (all pyrethrins) 5 mg/m^3 TWA

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18], as pyrethroid.

Determination in Water: Log K_{ow} = >5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >400 mg/kg; LD_{50} (dermal, rat) = 5 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May be an endorine disruptor.

Points of Attack: Endocrine system, bones.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with preexisting skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m^3:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen fluoride and hydrogen chloride gases. *On a small fire:* use dry chemical, CO_2 or water spray. *On a a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

lambda-Cyhalothrin C:1808

Use Type: Insecticide; acaridide

CAS Number: 91465-08-6

Formula: $C_{23}H_{19}ClF_3NO_3$

Synonyms: (*R*+*S*)-*α*-Cyano-3-phenoxybenzyl(1*S*+1*R*)-*cis*-3-(*Z*-2-Chloro-3,3,3-trifluoroprop-1-enyl)-2,2-dimethylcyclopropanecarboxylate; (*RS*)-*α*-Cyano-3-phenoxybenzyl*(Z)*-(1*RS*,3*RS*)-(2-chloro-3,3,3-trifluoropropenyl)-2,2-dimethylcyclopropanecarboxylate; Cyclopropanecarboxylic acid, 3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethyl-, cyano(3-phenoxyphenyl)methyl ester, [1*α(S*)*,3*α(Z)*]-(+)-; λ-Cyhalothrin; Cyhalothrin-K

Trade Names: CHARGE®; COMMODORE®; DEMAND®; DEMAND CS®; DOUBLE BARREL®; EXCALIBER®; GRENADE®; HALLMARK®; ICON®; IMPASSE®; KARATE®; MATADOR®; NINJA®; PP-321®; RATE®; SABER®; SAMURAI®; SCIMITAR®; SENTINEL®; WARRIOR®

Chemical class: Pyrethroid

EPA/OPP PC Code: 128897

California DPR Chemical Code: 2297

HSDB Number: 6791as cyhalothrin

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: GZ1227780

EC Number: 415-130-7 [*Annex I Index No.:* 607-252-006]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Only cyhalothrin is banned for use in EU; not *lamda*-isomer; CAS 68085-85-8). Used to control a variety of pests in many crops. Also used in structural pest situations..

U.S. Maximum Allowable Residue Levels for lambda-Cyhalothrin [40 CFR 180.438(a)(2)]: Alfalfa, hay 6.0 ppm; almonds, hulls 1.5 ppm; apple, wet pomace 2.50 ppm; avocado, imported 0.20 ppm; brassica, head and stem, subgroup 5A, 0.4 ppm; canola, seed 0.15 ppm; cattle, fat 3.0 ppm; cattle, meat 0.2 ppm; cattle, meat byproducts 0.2 ppm; Corn, field, flour 0.15 ppm; corn, field, forage 6.0 ppm; corn, field, grain 0.05 ppm; corn, field, stover 1.0 ppm; corn, pop, grain 0.05 ppm; corn, pop, stover 1.0 ppm; corn, sweet, forage 6.0 ppm; corn, sweet, stover 1.0 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; cotton, undelinted seed 0.05 ppm; egg 0.01 ppm; fruit, pome, group 11 0.30 ppm; fruit, stone, group 12 0.50 ppm; garlic 0.10 ppm; goat, fat 3.0 ppm; goat, meat 0.2 ppm; goat, meat byproducts 0.2 ppm; grain, aspirated fractions 2.0 ppm; hog, fat 3.0 ppm; hog, meat 0.2 ppm; hog, meat byproducts 0.2 ppm; horse, fat 3.0 ppm; horse, meat 0.2 ppm; horse, meat byproducts 0.2 ppm; lettuce, head 2.0 ppm; lettuce, leaf 2.0 ppm; milk, fat (reflecting 0.20 ppm; ppm in whole milk) 5.0 ppm; nut, tree, group 14, 0.05 ppm; okra 0.20 ppm; onion, bulb 0.1 ppm; pea and bean, dried shelled, except soybean, subgroup 6C, 0.10 ppm; pea and bean, succulent shelled, subgroup 6B, 0.01 ppm; peanut 0.05 ppm; peanut, hay 3.0 ppm; pistachio 0.05 ppm; poultry, fat 0.03 ppm; poultry, meat 0.01 ppm; poultry, meat byproducts 0.01 ppm; rice, grain 1.0 ppm; rice, hulls 5.0 ppm; rice, straw 1.8 ppm; sheep, fat 3.0 ppm; sheep, meat 0.2 ppm; sheep, meat byproducts 0.2 ppm; sorghum, grain, forage 0.30 ppm; sorghum, grain, grain 0.20 ppm; sorghum, grain, stover 0.50 ppm; soybean 0.01 ppm; sugarcane, cane 0.05 ppm; sunflower, forage 0.20 ppm; sunflower, refined oil 0.30 ppm; sunflower, seed 0.20 ppm; sunflower, seed, hulls 0.50 ppm; tomato 0.10 ppm; tomato, dry pomace 6.0 ppm; tomato, wet pomace 6.0 ppm; vegetable, fruiting, group 8, 0.20 ppm; vegetable, legume, edible podded, subgroup 6A, 0.20 ppm; wheat, bran 2.0 ppm; wheat, forage 2.0 ppm; wheat, grain 0.05 ppm; wheat, hay 2.0 ppm; wheat, straw 2.0 ppm. ***[40 CFR 180.438(b)]***: The tolerances will expire and are revoked on the dates specified in the following table: barley, bran 0.2 ppm; 12/31/08 barley, grain 0.05 ppm; 12/31/08 barley, hay 2.0 ppm; 12/31/08 barley, straw 2.0 ppm; 12/31/08 clover, forage 5.0 ppm; 12/31/08 clover, hay 6.0 ppm; 12/31/08 grass, forage 5.0 ppm; 12/31/08 grass, hay 6.0 ppm; 12/31/08 rice, wild, grain 1.0 ppm. ***[40 CFR 483 (a)(3)]*** A tolerance of 0.01 ppm is established for residues in or on all food commodities (other than those already covered by a higher tolerance as a result of use on growing crops) in food-handling establishments where food products are held, processed, or prepared.

Fish toxicity (threshold)[101]***:*** Extra high–0.04384 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Acute Oral Category: 2, WARNING

Health Advisory: Endocrine disruptor (S!)

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R21; R25; R26; R50/53; safety phrases: S1/2; S28; S36/37/39; S38; S45; S60; S61 (see Appendix 1)

Description: Colorless to beige powder; or viscous yellowish-brown liquid. Mild odor. Liquid formulations containing organic solvents may be flammable. Molecular weight = 449.85; Specific gravity (H_2O:1) = 1.25 @ 25 °C; Boiling point = (decomposes); Freezing/Melting point = 50 °C; Vapor pressure = (est.) 1.1×10^{-6} mmHg @ 20 °C; Flash point = 75 °C. Slight solubility in water; solubility = <1 ppm. Hydrolyzed by water (slowly @ pH = 7–9, rapidly @ pH = >9). Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Hydrolyzed by water (slowly @ pH = 7–9, rapidly @ pH = >9).

Permissible Exposure Limits in Air:

ACGIH TLV®[1]: (all pyrethrins) 5 mg/m^3 TWA

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18], as pyrethroid.

Determination in Water: Log K_{ow} = 6.8–7.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal or eye contact.

References:

Short Term Exposure: High toxicity. Contact with eyes or skin may cause irritation or injury. Ingestion is harmful. Inhalation should be avoided. *Inhalation:* Convulsions, cough, trouble breathing, sore throat. *Skin:* Pain and redness. *Eyes:* Pain and redness. *Ingestion:* Abdominal pain and coughing. LD_{50} (oral, rat) = 50–166 mg/kg; LD_{50} (dermal, rat) = >500 mg/kg.

Long Term Exposure: May cause respiratory disease, asthma, skin sensitization, skin allergy, dermatitis.

Points of Attack: Lungs, skin.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with preexisting skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m^3:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Irritating gases are produced in fire. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Cymoxanil C:1820

Use Type: Fungicide
CAS Number: 57966-95-7
Formula: $C_7H_{10}N_4O_3$
Synonyms: Acetamide, 2-cyano-*N*-[(ethylamino)carbonyl]-2-(methoxyimino)-; 2-Cyano-*N*-[(ethylamino)carbonyl]-2-(methoxyimino)acetamide; Acetamide, 2-cyano-*N*-[(ethylamino)carbonyl]-2-(methoxyimino)-; 2-Cyano-*N*-ethylcarbamoyl-2-methoxyiminoacetamide
Trade Names: CURZATE®; DPX 3217®; DPX 3217 M®; DPX-T3217®; EVOLVE®; MZ-CURZATE®; TANOS® Cymoxanil
Chemical class: Cyanoacetamide oxime
EPA/OPP PC Code: 129106
California DPR Chemical Code: 4002
HSDB Number: 6914
UN/NA & ERG Number: UN3077 (solid)/171
RTECS® Number: AB5957000
EC Number: 261-043-0 [*Annex I Index No.:* 616-035-00-5]
Uses: Cymoxanil is applied as a seed treatment to cut potato seed pieces or as a foliar to control late blight.
U.S. Maximum Allowable Residue Levels for Cymoxanil [40 CFR 180.503(a)]: potatoes 0.05 ppm; ***[40 CFR 180.503(e)]***
grapes, imported 0.1 ppm; tomatoes, imported 0.1 ppm. (7/1/98).
Human toxicity (long-term)[101]: Low–91.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: High–1.53362 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity: EPA: Not likely to be carcinogenic to humans.
Acute Oral Category: 3, CAUTION
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean water act: Section 307 Priority Pollutants as cyanide, total; Toxic Pollutant (Section 401.15)
RCRA Universal Treatment Standards: Wastewater (mg/L), 1.2 (total); 0.86 (amenable); Nonwastewater (mg/kg), 590 (total); 30 (amenable)
RCRA Ground Water Monitoring List. Suggested test method(s) (PQL *ug*/L): 9010(40)
Safe Drinking Water Act: MCL, 0.2 mg/L; MCLG, 0.2 mg/L; Regulated chemical (47 FR 9352)
EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as cyanides, mixtures or solutions.
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R43; R51/R53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)
Description: A white to peach (pale pink) crystalline solid. Molecular weight = 198.20; Specific gravity (H_2O:1) = 1.31 @ 25 °C; Melting point = 159–160 °C; Vapor pressure = 12×10^{-8} mmHg @ 25 °C. Low solubility in water; solubility increases with temperature.
Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Light sensitive.
Determination in Water: Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.
References:
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >1 g/kg; LD_{50} (dermal, rat) = >3 g/kg.
Long Term Exposure: May cause skin sensitization.
Points of Attack: Skin.
Medical Surveillance:
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.
Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this

chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters /0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Burn in incinerator specifically designed for pesticide disposal or dispose as a hazardous waste in a landfill approved and licensed for the disposal of pesticides. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

EPA/OPP PC Code: 109702

California DPR Chemical Code: 2171

HSDB Number: 6600

UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151

RTECS® Number: GZ1250000

EC Number: 257-842-7 [*Annex I Index No.:* 607-422-00-x]

Uses: A U.S. EPA restricted Use Pesticide (RUP) used to control a variety of insects on cotton, fruit and vegetable crops. Also used in commercial and residential settings, ships, laboratories and food processing plants.

Human toxicity (long-term)[101]: High–7.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.21494 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Cypermethrin [(40 CFR 180.418 (a) (2)]: alfalfa, hay 15.00 ppm; alfalfa, forage 5.00 ppm; alfalfa, seed 0.50 ppm; almond, hulls 6 ppm; animal feed, nongrass, group 18, forage 8 ppm; animal feed, nongrass, group 18, hay 40 ppm; beet, sugar, roots 0.05 ppm; beet, sugar, tops 0.20 ppm; berry group 13 0.8 ppm; borage, seed 0.2 ppm; brassica, head and stem, subgroup 5A, 2.00 ppm; brassica, leafy greens, subgroup 5B, 14.00 ppm; cabbage 2.00 ppm; castor oil plant, refined oil 0.4 ppm; castor oil plant, seed 0.2 ppm; cattle, fat 1.00 ppm; cattle, meat 0.2 ppm; cattle, meat byproducts 0.05 ppm; Chinese tallowtree, refined oil 0.4 ppm; Chinese tallowtree, seed 0.2 ppm; cilantro, leaves 10 ppm; citrus, dried pulp 1.8 ppm; citrus, oil 4.0 ppm; corn, field, forage 0.20 ppm; corn, field, grain 0.05 ppm; corn, field, stover 3.00 ppm; corn, pop, grain 0.05 ppm; corn, pop, stover 3.00 ppm; corn, sweet, forage 15.00 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; corn, sweet, stover 15.00 ppm; cotton, undelinted seed 0.5 ppm; crambe, seed 0.2 ppm; cuphea, seed 0.2 ppm; echium, seed 0.2 ppm; egg 0.05 ppm; euphorbia, refined oil 0.4 ppm; euphorbia, seed 0.2 ppm; evening primrose, refined oil 0.4 ppm; evening primrose, seed 0.2 ppm; flax, seed 0.2 ppm; food commodities/feed commodities (other than those covered by a higher tolerance as a result of use on growing crops) in food/feed handling establishments 0.05 ppm; fruit, citrus, group 10 ppm; 0.35 ppm; fruit, pome, group 11 2 ppm; fruit, stone, group 12 ppm; 1 ppm; goat, fat 1.00 ppm; goat, meat 0.2 ppm; goat, meat byproducts 0.05 ppm; gold of pleasure, seed 0.2 ppm; grain, aspirated fractions 10.0 ppm; grape 2 ppm; grass, forage, fodder, and hay, group 17, forage 10 ppm; grass, forage, fodder and hay, group 17, hay 35 ppm; hare's-ear mustard, seed 0.2 ppm; hog, fat 0.1 ppm; hog, meat 0.05 ppm; horse, fat 1.00 ppm; horse, meat 0.2 ppm; horse, meat byproducts 0.05 ppm; jojoba, refined oil 0.4 ppm; jojoba, seed 0.2 ppm; lesquerella, seed 0.2 ppm; lunaria, seed 0.2 ppm; meadowfoam, seed 0.2 ppm; milk, fat (reflecting 0.10 ppm; in whole milk) 2.50 ppm; milkweed, seed 0.2 ppm; mustard, seed 0.2 ppm; niger seed, refined oil 0.4 ppm; niger seed, seed 0.2 ppm; nut, tree, group 14 ppm; 0.05 ppm; oil radish, seed 0.2 ppm; okra 0.2 ppm; onion, bulb 0.10 ppm; onion, green 3.00 ppm; pea and bean, dried shelled, except soybean, subgroup 6C, 0.05 ppm; pea and bean, succulent shelled, subgroup 6B, 0.1 ppm; peanut 0.05 ppm; pecan 0.05 ppm; poppy, seed 0.2 ppm; poultry, fat 0.05 ppm; poultry, meat 0.05 ppm; rapeseed 0.2 ppm; rice, grain rice, wild, grain 1.5 ppm; rose hip, refined oil 0.4 ppm; rose hip, seed 0.2 ppm; safflower, seed 0.2 ppm; sesame, seed 0.2 ppm; sheep, fat 1.00 ppm; sheep, meat 0.2 ppm; sheep, meat byproducts 0.05 ppm; sorghum, grain, forage 0.1 ppm; sorghum, grain, grain 0.5 ppm; sorghum, grain, stover 5.0 ppm; soybean, seed 0.05 ppm; stokes aster, refined oil 0.4 ppm; stokes aster, seed 0.2 ppm; sugarcane, cane 0.60 ppm; sunflower, refined oil 0.5 ppm; sunflower, seed 0.2 ppm; sweet rocket, seed 0.2 ppm; tallowwood, refined oil 0.4 ppm; tallowwood, seed 0.2 ppm; tea oil plant, refined oil 0.4 ppm; tea oil plant, seed 0.2 ppm; turnip, greens 14 ppm; vegetable, cucurbit, group 9, 0.2 ppm; vegetable, fruiting, group 8, 0.2 ppm; vegetable, leafy, except brassica, group 4, 10.00 ppm; vegetable, legume, edible podded, subgroup 6A, 0.5 ppm; vegetable, root and tuber, group 1, except sugar beet 0.1 ppm; vernonia, refined oil 0.4 ppm; vernonia, seed 0.2 ppm; wheat, forage 3.0 ppm; wheat, grain 0.2 ppm; wheat, hay 6.0 ppm; wheat, straw 7.0 ppm

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group C, Possible human carcinogen.

Health Advisory: Endocrine disruptor (S!), Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 2, WARNING

European/International Regulations: Hazard Symbol: T, N; risk phrases: R25; R37; R48/22; R50/53; safety phrases: S1/2; S36/37/39; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Thick, yellow-brown liquid or semisolid mass (technical product). Molecular weight = 416.30; Specific gravity (H_2O:1) = 1.25 @ 20 °C; Freezing/Melting point = 41.2 °C; 70 °C; Vapor pressure = 5.1×10^{-8} mmHg @ 70 °C; 1.7×10^{-9} mmHg @ 20 °C[83]. Very sparingly soluble in water; solubility = 0.041 ppm @ room temp; about 0.01 ppm @ 20 °C.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air:

ACGIH TLV®[1]: (all pyrethrins) 5 mg/m^3 TWA

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. (pyrethrum)

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms. Log K_{ow} = >5. Values above 3.0 are likely to bioaccumulate in aquatic organisms

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, rat) = 57,500 μg/kg.; LD_{50} (dermal, rat) = <2 g/kg.

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic “pneumonia” can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse

Points of Attack: Respiratory system, skin, central nervous system

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with preexisting skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9]. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m^3:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and oxygen and hydrogen chloride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

alpha-Cypermethrin C:1831

Use Type: Insecticide

CAS Number: 67375-30-8; 66841-24-5 (d-trans-β-Cypermethrin); 97955-44-7 (*zeta*-)

Formula: $C_{22}H_{19}Cl_2NO_3$

Synonyms: Alphacypermethrin; (+)-Alphamethrin; *α*-Cyano-3-phenoxybenzyl 3-(2,2-dichlorovinyl)-2,2-dimethylcyclopropanecarboxylate, (±)-*cis* isomer; Cyano(3-phenoxyphenyl)methyl 3-(2,2-dichlorovinyl)-2,2-dimethylcyclopropanecarboxylate, (±)-*cis* isomer; Cyclopropanecarboxylic acid, 3-(2,2-dichloroethenyl)-2,2-dimethyl-, cyano(3-phenoxyphenyl)methyl ester, [1α(S*), 3*α*]-(+)-

Cypermethrin-s: *s*-Cyano(3-phenoxyphenyl)methyl (±)-*cis/trans*-3-(2,2-dichloethenyl)-2,2-dimethylcyclopropane arboxylate; Cyclopropanecarboxylic acid, 3-(2,2-dichloroethenyl)-2,2-dimethyl-, cyano(3-phenoxyphenyl)methyl ester, (*S*)-; Cypermethrin-minus; *zeta*-Cypermethrin

Trade Names: BESTOX®; CONCORD®; DOMINEX®; FASTAC®; FENDONA®; FMC 45497®[C]; NRDC 160®; RENEGADE®; WL-85871®

Cypermethrin-s: FURY® (*s*-isomer); FMC 56701® (*s*-isomer)

Chemical class: Pyrethroid

EPA/OPP PC Code: 209600; 129064; (109702 use code 129064) cypermethrin-*S*

California DPR Chemical Code: 3866

HSDB Number: 6554

UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151

RTECS® Number: GZ1250000

EC Number: Not assigned [*Annex I Index No.:* 607-422-00-x]

Uses: A U.S. EPA restricted Use Pesticide (RUP) (*zeta*-Cypermethrin only). Used for the control of a wide range of chewing and sucking insects (particularly Lepidotera, Coleoptera, and Hemiptera) in fruit (including citrus), vegetables, vines, cereals, maize, beet, oilseed rape, potatoes, cotton, rice, soya beans, forestry, and other crops. Control of cockroaches, mosquitoes, flies, and other insect pests in public health; and flies in animal houses. Also used as an animal ectoparasiticide.

Regulatory Authority and Advisory Information:

Toxicity (oral) Category (*alpha*-): 2, WARNING; Category (*zeta*-): 1, DANGER–POISON

Health Advisory: Endocring Disruptor (S!), Mutagen

U.S. DOT Regulated Marine Pollutant (49 CFR, Subchapter 172.101, Appendix B), severe pollutant

European/International Regulations: Hazard Symbol: T, N; risk phrases: R25; R37; R48/22; R50/53; safety phrases: S1/2; S36/37/39; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Colorless crystalline solid or viscous yellowish-brown semisolid mass. Mild aromatic odor. Molecular weight = 416.30; Specific gravity (H_2O:1) = 1.36 @ 20 °C; Boiling point = 200 °C @ 0.07 mmHg; Freezing/Melting point = 80.5 °C; Vapor pressure = 170 mmHg @ 20 °C. Very low solubility in water; solubility = 0.2 ppm @ 20 °C.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. When heated to decomposition this chemical emits toxic nitrogen oxides and chlorine gas.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. Log K_{ow} = 6.29. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, rat) = <100 mg/kg.; LD_{50} (dermal, rat) = <2 g/kg.

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash, redness, blisters, and itching, even with lower exposures. A severe generalized allergy can occur with weakness and collapse. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Respiratory system, bones, skin, central nervous system

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: This chemical should be labeled "poisonous materials." It falls into Hazard Class 6.1(b).

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: When heated to decomposition it emits toxic fumes of formaldehyde, acrolein, hydrogen cyanide, hydrogen chloride and hydrogen fluoride. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Burn in incinerator specifically designed for pesticide disposal or dispose as a hazardous waste in a landfill approved and licensed for the disposal of pesticides. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

Cyproconazole C:1850

Use Type: Fungicide

CAS Number: 94361-06-5

Formula: $C_{15}H_{18}ClN_3O$

Synonyms: *α*-(4-Chlorophenyl)-*α*-(1-cyclopropylethyl)-1*H*-1,2,4-triazole-1-ethanol; (2*RS*, 3*RS*)-2-(4-Chlorophenyl)-3-cyclopropyl-1-(1*H*-1,2,4-triazol-1-yl)butan-2-ol; 1*H*-1,2,4-Triazole-1-ethanol, *α*-(4-chlorophenyl)-*α*-(1-cyclopropylethyl)-

Trade Names: ALTO®; ALTO®˒ ELITE; ATEMI®; ATEMI-50-SL®;EVIPOL®; FLINT®; NOAH GOLD®; SAN-619 F®; SENTINEL®; SN 108266®

Chemical class: Azole; Triazole

EPA/OPP PC Code: 128993

California DPR Chemical Code: 5105

HSDB Number: 7706

UN/NA & ERG Number: UN3082 (environmentally hazardous substances, liquid, n. o. s.)/171

EC Number: [*Annex I Index No.*: 650-032-00-x]]

Uses: Used to control fungus on cereals, coffee beans; anthracnose and other diseases on turfgrass; used against rust and leaf spot disease.

U.S. Maximum Allowable Residue Levels for Cyproconazole: ***[40 CFR 180.485(a)(1)]*** aspirated grain fractions 2.5 ppm; cattle, fat 0.01 ppm; cattle, meat byproducts (except liver) 0.01 ppm; coffee bean, green (imported) (there are no U.S. registrations as of February 15, 2008 for use on coffee bean.) 0.1 ppm; corn, field, forage 0.60 ppm; corn, field, grain 0.01 ppm; corn, field, stover 1.2 ppm; goat, fat 0.01 ppm; goat, meat byproducts (except liver) 0.01 ppm; horse, fat 0.01 ppm; horse, meat byproducts (except liver) 0.01 ppm; sheep, fat 0.01 ppm; sheep, meat byproducts (except liver) 0.01 ppm; soybean, forage 1.0 ppm; soybean, hay 3.0 ppm; soybean, oil 0.10 ppm; soybean, seed 0.05 ppm; wheat, forage 0.80 ppm; wheat, grain 0.05 ppm; wheat, grain, milled byproducts 0.10 ppm; wheat, hay 1.3 ppm; wheat, straw 0.90 ppm; ***40 CFR 180.485(a)(2)*** milk 0.02 ppm; ***40 CFR 180.485(a)(3)*** cattle, liver 0.50 ppm; goat, liver 0.50 ppm; hog, liver 0.01 ppm; horse, liver 0.50 ppm; sheep, liver 0.50 ppm.

Human toxicity (long-term)[101]: High–1.15894 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Very low–3210.91612 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group 2b, probable carcinogen

Acute Oral Category: 3, CAUTION

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; R63; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Colorless, crystalline solid. Odorless. Molecular weight = 291.78; Specific gravity (H_2O:1) = 1.26; Boiling point = decomposes @ 295–300 °C; Freezing/Melting point = 104–106.5 °C; Vapor pressure = 2.5×10^{-7} mmHg @ 20 °C. Moderately soluble in water.

Incompatibilities: The triazoles are sensitive to heat, friction, and impact. Sensitivity varies with the type substitution to the triazole ring. Metal chelated and halogen substitution of the triazol ring make for a particularly heat sensitive material. Azido and nitro derivatives have been employed as high explosives. No matter the derivative these materials should be treated as explosives[88].

Determination in Water: Log K_{ow} = 2.9–3.1. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, dermal contact

Harmful Effects and Symptoms

Short Term Exposure: Contact may irritate skin and cause eye irritation and possible severe injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. Poisonous if swallowed. LD_{50} (oral, rat) = (male) 1020 mg/kg; (female) 1330 mg/kg[14].

Medical Surveillance: Contact physician if poisoning is suspected or if redness, itching, burning of the skin or eyes develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations

ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high efficiency particulate filter)[88] Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Refrigerate. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not re-enter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned. Do not allow water to get inside containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: See "Incompatibilities" section. Use dry chemical, carbon dioxide; or halon extinguishers. Hazardous decomposition includes toxic oxides of nitrogen and hydrogen chloride gas. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

Cyprodinil C:1860

Use Type: Fungicide

CAS Number: 121552-61-2

Formula: $C_{14}H_{15}N_3$

Synonyms: *N*-(4-Cyclopropyl-6-methyl-pyrimidin-2-yl)-; 4-Cyclopropyl-6-methyl-*N*-phenyl-2-pyrimidinamine; 2-Pyrimidinamine, 4-cyclopropyl-6-methyl-*N*-phenyl-

Trade Names: CGA 219417® technical; CHORUS®; SWITCH®; UNIX®; VANGUARD®

Chemical class: Anilinopyrimidine

EPA/OPP PC Code: 288202

California DPR Chemical Code: 4000

HSDB Number: 7019

UN/NA & ERG Number: UN3077 (solid)/171 or UN3082/171, depending on formulation.

EC Number: Not assigned [*Annex I Index No.:* 612-242-00-x]

Uses: Cyprodinil is applied to the foliage of almonds, grapes, stone fruit crops, and pome fruit crops to control plant diseases. Target fungi for cyprodinil include scab and brown rot blossom

U.S. Maximum Allowable Residue Levels for ciprodinil [(40 CFR 180.532(a)(1)]: almond hulls 0.05 ppm; almond nutmeats 0.02 ppm; apple pomace, wet 0.15 ppm; grapes 2.0 ppm; pome fruit 0.1 ppm; raisins 3.0 ppm; and stone fruit 2.0 ppm. (7/1/2001)

Human toxicity (long-term)[101]: Very low–262.50 ppb, Health Advisory

Fish toxicity (threshold)[101]: Low–160.91666 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA: Not likely to be a human carcinogen

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R43; R50/53; safety phrases: S2, S24; S37, S46; S60; S61 (see Appendix 1)

Description: White crystalline solid or beige powder. Molecular weight = 225.30; Freezing/Melting point = 70–75 °C; Vapor pressure = 5.0×10^{-4} mmHg. Low solubility in water; solubility = 12 mg/L @ 20 °C.

Determination in Water: Log K_{ow} = 3.9–4.0. Values of more than 3.0 are likely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Skin, eye, and respiratory tract irritant. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed.

Long Term Exposure:

Points of Attack: Ski

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition products include toxic nitrogen oxides and oxides of carbon. *On a small fire:* use dry chemical, carbon dioxide or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

Cyromazine C:1870

Use Type: Insecticide (insect growth regulator)

CAS Number: 66215-27-8

Formula: $C_6H_{10}N_6$

Synonyms: *N*-Cyclopropyl-1,3,5-triazine-2,4,6-triamine; 2-Cyclopropylamino-4,6-diamino-*s*-triazine; Cyclopropylmelamine; 2,4-Diamino-6-(cyclopropylamino)-*s*-triazine; 1,3,5-Triazine-2,4,6-triamine, *N*-cyclopropyl-

Trade Names: ARMOR®; CITATION; CGA-72662®; LARVADEX®; PATRON®; TRIGARD®; VETRAZIN®

Chemical class: Triazine

EPA/OPP PC Code: 121301

California DPR Chemical Code: 2286
HSDB Number: 6602
UN/NA & ERG Number: UN3077 (solid)/171
RTECS® Number: ZX1056500
EC Number: 266-257-8

Uses: As an insect growth regulator, cyromazine is fed to caged poultry and is passed through the chicken, leaving a residue in the manure. The chemical controls the growth of the fly larvae developing in the manure. Used as a foliar spray to control leaf miners in vegetables, mushrooms, potatoes and ornamentals and to control flies on animals.

U.S. Maximum Allowable Residue Levels for Cyromazine 40 CFR 180.414(a)(1): bean, dry, except cowpea 3.0 ppm; bean, lima 1.0 ppm; broccoli 1.0 ppm; cabbage, abyssinian 10.0 ppm; cabbage, seakale 10.0 ppm; cattle, fat 0.05 ppm; cattle, kidney 0.2 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts, except kidney 0.05 ppm; egg 0.25 ppm; garlic, bulb 0.2 ppm; garlic, great-headed, bulb 0.2 ppm; goat, fat 0.05 ppm; goat, kidney 0.2 ppm; goat, meat 0.05 ppm; goat, meat byproducts, except kidney 0.05 ppm; hanover salad, leaves 10.0 ppm; hog, fat 0.05 ppm; hog, kidney 0.2 ppm; hog, meat 0.05 ppm; hog, meat byproducts, except kidney 0.05 ppm; horse, fat 0.05 ppm; horse, kidney 0.2 ppm; horse, meat 0.05 ppm; horse, meat byproducts, except kidney 0.05 ppm; leek 3.0 ppm; mango (there are no U.S. registrations on mango as of May 4, 2000) 0.3 ppm; milk 0.05 ppm; mushroom 1.0 ppm; onion, dry bulb 0.2 ppm; onion, green 3.0 ppm; onion, potato 3.0 ppm; onion, tree 3.0 ppm; onion, welsh 3.0 ppm; pepper 1.0 ppm; potato 0.8 ppm; poultry, fat (from chicken layer hens and chicken breeder hens only) 0.05 ppm; poultry, meat (from chicken layer hens and chicken breeder hens only) 0.05 ppm; poultry, meat byproducts (from chicken layer hens and chicken breeder hens only) 0.05 ppm; rakkyo, bulb 0.2 ppm; shallot, bulb 0.2 ppm; shallot, fresh leaves 3.0 ppm; sheep, fat 0.05 ppm; sheep, kidney 0.2 ppm; sheep, meat 0.05 ppm; sheep, meat byproducts, except kidney 0.05 ppm; tomato 0.5 ppm; turnip, greens 10.0 ppm; vegetable, brassica, leafy, group 5, except broccoli 10.0 ppm; vegetable, leafy, except brassica, group 4, 7.0 ppm; vegetable, cucurbit, group 9, 1.0 ppm; ***[40 CFR 180.414(a)(2)]***; cyromazine may be safely used in accordance with the following conditions: (i) It is used as a feed additive only in feed for chicken layer hens and chicken breeder hens at the rate of not more than 0.01 pound of cyromazine per ton of poultry feed. (ii) It is used for control of flies in manure of treated chicken layer hens and chicken breeder hens. (iii) Feeding of-treated feed must stop at least 3 days (72 hours) before slaughter. If the feed is formulated by any person other than the end user, the formulator must inform the end user, in writing, of the 3-day (72 hours) preslaughter interval. (iv) To ensure safe use of the additive, the labeling of the pesticide formulation containing the feed additive shall conform to the labeling which is registered by the U.S. Environmental Protection Agency, and the additive shall be used in accordance with this registered labeling. (v) Residues of cyromazine are not to exceed 5.0 ppm in poultry feed. ***[40 CFR 180.414(d)]***: Cotton, undelinted seed 0.1 ppm; corn, sweet, kernel plus cob with husks removed 0.5 ppm; corn, sweet, forage 0.5 ppm; corn, sweet, stover 0.5 ppm; radish, root 0.5 ppm; radish, tops (leaves) 0.5 ppm

Human toxicity (long-term)[101]: Low–52.50 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–22450.18892 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
Carcinogenicity: EPA Group E, evidence of non-carcinogenicity for humans.
Acute Oral Category: 4, Caution
European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: White crystalline solid. Odorless. Molecular weight = 166.18; Specific gravity (H_2O:1) = 1.35; Freezing/Melting point = 225 °C; Vapor pressure = 3.36×10^{-9} mmHg @ 20 °C. Soluble in water; solubility = 1%.

Incompatibilities: Incompatible with oxidizers, acids, acid chlorides, acid halides, isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides. Contact with strong reducing agents such as halides may generate explosive a flammable gas.

Routes of Entry: Inhalation, passing through the skin, ingestion

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >3 g/kg; LD_{50} (dermal, rat) = >3 g/kg.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks of tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic

Points of Attack: Liver, lungs and skin. May cause reproductive and fetal effects.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition products include toxic nitrogen oxides and oxides of carbon. *On a small fire:* use dry chemical, carbon dioxide or foam. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

California DPR Chemical Code: 636
HSDB Number: 202; 7309 (EHE); None (DEA)
UN/NA & ERG Number: UN3345 (solid)/153; UN3348 (liquid)/153; UN2765/152[86]
RTECS® Number: AG6825000
EC Number: 202-361-1 [*Annex I Index No.:* 607-039-00-8]
Uses: 2,4-Dichlorophenoxyacetic acid was introduced as a plant growth-regulator in 1942. 2, 4-D is the most widely used herbicide in the United States and its used in more than 100 countries. It is registered in the United States as a herbicide for control of broadleaf plants and as a plant growth-regulator. There are many forms or derivatives of 2,4-D including esters, amines, and salts. It is used in cultivated agriculture, in pasture and rangeland applications, forest management, home, garden, and to control aquatic vegetation. It may be found in emulsion form, in aqueous solutions (salts), and as a dry compound. The product *Agent Orange*, made by Monsanto Chemical and used extensively throughout Vietnam, was about 50% 2,4-D. However, the controversies associated with the use of *Agent Orange* involved a contaminant (dioxin) in the 2,4,5-T component of the defoliant. In 1964 *Agent Orange* replaced *Agent Purple* a mixture of the *n*-butyl esters of 2,4-D and 2,4,5-T plus the isobutyl ester of 2,4,5-T.
U.S. Maximum Allowable Residue Levels for 2,4-D [40 CFR 180.142(a)(1)]: See also Hazardous Substance Data Bank, Number: 202 @ http://toxnet.nlm.nih.gov/cgi-bin/sis/search/f?./temp/~geopv R:1: in or on raw agricultural commodities as follows: apples 5 ppm; apricots 5 ppm; citrus fruits 5 ppm; pears 5 ppm; potatoes 0.2 ppm; and quinces 5 ppm; preharvest application 2,4-D dimethylamine salt apricots 5 ppm; 2,4-D from the preharvest application of 2,4-D isopropyl ester and 2,4-D butoxyethyl ester and from the postharvest application of 2,4-D alkanolamine salts and 2,4-D isopropyl ester citrus fruits 5 ppm; ***[40 CFR 180.142(a)(2)]*** barley, grain 0.5 ppm; blueberries 0.1 ppm; corn, fodder 20 ppm; corn, forage 20 ppm; corn, fresh, sweet (kernel plus cob with husk removed) 0.5 ppm; corn, grain 0.5 ppm; cranberries 0.5 ppm; grapes 0.5 ppm; grass hay 300 ppm; grasses, pasture 1,000 ppm; grasses, rangeland 1,000 ppm; millet, forage 20 ppm; millet, grain 0.5 ppm; millet, straw 20 ppm; nuts 0.2 ppm; oats, forage 20 ppm; oats, grain 0.5 ppm; pistachios 0.2 ppm; rice 0.1 ppm; rice, straw 20 ppm; rye, forage 20 ppm; rye, grain 0.5 ppm: sorghum, fodder 20 ppm; sorghum, forage 20 ppm; sorghum, grain 0.5 ppm; stone fruits 0.2 ppm; sugarcane 2 ppm; sugarcane, forage 20 ppm; wheat, forage 20 ppm; and wheat, grain 0.5 ppm. ***[40 CFR 180.142(a)(2)(i)]*** the inorganic salts: ammonium, lithium, potassium, and sodium; (B) the amine salt: alkanolamines of the ethanol and isopropanol series (C-12), alkyl (C-13), alkyl (C-14), alkylamines derived from tall oil, amylamine, diethanolamine, diethylamine, diisopropanolamine, dimethylamine, N,N-dimethyllinoleylamine, N,N-dimethyloleyamine, ethanolamine, ethylamine, heptylamine, isopropanolamine, isopropylamine, linoleylamine, methylamine, morpholine, octylamine,

(Residues on all the above may result from application of 2,4-D in acid form, or in the form of one or more of the following esters: amyl (pentyl), butoxyethoxypropyl, butoxyethyl, butoxypolythylene glycol butyl ether, butoxypropyl, butyl, dipropylene glycol isobutyl ether, ethoxyethoxyethyl, ethoxyethoxypropyl, ethyl, ethoxypropyl, isobutyl, isooctyl (including, but not limited to, 2-ethylhexyl, 2-ethyl-4-methylpentyl, and 2-octyl), isopropyl, methyl, polyethylene glycol 200, polypropoxybutyl, polypropylene glycol, propylene glycol, propylene glycol butyl ether, propylene glycol isobutyl ether, tetrahydrofurfuryl, and tripropylene glycol isobutyl ether.) ***Regional registration, as defined in section 180.1(n) [40 CFR 180.142(a)(10)]:*** on the following raw agricultural commodity: raspberries, 1.0 ppm. ***The following tolerances are established for residues of 2,4-D (2,4-dichloro-phenoxyacetic acid) in the following processed feeds. Such residues may be present therein only as a result of application to the growing crop of the herbicides identified in this section: [40 CFR 180.142(a)(12)]:*** (i) in sugarcane bagasse 5 ppm; sugarcane molasses 5 ppm. (ii) in the milled fractions derived from barley, oats, rye and wheat to be ingested as animal feed or converted into animal feed, 2 ppm. ***[40 CFR 180.142(a)(13)]:*** in sugarcane molasses, resulting from application of the herbicide to sugarcane fields 5 ppm; ***[40 CFR 180.142(a)(13) (ii)]*** in the milled fractions (except flour) derived from barley, oats, rye, and wheat to be ingested as food or to be converted to food. Such residues may be present therein only as a result of application to the growing crop of the herbicides identified in ***40 CFR 180.142***. ***[40 CFR 180.142(a)(13) (iii)]:*** 0.1 ppm (negligible residue) in potable water. Such residues may be present therein only: (A) As a result of the application of the dimethylamine salt of 2,4-D to irrigation ditch banks in the Western United States to programs of the Bureau of Reclamation; cooperating water user organizations; the Bureau of Sport Fisheries, U.S. Department of the Interior; Agricultural Research Services, U.S. Department of Agriculture; and the Corps of Engineers, U.S. Department of Defense. (B) As a result of the application of the dimethylamine salt of 2,4-D for water hyacinth control in ponds, lakes, reservoirs, marshes, bayous, drainage ditches, canals, rivers and streams that are quiescent or slow moving in programs of the Corps of Engineers or other Federal, State, or local public agencies. (C) As a result of application of its dimethylamine salt or its butoxyethanol ester for Eurasian watermilfoil control in programs conducted by the Tennessee Valley Authority in dams and reservoirs of the TVA system. (7/1/2001).

Human toxicity (long-term)[101]: Low–70.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)[101]: Very low–4247.00420 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group D, Not classifiable as to human carcinogenicity. ACGIH A4, not classified as a human carcinogen.

Acute Oral Category: 2, WARNING; Category: 3, CAUTION[86] (based on formulation)

Health Advisory: Mutagen, Endocrine disruptor (S!)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active], includes salts: 2,4-D, 2-ethylhexyl ester; 2,4-D, diethanolamine salt; 2,4-D, dimethylamine salt; 2,4-D, isooctyl ester

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)

Reportable Quantity (RQ): 100 lb (45.5 kg)

U.S. EPA Hazardous Waste Number (RCRA No.): D016 & U240

RCRA Toxicity Characteristic (Section 261.24), Maximum Concentration of Contaminants, regulatory level, 10.0 mg/L

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.72; Nonwastewater (mg/kg), 10

RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8150 (10)

Safe Drinking Water Act: MCL, 0.1 mg/L; MCGL, 0.07 mg/L; Regulated chemical (47 FR 9352) as 2,4-D

CERCLA/SARA 313: Form R *de minimis* concentration reporting level: 1.0%

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)

European/International Regulations: Hazard Symbol: Xn; risk phrases: R22; R37; R41; R43; safety phrases: S2; S24; S25; S26; S36/37/39; S46; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: 2,4-Dichlorophenoxyacetic acid is a white to yellow crystalline powder with a slight phenolic odor. Molecular weight = 221.04; Specific gravity (H_2O:1) = 1.563 @ 20°C; Boiling point = (decomposes) below BP @ 158°C; Freezing/Melting point = 140.5°C; Vapor pressure = 8×10^{-6} mmHg[83]; 0.4 mmHg @ 160°C[9]. Heat of Combustion = (est.) –7,700 Btu/lb = –4,300 cal/g = -180×105 J/kg. Slightly soluble in water; solubility = 0.05%. 2,4D-DEA (diethanolamine salt, CAS: 5742-19-8) is a cream-colored powder. Molecular weight = 326.18; Vapor pressure = 9.98×10^{-8} mmHg. Solubility in water = 8.1×10^{5} mg/L

2,4-D-EHE (ethylhexyl ester, CAS: 1928-43-4) is a yellow to dark amber liquid. Sweet odor. Molecular weight = 333.28; Boiling point = (decomposes); Vapor pressure = 3.6×10^{-6} mmHg. Solubility in water = 8.7×10^{-2} mg/L.

Incompatibilities: A weak acid, incompatible with bases. Decomposes in sunlight or heat, forming hydrogen chloride and phosgene. Contact with strong oxidizers may cause fire and explosions. Attacks metals and painted surfaces. Vapors of the EHE ester may form an explosive mixture with air.

Permissible Exposure Limits in Air: OSHA PEL: 10 mg/m^3 TWA

NIOSH REL: 10 mg/m^3 TWA

ACGIH TLV®[1]: 10 mg/m^3 TWA; not classifiable as a human carcinogen

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 14 mg/m^3
PAC-2: 140 mg/m^3
PAC-3: 500 mg/m^3

2,4-D, including salts and esters

DFG MAK: 1 mg/m^3, inhalable fraction TWA; Peak limitation Category II(8) [skin]; Pregnancy Risk Group C

Determination in Air: Collection on a glass fiber filter and analysis by HPLC with ultraviolet detection. See NIOSH Method #5001[18]

Permissible Concentration in Water: Federal Drinking Water Guidelines: 70 ppb[93]

Determination in Water: Filter; Methanol; high-pressure liquid chromatography/Ultraviolet detection; NIOSH IV Method #5001[18]. The taste and odor threshold in water is 3.13 mg/L. Log K_{ow} = ranges from 2.8 for the acid to 5.8 for (EHE). Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and eye contact

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation:* May cause irritation of the mouth, nose and throat, headache, nausea, vomiting, and diarrhea at levels above 10 mg/m^3. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposures may result in death. *Skin:* Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. *Eyes:* Irritation may occur. *Ingestion:* The oral dose (human) required to produce symptoms is about 1/12 ounce (1/2 teaspoon). Increasing amounts may result in increasingly severe symptoms as listed above. Death has resulted from as little as 1/5 ounce. Survival for more than 48 hours is usually followed by complete recovery although symptoms may last for several months. LD_{50} (oral, human) = 80 mg/kg[86]; LD_{50} (oral, rat) = 375[86] – >1600 mg/kg.

Long Term Exposure: Workers exposed to 2,4-D in the manufacturing process over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. May cause tumors. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, 2,4-D may affect human reproduction. May cause skin sensitization. May be neurotoxic.

Points of Attack: Skin, central nervous system, liver, kidneys, skin. Reproductive cells.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. **8 hr** (more than 8 hours of resistance to breakthrough >0.1 μg/cm²/min): natural rubber gloves, Neoprene™ rubber gloves, suits, boots; nitrile rubber gloves, suits, boots; polyvinyl alcohol gloves. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 14 mg/m^3. NIOSH: *100 mg/m³:* Any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter [the following filters may also be used: N99, R99, P99, N100, R100, P100]; or GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter); or Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece); or SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting face-piece and is operated in a continuous-flow mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a dark, cool, well-ventilated area. Keep away from oxidizers, heat, and sunlight. A regulated, marked area should be established where this chemical is stored in compliance with OSHA Standard 1910.1045.

Shipping: Phenoxyacetic acid derivative pesticides require a shipping label of "poisonous materials" and fall in Hazard Class 6.1, Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: 2,4-Dichlorophenoxyacetic acid ester may burn, but does not readily ignite. Hazardous decomposition includes oxides of carbon, hydrogen chloride and phosgene. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration of phenoxys is effective in 1 second @ 982°C, using a straight combustion process, or @ 482°C using catalytic combustion. Over 99% decomposition was reported when small amounts of 2,4-D were burned in a polyethylene bag. See "References" for additional detail. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices.

Daminozide D:0120

Use Type: Plant growth regulator
CAS Number: 1596-84-5
Formula: $C_6H_{12}N_2O_3$
Synonyms: Butanedioic acid mono(2,2-dimethylhydrazide); DIMAS; *N*-Dimethyl amino-β-carbamyl propionic acid; *N*-(Dimethylamino)succinamic acid; DMSA; NCI-C03827; Succinic acid, 2,2-dimethylhydrazide; Succinic-1,1-dimethyl hydrazide
Trade Names: ALAR®; ALAR-85®; AMINOZID®; AMINOZIDE®; B-9®; B-995®; B-NINE®; DAZIDE®; DAZIDE®; ENHANCE®; DIMAS®; KYLAR®; SADH®
Chemical Class: Azo, Diazo, Azido compounds
EPA/OPP PC Code: 035101
California DPR Chemical Code: 7
HSDB Number: 1769
UN/NA&ERG Number: UN2811 (toxic solid, organic, n.o.s.)/154
RTECS® Number: WM9625000
EC Number: 216-485-9

Uses: Daminozide is a systemic growth regulator registered for use on ornamentals, including potted chrysanthemums and poinsettias, and bedding plants in enclosed structures. U.S. sales for food and feed crops were halted in 1989 because of health considerations, i. e., the Alar scare on apples.

Human toxicity (long-term) ***[101]:*** Intermediate–40.22989 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold) ***[101]:*** Very low–31007.43129 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
Carcinogenicity: EPA Group B2, Probable human carcinogen.
California Proposition 65 Chemical: Carcinogen (January 1, 1990)
Health Advisory: Mutagen
Acute Oral Category: 4, Caution

Description: White crystalline solid or water soluble powder. Molecular weight = 160.20; Boiling point = decomposes @ 142°C;. Freezing/Melting point =154°C; Vapor pressure = 1×10^{-8} mmHg @ 20°C; <7.50×10^{-5} mmHg @

20°C[88]. Soluble in water; solubility = 100 g/kg @ 25°C; 1–10 mg/mL @ 23.9°C[88].

Incompatibilities: Keep material away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin, as it may generate toxic gases. Contact with alkali metals may generate flammable gases. May corrode metals, especially in the presence of moisture.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].

Determination in Water: Log K_{ow} = very low. Unlikely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: However, daminozide metabolizes to diamethylhydrazine, which is a proven carcinogen in animal tests. In has a low dermal irritation potential and it is neither teratogenic nor mutagenic[55]. It is not an acute toxin to fish or wildlife. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause reproductive and fetal effects. May cause tumors.

Points of Attack: Reproductive cells. Reproductive system.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: **Skin:** Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help ensure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eyes*: Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20–30 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* If convulsions are not present, give a glass or two of water or milk to dilute the substance. Ensure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with daminozide you should be trained on its proper handling and storage. Store in a cool, dry place or in a refrigerator. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration in a unit with efficient gas scrubbing. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dazomet D:0132

Use Type: Insecticide, Herbicide, Fumigant, Fungicide, Nematicide

CAS Number: 533-74-4

Formula: $C_5H_{10}N_2S_2$

Synonyms: Caswell No. 840; Dimethylformocarbothialdine; 3,5-Dimethylperhydro- 1,3,5-thiadiazin-2-thion (Czech, German); 3,5-Dimethyl- 1,2,3,5- tetrahydro-1,3,5-thiadiazinethione-2; 3,5-Dimethyltetrahydro -1,3,5-2*H*-thiadiazine-2-thione; 3,5-Dimethyltetrahydro-1,3,5-thiadiazine-2-thione; 3,5-Dimethyl-1,3,5-thiadiazinane-2-thione; 3,5-Dimethyl-2-thionotetrahydro-1,3,5-thiadiazine; DMTT; Tetrahydro-2*H*-3,5-dimethyl-1,3,5-thiadiazine-2-thione; Tetrahydro-3,5-dimethyl-1,3,5-thiadiazine-2-thione; Tetrahydro-3,5-dimethyl-2*H*-1,3,5-thiadiazine-2-thione; 2*H*-1,3,5-Thiadiazine-2-thione, tetrahydro-3,5-dimethyl-; 2-Thio-3,5-dimethyltetrahydro-1,3,5-thiadiazine

Trade Names: AMA-20®, Kemira Chemicals (Finland); BASAMID®; BASAMID® G; BASAMID®-GRANULAR; BASAMID® P; BASAMID-PUDER®; CARBOTHIALDIN®; CARBOTHIALDINE®; CRAG®; CRAG® FUNGICIDE 974; CRAG® NEMACIDE; DAZOMET®-POWDER BASF; FENNOSAN® B 100; MICO-FUME®; MYLON®; MYLONE®; MYLONE® 85; N 521®; NALCON 243®; PREZERVIT®; STAUFFER N® 521; THIADIAZIN® (PESTICIDE); TIAZON®; TROYSAN® 142; UCC 974®

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 035602

California DPR Chemical Code: 233

HSDB Number: 1642

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: XI2800000

EC Number: 208-576-7 [*Annex I Index No.*613-008-00-X]

Uses: Dazomet is a soil fumigant used against germinating weed seeds, soil insects, nematodes, and soil-borne diseases in forest nursery seed beds, tobacco crops, greenhouse crops, and substrates for potted plants, turf, and ornamentals. It is also used as an antimicrobial agent for slimicide preparations and for adhesives, paper-mill slimicide, paint, and cooling water slimicides.

Human toxicity (long-term)[101]: Intermediate–24.500 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–16.769960 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group D, Not classifiable as a human carcinogen

Health Advisory: Skin irritant/sensitizer

Acute Oral Category: 2, WARNING

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPA Hazardous Waste Number (RCRA No.): U366

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R36; R50/53; safety phrases: S2, S15; S22, S24; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: White crystalline solid. Nearly odorless. Molecular weight = 162.27; Freezing/Melting point = 102–105°C (decomposes prior to boiling); Vapor pressure = 3.2×10^{-6}mm @ 20°C. Flash point = 93°C. Combustible in dust form. Highly soluble in water; solubility = 1300 mg/L @ 25°C.

Incompatibilities: Sensitive to moisture and heat. Decomposes on heating above 102°C, producing toxic fumes including nitrogen oxides and sulfur oxides. Decomposes on contact with acids, producing carbon disulfide. Decomposes on contact with water or moisture, producing toxic gases. Flammable gases are generated by the combination of dithiocarbamates with aldehydes, nitrides, and hydrides. Dithiocarbamates are incompatible with acids, peroxides, and acid halides.

Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = 1.38. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Absorbed through the skin, inhalation, ingestion

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. Irritates skin and a severe eye irritant. Poisonous if swallowed. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. LD_{50} (oral, rat) = 300–350 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Skin sensitizer. May cause liver damage.

Points of Attack: Skin, liver (possible toxin).

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Where potential exists for exposures over 2 mg/m^3, use an NIOSH/MSHA- or European Standard EN 149-approved full facepiece respirator with a pesticide cartridge. Increased protection is obtained from full facepiece air-purifying respirators. If while wearing a filter, cartridge or canister respirator, you can smell, taste, or otherwise detect disulfiram, or in the case of a full facepiece respirator you experience eye irritation, leave the area immediately. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter, cartridge, or canister. If the seal is no longer good, you may need a new respirator. *Where potential for high exposures exists*, use an NIOSH/MSHA- or European Standard EN 149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous flow mode; or use an NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus with a full facepiece operated in the pressure-demand or other positive-pressure mode.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Extinguish fire using an agent suitable for type of surrounding fire. Disulfiram itself does not burn readily. Poisonous gases are produced in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. A potential candidate for liquid injection incineration at a temperature range of 650 to 1,600 °C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1,600°C and residence times of seconds for liquids and gases, and hours for solids[83]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

2,4-DB D:0133

Use Type: Herbicide
CAS Number: 94-82-6
Formula: $C_{10}H_{10}Cl_2O_3$
Synonyms: Acido 2,4-diclorofenoxibutirico (Spanish); 2,4-D butyric; Butanoic acid, 4-(2,4-dichlorophenoxy)-; Butyric acid, 4-(2,4-dichlorophenoxy)-; Caswell No. 316; 4-(2,4-DB); 4-(2,4-Dichlorophenoxy)butyric acid; γ-(2,4-Dichlorophenoxy)butyric acid; 2,4-DM
Trade Names: BUTIREX®; BUTORMONE®; BUTOXON®; BUTOXONE®; BUTOXONE® ESTER; BUTOXONE® AMINE; BUTYRAC®; BUTYRAC® 118; BUTYRAC® 200; BUTYRAC® ESTER; CAMPBELL'S® DB STRAIGHT; CAMPBELL'S® REDLEGOR; DESORMONE® 2,4, DB; EMBUTOX KLEAN-UP®; EMBUTONE®; EMBUTOX®; LEGUMEX® D
Chemical Class: Chlorophenoxy; Aryloxyalkanoic acid
EPA/OPP PC Code: 030801
California DPR Chemical Code: 5020
HSDB Number: 6603
UN/NA & ERG Number: UN3077 (solid)/171
RTECS® Number: ES9100000
EC Number: 202-366-9 [Annex I Index No.: 607-083-00-8]
Uses: 2,4-DB is a selective systemic herbicide used to control annual and perennial broadleaf weeds in many field crops such as alfalfa, peanuts, cereals and soybeans; used as a defoliant. In the plant, the compound changes to 2,4-D and inhibits growth at the tips of stems and roots.
Human toxicity (long-term)[101]: Low–70.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Low–269.85657 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity: EPA, Not likely to be carcinogenic to humans; IARC, Group 2b, Possibly carcinogenic to humans.
California Proposition 65 Chemical: Developmental toxin, male; delisted (1/1/2005)
Health Advisory: Mutagen, Developmental/ Reproductive Toxin (?), Endocrine disruptor (S!)
Acute Oral Category: 2, WARNING
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides.
The "Director's List" (CAL/OSHA) as chlorophenoxy pesticides.
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R51/53; safety phrases: S2; S25; S29; S46; S61 (see Appendix 1)
Description: White to light-brown crystalline solid. May be shipped as a concentrate to be mixed with water and used as a spray. Slight phenolic odor. Molecular weight = 249.09; Boiling point = 324°C; Freezing/Melting point =115–119°C; Vapor pressure = 3.5×10^{-6} mmHg @ 25°C (est); 9.44×10^{-3} mmHg @ 25°C. Highly soluble in water.
Incompatibilities: 2,4-DB is a weak organic acid. Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Corrosive to iron, aluminum, zinc, and possibly other metals, especially in the presence of moisture.
Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].
Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, ingestion, absorbed through the skin.
Harmful Effects and Symptoms
Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. LD_{50} (oral, rat) = 700–800 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.
Long Term Exposure: Workers exposed to chlorophenoxy compounds over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction
Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. See a physician if poisoning is suspected or if redness, itching, or burning of the skin or eyes develop
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention.

Do not induce vomiting when formulations containing petroleum solvents are ingested. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition in fire produces toxic hydrogen chloride fumes. *On a small fire:* use dry chemical powder, carbon dioxide or alcohol-resistant foam. *On a large fire:* use water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

DCPA D:0136

Use Type: Herbicide, Pesticide

CAS Number: 1861-32-1

Formula: $C_{10}H_6Cl_4O_4$

Synonyms: Chlorthal-dimethyl; Chlorthal-methyl; Dimethyl tetrachloroterephthalate; Dimethyl 2,3,5,6-tetrachloroterephthalate; Chlorthal dimethyl; 2,3,5,6-Tetrachloro-1,4-benzenedicarboxylic acid, dimethyl ester; Tetrachloroterephthalic acid, dimethyl ester

Note: "DCPA" is also a synonym for Propanil (CAS 709-98-8)

Trade Names: ACME® DCPA; DAC 893; DACTHAL; DACTHAL® W-75; DECIMATE® (with Propachlor); FATAL®, GREEN WEEDER®

Chemical Class: Alkyl Phthalate; Benzenedicarboxylic acid

EPA/OPP PC Code: 078701

California DPR Chemical Code: 179

HSDB Number: 358

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: WZ1500000

EC Number: 217-464-7

Uses: This pre-emergent herbicide is used on annual broadleaf weeds and grasses in a wide spectrum of vegetable crops.

U.S. Maximum Allowable Residue Levels for Chlorthal-dimethyl and its metabolites monoethyl tetrachloroterephthalate and tetrachloroterephthalic acid (calculated as dimethyl tetrachloroterephthalate) [40 CFR 180.185(a)]: in or on the following raw agricultural commodities: Beans (field, dry; mung, dry; snap, succulent) 2 ppm; broccoli 1 ppm; brussels sprouts 1 ppm; cabbage 1 ppm; cantaloups 1 ppm; cauliflower 1 ppm; collards 2 ppm; corn (field, fodder and forage) 0.4 ppm; corn (grain (including field and pop)) 0.05 ppm; corn (pop, fodder and forage) 0.4 ppm; corn (sweet (K+CWHR)) 0.05 ppm; corn (sweet, fodder and forage) 0.4 ppm; cottonseed 0.2 ppm; cress (upland) 5 ppm; cucumbers 1 ppm; eggplant 1 ppm; garlic 1 ppm; honeydew melons 1 ppm; horseradish 2 ppm; kale 2 ppm; lettuce 2 ppm; mustard (greens) 5 ppm; onions 1 ppm; peas (southern, black-eyed) 2 ppm; peppers 2 ppm; pimentos 2 ppm; potatoes 2 ppm; rutabagas 2 ppm; soybeans 2 ppm; squash (summer and winter) 1 ppm; strawberries 2 ppm; sweet potatoes 2 ppm; tomatoes 1 ppm; turnips 2 ppm; turnips (greens) 5 ppm; vegetables (leafy, Brassica (cole)) 5 ppm; watermelons 1 ppm; and yams 2 ppm; ***[40 CFR 180.185(b)]*** in or on the following raw agricultural commodities: radish (roots) 2 ppm; and radish (tops) 15 ppm. (7/1/94).

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group C, Possible human carcinogen.

Health Advisory: Developmental/Reproductive Toxin, Endocrine disruptor (S!) (some alkyl phthalates)

Acute Oral Category: 3, CAUTION

Washington state requires supplemental labeling as DACTHAL® W-75

European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S61 (see Appendix 1)

Description: Colorless to gray crystalline solid. Practically odorless. Molecular weight 331.96; Specific gravity (H_2O:1) = 1.56; Boiling point = 345°C; Freezing/Melting point = 156°C; Vapor pressure <0.4 mmHg @ 30°C. Practically insoluble in water; solubility = 0.5 ppm @ 25°C.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 70 ppb[93].

Determination in Water: EPA Methods 8081, 608.2, 515.2; Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms. State Drinking Water Guidelines: Arizona 3500 μg/l; California 3500 μg/l; Washington 530 μg/L; Wisconsin 70 μg/L[83].

Routes of Entry: Inhalation, ingestion. Absorbed through the intact skin

Harmful Effects and Symptoms

Short Term Exposure: Symptoms include apprehension, anxiety, confusion, nervous excitation; dizziness; headache; numbness and weakness in limbs; muscle twitching, tremors; nausea and vomiting; slow, shallow respiration, bluish face; convulsions; loss of consciousness; breathing stops; death. LD_{50} (oral, rat) = >3 g/kg; LD_{50} (dermal, rabbit) = >10 g/kg.

Long Term Exposure: May cause reproductive and fetal effects. May affect lungs, thyroid, liver, kidneys. May cause skin sensitization.

Points of Attack: Reproductive cells. Lungs, liver, thyroid, skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: *Eyes:* Speed in removing material from skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Directly, irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Get medical aid immediately. Have physician check for possible delayed damage. *Skin:* Get medical aid. Skin and/or eye contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. Shampoo hair promptly if contaminated; protect eyes. Do not scrub skin or hair, since this can increase absorption through the skin. Rinse thoroughly with water. Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs many organochlorines; therefore, items such as leather shoes, gloves, and belts should be discarded. If the skin is swollen or inflamed, cool affected areas with cold compresses. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do not induce vomiting.* * In cases of ingestion, the patient is at risk of central nervous system depression or seizures, which may lead to pulmonary aspiration during vomiting. If the victim is conscious and able to swallow, *administer an aqueous slurry of activated charcoal at 1 g/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. The efficacy of activated charcoal for some organochlorine poisoning (such as chlordane) is uncertain. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do not give activated charcoal* <u>before or with</u> *ipecac syrup. Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately remove the victim from the contaminated area to fresh air. For inhalation exposures, monitor for respiratory distress. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. If breathing is difficult, administer 100% humidified supplemental oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended

Personal Protective Methods: Wear acid-resistant protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield when working with liquids or dust-proof goggles and faceshield when working with powders or dusts, unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposures *over 1 ppm*, use an NIOSH/MSHA- or European Standard EN 149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use an NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizing agents; acid hydrides, and strong bases.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: *Liquid or wettable powder:* Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Powder: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Poisonous gases, including chlorine, are produced in fire. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration in a unit with efficient gas scrubbing. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

DDT D:0140

Use Type: Insecticide
CAS Number: 50-29-3 (*p,p'*-DDT); 789-02-6 (o,p'-DDT)
Formula: $C_{14}H_9Cl_5$
Synonyms: Benzene, 1,1'-(2,2,2-trichloroethylidene) bis(4-chloro); α,α-Bis(*p*-chlorophenyl)-β,β,β-trichlorethane; 1,1-Bis-(*p*-chlorophenyl)-2,2,2-trichloroethane; 2,2-Bis(*p* -chlorophenyl)-1,1-trichloroethane; Chlorophenothan; Chlorophenothane; α-Chlorophenothane; Chlorophenotoxum; Dichlorodiphenyl trichloroethane 2,2-Bis(*p*-chlorophenyl)-1,1,1-trichloroethane; *p,p*'-DDT; 4,4' DDT; Dichlorodiphenyltrichloroethane; *p,p*'-Dichlorodiphenyltrichloroethane; 4,4'-Dichlorodiphenyltrichloroethane; Diclorodifeniltricloroetano (Spanish); Diphenyltrichloroethane; ENT 1,506; Ethane, 1,1,1-trichloro-2,2-bis(*p*-chlorophenyl)-;NA2761;NCI-C00464;OMS 16; Parachlorocidum; PEB1; Pentachlorin; Trichlorobis(4-chlorophenyl)ethane; 1,1,1-Trichloro-2,2-bis(*p*-chlorophenyl) ethane; 1,1,1-Trichloro- 2,2-di(4-chlorophenyl)-ethane
Trade Names: ARKOTINE®; AGRITAN®; ANOFEX®; AZOTOX®; BOSAN SUPRA®; BOVIDERMOL®; CESAREX®; CITOX®; CLOFENOTANE®; DEDELO®; DICOPHANE®; DIDIGAM®; DIDIMAC®; DINOCIDE®; DODAT®; DYKOL®; ESTONATE®; GENITOX®; GESAFID®; GESAPON®; GESAREX®; GESAROL®; GENITOX®; GEXAREX®; GUESAPON®; GUESAROL®; GYRON®; HAVERO-EXTRA®; HILDIT®; IVORAN®; IXODEX®; KOPSOL®; MUTOXIN; NEOCID®; NIAGARA ZINEB®[C]; PENTECH®; PZEIDAN®; R 50®; RUKSEAM®; SANTOBANE®; ZEIDANE®; ZERDANE®
Chemical Class: Organochlorine
EPA/OPP PC Code: 029201
California DPR Chemical Code: 186
HSDB Number: 200
UN/NA & ERG Number: UN2761 (solid)/151
RTECS® Number: KJ3325000
EC Number: 200-024-3 [*Annex I Index No.:* 602-045-00-7]
Uses: Banned for use in EU (also export). DDT was banned form use in the U.S. on December 31, 1972, but it is still used in some other countries, primarily in the subtropics to control malaria. DDT is an organochlorine insecticide used mainly to control mosquito-borne malaria. It was extensively used during the Second World War among Allied troops and certain civilian populations to control insect typhus and malaria vectors, bubonic plague and body lice and was then extensively used as an agricultural insecticide after 1945. By 1970, the Bald Eagle and the Osprey population in the U.S. were near extinction. DDT was banned for use in Sweden in 1970 and in the United States in 1972. DDT is a relatively low-cost broad-spectrum insecticide. However, following an extensive review of health and environmental hazards of the use of DDT, U.S. EPA decided to ban further use of DDT in December 1972. This decision was based on several properties of DDT that had been well evidenced: (1) DDT and its metabolites are toxins with long-term persistence in soil and water; (2) it is widely dispersed by erosion, runoff and volatization; and (3) the low water solubility and high lipophilicity of DDT result in concentrated accumulation of DDT in the fat of wildlife and humans which may be hazardous. Nevertheless, DDT is used to control malaria in subtropical countries, in Africa and some South American locales, where malaria in of epidemic proportions.
Human toxicity (long-term)[101]: High–1.02941 ppb, CHCL (Chronic Human Carcinogen Level)
Fish toxicity (threshold)[101]: Extra high–0.09855 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen; EPA Group 2b, Probable human carcinogen; EU GHS Category 2: Suspected human carcinogen
California Proposition 65 Chemical: Cancer (10/1/1987) (DDT); Developmental/Reproductive toxin (female) (5/15/1998) (*p,p'*-DDT)
Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)]
Endocrine disruptor: Known ED
Acute Oral Category: 2, WARNING
Health Advisory: Mutagen, Developmental/Reproductive Toxin
Persistent Organic Pollutants (UN)
Air Pollutant Standard Set. Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR423, appendix A, Priority Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92); Toxic Pollutant (Section 401.15)
U.S. EPA Hazardous Waste Number (RCRA No.): U061
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.0039; Nonwastewater (mg/kg), 0.087
RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL *µ*g/L): 8080 (0.1); 8270 (10)
Reportable Quantity (RQ): 1 lb (0.454 kg)
US DOT Regulated Marine Pollutant (49CFR172.101, appendix B), severe pollutant
Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)]
List of Stockholm Convention POPs: Annex B (Restriction).
European/International Regulations: Hazard Symbol: T, N; risk phrases: R25; R40 (Carcinogen Category 3); R48/25; R50/53; safety phrases: S1/2; S22; S36/37; S45; S60; S61 (see Appendix 1).

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters. (50-29-3 9)

Description: DDT is a waxy solid, colorless crystalline solid, or slightly off-white powder. Weak, chemical odor. Molecular weight = 354.49; Specific gravity (H_2O:1) = 0.98 to 0.99 (no temperature); Boiling point = 185.2°C; Freezing/Melting point = 108.5°C; Flash point = 72–75°C; Vapor pressure = 2.1×10^{-7} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Practically insoluble in water; solubility = 3.2×10^{-4} ppm @ 25°C.

Incompatibilities: Contact with alkaline material or strong oxidizers may cause fire and explosion hazard. Incompatible with salts of iron or aluminum, and bases. Do not store in iron containers.

Permissible Exposure Limits in Air: OSHA PEL: 1 mg/m^3 TWA [skin]

NIOSH REL: 0.5 mg/m^3 TWA; Suspected occupational carcinogen. Reduce exposure to lowest feasible level. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: 1 mg/m^3 TWA; confirmed animal carcinogen with unknown relevance to humans.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1 mg/m^3
PAC-2: 1 mg/m^3
PAC-3: 38 mg/m^3

DFG MAK: 1 mg/m^3 TWA measured as the, inhalable fraction [skin]; Peak Limitation Category II(8).

Determination in Air: Collection on a filter, workup with isooctane, analysis by gas chromatography. See NIOSH Method #S-274[18]

Permissible Concentration in Water: Federal Drinking Water Guidelines: 1.0 ppb[93]. To protect freshwater aquatic life: 0.0010 μg/L as a 24 hr average; never to exceed 1.1 μg/L. To protect saltwater aquatic life: 0.0010 μg/L as a 24 hr average; never to exceed 0.13 μg/L. To protect human health: preferably zero. An additional lifetime cancer risk of 1 in 100,000 is imposed by a level of 0.24 ng/L (0.00024 μg/L).

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Gas chromatography (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625); Log K_{ow} = >6.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and dermal contact.

Harmful Effects and Symptoms

DDT is a low-cost broad-spectrum insecticide. However, following an extensive review of health and environmental hazards of the use of DDT, U.S. EPA decided to ban further use of DDT in December 1972. This decision was based on several properties of DDT that had been well evidenced[1]: DDT and its metabolites are toxins with long-term persistence in soil and water[2]; it is widely dispersed by erosion, runoff and volatization; and[3] the low water solubility and high lipophilicity of DDT result in concentrated accumulation of DDT in the fat of wildlife and humans which may be hazardous.

Short Term Exposure: *Inhalation:* Can cause irritation. 500–4200 mg/m^3 has produced dizziness. *Skin:* Can cause irritation in very high concentrations. DDT can be absorbed through the skin if dissolved in vegetable oils or other solvents. *Eyes:* Can cause irritation. *Ingestion:* 1/30- to 1/4-ounce has caused nausea, vomiting, headache and convulsions. Other symptoms include weakness, restlessness, dizziness, incoordination, numbness of face and extremities, abdominal pain, diarrhea, tremors, and death. Symptoms may be delayed from ½ to 3 hours. Estimated lethal dose is between 1 teaspoon and 1 ounce. Can cause a prickling or tingling sensation in the mouth, tongue, lower face, nausea, vomiting, confusion, a sense of apprehension, weakness, loss of muscle control, and tremors, paresthesia tongue, lips, face; tremor; dizziness, confusion, malaise (vague feeling of discomfort), headache, fatigue; convulsions; paresis hands. High exposures can cause convulsions and death. LD_{50} (oral, rat) = 113 mg/kg.

Long Term Exposure: Organochlorine pesticides are highly toxic to mammals and will accumulate in the tissues of living organisms. DDT may cause liver and kidney damage. Prolonged or repeated exposure can cause irritation of the eyes, skin, and throat. Occupational exposure to DDT has been associated with changes in genetic material. DDT levels build up and stay in the body for long periods of time. Exposure to DDT and Aldrin may increase retention of DDT in the body. DDT causes cancer in laboratory animals. The U.S. EPA determined that DDT, DDE, and DDD are probable human carcinogens. There is no evidence that DDT, DDE, or DDD cause birth defects in people. Studies in rats have shown that DDT and DDE can mimic the action of natural hormones and in this way affect the development of the reproductive and nervous systems. Puberty was delayed in male rats given high amounts of DDE as juveniles. This could possibly happen in humans. A study in mice showed that exposure to DDT during the first weeks of life may cause neurobehavioral problems later in life.

Points of Attack: Eyes, skin, central nervous system, kidneys, liver, brain, peripheral nervous system. Cancer site in animals: liver, lung, and lymphatic tumors. May cause reproductive and fetal effects. On January 27, 2014 there were various news reports in the U.S. that a new study published in the *Journal of the American Medical Association Neurology* found DDT may be associated with increased risk of Alzheimer's disease.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Serum

DDT level. Urine *dichlorodiphenyl acetic acid* level. Liver and kidney function tests.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Any barrier will prevent contamination from the dry chemical. Also, safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 1 mg/m^3. NIOSH: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Do not store in iron containers. Prior to working with DDT you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers, strong bases; and heat. Should not be stored in iron containers. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Organochlorine pesticides, liquid or solid require a "poisonous materials" label. They fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not dry sweep. Use vacuum (use special HEPA vac, NOT a standard shop-vac) or a wet method to reduce dust during clean up. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Hazardous decomposition includes toxic chlorides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration has been successfully used on a large scale for several years; huge incinerator equipment with scrubbers to catch HCl, a combustion product, are in use at several facilities, such as Hooker Chemical, Dow Chemical and other producers of chlorinated hydrocarbon products. One incinerator operates @ 900–1400°C with air and steam added which precludes formation of Cl_2. A few companies also constructed incinerator-scrubber combinations of smaller size, e.g., a system built by Garver-Davis, Inc., of Cleveland, Ohio, for the Canadian government, can handle 200–500 lb DDT/day as a kerosene solution. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Decanoic acid D:0164

Use Type: Microbiocide

CAS Number: 334-48-5

Formula: $C_{10}H_{20}O_2$

Synonyms: Acido decanoico (Spanish); Capric acid; *n*-Capric acid; Caprinic acid; Caprynic acid; *n*-Decanoic acid; *n*-Decoic acid; Decylic acid; *n*-Decylic acid; 1-Nonanecarboxylic acid

Trade Names: ECONOSAN®; HEXACID®-1095; NEO-FAT 10®

Chemical Class: Fatty acids, saturated, linear, number of C-atoms>=8 and<=12, with terminating carboxyl group.

EPA/OPP PC Code: 128955

California DPR Chemical Code: 2315

HSDB Number: 2751

UN/NA & ERG Number: UN1993/128

RTECS® Number: HD9100000

EC Number: 206-376-4

Uses: Used in cleaning, sanitizing and disinfecting applications for food processors and dairy farmers.

U.S. Maximum Allowable Residue Levels for Decanoic acid (40 CFR 180.275): [40 CFR 180.940(b)] Residues of the following chemical substances are exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food. (b) The following chemical substances when used as ingredients in an antimicrobial pesticide formulation may be applied to: Dairy processing equipment, and food-processing equipment and utensils. Decanoic acid is included on this list. Limit: when ready for use, the end-use concentration is not to exceed 90 ppm. (USEPA); U.S. National Archives and Records Administration's Electronic Code of Federal Regulations. ***[40 CFR 180.1225]*** An exemption from the requirement of a tolerance is established for residues of decanoic acid in or on all raw agricultural commodities and in processed commodities, when such residues result from the use of decanoic acid as an antimicrobial treatment in solutions containing a diluted end-use concentration of decanoic acid (up to 170 ppm per application) on food contact surfaces such as equipment, pipelines, tanks, vats, fillers, evaporators, pasteurizers and aseptic equipment in restaurants, food service operations, dairies, breweries, wineries, beverage and food-processing plants.

Regulatory Authority and Advisory Information: WGK (German Aquatic Hazard Class): 1-Low hazard to waters.

Description: White crystalline solid or needles. Unpleasant, rancid odor. Molecular weight = 172.26; Specific gravity (H_2O:1) = 0.8858 @ 40°C; Boiling point = 268–270°C; Freezing/Melting point = 31.5°C; Vapor pressure = 1 mm @ 125°C. Flash point = 112.78°C (cc); Autoignition temperature = 375°C; Explosive limits: LEL = 5.5%; UEL = 0.8%. Hazard Identification (based on NFPA-704 M Rating System): Health Hazards (Blue): 2; Flammability (Red): 1; Reactivity (Yellow): 0. Practically insoluble in water; solubility = <1 mg/mL @ 18°C; 140 mg/L.

Incompatibilities: An organic acid. Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Corrosive solution; attacks most common metals. Reacts violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Mixture with some silver compounds forms explosive salts of silver oxalate. Incompatible with silver compounds.

Determination in Water: Log K_{ow} = ~4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, skin and eye contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Vapors cannot be tolerated even at low concentrations; can cause severe irritation of eyes and throat; may cause eye and lung injury. If inhaled, causes coughing or difficult breathing. Contact with liquid or solid causes second and third degree burns in a short time; very injurious to the eyes. If swallowed, causes nausea and vomiting. Toxicity by ingestion: Grade 3. LD_{50} (oral, rat) = >10 g/kg.

Long Term Exposure: May cause lung damage.

Medical Surveillance: Lung x-ray.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Store in tightly closed containers in a cool, well-ventilated area. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from heat and incompatible materials. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of 5 gallons or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical.

Shipping: Combustible liquids, n.o.s. Technical name required.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area for at least 50 meters/150 feet in all directions. *Large spill*: Consider initial downwind evacuation for at least 300 meters/1000 feet. *Eliminate* all ignition sources (no smoking, flares, sparks or flames in immediate area). All equipment used when handling the product must be grounded. Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. A vapor-suppressing foam may be used to reduce vapors. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Use clean non-sparking tools to collect absorbed material. *Large spill*: Dike far ahead of liquid spill for later disposal. Water spray may reduce vapor; but may not prevent ignition in closed spaces. *Fire extinguishing:* decomposition products include oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. CAUTION: (1) This product may have a very low flash point: Use of water spray when fighting fire may be inefficient. (2) For mixtures containing alcohol or polar solvent, alcohol-resistant foam may be more effective. *Small fire*: dry chemical, CO_2, water spray or regular foam. *Large fire:* water spray, fog or regular foam. Do not use straight streams. Move containers from fire area if you can do it without risk. *Fire involving tanks or vehicle loads;* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Deltamethrin D:0167

Use Type: Insecticide

CAS Number: 52918-63-5

Formula: $C_{22}H_{19}Br_2NO_3$

Synonyms: (*S*)-α-Cyano-*m*-phenoxybenzyl (1R,3R)-3-(2,2-dibromovinyl)-2,2-dimethylcyclopropanecarboxylate; 1R-[1-α(S*),3-α)]- cyano(3-phenoxyphenyl) methyl -3-(2,2-dibromovinyl)-2,2-dimethylcyclopropane carboxylate; Cyclopropanecarboxylic acid, 3-(2,2-dibromoethenyl)-2,2-dimethyl-, cyano(3-phenoxyphenyl)methyl ester, [1R-(1α(*S**,3α)]-; Decamethrin; (1R,3R)-3-(2,2-Dibromovinyl)-2,2-dimethylcyclopropane carboxylic acid, (*S*)-α-cyano-3-phenoxybenzyl ester

Trade Names: BUTOFLIN®; BUTOSS®; BUTOX®; CISLIN®; CRACKDOWN®; DECIS®; DELTA®; DELTAGUARD®; ESBECYTHRIN®; FMC 45498®; JMC 45498®; K-OTHRINE® dust; NRDC 161®; RU 22974®; STRIKER® IEC insecticide (mixture of deltamethrin and tralomethrin)

Chemical Class: Pyrethroid

EPA/OPP PC Code: 097805

California DPR Chemical Code: 3010

HSDB Number: 6604

UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151

RTECS® Number: GZ1233000

EC Number: 258-256-6 [*Annex I Index No.:* 607-319-00-X]

Uses: Some formulations are Restricted Use Pesticides (RUP). Deltamethrin is a synthetic pyrethroid insecticide that kills insects on contact and through digestion. It is used to control a variety of chewing and sucking insects that infest fruit, vegetables and field crops, including apples, pears and plums; peas, glasshouse cucumbers, tomatoes, peppers, potted plants, and ornamentals; hops, oats, cotton and other field crops. Deltamethrin is also used to control residential and commercial insect pests.

U.S. Maximum Allowable Residue Levels for Deltamethrin and its major metabolites, trans deltamethrin (S)-alpha-cyano-m-phenoxybenzyl-(1 R,3 R)-3-(2,2 -dibromovinyl)-2,2-dimethylcyclopropanecarboxylate and alpha-R-deltamethrin[(R)-alpha-cyano- m -phenoxybenzyl-(1 R,3 R)- 3-(2,2-dibromovinyl)-2,2-dimethylcyclopropanecarboxylate][40CFR180.435(a)(1)]: Almond, hulls 2.5 ppm; apple, wet pomace 1.0 ppm; artichoke, globe 0.5 ppm; barley, bran 5.0 ppm; cattle, fat 0.05 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts 0.05 ppm; corn, field, forage 0.7 ppm; corn, field, refined oil 2.5 ppm; corn, field, stover 5.0 ppm; corn, pop, stover 5.0 ppm; corn, sweet, forage 10 ppm; corn, sweet, kernel plus cob with husks removed 0.03 ppm; corn, sweet, stover 15 ppm; cotton, refined oil 0.2 ppm; cotton, undelinted seed 0.04 ppm; egg 0.02 ppm; fruit, pome, group 11, 0.2 ppm; goat, fat 0.05 ppm; goat, meat 0.02 ppm; goat, meat byproducts 0.05 ppm; grain, aspirated fractions 65 ppm; grain, cereal, group 15, except sweet corn 1.0 ppm; hog, fat 0.05 ppm; horse, fat 0.05 ppm; horse, meat 0.02 ppm; horse, meat byproducts 0.05 ppm; lychee (There are no U.S. registrations for use of deltamethrin on starfruit and lychee.) 0.2 ppm; milk, fat (reflecting 0.02 ppm; ppm in whole milk) 0.1 ppm; Nut, tree, group 14, 0.1 ppm; onion, bulb 0.1 ppm; onion, green 1.5 ppm; poultry, fat 0.05 ppm; poultry, meat 0.02 ppm; poultry, meat byproducts 0.02 ppm; radish, tops 4.0 ppm; rapeseed 0.2 ppm; rice, hulls 2.5 ppm; rye, bran 5.0 ppm; sheep, fat 0.05 ppm; sheep, meat 0.02 ppm; sheep, meat byproducts 0.05 ppm; sorghum, grain, forage 0.5 ppm; sorghum, grain, stover 1.0 ppm; soybean, seed 0.1 ppm; soybean, hulls 0.2 ppm; starfruit (There are no U.S. registrations for use of deltamethrin on starfruit and lychee) 0.2 ppm; sunflower, seed 0.1 ppm; tomato 0.2 ppm; tomato, paste 1.0 ppm; Tomato, puree 1.0 ppm; Vegetable, cucurbit, Group 9, 0.2 ppm; Vegetable, fruiting, Group 8, 0.3 ppm; vegetable, root, except sugar beet, subgroup IB, 0.2 ppm; vegetable, tuberous and corm, subgroup IC, 0.04 wheat, bran 5.0 ppm. ***[40 CFR 180.435(a)(2)]*** A tolerance of 0.05 ppm is established for residues of the insecticide as follows: (i) In or on all food/feed items (other than those covered by a higher tolerance as a result of use on growing crops) in food/feed handling establishments. (ii) The insecticide may be present as a residue from application of deltamethrin in food handling establishments, including food service, manufacturing and processing establishments, such as restaurants, cafeterias, supermarkets, bakeries, breweries, dairies, meat slaughtering and packing plants, and canneries, feed handling establishments including feed manufacturing and processing establishments, in accordance with the following prescribed conditions: (A) Application shall be limited to general surface and spot and/or crack and crevice treatment in food/feed handling establishments where food/feed and food/feed products are held, processed, prepared and served. General surface application may be used only when the facility is not in operation provided exposed food/feed has been covered or removed from the area being treated. Spot and/or crack and crevice application may be used while the facility is in operation provided exposed food/feed is covered or removed from the area being treated prior to application. Spray concentration shall be limited to a maximum of 0.06 percent active ingredient. Contamination of food/feed or food/feed contact surfaces shall be avoided. (B) To ensure safe use of the insecticide, its label and labeling shall conform to that registered with the U.S. Environmental Protection Agency and shall be used in accordance with such label and labeling.

Human toxicity (long-term)[101]: Low–70.00 ppb, Health Advisory.

Fish toxicity (threshold): Extra high–0.02258 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: IARC, Animal Inadequate Evidence; Human Inadequate Evidence*, not classifiable as carcinogenic to humans*, Group 3; EPA, Not likely to be carcinogenic to humans

Health Advisory: Mutagen

Toxicity (oral) Category (range depending on carrier solvent): 1, DANGER–POISON to Category: 3, CAUTION

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23/25; R50/53; safety phrases: S1/2; S24; S28; S36/37/39; S38; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Colorless, white, or off-white crystalline solid or powder. Odorless. Combustible. Molecular weight = 505.21; Freezing/Melting point = 98–100°C; Boiling point decomposes on distillation; Vapor pressure = 2×10^{-8} mmHg @ 25°C; 0.002 mmHg @ 25°C; Specific gravity (H_2O:1) = 1.22 @ 25°C. Practically insoluble in water; solubility = ≤0.002 mg/L.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air: ACGIH TLV®[1]: (all pyrethrins) 5 mg/m^3 TWA

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18], as pyrethroid.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. Log K_{ow} = 5.41. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous. May be fatal if inhaled, swallowed, or absorbed through skin. Contact may cause severe irritation and burns to skin and eyes. Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral), depending on carrier solvent = 30–2000 mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse. May cause reproductive and fetal effects. May cause tumors.

Points of Attack: Respiratory system, skin, central nervous system, brain. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with preexisting skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m³:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator).*125 mg/m³:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter).*250 mg/m³:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece).*5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35°C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and oxygen and hydrogen bromide gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Demeton-O: BAYER® 8169; DI-SEPTON®; E-1059; DISYSTON®; THIODEMETON®; THIONODEMETON®; THIOLMECAPTOPHOS®

Chemical Class: Organophosphate

EPA/OPP PC Code: 057601 (mixture of demeton-*O*+demeton-*S*); 057602 (demeton-*O*); 057603 (demeton-*S*)

California DPR Chemical Code: 566 (Demeton)

HSDB Number: 201; 6201 (demeton-*S as Isosystox*)

UN/NA & ERG Number: UN3018 (liquid)/152

RTECS® Number: TF3150000 (mixture of demeton-*O*+demeton-*S*); TF3125000 (demeton-*O*); FT3130000 (demeton-*S*)

EC Number: 204-801-8 [*Annex I Index No.:* 015-029-00-4] (demeton-S); 206-053-8 [*Annex I Index No.:* 015-028-00-9] (demeton-O); [*Annex I Index No.:* 015-118-00-8] (mixture)

Uses: Not approved for use in EU countries[115]. Not registered for use in the U.S. Demeton is a mixture of Demeton-*O* (I) and Demeton-*S* (II). Demeton mixture is a plant systemic and extremely toxic to bees, fish and wildlife.

U.S. Maximum Allowable Residue Levels for Demeton [40 CFR 180.3(d)(2)]: Where tolerances are established for residues of both *O,O*-diethyl S-[2-(ethylthio)ethyl] phosphorodithioate and demeton (a mixture of *O,O*-diethyl *O*-(and *S*-) [2-(ethylthio)ethyl] phosphorothioates) on the same raw agricultural commodity, the total amount of such pesticides shall not yield more residue than that permitted by the larger of the two tolerances, calculated as demeton **[*40CFR180.183(a)*]** Barley, grain 0.75 ppm; barley, straw 5.0 ppm; bean, dry, seed 0.75 ppm; bean, lima 0.75 ppm; bean, snap, succulent 0.75 ppm; broccoli 0.75 ppm; Brussels sprouts 0.75 ppm; cabbage 0.75 ppm; cauliflower 0.75 ppm; coffee, bean 0.3 0 ppm; cotton, undelinted seed 0.75 ppm; lettuce 0.75 ppm; peanut 0.75 ppm; pea 0.75 ppm; pea, field, vines 5.0 0 ppm; pepper 0.1 0 ppm; potato 0.75 ppm; sorghum, forage 5.0 ppm; sorghum, grain, grain 0.75 ppm; sorghum, grain, stover 5.0 ppm; soybean 0.1 ppm; soybean, forage 0.25 ppm; soybean, hay 0.25 ppm; spinach 0.75 ppm; sugarcane, cane 0.3 ppm; tomato 0.75 ppm; wheat, hay 5.0 ppm; wheat, grain 0.3 ppm; wheat, straw 5.0 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR180.183(c)]:*** Asparagus, 0.1 ppm.

Human toxicity (long-term)[101]: Extra high–0.28 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–3.85101 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Air Pollutant Standard Set. US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates

For Demeton and Demeton-S:

Acute Oral Category: 1, DANGER–POISON

Superfund/EPCRA 302, Extremely Hazardous Substances: TPQ = 500 lb (227 kg)

Health Advisory: Nerve toxin, Mutagen

Reportable Quantity (RQ): 500 lb (227 kg).

European/International Regulations (*O-; 298-03-3* & *mixture 8065-48-3*): Hazard Symbol: T+, N; risk phrases: R27/28; R50; safety phrases: S1/2; 28; S36/37; S45; S60; S61; (*S-; 126-75-0*): Hazard Symbol: T+, N; risk phrases: R27/28; safety phrases: S1/2; S28; S36/37; S45 (see Appendix 1).

WGK (German Aquatic Hazard Class): No value assigned.

Description: Demeton is a light-brown liquid with an odor of sulfur compounds. Molecular weight = 516.72; Specific gravity (H_2O:1) = 1.112 @ 20°C; 1.21 @ 20°C (*126-75-0*) Boiling point = 134°C @ 2 mmHg @ 20°C; 125°C; Freezing/Melting point ≤–13°C; Flash point = 45°C; Explosive limits: LEL = 1%; UEL = 5.3%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 0. Highly soluble in water.

Incompatibilities: Forms explosive mixture with air. Strong oxidizers, strong bases, soluble mercury, other pesticides, and water. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: *8065-48-3*

OSHA PEL: 0.1 mg/m^3 TWA[skin]

NIOSH REL: 0.1 mg/m^3 TWA [skin]

8065-48-3 & *919-86-8*

ACGIH TLV®[1]: 0.01 mg/m^3 TWA, inhalable fraction and vapor [skin]; BEI_A: Acetylcholinesterase inhibiting pesticides; methemoglobin in blood; 1.5% of hemoglobin, during or end-of-shift as methemoglobin inducers.

919-86-8

Protective Action Criteria (PAC) *8065-48-3 demeton* Ver. 27[89]

PAC-1: 0.18 mg/m^3
PAC-2: 2 mg/m^3
PAC-3: 20 mg/m^3

Protective Action Criteria (PAC) *126-75-0* (demeton-*S*-methyl) Ver. 27[89]

PAC-1: 0.45 mg/m^3
PAC-2: 2 mg/m^3
PAC-3: 22 mg/m^3

DFG MAK: [skin]; BAT information, as acetylcholine esterase inhibitors.

Determination in Air: Filter/XAD-2® (tube); Toluene; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #5514.[18].

Determination in Water: Log K_{ow} = 3.2. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and dermal contact

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Demeton can be absorbed through the skin, thereby increasing exposure. Demeton may cause effects on the nervous system by cholinesterase inhibiting effect, causing convulsions, respiratory failure and possible death. High exposure (above OEL) may result in unconsciousness and death. Acute exposure to demeton may produce the following symptoms of exposure: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may occur, although hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur.

This material is an acetylcholinesterase inhibitor. It is readily absorbed through the skin and is extremely toxic. Probable human lethal oral dose is 5–50 mg/kg or 7 drops to 1 teaspoonful for 150 lb person. Acute dose is believed to be 12 to 20 mg by oral route. The effects may be delayed. Medical observation is indicated. LD_{50} (oral, rat) = 2.5 mg/kg.

Long Term Exposure: May cause mutations. May damage the developing fetus. May damage the nervous system, causing sensation of “pins and needles” in the hands and feet. May cause depression, irritability and personality changes. Cumulative effect is possible. Demeton may affect cholinesterase, causing significant depression of blood cholinesterase.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Effects may be delayed; medical observation is recommended

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA 0.18 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Poisonous gases are produced in fire, including oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Desmedipham D:0185

Use Type: Herbicide

CAS Number: 13684-56-5

Formula: $C_{16}H_{16}N_2O_4$

Synonyms: Carbamic acid, *N*-phenyl-, 3-[(ethoxycarbonyl)amino]phenyl ester; *m*-Carbaniloyloxycarbanilic acid ethyl ester; 3-[(Ethoxycarbonyl)amino]phenyl *N*-phenylcarbamate; Ethyl *m*-hydroxycarbanilate carbanilate; Ethyl phenylcarbamoyloxyphenylcarbamate; Phenylcarbamoyloxyphenylcarbamate

Trade Names: BETANAL® AM; BETANAL®-475; BETANEX®; BETAMIX® 70 WP; BETANEX® 70 WP; EP 475®; PROGRESS®; SCHERING® 38107; SN-475®; SN-38107®

Chemical Class: Bis-Carbamate

EPA/OPP PC Code: 104801

California DPR Chemical Code: 1748

UN/NA & ERG Number: UN3077 (solid)/171;UN2757 (solid)/151

RTECS® Number: FD0425000

EC Number: 237-198-5 [*Annex I Index No.:* 616-113-00-9]

Uses: Post-emergence sugarbeet herbicide for control of annual weeds such as pigweed, wild mustard, lamb's quarters, nightshade, chickweed, buckwheat, goosefoot, ragweed, fiddleneck, and kochia.

U.S. Maximum Allowable Residue Levels for Desmedipham [40 CFR 180.353 (a)]: beet, garden, roots 0.05 ppm; beet, garden, tops 1.0 ppm; beet, sugar, roots 0.1 ppm; beet, sugar, tops 5.0 ppm; spinach 6.0 ppm.

Human toxicity (long-term) [101]***:*** Very low–280.00 ppb, Health Advisory

Fish toxicity (threshold) [101]***:*** Low–225.68038 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group E, evidence of non-carcinogenicity for humans

Acute Oral Category: 4, Caution

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S60; S61 (see Appendix 1)

Description: Colorless, crystalline solid. Molecular weight = 300.34; Boiling point = (decomposes); Freezing/Melting point = 120°C; Vapor pressure = 2.9×10^{-9} mmHg @ 20°C. Low solubility in water.

Incompatibilities: Esters interact with acids to liberate heat along with alcohols and acids. Strong oxidizing acids may cause a vigorous reaction that is sufficiently exothermic to ignite the reaction products. Heat is also generated by the interaction of esters with caustic solutions. Flammable hydrogen is generated by mixing esters with alkali metals and hydrides. Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. Forms carbon monoxide and toxic nitrogen oxides when heated to decomposition.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].

Determination in Water: Log K_{ow} = 3.4. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Skin absorption, ingestion, inhalation

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = >4500 mg/kg.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause dermatitis; liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (i.e., sodium hydroxide, sodium bicarbonate, etc.).

Shipping: The solid toxic carbamate should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposes above 230°C releasing toxic carbons of nitrogen and carbon. *On a small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On a large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Formula: $C_8H_7Cl_2NaO_5$; $Cl_2C_6H_3O(CH_2)_2OSO_3Na$

Synonyms: 2,4-DES-Na; 2-(2,4-Dichlorophenoxy)ethanol hydrogen sulfate sodium salt; 2,4-Dichlorophenoxyethyl sulfate, sodium salt; Disul; Disul-Na; Disul-sodium; SES; Sesone; Sodium-2-(2,4-dichlorophenoxy)ethyl sulfate; Sodium-2,4-dichlorophenoxyethyl sulphate; Sodium-2,4-dichlorophenyl cellosolve sulfate

Trade Names: CRAG HERBICIDE 1®; CRAG SESONE®; SCATHE PEANUT HERBICIDE®[C]

Chemical Class: Chlorophenoxy

EPA/OPP PC Code: 030602

HSDB Number: 2522

UN/NA & ERG Number: UN3345 (solid)/153; UN3348 (liquid)/153

RTECS® Number: KK4900000

EC Number: 205-259-5 [*Annex I Index No.:* 016-025-00-5]

Uses: Not registered for use in the U.S. Herbicidal pre-emergence control of annual weeds in certain fruits and berries, corn and maize, rhubarb, flowers, ornamental shrubs and trees. Used as corrosion inhibitor, pharmaceutical intermediate and emulsifier.

U.S. Maximum Allowable Residue Levels for Sesone (40 CFR 180.102): in or on the raw agricultural commodities indicated: in or on potatoes 6 ppm; peanuts 6 ppm; peanut hulls 6 ppm; peanut hay 6 ppm; asparagus 2 ppm;, strawberries 2 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity: ACGIH, A4, Not classifiable as a human carcinogen.

Health Advisory: Skin irritant/sensitizer, Endocrine disruptor (?)

European/International Regulations: Hazard Symbol: Xn; risk phrases: R22; R38; R41; safety phrases: S2; S26 (see Appendix 1)

Description: Sesone or Crag® pesticide is a colorless, crystalline solid. Odorless. It's a noncombustible solid, but commercial products may be formulated using flammable organic solvents, which can change the physical properties shown here. Molecular weight = 309.10; Specific gravity (H_2O:1) = 1.70; Freezing/Melting point = 245°C (decomposes); Vapor pressure = 0.1 mmHg. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Soluble in water; solubility = 26% @ 25°C.

Permissible Exposure Limits in Air: OSHA PEL: 15 mg/m^3 TWA, total dust; 5 mg/m^3 TWA, respirable fraction

NIOSH REL: 10 mg/m^3 TWA, total dust; 5 mg/m^3 TWA, respirable fraction

ACGIH TLV®[1]: 10 mg/m^3 TWA; Not Suspected as a Human carcinogen, as Sesone

NIOSH IDLH: 500 mg/m^3

No Protective Action Criteria (PAC) Available.

Determination in Air: See NIOSH Method # S-356 (II)5[18]

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion skin and eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates eyes, skin, and respiratory tract. High levels of exposure may cause central nervous system effects, convulsions. May affect the kidneys and liver. LD_{50} (oral, rat) = 1500 mg/kg.

Long Term Exposure: May cause liver and kidney damage.

Points of Attack: Eyes, skin, central nervous system, liver, kidneys.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Liver function. Kidney function. Tests of nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH: *50 mg/m^3*: Qm (APF = 25) (any quarter-mask respirator (N, R, or P filters). *100 mg/m^3*: Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *250 mg/m^3*: PaprHie (APF = 25) (any powered, air-purifying respirator with a high-efficiency particulate filter); or Sa:Cf (APF = 25) (any powered, air-purifying respirator with a dust and mist filter). *500 mg/m^3*: 100 F (APF = 50) (any air purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAF (APF = 50) (any powered, air-purifying respirator with a tight-fitting face-piece and a high-efficiency particulate filter)*; or SaF (APF = 50) (any supplied-air respirator that has a tight-fitting face-piece and is operated in a continuous-flow mode)*; PaprTHie (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaT: Cf (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode.) *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

*Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers and acids. Where possible, automatically pump liquid from drums or other storage containers to process containers.

Shipping: Phenoxyacetic acid derivative pesticides, solid or liquid, toxic, require a shipping label of "poisonous materials" and fall in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Poisonous gases are produced in fire including oxides of sulfur and sodium and chlorine gas. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Sesone is hydrolyzed by alkali to $NaHSO_4$ and apparently dichlorophenoxyethanol. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dialifor D:0210

Use Type: Insecticide, Acaricide

CAS Number: 10311-84-9

Formula: $C_{14}H_{17}ClNO_4PS_2$

Synonyms: *N*-(2-Chloro-1-(diethoxyphosphinpthioylthio) ethyl)phthalimide; *S*-(2-Chloro-1-(1,3-dihydro-1,3-dioxo-2*H*-isoindol-2-yl)ethyl)-*O,O*-diethyl phosphorodithioate; *S*-(2-Chloro-1-phthalimidoethyl)-*O,O*-diethylphosphorodithioate; Dialifos; *O,O*-Diethyl-*S*-(2-chloro-1-phthalimidoethyl)phosphorodithioate; *O,O*-Diethyl phosphorodithioate *S*-ester with *N*-(2-Chloro-1-mercaptoethyl)phthalimide; ENT 27,320; Phosphorodithioic acid *S*-[2-chloro-1-(1,3-dihydro-1,3-dioxo-2*H*-isoindol-2-yl)ethyl]-*O,O*-diethyl ester; Phosphorodithioic acid-*S*-(2-chloro-1-phthalimidoethyl)-*O,O*-diethyl ester

Trade Names: HERCULES 14503®[C]; TORAK®[C]

Chemical Class: Organophosphate

EPA/OPP PC Code: 102501

California DPR Chemical Code: 1799

HSDB Number: 1559

UN/NA & ERG Number: UN2783 (solid)/152

RTECS® Number: TD5165000

EC Number: 233-689-3 [*Annex I Index No.:* 015-088-00-6]

Uses: Not registered for use in the U.S. Sixteen global suppliers[97].

Regulatory Authority and Advisory Information:

Health Advisory: Nerve Toxin, Reproduction Hazard

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: T+, N; risk phrases R24; R28; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Dialifor, when pure, is a white crystalline solid. The commercial product may also be available as a colorless oil. Molecular weight = 393.846; Freezing/Melting point (solid) = 67.2–68.9°C; Vapor pressure = 1×10^{-3} mmHg @ 35°C[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Insoluble in water. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: Strong bases. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Imides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic imides with strong reducing agents. Imides are extremely weak bases (weaker than water). React with strong bases to form salts. That is, they can react as acids.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.45 mg/m^3
PAC-2: 5 mg/m^3
PAC-3: 5 mg/m3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: EAD Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = 4–4.7. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: This material is highly toxic. This material can cause serious symptoms and in extreme cases death by respiratory arrest. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 5–71 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. A possible neurotoxin.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed* *by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Poisonous and corrosive gases are produced in fire including hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Diallate D:0220

Use Type: Herbicide

CAS Number: 2303-16-4; 17708-58-6 (trans-isomer); 17708-57-5 (cis-isomer)

Formula: $C_{10}H_{17}Cl_2NOS$; $[(CH_3)_2CH]_2NCOSCH_2CCl = CHCl$

Synonyms: Bis(1-methylethyl) carbamothioic acid, *S*-(2,3-dichloro-2-propenyl)ester; Carbamothioic acid, Bis(1-methylethyl)-*S*-(2,3-dichloro-2-propenyl) ester; CP 15,336; DATC; 2,3-DCDT; Di-allate; Diallate carbamate herbicide; Dichloroallyldiisopropylthiocarbamate; *S*-2,3-Dichloroallyldiisopropylthiocarbamate; 2,3-Dichloroallyl *N,N*-diisopropylthiolcarbamate; 2,3-Dichloro-2-propene-1-thiol, diisopropylcarbamate; Diisopropylthiocarbamic acid, -(2,3-dichloroallyl) ester; 2-Propene-1-thiol, 2,3-dichloro-,diisopropylcarbamate; *S*-2,3-Dichloroallyl diisopropylthiocarbamate; *S*-2,3-Dichloroallyl di-isopropyl(thiocarbamate); *S*-(2,3-Dichloroallyl) diisopropylthiocarbamate); *S*-(2,3-Dichloro-2-propenyl)bis(1-methylethtl) carbamothioate

Trade Names: AVADEX®[C]

Chemical Class: Thiocarbamate

EPA/OPP PC Code: 078801

California DPR Chemical Code: 48

HSDB Number: 1566

UN/NA & ERG Number: UN2902 (liquid)/151 UN2757 (solid)/151

RTECS® Number: EX8225000

EC Number: 218-961-1 [*Annex I Index No.:* 006-019-00-0]

U.S. Maximum Allowable Residue Levels for Diallate (40 CFR 180.277): in or on the raw agricultural commodities: alfalfa (fresh and hay) 0.05 ppm; barley (grain, forage, and straw) 0.05 ppm; clover (fresh and hay) 0.05 ppm; field corn 0.05 ppm; grain 0.05 ppm; fodder and forage 0.05 ppm; flaxseed 0.05 ppm; lentils 0.05 ppm; peas 0.05 ppm; pea forage and hay 0.05 ppm; potatoes 0.05 ppm; safflower seed 0.05 ppm; soybeans 0.05 ppm; soybean forage and hay 0.05 ppm; and sugar beet roots and tops 0.05 ppm.

Uses: Not registered for use in the U.S. Used as a before or after planting treatment depending on the crop for control of wild oats. For use on alfalfa, alsike clover, barley, corn, flax, soybeans, lentils, peas, potatoes, red clover, sugar beets and sweet clover. Twenty global suppliers[97].

Human toxicity (long-term)[101]: Intermediate–35.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Low–344.93242 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group C, limited evidence in animals, Possible human carcinogen; IARC, Animal Inadequate Evidence; Human Inadequate Evidence*, not classifiable as carcinogenic to humans*, Group 3

EPA Hazardous Waste Number (RCRA No.): U062

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL *u*g/L): 8270(10)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R40; R50/53; safety phrases: S2; S25; S36/37; S60; S61 (see Appendix 1)

Description: Diallate is a brown liquid. Molecular weight = 270.21; Boiling point = 150°C @ 9 mmHg; Freezing/Melting point = 25–30°C. Flash point = 77°C (c.c.). Hazard Identification (based on NFPA-704 M Rating System) (solid): Health 2, Flammability 0, Reactivity 0. Slightly soluble in water; solubility = 14 mg/L @ 25°C.

Incompatibilities: Alkalis. Decomposes above 200°C. Flammable gases are generated by the combination of thiocarbamates with aldehydes, nitrides, and hydrides. Thiocarbamates are incompatible with acids, peroxides, and acid halides.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 6 ppb[107]. State Drinking Water Guidelines: Florida 0.57 μg/L; Maine 3.5 μg/L.

Determination in Water: Log K_{ow} = 3.3. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Some thiocarbamates may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. Eye contact can irritate and possibly cause burns. Inhalation caused irritation of the respiratory tract with chest tightness and/or difficulty breathing. Higher levels can affect the nervous system. With nausea, vomiting, diarrhea, abdominal pain, reduced muscle coordination, blurred vision, muscle twitching, convulsions, coma and possible death. LD_{50} (oral, rat) = >350 mg/kg. Moderately toxic.

Long Term Exposure: High or repeated exposures can cause liver and kidney damage. There is limited evidence that diallate causes liver cancer in animals.

Points of Attack: Skin, eyes, nervous system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Lung function tests. Kidney and liver function tests. Examination of the nervous system. Interview exposed person for brain effects, including memory, mood, concentration, headaches, malaise, and altered sleep patterns.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with diallate you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from alkalies. Where possible, automatically pump liquid from drums or other storage containers to process containers. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Pesticides, solid, toxic, n.o.s. must bear a "poisonous materials" label. They fall in DOT Hazard Class 6.1 and diallate falls in Packing Group III.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition including oxides of sulfur, nitrogen and carbon and hydrogen chloride gas are produced in fire. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Land burial is acceptable for small quantities. Larger quantities can be incinerated. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Diatomaceous earth D:0260

Use Type: Diatomaceous earth is used as insecticide, molluscicide, and as a filler in pesticides.

CAS Number: 61790-53-2 (uncalcined); 7631-86-9 [Silica, amorphous-diatomaceous earth (uncalcined)]; 68855-54-9 (flux calcinated)

Formula: SiO_2

Synonyms: Amorphous silica; Diatomaceous silica; Diatomite, uncalcined; Silica, amorphous diatomaceous earth; Precipitated amorphous silica; Silicon dioxide (amorphous)

Trade Names: CELITE®; CROP GUARD®; DIACTIV®; DIAFIL®; DI-ATOMATE®; DIE-SECTICIDE®; KENITE®; PRIMISIL®

Chemical Class: Inorganic

EPA/OPP PC Code: 072605

California DPR Chemical Code: 195

HSDB Number: 682 as amorphous silica

UN/NA & ERG Number: No citation

RTECS® Number: HL8600000

EC Number: 231-545-4 (silicon dioxide)

Uses: Diatomaceous earth kills and repels insects, including bed bugs, fleas, cockroaches, and carpet beetles, by dehydrating them, rather than chemically poisoning them, and has been used since early times. It is also used as a filtering agent and as a filler in construction materials, pesticides, paints, and varnishes. The calcined version (which has been heat treated) is the most dangerous and contains crystallized silica, and should be handled as silica.

U.S. Maximum Allowable Residue Levels for Amorphous silica (40 CFR 180.950): Tolerance exemptions for minimal risk active and inert ingredients. Unless specifically excluded, residues resulting from the use of the following substances as either an inert or an active ingredient in a pesticide chemical formulation, including antimicrobial pesticide chemicals, are exempted from the requirement of a tolerance under FFDCA section 408, if such use is in accordance with good agricultural or manufacturing practices. Silica, amorphous, fumed (crystalline-free); silica, amorphous, precipitated and gel; silica gel; silica gel, precipitated, crystalline-free, silica, hydrate; and silica, vitreous are included on this list.

Regulatory Authority and Advisory Information:

Carcinogenicity: IARC: Animal Inadequate Evidence; Human Inadequate Evidence, *not classifiable as carcinogenic to humans*, Group 3, 1997; NIOSH (*Silica, amorphous silica, fused*): Potential occupational carcinogen

WGK (German Aquatic Hazard Class): Non-water polluting agent

Description: Diatomaceous earth is a transparent to gray, odorless amorphous powder. Molecular weight = 60.78; Specific gravity (H_2O:1) = 1.9–2.35 (uncalcined); 2.2 (calcined); Boiling point = 2230°C (uncalcined); 2595 (calcined); Freezing/Melting point = 1710°C (uncalcined); 1083°C (calcined). Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Insoluble in water.

Incompatibilities: High temperatures cause the formation of crystalline silica. Incompatible with oxygen difluoride, chlorine difluoride.

Permissible Exposure Limits in Air: *diatomaceous earth, uncalcined & Silica, amorphous precipitated and gel*

OSHA PEL: either one **of the methods:** 20 mppcf [millions of particles per cubic foot of air, based on impinger samples counted by light-field techniques] or 80 mg/m^3 divided by the value “%SiO_2,” TWA

NIOSH REL: 6 mg/m^3 TWA

ACGIH TLV®[1]: withdrawn for the following: *silica amorphous, precipitated and gel; silica fume; silica fused; diatomaceous earth, calcined.*

NIOSH IDLH: 3000 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

Diatomaceous earth (flux calcinated)

PAC-1: 0.9 mg/m^3
PAC-2: 9.9 mg/m^3
PAC-3: 59 mg/m^3

Diatomaceous earth (uncalcined)

PAC-1: 18 mg/m^3

PAC-2: 200 mg/m^3
PAC-3: 1200 mg/m^3
DFG MAK (*diatomaceous earth, uncalcined)*: 4 mg/m^3, inhalable fraction; Pregnancy Risk Group C.

Determination in Air: Filter; Low-temperature ashing; x-ray diffraction spectrometry; NIOSH IV, Method #7501[18]; or, Gravimetric plus OSHA Method ID/42[58]

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation

Harmful Effects and Symptoms

Short Term Exposure: Inhalation can irritate the nose and nasal passages. High inhalation exposure may cause cough and shortness of breath. Skin contact can cause irritation and dryness. Following inhalation of *amorphous* diatomaceous earth, it is rapidly eliminated from lung tissue. However, *crystalline* diatomaceous earth is much smaller, and it may accumulate in lung tissue and lymph nodes. May irritate the eyes, due to its abrasive nature. Any dust, including silica, can be irritating to the eyes. When ingested, very little is absorbed into the body[NPIC]. The remaining portion is rapidly excreted. Small amounts of silica are normally present in all body tissues, and it is normal to find silicon dioxide in urine.

Long Term Exposure: Exposure can cause permanent scarring of the lungs, especially if diatomaceous earth has been calcined (heat treated).When mice were forced to breathe diatomaceous earth for one hour each day for a year, there was an increase in lung cancers. When rats were fed silica at a high dose for two years, there was no increase in cancer development. Very small amount of *crystalline* diatomaceous earth may be found in pesticide products. Long-term inhalation of the crystalline form is associated with silicosis, chronic bronchitis, and other respiratory problems. The bulk of diatomaceous earth is *amorphous*, not crystalline. The *amorphous* form is only associated with mild, reversible lung inflammation. This can begin anywhere from months to years after exposure. The name of this disease is silicosis. With heavy exposure, individuals may become respiratory cripples. This can be fatal.

Points of Attack: Lungs. Silicosis and potential for lung cancer.

Medical Surveillance: Diagnosis of chronic silicosis is confirmed with a positive x-ray. Before first exposure to calcined diatomaceous earth and at regular times after, the following are recommended: Medical exam of the lungs. Lung function tests. Chest x-ray (every two to five years).

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility.

Personal Protective Methods: Wear protective gloves and clothing. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > **0.9 mg/m^3**; *(uncalcined)* > **18 mg/m^3.** NIOSH: *30 mg/m^3*: Qm (APF = 25) (any quarter-mask respirator). *60 mg/m^3:* Any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering face-pieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100; or Sa (APF = 10) (any supplied-air respirator). *150 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprHie (APF = 25) (any powered, air-purifying respirator with a high-efficiency particulate filter). *300 mg/m^3:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting face-piece and is operated in a continuous-flow mode); or PaprTHie (APF = 50) (any powered, air-purifying respirator with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *3000 mg/m^3:* SaF: Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Green: General storage may be used. Store in tightly closed containers in a cool well-ventilated area.

Shipping: This material is not listed by DOT[19] in its Performance-Oriented Packaging Standards.

Spill Handling: Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations.

If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use any extinguishing agent suitable for surrounding fire. Poisonous gases are produced in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Diazinon D:0280

Use Type: Insecticide, Acaricide

CAS Number: 333-41-5

Formula: $C_{12}H_{21}O_3N_2SP$

Synonyms: Diethyl 4-(2-isopropyl-6-methylpyrimidinl)phosphorothionate; Diethyl 2-isopropyl-4-methyl-6-pyrimidinl phosphorothionate; *O,O*-Diethyl *O*-2-isopropyl-6-methylpyrimidin-4-ylphosphorothionate; *O,O*-Diethyl-*O*-(2-isopropyl-4-methyl-6-pyrimidyl) phosphorothionate; *O,O*-Diethyl 2-isopropyl-4-methylpyrimidyl-6-thiophosphate; *O,O*-Diethyl *O*-(2-isopropyl-4-methyl-6-pyrimidyl)thionophosphate; Diethyl 2-isopropyl-4-methyl-6-pyrimidylthionophosphate; *O,O*-Diethyl *O*-6-methyl-2-isopropyl-4-pyrimidinyl phosphorothioate; *O,O*-Diethyl *O*-(6-methyl-2-(1-methylethyl)-4-pyrimidinyl) phosphorothioate; ENT 19,507; Isopropylmethylpyrimidyl diethyl thiophosphate; *O*-2-Isopropyl-4-methylpyrimyl-*O,O*-diethyl phosphorothioate; NCI-C08673; Phosphoric acid, *O,O*-diethyl *O*-6-methyl-2-(1-methylethyl)-4-pyrimidinyl ester; Phosphorothioate, *O,O*-diethyl *O*-6-(2-isopropyl-4-methylpyrimidyl; Phosphorothioic acid, *O,O*-diethyl *O*-(2-isopropyl-6-methyl-4-pyrimidinl) ester; Phosphorothioic acid, *O,O*-diethyl *O*-(isopropylmethylpyrimidyl) ester; Phosphorothioic acid, *O,O*-diethyl *O*-(6-methyl-2-(1-methylethyl)-4-pyrimidinyl) ester; 4-Pyrimidinol, 2-isopropyl-6-methyl-, *O*-ester with *O,O*-diethylphosphorothioate; Thiophosphoric acid 2-isopropyl-4-methyl-6-pyrimidyl diethyl ester

Trade Names: AG-500®; AI3-19507®; ALFA-TOX®[C]; ANTIGAL®; ANTLAK®; BASUDIN®; BAZUDEN®; CASWELL No. 342®; DACUTOX®; DASSITOX®; DAZZEL®; DIAGRAN®; DIANON®; DIATERR-FOS®; DIAZAJET®; DIAZATOL®; DIAZIDE®; DIAZINON AG 500 WBC®; DIAZINONE®; DIAZITOL®; DIAZOL®; DICID®; DIMPYLATE®; DIPOFENE®; DIZIKTOL®; DIZINON®[C]; DRAWIZON®; DYMET®; DYZOL®); D.Z.N.®; EXODIN®; FEZUDIN®; FLYTROL®; G 301®; G-24480®; GALESAN®; GARDENTOX®; GEIGY 24480®; KAYAZINON®; KAYAZOL®; NEOCIDOL® (OIL); NEOCIDOL®; NIPSAN®; NUCIDOL®; OLEODIAZINON®; ROOT GUARD; SAROLEX®[C]; SPECTRACIDE®; SROLEX®; SUZON®

Chemical Class: Organophosphate

EPA/OPP PC Code: 057801

California DPR Chemical Code: 198

HSDB Number: 303

UN/NA & ERG Number: UN3018 (liquid)/152; UN2783/152

RTECS® Number: TF3325000

EC Number: 206-373-8 [*Annex I Index No.:* 015-040-00-4]

Uses: Diazinon is the most widely used pesticide by homeowners on lawns, and is one of the most widely used pesticide ingredients for application around the home and in gardens. It is used to control insects and grub worms. It is a nonsystemic organophosphate insecticide used to control cockroaches, silverfish, ants, and fleas in residential, non-food buildings. Bait is used to control scavenger yellow jackets in the western U.S. It is used on home gardens and farms to control a wide variety of sucking and leaf-eating insects. It is used on rice, fruit trees, sugarcane, corn, tobacco, potatoes and on horticultural plants, and is also an ingredient in pest strips. Diazinon has veterinary uses against fleas and ticks. It is available in dust, granules, seed dressings, wettable powder, and emulsifiable solution formulations. In 1988, there were 500 different products containing diazinon on the market, and used in such products as agricultural sprays and granules, animal ear tags, household sprays and dust and veterinary products. Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP). The U.S. EPA initiated a program to phase out all non-agricultural uses of diazinon commencing in March, 2001. Many commercial outdoor uses of diazinon have been canceled or restricted to licensed pesticide applicators because of its known toxicity to birds and aquatic life. Diazinon is highly toxic to bees and very highly toxic to birds, fish and aquatic invertebrates. Diazinon was canceled for use on golf courses and sod farms in 1988 because of its high risk to birds.

U.S. Maximum Allowable Residue Levels for Diazinon [40 CFR 180.153 (a)]: Almond, hulls 3. 0 ppm; apple 0.50 ppm; apricot 0.20 ppm; bean, lima 0.50 ppm; bean, snap, succulent 0.50 ppm; beet, garden, roots 0.75 ppm; beet, garden, tops 0.70 ppm; blueberry 0.50 ppm; caneberry subgroup 13-07A, 0.75 ppm; carrot, roots 0.75 ppm; cattle, fat 0.50 ppm; cherry, sweet 0.20 ppm; cherry, tart 0.20 ppm; cranberry 0.50 ppm; endive 0.70 ppm; fig 0.50 ppm; ginseng 0.75 ppm; hazelnut 0.50 ppm; lettuce 0.70 ppm; melon 0.75 ppm; nectarine 0.20 ppm; onion, bulb 0.75 ppm; onion, green 0.75 ppm; pea, succulent 0.50 ppm; peach 0.20 ppm; pear 0.50 ppm; pineapple 0.50 ppm; plum, prune, fresh 0.20 ppm; radish 0.50 ppm; rutabaga 0.75 ppm; spinach 0.70 ppm; strawberry 0.50 ppm; tomato 0.75 ppm; vegetable, brassica, leafy, group 5, 0.70 ppm; watercress 0.05 ppm; ***[40CFR180.153 (c)]*** almond 0.50 ppm; banana 0.20 ppm; celery 0.70 ppm; cucumber 0.75 ppm; parsley, leaves 0.75 ppm; parsnip 0.50 ppm; pepper 0.5 ppm; potato 0.10 ppm; squash, summer 0.50 ppm; squash, winter 0.75 ppm; sweet potato, roots 0.10 ppm; swiss chard 0.70 ppm; turnip, roots 0.50 ppm; turnip, tops 0.75 ppm.

***Human toxicity (long-term)* *[101]*:** Extra high–0.60 ppb, Health Advisory

***Fish toxicity (threshold)* *[101]*:** Extra high–0.09200 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA, Not likely to be carcinogenic to humans; ACGIH, A4 Not classifiable as a human carcinogen.

Acute Oral Category: 2, WARNING to Poison (oral) Category: 3, CAUTION

Health Advisory: Nerve toxin, Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer, Developmental toxin

EPA Population Adjusted Dose (aPAD) is 0.0025 mg/kg/day.

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Air Pollutant Standard Set. US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Reportable Quantity (RQ): 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%.

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B), severe pollutant

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S24/25; S60; S61 (see Appendix 1).

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Diazinon is a combustible, colorless, oily liquid with a faint amine odor. Technical grade is pale to dark brown. Commercial formulations may use carrier solvents of acetone, ethanol or xylene which can change the physical properties listed here. Molecular weight = 304.35; Specific gravity (H_2O:1) = 1.12 @ 20°C; Boiling point = (decomposes) @ 120°C; Flash point = 28–82°C (depending on carrier). Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Low solublility in water; solubility = 40–60 mg/L.

Incompatibilities: Hydrolyzes slowly in water and dilute acid. Reacts with strong acids and alkalis with possible formation of highly toxic tetraethyl thiopyrophosphates. Incompatible with copper-containing compounds. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 0.1 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.01 mg/m^3 TWA, inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; TLV-BEI$_A$ issued (2000), Acetylcholinesterase inhibiting pesticides

No Protective Action Criteria (PAC) available

DFG MAK: 0.1 mg/m^3 (measured as the, inhalable fraction); Peak Limitation Category II(2) [skin]; Pregnancy Risk Group C

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #5600[18], Organophosphorus pesticides. See also OSHA Method #62[58]

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 1 μg/L. State Drinking Water Guidelines: Arizona 0.63 μg/L; Florida 6.3 μg/L; California 6 μg/L. The U.S. EPA has set a non-enforceable lifetime health advisory at 0.001 mg/L for diazinon in drinking water.

Determination in Water: EAD Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Diazinon can affect you when breathed in and quickly enters the body by passing through the skin. May cause skin and eye irritation. Exposure can cause organophosphate poisoning with headache, sweating, nausea, and vomiting, diarrhea, muscle twitching and possible death. It is a moderately toxic organophosphate chemical. Delayed pulmonary edema may occur after inhalation. Diazinon has a low acute oral toxicity in male and female rats. The acute oral LD_{50} for female rats was 1160 mg/kg and 1340 mg/kg for male rats. Other reported LD_{50} values (mg/kg) include: 300–850 (rats), 80–135 (mice), 250–355 (guinea pigs), 130 (rabbits), 8 (hens), 3 (pheasants), 3.5 (ducks) and 100 (pigs). LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Damage to the pancreas has developed in some people and in laboratory animals exposed to large amounts of diazinon. In animal studies, high doses of diazinon produced effects on the nervous system similar to those seen in people. May cause tumors.

Points of Attack: Eyes, respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Liver function tests. Exam of the nervous system. Complete blood count

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Poisonous gases are produced in fire, including oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dibromochloropropane D:0360

Use Type: Nematicide, Fumigant

CAS Number: 96-12-8

Formula: $C_3H_5Br_2Cl$; $CH_2BrCHBrCH_2Cl$

Synonyms: 1,2-Dibromo-3-cloropropano (Spanish); 1-Chloro-2,3-dibromopropane; 3-Chloro-1,2-dibromopropane; DBCP; NCI-C00500; Propane, 1,2-dibromo-3-chloro-

Trade Names: BBC 12®; FUMAGONE®; FUMAZONE®[C]; MEMATOCIDE®; NEMABROM®; NEMAFUM®; NEMAGON®[C]; NEMAGON SOIL FUMIGANT®[C]; NEMANAX®; NEMAPAZ®; NEMASET®; NEMATOCIDE®[C]; NEMATOX®; NEMAZON®; OS 1897®; OXY BCP®[C]; SD 1897®

Chemical Class: Halogenated organic compound (Alkane)

EPA/OPP PC Code: 011301

California DPR Chemical Code: 183

HSDB Number: 1629

UN/NA & ERG Number: UN2872/159

RTECS® Number: TX8750000

EC Number: 202-479-3 [*Annex I Index No.:* 602-021-00-6]

Uses: DBCP has been used in agriculture as a nematicide since 1955, being supplied for such use in the forms of liquid concentrate, emulsifiable concentrate, powder, granules, and solid material. A rebuttable presumption against registration for pesticide uses was issued by U.S. EPA on September 22, 1977, on the basis of oncogenicity and reproductive effects. Then, as of November 3, 1977, EPA in a further action suspended all registrations of end-use products, subject to various specific restrictions. Not listed as registered in EU countries[115].

U.S. Maximum Allowable Residue Levels: Tolerances are established for residues of inorganic bromides (calculated as Br) in or on the following raw agricultural commodities grown in soil fumigated with combinations of chloropicrin, methyl bromide, and propargyl bromide. No tolerances are established for chloropicrin since it has been established that no residue of this substance remains in the raw agricultural commodity: ***[40 CFR 180.199(a)]***: broccoli 25 ppm; cauliflower 25 ppm; eggplant 60 ppm; muskmelon 40 ppm; pepper 25 ppm; pineapple 25 ppm; strawberry 25 ppm; and tomato 40 ppm. ***Tolerances with regional registration, as defined in 180.1(n), are established for residues of inorganic bromides (calculated as Br) [40 CFR 180.199(b)]:*** in or on the following raw agricultural commodities grown in soil fumigated with combinations of chloropicrin, methyl bromide, and propargyl bromide: asparagus 300 ppm; lettuce 300 ppm; and onion, dry bulb 300 ppm.

Human toxicity (long-term) [101]***:*** Extra high–0.20 ppb, MCL (Maximum Contaminant Level)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA, B2, Probable human carcinogen; IARC: Human Inadequate Evidence; Animal Sufficient Evidence, *possibly carcinogenic to humans*, Group 2b, 1999; NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen

California Proposition 65 Chemical: Cancer (7/1/1987); reproductive, male (2/27/87)

Health Advisory: Endocrine disruptor

Acute Oral Category: 2, WARNING

OSHA, 29CFR1910 Specifically Regulated Chemicals (See CFR 1910.1044)

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

U.S. EPA Hazardous Waste Number (RCRA No.): U066

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.11; Nonwastewater (mg/kg), 15

RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8010 (100); 8240 (5); 8270 (10)

Safe Drinking Water Act: MCL, 0.0002 mg/L; MCLG, zero; Regulated chemical (47FR9352)

Reportable Quantity (RQ): 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%

European/International Regulations: Hazard Symbol: T, Xn, N; risk phrases: R25; R45(2); R46(1); R48/20/22; R52/53; R60; safety phrases: S2; S53; S61 (see Appendix 1)

Description: DBCP is a flammable amber to brown liquid (a solid below 6°C). Strong, pungent odor. It has an odor and taste threshold at 0.01 mg/L in water. Molecular weight = 236.33; Specific gravity (H_2O:1) = 1.093 @ 14°C; Boiling point = 196°C (decomposes); Freezing/Melting point = 5–6.1°C; Vapor pressure = 0.8 mmHg @ 20°C; Flash point = 77°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. High solubility in water; solubility = >1000 mg/L.

Incompatibilities: Reacts, possibly violently, with oxidizers and chemically active metals (i.e., aluminum, magnesium and tin alloys). Attacks some rubber materials and coatings; corrosive to some metals.

Permissible Exposure Limits in Air: OSHA PEL: [1910.1044] TWA 0.001 ppm
NIOSH REL: Carcinogen; Limit exposure to lowest feasible concentration
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.003 ppm
PAC-2: 0.41 ppm
PAC-3: 0.45 ppm
DFG MAK: [skin] Carcinogen Category 2; Germ Cell Mutation Category 2

Permissible Concentration in Water: Federal and State drinking water guidelines: EPA 0.2 μg/L; State Drinking Water Standards: California 0.2 μg/L; Hawaii 0.04 μg/L; State Drinking Water Guidelines: Arizona 0.025 μg/L; Maine 0.25 μg/L.

Determination in Water: By purge-and-trap gas chromatography[47]. Log K_{ow} = 2.43–2.96. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: Symptoms include severe local irritation to eyes, skin and mucous membranes. Nausea and vomiting may occur after ingestion. Exposure to DBCP can cause headache, nausea, vomiting, weakness, lightheadedness, unconsciousness, and possible death. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Narcotic at high levels of concentration. LD_{50} (oral, rat) = 170 mg/kg; LD_{50} (dermal, rat) = >1000 mg/kg.

Long Term Exposure: The possible effects on the health of employees chronically exposed to repeated or lower expsures of DBCP may include sterility, diminished renal function, and degeneration and cirrhosis of the liver. DBCP is a probable carcinogen in humans. It has been shown to cause stomach, breast, tongue, and nasal cavity cancer in animals. May damage the testes and decrease fertility in males and females. Repeated exposure can damage the eyes, causing clouding of lens or cornea, and cause open sores on the skin, liver and kidney damage.

Points of Attack: Eyes, skin, respiratory system, central nervous system, liver, kidneys, spleen, reproductive system, digestive system. Potential neurotoxin.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. In addition, screening tests of the renal and hepatic systems may be considered. A judgment of the worker's ability to use positive-pressure respirators. In addition, they should be made aware that cancer was produced in some animals. While the relevance of these findings is not yet clearly defined, they do indicate that both employees and employers should do everything possible to minimize exposure to DBCP. Periodic examinations containing the elements of the preplacement or initial examination shall be made available on at least an annual basis. Examinations of current employees shall be made available as soon as practicable after the promulgation of a standard for DBCP. Medical surveillance shall be made available to any worker suspected of having been exposed to DBCP. Pertinent medical records shall be maintained for all employees subject to exposure to DBCP in the workplace. Such records shall be maintained for 30 years and shall be available to medical representatives of the U.S. Government, the employer and the employee.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 20–30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Contact local poison control center for advice about inducing vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Note: Protective clothing shall be resistant to the penetration and to the chemical action of dibromochloropropane. Additional protection, including gloves, bib-type aprons, boots, and overshoes, shall be provided for, and worn by, each employee during any operation that may cause direct contact with liquid dibromochloropropane. Supplied-air hoods or suits resistant to penetration by dibromochloropropane shall be worn when entering confined spaces, such as pits, or storage tanks. In situations where heat stress is likely to occur, supplied-air suits, preferably cooled, are recommended. The employer shall ensure that all personal protective clothing is inspected regularly for defects and is maintained in a clean and satisfactory condition by the employee.

Respirator Selection: Engineering controls shall be used wherever needed to keep airborne dibromochloropropane concentrations below the recommended occupational exposure limit. Compliance with this limit may be achieved by the use of respirators under the following conditions only. During the time necessary to install or test the required engineering controls. For nonroutine operations, such as emergency maintenance or repair activities. During emergencies when air concentrations of dibromochloropropane may exceed the recommended occupational exposure limit. When a respirator is permitted, NIOSH recommends the following: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with DBCP you should be trained on its proper handling and storage. Store in a refrigerator. Protect from alkalis and reactive metals. Protection from light is recommended for long term storage. Where possible, automatically pump liquid from drums or other storage containers to process containers. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: DBCP requires a "poisonous materials" label. It usually falls in Hazard Class 6.1.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible liquid. Hazardous decomposition includes hydrogen bromide. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Use incinerator equipped with afterburner and scrubber. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

1,2-Dibromo-2,4-dicyanobutane D:0363

Use Type: Microbiocide
CAS Number: 35691-65-7
Formula: $C_6H_6Br_2N_2$
Synonyms: 2-Bromo-2-(bromomethyl)glutaronitrile; 1-Bromo-1-(bromomethyl)-1,3-propanedicarbonitrile; Dibromodicyanobutane; Glutaronitrile, 2-bromo-2-(bromomethyl)-; Pentanedinitrile, 2-bromo-2-(bromomethyl)-
Trade Names: BIOCHEK®; BIOCLEAR®; MERCK® 48051; METACIDE® 38; METASOL; TEKTAMER
Chemical Class: Nitrile
EPA/OPP PC Code: 111001; (217700 and 218500 are old EPA code numbers)
California DPR Chemical Code: 2313
HSDB Number: 7313
UN/NA & ERG Number: UN3261/154
RTECS® Number: MA5599000

EC Number: 262-281-0

Uses: Tolerances have been established by the U.S. Food and Drug Administration when this substances is used as a preservative in food-grade adhesives and as a slimicide in the manufacture of food-grade paper and paperboard. Used to control slime-forming bacteria and fungi in recirculating water cooling system; oil-recovery drilling mud systems; paper mill and pulp mill water systems and similar industrial processing and chemical systems.

Regulatory Authority and Advisory Information:

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

WGK (German Aquatic Hazard Class): No value assigned.

Description: Light yellow crystalline solid or powder. Commercial products may be soluble concentrate (liquid or solid); pellets/tablets. Mild, acrid, sweet odor. Molecular weight = 265.93; Specific gravity (H_2O:1) = 0.970 @ 20°C; Freezing/Melting point = 52°C; Vapor pressure = 5.03×10^{-5} @25°C. Henry's Law constant = 3.9×10^{-10} atm-m^3/mol @ 25°C (est)[83]. Slightly soluble in water; solubility 0.212 g/100 mL.

Incompatibilities: Corrosive. Strong oxidizers and reducing agents, strong acids and bases. Reacts with acids, steam, warm water, producing toxic and flammable hydrogen cyanide fumes. Hydrogen cyanide is produced when propionitrile is heated to decomposition.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact may cause burns to skin and eyes. May affect the iron metabolism, causing asphyxia. It is highly toxic. Forms cyanide in the body. Exposure results in headache, dizziness, rapid pulse, deep-rapid breathing, nausea, vomiting, unconsciousness, convulsions and sometimes death. May cause cyanosis (blue coloration of skin and lips caused by lack of oxygen). LD_{50} (oral, rat) = 0.77 g/kg[83].

Long Term Exposure: Chronic exposure over long periods may cause fatigue and weakness. Can cause same general symptoms as hydrogen cyanide but onset of symptoms is likely to be slower. May cause liver and kidney damage.

Points of Attack: In animals: liver, kidney damage.

Medical Surveillance: Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1–2 years to ensure freshness. Persons trained in the use of this kit, oxygen use, and CPR must be quickly available.

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Spill Handling: For *liquids*, isolate spill or leak area in all directions for at least 50 meters /150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers. For *solids*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Shipping: "Corrosive solid, acidic, orgainc, n.o.s." It falls into Hazard Class 8, and Packing Group II.

Fire Extinguishing: Hazardous decomposition includes poisonous gases, including oxides of nitrogen and carbon and hydrogen bromide gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank.

Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Dicamba D:0420

Use Type: Herbicide

CAS Number: 1918-00-9

Formula: $C_8H_6Cl_2O_3$

Synonyms: AI3-27556; *o*-Anisic acid, 3,6-dichloro-; Benzoic acid, 3,6-dichloro-2-methoxy-; Dicamba benzoic acid herbicide; 3,6-Dichloro-*o*-anisic acid; 2,5-Dichloro-6-methoxybenzoic acid; 3,6-Dichloro-2-methoxybenzoic acid; 3,6-Dichloro-2-methoxybenzoic acid; MDBA; 2-Methoxy-3,6-dichlorobenzoic acid

Trade Names: BANEX®; BANLEN®; BANVEL®; BANVEL 4S®; BANVEL 4WS®; BANVEL CST®; BANVEL HERBICIDE®; BANVEL II HERBICIDE®; BRUSH BUSTER®; BUSHWHACKER®; CADENCE®; CASWELL No. 295®; CLARITY®; COMPOUND B DICAMBA®; DIANATE®; DISTINCT®; DYVEL®; FALLOWMASTER®; FLOWMASTER®; GORDON'S TRIGUARD®; GORDON'S TRI-MEC®; MARKSMAN®; MEDIBEN®; NORTHSTAR®; SUMMIT®; TARGET®; TRACKER®; TROOPER®; VANQUISH®; VELSICOL 58-CS-11®; VELSICOL COMPOUND R®; WEEDMASTER®; YUKON®

Chemical Class: Benzoic acid

EPA/OPP PC Code: 029801

California DPR Chemical Code: 200

HSDB Number: 311

UN/NA & ERG Number: UN3077 (solid)/171;UN3082 (liquid)/171

RTECS® Number: DG7525000

EC Number: 217-635-6 [*Annex I Index No.:* 607-043-00-X]

Uses: Used to control annual and perennial broadleaf weeds in corn, sorghum, small grains, pastures, hay, rangeland, sugarcane, asparagus, turf, grass-seed crops, and non-croplands. It can be applied to the leaves or to the soil. Dicamba controls annual and perennial broadleaf weeds in grain crops and grasslands, and it is used to control brush and bracken in pastures. It will kill broadleaf weeds before and after they sprout. Legumes will be killed by dicamba. In combination with a phenoxyalkanoic acid or other herbicide, dicamba is used in pastures, range land, and non-crop areas such as fence-rows and roadways to control weeds.

U.S. Maximum Allowable Residue Levels for Dicamba and its metabolite, 3,6-dichloro-5-hydroxy-anisic acid [40CFR180.227(a)(1)]: barley, grain 6.0 ppm; barley, hay 2.0 ppm; barley, straw 15.0 ppm; corn, field, forage 3.0 ppm; corn, field, grain 0.1 ppm; corn, field, stover 3.0 ppm; corn, pop, grain 0.1 ppm; corn, pop, stover 3.0 ppm; corn, sweet, forage 0.50 ppm; corn, sweet, kernel plus cob with husks removed 0.04 ppm; corn, sweet, stover 0.50 ppm; corn, undelinted seed 0.2 ppm; Grass, forage, fodder and hay, group 17, forage 125.0 ppm; grass, forage, fodder and hay, group 17, hay 200.0 ppm; millet, proso, forage 90.0 ppm; millet, proso, grain 2.0 ppm; millet, proso, hay 40.0 ppm; millet, proso, straw 30.0 ppm; oat, forage 90.0 ppm; oat, grain 2.0 ppm; oat, hay 40.0 ppm; oat, straw 30.0 ppm; rye, forage 90.0 ppm; rye, grain 2.0 ppm; rye, straw 30.0 ppm; sorghum, grain, forage 3.0 ppm; sorghum, grain 4.0 ppm; sorghum, grain, stover 10.0 ppm; sugarcane, cane 0.1 ppm; sugarcane, molasses 2.0 ppm; wheat, forage 90.0 ppm; wheat, grain 2.0 ppm; wheat, hay 40.0 ppm; wheat, straw 30.0 ppm; ***[40CFR180.227(a)(2)]*** asparagus 4.0 ppm; cattle, fat 0.3 ppm; cattle, kidney 25.0 ppm; cattle, meat 0.25 ppm; cattle, meat byproducts, except kidney 3.0 ppm; goat, fat 0.3 ppm; goat, kidney 25.0 ppm; goat, meat 0.25 ppm; goat, meat byproducts, except kidney 3.0 ppm; hog, fat 0.3 ppm; hog, kidney 25.0 ppm; hog, meat 0.25 ppm; hog, meat byproducts, except kidney 3.0 ppm; horse, fat 0.3 ppm; horse, kidney 25.0 ppm; horse, meat 0.25 ppm; horse, meat byproducts, except kidney 3.0 ppm; milk 0.2 ppm; Sheep, fat 0.3 ppm; sheep, kidney 25.0 ppm; sheep, meat 0.25 ppm; sheep, meat byproducts, except kidney 3.0 ppm; **[*40CFR180.227(a)(3)*]** grain, aspirated fractions 1000 ppm; soybean, hulls 30.0 ppm; soybean, seed 10.0 ppm.

Human toxicity (long-term)[101]: Very low–200.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–4918.96611 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group D, Not classifiable as a human carcinogen.

Health Advisory: Mutagen, Developmental toxin (TRI)

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active], includes sodium, diglycolamine and dimethylamine salts.

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Safe Drinking Water Act: Priority List (55 FR 1470)

Reportable Quantity (RQ): 1000 lb (454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S61 (see Appendix 1)

Description: Dicamba is a white or brown nonflammable, colorless solid. Usually dissolved in a liquid (water emulsifiable) carrier. Odorless. Molecular weight = 221.04; Specific gravity (H_2O:1) = 1.57; Boiling point = (decomposes) 195°C; Freezing/Melting point = 114–116°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Highly soluble in water. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: A strong acid. Incompatible with sulfuric acid, bases, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 200 ppb[93]; State Drinking Water Guidelines: Florida 210 μg/L; Minnesota 200 μg/L; Arizona 9 μg/L; Wisconsin 300 μg/L.

Determination in Water: A detection limit of 1 ppb for dicamba by electron-capture gas chromatography has been reported by NAS/NRC[46]. Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, and through the skin

Harmful Effects and Symptoms

Short Term Exposure: Dicamba irritates the eyes, skin, and respiratory tract. Exposure can cause nausea, vomiting, loss of appetite and weight, muscle weakness, and exhaustion. The acute toxicity of dicamba is relatively low. Dicamba produced no adverse effect when fed to rats at up to 19.3 mg/kg/day and 25 mg/kg/day in subchronic and chronic studies. The no-adverse-effect dose in dogs was 1.25 mg/kg/day in a 2-year feeding study. Based on these data, an ADI (EPA Acceptable Daily Intake) was calculated at 0.0012 mg/kg/day. LD_{50} (oral, rat) = 1 to >2 g/kg; LD_{50} (dermal, rat) = >1 g/kg.

Long Term Exposure: May cause reproductive and fetal effects. May affect the liver, kidneys. May cause skin sensitization.

Points of Attack: Liver. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Liver function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with dicamba you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well ventilated area away from incompatible materials listed above, heat and water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic and corrosive fumes including hydrogen chloride. This chemical is a noncombustible solid. Use extinguishers suitable for surrounding fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Land disposal or incineration are disposal options. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dichlobenil D:0423

Use Type: Herbicide

CAS Number: 1194-65-6

Formula: $C_7H_3Cl_2N$

Synonyms: Benzonitrile, 2,6-dichloro-; DCBN; DBN; 2,6-DBN; DCB; Decabane; 2,6-Dichlorobenzonitrile; 2,6-Dichlorocyanobenzene

Trade Names: BARRIER®; BH Prefix D®; CARSORON®; CASORON® 133; CARSORON® G; CARSORON® G4; CARSORON® G20-SR; CODE H 133®; DECABANE®; DU-SPREX®; DYCLOMEC®; FYDULAN; FYDUMAS; FYDUSIT; H 133®; H 1313®; NIA 5996®; NIAGARA® 5006; NIAGARA 5,996; NOROSAC®; PREFIX D®

Chemical Class: Substituted benzene; Benzonitrile

EPA/OPP PC Code: 027401

California DPR Chemical Code: 112

HSDB Number: 312

UN/NA & ERG Number: UN3077 (solid)/171

RTECS® Number: DI3500000

EC Number: 214-787-5 [*Annex I Index No.:* 608-015-00-X]

Uses: Dichlobenil is a herbicide used on cranberry bogs, dichondra, ornamentals, blackberry, raspberry, and blueberry fields, apple, pear, filbert and cherry orchards, vineyards, hybrid poplar-cottonwood plantations, and rights-of-way to control weeds; and sewers to remove roots. It acts on dandelion, prickly oxtongue (pre-emergence), and tree roots. Not approved for use in EU countries[115]. Actively registered in the U.S.

U.S. Maximum Allowable Residue Levels for Dichlobenil and its metabolite, 2,6-dichlorobenzamide (40 CFR 180.231): apple 0.5 ppm; blackberry 0.1 ppm; blueberry 0.15 ppm; cranberry 0.1 ppm; filbert 0.1 ppm; fruit, stone, group 12, 0.15 ppm; grape 0.15 ppm; pear 0.5 ppm; raspberry 0.1 ppm.

Human toxicity (long-term)[101]: High–9.10 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–973.64357 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group C, Possible human carcinogen

Acute Oral Category: 4, Caution

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA)

EPCRA Section 304 RQ: CERCLA, 100 lb (45.4 kg)

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R21; R50/R53; safety phrases: S2; S36/37; S61 (see Appendix 1)

Description: White solid. Molecular weight = 172.01; Boiling point = 269°C; Boiling point = decomposes @ 120°C before boiling; Freezing/Melting point = 143–146°C; Vapor pressure = 1×10^{-3} mmHg @ 25. Practically insoluble in water; solubility = 18 ppm @ 20°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 9 ppb[14].

Determination in Water: Log K_{ow} = 2.6–2.7. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Absorbed by dry skin and inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate the skin and eyes. Inhalation may irritate the nose and throat. High exposure can cause headache, dizziness, a drop in blood pressure, rapid pulse, loss of appetite, seizures, coma and death. Repeated high exposure may result in a loss of smell, acne-like rash. LD_{50} (oral, rat) = >2500 mg/kg. Moderately toxic.

Points of Attack: Eyes, skin, liver and kidneys.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with dichlobenil, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above, heat and water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a noncombustible solid. Use extinguishers suitable for surrounding fire. Hazardous decomposition includes oxides of nitrogen, hydrogen cyanide, hydrogen. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Land disposal or incineration are disposal options. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dichlone D:0425

Use Type: Fungicide
CAS Number: 117-80-6
Formula: $C_{10}H_4Cl_2O_2$
Synonyms: 2,3-Dichloro-1,4-naphthalenedione; 2,3-Dichloro-1, 4-naphthoquinone; Dichloronaphthoquinone; 2,3-Dichloronaphthoquinone; 2.3-Dichloro-α-naphthoquinone; 2,3-Dichloronaphthoquinone-1,4; Diclone; ENT 3,776; 1,4-Napthalenedione, 2,3-dichloro-
Trade Names: ALGISTAT®; COMPOUND 604®; PHYGON®; PHYGON® PASTE; PHYGON® SEED PROTECTANT; PHYGON® XL; QUINTAR®; QUINTAR® 540 F; SANQUINON®; UNIROYAL® 604; USR® 604; U.S. RUBBER® 604
Chemical Class: Quinone
EPA/OPP PC Code: 029601
California DPR Chemical Code: 202
HSDB Number: 313
UN/NA & ERG Number: UN2902 (liquid)/151
RTECS® Number: QL7525000
EC Number: 204-210-5 [*Annex I Index No.:* 606-018-00-0]
Uses: Not currently registered in the U.S. Not approved for use in the EU. Dichlone is used as a fungicide for foliage and to control blue algae in ponds, swimming pools and lakes. As a substitute for copper and sulfur to control rot on fruit trees, vegetables, field crops, ornamentals, resident and commercial outdoor areas.
Human toxicity (long-term)[101]: Very low–560.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: High–4.56263 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Poison (oral) Category: 2, WARNING
Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA)
EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg)
European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R/22; R36/38; R50/53; safety phrases: S2; S26; S60; S61 (see Appendix 1)
Description: Golden-yellow crystals, leaflets, or needles from alcohol. Usually dissolved in a liquid carrier. Molecular weight = 227.04; Boiling point = (sublimes) 275°C @ 2 mmHg; Freezing/Melting point = 193°C; Vapor density = 7.8; Vapor pressure = 8.2 mmHg @ 20°C. Practically insoluble in water; solubility = <0.1 mg/L @ 25°C.
Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.
Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms. The primary hazard of this fungicide is the threat to the environment. It can easily penetrate the soil and contaminate groundwater and nearby streams.
Routes of Entry: Dangerous through all routes of contact. Absorbed through intact skin.
Harmful Effects and Symptoms
Short Term Exposure: Central nervous system depressant. Irritating to eyes, skin, mucous membranes. Large doses can cause central nervous system depression, dizziness, weakness, headache, nausea, vomiting, and difficult breathing. Apprehension, anxiety, confusion, nervous excitation; dizziness; headache; numbness and weakness in limbs; muscle twitching, tremors; nausea and vomiting; slow, shallow respiration, bluish face; convulsions; loss of consciousness; breathing stops; death. At fire temperatures can produce coughing, choking, difficult breathing, and cyanosis. LD_{50} (oral, rat) = <500 mg/kg; LD_{50} (dermal, rabbit) = >300 mg/kg.
Long Term Exposure: Irritating to the skin; may cause dermatitis. May cause tumors.
Points of Attack: Skin, central nervous system.
Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.
First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Directly, irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Get medical aid immediately. Have physician check for possible delayed damage. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. Shampoo hair promptly if contaminated; protect eyes. Do not scrub skin or hair, since this can increase absorption through the skin. Rinse thoroughly with water. Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs many organochlorines; therefore, items such as leather shoes, gloves, and belts should be discarded. If the skin is swollen or inflamed, cool affected areas with cold compresses. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. The patient is at risk of central nervous system depression or seizures, which may lead to pulmonary aspiration during vomiting. If the victim is conscious and

able to swallow, *administer an aqueous slurry of activated charcoal at 1 g/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. The efficacy of activated charcoal for some organochlorine poisoning (such as chlordane) is uncertain. If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal* before or with *ipecac syrup. Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately remove the victim from the contaminated area to fresh air. For inhalation exposures, monitor for respiratory distress. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. If breathing is difficult, administer 100% humidified supplemental oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. Any barrier will prevent contamination from the dry chemical. Also, safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: NIOSH: *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd, Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Do not store in iron containers. Prior to working with DDT you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers, strong bases, and heat. Should not be stored in iron containers. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045.

Shipping: Pesticides liquid or solid, toxic, n.o.s. requires a shipping label of "poisonous materials" and falls in DOT Hazard Class 6.1. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not dry sweep. Use vacuum (use special HEPA vac, NOT a standard shop-vac) or a wet method to reduce dust during clean up. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and hydrogen chloride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or car/trailer loads*: if tank, rail car or tank truck is involved in a fire, isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Dichloran D:0427

Use Type: Fungicide

CAS Number: 99-30-9

Formula: $C_6H_4Cl_2N_2O_2$; $Cl_2C_6H_2(NO_2)NH_2$

Synonyms: AI3-08870; AI-50; Aniline, 2,6-dichloro-4-nitro-; Benzenamine, 2,6-dichloro-4-nitro-; Caswell No. 311; CDNA; CNA; DCNA; 2,6-Dichloro-4-nitroaniline; 2,6-Dichloro-4-nitrobenzenamine; Dicloran; 4-Nitroaniline, 2,6-dichloro-; 4-Nitro-2,6-dichloroaniline

Trade Names: AL-50®; ALLISAN®; BORTRAN®; BOTRAN®; DITRANIL®; FUMITE DICLORAN SMOKE ACARICIDE®; RESISAN®; RD-6584®; U-2069®

Chemical Class: Substituted benzene; Chlorophenyl

EPA/OPP PC Code: 031301

California DPR Chemical Code: 81

HSDB Number: 1570

UN/NA & ERG Number: UN2811/154; UN3077 (solid)/171

RTECS® Number: BX2975000

EC Number: 202-746-4

Uses: Used to control fungi on a variety of crops. The top crop usages in California are on celery, head lettuce, and grapes (table, wine and raisin). Not approved for use in EU countries[115]. Actively registered in the U.S. Sixty-five global suppliers[97].

U.S. Maximum Allowable Residue Levels for Dicloran (40 CFR 180.200): apricot, post-harvest 20 ppm; bean, snap, succulent 20 ppm; celery 15 ppm; cherry, sweet, post-harvest 20 ppm; cucumber 5 ppm; endive 10 ppm; garlic 5 ppm; grape 10 ppm; lettuce 10 ppm; nectarine, post-harvest 20 ppm; onion 10 ppm; peach, post-harvest 20 ppm; plum, fresh prune, post-harvest 15 ppm; potato 0.25 ppm; rhubarb 10 ppm; sweet potato, roots, post-harvest 10 ppm; tomato 5 ppm.

Regulatory Authority and Advisory Information:

Health Advisory: Mutagen, Developmental toxin (TRI)

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xi; risk phrases: R36/R37/38; safety phrases: S26; S27/39 (see Appendix 1)

Description: Dicloran is a yellow crystalline solid or power. Odorless. Molecular weight = 207.01; Boiling point = (decomposes); Freezing/Melting point = 193–195°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Low solubility in water; solubility = 1 g/L @ 60°C.

Incompatibilities: Keep away from strong oxidizing agents, strong acids; acid anhydrides; acid chlorides; acetic anhydride; carbon dioxide.

Determination in Water: Log K_{ow} = 2.80. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin: may be fatal if absorbed through skin; may cause skin irritation. Inhalation should be avoided; may cause respiratory tract irritation. May be harmful and possibly fatal, if swallowed. LD_{50} (oral, rat) = >2000 mg/kg.

Routes of Entry: Inhalation, ingestion, skin absorption.

Long Term Exposure: May cause tumors, reproductive and fetal effects.

Points of Attack: Eyes, liver, blood, central nervous system, spleen, liver. Reproductive cells.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers. Where possible, automatically transfer material from drums or other storage containers to process containers. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of this chemical should be grounded and bonded. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers. Soil Adsorption Index (K_{oc}) = 5000 (estimate).

Fire Extinguishing: Decomposes above 350°C emitting oxides of nitrogen and carbon and hydrogen chloride gas. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with a licensed waste disposal service or environmental regulatory agencies for guidance on acceptable disposal practices. Dissolve or mix material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber.

para-Dichlorobenzene D:0465

Use Type: Insecticide, Rodenticide, Fungicide
CAS Number: 106-46-7
Formula: $C_6H_4Cl_2$
Synonyms: *p-DCB:* 1,4-DCB: Benzene, 1,4-dichloro-; Benzene, *p*-dichloro-; *p*-Chlorophenyl chloride; PDCB; Dichloricide; 1,4-Diclorobenceno (Spanish); *p*-Diclorobenceno (Spanish); *p*-Dichlorobenzene; Paradichlorobenzene
Trade Names: DowTHERM®; EVOLA; PARACIDE®; PARA CRYSTALS®; PARADI®; PARADOW®; PARAMOTH®; PARANUGGETS®; PARAZENE®; PERSIA-PERAZOL®; SANTOCHLOR®; *Mixed isomers:* DILATIN DBI®; MOTTENSCHUTZMITTEL EVAU P®; MOTT-EX®; TOTAMOTT®
Chemical Class: Halogenated organic compound
EPA/OPP PC Code: 061501
California DPR Chemical Code: 455
HSDB Number: 523
UN/NA & ERG Number: UN3077 (solid)/171; IMO 6.1
RTECS® Number: CZ4550000
EC Number: 203-400-5 [*Annex I Index No.:* 602-035-00-2]

Uses: *p*-Dichlorbenzene is used primarily as an air deodorant, as moth balls, and in insecticides, which accounts for 90% of the total production of this isomer. Information is not available concerning the production and use of *m*-DCB. However, it may occur as a contaminant of *o*- or *p*-DCB formulations. Both *o*- and *p*-isomers are produced almost entirely as byproducts during the production of monochlorobenzene. The major uses of *o*-DCB are as a process solvent in the manufacturing of toluene diisocyanate and as an intermediate in the synthesis of dyestuffs, herbicides, and degreasers. The *para*-isomer of dichlorobenzene is the isomer most prominently used in agriculture. Not listed for use in EU countries[115].

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group C, Possible human carcinogen; EU GHS Category 2: Suspected human carcinogen; ACGIH A3 Confirmed animal carcinogen with unknown relevance to humans
California Proposition 65 Chemical: Carcinogen (1/1/1989)
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer
Acute Oral Category: 3, CAUTION
List of priority pollutants (U.S. EPA)
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR423, Appendix A, Priority Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92); Toxic Pollutant (Section 401.15)
EPA Hazardous Waste Number (RCRA No.): U072; D027
RCRA Toxicity Characteristic (Section 261.24), Maximum Concentration of Contaminants, regulatory level, 7.5 mg/L
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.090; Nonwastewater (mg/kg), 6.0

RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL *u*g/L): 8010(2); 8020(5); 8120(15); 8270(10)

Safe Drinking Water Act: MCL, 0.075 mg/L; MCLG, 0.075 mg/L; Regulated chemical (47 FR 9352)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R36; R40; R50/53; safety phrases: S2; S36/37; S46; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters.

Description: *p*-DCB is a colorless or white solid. Mothball-like odor. May be available commercially as a liquid. Odor threshold = 0.18 ppm. Molecular weight = 147; Specific gravity (H_2O:1) = 1.248 @ 55°C; Boiling point = 174°C; Freezing/Melting point = 53.1°C; Vapor pressure = 0.75 mmHg @ 8°C;. Flash point = 66°C. Explosive limits: LEL = 1.7%; UEL = 5.9%. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Soluble in water; solubility = 80 mg/L.

Incompatibilities: Strong oxidizers; although, incompatibilities for this chemical may also include other materials listed for *o*-DCB.

Permissible Exposure Limits in Air: NIOSH IDLH: [Ca] 150 ppm

OSHA PEL: 75 ppm/450 mg/m^3 TWA

NIOSH REL: Potential carcinogen. Limit exposure to lowest feasible level; See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: 10 ppm/60 mg/m^3 TWA; confirmed animal carcinogen with unknown relevance to humans.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 10 ppm
PAC-2: 10 ppm
PAC-3: 1000 ppm

DFG MAK: [skin] Carcinogen Category 2; Pregnancy Risk Group 3B; BAT suspended 2003

The Minimal Risk Level (MRL) for acute inhalation exposure to paradichlorobenzene has been set at 2 ppm.

Determination in Air: Charcoal adsorption followed by CS_2 workup and gas chromatographic analysis. See NIOSH Method 1003 for halogenated hydrocarbons[18].

Permissible Concentration in Water: EPA, Federal Drinking Water Guidelines: EPA 75 μg/L; State Drinking Water Standards: California 5 μg/L; Massachusetts 5 μg/L; State Drinking Water Guidelines: Arizona 75 μg/L; Maine 21 μg/L; Minnesota 10 μg/L.

Determination in Water: Gas chromatography (EPA Methods 601, 602, 612) or gas chromatography plus mass spectrometry (EPA Method 625). Gas-chromatographic methods have been developed for PDB with a sensitivity of 380 pg/cm peak high, and PDB concentrations as low as 1.0 ppb in water have been analyzed according to NAS/NRC. Log K_{ow} = 3.36–3.44. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, eye and dermal contact.

Harmful Effects and Symptoms

Human exposure to dichlorobenzene is reported to cause hemolytic anemia and liver necrosis, and 1,4-dichlorobenzene has been found in human adipose tissue. In addition, the dichlorobenzenes are toxic to nonhuman mammals, birds, and aquatic organisms and impart an offensive taste and odor to water. The dichlorobenzenes are metabolized by mammals, including humans, to various dichlorophenols, some of which are as toxic as the dichlorobenzenes. Exposure can damage blood cells. Contact can cause irritation of the skin and eyes. Prolonged contact can cause severe burns. It may damage the liver, kidneys and lungs. Exposure can cause headache, dizziness, swelling of the eyes, hands and feet, and nausea. Higher levels can cause severe liver damage and death. Persons with preexisting pathology (hepatic, renal, central nervous system, blood) or metabolic disorders, who are taking certain drugs (hormones or otherwise metabolically active), or who are otherwise exposed to DCBs or related (chemically or biologically) chemicals by such means as occupation, or domestic use or abuse (e. g., pica or "sniffing") of DCB products, might well be considered at increased risk from exposure to DCBs.

Short Term Exposure: *p*-DCB can be absorbed through the skin, thereby increasing exposure. Exposure can cause headache, dizziness, nausea, swelling of the hands and feet. Contact with the dust can irritate and burn the eyes and skin. Skin allergy may develop. LD_{50} (oral, rat) = >500 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: *p*-DCB may be carcinogenic to humans; it causes kidney and liver cancer in animals. There is a suggested association between this chemical and leukemia. May cause tumors. There is evidence that *p*-DCB can damage the developing animal fetus. Repeated exposure can damage the nervous system, cause skin allergy and damage the lungs, liver, and kidneys. *p*-DCB may affect the blood and cause hemolytic anemia.

Points of Attack: Liver, respiratory system, eyes, kidneys, skin. Reproductive cells.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. For those with frequent or potentially high exposure (half the TLV or greater, or significant dermal contact) the following are recommended before beginning work and at regular times after that: Liver, kidney and lung function tests. Complete blood count. If symptoms develop or overexposure is suspected, the following may be useful: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal contact. **4 hr** (At least 4 but <8 hours of resistance to breakthrough $>0.1\,\mu g/cm^2/min$): Viton™ gloves, suits; 4H™ and Silver Shield™ gloves. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof (*p*-DCB) chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *For p-DCB:* NIOSH: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister] or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: A regulated, marked area should be established where *p*-DCB is handled, used, or stored in compliance with OSHA Standard 1910.1045. General storage may be used. Prior to working with any DCB you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Dichlorobenzene must be stored to avoid contact with strong oxidizers, such as permanganates, nitrates, peroxides, chlorates, and perchlorates, hot aluminum or aluminum alloys, since violent reactions occur. Store in tightly closed containers in a cool well-ventilated area away from heat and direct light. Sources of ignition, such as smoking and open flames, are prohibited where dichlorobenzene is used, handled, or stored in a manner that could create a potential fire or explosion hazard.

Shipping: *p*-DCB: may be classified as an Environmentally hazardous substance, solid, n.o.s. This chemical requires a shipping label of "CLASS 9." It usually falls in Hazard Class 9.

Spill Handling: *p-DCB.* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all ignition sources. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: *p-DCB:* This chemical is a combustible solid. Use dry chemical, carbon dioxide; or foam extinguishers. Hazardous decomposition includes hydrogen chloride. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration, preferably after mixing with another combustible fuel. Care must be exercised to ensure complete combustion to prevent the formation of phosgene. An acid scrubber is necessary to remove the halo acids produced. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Dichloroisocyanuric acid D:0555

Use Type: Biocide, Water treatment chemical
CAS Number: 2782-57-2
Formula: $C_3H_2Cl_2N_3O_3$
Synonyms: Dichloroisocyanurate; Dichloroisocyanuric acid, dry or dichloroisocyanuric acid salts; Dichloro-*s*-triazinetrione; 1,3-Dichloro-*s*-triazine-2,4,6-(1*H*,3*H*,5*H*)-trione; Isocyanuric acid, dichloro-; Isocyanuric dichloride; *S*-Triazine-2,4,6-(1H,3H,5H)-trione, 1,3-dichloro-; 1,3,5-Triazine-2,4,6-(1H,3H,5H)-trione, 1,3-dichloro-
Trade Names: ACL 70®; CDB 60®; FI CLOR 71®; HILITE 60®; ORCED®; TROCLOSENE®
Chemical Class: Triazinetrione; Chlorinated isocyanurate
EPA/OPP PC Code: 081401
California DPR Chemical Code: 204
HSDB Number: 5897
UN/NA & ERG Number: UN2465/140 (Dichloroisocyanuric acid, dry, or its salts); UN2568
RTECS® Number: XZ1845000
EC Number: 220-487-5 [*Annex I Index No.*: 613-029-00-4
U.S. Maximum Allowable Residue Levels for Chlorinated isocyanurates [40 CFR 180.940 (c)]: Residues are exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food. (c) The following chemical substances when used as ingredients in an antimicrobial pesticide formulation may be applied to: Food-processing equipment and utensils. 1,3,5-Triazine-2,4,6(1H,3H,5H)-trione, 1,3-dichloro- is included on this list. Limit: When ready for use, the end-use concentration of all di- or tri-chloroisocyanuric acid chemicals in the solution is not to exceed 100 ppm determined as total available chlorine.
Uses: Used in disinfectants and cleaning solution in domestic products and in food-processing plants. Registered because there are many products that contain this chemical.

Regulatory Authority and Advisory Information:
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
Clean Water Act: Section 307 Priority Pollutants as cyanide, total; Toxic Pollutant (Section 401.15)
RCRA Universal Treatment Standards: Wastewater (mg/L), 1.2 (total); 0.86 (amenable); Nonwastewater (mg/kg), 590 (total); 30 (amenable)
RCRA Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 9010(40)
Safe Drinking Water Act: MCL, 0.2 mg/L; MCLG, 0.2 mg/L; Regulated chemical (47 FR 9352)
EPA Hazardous Waste Number (RCRA No.): D001 (40CFG261)
EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: O, Xn, N; risk phrases: R8; R22; R31; R36/37; R50/53; safety phrases: S2; S8; S26; S41; S60; S61 (see Appendix 1)
Description: White, crystalline solid, powder, or granules. Chlorine odor. Molecular weight = 197.97; Freezing/Melting point = 227°C (decomposes); Vapor pressure = 2.0×10^{-9} mmHg @ 25°C. Moderately soluble in water; reaction may be violent, releasing chlorine gas.
Incompatibilities: A strong oxidizer and chlorinating compound. Violent reaction with organic and flammable materials. Contact with materials containing nitrogen, such as ammonia, ammonium salts, or urea, may be violent and form highly explosive nitrogen trichloride. Contact with water evolves extremely dense and noxious fumes of chlorides; chlorine gas. Triazine compounds are incompatible with oxidizers, acids, acid chlorides, acid halides, isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides. Contact with strong reducing agents such as halides may generate explosive flammable gas.
Permissible Concentration in Water: The U.S. EPA[49] has determined a no-observed-adverse-effect level (NOAEL) of 10.8 mg/kg/day which yields a lifetime health advisory of 154 μg/L.
Determination in Water: Distillation followed by silver nitrate titration or colorimetric analysis using pyridine pyrazolone (or barbituric acid) Log K_{ow} = 1.3. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms
Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = 150 mg/kg *as chlorinated isocyanurates*[83]; 1170 mg/kg[lit]
Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds may increase risks of tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. A mutagen.

Points of Attack: Liver, lungs, skin. May cause reproductive and fetal effects.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following requirements: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Shipping: This chemical must carry an "OXIDIZING SUBSTANCES" label. It usually falls in Hazard Class 5.1 and Packing Group II. It is a marine pollutant and Environmentally hazardous substance.

Spill Handling: For solids, *small spill*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. For a *large spill* evacuate downwind at least 100 meters/330 feet. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Keep combustibles (wood, paper, oil, etc.) away from spilled material. Do not allow water to get inside containers. *Small dry spill*: with clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Large spill*: dike far ahead of liquid spill for later disposal. Following product recovery, flush area with water. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Decomposition products include extremely dense and noxious fumes of chlorides, carbon monoxide, and other toxic gases. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire*: use water. Do not use dry chemicals or foams. Carbon dioxide or Halon® may provide limited control. *On a large fire:* flood fire area with water from a distance. Do not move cargo or vehicle if cargo has been exposed to heat. *Fire involving tanks or car/trailer loads*: fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations.

Dichlorophene D:0585

Use Type: Fungicide, Herbicide, Bactericide, Veterinary medicine

CAS Number: 97-23-4

Formula: $C_{13}H_{10}Cl_2O_2$

Synonyms: AI3-02370; Bis(5-chloro-2-hydroxyphenyl)methane; Bis(chlorohydroxyphenyl) methane; Bis(2-hydroxy-5-chlorophenyl)methane; Caswell No. 563; DDDM; DDM; 5,5'-Dichloro-2,2'-dihydroxydiphenylmethane; Dichlorofen;

Di(5-chloro-2-hydroxyphenyl)methane; 4,4'-Dichloro-2,2'-methylenediphenol; diclorofeno (Spanish); Dihydroxy dichlorodiphenylmethane; 2,2'-Dihydroxy-5,5'-dichloro diphenylmethane; [(Dihydroxydichloro)diphenyl]methane; GH; 2,2'-Methylenebis(4-chlorophenol); NSC 38642; Phenol, 2,2'-methylenebis(4-chloro-

Trade Names: ANTHIPHEN®; DIPHENTANE 70®; DICHLOROPHEN®; DICHLOROPHEN B®; DICHLOROPHENE 10®; DICHLORPHEN®; DIDROXANE®; DIPHENTHANE 70®; FUNGICIDE F®; FUNGICIDE GM®; FUNGICIDE M®; G 4®; GEFIR®; HYOSAN; KORIUM®; PLATH-LYSE®; PREVENTAL®; PREVENTOL®; PREVENTOL GD®; PREVENTOL GDC®; SUPER MOSSTOX®; TAENIATOL®; TENIATOL®; TENIATHANE®; TRIVEX®; VERMITHANA®; WESPURIL®

Chemical Class: Chlorinated phenol

EPA/OPP PC Code: 055001

California DPR Chemical Code: 206

HSDB Number: 6033

UN/NA & ERG Number: UN2020 (chlorophenols, solid)/153; UN2021 (chlorophenols, liquid)/153

RTECS® Number: SM0175000

EC Number: 202-567-1

Uses: Not currently registered in the U.S. Dichlorophene is a wide-spectrum, non-oxidizing biocide used against all types of algae and bacteria. Widely used to treat fungi, fleas and worm conditions in pet animals and livestock. See U.S. Food and Drug Administration 20 CFR 520.580 and 20 CFR 520.581

Regulatory Authority and Advisory Information:

California Proposition 65 Chemical: Developmental/Reproductive toxin (4/27/1999)

Health Advisory: Developmental toxin

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R36; R50/53; safety phrases: S2; S26; S60; S61 (see Appendix 1)

Description: White crystalline solid or tan, sand-like powder. Odorless when pure; weak phenol odor from contact with air. Molecular weight = 269.13; Freezing/Melting point = 177.22–177.78°C; Vapor pressure = 1×10^{-4} mmHg @ 100°C. Practically insoluble in water; solubility = <1 mg/mL @ 25°C[88].

Incompatibilities: React with oxidizers, boranes, alkalies, aliphatic amines, amides, strong bases, nitric acid, sulfuric acid. Flammable hydrogen gas may be generated, and the heat from reaction may ignite the gas. May generate heat on contact with bases. Heating may initiate dangerous polymerization.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 4.5 mg/m^3
PAC-2: 50 mg/m^3
PAC-3: 300 mg/m^3

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms of exposure to this compound include sensitivity dermatitis, photosensitivity and stomatitis. Other symptoms include nausea, vomiting, gastrointestinal colic, diarrhea, urticarial rash and jaundice. Irritation of the skin, eyes, mucous membranes and upper respiratory tract may also occur. It can cause cramps. Symptoms of exposure to related compounds include necrosis of the mucous membranes, cerebral edema, degenerative changes in the liver and kidneys, bladder necrosis, collapse, coma, painless blanching or erythema, possible corrosion, profuse sweating, intense thirst, cyanosis from methemoglobinemia, hyperactivity, stupor, blood pressure fall, hyperpnea, abdominal pain, hemolysis, convulsions and pulmonary edema followed by pneumonia. If death from respiratory failure is not immediate, oliguria or anuria may occur[88]. LD_{50} (oral, rat) = >1500 mg/kg[83]; >2500 kg/mg.

Points of Attack: Liver, kidneys, spleen and central nervous system.

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: SCBA >5.5 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Chlorophenols, liquid or solid require a shipping label of "poisonous materials" and fall in Hazard Class 6.1.

Spill Handling: If a spill occurs, clean it up promptly. Wear protective clothing. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and extremely toxic hydrogen chloride fumes. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

1,3-Dichloropropene D:0660

Use Type: Soil fumigant, Nematicide

CAS Number: 542-75-6; 10061-01-5 (*cis*-); 10061-02-6 (*trans*-)

Formula: $C_3H_4Cl_2$; $CHCl = CHCH_2Cl$

Synonyms: β-Chloroallyl chloride; 3-Chloroallyl chloride; 3-Chloropropenyl chloride; 1,3-D; 1,3-Dichloro-2-propene; 1,3-Dicloropropeno (Spanish); α,β-Dichloropropylene; 1,3-Dichloropropylene; (*EZ*)-1,3-Dichloropropene; 1-Propene, 1,3-dichloro-; Propene, 1,3-dichloro-

Trade Names: DURHAM NEMATOCIDE®[C]; FUMAZONE®[C]; NEMAGON®[C]; NEMEX®; PRO-KILL NEMATOCIDE®[C]; TELONE®; TELONE II®; TELONE II-B®; TELONE® EC DRIP; VIDDEN D®; VORLEX®

Chemical Class: Halogenated hydrocarbon

EPA/OPP PC Code: 029001

California DPR Chemical Code: 573

HSDB Number: 1109

UN/NA & ERG Number: UN2047/129

RTECS® Number: UC8310000

EC Number: 208-826-5 [*Annex I Index No.:* 602-030-00-5]

Uses: This chemical is also used in combinations with dichloropropanes as a soil fumigant to kill nematodes, insects and fungus on cotton, potatoes, tobacco, sugar beets, vegetables, grain, citrus planting sites, deciduous fruit and nut-tree planting sites, and ornamental trees and floral sites. Top four applications in California are on sweet potatoes, carrots, wine grapes and outdoor propagation nurseries. It is used on a wide variety of crops. Not approved for use in EU countries[115]. Actively registered in the U.S.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; NTP: 12th Report on Carcinogens, 2011: Reasonably anticipated to be a human carcinogen; IARC: Group 2b, Possible human carcinogen; ACGIH, A3 Confirmed animal carcinogen with unknown relevance to humans

California Proposition 65 Chemical: Carcinogen (1/1/1989)

List of priority pollutants (U.S. EPA)

Health Advisory: Mutagen, Highly flammable

WGK (German Aquatic Hazard Class): No value assigned

Description: 1,3-Dichloropropene is a colorless to straw-colored liquid. Corrosive and flammable. It has a sharp, sweet, irritating, chloroform-like odor. Molecular weight = 110.97; Specific gravity (H_2O:1) = 1.2 @ 20°C; Boiling point = 103.89°C @ 760 mmHg; 77°C (mixed *cis*- and *trans*-isomers); Freezing/Melting point = –83.9°C; Vapor pressure = 28 mmHg @ 25°C; Flash point = 35°C. The explosive limits are: LEL = 5.3%; UEL = 14.5%. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 3, Reactivity 0. Highly soluble in water; solubility = >2000 mg/L.

Incompatibilities: Forms explosive mixture with air. Violent reaction with strong oxidizers. May accumulate static electrical charges, and may cause ignition of its vapors. Incompatible with strong acids, oxidizers, aluminum or magnesium compounds, aliphatic amines, alkanolamines, alkaline matrials, halogens, or corrosives. *Note*: Epichlorohydrin may be added as a stabilizer.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 1 ppm/5 mg/m^3 TWA [skin]; Potential occupational carcinogen; limit exposure to lowest feasible level. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: 1 ppm/4.5 mg/m^3 TWA [skin]; confirmed animal carcinogen with unknown relevance to humans (2003)

Protective Action Criteria (PAC) Ver. 27[89]

dichloropropene, 1,3- (including *cis-* and *trans-* isomers)

PAC-1: 3 ppm
PAC-2: 19 ppm
PAC-3: 120 ppm

DFG MAK (*cis- and trans-isomers*): [skin] danger of skin sensitization; Carcinogen Category 2

Determination in Air: EPA Method 8240. Gas Chromatography/Mass Spectrometry for the determination of volatile organics. OSW Method 0031. Sampling Method for Volatile Organic Compounds. Sampling train. Incinerator. Target detection limit = 0.100 μg/m^3.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 4 ppb[93]. State Drinking Water Standards: California 0.5 μg/L; State Drinking Water Guidelines: Florida 0.4 μg/L; Maine 4 μg/L; Massachusetts 0.4 μg/L; Minnesota 2 μg/L; New Hampshire 0.4 μg/L; Wisconsin 0.2 μg/L.

Determination in Water: Inert gas purge followed by gas chromatography with halide-specific detection (EPA Method 601) or gas chromatography plus mass spectrometry (EPA Method 624); Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Exposure can cause headaches, chest pain, and dizziness. High levels can cause you to pass out. Contact can severely burn the eyes and skin, with permanent damage. High exposures can damage the kidneys, liver and lungs. A skin sensitizer. LD_{50} (oral, rat) = 50–500 mg/kg; LD_{50} (dermal, rat) = >300 mg/kg.

Long Term Exposure: There is evidence that 1,3-dichloropropene causes cancer in animals and humans. May be a liver and kidney toxin, causing damage to the kidneys and liver. May cause lung damage. May cause chronic headache, and personality changes. This chemical has mutagenic potential. May cause skin sensitization. May cause tumors.

Points of Attack: Eyes, skin, respiratory system, central nervous system, liver, kidneys. Cancer site in animals: cancer of the bladder, liver, lung and stomach.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Before beginning employment and at regular times after that, the following are recommended: Liver function tests. Lung function tests. Kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. NIOSH recommends: **8 hr** (more than 8 hours of resistance to breakthrough $>0.1 \mu g/cm^2/min$): polyvinyl alcohol gloves; Viton™ gloves, suits; Responder™ suits; **4 hr** (At least 4 but <8 hours of resistance to breakthrough $>0.1 \mu g/cm^2/min$): Teflon™ gloves, suits, boots. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >3 ppm. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode) or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Prior to working with 1,3-dichloropropene you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. 1,3-Dichloropropene must be stored to avoid contact with aluminum or magnesium compounds, substances containing fluorine, chlorine, bromine or iodine, and alkaline or corrosive materials, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area. Separate outside storage is preferred. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where 1,3-dichloropropene is handled, used, or stored. Metal containers involving the transfer of 5 gallons or more of 1,3-dichloropropene should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of 1,3-dichloropropene. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dichloropropene must be labeled "FLAMMABLE LIQUID." It falls in DOT Hazard Class 3.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Establish forced ventilation to keep levels below explosive limit. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a flammable liquid. Hazardous decomposition includes hydrogen chloride. Use dry chemical, carbon dioxide; or foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration, preferably after mixing with another combustible fuel. Care must be exercised to ensure complete combustion to prevent the formation of phosgene. An acid scrubber is necessary to remove the halo acids produced. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Dichlorvos D:0690

Use Type: Insecticide, Acaricide, Nematicide

CAS Number: 62-73-7

Formula: $C_4H_7Cl_2O_4P$

Synonyms: Chlorvinphos; Cyanophos; DDVF; DDVP (Insecticide); Dichlorman; 2,2-Dichloroethenol dimethyl phosphate; 2,2-Dichloroethenyl dimethyl phosphate; 2,2-Dichlorovinyl dimethyl phosphate; Dichlorovos; Dimethyl 2,2-dichloroethenyl phosphate; *O,O*-Dimethyl 2,2-dichlorovinyl phosphate; Dimethyl 2,2-dichlorovinyl phosphate; Dimethyl dichlorovinyl phosphate; ENT 20,738; Ethenol, 2,2-dichloro-, dimethyl phosphate; NCI-C00113; NSC-6738; Phosphoric acid, 2,2-dichloroethenyl dimethyl ester; Phosphoric acid, 2,2-dichlorovinyl dimethyl ester

Trade Names: ALCO® Dichlorvos; APAVAP®; ASTROBOT®; ATGARD®; BAY 19149®; BAYER 19149®; BENFOS®; BIBESOL®; BREVINYL®; BREVINYL E 50®; CANOGARD®; CEKUSAN®; CYPONA®; DEDEVAP®; DERRIBAN®; DERRIBANTE®; DES®; DEVIKOL®; DICLORCAL 50®; DIDIVANE; DIVIPAN®; DOOM®; DQUIGARD®; DUO-KILL®; DURAVOS®; ELASTREL®; EQUIGARD®[C]; EQUIGEL®[C]; ESTROSEL®; ESTROSOL®; FECAMA®; FEKAMA®; FLY-DIE®; FLY FIGHTER®; HERKOL®; INSECTIGAS D®; KRECALVIN®; LINDAN®; MAFU®; MARVEX®; MOPARI®; NEFRAFOS®; NERKOL®; NOGOS®; NO-PEST®; NOVOTOX®; NUVA®; NUVAN®; OKO®; OMS 14®; PANAPLATE®; PHOSVIT®; PRENTOX®; SD 1750®; SUCHLOR®; SZKLARNIAK®; TAP 9VP®; TASK®; TENAC®; TETRAVOS®; UNIFOS (PESTICIDE)®; UNITOX®; VAPONA® et al. [C]; VAPONITE®; VERDICAN®; VERDIPOR®; VERDISOL®; VINYLOFOS®; VINYLOPHOS®; WINYLOPHOS®

Chemical Class: Organophosphate

EPA/OPP PC Code: 084001 and 600020

California DPR Chemical Code: 187

HSDB Number: 319

UN/NA & ERG Number: UN2783 (solid)/152

RTECS® Number: TC0350000

EC Number: 200-547-7 [*Annex I Index No.:* 015-019-00-X]

Uses: Dichlorvos is used for insect control in food-storage areas, green-houses, and barns, and control of insects on livestock. It is not generally used on outdoor crops. Dichlorvos is sometimes used for insect control in workplaces and in the home. Dichlorvos used in pest control is diluted with other chemicals and used as a spray. It can also be incorporated into plastic that slowly releases the chemical. Veterinarians use it to control parasites on pets. Dichlorvos is effective against mushroom flies, aphids, spider mites, caterpillars, thrips, and white flies in greenhouse, outdoor fruit, and vegetable crops. It is used to treat a variety of parasitic worm infections in dogs, livestock, and humans. Dichlorvos can be fed to livestock to control botfly larvae in the manure. It acts against insects as both a contact and a stomach poison. It is used as a fumigant and has been used to make pet collars and pest strips. It is available as an aerosol and soluble concentrate. Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP). Dichlorvos also exists as a breakdown product.

U.S. Maximum Allowable Residue Levels for Dichlorvos [40 CFR 180.235 (a)]: Tolerances for residues of the insecticide 2,2-dichlorovinyl dimethyl phosphate are established as follows: cattle, fat 0.02 ppm (N); cattle, meat 0.02 ppm (N); cattle, meat, byproducts 0.02 ppm (N); egg 0.05 ppm (N); goat, fat 0.02 ppm (N); goat, meat 0.02 ppm (N); goat, meat byproducts 0.02 ppm (N); horse, fat 0.02 ppm (N); horse, meat 0.02 ppm (N); horse, meat byproducts 0.02 ppm (N); milk 0.02 ppm (N); mushroom (residues expressed as naled) 0.5 ppm; poultry, fat 0.05 ppm (N); poultry, meat 0.05 ppm (N); poultry, meat byproducts 0.05 ppm (N); raw agricultural commodities, nonperishable, bulk stored regardless of fat content, postharvest 0.5 ppm; raw agricultural commodities nonperishable, packaged or bagged, containing 6 percent fat or less, postharvest 0.5 ppm; raw agricultural commodities, nonperishable, packaged or bagged, containing more than 6 percent fat, postharvest 2 ppm; sheep, fat 0.02 ppm (N); sheep, meat 0.02 ppm (N); sheep, meat byproducts 0.02 ppm (N); and tomato, postharvest (residues expressed as naled) 0.05 ppm. ***[40 CFR 180.235(a)(2)]:*** The tolerance of 0.1 part per million prescribed by 21 CFR 556.180 for negligible residues of 2,2-dichlorovinyl dimethyl phosphate in the edible tissue of swine covers both its use as an anthelmintic in swine feed and as an insecticide applied directly to swine. ***[40 CFR 180.235(a)(3)]:*** a residue on packaged or bagged nonperishable processed food [see: 21 CFR 170.3(j)] 0.5 ppm. To ensure safe use of the insecticide, its label and labeling shall conform to the label and labeling registered by the U.S. EPA, and the usage employed shall conform with such label or labeling. ***[21 CFR 556.180]:*** negligible residues in the edible tissues of swine 0.1 ppm.

Human toxicity (long-term)[101]: Extra high–0.35 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–7.24703 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: IARC: Animal Sufficient Evidence; Human Inadequate Data, *possibly carcinogenic to humans*, Group 2b, 1991; EPA Group C, Possible human carcinogen

California Proposition 65 Chemical: Cancer (1/1/1989)

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Very toxic by Inhalation (EU)

Acute Oral Category: 1, DANGER–POISON

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 1000 lb (454 kg)

CERCLA Reportable Quantity (RQ): 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B), severe pollutant.

US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates

European/International Regulations: Hazard Symbol: T, T+, Xn, N; risk phrases: R24/25; R26; R43; R50; safety phrases: S1/2; S28; S36/37; S45; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Dichlorvos is a colorless, pale yellow or amber liquid. Mild aromatic odor. Molecular weight = 220.98; Specific gravity (H_2O:1) = 1.415 @ 25°C; Boiling point = 140°C @ 25°C; Freezing/Melting point = <– 60°C; Vapor pressure = 1.6×10^{-2} mmHg @ 25°C; Flash point ≥79°C; LEL (Lower Explosive Limit) = 33,850 ppm. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Highly soluble in water; solubility = 10–50 mg/mL @ 20°C.

Incompatibilities: Mist or vapor may form explosive mixture with air. Corrosive in molten form. Strong acids, strong alkalis. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Corrosive to iron, mild steel, and some forms of plastics, rubber, and coatings.

Permissible Exposure Limits in Air: NIOSH IDLH: 100 mg/m^3

Conversion factor: 1 ppm = 9.04 mg/m^3 @ 25°C @ 1 atm

OSHA PEL: 1 mg/m^3 TWA [skin]

NIOSH REL: 1 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.9 mg/m^3 TWA measured as inhalable fraction and vapor; [skin, sensitization]; not classifiable as a human carcinogen; BEI_A issued; Acetylcholinesterase inhibiting pesticides.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 1.8 mg/m^3

PAC-2: 20 mg/m^3

PAC-3: 200 mg/m^3

DFG MAK: 0.11 ppm/1 mg/m^3 TWA; Peak Limitation Category II(2) [skin], Pregnancy Risk Group C

Determination in Air: XAD-2® (tube); Toluene; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH II(5), P&CAM Method #295[18]

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 0.1 μg/L.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or dermal and/or eye contact.

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Dichlorvos irritates the eyes and skin. Symptoms include miosis, aching eyes; rhinorrhea (discharge of thin nasal mucous); headache; chest tightness, wheezing, laryngeal spasm, salivation; cyanosis;

anorexia, nausea, vomiting, diarrhea; sweating; muscle fasiculation, paralysis, giddiness, ataxia; convulsions; low blood pressure, cardiac irregular/irregularities. The substance may cause effects on the central nervous system. Acetyl cholinesterase inhibitor. High levels of exposure may result in death. Delayed pulmonary edema may occur after inhalation. Symptoms of exposure include sweating, twitching, contracted pupils, respiratory distress (tightness in the chest and wheezing), salivation (drooling), lacrimation (tearing), nausea, vomiting, abdominal cramps, diarrhea, involuntary defecation and urination, slurred speech, coma, apnea (cessation of breathing), and death. Toxic changes are typical of organophosphate insecticide poisoning with progression to respiratory distress, respiratory paralysis, and death if there is no clinical intervention. LD_{50} (oral, rat) = 17–80 mg/kg; LD_{50} (dermal, rat) = 75–120 mg/kg.

Long Term Exposure: May cause cancer. Repeated or prolonged contact with skin may cause skin sensitization and dermatitis. Cholinesterase inhibitor; cumulative effect is possible. Animal studies have also shown effects on the nervous system when animals drank water or ate food containing dichlorvos. Animal studies have not reported effects on reproduction or birth defects when animals were exposed to dichlorvos. May cause liver and kidney damage, tumors. A neurotoxin.

Points of Attack: Eyes, skin, liver, kidney respiratory system, cardiovascular system, central nervous system, blood acetylcholinesterase.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Also consider complete blood count and chest x-ray following acute overexposure.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, *do not induce vomiting*. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >1.8 mg/m^3 NIOSH: *10 mg/m^3*: Sa (APF = 10) (any supplied-air respirator). *25 mg/m^3*: Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode). *50 mg/m^3*: SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *100 mg/m^3*: Sa: Pd,Pp (APF = 1000) (any supplied-air respirator operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions*: SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with dichlorvos you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong acids; strong alkalis. Dichlorvos will attack some forms of mild iron, plastics, rubber and coatings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, liquid, toxic, n.o.s. require a "POISON, FLAMMABLE LIQUID" label. Dichlorvos falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leaks if you can do it without risk. Reduce vapors with water spray. Take up *small spills* with sand or other noncombustible absorbent material for later disposal in canisters. Dike *large spills* far ahead of spill for later disposal. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. This chemical is a flammable liquid. Use dry chemical, carbon dioxide; or foam extinguishers. Use self-contained breathing apparatus with a full facepiece operated on pressure-demand or other positive-pressure mode. Prevent dermal contact with protective clothing. Isolate area and deny entry. Fight fire from maximum distance. Dike fire control water for future disposal. Vapors are heavier than air and will collect in low areas. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: 50% hydrolysis is obtained in pure water in 25 minutes @ 70°C and in 61.5 days @ 20°C. A buffered solution yields 50% hydrolysis (37.5°C) in 301 minutes at pH 8, 462 minutes at pH 7, 620 minutes at pH 5.4. Hydrolysis yields no toxic residues. Incineration in a furnace equipped with an afterburner and alkaline scrubber is recommended as is alkaline hydrolysis followed by soil burial. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Diclofop D:0694

Use Type: Herbicide
CAS Number: 40843-25-2
Formula: $C_{15}H_{12}Cl_2O_4$
Synonyms: Dichlorfop acid; 2-[4-(2,4-Dichlorophenoxy) phenoxy]-propanoic acid; (RS)-2-[4-(2,4-Dichlorophenoxy) phenoxy]-propanoic acid; Propanoic acid, 2-[4-(2,4-dichlorophenoxy)phenoxy]-
Trade names: HOE-021079
Chemical Class: Aryloxyphenoxypropionate acid; Chlorophenoxy
EPA/OPP PC Code: 110902
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: UA2458880
Regulatory Authority and Advisory Information:
Acute Oral Category: 2, WARNING
WGK (German Aquatic Hazard Class): No value assigned

Description: A white to light yellow solid or powder. Molecular weight = 327.162; Specific gravity (H_2O:1) = 1.414 @ 20°C; Boiling point = (decomposes); Freezing/Melting point = 120°C; Vapor pressure = 4.03×10^{-8} mmHg @ 25°C; Henry's Law constant = 2.7×10^{-10} atm-m^3/mol @ 25°C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. High solubility in water; solubility = 453 mg/L.

Incompatibilities: Incompatible with oxidizers, chlorates, nitrates, peroxides, reducing agents, acids, and bases.

Permissible Concentration in Water: Canadian Drinking Water Standards: MAC 0.009 mg/L

Determination in Water: Toxicity to fish: LC_{50}: *Oncorhynchus mykiss*/rainbow trout = >100 mg/L/96 h. Log K_{ow} = 4.58[83]. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause eye, skin, and respiratory tract irritation. May be harmful if absorbed through the skin. Irritation of skin, eyes and respiratory tract. Inhalation may cause burning sensation in nasopharynx and chest, coughing, and/or dizziness. Headache, vomiting, diarrhea. Confusion, bizarre or aggressive behavior. Metabolic acidosis resulting in peculiar odor on breath. LD_{50} (oral, rat) = 523–563 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Workers exposed to chlorophenoxy compounds over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction. Liver and kidney toxin; may cause kidney failure and increased heart rate.

Points of Attack: Liver, kidneys.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications.

They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers and bases. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically transfer material from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: *Solid material:* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Liquid formulations containing organic solvents: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes chlorates, hydrogen chloride and carbon monoxide. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Diclofop-methyl D:0695

Use Type: Herbicide

CAS Number: 51338-27-3

Formula: $C_{16}H_{14}Cl_2O_4$

Synonyms: Caswell No. 319A; Diclofop methyl ester; Dichlordiphenprop; Dichlorfop-methyl; 2-[4-(2,4-Dichlorophenoxy)phenoxy]-methyl-propionate; 2-[4-(2,4-Dichlorophenoxy)phenoxy]propanoic acid methyl ester; Methyl 2-[2-(2,4-dichlorophenoxy)phenoxy] propanoate; Methyl ester of 2-[4-(2,4-dichlorophenoxy) phenoxy] propanoic acid; Propanoic acid, 2-[4-(2,4-dichlorophenoxy) phenoxy]-, methyl ester

Trade Names: DICHLORDIPHENPROP®; HOELON®; HOELON® 3EC; HOE-GRASS®; HOEGRASS®; HOE® 23408; ILOXAN®; ILLOXAN®; ONE SHOT®[C]

Chemical Class: Chlorophenoxy; Aryloxyphenoxypropionate acid

EPA/OPP PC Code: 110902

California DPR Chemical Code: 2034 Not registered.

HSDB Number: 6607

UN/NA & ERG Number: UN3345 (solid)/153; UN3348 (liquid)/153

RTECS® Number: UF1180000

EC Number: 257-141-8 [*Annex I Index No.:* 607-165-00-3]

Uses: Some uses are classified as U.S. Restricted Use Pesticide (RUP). Diclofop-methyl is a selective post-emergence herbicide used to control wild oats and annual grassy weeds in grain and vegetable crops: alfalfa, carrots, celery, box, field and french beans, barley, wheat, brassicas, parsnips, peas, potatoes, rapeseed (canola), soy beans, oilseed rape, onions, sugar beets and lettuce.

U.S. Maximum Allowable Residue Levels for the combined residues of Diclofop-methyl and its metabolites, 2-(4-(2,4-dichlorophenoxy)phenoxy)propanoic acid and 2-(4-(2,4-dichloro-5-hydroxyphenoxy)phenoxy)propanoic acid (40 CFR 180.385): in or on the following raw agricultural commodities: barley, grain 0.1 ppm; barley, straw 0.1 ppm; flaxseed 0.1 ppm; lentils 0.1 ppm; pea seeds (dry) 0.1 ppm; soybeans 0.1 ppm; wheat, grain 0.1 ppm; and wheat, straw 0.1 ppm.

EPA Acceptable Daily Intake (ADI): 0.002 mg/kg.

Human toxicity (long-term)[101]: High–1.40 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–10.60669 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely human carcinogen; IARC. Group 2b, possibly carcinogenic to humans.

California Proposition 65 Chemical: Listed: Cancer (4/6/2010)

Health Advisory: Developmental/Reproductive Toxin (TRI), Endocrine disruptor (?)

AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R43; R50/53; safety phrases: S2; S24; S37; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters.

Description: A white crystalline solid. Odorless. Can also be commercially available as a clear to dark brown liquid with a typical solvent odor. Molecular weight = 341.19; Specific gravity (H_2O:1) = 1.4; Boiling point = 173–175; Freezing/Melting point = 39–43.8°C; Vapor pressure = 2.5×10^{-2} mmHg @ 25°C; Flash point = 150°C; 63.1°C (cc) (liquid). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Slightly soluble in water (forms an emulsion); solubility = 3 mg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers, chlorates nitrates, peroxides, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Permissible Concentration in Water: EU Drinking Water MAC: 0.006 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. May cause pulmonary edema or bronchopneumonia; symptoms may be delayed. LD_{50} (oral, rat) = >500 mg/kg.

Long Term Exposure: Workers exposed to chlorophenoxy compounds over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction

Points of Attack: Eyes, skin, lungs and respiratory system, central nervous system, cardiovascular system, liver, kidney. Liver and kidney toxin; skin sensitizer.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers and bases. Metal containers involving the transfer of this chemical should be grounded and bonded. Where possible, automatically transfer material from drums or other storage containers to process containers. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenoxyacetic acid derivative pesticide, solid or liquid, toxic require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Commercial product may also be a liquid in a flammable carrier.

Spill Handling: *Solid material:* first remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Liquid formulations containing organic solvents: evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers.

Fire Extinguishing: *Solid material: a* combustible solid. Hazardous decomposition includes hydrogen chloride gas, chlorates and oxides of carbon As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dicofol D:0700

Use Type: Insecticide, Acaricide

CAS Number: 115-32-2

Formula: $C_{14}H_9Cl_5$

Synonyms: Benzenemethanol, 4-chloro-α(-4-chlorophenyl) -α-(trichloromethyl)-; Benzhydrol, 4,4'-dichloro-*alpha*-(trichloromethyl)-; 1,1-Bis(*p*-chlorophenyl)-2,2,2-trichloro ethanol; 1,1-Bis(4-chlorophenyl)-2,2,2-trichloroethanol; 4-Chloro-α-(4-chlorophenyl)-α-(trichloromethyl)benzene methanol; CPCA; 4,4'-Dichloro-α-(trichloromethyl) benzhydrol; Dichlorokelthane; Di(*p*-chlorophenyl) trichloromethyl carbinol; DTMC; ENT 23,648; Ethanol, 2,2,2-trichloro-1,1-bis(4-chlorophenyl)-; NCI-C00486; 2,2,2-Trichloro-1,1-bis(4-chlorophenyl) ethanol; 2,2,2-Trichloro-1,1-bis(*p*-chlorophenyl)ethanoL; 2,2,2-Trichloro-1,1-di(4-chlorophenyl)ethanol

Trade Names: ACARIN®[C]; CALLIFOL®; CARBAX®; CEKUDIFOL®; DECOFOL®; DICOMITE®; DIFOL®; FERRIAMICIDE®; FUMITE DICOFOL®; FW 293®; HIFOL®; KELTANE®; KELTHANE®; P,P'-KELTHANE®; KELTHANETHANOL®; MILBOL®; MITIGAN®; TIKTOK®; VAPCOTHION®, dicofol

Chemical Class: Organochlorine

EPA/OPP PC Code: 010501

California DPR Chemical Code: 346

HSDB Number: 631

UN/NA & ERG Number: UN2761 (solid)/151; UN2996 (liquid)/151; UN3082 (liquid)/171

RTECS® Number: DC8400000

EC Number: 204-082-0 [*Annex I Index No.:* 603-044-00-4]

Uses: Not approved for use in EU countries[115]. Severely Restricted for use in EU (containing > 78% *p,p'*-dicofol or 1 g/kg of DDT and DDT-related compounds). Dicofol is an organochlorine miticide/pesticide used for foliar applications, mostly on cotton, apples, and citrus crops. Other crops include: strawberries, mint, beans, peppers, tomatoes, pecans, walnuts, stonefruit, cucurbits, and nonresidential lawns/ornamentals. Formulations registered for use on food/feed crops include emulsifiable concentrates, and wettable powder formulations. These formulations may be applied as concentrated or dilute sprays using aircraft, duster, groundboom, and sprayer. Dicofol is manufactured from DDT. In 1986, use of dicofol was temporarily canceled by the U.S. EPA because of concerns raised by high levels of DDT contamination. However, it was reinstated when it was shown that modern manufacturing processes can produce technical-grade dicofol which contains <0.1% DDT.

U.S. Maximum Allowable Residue Levels for Dicofol [40CFR180.163(a)(1)]: Apple, wet pomace 38.0 ppm; bean, dry, seed 0.5 ppm; bean, succulent 3.0 ppm; butternut 0.1 ppm; caneberry subgroup 13A, 5.0 ppm; chestnut 0.1 ppm; citrus, dried pulp 12.0 ppm; citrus oil 200.0 ppm; cotton, refined oil 0.5 ppm; cotton, undelinted seed 0.1 ppm; fruit, citrus, group 10, 6.0 ppm; fruit, pome, group 1, 1 ppm; 10.0 ppm; fruit, stone, group 12, 5.0 ppm; grape 5.0 ppm; grape, raisin 20.0 ppm; hazelnut 0.1 ppm; hop, dried cones 65.0 ppm; nut, hickory 0.1 ppm; nut, macadamia 0.1 ppm; pecan 0.1 ppm; peppermint, oil 30.0 ppm; peppermint, tops 25.0 ppm; spearmint, oil 30.0 ppm; spearmint, tops 25.0 ppm; strawberry 10.0 ppm; tea, dried 50.0 ppm; tea, plucked leaves 30.0 ppm; vegetable, cucurbit, group 9, 2.0 ppm; vegetable, fruiting, group 8, 2.0 ppm; walnut 0.1 ppm; **[*40CFR180.163(a)(2)*]** cattle, fat 50.0 ppm; cattle, liver 5.0 ppm; cattle, meat 3.0 ppm; cattle, meat byproducts, except liver 3.0 ppm; egg 0.05 ppm; goat, fat 50.0 ppm; goat, liver 5.0 ppm; goat, meat 3.0 ppm; goat, meat byproducts, except liver 3.0 ppm; hog, fat 50.0 ppm; hog, liver 5.0 ppm; hog, meat 3.0 ppm; hog, meat byproducts, except liver 3.0 ppm; horse, fat 50.0 ppm; horse, liver 5.0 ppm; horse, meat 3.0 ppm; horse, meat byproducts, except liver 3.0 ppm; milk, fat (reflecting 0.75 ppm; ppm in whole milk) 22.0 ppm; poultry, fat 0.1 ppm; poultry, meat 0.1 ppm; poultry, meat byproducts 0.1 ppm; sheep, fat 50.0 ppm; sheep, liver 5.0 ppm; sheep, meat 3.0 ppm; sheep, meat byproducts, except liver 3.0 ppm.

Human toxicity (long-term)[101]: Extra high–0.84 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–5.89576 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen, April 2006; IARC: Human, No Adequate Data, 1983; Animal, Limited Evidence, 1983*, not classifiable as carcinogenic to humans*, Group 3, 1987

Acute Oral Category: 2, WARNING

Health Advisory: Endocrine disruptor (S!), Mutagen, Developmental/Reproductive Toxin

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)

CERCLA Reportable Quantity (RQ): 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R21/22; R38; R43; R50/53; safety phrases: S2; S36/37; 60; S61 (see Appendix 1)

Description: Dicofol is a white crystalline powder or white to brown waxy solid. The commercial product is often dissolved in a liquid carrier such as water. Molecular weight = 370.49; Specific gravity (H_2O:1) = 1.1; Boiling point = 180°C; 193°C; Freezing/Melting point = 77.5°C; Vapor pressure = 0.25 mmHg @ 25°C; Henry's Law constant = 2.4×10^{-7} atm-m^3/mol @ 25°C (est)[83]; Flash point = 120–230°C (depending on solvent). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Low solubility in water; solubility = about 1 mg/L. Physical and toxicological properties may be affected by by the carrier solvents (xylene is possible) used in commercial formulations.

Incompatibilities: Incompatible with alkaline pesticides, strong acids, acid fumes, aliphatic amines, isocyanates, steel. Slightly corrosive to metals, especially in the presence of moisture.

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 0.08 μg/L.

Determination in Water: EPA Method D3086. GC method with ECD for the determination of organochlorine pesticides in water and wastewater. Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms. The primary hazard of this pesticide is the threat to the environment. Immediate steps should be taken to limit its spread to the environment. Can easily penetrate the soil and contaminate groundwater and nearby streams.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Dicofol can be absorbed through the skin, thereby increasing exposure. It irritates the skin and the respiratory tract. Exposure can cause headache, nausea, vomiting and poor appetite. Dicofol may affect the central nervous system, causing numbness and weakness in the hands and feet, muscle twitching, seizures, unconsciousness and death. LD_{50} (oral, rat) = >500 mg/kg; LD_{50} (dermal, rat) = <200 mg/kg.

Long Term Exposure: May cause tumors. Organochlorine pesticides are highly toxic to mammals and will accumulate in the tissues of living organisms. May affect the liver and kidneys. May cause personality changes with depression, anxiety, and irritability. May decrease fertility in females. Prolonged or repeated dermal contact may cause dermatitis. There is limited evidence that dicofol causes liver cancer in animals. May cause skin sensitization.

Points of Attack: Skin, nervous system. liver, kidneys.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Liver and kidney function tests. Examination of the nervous system. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. For liquid solutions containing dicofol wear indirect-vent, impact and splash-resistant goggles. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with dicofol you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from alkaline pesticides, strong acids, acid fumes, and steel. Where possible, automatically transfer material from drums or other storage containers to process containers. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organochlorine pesticides, liquid or solid require a "poisonous materials" label. They fall in Hazard Class 6.1. STN: 4966940. It is also an environmental hazard: environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Hazardous decomposition includes hydrogen chloride, hydrogen, and chlorides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dicrotophos D:0710

Use Type: Insecticide, Acaricide

CAS Number: 141-66-2

Formula: $C_8H_{16}NO_5P$

Synonyms: Crotonamide, 3-hydroxy-*N*-*N*,-dimethyl-, *cis*-, Dimethyl phosphate; Crotonamide, 3-hydroxy-*N*-*N*-dimethyl-, dimethylphosphate, *cis*-; Crotonamide, 3-hydroxy-*N*-*N*-dimethyl-, dimethylphosphate, (*E*)-; Dicroptophos; 3-(Dimethoxyphosphinyloxy)-*N,N*-dimethyl-(*E*)-crotonamide; 3-(Dimethoxyphosphinyloxy)-*N,N*-dimethyl-*cis*-crotonamide; 3-(Dimethoxyphosphinyloxy)-*N,N*-dimethylisocrotonamide; 3-(Dimethylamino)-1-methyl-3-oxo-1-propenyl dimethyl phosphate; *cis*-2-Dimethylcarbamoyl-1-methylvinyldimethylphosphate;*(E)*-2-Dimethylcarbamoyl-1-methylvinyl dimethylphosphate; *O,* *O,O*-Dimethylo-(*N,N*-dimethylcarbamoyl-1-methylvinyl) phosphate; *O,O*-Dimethyl-*O*-(1,4-dimethyl-3-oxo-4-azapent-1-enyl)phosphate; Dimethyl phosphate of 3-hydroxy-*N,N*-dimethyl-*cis*-crotonamide; Dimethyl phosphate ester with 3-hydroxy-*N,N*-dimethyl-*cis*-crotonamide; ENT 24,482; 3-Hydroxydimethyl crotonamide dimethyl phosphate; 3-Hydroxy-*N,N*-dimethyl-*cis*-crotonamide dimethyl phosphate; 3-Hydroxy-*N,N*-dimethyl-*(E)*-crotonamide dimethyl phosphate; Phosphoric acid, 3-(dimethylamino)-1-methyl-3-oxo-1-propenyl dimethyl ester, *(E)*-; Phosphoric acid, dimethyl ester with *cis*-3-hydroxy-*N,N*-dimethylcrotonamide; Phosphoric acid, dimethylester with *(E)*-3-hydroxy-*N,N*-dimethylcrotonamide

Trade Names: BIDIRL®; BIDRIN®; BIDRIN-R®[C]; BIDRIN®[C]; C-709®; C-709®; CARBICRIN®; CARBICRON®; CARBOMICRON®; CIBA 709®; DIAPADRIN®; DICRON®; DIDRIN®; EKTAFOS®; EKTOFOS®; KARBICRON®; SD 3562®; SHELL SD-3562®

Chemical Class: Organophosphate

EPA/OPP PC Code: 035201

California DPR Chemical Code: 72

HSDB Number: 1637

UN/NA & ERG Number: UN3018 (liquid)/152

RTECS® Number: TC3850000

EC Number: 205-494-3 [*Annex I Index No.:* 015-073-00-4]

Uses: EPA restricted Use Pesticide (RUP). Not approved for use in EU countries[115]. Dicrotophos was introduced in 1956 as a contact systemic pesticide with a wide range of applications. Today, dicrotophos is currently used mainly as an insecticide for apples and other fruit crops, and for cotton pests, mostly in the Mississippi Valley. It is acutely toxic to birds, especially those that follow their migratory corridors and feed in the farmlands that have been treated with this pesticide. Internationally, dicrotophos is used on rice, coffee and citrus. One of the major degradates of dicrotophos is monocrotophos. All uses of monocrotophos have been voluntarily cancelled in the United States due to its extreme toxicity to humans and wildlife.

U.S. Maximum Allowable Residue Levels for Dicrotophos (40 CFR 180.299): cotton, undelinted seed 0.05 ppm.

Human toxicity (long-term)[101]: Extra high–0.70 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–953.39880 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Suggestive Evidence of Carcinogenicity, but Not Sufficient to Assess Human Carcinogenic Potential; ACGIH, A4 Not classifiable as a human carcinogen; EU GHS Category 2: Suspected human carcinogen.

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)

CERCLA Reportable Quantity (RQ): 100 lb (45.4 kg)

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)

US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R24; R28; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)

Description: Dicrotophos is a yellow or amber liquid. Mild ester odor. Molecular weight = 237.22; Specific gravity (H_2O:1) = 1.216 @ 15°C; Boiling point = 400°C (Decomposes below boiling point @ 75°C after storage for 31 days); Vapor pressure = 8.6×10^{-5} mmHg @ 20°C; Flash point ≥94°C; LEL (Lower Explosive Limit) = 41,000 ppm. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Highly soluble in water.

Incompatibilities: In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Attacks some metals: corrosive to cast iron, mild steel, brass, and stainless steel 304. Decomposes after prolonged storage, but is stable when stored in glass or polyethylene containers with temperatures to 40°C. Forms highly toxic fumes of phosphorus and nitrogen oxides when heated to decomposition.

Permissible Exposure Limits in Air: Conversion factor: 1 ppm = 9.70 mg/m^3 @ 25°C @ 1 atm

OSHA PEL: None

NIOSH REL: 0.25 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.05 mg/m^3 TWA measured as inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI: methemoglobin in blood; 1.5% of hemoglobin, during or end-of-shift as methemoglobin inducers.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.082 mg/m^3

PAC-2: 0.9 mg/m^3

PAC-3: 4 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides[18]

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 1.0 μg/L.

Determination in Water: Log K_{ow} = <– 0.9. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Dicrotophos may affect the nervous system, causing convulsions, respiratory failure. Dicrotophos is a cholinesterase inhibitor which can penetrate the skin. Effects may be cumulative. It is extremely toxic. Closely related in toxicity to azodrin. Acute exposure to dicrotophos may produce the following signs and symptoms; pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. The effects may be delayed. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 191–225 mg/kg. Highly toxic.

Long Term Exposure: Dicrotophos is a cholinesterase inhibitor; cumulative effect is possible. May damage the nervous system, causing numbness, "pins and needles," sensation and/or weakness of the hands and feet. Repeated exposure may cause personality changes of depression, anxiety or irritability

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. *Eyes:* Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA $>0.082\,\mathrm{mg/m^3}$. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. Hazardous decomposition includes oxides of carbon, nitrogen, sulfur and phosphorus. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Didecyldimethylammonium chloride D:0745

Use Type: Biocide, Fungicide, Bactericide, Herbicide, Algaecide, Algaecide, Bacteriocide, Fungistat, Microbiocide, Microbiostat disinfectant, Viricide, Tuberculocide, Molluscide, Insecticide

CAS Number: 7173-51-5

Formula: $C_{22}H_{48}ClN$

Synonyms: 1-Decanaminium; *N*-Decyl-*N,N*-dimethyl-, chloride (1:1); *N*-Decyl-*N,N*-dimethyl-1-decanaminium chloride; Dimethyldidecylammonium chloride; Didecyl (dimethyl)azanium chloride;

Trade Names: ALIQUAT 203; BARDAC® 22; BARDAC® 2250, 2270, 2280

Chemical Class: Quaternary ammonium salt

EPA/OPP PC Code: 069149

HSDB Number: 7611

UN/NA & ERG Number: UN2811/154

RTECS® Number: BP6560000

EC Number: 230-525-2 [*Annex I Index No.:*612-131-00-6]

Uses: General purpose disinfectant used on hard, nonporous surfaces as a sanitizer; mildew preventative, wood preservative, and to kill algae, phytopathogenic fungi, phytopathogenic bacteria. An active ingredient in a large number of disinfectant products registered with USEPA and labeled with a claim to inactivate "avian influenza A" viruses on hard surfaces.

U.S. Maximum Allowable Residue Levels for residues of the pesticidal chemical 1-Decanaminium, N-decyl-N,N-dimethyl-, chloride [40 CFR 180.940 (c)]: is exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food. This chemical in an antimicrobial pesticide formulation may be applied to: Food-processing equipment and utensils. Limit: When ready for use, the end-use concentration is not to exceed 200 ppm of active quaternary compound.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans.

Health Advisory: Skin irritant/sensitizer

European/International Regulations: Hazard Symbol: Xn, C; risk phrases: R22; R34; safety phrases: S2; S26; S326/37/39; S45 (see Appendix 1)

WGK (German Aquatic Hazard Class): No value assigned.

Description: A clear crystalline solid, off-white, sticky powder, or yellow liquid. Ethanolic odor. Molecular weight = 362.09; Specific gravity (H_2O:1) = 0.9216 @ 25°C[83]; Boiling point = (decomposes); Freezing/Melting point = 228.81[83]; Vapor pressure = 2.3×10^{-11} mmHg @ 25°C; Flash point = 21–55°C. Henry's Law constant = 6.85×10^{-10} atm-m^3/mol @ 25°C (est)[83]. High solubility in water.

Incompatibilities: Dust forms explosive mixture with air. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Corrosive material.

Determination in Water: Log K_{ow} = 4.66 (est)[83]. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

There have been nearly 2700 incidents reported to the Opp incident data system (ids) and the California Department of Pesticide Regulation from 1982 to 2004 associated with exposure to end-use products containing quaternary ammonium compounds: Most of the incidents are related to dermal, ocular and inhalation irritation. Allergic type reaction has also been reported in some incidents[83].

Short Term Exposure: Quaternary ammonium compounds can cause coughing and choking, shortness of breath, irritation to the mucous membrane, mouth, nose and respiratory tract; sore throat, possible chest pain, dizziness. Ingestion may cause abdominal pain, headache, dizziness and disorientation; burning irritation to mouth, nausea and vomiting. Eye irritation, burning and pain, conjunctivitis, swelling of both eye and eyelids. High levels of exposure may cause respiratory failure and/or cardiovascular collapse. Skin contact can result in irritation, burning sensation, itching, numbness, and itching; rash and blistering may result. May be a skin sensitizer. LD_{50} (oral, rat) = 150–238 mg/kg; LD_{50} (dermal, rat) = >4000 mg/kg.

Long Term Exposure: Repeated contact may cause skin problems.

Points of Attack: Skin, eyes, respiratory tract

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: Eyes: First check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. *Immediately* transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop. Skin: *Immediately* flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, *immediately* call a physician and be prepared to transport the victim to a hospital for treatment. Inhalation: *Immediately* leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, self-contained breathing apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing. Ingestion: *Do not induce vomiting.* If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and *immediately* call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Do not induce vomiting. Immediately* transport the victim to a hospital[88].

Personal Protective Methods: Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/ Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with an organic vapor/acid gas cartridge (specific for organic vapors, HCl, acid gas and SO_2) with a dust/mist filter[88].

Storage: Color Code-White: Corrosive or Contact Hazard; Store refrigerated and separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Corrosive liquid, basic, organic, n.o.s. materials require a label of "CORROSIVE MATERIAL." It falls in Hazard Class 8 and Packing Group I, II or III, depending on concentration. Technical name required.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes fumes of amine, ammonia, hydrogen chloride, and organic chloride fumes. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: High-temperature incineration. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dieldrin D:0750

Use Type: Insecticide

CAS Number: 60-57-1

Formula: $C_{12}H_8Cl_6O$

Synonyms: Dieldrina (Spanish); 2,7:3, 6-Dimethanonaphtha[2,3B]oxirene,3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-(1a α,2. β,2A. α,3β,6. β,6Aα,7β,7Aα); 1,2,3,4,10,10-Hexachloro-6,7- epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4-*endo,exo*- 5,8-di-methanonaphthalene; 3,4,5,6,9,9 -Hexachloro-1a,2,2a,3,6,6a, 7,7a-octahydro-2,7:3,6-dimethano; ENT 16,225; HEOD; Hexachloroepoxyoctahydro- *endo,exo*-dimethanonaphthalene; 3,4,5,6,9,9-Hexachloro-1a, 2, 2a, 3, 6, 6a, 7, 7a-octahydro-2,7:3,6-dimethanonaphth(2,3-b)oxirene; NCI-C00124; (1R,4S,4AS,5R,6R,7S,8S,8AR) 1,2,3,4,10,10-Hexachloro-1,4,4a,5,6,7,8,8a-octahydro-6,7-epoxy-1,4:5,8-dimethanonaphthalene

Trade Names: ALVIT®; BELCO®[C]; COMPOUND 497®; D-31®; DIELDREX®; DIELDRITE®; ILLOXOL®; KILLGERM DETHLAC INSECTICIDAL LAQUER®; OCTALOX®; OXRALOX®; PANORAM®; PANORAM D-31®; PRENTOX®[C]; QUINTOX®; ROYAL BRAND®[C]; SD 3417®

Chemical Class: Organochlorine

EPA/OPP PC Code: 045001

California DPR Chemical Code: 210

HSDB Number: 322

UN/NA & ERG Number: UN2761 (solid)/151

RTECS® Number: IO1750000

EC Number: 200-484-5 [*Annex I Index No.:* 602-049-00-9]

Uses: Manufacture in the United States prohibited since 1974. In 1987, EPA banned all uses. Banned for use in EU (also for export) All uses of dieldrin (and Aldrin) were canceled in 1974, except for subsurface ground insertion for termite control, dipping of non-food roots and tops, and moth-proofing by manufacturing processes in a closed system (EPA 1974). In 1987, these final three uses were voluntarily canceled by the sole manufacturer. Currently there are more than 25 global suppliers[97].

Human toxicity (long-term)[101]: Extra high–0.02187 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Extra high–0.07710 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; IARC: Human, Inadequate Data, 1974; Animal, Limited Evidence, 1974*, not classifiable as carcinogenic to humans*, Group 3, 1987; NIOSH: Potential occupational carcinogen, See *NIOSH Pocket Guide*, Appendix A; ACGIH, A4 Not classifiable as a human carcinogen.

California Proposition 65 Chemical: Carcinogen (7/1/1988)

Acute Oral Category: 1, DANGER–POISON

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR423, appendix A, Priority Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92); Toxic Pollutant (Section 401.15)

U.S. EPA Hazardous Waste Number (RCRA No.): P037

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.017; Non-wastewater (mg/kg), 0.13

RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8080 (0.05); 8270 (10)

CERCLA Reportable Quantity (RQ): 1 lb (0.454 kg)

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)

Mexico, Drinking Water Criteria, 0.0000007 mg/L

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)]

List of Stockholm Convention POPs: Annex A (Elimination), Dieldrin and Aldrin

Regulations: Hazard Symbol: T+, N; risk phrases: R25; R27; R40; R48/25; R50/53; safety phrases: S1/2; S21; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Dieldrin is a white to light tan crystalline solid. Mild chemical odor. Molecular weight = 380.93; Specific gravity (H_2O:1) = 1.75 @ 20°C; Boiling point = (decomposes); Freezing/Melting point = 178°C; Vapor pressure = 8×10^{-7} mmHg @ 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Practically insoluble in water; solubility = 0.02%. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Potential Exposure: Dieldrin and aldrin were manufactured in the United States by Shell Chemical Co. until the U.S. EPA prohibited their manufacture in 1974 under the Federal Insecticide, Fungicide, and Rodenticide Act. The primary use of the chemicals in the past was for control of corn pests, although they were also used by the citrus industry. Dieldrin's persistence in the environment is due to its extremely low volatility (i.e., a vapor pressure of 1.78×10^{-7} mmHg @ 20°C), and low solubility in water (186 μg/L @ 25–29°C). In addition, dieldrin is extremely apolar, resulting in a high affinity for fat, which accounts for its retention in animal fats, plant waxes, and other such organic matter in the environment. The fat solubility of dieldrin results in the progressive accumulation in the food chain, which may result in a concentration in an organism which would exceed the lethal limit for a consumer.

Incompatibilities: Incompatible with strong acids: concentrated mineral acids, acid catalysts, phenols, strong oxidizers, phenols, active metals, like sodium, potassium, magnesium, and zinc. Keep away from copper, iron, and their salts. Corrosive to metals.

Permissible Exposure Limits in Air: OSHA PEL: 0.25 mg/m^3 TWA[skin]

NIOSH REL: 0.25 mg/m^3 TWA[skin]; Potential occupational carcinogen; limit exposure to lowest feasible level. See *NIOSH Pocket Guide*, Appendix A

ACGIH TLV®[1]: 0.25 mg/m^3 TWA measured as inhalable fraction and vapor [skin]; confirmed animal carcinogen with unknown relevance to humans.NIOSH IDLH: 50 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.3 mg/m^3
PAC-2: 2.5 mg/m^3
PAC-3: 450 mg/m^3

DFG MAK: 0.25 mg/m^3, measured as the, inhalable fraction; [skin] Peak Limitation Category II(8)

Determination in Air: Filter; Isooctane; Gas chromatography/Electrochemical detection; NIOSH II(3), Method #S283[18]

Permissible Concentration in Water: Federal Drinking Water Guidelines: 0.02 ppb[93]. State Drinking Water Standards: Illinois 1 μg/L; Florida 0.002 μg/L; California 0.002 μg/L; Connecticut 0.03 μg/L; Maine 0.02 μg/L; Minnesota 0.2 μg/L; New Hampshire 0.002 μg/L.

Determination in Water: Methylene chloride extraction followed by gas chromatography with electron capture or halogen-specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625). Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms. The Odor Threshold in water is 0.04 mg/L.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or dermal contact.

Harmful Effects and Symptoms

During the past decade, considerable information has been generated concerning the toxicity and potential carcinogenicity of the two organochlorine pesticides, aldrin and dieldrin. These two pesticides are usually considered together since aldrin is readily epoxidized to dieldrin in the environment. Both are acutely toxic to most forms of life including arthropods, mollusks, invertebrates, amphibians, reptiles, fish, birds and mammals. Dieldrin is extremely persistent in the environment. By means of bioaccumulation it is concentrated many times as it moves up the food chain.

Short Term Exposure: *Inhalation:* May cause nausea, drowsiness, loss of appetite, visual disturbances and insomnia. Sprays of 1 to 21/2% have caused giddiness, headache, muscle twitching, convulsions and loss of consciousness. *Skin*: Can be absorbed to cause or increase the severity of symptoms as listed under ingestion. Contact may cause skin rash. *Eyes:* May cause irritation, redness, and affect vision. *Ingestion*: Can cause headache, nausea, irritability, insomnia, high blood pressure, vision problems, loss of coordination, profuse sweating, dizziness, frothing at the mouth, convulsions and loss of consciousness. Death may occur from as little as 1/20 ounce (1.4 gram). Some symptoms may be delayed up to 12 hours. Exposure to dieldrin may affect the central nervous system, resulting in convulsions. LD_{50} (oral, rat) = 46 mg/kg[86]. High toxicity.

Long Term Exposure: May cause tumors. Organochlorine pesticides are highly toxic to mammals and will accumulate in the tissues of living organisms. May cause liver damage. Dieldrin accumulates in the human body. Dieldrin has caused cancer in laboratory animals. It is considered a suspect occupational carcinogen. May damage the developing fetus. May reduce fertility in males and females. Dieldrin concentrates in breast milk, and therefore may be transferred to breast-feeding infants. Repeated higher exposure can cause tremors, muscle twitching and seizures (convulsions) and may lead to coma and death. Convulsions are somewhat delayed and may occur weeks or months following exposure. Repeated exposure may cause personality changes of depression, anxiety or irritability.

Points of Attack: Central nervous system, liver, kidneys, skin. Cancer site in animals: lung, liver, thyroid and adrenal gland tumors. Potential neurotoxin.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below pre-employment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Blood dieldrin level. Examination of the nervous system. If symptoms develop or overexposure is suspected, the following may be useful: Liver function tests. EEG. Blood dieldrin levels (Normal = <1 mg/100 ml; level should not exceed 15 mg/100 ml). Examination of the nervous system

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 12 hours after overexposure.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.3 mg/m^3. NIOSH: At *any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with dieldrin you should be trained on its proper handling and storage. Dieldrin must be stored to avoid contact with oxidizers (such as perchlorates, peroxides, permanganates, chlorates and nitrates); strong acids (such as hydrochloric, sulfuric and nitric); chemically active metals (such as potassium, sodium, magnesium and zinc), since violent reactions occur. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dieldrin, an organochlorine pesticides, solid toxic, must carry a "poisonous materials" label. It usually falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: Hazardous decomposition begins @~375°C releasing oxides of carbon and hydrogen chloride gas. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Commercial solutions may contain flammable or combustible liquids. Use dry chemical, carbon dioxide; water spray, alcohol or polymer foam extinguishers. Hazardous decomposition includes hydrogen chloride and carbon monoxide. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration (816°C, 0.5 second minimum for primary combustion; 1760°C, 1.0 second for secondary combustion) with adequate scrubbing and ash-disposal facilities. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Difenacoum D:0932

Use Type: Rodenticide

CAS Number: 56073-07-5

Formula: $C_{31}H_{24}O_3$

Synonyms: 3-(3,1,1'-Biphenyl-4-yl-1,2,3,4-tetrahydro-1-napthalenyl)-4-hydroxy-1(2*H*)-benzopyran-2-one

Trade Names: COMPO®; MATRAK®; NEOSOREXA® PELLETS; NEOSOREXA PP580®; RASTOP®; RATAK®; RATRICK®; SILO; SOREXA GEL; STORM

Chemical Class: Coumarin; Hydroxycoumarin

EPA/OPP PC Code: 119901

California DPR Chemical Code: 5973

HSDB Number: 6609

UN/NA & ERG Number: UN3027/151 Coumarin derivative pesticides, solid, toxic, n.o.s; Coumarin derivative pesticides, solid, toxic, n.o.s.

RTECS® Number: GN4934500

EC Number: 259-978-4 [*Annex I Index No.:* 607-157-00-X]

Uses: Difenacoum is an anticoagulant that is effective against rats and mice, including warfarin-resistant strains. It is used in agriculture and urban rodent control as ready-to-use baits.

Regulatory Authority and Advisory Information:

Acute Oral Category: 1, DANGER–POISON

Regulations: Hazard Symbol: T+, T, N; risk phrases: R28; R48/25; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

Description: Colorless to off-white crystalline solid or powder. Odorless. Some formulations may be combustible. Molecular weight = 444.6; Specific gravity (H_2O:1) = 1.27; Boiling point = (decomposes); Freezing/Melting point = 215–219°C; 230°C; Vapor pressure = 2×10^{-8} mmHg @ 25°C. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: A weak acid. Incompatible with oxidizers, chlorates nitrates, peroxides and alkaline materials.

Determination in Water: Log K_{ow} = >7.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, dermal and/or eye contact. Persons who are taking anticoagulants or are suffering from bleeding disorders must be protected from exposure.

Harmful Effects and Symptoms

The onset of the symptoms of poisoning may be delayed for a few days following ingestion. Typical symptoms of poisoning include increased bleeding. Coagulation problems may be detected by laboratory analyses only. Large exposures may cause excessive bleeding from minor cuts or abrasions, bleeding from the gums and/or blood in feces. Massive internal bleeding may result in shock. A victim with anemia and/or liver disease may have more severe and persistent poisoning that may be extremely difficult to control.

Short Term Exposure: Vapor may cause dizziness; possible suffocation.May cause blood coagulation and hemorrhaging. Death may occur. LD_{50} (oral, rat) = 2 mg/kg or lower. Highly toxic.

Long Term Exposure: May accumulate in the liver.

Points of Attack: Blood, liver, kidneys

Medical Surveillance: Blood test for clotting time (PT, INR, or PTT). Stool and urine tests for blood. Liver and kidney function tests. Complete blood count. EEG. Plasma analysis for presence of coumarin in the liver. Gastric lavage and repeated administration of charcoal. Blood sample to measure hemoglobin level, prothrombin time, blood grouping and cross-matching.

First Aid: *Emergency Life-Support Procedures:* Acute exposure to difenacoum may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation Exposure:* 1. Move victims to fresh air. Emergency personnel should avoid self-exposure to difenacoum. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 4. RUSH to a health care facility. *Dermal/Eye Exposure:* 1. Remove victims from exposure. Emergency personnel should avoid self-exposure to difenacoum. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Remove contaminated clothing as soon as possible. 4. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. 5. Wash exposed skin areas twice with soap and water. 6. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 7. RUSH to a health care facility. *Ingestion Exposure:* 1. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 2. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 3. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of difenacoum is unknown or suspected to be greater than 30 minutes, do not induce vomiting and RUSH to a health care facility. 4. ipecac should not be administered to children under 6 months of age. ***Warning:*** Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If ANY uncertainty exists, RUSH to a health care facility. 4. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Ambulate (walk) the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be re-administered. Continue to ambulate and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. 4. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (1/2 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (1/2 to 1 cup) of water. 5. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (1/2 to 1 oz) of cathartic; 50 to 100 g (1-3/4 to 3-1/2 oz) is recommended for adults. 6. RUSH to a health care facility[83].

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof or dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Specific respirator(s) have not been recommended by NIOSH. The following might be considered in an emergency: SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Coumarin derivative pesticides, solid, toxic, requires a shipping label of "poisonous materials." This material falls in the Hazard Class 6.1 and Product Group I.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Do not touch spilled material. Use water spray to reduce vapors. With clean shovel place material into clean, dry container and cover. Dike far ahead of *large spills* for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposition product includes toxic fumes of carbon. This chemical is a noncombustible solid. *Small fires:* dry chemical, carbon dioxide; water spray or foam. *Large fires:* water spray, fog or foam. Stay upwind, keep out of low areas. Wear positive-pressure breathing apparatus and special protective clothing. Fight fire from maximum distance. Dike fire-control water for later disposal. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve in a solvent and burn in a furnace by spraying in the solution. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Difenoconazole D:0734

Use Type: Fungicide

CAS Number: 119446-68-3

Formula: $C_{19}H_{17}Cl_2N_3O_3$

Synonyms: CGA 169374; 1*H*-1,2,4-Triazole, 1-[(2-(2-chloro-4-(4-chlorophenoxy)phenyl)-4-methyl-1,3-dioxolan-2-yl)methyl]-

Trade Names: CGA 169374®; DIVIDEND®; DIVIDEND® EXTREME FUNGICIDE; HELIX®; SCORE®; TECHNICAL CGA-169374®

Chemical Class: Azole; Triazole

EPA/OPP PC Code: 128847

California DPR Chemical Code: 5024

UN/NA & ERG Number: UN 3077/171; UN3082 (liquid)/171

RTECS® Number: XZ4380000

Uses: For suppression of fungi diseases in crops and seeds.

Regulatory Authority and Advisory Information:

Acute Oral Category: 3, CAUTION

Health Advisory: Developmental/Reproductive Toxin

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides

Marine pollutant.

Description: White crystalline solid. Commercial product may be an emulsifiable solid for adding to water or inorganic solvents for spraying. Molecular weight = 406.26; Specific gravity (H_2O:1) = 1.37; Boiling point = 102°C; Freezing/Melting point = 83.4 °C. Vapor pressure = 3×10^{-5} mmHg @ 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Low solubility in water.

Incompatibilities: A strong acid. Keep away from bases and alkalies.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. LD_{50} (oral, rat) = >1000 mg/kg; LD_{50} (dermal, rat) = >2000 mg/kg.

Long Term Exposure: May cause reproductive and fetal effects. May cause chronic allergic reaction. May cause liver, kidney, thyroid and heart problems.

Points of Attack: Skin, eye, heart, liver, thyroid, kidney.

Medical Surveillance: If symptoms develop or overexposure is suspected, liver or kidney function tests may be useful. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person drink or vomit. *Note to Physician:* If ingested, remove by lavage or vomiting. Use general supportive measures for central nervous system depression. Consider the use of quinidine for myotonia.

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Refrigerate. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned. Do not allow water to get inside containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

Difethialone D:0934

Use Type: Rodenticide, Pesticide

CAS Number: 104653-34-1

Formula: $C_{31}H_{23}BrO_2S$

Synonyms: 2*H*-1-Benzothiapyran-2-one,3-(3-(4'-bromo(1,1'-biphenyl)-4-yl)-1,2,3,4-tetrahydro-1-naphthalenyl)-4-hydroxy-; 2*H*-1-Benzothiopyran-2-one,3-(3-(4'bromo(1,1'biphenyl)-4-yl)-1,2,3,4-tetrahydro-1-naphthalenyl)-4-hydroxy-; 3-[3-(4-Bromo-(1,1'-biphenyl)-4-yl)-1,2,3,4-tetrahydro-1-naphthalenyl]-4-hydroxy-2*H*-benzothiopyran-2-one; 3-(1RS,3RS;1RS,3SR)-3-(4'-Bromobiphenyl-4-yl)-1,2,3,4-tetrahydro-1-naphthyl)-4-hydroxy-1-benzothi-in-2-one

Trade names: LM-2219®; PROTECTA RAT BAIT STATION®; VETERAN PELLET®; VETERAN WAX BLOCK®

Chemical Class: Coumarin derivative

EPA/OPP PC Code: 128967

California DPR Chemical Code: 4014

HSDB Number: 7119

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: DM0013800

EC Number: Not found

Uses: Introduced in 1986, this second-generation anticoagulant rodenticide (member of the hydroxy-4-benzothiopyranone family) is used to control mice and rats, including those resistant to first-generation anticoagulants. Not approved for use in most EU countries[115]. Approved for use in the U.S.

Regulatory Authority and Advisory Information:

Reproductive Toxin

Acute Oral Category: 1, DANGER–POISON

Very toxic by inhalation, in contact with the skin and if swallowed.

Regulations: Hazard Symbol: T+, T, N; risk phrases: R26/27/28; R48/23/24/25; R50, R53; R61; safety phrases: S2; S45; S53; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): No value assigned.

Description: A white to light yellow powder.

Molecular weight = 539.48; Specific gravity (H_2O:1) = 1.36 @ 20°C; Boiling point = (decomposes); Freezing/Melting point = 203–227°C; Vapor pressure = 6×10^{-7} mmHg @ 25°C.

Low solubility in water; solubility = <0.5 g/L @ 25°C.

Incompatibilities: Incompatible with oxidizers, chlorates nitrates, peroxides and alkaline materials.

Determination in Water: Log K_{ow} = >6.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

The onset of the symptoms of poisoning may be delayed for a few days following ingestion. Typical symptoms of poisoning include increased bleeding. Coagulation problems may be detected by laboratory analyses only. Large exposures may cause excessive bleeding from minor cuts or abrasions, bleeding from the gums and/or blood in feces. Massive internal bleeding may result in shock. A victim with anemia and/or liver disease may have more severe and persistent poisoning that may be extremely difficult to control.

Short Term Exposure: Highly toxic. Ingestion may cause hemorrhaging and possible death. May be absorbed through the unbroken skin. LD_{50} (oral, rat) = 550 μg/kg; LD_{50} (dermal, rat) = 5.3–6.5 mg/kg.

Long Term Exposure: May affect the liver and kidneys. Repeated exposure may cause low white blood cell count and affect the brain. May accumulate in the liver.

Points of Attack: Blood, liver, kidneys.

Medical Surveillance: Blood test for clotting time (PT, INR, or PTT). Stool and urine tests for blood. Liver and kidney function tests. Complete blood count. EEG.

First Aid: *Emergency Life-Support Procedures:* Acute exposure RUSH to health care facility; may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation Exposure:* 1. Move victims to fresh air. Emergency personnel should avoid self-exposure. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 4. RUSH to a health care facility. *Dermal/Eye Exposure:* 1. Remove victims from exposure. Emergency personnel should avoid self- exposure. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Remove contaminated clothing as soon as possible. 4. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. 5. Wash exposed skin areas twice with soap and water. 6. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 7. RUSH to a health care facility. *Ingestion Exposure:* 1. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 2. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 3. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of diphacinone is unknown or suspected to be greater than 30 minutes, do not induce vomiting and RUSH to a health care facility. 4. Ipecac should not be administered to children under 6 months of age. ***Warning:*** Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If ANY uncertainty exists, RUSH to a health care facility. 4. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Ambulate (walk) the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be re-administered. Continue to ambulate and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. 4. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (1/2 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (1/2 to 1 cup) of water. 5. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (1/2 to 1 oz) of cathartic; 50

to 100 g (1-3/4 to 3-1/2 oz) is recommended for adults. 6. RUSH to a health care facility[83].

Note to physician: A collection of published articles. from the literature has been submitted to support the use of Vitamin K as an antidote in treating diphacinone poisoning[83]. See record number 2788 for HSDB (Hazardous Substance Data Bank).

Personal Protective Methods: For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA) or pressure-demand supplied-air respirator with escape SCBA and a fully- encapsulating, chemical-resistant suit. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposure to diphacinone, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. *Small spills*: take up with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills:* with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of bromine, sulfur, and carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Diflubenzuron D:0938

Use Type: Insecticide, Larvicide

CAS Number: 35367-38-5

Formula: $C_{14}H_9ClF_2N_2O_2$

Synonyms: AI 329054; Benzamide, *N*-[((4-chlorophenyl) amino)carbonyl]-2,6-difluoro; *N*-[((4-Chlorophenyl)amino) carbonyl]-2,6-difluorobenzamide; 1-(4-Chlorophenyl)-3-(2,6-difluorobenzoyl)urea; ENT 29,054; Urea, 1-(*p*-chlorophenyl)-3-(2,6-difluorobenzoyl)-

Trade Names: ADEPT®; ASTONEX®; DIMILIN®; DIMILIN® FLO; DIMILIN® WG-80; DU-112307®; DUPHAR® PH 60-40; ODC-45®; DIFLURON®; DU 112307®; LARGON®; LARVAKIL®; MICROMITE®; OMS 1804®; PDD 60401®; PH 60-40®; PHILIPS-DUPHAR® PH 60-40; TH 60-40®;

THOMPSON-HAYWARD® 6040; VIGILANTE®

Chemical Class: Benzoyl urea

EPA/OPP PC Code: 108201

California DPR Chemical Code: 1992

HSDB Number: 6611

UN/NA & ERG Number: UN3077(solid)/171; UN3082 (liquid)/171

RTECS® Number: YS6200000

EC Number: 252-529-3

Uses: Diflubenzuron is used primarily on citrus, cattle feed, cotton, forestry, mushrooms, ornamentals, pastures, soybeans, standing water, sewage systems, and wide-area general outdoor treatment sites. The insecticide behaves as a chitin inhibitor to inhibit the growth of many leaf-eating larvae, mosquito larvae, aquatic midges, rust mite, boll weevil, and house- black-, and stable-flies. Diflubenzuron was first registered in the United States in 1979 for use as an insecticide.

Human toxicity (long-term)[101]: Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–20.00 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Diflubenzuron [40 CFR 180.377(a)(1)]: in or on the following food commodities: artichokes 6.0 ppm; cattle, fat 0.05 ppm; cattle, meat byproducts 0.05 ppm; cattle, meat 0.05 ppm; cottonseed 0.2 ppm; eggs 0.05 ppm; goats, fat 0.05 ppm; goats, meat byproducts 0.05 ppm; goats, meat 0.05 ppm; grapefruit 0.5 ppm; hogs, fat 0.05 ppm; hogs, meat byproducts 0.05 ppm; hogs, meat 0.05 ppm; horses, fat 0.05 ppm; horses, meat byproducts 0.05 ppm; horses, meat 0.05 ppm; milk 0.05 ppm; mushrooms 0.2 ppm; orange 0.5 ppm; poultry, fat 0.05 ppm; poultry, meat byproducts 0.05 ppm; poultry, meat 0.05 ppm; sheep, fat 0.05 ppm; sheep, meat byproducts 0.05 ppm; sheep, meat 0.05 ppm; soybeans 0.05 ppm; soybean hulls 0.5 ppm; tangerine 0.5 ppm; and walnuts 0.1 ppm. *Regional registration, as defined in section 180.1(n)* ***[40 CFR 180.377(c)]*** in or on the following raw agricultural commodities: grass, pasture: 1.0 ppm; grass, range: 3.0 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans.

Acute Oral Category: 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless or white crystalline solid. Molecular weight = 310.70; Boiling point = 257°C, decomposes; Freezing/Melting point = 228°C; Vapor pressure = 9×10^{-10} mmHg @ 25°C. Practically insoluble in water; solubility = 2×10^{-5} mg/L @ 20°C.

Incompatibilities: Keep away from strong oxidizers and alkaline materials. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: Benzoyl urea may cause groundwater contamination. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Dermal contact may cause allergic reaction. May be a methemoglobin inducer. LD_{50} (oral, rat) = >1500–4640 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies. May cause the severe blood disorder methemoglobinemia.

Points of Attack: Skin, respiratory tract.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Blood tests for methemoglobinemia.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA) or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical resistant suit[83] such as DuPont™ Tychem® suit fabrics.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Always store pesticides in their original containers, complete with labels that list ingredients, directions for use, and first aid steps in case of accidental poisoning. Never store pesticides in cabinets with or near food, animal feed, or medical supplies. Do not store pesticides in places where flooding is possible or where they might spill or leak into wells, drains, ground water, or surface water. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: Dampen the spilled material with water.

Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not re-enter the contaminated area until an expert verifies that the area has been properly cleaned.

Fire Extinguishing: Hazardous decomposition includes toxic fumes of chlorine, fluorine, oxides of nitrogen. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Diflufenican D:0939

Use Type: Herbicide
CAS Number: 83164-33-4
Formula: $C_{19}H_{11}F_5N_2O_2$
Synonyms: *N*-(2,4-Difluorophenyl)-2-[3-(trifluoromethyl) phenoxy]-3-pyridinecarboxamide; 2',4'-Difluoro-2-(α-α-α-trifluoro-*m*-tolyloxy)nicotinanilide; DFF; 3-Pyridinecarboxamide, *N*-(2,4-difluorophenyl)-2-[3-(trifluoromethyl)phenoxy]-
Trade Names: ARDENT®; BACARA®; CAPTURE® Diflufenican; COUGAR®; CUB®; GRENADIER®; IONIZ®; JAVELIN®; JAVELIN® GOLD; KWARC®; MB-38183®; M&B 38544®; PANTHER®; QUARTZ®; SPEARHEAD®
Chemical Class: Anilide
EPA/OPP PC Code: Not assigned
UN/NA & ERG Number: UN3077(solid)/171; UN3082 (liquid)/171
RTECS® Number: US4898000
EC Number: Not assigned [*Annex I Index No.:* 616-032-00-9]
Uses: Pre- and post-emergence foliar absorbed herbicide for winter weed control in cereal crops; carotenoid biosynthesis inhibitor. Used on crops such as apples, apricot, barley, beans (dry), broad beans, cherry, grapefruit, lemon, lime, loquat, natsudaidai (whole), nectarine, orange, peach, pear, peas, persimon, plum,quince, rye, soybeans, unshu orange and wheat. Not currently registered in the U.S. Approved for use in EU countries[115].

Regulatory Authority and Advisory Information:
Health Advisory: Developmental/Reproductive Toxin
Acute Oral Category: 3, CAUTION
Dangerous to the Environment
European/International Regulations: Hazard Symbol: N; risk phrases: R52/53; safety phrases: S2; S61 (see Appendix 1)

Description: Light brown oily liquid suspension. Comercial product may be suspended in water or hydrocarbon solvent. Strong ester odor. Molecular weight = 394.29; Specific gravity (H_2O:1) = 1.438; Boiling point = 376°C @ 760 mmHg; Freezing/Melting point = 161–162°C; Vapor pressure = 1.9×10^{-7} mmHg @25°C; Flash point = 181°C. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, eye, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May irritate mucous membranes in the mouth and nose. Possible eye irritation. LD_{50} (oral, rat) = 2 g/kg; LD_{50} (dermal, rat) = 2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause reproductive and fetal effects.

Points of Attack: Reproductive cells, bones.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in nonroutine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with diflufenican you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen fluoride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dimethenamid D:1033

Use Type: Herbicide
CAS Number: 87674-68-8; 163515-14-8 (-P)
Formula: $C_{12}H_{18}ClNO_2S$
Synonyms: Acetamide, 2-chloro-*N*-(2,4-dimethyl-3-thienyl)-*N*-(2-methoxy-1-methylethyl)-; 2-Chloro-*N*-(2,4-dimethyl-3-thienyl)-*N*-(2-methoxy-1-methylethyl) acetamide; 2-Chloro-*N*-[(1-methyl-2-methoxy)-ethyl]-*N*-(2,4-dimethyl-thien-3-yl)acetamide
Trade Names: DETAIL®; DPX-PM082® (formulation containing dimethenamid, chlorimuron-ethyl, and sodium sulforicinol); FRONTIER®; GUARDSMAN®; LEADOFF® (atrazine + dimethenamid), DuPont™ Crop Protection; PURSUIT®; OPTILL®; SAN-582H®
Chemical Class: Amide Herbicide
EPA/OPP PC Code: 129051 as dimethenamid-P
California DPR Chemical Code: 5112
HSDB Number: 7935 as dimethenamid-P
UN/NA & ERG Number: UN3082 (liquid)/171
RTECS® Number: AB54442000
Uses: A U.S. EPA restricted Use Pesticide (RUP) as Dimethenamide-P. Not approved for use in EU countries[115].
U.S. Maximum Allowable Residue Levels for Dimethenamid [40 CFR 180.464(a)]: Bean, dry, seed 0.01 ppm; beet, garden, roots 0.01 ppm; beet, garden, tops 0.01 ppm; beet, sugar, dried pulp 0.01 ppm; beet, sugar, molasses 0.01 ppm; beet, sugar, roots 0.01 ppm; beet, sugar, tops 0.01 ppm; corn, field, forage 0.01 ppm; corn, field, grain 0.01 ppm; corn, field, stover 0.01 ppm; corn, pop, forage 0.01 ppm; corn, pop, grain 0.01 ppm; corn, pop, stover 0.01 ppm; corn, sweet, forage 0.01 ppm; corn, sweet, kernel plus cob with husks removed 0.01 ppm; corn, sweet, stover 0.01 ppm; garlic 0.01 ppm; grass, forage 0.15 ppm; grass, hay 2.5 ppm; grass, seed screenings 0.01 ppm; grass, straw 0.01 ppm; hop, dried cones 0.05 ppm; horseradish 0.01 ppm; leek 0.01 ppm; onion, bulb 0.01 ppm; onion, green 0.01 ppm; onion, Welsh 0.01 ppm; peanut 0.01 ppm; peanut, hay 0.01 ppm; radish, roots 0.01 ppm; radish, tops 0.01 ppm; rutabaga, roots 0.01 ppm; rutabaga, tops 0.1 ppm; shallot, bulb 0.01 ppm; shallot, fresh leaves 0.01 ppm; sorghum, grain, forage 0.01 ppm; sorghum, grain, grain 0.01 ppm; sorghum, grain, stover 0.01 ppm; soybean, seed 0.01 ppm; turnip, greens 0.1 ppm; turnip, roots 0.01 ppm; turnip, tops 0.1 ppm; vegetable, tuberous and corm, subgroup 1C, 0.01 ppm. ***Dimethenamid applied as either the 90: 10 or 50: 50 S: R isomers [40CFR180.464(c)]:*** in or on Pumpkin 0.01 ppm; Squash, winter 0.01 ppm.
Human toxicity (long-term) [101]***:*** Intermediate–35.00 ppb, Health Advisory
Fish toxicity (threshold) [101]***:*** Low–169.70710 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active] (-P)
Acute Oral Category: 2, WARNING
Description: Dark yellow-brown viscous liquid. Aromatic odor; Molecular weight = 275.79; 123 (P-); Specific gravity (H_2O:1) = 1.195; Boiling point = 383; 127–130°C (-P); Flash point = 285°C; 90°C (-P); Autoignition temperature (-P) = >400°C. Soluble in water; solubility = 1165 ppm.
Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.
Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Skin, eyes, inhalation.
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use. May be harmful if swallowed. Skin sensitization. LD_{50} (oral, rat) = 380 mg/kg; >5 g/kg (-P).
Long Term Exposure: May cause skin problems.
Points of Attack: skin sensitization.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or

aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: For liquids, isolate spill or leak area in all directions for at least 50 meters /150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dimethipin D:1036

Use Type: Plant growth regulator, Defoliant

CAS Number: 55290-64-7

Formula: $C_6H_{10}O_4S_2$

Synonyms: Caswell No. 472AA; 2,3-Dehydro-2,3-dimethyl-tetroxide; 2,3-dihydro-5,6-dimethyl-1,4-dithiin 1,1,4,4-tetraoxide; 2,3,-Dihydro-5,6-dimethyl-1,4-dithiin 1,1,4,4-tetraoxide; 2,3-Dihydro-5,6-dimethyl-1,4-dithiin 1,1,4,4-tetraoxide; *p*-Dithiane, dimethipin [2,3,-dihydro-5,6-dimethyl-1,4-dithiin-1,1,4,4-tetraoxide]; 2,3-*p*-Dithiane, 2,3-dehydro-2,3-dimethyl-, tetroxide; 1,4-Dithiin, 2,3-dihydro-5,6-dimethyl-,1,1,4,4-tetraoxide; Oxidimethiin; Oxydimethiin

Trade Names: HARVADE®; HARVADE-25F®; LEAFLESS® Dimethipin; N 252®; TETRATHIIN®; UBI-N 252®

Chemical Class: Unclassified

EPA/OPP PC Code: 118901; (210600 old EPA code number)

California DPR Chemical Code: 2159

HSDB Number: 6615

UN/NA & ERG Number: UN2811/154

RTECS® Number: JO5090000

EC Number: 259-572-7

Uses: Plant and harvest growth regulant. Defoliant used on cotton crops, beans (dry), vines, plants, and trees. Desiccant for canola seeds, flax, maize, rice, oilseed rape, and sunflowers. Not approved for use in the U.S. or EU countries[115]. There are 17 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Dimethipin [40 CFR 180.406]: in or on cottonseed 0.5 ppm; cattle, fat 0.02 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts 0.02 ppm; goats, fat 0.02 ppm; goats, meat 0.02 ppm; goats, meat byproducts 0.02 ppm; hogs, fat 0.02 ppm; hogs, meat 0.02 ppm; hogs, meat byproducts 0.02 ppm; horses, fat 0.02 ppm; horses, meat 0.02 ppm; horses, meat byproducts 0.02 ppm; sheep, fat 0.02 ppm; sheep, meat 0.02 ppm; and sheep, meat byproducts 0.02 ppm. ***[40 CFR 186.2050]:*** in or on the following processed feeds when present therein as a result of application to the growing crops: cottonseed hulls 0.7 ppm. (1996)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group C, Possible human carcinogen
Acute Oral Category: 2, WARNING
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White crystalline solid or needles. Commercial product may be a concentrated liquid suspension. Molecular weight = 210.28; Specific gravity (H_2O:1) = 1.59; Freezing/Melting point = 168°C; Vapor pressure = 4×10^{-7} mmHg @ 25°C. Henry's Law constant = 1.7 x10^{-8} Pa-m^3/mole @ 25°C[83,USDA]. Highly soluble in water; decomposes. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Slowly decomposes in water. Keep away from strong oxidizers and nitrates.

Determination in Water: Log K_{ow} = <– 1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation of dust particles, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin and respiratory tract. Poisonous if ingested; LD_{50} (dermal, rat) = 400–1000 mg/kg; LD_{50} (dermal, rabbit) = >7500 mg/kg.

Long Term Exposure: May result in skin sensitization.

Points of Attack: Skin sensitizer.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88] All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Toxic, solids, organic, n.o.s. require a label of "poisonous materials." This material falls in Hazard Class 6.1 and Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decompositon includes oxides of carbon and sulfur. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dimethoate D:1040

Use Type: Insecticide, Miticide

CAS Number: 60-51-5

Formula: $C_5H_{12}NO_3PS_2$; $H_3COP(S)(OCH_3)SCH_2CONHCH_3$

Synonyms: Acetic acid, *O,O*-dimethyldithiophosphoryl-, *N*-monomethylamide Salt; *O,O*-Dimethyl *S*-(*N*-methylcarbamoylmethyl)dithiophosphate; Phosphorodithioic acid, *O,O*-dimethyl *S*-[2-(methylamino)-2-oxoethyl] ester; Phosphamide

Trade Names: REBELATE®; CEKUTHOATE®; CHIMIGOR 40®; CYGON 400®[C]; DEFEND®; DAPHENE®; DANADIM®; DANADIM® PROGRESS; DE-FEND®; DEMOS NF®; DEVIGON®; DICAP®; DIMATE 267®; DIMET®; DIMETHOATE 40; DIMETHOPGAN®; FERKETHION®; FOSTION MM®; KENLOGO®; NUGOR®; PERFEKTION®; ROGODAN®; ROGODIAL®; ROGOR®; ROXION®; SEVIGOR®

Chemical Class: Organophosphate

EPA/OPP PC Code: 035001

California DPR Chemical Code: 216

HSDB Number: 1586

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TE1750000

EC Number: 200-480-3 [*Annex I Index No.:* 015-051-00-4]

Uses: Dimethoate is used to kill mites and insects systemically and on contact. It is used against a wide range of insects, including aphids, thrips, planthoppers, and whiteflies on ornamental plants, alfalfa, apples, corn, cotton, grapefruit, grapes, lemons, melons, oranges, pears, pecans, safflower, sorghum, soybeans, tangerines, tobacco, tomatoes, watermelons, wheat, and other vegetables. It is also used as a residual wall spray in farm buildings for house flies. Dimethoate has been administered to livestock for control of botflies. Dimethoate is available in aerosol spray, dust, emulsifiable concentrate, and ULV concentrate formulations.

U.S. Maximum Allowable Residue Levels for Dimethoate including its oxygen analog [O,O-dimethyl S-(N-methylcarbamoylmethyl) phosphorothioate] [40CFR 180.204(a)]: Alfala 2 ppm; apple 2 ppm; bean, dry, seed 2 ppm; bean, lima 2 ppm; bean, snap, succulent 2 ppm; broccoli 2 ppm; cabbage 2 ppm; cattle, meat byproducts 0.02 ppm; cauliflower 2 ppm; celery 2 ppm; citrus, dried pulp 5 ppm; collards 2 ppm; corn, forage 1 ppm; corn, grain 0.1 ppm; corn, stover 1 ppm; cotton, undelinted seed 0.1 ppm; egg 0.02 ppm; endive (escarole) 2 ppm; goat, meat byproducts 0.02 ppm; grapefruit 2 ppm; grape 1 ppm; hog, meat byproducts 0.02 ppm; horse, meat byproducts 0.02 ppm; kale 2 ppm; lemon 2 ppm; lentil, seed 2.0 lettuce 2 ppm; melon 1 ppm; milk 0.002 ppm; mustard greens 2 ppm; orange, sweet 2 ppm; pear 2 ppm; pea 2 ppm; pecans 0.1 ppm; pepper 2 ppm; potato 0.2 ppm; poultry, meat byproducts 0.02 ppm; safflower, seed 0.1 ppm; sheep, meat byproducts 0.02 ppm; sorghum, forage 0.2 ppm; sorghum, grain 0.1 ppm; soybean 0.05 ppm; soybean, forage 2 ppm; soybean, hay 2 ppm; spinach 2 ppm; Swiss chard 2 ppm; tangerine 2 ppm; tomato 2 ppm; turnip, greens 2 ppm; turnip, roots 2 ppm; wheat, grain 0.04 ppm; wheat, hay 2 ppm; wheat, straw 2 ppm. [*40CFR 180.204 ppm(c)*]: asparagus 0.15 ppm; Brussels sprouts 5 ppm; cherry 2 ppm.

Human toxicity (long-term) [101]***:*** Extra high–0.35 ppb, Health Advisory

Fish toxicity (threshold) [101]***:*** Very low–600.99381 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Acute Oral Category: 2, WARNING

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin, Developmental toxin (TRI)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

U.S. EPA Hazardous Waste Number (RCRA No.): P044

RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8270 (10)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4540 kg)

CERCLA Reportable Quantity (RQ): 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

US DOT 49CFR172.101, Inhalation Hazardous Chemical as organophosphates

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)

European/International Regulations: Hazard Symbol: Xn; risk phrases: R21/22; safety phrases: S2; S36/37 (see Appendix 1)

Description: Dimethoate is a white crystalline solid with a camphor-like odor. Molecular weight = 229.27; Specific gravity (H_2O:1) = 1.277 @ 65°C; Boiling point = (decomposes) 117°C; Freezing/Melting point = 52°C; flash point – 106.7. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 0. Readily soluble in water; solubility = >4000 mg/L.

Incompatibilities: Unstable in strong bases (alkalis). In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 2.7 mg/m^3
PAC-2: 30 mg/m^3
PAC-3: 30 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 1.2 μg/L; Florida 5 μg/L; California 1 μg/L; Wisconsin 2 μg/L. Canadian Drinking Water Standards: IMAC 0.02 mg/L.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin absorption, eyes and ingestion.

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Acute exposure to dimethoate may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Low blood pressure and chest pain may be noted. High blood pressure is not uncommon. Respiratory effects may include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. Dimethoate is a cholinesterase inhibitor, meaning it affects the central nervous system. Death is due to respiratory arrest arising from failure of respiratory center, paralysis of respiratory muscles, intense bronchoconstriction or all three, Dimethoate is a mutagen. Mutagens may have a cancer risk. All contact with this chemical should be reduced to the lowest possible level. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 60 mg/kg; LD_{50} (dermal, rat) = <400 mg/kg.

Long Term Exposure: May cause tumors. Repeated or prolonged contact with skin may cause dermatitis. Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; this chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Animal tests indicate that this chemical possibly causes toxic effects upon human reproduction. May cause reproductive and fetal effects.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. Reproduction system.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: SCBA >2.7 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Do not store solid above 25–30°C. Liquid solutions must be stored above 7°C. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorous pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dimethomorph D:1045

Use Type: Fungicide

CAS Number: 110488-70-5

Formula: $C_{21}H_{22}ClNO_4$

Synonyms: (*E,Z*)-4-[3-(4-Chlorophenyl)-3-(3,4-dimethoxyphenyl)acryloyl]morpholine; 4-[3-(4-Chlorophenyl)-3-(3,4-dimethoxyphenyl)-1-*oxo*-2-propenyl]morpholine; 3-(4-Chlorophenyl)-3-(3,4-dimethyphenyl)acrylic acid morpholide; Morpholine, 3-[3-(4-chlorophenyl)-3-(3,4-dimethoxyphenyl)-1-oxo-2-propenyl]-

Trade Names: ACROBAT® WP; FORUM DC®, [mancozeb+dimethomorph]; CME 151®; STATURE®

Chemical Class: Morpholine

EPA/OPP PC Code: 268800

California DPR Chemical Code: 4003

HSDB Number: 6915

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: QE0478300

EC Number: 404-200-2 [*Annex I Index No.:* 613-102-00-0]

Uses: A systemic fungicide that protects crops from mold. It also kills mold and prevents their spread; controls late blight on tomatoes; and is used as a wood preservative to control downey mildew.

U.S. Maximum Allowable Residue Levels for Dimethomorph (40 CFR 180.493): A tolerance is established for the residues of the fungicide dimethomorph in or on potatoes at 0.05 ppm. All other tolerances have expired.

Human toxicity (long-term)[101]: Very low–700.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–34.00 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA, Not likely to be carcinogenic in humans.

European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S2; S61 (see Appendix 1)

Description: Colorless or gray crystalline solid. The commercial/technical product may be yellowish to red-brown.

Odorless. Commercial product is a mixture of *cis*- and *trans*-isomers. Molecular weight = 387.86; Specific gravity (H_2O:1) = 1.32; Boiling point = 584.9°C; Freezing/Melting point = 137°C; Flash point = 305°C. Practically insoluble in water; solubility = <0.005 ppm. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Dust may form explosive mixture with air. This material is a strong acid. Keep away from bases and alkaline materials.

Determination in Water: Log K_{ow} = >2.5–<3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes, skin, or respiratory tract may cause irritation or injury. May be harmful if swallowed. LD_{50} (oral, rat) = 3900 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well- ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon and corrosive hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dimetilan D:1300

Use Type: Insecticide
CAS Number: 644-64-4
Formula: $C_{10}H_{16}N_4O_3$
Synonyms: Carbamic acid, dimethyl-, 1-[(dimethylamino)carbonyl]-5-methyl-1*H*-pyrazol-2-yl ester; Carbamic acid, dimethyl-, ester with 3-hydroxy-*N,N*-5-trimethylpyrazole-1-carboxamide; Dimethyl carbamate ester of 3-hydroxy-*N,N*-5-trimethylpyrazole-1-carboxamide; Dimethylcarbamic acid-1-[(dimethylamino)carbonyl]-5-methyl-1*H*-pyrazol-3-yl ester; Dimethylcarbamic acidester with 3-hydroxy-*N,N*,5-trimethylpyrazole-1-carboxamide; Dimethylcarbamic acid-5-methyl-1*H*-carboxamine; Dimethylcarbamic acid-5-methyl-1*H*-pyrazol-3-yl ester; 2-Dimethylcarbamoyl-3-methylpyrazolyl-(5)-*N,N*-dimethylcarbamat; Dimethylcarbamoyl-3-methyl-5-pyrazolyldimethylcarbamate; 1-Dimethylcarbamoyl-5-methylpyrazol-3-yl dimethylcarbamate; Dimetilane; ENT 25,595-X; ENT 25,922; 3-Hydroxy-*N,N*,5-trimethylpyrazole-1-carboxamidedimethylcarbamate (ester); 5-Methyl-1*H*-pyrazol-3-yl dimethylcarbamate
Trade Names: FLYBANDS®[C]; GEIGY 22870®[C]; GEIGY GS-13332®[C]; SNIP®[C]; SNIP FLY®[C].
Chemical Class: Carbamate
EPA/OPP PC Code: 090101
HSDB Number: 1726
UN/NA & ERG Number: UN2757 (solid)/151
RTECS® Number: EZ9084000
EC Number: 211-420-0 [*Annex I Index No.:* 623-047-2]
Uses: An insecticide formerly used for insect control on livestock, especially housefly control. Not registered for use in the U.S. or in EU countries[115]. There are 10 global suppliers[97].
Regulatory Authority and Advisory Information: Health Advisory: Nerve Toxin (S!)
Superfund/EPCRA [40CFR 302 and 355, F R: 8/16/06, Vol 71, No. 158] Reportable Quantity (RQ): 1 lb (0.454 kg)
U.S. EPA Hazardous Waste Number (RCRA No.): P191
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Non-wastewater (mg/kg), 1.4
Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4540 kg)
CERCLA Reportable Quantity (RQ): 1 lb (0.454 kg)
European/International Regulations: Hazard Symbol: T, N; risk phrases: R21; R25; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

Description: Dimetilan is a yellow to reddish-brown solid. My be commercially available as a aqueous liquid or emulsifiable concentrate. Molecular weight = 240.26; Boiling point = 210°C; Freezing/Melting point = 68–71°C (technical grade 55–65°C); Vapor pressure = 0.00097 mmHg @ 20°C; Henry's Law constant = 4.14×10^{-11} atm-m^3/mol @ 25°C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 1. Soluble in water; solubility = 24% @ 25°C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Hydrolyzed by acids and alkalis.
Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 2.3 mg/m^3
PAC-2: 25 mg/m^3
PAC-3: 25 mg/m^3
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = 0.27[83]. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Dermal contact, inhalation
Harmful Effects and Symptoms
Short Term Exposure: Dimetilan is highly toxic by ingestion and moderately toxic by contact with the skin. Death is primarily due to respiratory arrest of central origin, paralysis of the respiratory muscles, intense bronchoconstriction, or all three. This compound is an acetylcholinesterase inhibitor. Symptoms are similar to carbaryl poisoning: nausea, vomiting, abdominal cramps, diarrhea, pinpoint pupils, excessive salivation, and sweating are common symptoms. Running nose and tightness in chest are common in inhalation exposures. Difficulty in breathing, raspy breathing, and loss of muscle coordination may also be seen. Exposure may also result in random jerky movements, incontinence, convulsions, and coma and death. LD_{50} (oral, rat) = 25–70 mg/kg; LD_{50} (dermal, rat) = 600 mg/kg.
Long Term Exposure: Many carbamates affect the central nervous system
Points of Attack: Attacks the central nervous system.
Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels

are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Also consider complete blood count and chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary

Medical note: 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88] All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >2.3 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149. *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Carbamate pesticides, solid, toxic, n.o.s. require a "poisonous materials" label. They are usually in Hazard Class 6.1 and Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. *On a small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On a large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Alkali treatment followed by soil burial. Large amounts should be incinerated in a unit equipped with efficient gas scrubbing. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dinex D:1315

Use Type: Pesticide, Acaricide

CAS Number: 131-89-5

Formula: $C_{12}H_{14}N_2O_5$

Synonyms: 6-Cyclohexyl-2,4-dinitrophenol; 2-Cyclohexyl-4,6-dinitrophenol; Dinitrocyclophenol; 4,6-Dinitro-*o*-cyclohexylphenol; 2-Cyclohexyl-4,6-dinitrophenol; Dinitrocyclohexylphenol; Dinitro-*o*-cyclohexylphenol; 2,4-Dinitro-6-cyclohexylphenol; 4,6-Dinitro-*o*-cyclohexylphenol; DNOCHP; ENT 157; Phenol, 2-cyclohexyl-4,6-dinitro-

Trade Names: DN®; DN-111®; DN dry mix; MIX No. 1®; DN dust No. 12®; DOW SPRAY®-17; DRY MIX No. 1®; PEDINEX®; SN 46®

Chemical Class: Dinitrophenol derivative; Substituted nitrophenol

EPA/OPP PC Code: 037501

HSDB Number: 6046

UN/NA & ERG Number: UN2779 (Substituted nitrophenol pesticides, solid, toxic)/153

RTECS® Number: SK6650000

EC Number: 205-042-5 [*Annex I Index No.:* 609–028-00-3]

Uses: Used to control mites on citrus fruits. Not registered in the U.S. Not listed for use in EU countries[115]. There are 11 global suppliers[97].

Regulatory Authority and Advisory Information: Health Advisory: Skin irritant/sensitizer

Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA); Section 307 Toxic Pollutants as nitrophenols

U.S. EPA Hazardous Waste Number (RCRA No.): P034

EPCRA Section 304 RQ: CERCLA, 100 lb (45.4 kg) as nitrophenols

Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as nitrophenols

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23/24/25; R50/53; safety phrases: S1/2; S13; S60; S61 (see Appendix 1)

Description: Yellow, crystalline solid. Molecular weight = 266.25; Relative vapor density = 9.2; Freezing/Melting point = 107.22°C; Hazard Identification (based on NFPA-704 M Rating System): Health (Blue): 2; Flammability (Red): 2; Reactivity (Yellow): 2; Very slightly soluble in water.

Incompatibilities: Strong oxidizer. Some nitrophenols are explosive; may detonate under confined conditions. Reacts with other oxidizers, combustibles; risk of fire and explosion. Incompatible with sulfuric acid, nitric acid, caustics, aliphatic amines, isocyanates. Reacts with boranes, alkalies, aliphatic amines, amides, nitric acid, sulfuric acid. May detonate when heated under confinement.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 500 μg/L. Runoff from spills or fire control may cause water pollution. To protect freshwater aquatic life: 230 μg/L on an acute toxicity basis for nitrophenols as a class. To protect saltwater aquatic life: 4850 μg/L on an acute toxicity basis for nitrophenols as a class. To protect human health: 70.0 μg/L[6].

Determination in Water: Filter/Bubbler; 2-Propanol; high-pressure liquid chromatography/Ultraviolet detection; NIOSH II[5] Method #S166. Methylene chloride extraction followed by gas chromatography with flame ionization or electron capture detection. EPA Method 604, or gas chromatography plus mass spectrometry EPA Method 625. Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Dermal contact, inhalation and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: A metabolic stimulant. Solid is poisonous if swallowed. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, yellowish face and lips, anxiety, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Severe exposure can cause death from heart failure. LD_{50} = 50–65 mg/kg (mouse); LD_{50} (dermal, rabbit) = 105 mg/kg.

Long Term Exposure: May damage the liver, kidneys and blood cells. May stain yellow the skin, eyes, and fingernails. Repeated exposure can cause anxiety, fatigue, insomnia, excessive perspiration, unusual thirst, weight loss and cataracts in the eyes.

Points of Attack: Skin, liver, kidneys, lungs, peripheral nervous system, eyes, thyroid gland and blood.

Medical Surveillance: Before beginning employment, at regular times after that and if symptoms develop or overexposure has occurred, the following may be useful: Exam of eyes for cataracts. Exam of skin and nails for staining. Blood tests for dinitro-*o*-cresol. Persons with blood levels over 10 ppm (10 mg/L) should be kept away from further exposure until levels return to normal. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Complete blood count

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to Physician:* Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. Butyl rubber gloves. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. NOAA/Cameo lists this material as corrosive: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Substituted nitrophenol pesticides, solid, toxic, require a "poisonous materials" label. They are in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: *On a small fire:* use dry chemical powder, carbon dioxide or water spray. *On a large fire:* use water spray, fog or alcohol -resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dinitro-*o*-cresol & salts D:1340

Use Type: Herbicide, Fungicide, Pesticide

CAS Number: 534-52-1; 2980-64-5 (ammonium salt); 5787-96-2 (potassium salt); 2312-76-7 (sodium salt)

Formula: $C_7H_6N_2O_5$

Synonyms: *o*-Cresol, 4,6-dinitro-; Dinitro; Dinitrocresol; Dinitro-*ortho*-cresol; Dinitrodendtroxal; 3,5-Dinitro-2-hydroxytoluene; Dinitrol; 4,6-Dinitro-2-methylphenol; 2,4-Dinitro-6-methylphenol; Dinitrocresol; 3,5-Dinitro-*o*-cresol; 4,6-Dinitro-*o*-cresol and salts; DNOC; 2-Methyl-4,6-dinitrophenol; 6-Methyl-2,4-dinitrophenol; Phenol, 2-methyl-4,6-dinitro-

Trade Names: ANTINONIN®; ANTINONNIN®; ARBOROL®; DEGRASSAN®; DEKRYSIL®; DETAL®; DILLEX®; DINOC®; DINURANIA®; DITROSOL®; DNOC®[C]; EFFUSAN®; EFFUSAN 3436®; ELGETOL®; ELGETOL 30®; ELIPOL®; EXTRAR®; FLAVIN-SANDOZ®; HEDOLIT®; HEDOLITE®; K III®; K IV®; KREOZAN®; KREZOTOL 50®; LIPAN®; NEUDORFF DN 50®; NITROFAN®; PROKARBOL®; RAFEX®; RAFEX 35®; RAPHATOX®; SANDOLIN®; SANDOLIN A®; SELINON®; SINOX®; WINTERWASH®

Chemical Class: Dinitrophenol

EPA/OPP PC Code: 037507; 600023 (code for chemical as impurity)

California DPR Chemical Code: 3170

HSDB Number: 1596

UN/NA & ERG Number: UN2779/153; UN1598/153

RTECS® Number: GO9625000

EC Number: 208-601-1 [*Annex I Index No.:* 609-020-00-X]

Uses: DNOC is widely used in agriculture as a herbicide and pesticide; it is also used in the dyestuff industry. Although 4,6-dinitro-*o*-cresol (DNOC) is no longer registered for use in the United States, it was used as a blossom-thinning agent on fruit trees and as a fungicide, insecticide, and miticides on fruit trees during the dormant season. It is used in mushroom houses to control foreign fungi; to kill locusts and other insects; and as a pre-harvest desiccant of potatoes and leguminous seed crops. DNOC is used as free radical polymerization inhibitor and agricultural chemical intermediate; widely used in agriculture as a herbicide and pesticide; Hence, individuals formulating or spraying the compound incur the highest risk of exposure to the compound. Not approved for use in EU countries[115]. DNOC’s registration in the U.S. as a pesticide was canceled in 1991. Currently, there are 39 global suppliers[97].

Fish toxicity (threshold)[101]: High–6.33138 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer (534-52-1 only); *Ammonium salt*: Mutagen, Developmental/Reproductive Toxin; *Sodium salt*: Mutagen

Acute Oral Category: 1, DANGER–POISON (534-52-1 only)

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Clean Water Act: Section 313 Water Priority Chemicals (57FR41331, 9/9/92)

U.S. EPA Hazardous Waste Number (RCRA No.): P047

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.28; Non-wastewater (mg/kg), 160

RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8040 (150); 8270 (50)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4540 kg)

CERCLA Reportable Quantity (RQ): 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] [as dinitro-ortho-cresol (DNOC) and its salts (such as ammonium salt, potassium salt and sodium salt)]; Marine Pollutant; Rotterdam Convention (Class 1b)

European/International Regulations (*DNOC*): Hazard Symbol: T+, N; risk phrases: R26/27/28; R38; R41; R43; R44; R50/53; R68; Safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

(*ammonium salt 2980-64-5*) Hazard Symbol: T+, N; risk phrases: R26/27/28; R33; R50/53; safety phrases: S1/2; S13-S28-S45; S60; S61; (*sodium salt 2312-76-7; potassium salt 5787-96-2*) Hazard Symbol: T+, N; risk phrases: R23/24/25; R33; R50/53; safety phrases: S1/2; S13-S45; S60; S61 (see Appendix 1)

Description: DNOC exists in nine isomeric forms of which 4,6-dinitro-*o*-cresol is the most important commercially and the most heavily regulated. DNOC is a noncombustible, yellow crystalline solid. Commercial products may in the form of wettable powders or flakes, or liquid in petroleum distillates or as emulsifiable concentrates. Molecular weight = 198.13; Specific gravity (H_2O:1) = 1.58 @ 20°C; Boiling point = 312°C; 220°C; Freezing/Melting point = 86.5°C; Vapor pressure = 12×10^{-5} mmHg @ 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Practically insoluble in water; solubility = 0.01%. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: A strong oxidizer. Dust can form an explosive mixture with air. Strong oxidizers, oxidizers, strong bases. Protect from heat and shock. DNOCs are incompatible with strong reducing agents (i.e., hydrides, nitrides, alkali metals, sulfides, etc.). Flammable hydrogen gas may be generated; the heat from reaction may ignite the gas and cause explosion. Heat is also generated on contact with bases.

Permissible Exposure Limits in Air: OSHA PEL: 0.2 mg/m^3 TWA [skin]

NIOSH REL: 0.2 mg/m^3 TWA [skin]

ACGIH TLV®[1]: 0.2 mg/m^3 TWA [skin]

NIOSH IDLH: 5 mg/m^3

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.2 mg/m^3

PAC-2: 0.5 mg/m^3

PAC-3: 5 mg/m^3

Determination in Air: Collection by charcoal tube, analysis by gas-liquid chromatography

Permissible Concentration in Water: To protect human health, 13.4 μg/L[6].

Determination in Water: Filter/Bubbler; 2-Propanol; high-pressure liquid chromatography/Ultraviolet detection; NIOSH II(5) Method #S166[18]. Methylene chloride extraction followed by gas chromatography with flame ionization or electron capture detection. EPA Method 604, or gas chromatography plus mass spectrometry EPA Method 625. Log K_{ow} = >2.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, percutaneous absorption, ingestion, eye and/or dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Early manifestations of acute dinitrocresol exposure include fever, sweating, headache, and confusion. Blood pressure, pulse, and respiratory rate are often elevated. Severe exposure may result in restlessness, seizures, and coma. Other signs and symptoms include dyspnea (shortness of breath), cyanosis (blue tint to skin and mucous membranes), pulmonary edema, nausea, vomiting, and abdominal pain. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Dermal exposure results in yellow staining of the skin and may produce burns. Dinitrocresol may irritate and burn the eyes and mucous membranes. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 7–25 mg/kg; LD_{50} (dermal, rat) = 200 mg/kg. Results for the sodium salt are similar.

Long Term Exposure: May damage the liver, kidneys and blood cells. May stain yellow the skin, eyes, and fingernails. Repeated exposure can cause anxiety, fatigue, insomnia, excessive perspiration, unusual thirst, weight loss and cataracts in the eyes. May cause skin sensitization.

Points of Attack: Cardiovascular system, endocrine system. May be a neurotoxin. Skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Before beginning employment, at regular times after that and if symptoms develop or overexposure has occurred, the following may be useful: Exam of eyes for cataracts. Exam of skin and nails for staining. Blood tests for 4,6-dinitro-*o*-cresol. Persons with blood levels over 10 ppm (10 mg/L) should be kept away from further exposure until levels return to normal. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Complete blood count. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. If high fever is present, drench victim's clothes in cool water, or immerse person in cool bath before transfer

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. ACGIH recommends Saranex™ coated suits, natural rubber, Neoprene™ and chlorinated polyethylene as providing good to excellent protection. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.2 mg/m^3. *up to 2 mg/m^3:* Any air-purifying full facepiece respirator equipped with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100. *Up to 5 mg/m^3:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or Sa:Cf* (any supplied-air respirator operated in a continuous-flow mode); or any self-contained breathing apparatus with a full facepiece; or SCBAF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH condition:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. 4,6-Dinitro-*o*-cresol must be stored to avoid contact with strong oxidizers (such as bromine, chlorine, chlorine dioxide and nitrates), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where 4,6-dinitro-*o*-cresol is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Use only non-sparking tools and equipment, especially when opening and closing containers of 4,6-dinitro-*o*-cresol. Wherever 4,6-dinitro-*o*-cresol is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of "poisonous materials." It usually falls in Hazard Class 6.1 and Packing Group II.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if it can be done without risk. Take up *small spills* with sand or other noncombustible absorbent material; place into containers for later disposal. *Small dry spills*: collect powdered material in the most convenient and safe manner and deposit in sealed containers. Large spills should be diked for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Unless dissolved in a petroleum distillate, solid 4,6-dinitro-*o*-cresol may burn but does not easily ignite. The dust can form an explosive mixture with air. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Hazardous decomposition includes nitrogen oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration (593°C minimum) with adequate scrubbing and ash-disposal facilities. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Dinocap D:1375

Use Type: Fungicide, Acaricide
CAS Number: 39300-45-3; 6119-92-2
Formula: $C_{18}H_{24}N_2O_6$
Synonyms: 2-Butenoic acid, 2-isooctyl-4,6-dinitrophenyl ester; 2-Butenoic acid, 4-isooctyl-2,6-dinitrophenyl ester; 2-Butenoic acid 2-(1-methylheptyl)-4,6-dinitrophenyl ester; Capryldinitrophenyl crotonate; 2-Capryl-4,6-dinitrophenyl crotonate; Caswell No. 391D; CPC; Crotonic acid 2,4-dinitro-6-(1-methylheptyl)phenyl ester; Crotonic acid 2,4-dinitro-6-(2-octyl)phenyl ester; Crotonic acid, 2-(1-methylheptyl)-4,6-dinitrophenyl ester; Crotonic acid, 4-(1-methylheptyl)-2,6-dinitrophenyl ester; Crotonic acid 2-(1-methylheptyl)-4,6-dinitrophenyl ester; DCPC; 4,6-Dinitro-2-(2-capryl)phenyl crotonate; 4,6-Dinitro-2-caprylphenyl crotonate; Dinitrocaprylphenyl crotonate; Dinitro(1-methylheptyl)phenyl crotonate; 2,4-Dinitro-6-(1-methylheptyl)phenyl crotonate; 4,6-Dinitro-2-(1-methylheptyl)phenyl crotonate; 2,4-Dinitro-6-octyl* phenyl crotonate, 2,6-Dinitro-4-octyl* phenylcrotonate, and nitrooctylphenols (principally dinitro); Dinitromethylheptyphenyl crotonate; Dinitro(1-methylheptyl)phenyl crotonate; 2,4-Dinitro-6-(2-octyl)phenyl crotonate; 2,4-Dinitro-6-octyl-phenyl crotonate; 2,6-Dinitro-4-octyl-phenyl crotonate; DNOCP; DNOPC; DPC; ENT 24727; 2-(1-Methylheptyl)-4,6-dinitrophenylcrotonate; Phenol, 2-(1-methylheptyl)-4,6-dinitro-, crotonate (ester)

*(A mixture of 1-methylheptyl, 1-ethylhexyl and 1-propylpentyl derivatives, chiefly 2-(1-methyl)-4,6-dinitrophenol)

Trade Names: ACTUAL DINOCAP®; ARATHANE®; CAPRANE®; CR 1639®; CEKUCAP® 25 WP; CROTOTHANE®; DICAP®; DIKAR®; EZENOAN®; ISCOTHANE®; ISOCOTHANE®; KARATHANE®[C]; KARATHANE® WD[C]; KARATHENE®[C]; MILDANE®; MILDEX®
Chemical Class: Dinitrophenyl
EPA/OPP PC Code: 036001
California DPR Chemical Code: 344
HSDB Number: 1597
UN/NA & ERG Number: UN2779 (Substituted nitrophenol pesticides, solid, toxic)/153; UN3082 (liquid)/171
RTECS® Number: GQ5775000
EC Number: 254-408-0 [*Annex I Index No.:* 609-023-00-6]; 228-088-8 (CAS: 6119-92-2)
Uses: Dinocap is a foliar fungicide/miticide used to control powdery mildew. It is applied to limit mites in apples and grapes crops outside the U.S., mainly in Europe, the Middle East and northern Africa. It is also used to control powdery mildew on fruit, vegetables and ornamentals. DAS, the registrant of dinocap, intends to support tolerances for dinocap residues in/on apples and grapes to permit legal importation of these commodities into the U.S. Not approved for use in EU countries[115]. Not currently registered in the U.S. There are 17 global suppliers[97].
U.S. Maximum Allowable Residue Levels for Dinocap (40 CFR 180.341): Apple 0.1; Grape 0.1.
Human toxicity (long-term)[101]: Intermediate–28.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: High–1.06008 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans.
California Proposition 65 Chemical: Developmental/Reproductive toxin (4/1/1990)
Health Advisory: Mutagen, Developmental/Reproductive Toxin (TRI)
Acute Oral Category: 2, WARNING
EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA); Section 307 Toxic Pollutants as nitrophenols
EPCRA Section 304 RQ: CERCLA, 100 lb (45.4 kg) as nitrophenols
U.S. DOT Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as nitrophenols
European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R20/22; R38, R43; R48/22;

R50/53; R61; safety phrases: S2; S45; S53; S60; S61 (see Appendix 1)

Description: Dark reddish-brown viscous liquid. Combustible. Molecular weight = 364.43; Specific gravity (H_2O:1) = 1.12; Boiling point = 139°C @ 0.07 mmHg; Freezing/Melting point = –25°C; Vapor pressure = 4×10^{-8} mmHg @ 20°C; flash point = 65°C. Practically insoluble in water; solubility = 0.01%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 1. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Containers may explode when heated. Contact with strong bases and alkalies can cause hydrolysis. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Some dinitrophenols are strong oxidizers and sensitive to heat, friction, and sudden shock.

Permissible Concentration in Water: To protect freshwater aquatic life: 230 μg/L on an acute toxicity basis for nitrophenols as a class. To protect saltwater aquatic life: 4850 μg/L on an acute toxicity basis for nitrophenols as a class. To protect human health: 70.0 μg/L[6].

Determination in Water: Filter/Bubbler; 2-Propanol; high-pressure liquid chromatography/Ultraviolet detection; NIOSH II[5] Method #S166. Methylene chloride extraction followed by gas chromatography with flame ionization or electron capture detection. EPA Method 604, or gas chromatography plus mass spectrometry EPA Method 625. Log K_{ow} = >6.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Dermal contact, inhalation and ingestion

Harmful Effects and Symptoms

Short Term Exposure: Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, yellowish tint to skin and lips, anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Severe exposure can cause death from heart failure. LD_{50} (oral, rat) = 750–1000 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause tumors. May damage the liver, kidneys, gastrointestinal tract and blood cells. May stain yellow the skin, eyes, and fingernails. Repeated exposure can cause anxiety, fatigue, insomnia, excessive perspiration, unusual thirst, weight loss and cataracts in the eyes. Skin and respiratory sensitizer.

Points of Attack: Skin, liver, kidneys, lungs, gastrointestinal tract, peripheral nervous system, eyes, thyroid gland, blood.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose skin or respiratory allergy. Before beginning employment, at regular times after that and if symptoms develop or overexposure has occurred, the following may be useful: Exam of eyes for cataracts. Exam of skin and nails for staining. Blood tests for dinitro-*o*-cresol. Persons with blood levels over 10 ppm (10 mg/L) should be kept away from further exposure until levels return to normal. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to physician or authorized medical personnel:* Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. Butyl rubber gloves. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: *May be highly explosive and flammable; highly reactive when dry.* Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Dinocap must be stored to avoid contact with strong oxidizers (such as bromine, chlorine, chlorine dioxide and nitrates), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where dinocap is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Use only non-sparking tools and equipment, especially when opening and closing containers of Dinocap. Wherever dinocap is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dinitrophenol solutions or substituted nitrophenol pesticides, solid, toxic and/or corrosive require a label of "poisonous materials." This material falls in Hazard Class 6.1. Depending on formulation, this material may be classified as Environmentally hazardous substances, solid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposition product includes oxides of nitrogen, carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Chemical Class: Dinitrophenol

EPA/OPP PC Code: 037505

California DPR Chemical Code: 238

HSDB Number: 1445

UN/NA & ERG Number: UN2779/153

RTECS® Number: SJ9800000

EC Number: 201-861-7 [*Annex I Index No.:* 609-025-00-7]

Uses: Dinoseb is a phenolic herbicide used in soybeans, vegetables, fruits and nuts, citrus, and other field crops for the selective control of grass and broadleaf weeds (e.g., in corn). It is also used as an insecticide in grapes, and as a seed crop drying agent. It is produced in emuslifiable concentrates or as water-soluble ammonium or amine salts. It is no longer available in the U.S. Formerly widely used in the UK for the fumigation of potatoes; however, dinoseb acetate and dinoseb amine were banned from use in 1988. Dinoseb's primary use is as a contact herbicide for post-emergence weed control in cereals, undersown cereals, seedling lucerne and peas. Dinoseb is also used as a corn yield enhancer and an insecticide and miticide. Banned for use in EU countries (includes salts and acetate). A U.S. EPA restricted Use Pesticide (RUP). The use of dinoseb was canceled in the U.S. in 1986 based on the potential risk of birth defects and other adverse health effects for applicators and other persons having substantial dinoseb exposure. There are 20 global suppliers[97].

Human toxicity (long-term)[101]: Extra high–0.70 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–2.85539 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group C, Possible human carcinogen

California Proposition 65 Chemical: Developmental/Reproductive toxin (male) 1/1/1989

Poison (oral) Category: 1, DANGER

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer.

U.S. EPA Hazardous Waste Number (RCRA No.): P020

RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.066; Non-wastewater (mg/kg), 2.515

RCRA 40CFR264, appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8150 (1); 8270 (10)

Safe Drinking Water Act: MCL, 0.007 mg/L; MCLG, 0.007 mg/L; Regulated chemical (47FR9352)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4540 kg)

CERCLA Reportable Quantity (RQ): 1000 lb (454 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

US DOT Regulated Marine Pollutant (49CFR172.101, appendix B)

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] (dinoseb and its salts and esters)

European/International Regulations (*88-85-7*): Hazard Symbol: T, N; risk phrases: R61; R62; R24/25; R36; R44; R50/53; safety phrases: S2; S53; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Dinoseb is an orange crystalline solid when pure. However, it may be formulated with a flammable organic solvent as a brown viscous liquid. Pungent odor. Molecular weight = 240.21; Specific gravity (H_2O:1) = 1.27 @ 45°C; Freezing/Melting point = 40°C; Vapor pressure = 1.0 mmHg @ 151°C; Flash point (hydrocarbon solvent) = 15.6–29.4°C (for three commercial products)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 2. Insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: This is a dinitrophenol herbicide. Dangerously explosive. When not water-wet it is a high explosive. In dry form, the material is easily ignited and it will burn very vigorously. On decomposition, nitro compounds such as this emit toxic fumes of nitrogen and carbon oxides. Appear to be stable in acid solution, but are susceptible to decomposition by ultraviolet radiation in alkaline solution[83]. The solution in water is a weak acid. Attacks many metals in presence of water.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.41 mg/m^3
PAC-2: 4.5 mg/m^3
PAC-3: 4.5 mg/m^3

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 7 μg/L. Canadian Drinking Water Standards: MAC 0.01 mg/L. A health advisory of 3.5 μg/L has been developed by EPA based on possible teratogenic action of dinoseb as described in the U.S. EPA document in "References."

Determination in Water: Extraction with ether, conversion to methyl ester and determination by electron capture gas chromatography

Routes of Entry: Inhalation, skin and eye contact, and ingestion

Harmful Effects and Symptoms

Short Term Exposure: Dinoseb causes eye irritation. May affect the gastrointestinal tract and central nervous system. Early manifestations of dinoseb exposure include fever, sweating, headache, and confusion. Elevations of blood pressure, pulse, and respiratory rate are common. Severe exposure may result in restlessness, seizures, and coma. Other signs and symptoms include dyspnea (shortness of breath), nausea, vomiting, and abdominal pain. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias may be noted. Inhalation of the aerosol may cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Muscle weakness may be pronounced. Dermal exposure results in yellow staining of the skin and may produce burns.

Warning: Exposure to dinoseb fumes or aerosol in hot environment may cause death. Effects may be delayed from several hours to 2 days. Caution is advised. Toxicity of dinoseb is enhanced by high ambient temperature and physical activity. Dinoseb is extremely toxic: Probable oral lethal dose is 5–50 mg/kg; between 7 drops and 1 teaspoonful for 70 kg person (150 lb). Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 25 mg/kg; LD_{50} (dermal, rat) = 80 mg/kg.

Long Term Exposure: May cause tumors. Dinoseb may affect the kidneys, liver, blood, immune system, and eyes; may cause cataracts. May cause reproductive toxicity in humans.

Points of Attack: Liver, kidneys, blood, cardiovascular system, immune system, eyes. Reproductive cells in animals; DNA.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Comprehensive physical examination with emphasis on the genito-urinary tract including testicle size and consistency in males. Semen analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Liver and kidney function tests. Complete blood count. Eye examination. EKG.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Consult poison center on use of antidotes.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. If working with liquid wear splash-proof chemical goggles, if working with dry material wear dust-proof chemical goggles and face shield unless full- face-piece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.41 mg/m^3. Where there exists a potential for exposures over *0.2 mg/m*^{3}, use an NIOSH/MSHA- or European Standard EN 149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use an NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with dinoseb you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dinitrophenol solutions or substituted nitrophenol pesticides, solid, toxic and/or corrosive require a label of "poisonous materials." This material falls in Hazard Class 6.1.

Spill Handling: Do not handle broken packages without protective equipment. Wash away any material which may have contacted the body with copious amounts of water. *Dry material:* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Keep spilled material wet. Do not attempt to sweep up dry material. Use HEPA vacuum or wet method to reduce dust during clean up. *Do not dry sweep*. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. Keep material out of water sources and sewers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. *Liquid:* Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep material out of water sources and sewers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. Extinguish by flooding with water. Cool all affected containers with flooding quantities of water. Wear self-contained breathing apparatus and full protective clothing. If fire becomes uncontrollable, evacuate for a radius of 1 mile. It is dangerously explosive. When not water-wet it is a high explosive. Dry, the material is easily ignited and it will burn very vigorously. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. Conduct @ 1000°C for 2.0 seconds minimum with scrubber for nitrogen oxide removal is recommended. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal.

Dinotefuran D:1385

Use Type: Insecticide
CAS Number: 165252-70-0
Formula: $C_7H_{14}N_4O_3$
Synonyms: 1-Methyl-2-nitro-3-(tetrahydro-3-furylmethyl) guanidine; (*RS*)-1-Methyl-2-nitro-3-(tetrahydro-3-furylmethyl)guanidine; *N*-Methyl-*N*'-nitro-*N*"-[(tetrahydro-3-furanyl)methyl]guanidine; Guanidine, *N*-methyl-*N*′-nitro-*N*″-[(tetrahydro-3-furanyl)methyl]-
Trade names: ALBARIN®; MIKEBLOCK MTI-446®; SAFARI®; SPARKLE®; VENOM®
Chemical Class: Neonicotinoid
EPA/OPP PC Code: 044321
California DPR Chemical Code: 5822
HSDB Number: 7465
UN/NA & ERG Number: UN3077(solid)/171
EC Number: Not found

Uses: Controls insect pests such as aphids, whiteflies, thrips, leafhopper, leafminer, sawfly, mole cricket, white grubs, lacebugs, billbugs, beetles, mealybugs, sawfly larvae, and cockroaches in leafy vegetables, in residential and commercial buildings, outdoor uses for professional turf management, turf farms, professional ornamental production, golf courses, residential indoor, lawn and garden use[83]. Not listed for use in EU countries[115]. Actively registered in the U.S. and other countries.

U.S. Maximum Allowable Residue Levels for the combined residues of Dinotefuran, and its metabolites DN [1-methyl-3-(tetrahydro-3-furylmethyl)guanidine] and UF [1-methyl-3-(tetrahydro-3-furylmethyl)urea], expressed as dinotefuran [40 CFR 180.603(a)(1)]: Brassica, head and stem, subgroup 5A, 1.4 ppm; cotton, undelinted seed 0.4 ppm; cotton, gin byproducts 8.0 ppm; grape 0.9 ppm; grape, raisin 2.5 ppm; potato 0.05 ppm; potato, chips 0.1 ppm; potato, granules/flakes 0.15 ppm; tomato, paste 1.0 ppm; vegetable, fruiting, group 8, 0.7 ppm; vegetable, cucurbit, group 9, 0.5 ppm; vegetable, leafy, except brassica, group 4, 5.0 ppm. ***[40 CFR 180.603(a)(2)]:*** in or on the following commodities: cattle, fat 0.05 ppm; cattle, meat byproducts 0.05 ppm; cattle, meat 0.05 ppm; goat, fat 0.05 ppm; goat, meat byproducts 0.05 ppm; goat, meat 0.05 ppm; hog, fat 0.05 ppm; hog, meat byproducts 0.05 ppm; hog, meat 0.05 ppm; horse, fat 0.05 ppm; horse, meat byproducts 0.05 ppm; horse, meat 0.05 ppm; milk 0.05 ppm; sheep, fat 0.05 ppm; sheep, meat byproducts 0.05 ppm; sheep, meat 0.05 ppm.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic in humans.
Acute Oral Category: 4, Caution

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R22; R36, R53; R56; S57; safety phrases: S2; S61 (see Appendix 1)

Description: White crystalline solid or powder. Odorless. Commercial formulations include the technical product, formulation intermediates, soluble concentrates, granulars, soluble granules, baits, gels, and ready-to-use sprays[83]. Molecular weight = 202.21; Specific gravity (H_2O:1) = 1.41 @ 20°C; Boiling point = (decomposes); Freezing/Melting point = 107.5; Vapor pressure = 1.3×10^{-8} mmHg @ 25°C[83]; Flash point = 350°C; Henry's Law constant = 6.4×10^{-14} atm-m^3/mol @ 25°C (est)[83]. Highly soluble in water; solubility 39.83 g/L[83].

Incompatibilities: Strong oxidizers. Dust may form explosive mixture with air.

Permissible Concentration in Water: Not listed.

Determination in Water: Log K_{ow} = –0.549 @ 25°C. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

The main target tissues are the nervous system and the immune system, with effects seen in several species. Nervous system toxicity is manifested as clinical signs and decreased motor activity seen after acute dosing (in both rats and rabbits) and increased motor activity seen after repeated dosing; these findings are consistent with effects on the nicotinic cholinergic nervous system[83].

Short Term Exposure: May cause irritation to the eyes, skin, and respiratory tract. Technical dinotefuran has low acute toxicity by the oral (toxicity category IV), dermal (toxicity category IV), and inhalation (toxicity category IV) routes. It is not a dermal sensitizer, causes a low level of skin irritation (toxicity category IV) and moderate eye irritation (toxicity category II)[83].

LD_{50} (oral, rat) = >2 g/kg[83]; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May affect immune system (decreases in spleen and thymus weights as seen in multiple studies and animal species). Indications of endocrine-related toxicity, abnormal sperm in animal males; changes in testes or ovary weight were also seen in several species.

Points of Attack: Immune system, spleen, thymus, endocrine system.

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88].

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group III.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. This chemical is combustible; it may burn but does not easily ignite. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. If this material cannot be disposed of according to label instructions, it may be dissolved or mixed with a combustible solvent and burned in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Dinoterb D:1390

Use Type: Herbicide, Rodenticide

CAS Number: 1420-07-1

Formula: $C_{10}H_{12}N_2O_5$; $C_6H_2(NO_2)_2(C_4H_9)(OH)$

Synonyms: *o-tert*-Butyl-4,6-dinitrophenol; 2-(1,1-Dimethylethyl)-4,6-dinitrophenol; 2,4-Dinitro-6-*tert*-butylphenol; Dinitroterb; DNTBP; Phenol, 2-(1,1-dimethylethyl)4,6-dinitro-; Phenol-2-*tert*-butyl-4, 6-dinitro-

Trade Names: HERBOGIL®; HERBOGIL® FLUSSIG

Chemical Class: Dinitrophenol derivative

EPA/OPP PC Code: 228400

HSDB Number: 1598

UN/NA & ERG Number: UN2779 (Substituted nitrophenol pesticides, solid, toxic)/153

RTECS® Number: SK0160000

EC Number: 215-813-8 [*Annex I Index No.:* 609-030-00-4]

Uses: Not approved for use in the U.S. or EU countries[115] There are 17 global suppliers[97].

Regulatory Authority and Advisory Information: Acute Oral Category: 1, DANGER–POISON

Health Advisory: Reproductive/Developmental hazard

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4540 kg)

CERCLA Reportable Quantity (RQ): 500 lb (227 kg)

European/International Regulations: Hazard Symbol: T, N; risk phrases: R24; R28; R44; R50/53; R61; safety phrases: S2; S45; S53; S60; S61 (see Appendix 1)

Description: Dinoterb is a yellow solid. Phenol-like odor. May be formulated in a hydrocarbon solvent which changes the physical properties shown here. Molecular weight = 240.24; Specific Gravity = 1.27 @ 45°C; Freezing/Melting point = 126°C; 37.8 to 42.2°C[83]; Vapor density = 7.73; Vapor Pressure = 1 mmHg @ 151°C; Flash point = 15.6 to 29.4°C (based on three commercial products)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 2. Practically insoluble in water.

Incompatibilities: Dinoseb is a strong oxidizer. If mixed with reducing agents, including hydrides, sulfides and nitrides, they may begin a vigorous reaction that culminates in a detonation. This is a dinitrophenol herbicide. It is dangerously explosive. When not water wet it is a high explosive. In dry form, the material is easily ignited and it will burn very vigorously. On decomposition, nitro compounds such as this emit toxic fumes of nitrogen and carbon oxides. Appear to be stable in acid solution, but are susceptible to decomposition by ultraviolet radiation in alkaline solution[83]. The aromatic nitro compounds may explode in the presence of a base such as sodium hydroxide or potassium hydroxide even in the presence of water or organic solvents[88]. Corrosive to metals in the presence of moisture.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 2.3 mg/m^3

PAC-2: 25 mg/m^3

PAC-3: 25 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation and ingestion. Persons with who are taking anticoagulants or are suffering from bleeding disorders must be protected from exposure.

Harmful Effects and Symptoms

Short Term Exposure: Highly toxic. Symptoms of poisoning are similar to other dinitrophenols and may include nausea, gastric distress, restlessness, sensation of heat, flushed skin, sweating, thirst, deep and rapid breathing, rapid heart rate, fever, and lack of oxygen to tissues (blueness of skin). This compound is toxic by all routes of exposure. The dangerous single oral dose of dinitro-*o*-cresol, a structurally similar compound, is estimated to be about 29 mg/kg. Delayed pulmonary edema may occur after inhalation. High ambient temperature and physical activity may enhance effects of toxicity. LD_{50} (oral, rat) = 26 mg/kg.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed.

First Aid: Warning: Effects may be delayed from several hours to 2 days. Caution is advised. Toxicity of dinoterb is enhanced by high ambient temperature and physical activity. *Signs and symptoms of exposure:* Early manifestations of dinoterb exposure include fever, sweating, thirst, headache, and confusion. Elevations of blood pressure, pulse, and respiratory rate are common. Severe exposure may result in restlessness, seizures, and coma. Other signs and symptoms include dyspnea (shortness of breath), deep and rapid breathing, flushed or blueness of skin, pulmonary edema, nausea, vomiting, and abdominal pain. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias may be noted. Muscle weakness may be pronounced. Dermal exposure results in yellow staining of the skin and may produce burns. *Emergency life-support procedures*: Acute exposure to dinoterb exposure may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation:* Move victims to fresh air. Emergency personnel should avoid self-exposure to dinoterb. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Transport to a health care facility. *Skin and/or Eye Contact:* Remove victims from exposure. Emergency personnel should avoid self-exposure to dinoterb. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Remove contaminated clothing as soon as possible. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. Vigorously wash exposed skin areas with soap and water. Yellowish coloration usually accompanies dermal exposure; the discoloration does not have to be fully removed to prevent further absorption. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Transport to a health care facility. *Ingestion:* Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of dinoterb is unknown or suspected to be greater than 30 minutes, do not induce vomiting and proceed to hospital. Ipecac should not be administered to children under 6 months of age. *Warning*: Ingestion of dinoterb may result in sudden onset of seizures or loss of consciousness. Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If ANY uncertainty exists, proceed to hospital. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Ambulate (walk) the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be re-administered. Continue to ambulate, and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (1/2 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (1/2 to 1 cup) of water. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (1/2 to 1 oz) of cathartic; 50 to 100 g (1-3/4 to 3- 1/2 oz) is recommended for adults. Transport to a health care facility[83].

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >2.3 mg/m³. Where potential for exposure to dinoterb exists, use a NIOSH/MSHA- or

European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with dinoterb you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dinitrophenol solutions or substituted nitrophenol pesticides, solid, toxic and/or corrosive require a label of "poisonous materials." This material falls in Hazard Class 6.1.

Spill Handling: *Dry material:* first remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. *Wet spills:* evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. Heat may cause material to explode. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. Conduct @ 1000°C for 2.0 seconds minimum with scrubber for nitrogen oxides removal is recommended. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices.

Dipentene D:1440

Use Type: Insecticide, Animal and insect repellant, Slimicide

CAS Number: 5989-27-5 (D-Limonene); 138-86-3 (*dl*-Limonene)

Formula: $C_{10}H_{16}$

Synonyms: Cajeputene; Cinene; Dipentene; Limonene: D-Limonene; D-(+)-Limonene; (+)-R-Limonene; *p*-Mentha-1,8-diene; 1-Methyl-4-(1-methylethenyl) cyclohexane; Terpinene; *dl*-*p*-mentha-1,8-diene

Trade Names: BUGAWAY®[C]; BUGCHASER®[C]; CARVENE®; DOO-NOT®; HOLIDAY FIRE ANT KILLER®

Chemical Class: Miscellaneous hydrocarbon; Essential oil

EPA/OPP PC Code: 079701

California DPR Chemical Code: 979, 2531

HSDB Number: 4186 (CAS: 5989-27-5); 1809 (CAS: 138-86-3) limonene mixture

UN/NA & ERG Number: UN2052/128

RTECS® Number: OS8100000; GW6360000 (D-Limonene); RJ3697600 (tea tree oil)

EC Number: CAS: 5989-27-5: 227-813-5 [*Annex I Index No.:* 601-029-00-7]; CAS: 138-86-3: 205-341-0 [*Annex I Index No.:* 601-029-00-7]; CAS: 8028-48-6: 232-433-8

Uses: Used as an insecticide, insect repellent, and animal repellent. Not listed for use in EU countries[115]. Registered for use in the U.S., Canada and other countries. There are 49 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Limonene (40 CFR 180.539): Limonene is exempt from tolerance levels when used in establishments making animal feed and processed food.

Regulatory Authority and Advisory Information: Carcinogenicity[83]: (*D-limonene 5989-27-5*), IARC: Human Inadequate Evidence; Animal, No Evidence*, not classifiable as carcinogenic to humans*, Group 3.

Acute Oral Category: 3, CAUTION

Health Advisory: Reproductive Toxin

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R10, R38; R43; R50/53; safety phrases: S2; S24; S37, S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Colorless to straw colored liquid. Lemon-like odor. Molecular weight = 136.24; Specific gravity (H_2O:1) = 0.84; Boiling point = 177.78°C. Freezing/Melting point = –40°C; Vapor pressure = 20 mmHg @ 68.2°C. Flash point = 46.1°C. Autoignition temperature = 237°C. Explosive limits: LEL = 0.7%; UEL = 6.1%, both @ 150°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Practically insoluble in water.

Incompatibilities: Mist may form explosive mixture with air. Incompatible with acids, alkalies, oxidizers. Contact with oxidizers can cause fire and may be an explosion hazard.

Permissible Exposure Limits in Air: AIHA WEEL: 30 ppm TWA (CAS:138-86-3)

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 20 ppm
PAC-2: 20 ppm
PAC-3: 160 ppm

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passing through the unbroken skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate the eyes and skin. High exposures may damage the kidneys. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause tumors. Dipentene may cause a skin allergy; very low future exposures can cause itching and a skin rash.

Points of Attack: Skin. There is limited evidence that dipentene causes kidney cancer in male rats.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >20 ppm. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Red: Flammability Hazard: Store in a flammable liquid storage area or approved cabinet away from ignition sources and corrosive and reactive materials. Store in tightly closed containers in a cool, well-ventilated area. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from heat and incompatible materials. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Metal containers involving the transfer of 5 gallons or more of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only nonsparking tools and equipment, especially when opening and closing containers of this chemical. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This requires a label of "FLAMMABLE LIQUIDS." It falls in Hazard Class 3.3 and Packing Group II.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area for at least 50 meters/150 feet in all directions. *Large spill*: consider initial downwind evacuation for at least 300 meters/1000 feet. *Eliminate* all ignition sources (no smoking, flares, sparks or flames in immediate area). All equipment used when handling the product must be grounded. Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. A vapor-suppressing foam may be used to reduce vapors. Absorb or cover with dry earth, sand or other noncombustible material and transfer to containers. Use clean non-sparking tools to collect absorbed material. *Large spill*: dike far ahead of liquid spill for later disposal. Water spray may reduce vapor; but may not prevent ignition in closed spaces.

Fire Extinguishing: This chemical is a flammable liquid. Hazardous decomposition includess acidic smoke and oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters (0.5 mile) in all directions. CAUTION: (1) This product may have a very low flash point: Use of water spray when fighting fire may be inefficient. (2) For mixtures containing alcohol or polar solvent, alcohol-resistant foam may be more effective. *Small fire*: dry chemical, CO_2, water spray or regular foam. *Large fire:* water spray, fog or regular foam. Do not use straight streams. Move containers from fire area if you can do it without risk. *Fire involving tanks or vehicle loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Diphacinone D:1450

Use Type: Rodenticide

CAS Number: 82-66-6; 42721-99-3 (sodium salt)

Formula: $C_{23}H_{16}O_3$

Synonyms: Dipazin; Diphacin (Italy and Turkey); Diphacinon; Diphenacin; Diphenadion; Diphenadione; 2-Diphenylacetyl-1,3-diketohydrindene; 2-(Diphenylacetyl) indan-1,3-indandione; 2-(Diphenylacetyl)-1*H*-indene-1,3(2*H*)-dione; Ratindan (Russia)

Trade Names: DE-PESTER®[C]; DIDANDIN®; DIPAXIN®; DITRAC®; GOLD CREST®; KILL-RO RAT KILLER®; LIQUA-TOX®, diphacinone sodium salt; ORAGULANT®; P. C. Q. ®; PID®; PROMAR®; RAMIK®; RAT KILLER®; RODENT CAKE®[C]; SOLVAN®; TOMCAT®; U 1363®

Chemical Class: 1,3-Indandione

EPA/OPP PC Code: 067701; 067705 (Na salt)

California DPR Chemical Code: 225; 1636 (Na salt)

HSDB Number: 2788

UN/NA & ERG Number: UN2811/154

RTECS® Number: NK5600000

EC Number: 201-434-5 [*Annex I Index No.:* 606-038-00-X]

Uses: A U.S. EPA restricted Use Pesticide (RUP) when the formulation contains 3% or more of diphacinone. Diphacinone is an anti-coagulant rodenticide bait used for control of rats, mice, voles and other rodents. It is available in meal, pellet, wax block, and liquid bait formulations, as well as in tracking powder and concentrate formulations. It is used in general agriculture and in food-processing areas. The top five uses for diphacinone in California are on landscapes, general vertebrate pest control, around structures and right of ways, and on oranges. This material is also used as an anticoagulant medication. Not approved for use in EU countries[115].

Regulatory Authority and Advisory Information: Acute Oral Category: 1, DANGER–POISON

PAN Bad Actor Chemical (82-66-6 only)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Marine pollutant

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R28; R48/23/24/25; safety phrases: S1/2; S36/37; S45 (see Appendix 1)

Description: Diphacinone is a pale yellow, crystalline solid. Odorless. Molecular weight = 340.38; Specific gravity (H_2O:1) = 1.281 @ 25°C; Boiling point = (decomposes); Freezing/Melting point = 147°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Practically insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Hydrolyzed by strong acids. Incompatible with oxidizers, chlorates nitrates, peroxides, water and strong light including ultraviolet light can cause decomposition. Diphacinone is a ketone, and behaves as a weak acid. Forms water-soluble alkali metal salts. Ketones are reactive with many acids and bases, liberating heat and flammable gases. The amount of heat may be sufficient to start a fire in the unreacted portion of the ketone. Ketones react with reducing agents such as hydrides, alkali metals, and nitrides to produce flammable hydrogen gas and heat. Ketones are incompatible with isocyanates, aldehydes, cyanides, peroxides, and anhydrides. They react violently with aldehydes, nitric acid and perchloric acid[88].

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.082 mg/m^3
PAC-2: 0.9 mg/m^3
PAC-3: 88 mg/m^3

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal or eye contact. Persons with who are taking anticoagulants or are suffering from bleeding disorders must be protected from exposure.

Harmful Effects and Symptoms

Short Term Exposure: This material is extremely toxic and an anticoagulant. Probable oral lethal dose in humans is 5–50 mg/kg, or between 7 drops and 1 teaspoonful for a 150 lb person. Diphacinone is an anticoagulant (inhibits blood clotting). Hemorrhage is the most common effect and may be manifested by nose bleeding, gum bleeding, bloody stools and urine, ecchymoses (extravasations of blood into skin), and hemoptysis (coughing up blood). Bruising is heightened. Abdominal and flank pain are also common. Other signs and symptoms include flushing, dizziness, hypotension (low blood pressure), dyspnea (shortness of breath), cyanosis (blue tint to the skin and mucous membranes), fever, and diarrhea. LD_{50} (oral, rat) = 7 mg/kg; LD_{50} (dermal, rat) = 200 mg/kg.

Long Term Exposure: May affect the liver and kidneys. Repeated exposure may cause low white blood cell count and affect the brain.

Points of Attack: Blood, liver, kidneys.

Medical Surveillance: Blood test for clotting time (PT, INR, or PTT). Stool and urine tests for blood. Liver and kidney function tests. Complete blood count. EEG.

First Aid: *Emergency Life-Support Procedures:* Acute exposure RUSH to health care facility; may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation Exposure:* 1. Move victims to fresh air. Emergency personnel should avoid self-exposure. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 4. RUSH to a health care facility. *Dermal/Eye Exposure:* 1. Remove victims from exposure. Emergency personnel should avoid self- exposure. 2. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 3. Remove contaminated clothing as soon as possible. 4. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. 5. Wash exposed skin areas twice with soap and water. 6. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 7. RUSH to a health care facility. *Ingestion Exposure:* 1. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. 2. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. 3. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of diphacinone is unknown or suspected to be greater than 30 minutes, do not induce vomiting and RUSH to a health care facility. 4. ipecac should not be administered to children under 6 months of age. ***Warning:*** Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If ANY uncertainty exists, RUSH to a health care facility. 4. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Ambulate (walk) the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be re-administered. Continue to ambulate and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. 4. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (1/2 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (1/2 to

1 cup) of water. 5. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (1/2 to 1 oz) of cathartic; 50 to 100 g (1-3/4 to 3-1/2 oz) is recommended for adults. 6. RUSH to a health care facility[83].

Note to physician: A collection of published articles. from the literature has been submitted to support the use of Vitamin K as an antidote in treating diphacinone poisoning[83]. See record number 2788 for HSDB (Hazardous Substance Data Bank).

Personal Protective Methods: For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA) or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical-resistant suit. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposure to diphacinone, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Indandione pesticides, solid, toxic, n. o. s., require a "poisonous materials" label.Hazard Class is 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. *Small spills*: take up with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills:* with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Hazardous decomposition includes oxides of carbon. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Diphenamid D:1460

Use Type: Herbicide

CAS Number: 957-51-7

Formula: $C_{16}H_{17}NO$; $(CH_3)_2NCOCH(C_6H_5)_2$

Synonyms: Acetamide, *N,N*-dimethyl-2,2-diphenyl-; Benzeneacetamide, *N,N*-dimethyl-α-phenyl-; Difenamid (Spanish); *N,N*-Dimethyl-α,α-diphenylacetamide; *N,N*-Dimethyl-α-phenylbenzeneacetamide; *N,N*-

Dimethyldiphenylacetamide; *N,N*-Dimethyl-2,2- diphenylacetamide; *N,N*-Dimethyl-α-phenylbenzeneacetamide; Dimid; Diphenamide; Diphenylamide; 2,2-Diphenyl-*N,N*-dimethylacetamide

Trade Names: DIF 4®; DYMID®[C]; ENIDE®[C]; FDN®; FENAM®; L 34314®; LILLY 34314®; RIDEON®; U 4513®; ZARUR®

Chemical Class: Amide Herbicide; Alkanamide; Phenylamide

EPA/OPP PC Code: 036601

California DPR Chemical Code: 226

HSDB Number: 367

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: AB8050000

EC Number: 213-482-4 [*Annex I Index No.:* 616-007-00-2]

Uses: This material is used as a pre-emergent and selective herbicide for tomatoes, peanuts, alfalfa, soybeans, cotton and other crops. Not approved for use in the U.S. or EU countries[115]. There are 18 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Diphenamid including its desmethyl metabolite (N-methyl-2,2-diphenylacetamide) [(40 CFR 180.230)]: in or on raw agricultural commodities as follows: peanut hay and forage 2 ppm; potatoes and strawberries 1 ppm; peanut hulls and soybean, hay and forage 0.5 ppm; cotton forage 0.2 ppm; apples, cottonseed, fruiting vegetables, okra, peaches, peanuts, soybeans, and sweet potatoes 0.1 ppm (negligible residue); in meat, fat, and meat byproducts of cattle, goats, hogs, horses, and sheep 0.05 ppm (negligible residue); in milk 0.01 ppm (negligible residues); rasberries 1.0 ppm.

Human toxicity (long-term)[101]: Very low–200.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–5.00495 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Toxicity (oral) Category: 3, CAUTION

Health Advisory: Mutagen

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R52/53; safety phrases: S2; S61 (see Appendix 1)

Description: Diphenamid is a white crystalline solid in various forms. Molecular weight = 239.32; Specific gravity (H_2O:1) = 1.18 @ 25°C; Freezing/Melting point = 135°C; Vapor pressure = 2.8×10^{-8} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Moderately soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Reacts with strong oxidants, strong acids and alkalies. Diphenamid is an amide. Amides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic amides with strong reducing agents. Amides are very weak bases (weaker than water). Mixing amides with dehydrating agents such as phosphorus pentoxide or thionyl chloride generates the corresponding nitrile. The combustion of these compounds generates mixed oxides of nitrogen. This compound is decomposed by strong base or acid[88].

Permissible Exposure Limits in Air: OEL (Russia): 5 mg/m³ STEL (1/1993)[9]

Permissible Concentration in Water: Federal Drinking Water Guidelines: 200 μg/L; State Drinking Water Guidelines: Florida 210 μg/L; California 200 μg/L.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the eyes, skin and respiratory tract. Ingestion can cause nausea and vomiting. May cause convulsions. LD_{50} (oral, rat) = 650 mg/kg; LD_{50} (dermal, rat) = >6000 mg/kg.

Long Term Exposure: A slight increase in liver weights was observed in long-term animal feeding studies. Mutation data reported.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential for exposure to diphenamidexists, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers, strong acids, strong alkalies. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid, n.o.s. This chemical requires a shipping label of "CLASS 9." It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. Diphenamid decomposes @ 210°C forming toxic and corrosive gases, including nitrogen oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Small amounts may be destroyed by alkaline hydrolysis. Admixture with alkali can be followed by soil burial. Larger quantities can be disposed of by incineration in admixture with acetone or xylene and using effluent gas scrubbing.

Diphenylamine D:1470

Use Type: Insecticide, Fungicide, Herbicide, Plant growth regulator

CAS Number: 122-39-4

Formula: $C_{12}H_{11}N$

Synonyms: Acetamide, 2-Biphenylyl-*N*-pyridyl-; AI3-00781; Aniline, *n*-phenyl-; Anilinobenzene; Benzenamine, *n*-phenyl-; Benzene, anilino-; Benzene, (phenylamino)-; Big Dipper; 2-Biphenylyl-*N*-pyridylacetamide; Caswell No. 398; C.I. 10355; Deccoscald 282; DFA; Difenilamina (Spanish); Diphenpyramide; *N*,*N*-Diphenylamine; DPA; NSC 215210; *n*-Phenylaniline; Phenylaniline; *n*-Phenylbenzenamine; *n*-Phenylbenzeneamine; Poly(diphenylamine); Pyridyl-biphenylyl-acetamide

Trade names: NO- SCALD DPA 31; NO- SCALD DPA 283; SCALDIP; Z-876

Chemical Class: Amine

EPA/OPP PC Code: 038501

California DPR Chemical Code: 228

HSDB Number: 1108

UN/NA & ERG Number: UN2811/154

RTECS® Number: JJ7800000

EC Number: 204-539-4[*Annex I Index No.:* 612-026-00-5]

Uses: Topically in anti-screwworm mixtures, foliar application in a modified growth chamber to decrease ozone injury to leaves of apple, bean, muskmelon, petunia, and tobacco plants. To control weather fleck in tobacco and inhibit algae formation. To prolong the fresh appearance of snapdragons. Protect rice from the toxic effects of thiolcarbamate herbicides[83]. Not currently approved for use in EU countries (resubmitted) [115]. Registered for use in the U.S. and other countries.

U.S. Maximum Allowable Residue Levels for diphenylamine [40 CFR 180.190(a)]: in or on the following commodities: apple, wet pomace 30.0 ppm; apple from preharvest or postharvest use, including use of impregnated wraps 10.0 ppm; cattle, fat 0.01 ppm; cattle, liver 0.1 ppm; cattle, meat byproducts, except liver 0.01 ppm; cattle, meat 0.01 ppm; goat, fat 0.01 ppm; goat, liver 0.1 ppm; goat, meat byproducts, except liver 0.01 ppm; goat, meat 0.01 ppm; horse, fat 0.01 ppm; horse, liver 0.1 ppm; horse, meat byproducts, except liver 0.01 ppm;

horse, meat 0.01 ppm; milk 0.01 ppm; sheep, fat 0.01 ppm; sheep, liver 0.1 ppm; sheep, meat byproducts, except liver 0.01 ppm; and sheep, meat 0.01 ppm.

Regulatory Authority and Advisory Information: Health Advisory: Mutagen, Developmental/Reproductive Toxin.

Acute Oral Category: 3, CAUTION

U.S. EPA Gene-Tox Program, Positive: Cell transform SA7/SHE

RCRA Hazardous Constituent Waste[5].

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23; R24; R25; R33; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1).

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: DPA is a colorless to amber to brown crystalline solid or liquid. Contact with light causes a color change. Pleasant to pungent, floral odor. Molecular weight = 169.22; Specific gravity (H_2O:1) = 1.158 @ 22°C; Boiling point = 302°C; Freezing/Melting point = 53.2°C; Vapor pressure = 2×10^{-4} mmHg @ 20°C; Flash point = 153°C (cc); Explosive limits: LEL = 0.7%; UEL 5.4%; Autoignition temperature = 634°C. Henry's Law constant = 2.69×10^{-006} atm-m^3/mol @ 25°C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Low solubility in water.

Incompatibilities: Dust forms explosive mixture with air. Incompatible with strong acids; strong oxidizers; aldehydes, organic anhydrides; isocyanates, hexachloromelamine, trichloromelamine. Reacts with nitrogen oxides forming *N*-nitrosodiphenylamine and heat-, friction-, and shock-sensitive nitro products.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 10 mg/m^3 TWA

ACGIH TLV®[1]: 10 mg/m^3 TWA; not classifiable as a human carcinogen

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 30 mg/m^3
PAC-2: 65 mg/m^3
PAC-3: 220 mg/m^3

Determination in Air: Use OSHA Analytical Method 78.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 200 μg/L; State Drinking Water Guidelines: Maine 175 μg/L; Florida 175 μg/L. EU Drinking Water Guidelines (MAC) = 90 μg/L.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation of dust, ingestion, skin absorption; eye and/or dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: DPA irritates the eyes, skin, and respiratory tract. It may affect the blood (resulting in formation of methemoglobin). Industrial poisoning has been encountered and was manifested clinically by bladder symptoms, tachycardia, hypertension and skin trouble. Overexposure can damage the liver, kidneys (polycystic kidneys), and may cause bladder symptoms and blood in the urine. LD_{50} (oral, rat) = >15 g/kg; LD_{50} (dermal, rat) = >7500 mg/kg.

Long Term Exposure: DPA may affect the liver, kidneys and blood, forming methemoglobin. NIOSH warns that the carcinogen 4-aminodiphenyl may be present as an impurity in the commercial product. In animals: teratogenic effects. May cause reproductive and fetal effects. May cause problems of the gastrointestinal tract, cardiovascular system and spleen. May cause kidney and liver problems.

Points of Attack: Eyes, skin, respiratory system; cardiovascular system, blood, bladder, reproductive system.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. If symptoms develop or overexposure is suspected, the following may be useful: evaluation of the kidneys and urinary system. Urine cytology (to look for abnormal cells). Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions, including resuscitation mask) if breathing has stopped and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >30 mg/m^3. Where potential exists for exposures over *10 mg/m*^{3}, use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator with a high-efficiency particulate filter. Greater protection is provided by a powered air-purifying respirator. Particulate filters must be checked every day before work for physical damage, such as rips or tears, and replaced as needed. If while wearing a filter, cartridge or canister respirator, you can smell, taste, or otherwise detect diphenylamine, or in the case of a full facepiece respirator you experience eye irritation, leave the area immediately. Check to make sure the respirator-to-face seal is still good. If it is, replace the filter, cartridge, or canister. If the seal is no longer good, you may need a new respirator. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Store in tightly closed containers in a cool, well-ventilated area away from light. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where diphenylamine is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Toxic solids, flammable, organic, n.o.s. requires a shipping label of "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition include oxides of carbon. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Burn in admixture with flammable solvent in furnace equipped with afterburner and scrubber.

Diquat D:1540

Use Type: Herbicide, Desiccant

CAS Number: 2764-72-9 (ion); 85-00-7 (dibromide); 6385-62-2 (monohydrate)

Formula: $C_{12}H_{12}N_2Br_2$

Synonyms: 9,10-Dihydro-8a,10-diazoniaphenanthrene dibromide;9,10-Dihydro-8a,10a-diazoniaphenanthrene(1,1'-ethylene-2,2'-bipyridylium)dibromide; 5,6-Dihydro-dipyrido(1,2a,2,1c)pyrazinium dibromide; 5,6-Dihydro-dipyrido(1,2-a:2,1'-c)pyrazinium dibromide; 6,7-Dihydropyrido(1,2-a:2',1'-c)pyrazinedium dibromide; 6,7-Dihydropyridol(1,2-a:2',1'-c)pyrazinedium dibromide; Dipyrido(1,2-a:2',1'-c)pyrazinediium, 6,7-dihydro-, dibromide; *o*-Diquat; Diquat dibromide; 1,1'-Ethylene-2,2'-bipyridyliumdibromide; Ethylene dipyridylium dibromide; 1,1-Ethylene 2,2-dipyridylium dibromide; 1,1'-Ethylene-2,2'-dipyridylium dibromide

Trade Names: AQUACIDE®; AQUA-CLEAR®[C] AQUAKILL®; CLEANSWEEP®; DEIQUAT®; DEXTRONE®; FARMON PDQ®; FB/2®; FEGLOX®; GROUNDHOG SOLTAIR®; ORTHO DIQUAT®; PATHCLEAR®; PREEGLONE®; REGLON®; REGLONE®; Zeneca Ag Products; REGLOX®; REWARD®; TAG®; TORPEDO®; VEGATROLE®; WEEDOL (ICI)®; WEEDTRINE-D®

Chemical Class: Bipyridilium

EPA/OPP PC Code: 032201

California DPR Chemical Code: 229

HSDB Number: 1700

UN/NA & ERG Number: UN2781/151

RTECS® Number: JM5690000

EC Number: 220-433-0; 201-579-4 [*Annex I Index No.:* 613-089-00-1] (*dibromide CAS: 85-00-7*)

Uses: Diquat or diquat dibromide is a nonselective, quick-acting herbicide and plant growth regulator, causing injury only to the parts of the plant to which it is applied.

Diquat is referred to as a desiccant because it causes a leaf or an entire plant to dry out quickly. It is used to desiccate potato vines and seed crops, to control flowering of sugarcane, and for industrial and aquatic weed control in environments such as catfish farms. It is not residual; it does not leave any trace of herbicide on or in plants, soil, or water.
U.S. Maximum Allowable Residue Levels for residues of the plant growth regulator diquat (6,7-dihydrodipyrido (1,2-a: 2(a) Tolerancprime;,1-c)pyrazinediium) derived from application of the dibromide salt and calculated as the cation [40 CFR 180.226 (a)(1)]: in or on the following food commodities: cattle, fat 0.02 ppm; cattle, meat byproducts 0.02 ppm; cattle, meat 0.02 ppm; egg 0.02 ppm; goat, fat 0.02 ppm; goat, meat byproducts 0.02 ppm; goat, meat 0.02 ppm; hog, fat 0.02 ppm; hog, meat byproducts 0.02 ppm; hot, meat 0.02 ppm; horse, fat 0.02 ppm; horse, meat byproducts 0.02 ppm; horse, meat 0.02 ppm; milk 0.02 ppm; potato 0.1 ppm; potato, waste, dried 1.0 ppm; poultry, fat 0.02 ppm; poultry, meat byproducts 0.02 ppm; poultry, meat 0.02 ppm; sheep, fat 0.02 ppm; sheep, meat byproducts: 0.02 ppm; and sheep, meat 0.02 ppm. ***Tolerances are established for residues of the herbicide diquat (calculated as the cation) derived from the application of the dibromide salt to ponds, lakes, reservoirs, marshes, drainage ditches, canals, streams, and rivers which are slow-moving or quiescent in programs of the Corps of Engineers or other Federal or State public agencies and to ponds, lakes and drainage ditches only where there is little or no outflow of water and which are totally under the control of the user [40 CFR 180.226 (a)(2)(I)]:*** in or on the following food commodities: avocado 0.02 ppm; cotton, undelinted seed 0.02 ppm; fish 0.1 ppm; fruit, citrus, group 0.02 ppm; fruit, pome group 0.02 ppm; fruit, small 0.02 ppm; fruit, stone, group 0.02 ppm; grain, crop 0.02 ppm; grass, forage 0.1 ppm; hop, dried cones 0.02 ppm; nut, tree, group 0.02 ppm; shellfish 0.1 ppm; sugarcane, cane 0.02 ppm; vegetable, cucurbit, group 0.02 ppm; vegetable, foliage of legume, group 0.1 ppm; vegetable, fruiting, group 0.02 ppm; vegetable, leafy 0.02 ppm; vegetable, root and tuber, group 0.02 ppm; and vegetable, seed and pod 0.02 ppm. ***Where tolerances are established at higher levels from other uses of diquat on the subject crops, the higher tolerances applies also to residues of the aquatic uses cited in this paragraph [40 CFR 180.226 (a)(2)(ii)]. Tolerances are established for residues of the plant growth regulator diquat derived from application of the dibromide salt and calculated as the cation [40 CFR 180.226 (a)(3)]:*** in or on the following food commodities: banana 0.05 ppm; and coffee 0.05 ppm. ***A tolerance is established for residues of diquat [40 CFR 180.226 (a)(5)]: in potato granules/flakes & potato chips 0.5 ppm. A tolerance regulation is established for residues of the desiccant diquat derived from application of the dibromide salt and calculated as the cation [40 CFR 180.226 (a)(6)]:*** in processed, dried potato waste 1.0 ppm.
Human toxicity (long-term)* [101]*: Intermediate–35.00 ppb, Health Advisory
Fish toxicity (threshold)* [101]*: Very low–932.73871 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:
Carcinogenicty: EPA Group E, evidence of non-carcinogenicity for humans (Diquat dibromide)
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer, Very toxic by Inhalation (EU)
Poison (oral) Category: 2, WARNING
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active] (dibromide)
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
Safe Drinking Water Act: MCL, 0.02 mg/L; MCLG, 0.02 mg/L; Regulated chemical (47 FR 9352)
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)
European/International Regulations (*includes salts*): Hazard Symbol: T+, Xn, Xi, N; risk phrases: R22; R26; R36/37/38; R43; R48/25; R50/53; safety phrases: S1/2; S28; S36/37/39; S45; S60; S61 (see Appendix 1)
Description: Diquat forms a monohydrate which is a colorless to yellow crystalline solid. The crystals are usually dissolved in a solution; commercial products may be found as a liquid concentrate or a solution. Molecular weight = 184.23 (cation); 344.1 (dibromide); Specific gravity (H_2O:1) = 122–127 @ 20°C; Boiling point = (decomposes); Freezing/Melting point = (decomposes) 320°C[88]; Vapor pressure = 0.0001 mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Soluble in water; solubility = 100 mg/L @ 20°C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Incompatible with alkalis, UV light, basic solutions. The active ingredient is corrosive to metals. Concentrated solutions attack aluminum. Diquat cylinder may explode in heat of fire.
Permissible Exposure Limits in Air: OSHA PEL: None
NIOSH REL: 0.5 mg/m^3 TWA
ACGIH TLV®[1]: 0.5 mg/m^3 TWA, inhalable fraction, 0.1 mg/m^3 TWA, respirable fraction; not classifiable as a human carcinogen [skin]
No Protective Action Criteria (PAC) Available.
Determination in Air: No method available.
Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 20 μg/L; State Drinking Water Guidelines: Maine 14 μg/L. Canadian Drinking Water Standards: MAC 0.07 mg/L. Runoff from spills or fire control may cause water pollution. (Dibromide)
Determination in Water: Log K_{ow} = <1. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Diquat can affect you when breathed in and by passing through your skin. Dermal contact can cause burns. High exposure can cause nausea, diarrhea, lung, liver, and kidney damage. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. LD_{50} (oral, rat) = <500 mg/kg; LD_{50} (dermal, rat) = >200–<2,000 mg/kg.

Long Term Exposure: Long term or repeated exposure may cause cataracts. Repeated contact causes dry, cracked skin and nail damage. May cause skin sensitization. Exposure can cause nosebleeds. Diquat may cause mutations. Handle with extreme caution. Diquat may damage the developing fetus. Lung damage may occur. May cause cataracts.

Points of Attack: Eyes, skin, respiratory system including lungs, kidneys, liver, central nervous system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. If symptoms develop or overexposure has occurred, the following may be useful: Lung function tests. Examination of the eyes. Kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. NIOSH recommends: **4 hr** (At least 4 but <8 hours of resistance to breakthrough >0.1 μg/cm^2/min): 4H™ and Silver Shield™ gloves. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposures over 0.5 mg/m^3, use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator with a pesticide cartridge. Increased protection is obtained from full facepiece air-purifying respirators. If while wearing filter, cartridge or canister respirator, you can smell, taste, or otherwise detect diquat, or in the case of a full facepiece respirator you experience eye irritation, leave the area immediately. Check to make sure the respirator to face seal is still good. If it is, replace the filter, cartridge, or canister. If the seal is no longer good, you may need a new respirator. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a MSHA/NIODH approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well ventilated area. Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with diquat you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers and reducing agents. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Bipyridilium pesticides, solid, toxic are "POISONOUS MATERIALS" They usually fall in Hazard Class 6.1.

Spill Handling: *Dry material:* First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. *Liquid:* Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Oil-skimming equipment may be used to remove slicks from water. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen bromide gas. Diquat cylinder may explode in fire. Diquat is a combustible solid but does not readily ignite and burns with difficulty. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Diquat is inactivated by inert clay or by anionic surfactants. Therefore, an effective and environmentally safe disposal method would be to mix the product with ordinary household detergent and bury the mixture in clay soil. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Disulfoton D:1580

Use Type: Insecticide, Acaricide

CAS Number: 298-04-4

Formula: $C_8H_{19}O_2PS_3$

Synonyms: *O,O*-diethyl *S*-(2-eththioethyl) phosphorodithioate; *O,O*-diethyl *S*-(2-eththioethyl) thiothionophosphate; *O,O*-Diethyl *S*-(2-ethylmercaptoethyl) dithiophosphate; *O,O*-Diethyl 2-ethylthioethylphosphorodithioate; *O,O*-Diethyls-2-(ethylthio)ethylphosphorodithioate; ENT 23,437; *O,O*-Ethyl *S*-2(ethylthio)ethylphosphorodithioate; *S*-2-(Ethylthio)ethyl *O,O*-diethylester of phosphorodithioic acid; Ethylthiodemeton; Phosphorodithionic acid, *S*-(2-(ethylthio)ethyl-*O,O*-diethylester; Phosphorodithionic acid, *O,O*-diethyl *S*-2-(ethylthio)ethyl ester

Trade names: BAY 19639®; BAYER 19639®; DIMAZ®; DISULFATON®; DI-SYSTON®[C]; DISYSTON®[C]; DISYSTOX®; DITHIODEMETON®; DITHIOSYSTOX®; EKATIN TD®; FRUMIN-AL®; FRUMIN G®; GLEBOFOS®; M-74®; S 276®; SOLVIREX®; THIODEMETON®; THIODEMETRON®

Chemical Class: Organophosphate

EPA/OPP PC Code: 032501

California DPR Chemical Code: 230 (inactive)

HSDB Number: 379

UN/NA & ERG Number: UN2783 (solid)/152

RTECS® Number: TD9275000

EC Number: 206-054-3 [*Annex I Index No.:* 015-060-00-3]

Uses: All products formulated at greater than 2% disulfoton are classified as Restricted Use Pesticides (RUP). Disulfoton is a selective, systemic organophosphate insecticide and acaricide that is especially effective against sucking insects. It is used to control aphids, leafhoppers, thrips, beet flies, spider mites, and coffee leaf miners. Not approved for use in EU countries[115]. There are 21 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Disulfoton [40 CFR 180.183(a)]: (*Note*: all 2003 cancellations removed) in or on the following raw agricultural commodities: barley, grain 0.75 ppm; barley, straw 5.0 ppm; bean, dry, seed 0.75 ppm; bean, lima 0.75 ppm; beans, snap 0.75 ppm; broccoli 0.75 ppm; Brussels sprouts 0.75 ppm; cabbage 0.75 ppm; cauliflower 0.75 ppm; coffee, bean 0.3 ppm; cotton, undelinted seed 0.75 ppm; hop, dried cones 0.5 ppm; lettuce 0.75 ppm; peanut 0.75 ppm; pea 0.75 ppm; pea, field, vines 5.0 ppm; pepper 0.1 ppm; potato 0.75 ppm; sorghum, forager 5.0 ppm; sorghum, grain, grain 0.75 ppm; sorghum, grain, stover 5.0 ppm; soybean 0.1 ppm; soybean, forage 0.25 ppm; soybean, hay 0.25 ppm; spinach 0.75 ppm; sugarcane, cane 0.3 ppm; tomato 0.75 ppm; wheat, hay 5.0 ppm; wheat, grain 0.3 ppm; and wheat, straw 5.0 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.183(c)]:*** in or on the following raw agricultural commodities: asparagus, 0.1 ppm; wheat, ornamentals and potatoes.

Human toxicity (long-term): Extra high–0.30 ppb, Health Advisory

Fish toxicity (threshold): High–2.90001 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Acute Oral Category: 1, DANGER–POISON
Health Advisory: Nerve Toxin, Mutagen
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive)
CLEAN WATER ACT: Section 311 Hazardous Substances/ RQ 40CFR117.3 (same as CERCLA, see below)
EPA HAZARDOUS WASTE NUMBER (RCRA No.): P039
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.017; Non-wastewater (mg/kg), 6.2
RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL ug/L): 8140(2)
SUPERFUND/EPCRA 302 Extremely Hazardous Substances: TPQ = 500 lb (227 kg)
SUPERFUND/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
European/International Regulations: Hazard Symbol: T+, N; risk phrases: R27/28; R50/53; safety phrases: S1/2; S28; S36/37; S45; S60; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Disulfoton is a combustible, colorless to yellowish oil (when pure). Characteristic sulfur-like odor. Technical product is a brown liquid. Molecular weight = 274.42; Specific gravity (H_2O:1) = 1.144 @ 20°C; Boiling point = 132–133°C @ 1.5 mm pressure; Freezing/Melting point = ≥ –25°C; Vapor pressure = 0.0002 mmHg @ 20°C; 5.4×10^{-5} mmHg @ 20°C; Flash point ≥82°C; 133°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 0.003% @ 25°C.

Incompatibilities: Alkalies, strong bases and oxidizers. Forms toxic nitrogen and sulfur oxides when heated to decomposition. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: OSHA PEL: None
NIOSH REL: 0.1 mg/m^3 TWA [skin]
ACGIH TLV®[1]: 0.05 mg/m^3 TWA inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI_A issued for acetylcholinesterase-inhibiting pesticides.
Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.18 mg/m^3
PAC-2: 2 mg/m^3
PAC-3: 8.8 mg/m^3

Determination in Air: Use NIOSH Analytical Method (IV) Method #5600, Organophosphorus Pesticides.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 0.3 ppb[93]; Arizona 0.03 μg/L; Florida 0.5 μg/L; Minnesota 0.03 μg/L.

Determination in Water: Extraction with methylene chloride followed by measurement by gas chromatography using a nitrogen-phosphorus detector. Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, skin absorption (rapidly absorbed), ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Contact may cause burns to skin and eyes. Symptoms include pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) and chest pain may be noted. Hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. It is poisonous and may be fatal if inhaled, swallowed, or absorbed through the skin. LD_{50} (oral, rat) = 2.6–6.8 mg/kg. LD_{50} (dermal, rat) = 6–25 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. May be a neurotoxin.

Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes*: Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposures over *0.1 mg/m*^{3}, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with disulfoton you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from alkalies. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid, toxic, n.o.s. require a shipping label of "poisonous materials." They fall in DOT Hazard Class 6.1 and disulfoton in Packing Group I.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Do not touch spill material. Exposure by dermal contact is likely to be more significant than inhalation. *Small spills:* take up with sand or other noncombustible absorbent materials and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. A combustible liquid, but will not ignite easily. Extinguish with dry chemical, carbon dioxide; water spray, fog, or foam. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. Wear positive-pressure breathing apparatus and special protective clothing. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with added flammable solvent in a furnace with alkali scrubber. Acid or alkaline hydrolysis may also be used. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Consult with environmental regulatory agencies for guidance on acceptable disposal practices.

Dithianon D:1685

Use Type: Fungicide

CAS Number: 3347-22-6

Formula: $C_{14}H_4N_2O_2S_2$

Synonyms: 2,3-Dicarbonitrilo-1,4-diathiaanthrachinon; 2,3-Dicyano-1,4-dithia-anthraquinone; 5,10-Dihydro-5,10-dioxonaphtho(2,3-b)-p-dithiin-2,3-dicarbonitrile; 2,3-Dinitrilo-1,4-dithioanthrachinon; 2,3-Dinitrilo-1,4-dithia-anthraquinone; 1,4-Dithiaanthraquinone-2,3-dicarbonitrile; 1,4-Dithiaanthraquinone-2,3-dinitrile; Dithianone

Trade names: DELAN®; DELAN-COL®; DELAN 70WG®; DITHIANON FLOWABLE®; DITHIANON-WG®; IT 931®; MV 119A®; STAUFFER MV-119A®; THYNON®

Chemical Class: Quinone

EPA/OPP PC Code: 099201

HSDB Number: 1583

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: QL0700000

EC Number: 222-098-6 [*Annex I Index No.* 613-021-00-0]

Uses: Fungicide used to control certain mildews. A seed dressing; used to attack foliar diseases of fruits (pome, stone, etc,), coffeee, wine, and vegetables. Not currently registered for use in the U.S. Approved for use in most EU countries.

Regulatory Authority and Advisory Information: Acute Oral Category: 3, CAUTION
Health Advisory: Mutagen
European/International Regulations: Hazard Symbol T, Xn, Xi, N; risk phrases: R22; R23; R40; R41; R43; R50; R53; R66; safety phrases: S2; S13; S36/37/39; S45 (see Appendix 1)

Description: Dark brown to gray-browish fibrous needles. Commercial product is available as an emulsifiable concentrate or wettable granules. Odorless. Molecular weight = 296.32; Specific gravity (H_2O:1) = 1.55 @ 20°C; Boiling point = (decomposes) @ 220°C; Freezing/Melting point = 215–220°C; Vapor pressure = 2×10^{-11} mmHg @ 25°C; Henry's Law constant = 6×10^{-11} atm-m^3/mol @ 25°C (est). Practically insoluble in water; solubility = <0.1 ppm.

Incompatibilities: Decomposes when exposed to alkaline media, acids and oxidizers. Keep away from sulfur compounds.

Determination in Water: Log K_{ow} = ~3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, dermal contact, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: May cause eye, skin, and respiratory tract irritation. If ingested, may cause nausea, vomiting and diarrhea. May be able to penetrate the unbroken skin. May cause skin sensitization. LD_{50} (oral, rat) = 300–638 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Skin sensitizer. May cause liver and kidney effects. May cause reproductive and fetal effects.

Points of Attack: Kidney and liver.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Liver and kidney function tests.

First Aid: *Eyes:* First check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. *Immediately* transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop. *Skin: Immediately* flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, *immediately* call a physician and be prepared to transport the victim to a hospital for treatment. *Inhalation: Immediately* leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, self-contained breathing apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing. *Ingestion: Do not induce vomiting.* If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and *immediately* call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Do not induce vomiting. Immediately* transport the victim to a hospital[88].

Personal Protective Methods: Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon, sulfur, and cyanide fumes. Combustible. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. A potential candidate for liquid injection incineration at a temperature range of 650 to 1600 °C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1600°C and residence times of seconds for liquids and gases, and hours for solids[83]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Diuron D:1610

Use Type: Herbicide

CAS Number: 330-54-1

Formula: $C_9H_{10}Cl_2N_2O$; $Cl_2C_6H_3NHCON(CH_3)_2$

Synonyms: Caswell No. 410®; DCMU (In Japan); Dichlorfenidim; 3-(3,4-Dichlorophenol)-1,1-dimethylurea; 3-(3,4-Dichlorophenyl)-1,1-demethylurea; *N'*-(3,4-dichlorophenyl)-*N,N*-dimethylurea; *N*-(3,4-Dichlorophenyl)-*N',N'*-dimethylurea; 1-(3,4-Dichlorophenyl)-3,3-dimethylurea; 1,1-Dimethyl-3-(3,4-dichlorophenyl)urea; 3-(3,4-Diclorofenil)-1,1-dimetilurea (Spanish); Urea, *N'*-(3,4-dichlorophenyl)-*N,N*-dimethyl-; Urea, 3-(3,4-dichlorophenyl)-1,1-dimethyl-

Trade Names: 330541®; AF 101®; AI3-61438®; AMETRON SC®; BOUNDRY®[C]; CHEMIURON®[C]; CEKIURON®; CRISURON®; DAILON®; DIATER®; DI-ON®; DIREX®; DITOX®; DIUMATE® Diuron; DIUREX®,[C]; DIUROL® Diuron; DIURON 4L®; DMU®; DREXEL DIURON 4L®; DROPP ULTRA®; DURAN®; DYNEX®[C] FARMCO DIURON®; FORTEX SC®; FREEFLO®; GINSTAR®; HERBURON 500 BR®; HW 920®; KARMEX®[C]; K-4®; KARMEX DIURON HERBICIDE®; KARMEX DW®; KROVAR IDF®[C]; MARMER®; STRIKER®; SUP'R FLO®; TELVAR®; TIGREX®; TREVISSIMO®; UNIDRON®; UROX D®[C]; VONDURON®

Chemical Class: Phenylurea; Substituted urea

EPA/OPP PC Code: 035505

California DPR Chemical Code: 231

HSDB Number: 382

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: YS8925000

EC Number: 206-354-4 [*Annex I Index No.:* 006-015-00-9]

Uses: Diuron is a substituted urea herbicide used to control a wide variety of annual and perennial broadleaf and grassy weeds, as well as mosses. It is used on non-crop areas and many agricultural crops such as fruit, cotton, sugar cane, alfalfa, and wheat. Diuron works by inhibiting photosynthesis. It may be found in formulations as wettable powders and suspension concentrates.

U.S. Maximum Allowable Residue Levels for Diuron and its metabolites convertible to 3,4-dichloroaniline [40CFR 180.106(a)]: Alfalfa, forage 3.0 ppm; alfalfa, hay 2.0 ppm; apple 0.1 ppm; artichoke, globe 1 ppm; asparagus 7 ppm; banana 0.1 ppm; berry group 13, 0.1 ppm; cattle, fat 1 ppm; cattle, meat 1 ppm; cattle, meat byproducts 1 ppm; citrus, oil 3.0 ppm; corn, field, grain 0.1 ppm; corn, pop, grain 0.1 ppm; cotton, undelinted seed 0.2 ppm; fish – freshwater finfish, farm raised 2.0 ppm; fruit, citrus, group 10, except lemon 0.05 ppm; goat, fat 1 ppm; goat, meat 1 ppm; goat, meat byproducts 1 ppm; grain, aspirated fractions 5.0 ppm; grape 0.05 ppm; grass, forage, except bermudagrass 2 ppm; grass, hay, except bermudagrass 2 ppm; hazelnut 0.1 ppm; hog, fat 1 ppm; hog, meat 1 ppm; hog, meat byproducts 1 ppm; horse, fat 1 ppm; horse, meat 1 ppm; horse, meat byproducts 1 ppm; lemon 0.5 ppm; nut, macadamia 0.05 ppm; olive 1 ppm; papaya 0.5 ppm; peach 0.1 ppm; pear 1 ppm; pea, field, seed 0.1 ppm; pea, field, vines 2 ppm; pea, field, hay 2 ppm; pecan 0.05 ppm; peppermint, tops 1.5 ppm; pineapple 0.1 ppm; pineapple, process residue 0.4 ppm; sheep, fat 1 ppm; sheep, meat 1 ppm; sheep, meat byproducts 1 ppm; sorghum, grain, forage 2 ppm; sorghum, grain, grain 0.5 ppm; sorghum, grain, stover 2 ppm; spearmint, tops 1.5 ppm; sugarcane, cane 0.2 ppm; sugarcane, molasses 0.7 ppm; walnut 0.05 ppm; wheat, bran 0.7 ppm; wheat, forage 2 ppm; wheat, grain 0.5 ppm; wheat, hay 2 ppm; wheat, straw 1.5 ppm; ppm. ***Regional registration, as defined in section 180.1(n) [40CFR 180.106(c)]:*** Barley, bran 0.7 ppm; Barley, grain 0.2 ppm; Barley, hay 2 ppm; Barley, straw 1.5 ppm; Cactus 0.05 ppm; Clover, forage 0.1 ppm; Clover, hay 1.0 ppm; Oat, forage 2 ppm; Oat, grain 0.1 ppm; Oat, hay 2 ppm; Oat, straw 1.5 ppm; Trefoil, forage 0.1 ppm; Trefoil, hay 1.5 ppm; Vetch, forage 0.1 ppm; Vetch, hay 1.5 ppm.

Human toxicity (long-term)[101]: Intermediate–18.32460 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)* [101]*: Intermediate–40.39243 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Carcinogenicty, EPA, Known/likely to be a carcinogen; EU GHS Category 2: Suspected human carcinogen; ACGIH, A4 Not classifiable as a human carcinogen.

California Proposition 65 Chemical: Carcinogen (5/31/2002)

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)

Acute Oral Category: 2, WARNING

Potential Ground Water Pollutant [California FAC Section 13149)

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R40; R48/22; R48/22; R50/53; safety phrases: S2; S13; S22; S23; S36/37; S46; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Diuron is a clear or white crystalline solid. Odorless. Molecular weight = 233.11; Specific gravity (H_2O:1) = 1.48; Boiling point = 180°C (decomposes before boiling); Freezing/Melting point = 157.8°C; Vapor pressure = 2×10^{-9} mmHg; 6.9×10^{-8} mmHg @ 20°C. Flash point = >200°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Very slightly soluble in water; solubility = 0.004%.

Incompatibilities: Keep away from strong acids. Stable under normal conditions, decomposed on heating to 180 to 190°C producing dimethylamine and 3,4-dichlorophenyl isocyanate.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 10 mg/m^3 TWA

ACGIH TLV®[1]: 10 mg/m^3 TWA; not classifiable as a human carcinogen

No Protective Action Criteria (PAC) available.

Determination in Air: OSHA versatile sampler-2; Reagent; high-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5601[18]

Permissible Concentration in Water: Federal Drinking Water Guidelines: 1.0 ppb[93]; Arizona 14 μg/L; Florida 14 μg/L; Maine 14 μg/L. Canadian Drinking Water Standards: MAC 0.15 mg/L

Determination in Water: High-performance liquid chromatography may be used after extraction with methylene chloride. Measurement is made using an ultraviolet detector. Log K_{ow} = >2.5–<3.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms. Harmful to aquatic life in very low concentrations.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Exposure may irritate the skin, eyes, and respiratory tract. LD_{50} (oral, rat) = 360–1250 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause tumors. May cause reproductive and fetal effects. May damage the developing fetus. In animals: anemia, methemoglobinemia.

Points of Attack: Eyes, skin, respiratory system, blood, reproductive system.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. If symptoms develop or overexposure is suspected, the following may be useful: Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to physician or authorized medical personnel: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with diuron you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Phenyl urea pesticides, solid, toxic, require a label of "poisonous materials." This compound falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposes @ 180–190°C[86]. Hazardous decomposition includes oxides of nitrogen and carbon, and corrosive fumes of hydrogen chloride and chlorine gas, dimethylamine and 3,4-dichlorophenyl isocyanate. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate in a unit with effluent gas scrubbing. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Dodecylbenzenesulfonic acid

D:1630

Use Type: Insecticide, Adjuvant, Biocide
CAS Number: 27176-87-0
Formula: $C_{18}H_{30}O_3S$
Synonyms: Acido dodecilbencenosulfonico (Spanish); Benzenesulfonic acid, dodecyl-; Benzenesulphonic acid, dodecyl-; Benzene sulfonic acid, dodecyl ester; Benzene sulphonic acid, dodecyl ester; DDBSA; Dodanic acid 83; Dodecyl benzenesulfonate; Dodecyl benzenesulphonate; *N*-Dodecyl benzenesulfonic acid; *N*-Dodecyl benzenesulphonic acid; Dodecylbenzenesulphonic acid; Laurylbenzenesulfonate; Laurylbenzenesulphonate; Laurylbenzenesulfonic acid; Laurylbenzenesulphonic acid; NANSA SSA; Pentine acid 5431; Richonic acid; Sulframin acid 1298
Trade Names: ACCOMPLISH®[C]; ACIDET®; ACIDISOL®; CALSOFT LAS 99®; E 7256®; ELFAN WA sulphonic acid®; NACCONOL 98 SA®; RHODACAL ABSA®
Chemical Class: Soap
EPA/OPP PC Code: 098002
California DPR Chemical Code: 941
HSDB Number: 6285
UN/NA & ERG Number: UN2584 (Alkyl sulfonic acids, liquid or Aryl sulfonic acids, liquid with more than 5 percent free sulfuric acid)/153
RTECS® Number: DB6600000
EC Number: 248-289-4
Uses: Dodecylbenzenesulfonic acid and its salts are used as degreasers in meat-cutting rooms. Also used as a laboratory chemical, to make detergents, and in electronically cleaning and pickling baths. Not listed for use in EU countries[115]. Approved for use in the U.S. and other countries. There are 30 global suppliers[97].
Regulatory Authority and Advisory Information: Toxicity (oral) Category: 3, CAUTION
Section 311 Hazardous Substances/RQ (same as CERCLA)
NIOSH Profile, "*Sulfonic Acids and Salts*," ARYL, SRC, 12/79
EPCRA Section 304 RQ: CERCLA, 1000 lb (454 kg)
WGK (German Aquatic Hazard Class): 2-Hazard to waters
Description: Dodecylbenzenesulfonic acid is a light yellow to brown liquid. Slight SO_2 odor. Molecular weight = 326.54; Specific gravity (H_2O:1) = 1.0 @ 25°C; Boiling point = 315°C; 204.5°C[86]; Freezing/Melting point = 10°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 1. Soluble in water.
Incompatibilities: Corrosive liquid. Incompatible with oxidizers, chlorates, nitrates, peroxides, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. May attack metals, forming flammable hydrogen gas.
Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 2 mg/m^3
PAC-2: 21 mg/m^3
PAC-3: 130 mg/m^3
Routes of Entry: Inhalation.
Harmful Effects and Symptoms
Short Term Exposure: A corrosive. Contact with the eyes and skin can cause severe irritation and burns. Inhalation can irritate the respiratory tract. LD_{50} (oral, rat) = 650–900 mg/kg.
Long Term Exposure: Repeated dermal contact may cause dermatitis. Corrosive materials may affect the lungs or cause bronchitis with coughing, phlegm and/or shortness of breath.
Points of Attack: Lungs.
Medical Surveillance: Lung function tests. Consider chest x-ray following acute overexposure.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.
Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.
Respirator Selection: SCBA >2 mg/m^3. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European

Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with DDBSA you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from metals. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dodecylbenzenesulfonic acid requires a shipping label of "CORROSIVE." It usually falls in Hazard Class 8 and Packing Group II. The symbol "D" identifies proper shipping names which are appropriate for describing materials for domestic transportation but may be inappropriate for international transportation under the provisions of international regulations (e.g., IMO, ICAO). An alternate proper shipping name may be selected when either domestic or international transportation is involved.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. Keep this chemical out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical may burn but does not easily ignite. Hazardous decomposition includes sulfur oxides and hydrogen sulfide. Use dry chemical, carbon dioxide; or alcohol foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Dodemorph acetate D:1650

Use Type: Fungicide

CAS Number: 31717-87-0

Formula: $C_{20}H_{39}NO_3$; $C_{18}H_{36}NO \cdot C_2H_4O_2$

Synonyms: Cyclododecyl-2,6-dimethylmorpholine acetate; 4-Cyclododecyl-2,6-dimethylmorpholine acetate; Cyclododecyl(4)-2,6-dimethylmorpholine acetate; *N*-Cyclododecyl-2,6-dimethylmorpholinium acetate; Morpholine, *N*-cyclododecyl-2,6-dimethyl-, acetate

Trade Names: CYCLOMORPH®; MELTATOX®; MILBAN®

Chemical Class: Morpholine mixture

EPA/OPP PC Code: 110401 (213600 and 268601 are old PC codes)

California DPR Chemical Code: 2120

HSDB Number: 1705

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: QE0610000

EC Number: 250-778-2

Uses: A system fungicide, one of the most recently developed, that can be applied as soil treatments. They are slowly absorbed through the roots. Dodemorph acetate is used to inhibit rusts and mildews. Not currently registered for use in the U.S. Approved for use in some EU countries and Canada.

Regulatory Authority and Advisory Information: Acute Oral Category: 3, CAUTION

Description: Colorless solid. Commercial products may be dissolved in flammable organic solvents. Molecular weight = 338.5; Specific gravity (H_2O:1) = 0.93 @ 20°C; Boiling point = (decomposes); Freezing/Melting point = 42°C; Vapor pressure = Volatile; Flash point = 74°C; 37.2°C (Meltatox)[BASF]. Autoignition temperature = 328°C[BASF]; Henry's Law constant = 3×10^{-6} atm-m^3/mol @ 25°C (est). High solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Acetates are generally incompatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition. Decomposes >155°C.

Determination in Air: Ionization. NIOSH IV Method#1450, Esters.[18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Eyes, ingestion, inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritation of eyes, skin, digestive tract and respiratory tract. May be a skin sensitizer for some people. If ingested, may cause nausea, vomiting and diarrhea. Inhalation should be avoided. LD_{50} (oral, rat) = 2500; LD_{50} (dermal, rat) = >4000 mg/kg.

Long Term Exposure: May cause skin sensitization. May be a mutagen, may cause reproductive and fetal effects.

Points of Attack: Skin, reproductive system.
