CAS Number: 51-03-6
Formula: $C_{19}H_{30}O_5$
Synonyms: AI3-14250; 1,3-Benzodioxole, 5-[(2-(2-butoxyethoxy)ethoxy)methyl]-6-propyl-; Butoxide; butoxido de piperonilo (Spanish); α-[2-(2-*N*-Butoxyethoxy) ethoxy]-4,5-methylenedioxy-2-propyltoluene; α-[2-(2-Butoxyethoxy)ethoxy]-4,5-Methylenedioxy-2-propyltoluene; 5-[(2-(2-Butoxyethoxy)ethoxy)methyl]-6-propyl-1,3-benzodioxole; 2-(2-Butoxyethoxy)ethyl 6-propylpiperonyl ether; Butyl carbitol 6-propylpiperonyl ether; Butyl-carbityl (6-propylpiperonyl) ether; (Butylcarbityl)(6-propylpiperonyl) ether 80% and related compounds 20%; Caswell No. 670; ENT 14,250; (3, 4-Methylenedioxy-6-propylbenzyl) (butyl)diethylene glycol ether; 3,4-Methylenedioxy-6-propylbenzyl *N*-butyl diethyleneglycol ether; 4,5-Methylenedioxy-2-propylbenzyldiethylene glycol butyl ether; NCI-C02813; PB; Piperonyl butoxyde; 6-(Propylpiperonyl)-butyl carbityl ether; 6-Propylpiperonyl butyl diethylene glycol ether; Toluene, α-[2-(2-butoxyethoxy)ethoxy]-4,5-(methylenedioxy)-2-propyl-
Trade Names: The U.S. EPA lists 7,340 products containing this substance, 1,622 of which are active
Chemical class: Glycol ether; Cyclic aromatic
EPA/OPP PC Code: 067501
California DPR Chemical Code: 486
HSDB Number: 1755
UN/NA & ERG Number: UN2810/153
RTECS® Number: XS8050000
EC Number: 200-076-7
Uses: A U.S. EPA restricted Use Pesticide (RUP). Not listed for use in EU countries[115]. Piperonyl butoxide is a synergist, i.e., not a pesticide itself, but enhances the properties of other chemicals. It is used with other pesticides such as pyrethrins, pyrethroids, rotenone and carbamates in food and non-food agricultural products, home and garden products, termite and mosquito products, and veterinary pesticide products. It inhibits the insect's ability to break down an insecticide before it takes effect, thereby prolonging the action, and reduces the necessity for using a stronger formulation.

U.S. Maximum Allowable Residue Levels Piperonyl Butoxide [40 CFR 180.127 (a)(1)]: *Note:* 180.127 gives tolerance levels, but 180.905 says its exempt under certain circumstances. Almond, post-harvest 8 ppm; apple, post-harvest 8 ppm; barley, post-harvest 20 ppm; bean, post-harvest 8 ppm; birdseed, mixtures, post-harvest 20 ppm; blackberry, post-harvest 8 ppm; blueberry, post-harvest 8 ppm; boysenberry, post-harvest 8 ppm; buckwheat, post-harvest 20 ppm; cacao bean, post-harvest 8 ppm; cattle, fat 0.1 ppm; cattle, meat 0.1 ppm; cattle, meat byproducts 0.1 ppm; cherry, post-harvest 8 ppm; coconut, copra, post-harvest 8 ppm; corn, field, grain, post-harvest 20 ppm; corn, pop 20 ppm; cotton, undelinted seed, post-harvest 8 ppm; crabapple, post-harvest

8 ppm; currant, post-harvest 8 ppm; dewberry, post-harvest 8 ppm; egg 1 ppm; fig, post-harvest 8 ppm; flax, seed, post-harvest 8 ppm; goat, fat 0.1 ppm; goat, meat 0.1 ppm; goat, meat-by-products 0.1 ppm; gooseberry, post-harvest 8 ppm; grain, cereal, milled fractions, except flour 10 ppm; grape, post-harvest 8 ppm; guava, post-harvest 8 ppm; hog, fat 0.1 ppm; hog, meat 0.1 ppm; hog, meat byproducts 0.1 ppm; horse, fat 0.1 ppm; horse, meat 0.1 ppm; horse, meat byproducts 0.1 ppm; loganberry, post-harvest 8 ppm; mango, post-harvest 8 ppm; milk, fat 0.25 ppm; muskmelon, post-harvest 8 ppm; oat, post-harvest 8 ppm; orange, post-harvest 8 ppm; pea, post-harvest 8 ppm; peach, post-harvest 8 ppm; peanut, post-harvest 8 ppm; pear, post-harvest 8 ppm; pineapple, post-harvest 8 ppm; plum, fresh prune, post-harvest 8 ppm; potato, post-harvest 0.25 ppm; poultry, fat 3 ppm; poultry, meat 3 ppm; poultry, meat byproducts 3 ppm; processed food 10 ppm; raspberry, post-harvest 8 ppm; rice, post-harvest 20 ppm; rye, post-harvest 20 ppm; sheep, fat 0.1 ppm; sheep, meat 0.1 ppm; sheep, meat byproducts 0.1 ppm; sorghum, grain, post-harvest 8 ppm; stored feed, dried, 4% fat or less, from cotton bags 10 ppm; stored feed, dried, 4% fat or less, from paper bags 10 ppm; sweet potato, roots, post-harvest 0.25 ppm; tomato, post-harvest 8 ppm; walnut, post-harvest 8 ppm; wheat, post-harvest 20 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible carcinogen; IARC, Group 3 not classifiable as to its carcinogenicity in human

Health Advisory: Nerve toxin, Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S)

Acute Oral Category: 4, Caution, Not acutely toxic

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as glycol ethers

CAL Air Resources Board/AB 1807 Toxic Air Contaminants as glycol ethers

AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as glycol ethers

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23; R24; R25 R40; R50/53; safety phrases: S2; S23; S26; R36; S37; S39; S45 (see Appendix 1)

Description: Light yellow to light brown liquid. Nearly odorless. Molecular weight = 338.45; Specific gravity (H_2O:1) = 1.06 @ 20 °C; Boiling point = 180 °C @ 1 mmHg. Flash point = 171 °C (oc); Specific gravity (H_2O:1) = 1.06 @ 25 °C. Henry's Law constant = 8.9×10^{-11} atm-m^3/mol @ 25 °C (est)[83]. Very slightly soluble in water.

Incompatibilities: Combustible solid. Contact with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.) may cause fire and explosions. May react violently with aliphatic amines, alkalies, boranes, isocyanates, nitric acid, sulfuric acid.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) ver. 2

PAC-1: 1.2 mg/m^3
PAC-2: 13 mg/m^3
PAC-3: 1200 mg/m^3

Determination in Air:

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: May affect you when breathed in and by passing through your skin. Contact can irritate the eyes and skin. Exposure can irritate the nose and throat. High levels of glycol ether vapor may cause central nervous system depression causing dizziness, lightheadedness, and unconsciousness. Very high levels of exposure may cause lung, liver, and kidney damage. LD_{50} (oral, rat) = >4 g/kg[83]; LD_{50} (dermal, rabbit) = >4 g/kg.

Long Term Exposure: May cause tumors. Causes skin dryness; dermatitis. May cause liver and kidney damage. May irritate the lungs; bronchitis may develop. A liver and nerve toxin.

Points of Attack: Eyes, skin, liver, respiratory system, central nervous system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Lung function test.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: SCBA >1.2 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *Where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Piperonyl butoxide must be stored to avoid contact with strong oxidizers (such as chlorine, bromine and fluorine), chromic acid and calcium hypochlorite, since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where it is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: The required label is “poisonous materials.” Hazard Class is 6.1.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Establish ventilation to keep levels below explosive limit. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: This chemical is a combustible solid. Hazardous decomposition includes oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration.

Pirimicarb P:0785

Use Type: Insecticide

CAS Number: 23103-98-2

Formula: $C_{11}H_{18}N_4O_2$

Synonyms: Carbamic acid, dimethyl-, 2-(dimethylamino)-5,6-dimethyl-4-pyrimidinyl ester; 2-Dimethylamino-5,6-dimethyl-4-pyrimidinyl dimethylcarbamate; 2-(Dimethylamino)-5,6-dimethyl-4-pyrimidinyldimethylcarbamate; 2-Dimethylamino-5,6-dimethylpryimidin-4-yl *N,N*-dimethylcarbamate; Dimethylcarbamic acid 2-(dimethylamino)-5,6-dimethyl-4-pyrimidinyl ester; 5,6-Dimethyl-2-dimethylamino-4-pyrimidinyldimethylcarbamate; ENT 27,766

Trade Names: ABOL®; AFICIDA®; APHOX®; FERNOS®; PIRIMIKARB; PIRIMOR®; PP 062®; PYRIMOR®; RAPID®

Chemical class: Carbamate (N-methyl)

EPA/OPP PC Code: 106101

California DPR Chemical Code: 1875
HSDB Number: 7005
UN/NA & ERG Number: UN2757 (solid)/151; UN2811/154
RTECS® Number: EZ9100000
EC Number: 245-430-1[*Annex I Index No.:* 006-035-00-8]

Uses: Originally registered in the U.S. for non-food use on alfalfa grown for seed in selected. Elsewhere it is used on a wide range of cereals, potatoes, fruits, vegetables and other crop.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans
Health Advisory: Nerve Toxin (S!), Mutagen
Acute Oral Category: 2, WARNING
European/International Regulations: Hazard Symbol: T, N; risk phrases: R25 R50/53; safety phrases: S1/2; S22; S37; S45; S60; S61 (see Appendix 1)

Description: Colorless crystalline solid. Odorless. Commercial product may be available as a liquid. Molecular weight = 238.39; Specific gravity (H_2O:1) = 1.21 @ 20 °C; Boiling point = 370 °C; Freezing/Melting point = 90.5 °C. Vapor pressure = 9×10^{-6} mmHg @ 25 °C; Flash point = 180 °C. Soluble in water; solubility = 3 g/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. May form explosive materials with phosphorus pentachloride.

Determination in Water: FDA Method 232.4. Organophosphorus Residues General Methods for Nonfatty Foods Using Acetone Extraction and Isolation in Organic Phase. No detection limit. FDA Method 242.1. Organonitrogen Residues General Method for Nonfatty Foods Including Acetone Extraction and Isolation in Organic Phase. No detection limit. Log K_{ow} = <1.75. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Skin absorption, ingestion and inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = 100–145 mg/kg; LD_{50} (dermal, rat) = >500[83].

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. Neurotoxic. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. Also consider complete blood count and chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. Inhalation: Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisoning. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.51 mg/m^3 NIOSH: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a liquid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For liquids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol -resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

California DPR Chemical Code: 2217

HSDB Number: 6984

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TF1410000

EC Number: 249-528-5 [*Annex I Index No.:*015-134-00-5]

Uses: Pirimiphos-methyl is a post-harvest insecticide used to control a variety of insects in stored grain products and seed such as corn, rice, wheat and sorghum. It is also incorporated into cattle ear tags, and used for the fogging treatment of iris bulbs and pre-harvest clean up of fruits and vegetables.

U.S. Maximum Allowable Residue Levels Pirimiphos-methyl [40 CFR 180.409(a)]: Cattle, fat 0.02 ppm; cattle, meat byproducts 0.02 ppm; corn, field, grain 8.0 ppm; corn, pop, grain 8.0 ppm; goat, fat 0.02 ppm; goat, meat byproducts 0.02 ppm; grain, aspirated fractions 20.0 ppm; hog, fat 0.02 ppm; hog, meat byproducts 0.02 ppm; horse, fat 0.02 ppm; horse, meat byproducts 0.02 ppm; poultry, fat 0.02 ppm; sheep, fat 0.02 ppm; sheep, meat byproducts 0.02 ppm; sorghum, grain, grain 8.0 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not yet determined

Acute Oral Category: 3, CAUTION.

Health Advisory: Nerve Toxin, Mutagen, Reproduction Hazard, Skin sensitizer

DOT Inhalation Hazard Chemicals as organophosphates

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Light yellow, straw colored, or amber oily liquid. Odorless when pure. Molecular weight = 305.33; 274.4; Specific gravity (H_2O:1) = 1.17 @ 20 °C; Freezing/Melting point = 21 °C; Boiling point = (decomposes) 387 °C; Specific gravity (H_2O:1) = 1.157 @ 30 mmHg; Vapor pressure = 3.8×10^{-6} mmHg @ 25 °C; Flash point = 45 °C. Henry's Law constant = 6.0×10^{-7} atm-m^3/mol @ 25 °C (est)[83]. Slightly soluble in water; solubility = ~15 mg/L @ 25 °C.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with strong acids and alkalies, lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.[18]

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 1200–1400 mg/kg; LD_{50} (dermal, rat) = >1900 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause contact dermatitis.

Points of Attack: Respiratory system, skin, central nervous system, cardiovascular system, blood cholinesterase. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 g in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15–30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store at 2–8 °C in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Decomposes >120 °C. Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Primisulfuron-methyl P:1015

Use Type: Herbicide

CAS Number: 86209-51-0

Formula: $C_{15}H_{12}F_4N_4O_7S$

Synonyms: Benzoic acid, 2-[((((4,6-bis(difluoromethoxy)-2-pyrimidinyl)amino)carbonyl)amino) sulfonyl]-, methyl ester; 3-[4,6-Bis(difluoromethoxy)-pyrimidin-2-yl]-1-(methoxycarbonylphenylsulfonyl) urea; *N*-(2-Methoxycarbonylphenylsulfonyl)-*N*-[4,6-bis(difluoromethoxy)pyrimidin-2-yl]urea; Methyl-2-[((((4,6-bis(difluoromethoxy)-2-pyrimidinyl)amino) carbonyl)amino) sulfonyl]benzoate

Trade Names: BEACON®; CGA 136,872®; EXCEED®; NORTHSTAR®; RIFLE®[C]; SPIRIT®; TELL®

Chemical class: Sulfonylurea

EPA/OPP PC Code: 128973

California DPR Chemical Code: 5103

HSDB Number: 7062

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: DG4436000

EC Number: Not assigned

Uses: A broad-spectrum herbicide. Actively registered for use in the U.S. Not approved for use in EU countries[115]. There are 14 global suppliers[97].

U.S. Maximum Allowable Residue Levels for Primisulfuron-methyl (40 CFR 180.452): corn, grain and milk: 0.02 ppm: cattle, fat; cattle, meat; cattle, meat-by-products; corn, forage; corn, stover; corn, sweet, kernel plus cob with husks removed; egg; goat, fat; goat, meat; goat, meat-by-products; hog, fat; hog, meat; hog, meat-by-products; horse, fat; horse, meat; horse, meat-by-products; poultry, fat; poultry, meat; poultry, meat-by-products; sheep, fat;sheep, meat; sheep, meat-by-products: 0.1 ppm

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Acute Oral Category: 4, Caution

Description: Colorless crystalline solid. Commercial products include wettable granules in water soluble packets. Molecular weight = 468.35; Specific gravity (H_2O:1) = 1.608 @ 20 °C; Freezing/Melting point = 195–203 °C; Vapor pressure = 4×10^{-7} mmHg @ 25 °C. Practically insoluble in water.

Determination in Water: . Log K_{ow} = <1.6. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. High levels may cause headache, nausea, vomiting, diarrhea; confusion; electrolyte depletion may occur in some cases. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause liver and kidney problems. Chronic exposure may cause weight loss, protein metabolism problems and moderate emphysema. May cause chronic nephritis, testicular atrophy, tooth and bone growth disorders[EXTOXNET, 1996; Kamrin, 1997].

Points of Attack: Bones, teeth, kidneys, testes.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or from exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl,[41] primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: May be classified as Environmentally hazardous substances, solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: Dampen the spilled material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, carbon and hydrogen fluoride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Prochloraz P:1022

Use Type: Fungicide

CAS Number: 67747-09-5

Formula: $C_{15}H_{16}Cl_3N_3O_2$

Synonyms: *N*-Propyl-*N*-[2-(2,4,6-trichlorophenoxy) ethyl]imidazole-1-carboxamide; *N*-Propyl-*N*-(2,4,6-trichlorophenoxy)ethyl-imidazole-1-carboxamide; 1-(*N*-Propyl-*N*-[2-(2,4,6-trichlorophenoxy)ethyl]carbamoyl imidazole; *N*-Propyl-*N*-[2-(2,4,6-trichlorophenoxy) ethyl]-1 h-imidazole-1-carboxamid

Trade Names: ASCURIT®; BTS40542®; DIBAVIT®; EYETAK®; FORTAK®; FUNCHLORAZ®; GRAIL®; MASTER®; MIRAGE®; MIRAGE® 40 EC; PORAZ®; SPORGON®; SPORTAK®; SPORTAKALPHA®; SPORTAKDELTA®

Chemical class: Imidazole; Azole

EPA/OPP PC Code: 128851

California DPR Chemical Code: 6100

UN/NA&ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: NI4000400

EC Number: 266-994-5 [*Annex I Index No.:* 613-128-00-2]

Uses: Plocloraz is fungicide that has shown to be effective against cereal powdery mildew. Not approved for use in EU countries[115]. Not registered for use in the U.S. There are 26 global suppliers[97].

Regulatory Authority and Advisory Information:

Carcinogenicity: EPA Group C, Possible carcinogen; IARC: Group 2b, Possible human carcinogen

Acute Oral Category: 3, CAUTION

Hazard Symbols Xn; N; Risk Codes: R22; (Carcinogen Category 3) R40; R50/53; (Reproduction Category 3)R63; Safety Description S2; S60; S61

Description: Red crystalline solid. Commercial product is available as an emulsifiable concentrate. Molecular Weight = 376.67; Specific gravity (H_2O:1) = 1.4 @20 °C; Boiling point = (decomposes); Melting point = 46.5 °C; Vapor pressure = 4×10^{-10} mmHg @ 25 °C. Low solubility in water; solubility = 25 mg/L.

Incompatibilities: Oxidizers. Decomposition starts >200 °C.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.0.Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Permissible Exposure Limits in Air:

Routes of Entry: Inhalation, ingestion, skin, eyes.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the skin, eyes, and respiratory tract. Harmful if ingested. LD_{50} (oral, rat) = <2000 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Possible liver toxin. Suspected reproductive toxin; may impair the reproductive capabilities in men and/or women.

Points of Attack: Liver, reproductive system.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA); or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical resistant suit.

Respirator Selection: May react with mineral or clay based absorbents. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well- ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills*: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Small dry spills*: with clean shovel place material into clean, dry container and cover; move containers from spill area. *Large spills*: dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: When heated to decomposition, above 200 °C, this material releases toxic fumes of nitrogen oxides, carbon oxides, and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR 165 recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

California DPR Chemical Code: 2042

HSDB Number: 6992

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TE9675000

EC Number: 255-255-2 [*Annex I Index No.:* 015-135-00-0]

Uses: Profenofos is A U.S. EPA restricted Use Pesticide (RUP) used solely on cotton to control a number of pests including tobacco budworm, cotton aphid and bollworm, armyworm, fleahopper and whiteflies. It is not registered for residential use. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Profenofos and its metabolites converted to 4-bromo-2-chlorophenyl and calculated as profenofos [40 CFR 180.404 (a)]: in or on the following food commodities cattle, fat 0.05 ppm; cattle, meat byproducts 0.05 ppm; cattle, meat 0.05 ppm; cottonseed 3.0 ppm; cottonseed hulls 6.0 ppm; eggs 0.05 ppm; goats, fat 0.05 ppm; goats, meat byproducts 0.05 ppm; goats, meat 0.05 ppm; hogs, fat 0.05 ppm; hogs, meat byproducts 0.05 ppm; hogs, meat 0.05 ppm; horses, fat 0.05 ppm; horses, meat byproducts 0.05 ppm; horses, meat 0.05 ppm; milk 0.01 ppm; poultry, fat 0.05 ppm; poultry, meat byproducts 0.05 ppm; poultry, meat 0.05 ppm; sheep, fat 0.05 ppm; sheep, meat byproducts 0.05 ppm; sheep, meat 0.05 ppm.

Human toxicity (long-term) ***[101]:*** 0.35 ppb, Health Advisory.

Fish toxicity (threshold)[101]: 3.0 ppb, MATC (Maximum Acceptable Toxicant Concentration).

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Health Advisory: Nerve Toxin, Mutagen, Developmental/Reproductive Toxin

Acute Oral Category: 2, WARNING

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

DOT Inhalation Hazard Chemicals as organophosphates

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R20/21/22; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Pale yellow liquid (technical profenofos). Garlic-like odor. Molecular weight = 373.65; Specific gravity (H_2O:1) = 1.47 @ 20 °C; Boiling point = 100 °C; Vapor pressure = 3×10^{-6} mmHg @ 20 °C; Flash point = 195 °C. Limited solubility in water.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Contact with flammable material may cause fire and explosions. Contact with combustible or oxidizable materials may form heat-, shock-, and friction-sensitive explosive mixtures. Static electricity may also cause explosions. Keep away from all acids, especially dibasic organic acids, ammonium compounds, antimony sulfide, arsenic trioxide, metal sulfides, powdered metals, calcium aluminum hydride, cyanides, manganese dioxide, phosphorus, selenium, sulfur, thiocyanates, zinc

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.[18].

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = <400 mg/kg; LD_{50} (dermal, rat) = <2 g/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; profenofos may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause reproductive and fetal effects.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase. Reproductive cells.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 g in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15–30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store @ 2–8 °C in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride, hydrogen bromide and oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Prohexadione-calcium P:1028

Use Type: Plant growth regulator

CAS Number: 127277-53-6

Formula: $C_{10}H_{11}CaO_5$

Synonyms: Calcium 3-oxido-5-*oxo*-4-propionylcyclohex-3-enecarboxylate; Cyclohexanecarboxylic acid, 3,5-dioxo-4-(1-oxopropyl)-, ion$^{[1-]}$, calcium, calcium salt; 3,5-Dioxo-4-(1-oxopropyl)cyclohexanecarboxylic acid ion(1-) calcium salt

Trade Names: APOGEE® PLANT GROWTH REGULATOR; BASELINE® PLANT REGULATOR; BX 112®; K-I CHEMICAL; KIM-112®; KUH-833®; VIVIFUL®

Chemical class: Unclassified

EPA/OPP PC Code: 112600

California DPR Chemical Code: 5497

HSDB Number: 7252

RTECS® Number: GU8488500

Uses: Used to inhibit foliar growth on apples and pears, reduces maturation of fruit and foliar covering. Also used on turf grass.

U.S. Maximum Allowable Residue Levels for Prohexadione Calcium [40 CFR 180.547(a)]: cattle, kidney 0.10 ppm; cattle, meat byproducts, except kidney

0.05 ppm; cherry, sweet 0.40 ppm; fruit, pome, group 11, 3.0 ppm; goat, kidney 0.10 ppm; goat, meat byproducts, except kidney 0.05 ppm; grass, forage (registration is limited to grass grown for seed) 0.10 ppm; grass, hay (registration is limited to grass grown for seed) 0.10 ppm; grass, seed screenings (registration is limited to grass grown for seed) 3.5 ppm; grass, straw (registration is limited to grass grown for seed) 1.2 ppm; hog, kidney 0.10 ppm; hog, meat byproducts, except kidney 0.05 ppm; horse, kidney 0.10 ppm; horse, meat byproducts, except kidney 0.05 ppm; peanut 1.0 ppm; peanut, hay 0.60 ppm; sheep, kidney 0.10 ppm; sheep, meat byproducts, except kidney 0.05 ppm.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans
Acute Oral Category: 4, Caution

Description: White solid when pure. Pale yellow-brown fine powder. Odorless. Commercial product is available as an emulsifiable concentrate or wettable powder. Molecular weight = 250.26[83]; Specific gravity (H_2O:1) = 1.46 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = >360 °C; Soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds form explosive salts of silver oxalate

Determination in Water: Log K_{ow} = –3. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the skin, eyes, and respiratory tract. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause kidney problems.

Points of Attack: Kidneys.

Medical Surveillance: Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Spill Handling: Dampen the spilled material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: *On a small fire:* use dry chemical, carbon dioxide or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See 40 CFR Parts 261.3 for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations.

Prometon P:1034

Use Type: Herbicide

CAS Number: 1610-18-0

Formula: $C_{10}H_{19}N_5O$

Synonyms: 2,4-Bis(isopropylamino)-6-methoxy-s-triazine; 2,6-Diisopropylamino-4-methoxytriazine; *N,N'*-Diisopropyl-6-methoxy-1,3,5-triazine-2,4-diyldiamine; *N,N'*-Diisopropyl-6-methoxy-1,3,5-triazine-2,4-diamine; 2-Methoxy-4,6-bis(isopropylamino)-*s*-triazine; 2-Methoxy-4,6-bis(isopropylamino)-1,3,5-triazine;

6-Methoxy-*N,N*'-bis(1-methylethyl)-1,3,5-triazine-2,4-diamine; Methoxypropazine; *s*-Triazine, 2,4-bis(isopropylamino)-6-methoxy-

Trade Names: ACME® Prometon; G-31435®; GESAFRAM® 50; GESAFRAM®; GESAGRAM®; GROUND ZERO®; KLEENWALK®; NIX®; NOXALL®; ONTRACK®; PRIMATOL® (prometon); PROMETONE®; WEED-GO®

Chemical class: Triazine

EPA/OPP PC Code: 080804

California DPR Chemical Code: 499

HSDB Number: 1519

UN/NA & ERG Number: UN2763/151

RTECS® Number: XY4200000

EC Number: 216-548-0

Uses: A non-selective pre-emergence and post-emergence herbicide. Use around buildings, storage areas, industrial sites, fences, recreational areas, rights-of-way, railroads, pipelines, lumberyards, tank farms, and similar areas. Controls broadleaf weeds and grasses over an extended period of time. Not listed for use in EU countries[115]. Registered for use in the U.S.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Health Advisory: Mutagen, Skin irritant/sensitizer

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13149]

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Colorless crystalline solid or white powder. Odorless. Molecular weight 225.28; Specific gravity (H_2O:1) = 1.09 @ 20 °C; Boiling point = 324 °C; Freezing/Melting point = 91.5 °C; Vapor pressure = 7.7×10^{-6} mmHg @ 20 °C. Soluble in water; solubility = 750 mg/L @ 20 °C.

Incompatibilities: UV causes decomposition.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 10 ppb[93]; EPA Health Advisory: 400 μg/L; State Drinking Water Guidelines: Florida 105 μg/L; Maine 100 μg/L; Minnesota 100 μg/L; Wisconsin 90 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >2.9. Values above 3.0 may bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = 1450 mg/kg–> 2 g/kg; (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks of tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May cause reproductive and fetal effects.

Points of Attack: Liver, lungs, skin. Reproductive cells.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Engineering control must be effective to ensure that exposure to prometon does not occur. Where there is potential exists for exposures to prometon use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator with a pesticide cartridge. Increased protection is obtained from full facepiece air-purifying respirators. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air-respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with cyanazine you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Triazine pesticides, solid, toxic, n. o. s. require a shipping label of "poisonous materials." This material falls in DOT/UN Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. If appropriate, moisten to prevent dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving tanks or car/trailer loads*: isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Prometryn P:1036

Use Type: Herbicide

CAS Number: 7287-19-6

Formula: $C_{10}H_{19}N_5S$

Synonyms: A13-60366; 2,4-Bis(isopropylamino)-6-(methylmercapto)-*S*-triazine; 2,4-Bis(isopropylamino)-6-(methylthio)-*S*-triazine; 2,4-Bis(isopropylamino)-6-(methylthio)-1,3,5-triazine; *N,N'*-Bis(1-methylethyl)-6-methylthio-1,3,5-triazine-2,4-diamine; *N,N'*-Bis(1-methylethyl)-6-(methylthio)-1,3,5-triazine-2,4-diamine; Caswell No. 097; *N,N'*-Di-isopropyl-6-methylthio-1,3,5-triazine-2,4-diamine;*N,N'*-Di-isopropyl-6-methylthio-1,3,5-triazine-2,4-diyldiamine; 2-(Methylmercapto)-4,6-bis(isopropylamino)-*S*-Triazine; 2-(Methylthio)-4,6-bis(isopropylamino)-*S*-Triazine; NSC 163049; Prometrin; Prometrene; *S*-Triazine,4,6-bis(isopropylamino)-2-(methylmercapto)-; *S*-Triazine, 2,4-bis(isopropylamino)-6-(methylthio)-; 1,3,5-Triazine-2,4-diamine, *N,N'*-bis(1-methylethyl)-6-(methylthio)-

Trade Names: A-1114®; CAPAROL®; COTTON PRO®; G 34161®; GESAGARD®; MERCASIN®; MERCAZIN®; MERKAZIN®; POLISIN®; PRIMAPIN®; PRIMATOL-Q®; PROMET®; PROMETREX®; SELECTIN®; SELECTIN-50®; SELEKTIN®; SESAGARD®; SUPREND®; UVON®

Chemical class: Triazine

EPA/OPP PC Code: 080805

California DPR Chemical Code: 502

HSDB Number: 4060

UN/NA & ERG Number: UN2763/151

RTECS® Number: XY4390000

EC Number: 230-771-3

Uses: Prometryn is used to control several annual grasses and broadleaf weeds in terrestrial food and feed crops. Its major uses are on cotton and celery, and is often used on dill and pigeon peas. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Prometryn [40 CFR 180.222(a)]: celery 0.5 ppm; corn, grain 0.25 ppm; cotton, undelinted seed 0.25 ppm; pea, pigeon seed 0.25 ppm. ***Regional registration, as defined in section 180.1(n) [40 CFR 180.222(c)]:*** dill 0.3 ppm; parsley, leaves 0.1 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer, Developmental toxin (TRI)

Acute Oral Category: 3, CAUTION

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless crystalline solid. Molecular weight = 241.385; Specific gravity (H_2O:1) = 1.16 @ 20 °C; Boiling point = 295 °C; Freezing/Melting point = 119 °C; Vapor pressure = 1.24×10^{-6} mmHg @ 20 °C. Slightly soluble in water; solubility = 48 ppm @ 20 °C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 30 ppb[93]. State Drinking Water Guidelines: Florida 28 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.0. Values >3.0 may bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = <2 g/kg[83]; LD_{50} (dermal, rat) = >3 g/kg[83].

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks of tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic. May be a liver, kidney and blood toxin.

Points of Attack: Kidney, liver, blood, lungs, skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system. Live and kidney function tests. Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Engineering control must be effective to ensure that exposure to cyanazine does not occur. Where potential exists for exposures to prometryn use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator with a pesticide cartridge. Increased protection is obtained from full facepiece air-purifying respirators. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air-respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with cyanazine you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid.

Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Triazine pesticides, solid, toxic, n. o. s. require a shipping label of "poisonous materials." This material falls in DOT/UN Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. If appropriate, moisten to prevent dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Pronamide P:1040

Use Type: Herbicide

CAS Number: 23950-58-5

Formula: $C_{12}H_{11}Cl_2NO$

Synonyms: Benzamide, 3,5-dichloro-*N*-(1,1-dimethyl-2-propynyl); Caswell No. 306A; 3,5-Dichloro-*N*-(1,1-dimethyl-2-propynyl)benzamide; 3,5-Dichloro-*N*-(1,1-dimethylpropynyl)benzamide; 3,5-Dichloro-*N*-(1,1-dimethylprop-2-ynyl)benzamide; *N*-(1,1-Dimethylpropynyl)-3,5-dichlorobenzamide; Propyzamide

Trade Names: BENZAMIDE®; CAMPBELL'S RAPIER®; CLANEX®; KERB®; KERB 50W®; KERB® PROPYZAMIDE 50; RH-315 RAPIER®; RONAMID®

Chemical class: Amide Herbicide

EPA/OPP PC Code: 101701

California DPR Chemical Code: 694

HSDB Number: 5118

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: CV3460000

EC Number: 245-951-4 [*Annex I Index No.:* 616-055-00-4]

Uses: Pronamide is a selective herbicide used either before weeds emerge (pre-emergence), and/or after weeds come up (post-emergence). It controls a wide range of annual and perennial grasses, as well as certain annual broadleaf weeds. It is used primarily on lettuce and alfalfa crops, as well as on blueberries, ornamentals, fruit trees, forage legumes, and on pastures and rangelands. Pronamide is usually incorporated into the soil by cultivation, irrigation, or rain immediately following application. It is available in wettable powder and granular formulations. Registered for use in the U.S. and EU countries. A U.S. EPA restricted Use Pesticide (RUP).

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; EU GHS Category 2: Suspected human carcinogen as propyzamide.

California Proposition 65 Chemical: Cancer (5/1/1996).
Health Advisory: Tumorigen, Liver cancer in animals
Health Advisory: Endocrine disruptor (S!)
Acute Oral Category: 3, CAUTION
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active] as propyzamide
EPA Hazardous Waste Number (RCRA No.): U192
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.093; Non-wastewater (mg/kg), 1.5
RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μg/L): 8270(10)
EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
Hazard Symbols: Xn, N, risk phrases: R40; R50/53, safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Pronamide is a colorless crystalline solid or powder. Molecular weight = 256.14; Freezing/Melting point = 155–156 °C; Vapor pressure = 8.3×10^{-5} mmHg @ 25 °C; Flash point = 160 °C. Practically insoluble in water; solubility = 15 ppm @ 25 °C.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 10 ppb[14]; EPA Health Advisory: 50 μg/L; State Drinking Water Guidelines: Florida 53 μg/L; Maine 23 μg/L; Arizona 52 μg/L.

Determination in Water: Extraction with Methylene chloride, separation by capillary-column gas chromatography, then measurement using a nitrogen-phosphorus detector.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Eye contact can cause irritation. Inhalation can cause irritation of the respiratory tract with cough, phlegm, and/or chest tightness. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >3 g/kg.

Long Term Exposure: May cause cancer. There is limited animal evidence of liver cancer. May be a skin sensitizer.

Points of Attack: Cancer site in animals: liver. Skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers. Where possible, automatically transfer material from drums or other storage containers to process containers. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Use HEPA vacuum or wet method to reduce dust during clean up. Do not dry sweep. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 200.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of nitrogen. This chemical is a combustible solid. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Propachlor P:1045

Use Type: Herbicide

CAS Number: 1918-16-7

Formula: $C_{11}H_{14}ClNO$; $(ClCH_2CO)N(C_6H_5)CH(CH_3)_2$

Synonyms: Acetamide, 2-chloro-*N*-(1-methylethyl)-*N*-phenyl-; Acetamide, 2-chloro-*N*-isopropyl-; α-Chloro-*N*-isopropylacetanilide; α-Chloro-*N*-isopropylacetanilide; 2-Chloro-*N*-isopropylacetanilide; 2-Chloro-*N*-isopropyl-*N*-phenylacetamide;2-Chloro-*N*-(1-methylethyl)-*N*-phenylacetamide; *N*-Isopropyl-α-chloroacetanilide; *N*-Isopropyl-2-chloroacetanilide; Propachlore; Propacloro (Spanish)

Trade Names: AATRAM®[C]; ACLID®; AI3-51503®; ALBRASS®; BEXTON®[C]; CIPA®; CP 31393®; KARTEX A®; NITICID®; RAMROD®; RAMROD® 65; SATECID®; WALLOP®[C]

Chemical class: Chloroacetanilide; Chloroacetamide

EPA/OPP PC Code: 019101

California DPR Chemical Code: 511

HSDB Number: 1200

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: AE1575000

EC Number: 217-638-2 [*Annex I Index No.:* 616-008-00-8]

Uses: A pre-emergence herbicide used to combat annual grasses and broad-leaved weeds in corn, sorghum, soybeans, cotton, sugar cane, sugar beets, vegetable crops, forage crops, pasture land and range land. Also used to control weeds in groundnuts, leeks, onions, peas, maize, roses and ornamental trees and shrubs. Not approved for use in EU countries[115]. Not registered for use in the U.S. except California.

U.S. Maximum Allowable Residue Levels for Propachlor [40 CFR 180.211(a)]: cattle, fat 0.02 (negligible); cattle, meat byproducts 0.02 (negligible); cattle, meat 0.02 (negligible); corn, forage 1.5 ppm; corn, grain 0.1 (negligible); egg 0.02 (negligible); goat, fat 0.02 (negligible); goat, meat byproducts 0.02 (negligible); goat, meat 0.02 (negligible); hog, fat 0.02 (negligible); hog, meat byproducts 0.02 (negligible); hog, meat 0.02 (negligible); horse, fat 0.02 (negligible); horse, meat byproducts 0.02 (negligible); horse, meat 0.02 (negligible); milk 0.02 (negligible); Poultry, fat 0.02 (negligible); poultry, meat byproducts 0.02 (negligible); poultry, meat 0.02 (negligible); sheep, fat 0.02 (negligible); sheep, meat byproducts 0.02 (negligible); sheep, meat 0.02 (negligible); sorghum, forage 5.0 ppm; sorghum, grain 0.25 ppm; sorghum, grain, stover 5.0 ppm.

Regulatory Authority and Advisory Information: Carcinogenicity[83]: EPA, Likely to be a human carcinogen

California Proposition 65 Chemical: Carcinogen (2/27/2001).
Health Advisory: Mutagen, Reproductive/developmental toxin (TRI)
Acute Oral Category: 3, CAUTION
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
MARINE POLLUTANT (49CFR, Subchapter 172.101, Appendix B)
European/International Regulations: Hazard Symbol: Xi; Xn, N; risk phrases: R22; R36; R43; R50/53; safety phrases: S2; S22; S36; S46; S60 (see Appendix 1)

Description: Propachlor is a light tan solid. Commercial product can be a soluble concentrate that may be mixed with water and used as a spray. Molecular weight = 211.71; Specific gravity (H_2O:1) = 1.13 @ 20 °C; Boiling point = 110 °C @ 0.03 mm; Freezing/Melting point = 73–76 °C; Vapor pressure = 1.9×10^{-3} mmHg @ 25 °C. Flash point = about 150 °C. Soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with alkaline materials, strong acids, strong oxidizers. Attacks carbon steel.

Permissible Exposure Limits in Air: Russia[35][43] set a MAC in work-place air of 0.5 mg/m^3.

Determination in Air: Gas chromatography/electron-capture detection.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 90 μg/L; State Drinking Water Guidelines: Florida 91 μg/L; Minnesota 90 μg/L.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Causes severe irritation to the skin and eyes. May be corrosive to the eyes. May cause irritation of the respiratory tract. Harmful if swallowed. The maximal tolerated dosage of propachlor without adverse effect is reported as 133.3 mg/kg/day in both rats and dogs. Other workers reported slight organ pathology in rats, mice, and rabbits at 100 mg/kg/day or higher; this agrees approximately with the former data. LD_{50} (oral, rat) = 500–700 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Apparently, no long-term toxicity studies have been completed of propachlor's degradation products, which include aniline derivatives. Based on animal studies, it may be mutagenic. May cause contact dermatitis.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers. Where possible, automatically transfer material from drums or other storage containers to process containers. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of this chemical should be grounded and bonded. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area.

Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 80.

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides and hydrogen chloride. This chemical is a combustible solid. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Alkaline hydrolysis would yield *N*-isopropylaniline. However, incineration @ 850 °C together with flue gas scrubbing is the preferred disposal method.

Propamocarb hydrochloride

P:1055

Use Type: Fungicide

CAS Number: 25606-41-1

Formula: $C_9H_{21}ClN_2O_2$

Synonyms: Carbamic acid, [3-(dimethylamino)propyl]-, propyl ester, monohydrochloride; *N*-(γ-Dimethylaminopropyl) carbamic acid propyl ester, monohydrochloride; Propyl [3-(dimethylamino)propyl]carbamate monohydrochloride

Trade Names: BANOL®; PREVEX®; PREVICUR N®; SH-66752®; TATTOO®

Chemical class: Carbamate

EPA/OPP PC Code: 119302

California DPR Chemical Code: 4022

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: EZ8860000

EC Number: 247-1245-9

Uses: Propamocarb hydrochloride is used for the plant disease called damping-off and has fungicidal activity against *Pythium* spp. and *Phytophthora* spp. It is used on non-food sites such as ornamental lawns and turf, sod farms, plants, vines and woody plants. Registered for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Propamocarb Hydrochloride (40 CFR 180.499): tomato 2.0 ppm; tomato, paste 5.0 ppm; tomato, puree 1.0 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans

Acute Oral Category: 3, CAUTION

Description: Colorless to yellow granules. Commercial product can be a soluble concentrate that may be mixed with water and used as a spray. Odorless to faint aromatic odor. Molecular weight = 224.73; Specific gravity (H_2O:1) = 1.16 @ 20 °C; Boiling point = (decomposes)

100 °C (liquid); Freezing/Melting point = 64 °C. Highly soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. May form explosive materials with phosphorus pentachloride. When heated to decomposition or on contact with acids or acid fumes, it may produce highly toxic chloride fumes; deadly phosgene gas may be formed. May cause pitting of some metals.

Determination in Water: Log K_{ow} = <–1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Skin absorption, ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. May cause skin sensitization. LD_{50} (oral, rat) = >2 g/kg; LD_{50} (dermal, rat) = >3 g/kg.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. May cause skin allergy.

Medical Surveillance: Evaluation by a qualified allergist. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do NOT induce vomiting.* * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation*: Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Solid toxic carbamate must be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet; for liquids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Begins to decompose >150 °C. Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Propanil P:1080

Use Type: Herbicide

CAS Number: 709-98-8

Formula: $C_9H_9Cl_2NO$

Synonyms: Cekupropanil; DCPA; *N*-(3,4-Dichlorophenyl) propanamide; 3',4'-Dichlorophenyl propionanilide; 3,4-Dichloropropionanilide; 3',4'-Dichloropropionanilide; Dichloropropionanilide; Dipram; DPA; NSC 31312; Propanamide, *N*-(3,4-Dichlorophenyl)-; Propanide; Propionanilide, 3',4'-Dichloro-; Propionic acid, 3,4-dichloroanilide

Trade Names: AI3-31382®; ARROSOLO®; ATLAS®; BAY® 30130; CHEM RICE®[C]; CRYSTAL PROPANIL-4®[C]; DREXEL PROP-JOB®; DROPAVEN®; DUET®; ERBAN®; FARMCO PROPANIL®; FW-734®; HERBANIL 368®; HERBAX TECHNICAL®; IDA PROP-A-NEL®; KENSOLO®; LONDAX PRO-PACK BNB®; MONTROSE PROPANIL®[C]; PANTOX®; PROPANEX®[C]; PROP-JOB®; PROPANIL MILENIA®; RISELECT®; ROGUE®[C]; ROSANIL®; RICECO TOUCHE®; S-10165®; SETRA PROWL®; STAM®; STAM® F-34; STAM® LV 10; STAMPEDE® 3E; STAM SUPERNOX®; STREL®; SURCOPUR®; SURPUR®; SUPERNOX®; SYNPRAN N®; TURF! EZ®; VERTAC®; WHAM! EZ®

Chemical class: Anilide; Acetanilide

EPA/OPP PC Code: 028201

California DPR Chemical Code: 503

HSDB Number: 1226

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: UE4900000

EC Number: 211-914-6 [*Annex I Index No.:* 616-009-00-3]

Uses: Propanil is a post-emergence herbicide with no residual effect. It is used against numerous grasses and broad-leaved weeds in rice, potatoes, and wheat. Mixing with carbamates or organophosphorus compounds is not recommended. It is also used on wheat in a mixture with MCPA. With carbaryl, it is used in citrus crops grown in sod culture. Not approved for use in EU countries (re-submitted)[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Propanil [40 CFR 180.274(a)]: cattle, fat 0.10 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts 1.0 ppm; crayfish 0.05 ppm; egg 0.30 ppm; goat, fat 0.10 ppm; goat, meat 0.05 ppm; goat, meat byproducts 1.0 ppm; hog, fat 0.10 ppm; hog, meat 0.05 ppm; hog, meat byproducts 1.0 ppm; horse, fat 0.10 ppm; horse, meat 0.05 ppm; horse, meat byproducts 1.0 ppm; milk 0.05 ppm; poultry, fat 0.05 ppm; poultry, meat 0.10 ppm; poultry, meat byproducts 0.50 ppm; rice, bran 40 ppm; rice, grain 10 ppm; rice, hulls 30 ppm; rice, straw 75 ppm; sheep, fat 0.10 ppm; sheep, meat 0.05 ppm; sheep, meat byproducts 1.0 ppm.

Human toxicity (long-term)[101]: Intermediate–35.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.48990 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Suggestive evidence of carcinogenicity, but not sufficient to assess human potential

Health Advisory: Mutagen

Acute Oral Category: 2, WARNING

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Safe Drinking Water Act: Priority List (55 FR 1470) as DCPA (and its acid metabolites)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50; safety phrases: S2; S22; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Propanil is a colorless solid. The technical product is a brown crystalline solid. Commercial products used for field application may contain hydrocarbon solvents. Molecular weight = 218.09; Specific gravity (H_2O:1) = 1.22 @ 25 °C; Boiling point = 350 °C[83]; Freezing/Melting point (pure) = 89–92 °C (pure); 85–89 °C (technical grade); Vapor pressure = 2.6×10^{-7} mmHg @ 30 °C. Henry's Law constant = 1.71×10^{-9} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Soluble in water; solubility = 125 ppm @ 22 °C; 152 mg/L @ 25 °C[83,USDA]. Commercial formulations use carrier solvents that may change the physical properties shown.

Permissible Exposure Limits in Air: Russia[43] set a MAC in work-place air of 0.1 mg/m^3 and has set MAC values for ambient air in residential areas of 0.005 mg/m^3 on a once-daily basis and 0.001 mg/m^3 on a daily average basis.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 40 ppb[93] State Drinking Water Guidelines: Maine 35 μg/L.

Determination in Water: Log K_{ow} = >3.0. Values >3.0. May bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Causes blue lips or fingernails, blue skin, headaches and dizziness. Propanil is well tolerated by experimental animals on a chronic basis, and there is little or no indication of mutagenic or oncogenic properties of the compound. The highest no-adverse-effect concentration of propanil based on reproduction in the rat and acute, subchronic, and chronic studies in rats and dogs is 400 pm in the diet. Based on this data, ADI was calculated at 0.02 mg/kg/day. LD_{50} (oral, rat) = 300–4000 mg/kg; LD_{50} (dermal, rat) = >2; >5 g/kg.

Long Term Exposure: Possible liver, kidney, spleen, and testes toxin. The solvents in commercial products may cause a form of acne.

Points of Attack: Digestive system, skin, nails, central nervous system, liver, kidney, spleen, and testes.

Medical Surveillance: This chemical may be a human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and

long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 149

Fire Extinguishing: This chemical is a combustible solid. Hazardous decomposition includes hydrogen chloride and oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Incineration with effluent gas scrubbing is recommended[22]. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Noncombustible containers should be compacted and buried under more than 16 inches/40 cm of soil[83]. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Trade Names: COMITE II®; COMITE® AGRICULTURAL MITICIDE; D-014®; DIBROM OMITE®; DICTATOR®; NAUGATUCK® D-014; OMAIT®; OMITE®; OMITE® 570EW; RED-TOP®[C]; UNIROYAL® D-014; U.S. RUBBER D-014®

Chemical class: Organosulfite; Sulfite ester

EPA/OPP PC Code: 097601

California DPR Chemical Code: 445

HSDB Number: 1528

UN/NA & ERG Number: UN2810/153

RTECS® Number: WT2900000

EC Number: 219-006-1 [*Annex I Index No.:* 607-151-00-7]

Uses: Pending for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP). Used on a variety of bearing and non-bearing food crops and non-food sites. Grapes, walnuts, almonds, nectarines and mint are the most treated crops. Other crops include alfalfa, avocados, beans, boysenberries, carrots, cherries, citrus, corn, currants, dates, filberts, grapefruit, jojoba, grapes, hops, peanuts, sugar beets, cotton and ornamentals.

U.S. Maximum Allowable Residue Levels for Propargite [40 CFR 180.259(a)]: Almond 0.1 ppm; almond, hulls 55 bean, dry, seed 0.2 ppm; cattle, fat 0.1 ppm; cattle, meat byproducts 0.1 ppm; cattle, meat 0.1 ppm; citrus, dried pulp 40 ppm; corn, forage 10 ppm; corn, grain 0.1 ppm; corn, stover 10 ppm; cotton, undelinted seed 0.1 ppm; egg 0.1 ppm; goat, fat 0.1 ppm; goat, meat byproducts 0.1 ppm; goat, meat 0.1 ppm; grapefruit 5 grape 10 ppm; hog, fat 0.1 ppm; hog, meat byproducts 0.1 ppm; hog, meat 0.1 ppm; hop 15 ppm; hop, dried cones 30 ppm; horse, fat 0.1 ppm; horse, meat byproducts 0.1 ppm; horse, meat 0.1 ppm; lemon 5 ppm; milk, fat (0.08 ppm in milk) 2 ppm; mint 50 ppm; nectarine 4 ppm; orange, sweet 5 ppm; peanut 0.1 ppm; peanut, hay 10 ppm; peanut, hulls 10 ppm; poultry, fat 0.1 ppm; poultry, meat byproducts 0.1 ppm; poultry, meat 0.1 ppm; potato 0.1 ppm; sheep, fat 0.1 ppm; sheep, meat byproducts 0.1 ppm; sheep, meat 0.1 ppm; sorghum, forage 10 ppm; sorghum, grain 10 ppm; sorghum, grain, stover 10 ppm; tea, dried 10 ppm; walnut 0.1 ppm. *Tolerances with regional registration, as defined in section 180(n)* ***[40 CFR 180.259(c)]:*** in or on the following raw agricultural commodities: corn, sweet, kernel plus cob with husks removed 0.1 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group B2, Probable human carcinogen; EU GHS Category 2: Suspected human carcinogen.

California Proposition 65 Chemical: Carcinogen (10/1 1994) and developmental toxin (6/15/1999)

U.S. TRI: Developmental toxin

Acute Oral Category: 3, CAUTION

Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA)

EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations Hazard Symbol: T, Xi, N; risk phrases: R23; R40; R38; R41; R50/53; safety phrases: S1/2; S26; S28; S36/37/39; S45; S60; 61 (see Appendix 1)

Description: Flammable, dark amber or brown-yellow viscous liquid. Faint solvent odor. A strong odor of sulfur dioxide may indicate that partial decomposition has occurred. Commercial product is available as a wettable powder or as an emulsifiable concentrate. Molecular weight = 350.47; Specific gravity (H_2O:1) = 1.085 to 1.115 @ 20 °C[86]; Boiling point = (decomposes) ~200 °C; Freezing/Melting point = 70 °C; Vapor pressure = 3×10^{-3} mmHg @ 20 °C. Flash point = 27.8 °C (oc)[86]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Practically insoluble in water; sinks slowly in water; solubility 10.5 mg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with oxidizers, chlorates, nitrates, peroxides, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. May react with water, steam, or acids, forming corrosive acid solution and sulfur oxide fumes. Incompatible with lead diacetate, mercury(I) chloride. Esters hydrolyze to form sulfur dioxide and alcohols; reaction is more rapid under basic conditions. Strong oxidizing acids may cause a vigorous reaction that is sufficiently exothermic to ignite the reaction products. Heat is also generated by the interaction of esters with caustic solutions. Flammable hydrogen is generated by mixing esters with alkali metals and hydrides.

Permissible Concentration in Water: State Drinking Water Guidelines: Arizona 160 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact may burn eyes, skin, and respiratory tract. Toxic if ingested. If spilled on clothing and allowed to remain may cause smarting and reddening of skin. May cause skin sensitization and allergy. LD_{50} (oral, rat) = 1500 mg/kg; LD_{50} (dermal, rat) = 250 mg/kg[83].

Long Term Exposure: Skin sensitizer.

Points of Attack: Ingestion, dermal and/or eye contact.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develops. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Spill Handling: *For liquids*, isolate spill or leak area in all directions for at least 50 meters /150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers. *For solids*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside container.

Fire Extinguishing: *On a small fire*: use dry chemical powder, carbon dioxide or water spray. *On a large fire:* use water spray, fog or alcohol-resistant foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. Use water spray or fog; do not scatter material using straight water jet streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Propazine P:1110

Use Type: Herbicide

CAS Number: 139-40-2

Formula: $C_9H_{16}ClN_5$

Synonyms: 2,4-Bis(isopropylamino)-6-chloro-*s*-triazine; 2-Chloro-4,6-bis(isopropylamino)-*s*-triazine; Propasin

Trade Names: GEIGY® 30,028; GESAMIL®; MAXX-90®; MILOCEP®; MILOGARD®[C]; MILO-PRO®; PLANTULIN®; PRIMATOL P®; PROPAZIN®; PROPINEX®; PROZINEX®

Chemical class: Triazine
EPA/OPP PC Code: 080808
California DPR Chemical Code: 504
HSDB Number: 1400
UN/NA & ERG Number: UN2753/151
RTECS® Number: XY5300000
EC Number: 205-359-9 [*Annex I Index No.:* 613-067-00-1]

Uses: Atrazine, simazine, and propazine and their common chlorinated degradates have a common mechanism of toxicity. They have similar applications. Propazine is used for control of broadleaf weeds and annual grasses in sweet sorghum. It is applied as a spray at the time of planting or immediately following planting, but prior to weed or sorghum emergence. It is also used as a post-emergence selective herbicide on carrots, celery and fennel. Not approved for use in EU countries[115]. Some formulations are U.S. EPA restricted Use Pesticides (RUPs).

U.S. Maximum Allowable Residue Levels for Propazine (40 CFR 180.243): sorghum, forage 0.25 ppm; sorghum, grain 0.25 ppm; sorghum, grain, stover 0.25 ppm; sorghum, sweet 0.25 ppm.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans. *Note:* Reclassified from Group C in 2000; EU GHS Category 2: Suspected human carcinogen
Acute Oral Category: 3, Caution
Health Advisory: Tumorigen
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R40; R50/53; safety phrases: S2; S36/37; S60; S61 (see Appendix 1)

Description: Propazine is a colorless crystalline solid or powder. Molecular weight = 229.71; Specific gravity (H_2O:1) = 1.16 @ 20 °C; Boiling point = 318.5°C; Freezing/Melting point = 213.5 °C; Vapor pressure = 1.3×10^{-7} mmHg @ 20 °C. Slightly soluble in water; solubility = 9.0 ppm @ 20 °C; 4.5×10^{-4} g/100 mL @ 20 °C.

Permissible Exposure Limits in Air: Russia[43] set a MAC in work-place air of 5.0 mg/m^3 and a MAC in ambient air in residential areas of 0.04 mg/m^3 both on a momentary and an average daily basis.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 10 μg/L; State Drinking Water Guidelines: Maine 14 μg/L; Florida 10 μg/L.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Determination in Water: Analysis of propazine is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen-phosphorus-containing pesticides in water samples. In this method, approximately 1 liter of sample is extracted with Methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using a nitrogen-phosphorus detector. The method detection limit has not been determined for propazine, but it is estimated that the detection limits for analytes included in this method are in the range of 0.1 to 2 μg/L. Log K_{ow} = ~3.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. May be absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: May cause eye irritation. Skin irritant/sensitizer was reported among workers involved in propazine manufacturing. LD_{50} (oral, rat) = 3000–4000 mg/kg; LD_{50} (dermal, rat) = >3000 mg/kg.

Long Term Exposure: May cause skin allergy, development of tumors. May cause reproductive and fetal effects.

Points of Attack: Skin. Reproductive cells.

Medical Surveillance: Examination by a qualified allergist. A suspected tumorigen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Triazine pesticides, solid, toxic, require a shipping label of "poisonous materials." Hazard Class 6.1.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 154.

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides and chlorine. This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See 40 CFR Parts 261.3 for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Propetamphos P:1115

Use Type: Fungicide, Insecticide

CAS Number: 31218-83-4

Formula: $C_{10}H_{20}NO_4PS$

Synonyms: 2-Butenoic acid, 3-[((ethylamino) methoxyphosphinothioyl)oxy]-, isopropylester, *(E)*-; 2-Butenoic acid, 3-[((ethylamino) methoxyphosphinothioyl) oxy]-,1-methylethyl ester, *(E)*-; Caswell No. 706A; Crotonic acid, 3-hydroxy-, isopropyl ester, O-ester with O-methyl ethylphosphoramidothioate, *(E)*-; ENT 27989; 3-[((Ethylamino) methoxyphosphinothioyl)oxy]-2-butenoic acid, 1-methylethyl ester; *(E)*-O-2-Isopropoxycarbonyl-1-methylvinyl O-methylethylphosphoramidothioate; O-(1-Isopropoxycarbonyl-1-propen-2-yl)-O-methyl-ethyl-phosphoramidothionate; Isopropyl 3-[((ethylamino)methoxyphosphinothioyl)oxy]crotonate; Isopropyl 3-(ethylamino(methoxy)phosphinothioyloxy) isocrotonate; 1-Methylethyl*(E)*-3-[((ethylamino) methoxyphosphinothioyl)oxy]-2-butenoate; *(E)*-1-Methylethyl 3-[((ethylamino)methoxy phosphinothioyl)oxy]-2-butenoate; Z-O-2-iso-Propoxycarbonyl-1-methylvinyl O-methyl ethyl phosphoramidothioate; Phosphoramidothioic acid, *N*-ethyl-, *(E)*-O-(2-isopropoxycarbonyl-1-methylvinyl) O-methyl ester

Trade Names: BLOTIC®; OVIDIP®; SAFROTIN®[C]; SAN-52139®; SANDOZ®- 52139; SERAPHOS®; TSAR®; VEL-4283®; ZOECON®

Chemical class: Organophosphate

EPA/OPP PC Code: 113601; (216800 old EPA code number)

California DPR Chemical Code: 2122

HSDB Number: 6985

UN/NA & ERG Number: UN3018 (liquid)/152

RTECS® Number: GQ4750000

EC Number: 250-517-2 [*Annex I Index No.:* 015-136-00-6]

Uses: Propetamphos is used indoors for the control of structural insects, e. g., ants, cockroaches, fleas, and termites. It is applied in indoor residential, medical, commercial, and industrial buildings, and in food service establishments where there is no contact with food, and where no processing, packing, or warehousing of food occurs. It is also used in veterinary practice to control ticks, lice, mites and other parasites in livestock. Not listed for use in EU countries[115]. Some formulations may be U.S. EPA restricted Use Pesticides (RUPs).

Regulatory Authority and Advisory Information: U.S.

EPA Carcinogens: Unlikely carcinogen

Acute Oral Category: 1, DANGER–POISON.

Health Advisory: Nerve Toxin

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

DOT Inhalation Hazard Chemicals

Description: Yellowish, oily liquid at room temperature. Commercial product is available as an emulsifiable concentrate. Molecular weight = 281.30; Specific gravity (H_2O:1) = 1.1294 @ 20 °C[88]; Boiling point = 88 °C @ 0.005 mmHg; Vapor pressure = 3×10^{-4} mmHg @ 25 °C. Soluble in water; solubility – 1000 mg/L @ 25 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.[18].

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms

Short Term Exposure: Organophosphates can cause cholinesterase inhibition in humans, resulting in overstimulation of the nervous system, nausea, dizziness, confusion; and, at very high exposures, such as accidents or major spills, respiratory paralysis and death[83]. Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 75–150 mg/kg; LD_{50} (dermal, rat) = 2200–2300 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Neurotoxic. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note* *to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 g in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15–30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Propiconazole P:1125

Use Type: Fungicide

CAS Number: 60207-90-1; 75881-82-2

Formula: $C_{15}H_{17}Cl_2N_3O_2$

Synonyms: Caswell No. 323EE; Desmel; (±)-1-[2-(2,4-Dichlorophenyl)-4-propyl-1,3-dioxolan-2-ylmethyl]-1*H*-1,2,4-triazole; 1-[(2-(2,4-Dichlorophenyl)-4-propyl-1,3-dioxolan-2-yl)methyl]-1*H*-1,2,4-triazole; 1-[2-(2,4-Dichlorophenyl)-4-propyl-1,3-dioxolan-2-yl]-methyl-1*H*-1,2,4,-triazole; Proconazole; 1*H*-1,2,4-Triazole, 1-[(2-(2,4-dichlorophenyl)-4-propyl-1,3-dioxolan-2-yl) methyl]-

Trade Names: ALAMO®; BANNER®; BENIT®; BREAK®; BUMPER®; CGA-64250®; CGA-92710F®; DESMEL®; FIDIS®; JUNO®; MANTI® S; MAXX®; NOVEL®; ORBIT®; PRACTIS®; PROPIMAX®; RADAR®; RESTORE®; SPIRE®; STRATEGO® (trifloxystrobin+propiconazole); TASPA®; TILT®; WOCOSIN®

Chemical class: Azole; Triazole

EPA/OPP PC Code: 122101

California DPR Chemical Code: 2276

HSDB Number: 6731

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: XZ4620000

EC Number: 262-104-4 [*Annex I Index No.:* 613-205-00-0]

Uses: Used to control fungi on a broad range of crops and turf. Used on ornamentals, range land and rights-of-way to prevent and control powdery mildew and fungi on hardwoods and conifers.

U.S. Maximum Allowable Residue Levels for Propiconazole [40 CFR 180.434(a)]: banana 0.2 ppm; barley, grain 0.1 ppm; barley, straw 1.5 ppm; cattle, fat 0.1 ppm; cattle, kidney 2.0 ppm; cattle, liver 2.0 ppm; cattle, meat byproducts, except kidney and liver 0.1 ppm; cattle, meat 0.1 ppm; celery 5.0 ppm; fruit, stone, group 12 1.0 ppm; goat, fat 0.1 ppm; goat, kidney 2.0 ppm; goat, liver 2.0 ppm; goat, meat byproducts, except kidney and liver 0.1 ppm; goat, meat 0.1 ppm; grass, forage 0.5 ppm; grass, hay 40 ppm; grass, straw 40 ppm; hog, fat 0.1 ppm; hog, kidney 2.0 ppm; hog, liver 2.0 ppm; hog, meat byproducts, except kidney and liver 0.1 ppm; hog, meat 0.1 ppm; horse, fat 0.1 ppm; horse, kidney 2.0 ppm; horse, liver 2.0 ppm; horse, meat byproducts, except kidney and liver 0.1 ppm; horse, meat 0.1 ppm; milk 0.05 ppm; mushroom 0.1 ppm; oat, forage 10.0 ppm; oat, grain 0.1 ppm; oat, hay 30.0 ppm; oat, straw 1.0 ppm; peanut 0.2 ppm; 11/30/08 peanut, pecans 0.1 ppm; pineapple, fodder 0.1 ppm; 11/30/08 plum, prune, fresh 1.0 ppm; rice, grain 0.1 ppm; rice, straw 3.0 ppm; rye, grain 0.1 ppm; rye, straw 1.5 ppm; sheep, fat 0.1 ppm; sheep, kidney 2.0 ppm; sheep, liver 2.0 ppm; sheep, meat byproducts, except kidney and liver 0.1 ppm; sheep, meat 0.1 ppm; wheat, grain 0.1 ppm; wheat, straw 1.5 ppm. *Regional registration, as defined in section 180.1(n)* ***[40 CFR 180.434(c)]:*** mint, tops (leaves and stems) 0.3 ppm; wild rice 0.5 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Health Advisory: Developmental & Reproductive Toxin, Endocrine disruptor (S!)

Poison (oral) Category: 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Regulations: Hazard Symbol: T, Xn, Xi, N; risk phrases: R22; R43; R50/53; safety phrases: S1/2; S36/37; S46; S60; S61 (see Appendix 1).

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Colorless solid or a yellow thick liquid. Odorless. Commercial product is available as an emulsifiable concentrate. Physical and toxicological properties may be affected by carrier solvents in commercial formulations. Molecular weight = 342.22; Specific gravity (H_2O:1) = 1.33 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = –25 °C; Vapor pressure = 4.2×10^{-7} mmHg @ 20 °C; Flash point = 244 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Soluble in water; solubility = 112 ppm.

Incompatibilities: The triazoles are sensitive to heat, friction, and impact. Sensitivity varies with the type of substitution to the triazole ring. Metal chelated and halogen substitution of the triazol ring make for a particularly heat- sensitive material. Azido and nitro derivatives have been employed as high explosives. No matter the derivative these materials should be treated as explosives[88].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 9 ppb[93] State Drinking Water Guidelines: Maine 9 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, passing through the skin and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the skin, eyes, and respiratory tract. Eye contact may cause irritation, burning sensation, and damage. Harmful if ingested, inhaled or absorbed through the skin. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. LD_{50} (oral, rat) = >1000 mg/kg; LD_{50} (dermal, rat) = >4 g/kg.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develops. Skin sensitizer.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Personal Protective Methods: Wear positive-pressure self-contained breathing apparatus (SCBA). Wear chemical protective clothing that is specifically recommended by the manufacturer. DuPont™ Tychem® Suit Fabrics is recommended by one government source[88]. It may provide little or no thermal protection. Structural firefighters' protective clothing provides limited protection in fire situations ONLY; it is not effective in spill situations where direct contact with the substance is possible.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Refrigerate. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned. Do not allow water to get inside containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and hydrogen chloride gas. See "Incompatibilities" section. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

Propineb P:1128

Use Type: Fungicide

CAS Number: 12071-83-9

Formula: $C_5H_8N_2S_4Zn$

Synonyms: [(1-Methyl-1,2-ethanediyl)bis (carbamodithioato)](2-)zinc homopolymer; Methyl zineb; Zinc, (1-methyl-1,2-ethanediyl)bis(carbamodithioato)(2-)-; Propylenebis(dithiocarbamato)zinc; Zinc-1,2-propylenebisdithiocarbamate; Zinc propylenebis(dithiocarbamate); Zinc [*N,N'*-propylene-1,2-bis(dithiocarbamate)]

Trade Names: AIRONE®; ANTRACOL®; BAY®-46131; BAYER®-46131; LH 3012®; LH 30/Z®; MEZINEB®; PROPINEBE®; ZIPROMAT®

Chemical class: Dithiocarbamate

EPA/OPP PC Code: 522200

California DPR Chemical Code:

HSDB Number: 6912 as zinc compounds

UN/NA & ERG Number: UN3077(solid)/171; UN2771 (solid)/151

RTECS® Number: ZH4950000

EC Number: 235-134-0

Uses: Used to control downy mildew, black rot, brown rot and other fungi on vines, apples, pears, citrus, berry fruit, stone fruit, tomatoes, potatoes, tobacco, vegetables, rice, ornamentals and tea. Not currently registered in the U.S. Used in more than a dozen European countries. There are more than 15 global suppliers[97].

Regulatory Authority and Advisory Information:

EPA Genetox program 1988, Positive: *S cerevisiae* gene conversion.

Health Advisory: Mutagen, Developmental & Reproductive Toxin

Acute Oral Category: 3, CAUTION

Clean Water Act: Section 307 Toxic Pollutants as zinc and compounds

Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as zinc compounds

The "Director's List" (CAL/OSHA) as zinc compounds

EPCRA Section 313: Form R *de minimis* concentration reporting level: 1.0% as zinc compounds.

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Yellowish to white crystalline solid or powder. Slight characteristic odor. Molecular weight = 289.79; Specific gravity (H_2O:1) = 1.79 @ 20°C; Boiling point = (decomposes); Freezing/Melting point = (decomposes). Insoluble in water.

Incompatibilities: Combustible material. Dust may form explosive mixture in air. Water, acid, oxidizing materials. Heat, or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide. Flammable gases are generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Decomposition products in fire include oxides of nitrogen and sulfur. Corrosive to iron, copper brass and zinc metals, especially in the presence of moisture. Heat alkalies (lime), moisture can cause decomposition. Decomposes on prolonged storage. Degradation produces ethylene thiourea.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 5000 μg[Zn]/L; EPA Lifetime Health Advisory 2000 μg[Zn]/L. State Drinking Water Guidelines: Arizona 5000 μg[Zn]/L; Minnesota 2000 μg[Zn]/L. Canadian Drinking Water Standards: AO $\leq$ 5.0 mg[Zn]/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry.

Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms. EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = 1–3 g/kg.

Long Term Exposure: May cause respiratory tract and lung problems.

Points of Attack: Respiratory system, lungs, thyroid, central nervous system, cardiovascular system, skin, eyes, muscular system.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Decomposition begins >150 °C. Hazardous decomposition includes oxides of nitrogen, carbon, sulfur, and zinc. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. A potential candidate for liquid injection incineration at a temperature range of 650 to 1,600 °C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1,600 °C and residence times of seconds for liquids and gases, and hours for solids[83].

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: T, N; risk phrases: R25; R50/53; safety phrases: S2; S37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Propoxur is a white to tan crystalline solid or powder. Faint characteristic odor. Molecular weight = 209.27; Boiling point = (decomposes); Freezing/Melting point = 87–90 °C; Vapor pressure = 7×10^{-6} mmHg @ 20 °C; Flash point = >149 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Slightly soluble in water; solubility = 1800 ppm @ 20 °C; 0.2%[9].

Incompatibilities: Propoxur is incompatible with strong oxidizers and alkalis. Carbamates are incompatible with reducing agents, strong acids, oxidizing acids, peroxides, and bases. Contact with active metals or nitrides causes the release of flammable, and potentially explosive, hydrogen gas. May form explosive materials with phosphorus pentachloride. When heated to decomposition, this material forms highly toxic oxides of nitrogen and methyl isocyanate fumes.

Permissible Exposure Limits in Air: OSHA PEL: None

NIOSH REL: 0.5 mg/m^3 TWA

ACGIH TLV®[1]: 0.5 mg/m^3 TWA; confirmed animal carcinogen with unknown relevance to humans. BEI$_A$ issued for Acetylcholinesterase inhibiting pesticide.

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.5 mg/m^3

PAC-2: 0.5 mg/m^3

PAC-3: 23 mg/m^3

DFG MAK: 2 mg/m^3 measured as the, inhalable fraction TWA; Peak Limitation Category II(8)

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 30 μg/L; EPA Health Advisory: 3 ppb; State Drinking Water Guidelines: Arizona 3 μg/L; Maine 28 μg/L; Florida 2.8 μg/L; California 30 μg/L. Runoff from spills or fire control may cause water.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Propoxur can affect you when breathed in and quickly enters the body by passing through the skin. Severe poisoning can occur from dermal and/or eye contact. It is a moderately toxic carbamate chemical. Exposure can cause severe carbamate poisoning, with symptoms of headaches, sweating, nausea and vomiting, diarrhea, muscle twitching, loss of coordination and even death. May affect the nervous system, liver, kidneys. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Cholinesterase toxin. Narcotic. Acute effects: Eye, effects other than irritation; Skin irritant, moderate; Heart, cardiovascular system; Brain; Central nervous system; Nervous system toxin; Respiratory toxin, other than severe or moderate irritation; Nose, other than irritation. LD_{50} (oral, rat) = <50 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Propoxur may cause mutations. Handle with extreme caution. It may damage the developing fetus. Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Central nervous system, liver, kidneys, gastrointestinal tract, blood cholinesterase.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1–2 weeks while red blood cell levels may be reduced for 1–3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. Also consider complete blood count and chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled “poisonous materials.” It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: *Deadly when decomposed in fire*. Hazardous decomposition includes oxides of nitrogen and carbon and highly toxic methyl isocyanate fumes[9]. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Prosulfuron P:1185

Use Type: Herbicide
CAS Number: 94125-34-5
Formula: $C_{15}H_{16}F_3N_5O_4S$
Synonyms: Benzenesulfonamide, *N*-[((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl]-2-(3,3,3-trifluoropropyl)-; 1-(4-Methoxy-6-methyl-triazin-2-yl)-3-[2-(3,3,3-trifluoropropyl)phenylsuulfonyl]urea; *N*-[((4-Methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl]-2-(3,3,3-trifluoropropyl)benzenesulfonamide
Trade Names: CGA®-152005; EXCEED®; PEAK®; SPIRIT®
Chemical class: Sulfonylurea
EPA/OPP PC Code: 129031
California DPR Chemical Code: 5115
UN/NA & ERG Number: UN3077(solid)/171
EC Number: 619-000-2 [*Annex I Index No.:* 016-084-00-7]
Uses: Used as a post-emergence herbicide on corn and cereals such as barley, millet, oats, rye, sorghum and wheat. Used on sugar cane in some countries. Currently registered in some EU countries[115]. Registered for use in the U.S.
U.S. Maximum Allowable Residue Levels for Prosulfuron [CFR180.481]: Over the years the U.S. EPA has granted temporary pesticide tolerances for residues of prosulfuron on raw agricultural commodities: corn (forage, fodder, grain and fresh [including sweet kernels], milk, and meat, fat and meat byproducts, of cattle, goats, hogs, horses, and sheep. Tolerances expired 12/31/1999. A petition for new tolerances under 40 CFR 180.481 was filed by Syngenta and reported in the Federal Register December 31, 2002. There is no current information on residue levels or tolerances.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen
Toxicity (oral) Category 3, CAUTION
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R40; R50/53; safety phrases: S2; S60; S61 (see Appendix 1)
Description: Prosulfuron is beige to tan crystalline solid, granules or powder. Sweet odor. Molecular weight = 419.38; Specific gravity (H_2O:1) = 1.453 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = (decomposes) 155 °C. Vapor pressure = 3×10^{-8} mmHg @ 25 °C; Autoignition temperature = ~ 400 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Slightly soluble in water; solubility = ~25 mg/L @ 25 °C.
Incompatibilities: Powder is combustible and may form explosive mixture with air. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.
Permissible Exposure Limits in Air: 4 mg/m^3 TWA [Syngenta MSDS]
Determination in Water: Log K_{ow} = ~1.5. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, passing through the skin and ingestion.
Routes of Entry: Inhalation, dermal contact, ingestion.
Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].
Short Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = ~1 g/kg; LD_{50} (dermal, rat) = >2 g/kg.
Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.
Points of Attack: Bones, teeth, blood.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or from exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl,[41] primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96].
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of

dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur and carbon and hydrogen fluoride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Pymetrozine P:1325

Use Type: Insecticide

CAS Number: 123312-89-0

Formula: $C_{10}H_{11}N_5O$

Synonyms: *(E)*-4,5-Dihydro-6-methyl-4-[(3-pyridinylmethylene)amino]-1,2,4-triazin-3(2*H*)-one; 1,2,4-Triazin-3(2*H*)-one, 4,5-dihydro-6-methyl-4-[(3-pyridinylmethylene)amino]-, *(E)*-

Trade Names: CGA-215944®; CHESS®; ENDEAVOR®; FULFILL®; PLENUM®; STERLING®

Chemical class: Triazine

EPA/OPP PC Code: 101103

California DPR Chemical Code: 5232

HSDB Number: 7054

UN/NA & ERG Number: UN3077 (solid)/171; UN3082(liquid)/171

EC Number: 602-927-1 [*Annex I Index No.:* 613-202-00-4]

Uses: The U.S. EPA considers pymetrozine a replacement for organophosphate pesticides when used in the same use patterns. Used on pecans, foliar ground plants and ornamentals, potatoes and other tuberous vegetables, leafy and fruiting vegetables, hops, cotton and tobacco.

U.S. Maximum Allowable Residue Levels for Pymetrozine [40 CFR 180.556(a)]: in or on the following raw agricultural commodities. The tolerance level for each commodity is expressed in terms of the parent insecticide only, which serves as an indicator of the use of pymetrozine on these raw agricultural commodities: brassica, head and stem, subgroup (crop subgroup 5-A) 0.5 ppm; brassica, leafy greens, subgroup (crop subgroup 5-B) 0.25 ppm; cotton gin byproducts 2.0 ppm; cotton, undelinted seed 0.3 ppm; hop, dried cones 6.0 ppm; pecans 0.02 ppm; turnip, greens 0.25 ppm; vegetable, fruiting, group (crop group 8) 0.2 ppm; vegetable, cucurbit, group (crop group 9) 0.1 ppm; vegetable, leafy, except brassica, group (crop group 4) 0.6 ppm; and vegetable, tuberous and corm, subgroup (crop subgroup 1-C) 0.02 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely to be a human carcinogen; EU GHS Category 2: Suspected human carcinogen

Toxicity (oral) Category 3, CAUTION

European/International Regulations: Hazard Symbol: Xn; risk phrases: R40; R52/53; safety phrases: S2; S36/37; S61 (see Appendix 1)

Description: White to beige crystalline solid. Slightly sweet odor. Molecular weight = 217.23; Specific gravity (H_2O:1) = 1.373 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = (decomposes); Freezing/Melting point = 217 °C; Vapor pressure = 1×10^{-8} mmHg @ 25 °C; Soluble in water.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Determination in Water: Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Harmful, possibly poisonous, if swallowed. May cause irritation of the skin, eyes, and respiratory tract. High levels of exposure may affect all major organs. LD_{50} (oral, rat) = >5 g/kg.; LD_{50} (dermal, rat) = >2 g/kg[83].

Long Term Exposure: Repeated contact or prolonged high dose may affect major organs, lungs, heart, liver, kidney, etc.

Points of Attack: Major organs.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Depending on formulation, the dry material may be classified as Environmentally hazardous substances, solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the liquid spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution.

Fire Extinguishing: Decomposes >190 °C. Hazardous decomposition includes oxides of nitrogen and carbon. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171
RTECS® Number: UR6125000
EC Number: 216-920-2 [*Annex I Index No.:* 606-035-00-3]
Uses: Used on sugar beets, red beets and fodder beets for pre-emergence and post-emergence weed control.
U.S. Maximum Allowable Residue Levels for Pyrazon (40 CFR 180.316): beet, garden, roots 0.1(N) ppm; beets, garden, tops 1 ppm; beet, sugar, roots 0.1(N) ppm; beet, sugar, tops 1 ppm; milk 0.01(N) ppm. (N) = negligible amount of residue.
Regulatory Authority and Advisory Information: Acute Oral Category: 3, CAUTION.
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R43; R50/53; safety phrases: S2; S24; S37; S60; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 2-Hazard to waters
Description: Tan to brown powder as pure compound; dark brown solid in technical state. Odorless. Molecular weight = 221.63; Specific gravity (H_2O:1) = 1.51 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 205 °C; Vapor pressure = 5×10^{-2} mmHg @ 20 °C. Low solubility in water; solubility = 400 mg/L @ 20 °C.
Incompatibilities: Decomposition >350 °C. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.
Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].
Determination in Water: Log K_{ow} = <1.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation and ingestion.
Harmful Effects and Symptoms
Short Term Exposure: Contact may irritate skin and cause eye irritation and possible severe injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. Poisonous if swallowed. LD_{50} (oral, rat) = >2 g/kg; LD_{50} (dermal, rat) = >2 g/kg.
Long Term Exposure: Skin sensitizer.
Points of Attack: Skin.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. If poisoning is suspected or of redness, itching, burning of skin or eyes develops. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has

been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont^{TM} Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Possible Human Carcinogen: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, *small spill*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. For a *large spill* evacuate downwind at least 100 meters/330 feet. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Keep combustibles (wood, paper, oil, etc.) away from spilled material. Do not allow water to get inside containers. *Small dry spill*: with clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Large spill*: dike far ahead of liquid spill for later disposal. Following product recovery, flush area with water. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Pyrethrins P:1340

Use Type: Insecticide
CAS Number: 121-21-1 (I); 121-29-9 (II); 8003-34-7 (pyrethrum)*
Formula: $C_{20-21}H_{28-30}O_{3-5}$
Synonyms: Chrysanthemum cinerariefolium; Cinerin I; Cinerin II; Jasmolin I; Jasmolin II; Persian insect powder; Piretrina (Spanish); Pyrethrin I; Pyrethrin II; Pyrethrum flowers; Trieste flowers
Trade Names: (The U.S. EPA currently registers 7,295 products, including 1,441 active ones and those that have been canceled or transferred.) BUHACH®; CHRYSANTHEMUM CINERAREAEFOLIUM®; DALMATION INSECT FLOWERS®; FIRMOTOX®; INSECT POWDER®; OFIRMOTOX®; PAREXAN®; PRENTOX®; PYRETRINER®; PYRETHRUM INSECTICIDE®
Chemical class: Botanical; Chrysanthemic esters
EPA/OPP PC Code: 069000 (Pyrethrum); 069001 (Mixed Pyrethrins I and Pyrethrins II); 069002 [Ground Pyrethrum (other than pyrethrins)].
California DPR Chemical Code: 510
HSDB Number: 6297
UN/NA & ERG Number: UN3077 (solid)/171
RTECS® Number: UR4200000
EC Number: 232-319-8
Uses: Pyrethrins is the name given to the active insecticidal components of the dried flowers-Pyrethrin I and II-which, in turn, have four different ingredients–Cinerin I and II and Jasmolin I and II. Pyrethrins are registered for use in the U.S. and Canada and EU countries.
U.S. Maximum Allowable Residue Levels for Pyrethrum powder other than pyrethrins (40 CFR 180.905): Pyrethrins or pyrethrum powders, when applied to growing crops in accordance with good agricultural practice, are exempt from the requirements of tolerance. These pesticides are not exempted from the requirement of a tolerance when applied to a crop at the time of, or after, the harvest.
Regulatory Authority and Advisory Information: U.S.
EPA Carcinogens: EPA Suggestive evidence of carcinogenicity, but not sufficient to assess human potential.
Acute Oral Category: 2, WARNING
AB 1803-Well Monitoring Chemical (CAL) as pyrethrins
Pyrethrin I:
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
EPA Hazardous Waste Number (RCRA No.): P008
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
Pyrethrin II:
Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters. [CAS: 8003-34-7; 121-21-1 (I); 121-29-9 (II)]
Description: The pyrethrins are a variable mixture of compounds which are found in pyrethrum flowers: cinerin, jasmolin, and pyrethrin. Pyrethrins are a brown, viscous oil or solid. Sprays may be dissolved in xylene or kerosene Molecular weight = 328.4 (Pyrethrin I); 372.4; (Pyrethrin II); 316.4 (Cinerin I); 360.4 (Cinerin II)[86]; Specific gravity (H_2O:1) = ~1.0 @ 25 °C; Boiling Point @ 1 atm: 170 °C; (Pyrethrin I) 200 °C (Pyrethrin II) 137 °C (Cinerin I); 183 °C (Cinerin II)[86]; Vapor pressure = Low; Flash point = 82.2–87.8 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Practically insoluble in water.
Incompatibilities: Dust may form explosive mixture with air. Violent reaction with strong oxidizers and alkaline materials. Pyrethrins oxidize rapidly in air. Decompose rapidly in base. May may generate heat on contact with acid or caustic solutions. Contact with hydrides and alkali metals generating flammable and potentially explosive hydrogen gas.
Permissible Exposure Limits in Air:
NIOSH[2] IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA
STEL set by HSE[33] = 10 mg/m^3.
Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18].
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Routes of Entry: Inhalation, ingestion, skin and/or eye contact.
Harmful Effects and Symptoms: Erythema, dermatitis, papules, pruritus, rhinorrhea (discharge of thin mucus); sneezing; asthma[9].
Short Term Exposure: Pyrethrum can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system, causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, human child) = 200 mg/kg[96]; LD_{50} (dermal, rat) = >1 g/kg.
Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.
Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: These materials may be classified as environmentally hazardous substances, solid or liquid, n. o. s. They usually fall in Hazard Class 9. STN: 49 638 81; Pyrethrins (hazardous substance, liquid, not otherwise specified); 49 638 86; Pyrethrins (pyrethrum extract, not <25% pyrethrum) (hazardous substance, liquid, not otherwise specified); 49 638 72; Pyrethrins (agricultural insecticides, not elsewhere classified, liquid) (hazardous substance, liquid, not otherwise specified); 49 638 77; Pyrethrins (agricultural insecticides, not elsewhere classified, other than liquid) (hazardous substance, solid, not otherwise specified); 49 638 68; Pyrethrins (insecticides, other than agricultural, not elsewhere classified) (hazardous substance, solid, not otherwise specified).

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Pyridaben P:1342

Use Type: Insecticide, Acaricide

CAS Number: 96489-71-3

Formula: $C_{19}H_{25}ClN_2OS$

Synonyms: 2-(*tert*-Butyl)-5-(4-*tert*-butyl-benzylthio)-4-chloropyridazin-3-(2*H*)one; 3(2*H*)-Pyridazinone, 4-chloro-2-(1,1-dimethylethyl)-5-[((4-(1,1-dimethylethyl) phenyl)methyl)thio]-

Trade Names: BAS®-300; NCI®-129; NESTER®; PYRAMITE®; SANMITE®

Chemical class: Pyridazinone

EPA/OPP PC Code: 129105

California DPR Chemical Code: 3959

HSDB Number: 7052

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: UR6149000

EC Number: 405-700-3 [*Annex I Index No.:* 613-149-00-7]

Uses: Used to control mites, whiteflies, leafhoppers and psyllids on fruit trees, vegetables, ornamentals and other field crops. Pyramite is a selective contact miticide/insecticide that controls pests in apple, grapes, pear, pistachio, stone fruits, and the tree nuts group[83].

U.S. Maximum Allowable Residue Levels for Pyridaben and its metabolites (2-tert-butyl-5-(4-(1-carboxy-1-methylethyl)benzylthio)-4-chloropyridazin-3(2H)- one) and (2-tert-butyl-5-(4-(1,1-dimethyl-2-hydroxyethyl)benzylthio-4-chloropyridazin-3(2H)-one) on animals, as follows [40 CFR 180.494(a)]: almond, hulls 4.0 ppm; apple 0.5 ppm; apple, wet pomace 0.75 ppm; cattle, fat 0.05 ppm; cattle, meat 0.05 ppm; cattle, meat byproducts 0.05 ppm; citrus 0.5 ppm; citrus, dried pulp 1.5 ppm; citrus, oil 10.0 ppm; goat, fat 0.05 ppm; goat, meat 0.05 ppm; goat, meat byproducts 0.05 ppm; grape 1.5 ppm; hog, fat 0.05 ppm; hog, meat 0.05 ppm; hog, meat byproducts 0.05 ppm; horse, fat 0.05 ppm; horse, meat 0.05 ppm; horse, meat byproducts 0.05 ppm; milk 0.01 ppm; nectarine 2.5 ppm; nut, tree crop group 0.05 ppm; peach 2.5 ppm; pear 0.75 ppm; pistachio 0.05 ppm; plum 2.5 ppm; prune 2.5 ppm; sheep, fat 0.05 ppm; sheep, meat 0.05 ppm; and sheep, meat byproducts 0.05 ppm. *Tolerances with regional registration, as defined in section 180.1(n) are established for residues of pyridaben* ***[40 CFR 180.494(a)]:*** in or on the following raw agricultural commodity: cranberry 0.5 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of noncarcinogenicity for humans.

EPA Oral reference dose (RfD) = 0.50 mg/kg/day. (NOAEL = 50 mg/kg/day, UF = 100) was selected for use in assessing acute dietary risk for the general population. EPA acute RfD of 0.13 mg/kg/day NOAEL = 13 mg/kg/day, uncertainty factor (UF) = 100 for use in assessing acute dietary risk for females 13 years and older[83].

Health Advisory: Developmental/Reproductive Toxin

Toxicity (oral) Category 3, CAUTION

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23/25; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

Description: White to tan crystalline solid or powder. Faint vanilla odor. Commercial product is available as an emulsifiable concentrate or wettable powder. Molecular weight = 364.92; Specific gravity (H_2O:1) = 1.19 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 109–112 °C; Vapor pressure = 2×10^{-7} mmHg @ 25 °C; Flash point = >200 °C; Autoignition temperature = 395 °C. Practically insoluble in water; solubility = <0.5 mg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Dust may form explosive mixture with air. Keep away from strong oxidizers.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >6.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, eyes, dermal absorption.

Harmful Effects and Symptoms

Short Term Exposure: May be fatal if inhaled. Do not breathe dust or spray mist. Avoid contact with skin. Causes moderate injury. Do not get in eyes or on clothing[83]. Absorbed through the unbroken skin. Harmful if swallowed. LD_{50} (oral, rat) = 600–1100 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May be a developmental/reproduction hazard.

Points of Attack: Reproductive system; DNA, testes, ovaries.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: For handling activities, use a dust/mist filtering respirator. or a NIOSH-approved respirator with an N, P, R, or HE prefilter[83]. *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Possible Human Carcinogen: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: For solids, *small spill*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. For a *large spill* evacuate downwind at least 100 meters/330 feet. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Keep combustibles (wood, paper, oil, etc.) away from spilled material. Do not allow water to get inside containers. *Small dry spill*: with clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Large spill*: dike far ahead of liquid spill for later disposal. Following product recovery, flush area with water. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Pyridate P:1344

Use Type: Herbicide

CAS Number: 55512-33-9

Formula: $C_{19}H_{23}ClN_2O_2S$

Synonyms: Carbonothioic acid, *O*-(6-chloro-3-phenyl-4-pyridizinyl) *S*-octyl ester; *O*-(6-Chloro-3-phenyl-4-pyridazinyl) *S*-octyl carbonothioate; 6-Chloro-3-phenylpridazin-4-yl-*S*-octyl-thiocarbonate; *O*-(6-Chloro-3-phenyl-4-pyridazinyl)-carbonothioic acid *S*-octyl ester; Fenpyrate; Octyl-*O*-(6-chloro-3-phenylpyridazin-4-yl)carbothioate (BSI)

Trade Names: CL-11344®; LENTAGRAN®; PIRATE®; ST-9551®; TOUGH®

Chemical class: Phenylpyridazine

EPA/OPP PC Code: 128834

California DPR Chemical Code: 3939

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: FG3880000

EC Number: 259-686-7 [*Annex I Index No.*: 607-232-00-7].

U.S. Maximum Allowable Residue Levels for Pyridate (40 CFR 180.462): brassica, head and stem, subgroup 5a, 0.03 ppm; ppm; cabbage 0.03 ppm; chickpea, seed 0.1 ppm; collards 0.03 ppm; corn, field, forage 0.03 ppm; corn, forage, grain, stover 0.03 ppm; peanut 0.03 ppm; peppermint, tops 0.2 ppm; spearmint, tops 0.2 ppm.

Regulatory Authority and Advisory Information:

Toxicity (oral) Category 3, CAUTION

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R20/22; R36/38; R41; R43; R50/53; safety phrases: S2; S24; S37; S60; S61 (see Appendix 1)

Description: Brown oily liquid. Molecular weight = 378.918; Specific gravity (H_2O:1) = 1.16 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 27–28 °C; Vapor pressure = 6×10^{-12} mmHg @ 25 °C; Flash point = 220 °C(cc). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Very slightly soluble in water; solubility = 85 ppm.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Routes of Entry: Dermal absorbtion, inhalation, ingestion, eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Harmful if swallowed. May cause irritation of the eyes, skin, and repsiratory tract. May cause skin sensitization. LD_{50} (oral, rat) = >2 g/kg; LD_{50} (dermal, rabbit) = >3 g/kg.

Long Term Exposure: Possible skin allergy.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: For handling activities, use a dust/mist filtering respirator. or a NIOSH-approved respirator with a N, P, R, or HE prefilter[83]. *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Possible Human Carcinogen: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, *small spill*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. For a *large spill* evacuate downwind at least 100 meters/330 feet. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Keep combustibles (wood, paper, oil, etc.) away from spilled material. Do not allow water to get inside containers. *Small dry spill*: with clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Large spill*: dike far ahead of liquid spill for later disposal. Following product recovery, flush area with water. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen, sulfur, and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Pyrimethanil P:1348

Use Type: Fungicide
CAS Number: 53112-28-0
Formula: $C_{12}H_{13}N_3$
Synonyms: 4,6-Dimethyl-*N*-phenyl-2-pyrimidinamine
Trade Names: SCALA®; SN 100309®
Chemical class: Pyrimidine
EPA/OPP PC Code: 288201
California DPR Chemical Code:

HSDB Number: 6916

UN/NA & ERG Number: UN3077 (solid)/171; UN3082(liquid)/171

EC Number: 414-2220-3

Uses: Used on grapes, strawberries, tomatoes, onions, beans, cucumbers, eggplant, and ornamental.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Health Advisory: Endocrine disruptor (S!)

Acute Oral Category: 2, WARNING

European/International Regulations: Hazard Symbol: N; risk phrases: R51/53; safety phrases: S2; S60 (see Appendix 1)

Description: Pyrimethanil is a white to light yellow crystalline powder. Commercial product is available as a brown emulsifiable concentrate. Molecular weight = 199.26; Specific gravity (H_2O:1) = 1.16 @ 20 °C; Freezing/Melting point = 93.3 °C; Vapor pressure = 2×10^{-5} mmHg @ 25 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Practically insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Strong oxidizers. When heated to decomposition, this material forms toxic oxides of nitrogen.

Determination in Water: Log K_{ow} = 2.5–2.8. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Harmful if inhaled. May cause skin, eye and respiratory tract irritation. May be harmful if swallowed or if absorbed through skin. LD_{50} (oral, rat) = >4 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Possible human carcinogen.

Points of Attack: May affect major organs.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material may be classified as Environmentally hazardous substances, liquid or solid, n.o.s. It usually falls in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. If this material cannot be disposed of according to label instructions, it may be dissolved or mixed with a combustible solvent and burned in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Pyriproxyfen P:1360

Use Type: Insect growth regulator, Insecticide, Veterinary medicine

CAS Number: 95737-68-1

Formula: $C_{20}H_{19}NO_3$

Synonyms: 2-[1-Methyl-2-(4-phenoxyphenoxy)ethoxy] pyridine; 4-Phenoxyphenyl (*RS*)-2-(2-pyridyloxy)propyl ether; Pyridine, 2-[1-methyl-2-(4-phenoxyphenoxy)ethoxy]-

Trade Names: ARCHER®; DALAR®; DISTANCE®; ESTEEM®; NYLAR®; S-9318®; S 31183®; SUMILARV® Pyriproxyfen

Chemical class: Unclassified

EPA/OPP PC Code: 129032

California DPR Chemical Code: 4019

HSDB Number: 7053

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: UT5804000

EC Number: 429-800-1

Uses: Pyriproxyfen is found in a number of household products as sprays, powders, baits, mists and shampoos for the control of fleas, ticks, mites and flying insects on pets, in the air, and in carpets and rugs. It's a larvicidal agent that mimics juvenile insect hormone.

U.S. Maximum Allowable Residue Levels for Pyriproxyfen [40 CFR 180.510(a)(1)]: in or on the following food commodities: acerola 0.10 ppm; almond, hulls 2.0 ppm; apple, wet pomace 0.8 ppm; brassica, head and stem, subgroup 5A: 0.70 ppm; brassica, leafy greens, subgroup 5B 2.0 ppm; bushberry subgroup 1.0 ppm; citrus, oil 20 ppm; citrus, dried pulp 2.0 ppm; cotton, gin byproducts 2.0 ppm; cottonseed 0.05 ppm; feijoa 0.10 ppm; fruit, citrus 0.3 ppm; fruit, pome 0.2 ppm; fruit, stone, group 1.0 ppm; guava 0.10 ppm; jaboticaba 0.10 ppm; juneberry 1.0 ppm; lingonbberry 1.0 ppm; logan 0.30 ppm; lychee 0.30 ppm; olive 1.0 ppm; olive, oil 2.0 ppm; passionfruit 0.10 ppm; pistachio 0.02 ppm; pulasan 0.30 ppm; rambutan 0.30 ppm; salal 1.0 ppm; Spanish lime 0.30 ppm; starfruit 0.10 ppm; tree nut 0.02 ppm; vegetable, cucurbit, group 9 0.10 ppm; vegetable, fruiting (except cucurbits) 0.2 ppm; walnut 0.02 ppm; and wax jambu 0.10 ppm. ***[40 CFR 180.510(a)(2)]:*** A tolerance of 0.10 ppm is established for all foods as a result of the proposed use of NYLAR in food handling establishments where food and food products are held, prepared, processed or served. Application is limited to space, general surface, spot, and/or crack and crevice treatment in food handling establishments where food and food products are held, processed, prepared and served. Space and general surface application may be used only when the facility is not in operation provided exposed food is covered or removed from the area being treated prior to application. Spot and/or crack and crevice treatment may be used while the facility is in operation provided exposed food is covered or removed from the area being treated prior to application. Food contact surfaces should be thoroughly washed with an effective cleaning compound and rinsed with potable water after use of the product. To assure safe use of this additive, its label and labeling shall conform to that registered with the U.S. Environmental Protection Agency, and shall be used in accordance with such label and labeling.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

EPA/OPP Oral reference dose (RfD) = 0.35 mg/kg/day. This RfD is based on a NOAEL of 35.1 mg/kg/day and an uncertainty factor (UF) of 100. The NOAEL was established from the combined chronic feeding/oncogenicity study in rats where the the LOAEL was 3,000 ppm, based on a 16.9% decrease in body weight gain in females when compared to controls[83].

Acute Oral Category: 4, Caution

European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: Gray to white crystalline solid or powder. Also described as a pale yellow, waxy solid or liquid. Commercial product is available as an emulsifiable concentrate or wettable powders. Molecular weight = 321.37; Specific gravity (H_2O:1) = 1.23 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 49.7 °C; Vapor pressure = 1×10^{-5} mmHg @ 25 °C; Flash point = >90 °C. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: This material is combustible; dust in air may form an explosive mixture. Reacts with strong acids and strong oxidizers. When heated to decomposition, this material forms toxic oxides of nitrogen and carbon monoxide.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Dermal contact, ingestion, eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the eyes, skin and respiratory tract. Inhalation may cause mucous membrane and respiratory irritation. Ingestion may cause stomach irritation, nausea, cramps and vomiting. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Possible blood and liver toxin.

Points of Attack: Liver, blood.

Medical Surveillance: Complete blood count. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Possible Human Carcinogen: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: For solids, *small spill*, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. For a *large spill* evacuate downwind at least 100 meters/330 feet. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Keep combustibles (wood, paper, oil, etc.) away from spilled material. Do not allow water to get inside containers. *Small dry spill*: With clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Large spill*: Dike far ahead of liquid spill for later disposal. Following product recovery, flush area with water. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are

expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

---

* Substance reported to cause eye irritation or damage; may require eye protection.

* *Note:* When phosphine burns it produces a dense white cloud of phosphorus pentoxide (P_2O_5) fume. This fume is a severe respiratory tract irritant due to the rapid formation of orthophosphoric acid(H_3PO_4) on contact with water.

* *Note* (U.S. EPA): Pyrethrum is the crude extract containing all of the pyrethrins and has nothing to do *per se* with the insecticidal activity.

Q

Quintozene Q:0110

Use Type: Soil fungicide, Nematicide, Seed treatment
CAS Number: 82-68-8
Formula: $C_6Cl_5NO_2$
Synonyms: Benzene, pentachloronitro-; NCI-C00419; Nitropentachlorobenzene; Olipsan; Olpisan; PCNB; Pentachloronitrobenzene; Quinosan; Quintocene; Quintoceno (Spanish)
Trade Names: (EPA lists 290 active and canceled or transferred products) AVICOL (PESTICIDE)®; BOTRILEX®; BLOCKER 4F®; BOTRILEX®; BRASSICOL®; BRASSICOL EARTHCIDE®; BRASSICOL 75®; BRASSICOL SUPER®; CHINOZAN®; EARTHCIDE®; FARTOX®; FOLOSAN®; FOMAC 2®; FUNGICHLOR®; GC 3944-3-4®; KOBU®; KOBUTOL®; KODIAK A-T FUNGICIDE®; KP 2®; MARISAN FORTE®; MEFENOXAM®; PARFLO®; PENTAGEN®; PHOMASAN®; PKhNB®; RTU 1010®; SANICLOR 30®; TERRACHLOR®; TERRACLOR®; TERRACLOR 30G®; TERRA-COAT®; TERRAFUN®; TERRAZAN®; TILCAREX®; TRIPCNB®; TRIQUINTAM®; TRITISAN®; TUBERGRAN®; TURFCIDE®; VITAVAX® Quintozene
Chemical class: Substituted benzene; Chlorophenyl
EPA/OPP PC Code: 056502
California DPR Chemical Code: 464
HSDB Number: 1749 as Pentachloronitrobenzene
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: DA6650000
EC Number: 201-435-0 [*Annex I Index No.:* 609-043-00-5]
Uses: Quintozene, the common name for PCNB or pentachlkoronitrobenzene, is an organochlorine fungicide used as a seed dressing or soil treatment to control a wide range of fungi species in such crops as potatoes, wheat, onions, lettuce, tomatoes, tulips, garlic, and others. Depending on the producer and the manufacturing procedure, PCNB impurities can include hexachlorobenzene, pentachlorobenzene, and tetrachloronitrobenzene. The fungicide is often used in combination with insecticides and fungicides including carbaryl, imazalil, tridimenol, etridiazole, and fuberidazole. It is available as a dustable or wettable powder, in granular form, emulsifiable concentrate, and seed treatment. Not approved for use in EU countries[115]. Registered for use in the U.S. and Canada. There are more than 35 global suppliers[97].
U.S. Maximum Allowable Residue Levels for tolerance of the fungicide Pentachloronitrobenzene/Quintozene is established for (N) negligible residues [40 CFR 180.291(a)] in or on the raw agricultural commodity cotton, undelinted seed 0.1 ppm. [40 CFR 180.291(b)]: Collards 0.2 ppm; Kale 0.2 ppm; Mustard greens 0.2 ppm. ***[40 CFR 180.319]:*** While petitions for tolerances for negligible residues are pending and until action is completed on these petitions, interim tolerances are established for residues of the listed pesticide chemicals in or on the following raw agricultural commodities: Substance: pentachloronitrobenzene; Uses: fungicide; Tolerance in parts per million: 1.0; Raw agricultural commodity: peanut. (N) = negligible amount of residue.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group C, Possible human carcinogen; IARC: Group 3, unclassifiable as to carcinogenicity to humans; ACGIH A4, not classified as a human carcinogen
Health Advisory: Mutagen, Developmental/Reproductive Toxin
Acute Oral Category: 3, CAUTION
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
EPA Hazardous Waste Number (RCRA No.): U185
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.055; Non-wastewater (mg/kg), 4.8
RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL *u*g/L): 8270(10)
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R43; R50/53; safety phrases: S2; S13; S24; S37; S60; S61 (see Appendix 1)
Description: Quintozene is a colorless to cream-colored crystalline material. Technical-grade PCNB contains an average of 97.8% PCNB, 1.8% hexachlorobenzene (HCB), 0.4% 2,3,4,5-tetrachloronitrobenzene (TCNB), and <0.1% pentachlorobenzene. Musty camphor-like odor. Molecular weight = 295.34; Specific gravity (H_2O:1) = 1.718 @ 25 °C; Boiling point = 327.78 °C; Freezing/Melting point = 146.11 °C; Vapor pressure = 1.3×10^{-2} mmHg @ 25 °C; Flash point = 160 °C; LEL (Lower Explosive Limit) = 4200 ppm. Practically insoluble in water; solubility = <1 mg/mL @ 22.2 °C
Incompatibilities: This material may be combustible and the dust may form an explosive mixture with air. Reacts with alkalies. When heated to decomposition, this material forms toxic oxides of nitrogen and fumes of chlorine
Permissible Exposure Limits in Air:
Conversion factor(s): 1 mg/m^3 = 0.08 ppm; 1 ppm = 12.3 mg/^{3}
ACGIH TLV®[1]: 0.5 mg/m^3 TWA; A4 not classifiable as a human carcinogen.
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 1.5 mg/m^3
PAC-2: 10 mg/m^3
PAC-3: 62 mg/m^3

Permissible Concentration in Water: Federal Drinking Water Guidelines: 0.9 ppb[93]. State Drinking Water Guidelines: California 20 μg/L; Maine 2 μg/L; Florida 15 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and eye irritation, sensitization with erythema, itching and edema. May cause conjunctivitis and corneal injury.

LD_{50} (oral, rat) = <1200 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause tumors. May cause cancer. Animal studies: liver toxin. May cause skin sensitization. May cause conjunctivitis and corneal injury.

Points of Attack: Liver, skin, eyes.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Liver function tests.

First Aid: *Dermal contact:* Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help ensure removal. Isolate contaminated clothing when removed to prevent contact by others. *Eye contact:* Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20–30 minutes. Seek medical attention. *Inhalation:* Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. *Ingestion:* If convulsions are not present, give a glass or two of water or milk to dilute the substance. Ensure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. If this chemical makes direct contact with your gloves, or if a tear, puncture or hole develops, replace them at once. Recommended glove materials: PVA, Edmont Model No. 25-545; Thickness: 0.33 mm; Breakthrough time: 240 min; Viton, North Model No. F-091; Thickness 0.24 mm; Breakthrough time: 240 min; Silvershield[88]. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® Suit Fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where there is potential for exposure to this chemical above 0.5 mg/m^3, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong oxidizers. Where possible, automatically transfer material from drums or other storage containers to process containers. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of this chemical should be grounded and bonded. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 5000 (estimate).

Fire Extinguishing: Hazardous decomposition includes nitrogen oxides and hydrogen chloride. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal.

Quizalofop-ethyl Q:0130

Use Type: Herbicide

CAS Number: 76578-14-8

Formula: $C_{19}H_{17}ClN_2O_4$ (same for *p*-isomer)

Synonyms: Caswell No. 215D; 2-[4-((6-Chloro-2-quinoxalinyl)oxy)phenoxy]ethyl propionate; 2-[4-((6-Chloro-2-quinoxalinyl)oxy)phenoxy]propionic acid, ethyl ester; Ethyl 2-[4-(6-chloro-2-quinoxalyloxy)phenoxy]propionate; NCI-C99983; Propanoic acid, 2-[4-((6-chloro-2-quinoxalinyl)oxy)phenoxy]-, ethyl ester; Quinofop-ethyl; Xylofop-ethyl

Trade Names: ASSURE®[C]; DPX-Y 6202®; FBC®; 32197; INY-6202; MATADOR®; LEOPARD EC (*p*-isomer); MON® 78746; NC-302®; PILOT®; SUPER MATADOR (*p*-isomer); TARGA®; ULTRA TARGA (*p*-isomer)

Chemical class: Chlorophenoxy; Aryloxyphenoxypropionate

EPA/OPP PC Code: 128711; (128201 old EPA code number)

California DPR Chemical Code: 2226

HSDB Number: 6990 (none for *p*-isomer)

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: GW71910000

Uses: Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Quizalofop-Ethyl and quizalofop ethyl (ethyl-2-[4-(6-chloroquinoxalin-2-yloxy)phenoxy]propanoate), all expressed as Quizaolgop Ethyl [40CFR 180.441(a)]: in or on the following agricultural commodities: soybean flour 0.5 ppm; soybean hulls 0.02 ppm; soybean meal 0.5 ppm; soybean soapstock 1.0 ppm; soybeans 0.05 ppm; cattle, fat 0.05 ppm; cattle, meat 0.02 ppm; cattle, meat byproducts 0.05 ppm; eggs 0.02 ppm; goats, fat 0.05 ppm; goats, meat 0.02 ppm; goats, meat byproducts 0.05 ppm; hogs, fat 0.05 ppm; hogs, meat 0.02 ppm; hogs, meat byproducts 0.05 ppm; horses, fat 0.05 ppm; horses, meat 0.02 ppm; horses, meat byproducts 0.05 ppm; milk 0.01 ppm; milk, fat 0.05 ppm; poultry, fat 0.05 ppm; poultry, meat 0.02 ppm; poultry, meat byproducts 0.05 ppm; sheep, fat 0.05 ppm; sheep, meat 0.02 ppm; sheep, meat byproducts 0.05 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

California Proposition 65 Chemical: Male reproductive toxin (12/24/1999)

Health Advisory: Developmental/Developmental/Reproductive Toxin (male, TRI); Endocrine disruptor (S!)

Acute Oral Category: 3, CAUTION

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) (severe)

Description: White crystalline solid or powder. Commercial product is available as an emulsifiable concentrate. Practically insoluble in water; solubility = $<2\times10^{-8}$ ppm. Molecular weight = 372.78; 372.80 (*p*-isomer); Vapor pressure = 3×10^{-7} mmHg @ 20 °C. Specific gravity (H_2O:1) = 1.35 @ 20 °C; Boiling point = 92 °C; Freezing/Melting point = 92 °C; 75 °C (*p*-isomer); Vapor pressure = 3×10^{-7} mmHg @ 25 °C; Practically insoluble in water; solubility = 0.5 mg/L @ 25 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Determination in Water: Log K_{ow} = >4.0 (both isomers). Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, absorbtion through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. LD_{50} (oral, rat) = 1500 mg/kg; 1200 mg/kg (*p*-isomer); LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Workers exposed to chlorophenoxy compounds over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney. A possible liver toxin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Comprehensive physical examination with emphasis on the genito-urinary tract including testicle size and consistency in males. Semen analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eyewear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000): (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes fluorine and nitrogen oxides. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

California DPR Chemical Code: 2119
HSDB Number: 1516
UN/NA & ERG Number: UN3082 (liquid)/151; UN3352 (liquid)/151; UN3349 (solid)/151
RTECS® Number: GZ1310000
EC Number: 233-940-7 [*Annex I Index No.:*613-060-00-3]
Uses: Resmethrin is currently used for mosquito control (by aerial application) in the USA, and may can also be used in greenhoused to control white fly. Resmethrin is a synthetic Type I pyrethroid insecticide registered for control of insects in residential, commercial and industrial settings, and in animal living areas. Resmethrin is also registered for use in food-handling establishments and as a restricted use pesticide when used in ULV spray to control adult mosquitoes in the interest of public health[83]. Restricted Use Pesticide (RUP) when formulated for use in mosquito abatement and pest control treatments at non-agricultural sites. Restricted due to extreme fish toxicity. Not approved for use in EU countries[115].
U.S. Maximum Allowable Residue Levels for Resmethrin [40 CFR 180.525]: in or on food commodities at 3.0 ppm resulting from use of the insecticide in food handling and storage areas as a space concentration for spot/or crack and crevice treatment and shall be limited to a maximum of 3.00 % of the active ingredient by weight, and as a space treatment shall be limited to a maximum of 0.5 fluid ounce of 3.0 % active ingredient by weight/1000 ft^3 of space provided that the food is removed or covered prior to such use. To assure safe use of the additive, its label and labeling shall conform to that registered with the U.S. Environmental Protection Agency, and shall be used in accordance with such label and labeling.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans
California Proposition 65 Chemical: Cancer (7/1/2008); Developmental/Reproductive toxin (7/1/2008).
Health Advisory: Endocrine disruptor (S!); Developmental/Reproductive Toxin
Toxicity (oral) Category 3, CAUTION
EPA Oral reference dose (RfD) = 0.03 mg/kg/day
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: Off-white to tan waxy solid or colorless crystals. Chrysanthemum-like odor. Commercial products may be dissolved in flammable organic solvents. Molecular weight = 338.48 (all isomers); Specific gravity (H_2O:1) = 0.96 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 56–57 °C; Vapor pressure = 1×10^{-8} mmHg @ 20 °C; Flash point = 129 °C. Henry's Law constant = 1.3×10^{-7} atm-m^3/mol @ 25 °C (est)[83]. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Decomposed by air, light, alkaline media, and temperatures >175 °C. May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air:

NIOSH[2] IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. (pyrethrum).

Permissible Concentration in Water: EPA Acceptable Daily Intake (ADI) = 0.1250 mg/kg/day.

Determination in Water: Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). Potential thyroid toxin. LD_{50} (oral, rat) = >2 g/kg; LD_{50} (dermal, rat) = >3 g/kg.

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, central nervous system; thyroid.

Medical Surveillance: Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m³:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m³:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165. Follow recommendations for the disposal of pesticides and pesticide containers[83]. Bury in non-crop land away from water. It would be better to mix the product with lime. Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amount of combustible material. Recommendable methods: Hydrolysis, landfill, incineration, and open burning. *Not recommendable method*: Discharge to sewer. Mix with sawdust and burn at a remote place[UN].

Rimsulfuron R:0135

Use Type: Herbicide
CAS Number: 122931-48-0
Formula: $C_{14}H_{17}N_5O_7S_2$
Synonyms: *N*-[(4,6-Dimethoxypyrimidin-2-yl)aminocarbonyl]-3-(ethylsulfonyl)-2-pyridinesulfonamide; 1-(4,6-Dimethoxypyrimidin-2-yl)-3-(3-ethylsulfonyl-2-pyridylsulfonyl)urea; *N*-[((4,6-Dimethoxy-2-pyrimidinyl) amino)carbonyl]-3-(ethylsulfonyl)-2-pyridinesulfonamide;2-Pyridinesulfonamide,*N*-[((4,6-dimethoxy-2-pyrimidinyl) amino)carbonyl]-3-(ethylsulfonyl)-
Trade Names: ACCENT®; BASIS® (rimsulfuron + thifensulfuron methyl); DPX-E9636®; DPX 79406® (nicosulfuron + rimsulfuron); Matrix® (nicosulfuron + rimsulfuron); SHADEOUT®; STEADFAST®, (nicosulfuron + rimsulfuron); TRANXIT®
Chemical class: Sulfonylurea
EPA/OPP PC Code: 129009; (129024 old EPA code number)
California DPR Chemical Code: 3835
HSDB Number: 7947
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: UT7900000
Uses: For controlling broadleaf weeds. Registered for use in the U.S. and Canada. A U.S. EPA restricted Use Pesticide (RUP) for some formulations. Registered for use in some EU countries[115].

U.S. Maximum Allowable Residue Levels for Rimsulfuron [40 CFR 180.478]: almond, hulls 0.09 ppm; corn, field, forage 0.4 ppm; corn, field, grain 0.1 ppm; corn, field, stover 2.5 ppm; fruit, citrus, group 10, 0.01 ppm; fruit, pome, group 11, 0.01 ppm; fruit, stone, group 12, 0.01 ppm; grain, aspirated fractions 4.5 ppm; grape 0.01 ppm; nut, tree, group 14, 0.01 ppm; pistachio 0.01 ppm; potato 0.1 ppm; soybean, forage 0.25 ppm; soybean, hay 1.2 ppm; soybean, hulls 0.04 ppm; soybean, seed 0.01 ppm; tomato 0.05 ppm.

Regulatory Authority and Advisory Information: Carcinogenicity: IARC and NTP have not classified the sulfonylurea herbicides with respect to human carcinogenicity. U.S. EPA considers the sulfonylureas not classifiable, not rated, or noncarcinogenic, *with the exception of* sulfosulfuron (141776-32-1), a likely human carcinogen, and triflusulfuron-methyl (126535-15-7), a possible human carcinogen[96].
Toxicity (oral) Category 4, Caution
Health Advisory: Mutagen
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
European/International Regulations: Hazard Symbol: N; risk phrases: R20; R53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: Colorless crystalline solid or powder. Molecular weight = 432.43; Specific gravity (H_2O:1) = 0.79 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 177 °C; Vapor pressure = 1×10^{-7} mmHg @ 25 °C; Henry's Law constant = 6.42×10^{-10} atm-m^3/mol @ 25 °C (est)[83]. Soluble in water; solubility = 8 mg/L @ 25 °C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Determination in Water: Log K_{ow} = Negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation; dermal and/or eye contact. Passes through the unbroken skin.

Harmful Effects and Symptoms

Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: A possible mutagen. Possible liver and kidney toxin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or from exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl,[41] primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96]. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Rotenone R:0150

Use Type: Insecticide, Acaracide, Veterinary medicine

CAS Number: 83-79-4

Formula: $C_{23}H_{22}O_6$

Synonyms: (1)Benzopyrano(3,4-b)furo(2,3-H)(1) benzopyrano-6(6a*H*)-one,1,2,12,12a-tetrahydro-8,9-dimethoxy-2-(1-methylethenyl)-, [2R(-2α,6aα,12aα)]; ENT 133; NCI-C55210; Hydrogenated rotenone; Rotenon; Rotenona (Spanish); Rotenone, hydrogenated; [2r-(2a,6a_,12a_)]-1,2,12,12a-Tetrahydro-8,9-dimethoxy-2-(1-methylethenyl)[1]-benzopyrano[3,4-b]furo[2,3-H][1]-benzopyran-6(6a*H*)one

Trade Names: ACME® Rotenone; AROL GORDON DUST®; BARBASCO®; BONIDE CUKE AND MELON DUST®; CENOL GARDEN DUST®; CHEM FISH®; CHEM-MITE®; CUBE®; CUBE EXTRACT®; CUBE-PULVER®; CUBEROL®; CUBE ROOT®; CUBOR®; CUREX FLEA DUSTER®; DACTINOL®; DERIL®; DERRIN®; DERRIS®; DRI-KIL®; ENT-133®; EXTRAX®; FISH-TOX®; GREEN CROSS WARBLE POWDER®; HAIARI®; LIQUID DERRIS®; MEXIDE®; NICOULINE®; NOXFIRE®; NOXFISH®; PARADERIL®; POWDER AND ROOT®; PRENTOX®; PRO-NOX FISH®; RO-KO®; RONONE®; ROTACIDE®; ROTEFIVE®; ROTEFOUR®; ROTESSENOL®; SINID®; TOX-R®; TUBATOXIN®

Chemical class: Botanical; often formulated with pyrethrins

EPA/OPP PC Code: 071003

California DPR Chemical Code: 518

HSDB Number: 1762

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: DJ2800000

EC Number: 201-501-9 [*Annex I Index No.:* 650-005-00-2]

Uses: The use of rotenone as a pesticide to kill invasive fish species is currently the only allowable use of this pesticide. Rotenone is a selective, nonspecific botanical insecticide with some acaricidal properties, and has been used in agriculture to control insects on vine fruit, flowers and vegetables. Registered for use in the U.S.A U.S. EPA restricted Use Pesticide (RUP) due to acute inhalation, acute oral, and aquatic toxicity. Agricultural and residential uses and all food uses were voluntarily cancelled in 2006[83]. In 2006, registrants requested voluntarily cancellation of all livestock, residential and home owner uses, domestic pet uses, and all other uses except for pesticide uses. In 2011 the use of this pesticide chemical was linked to Parkinson's disease. Not listed for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Rotenone [40 CFR 180.905]: This pesticide is not exempted from the requirement of a tolerance when applied to a crop at the time of or after harvest.

Human toxicity (long-term)[101]: High–28 ppb, Health Advisory.

Fish toxicity (threshold)[101]: High–1.4 ppb, MATC (Maximum Acceptable Toxicant Concentration).

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer
Acute Oral Category: 1, DANGER-Poison
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
European/International Regulations: Hazard Symbol: T, N; risk phrases: R25; R36/37/38; R50/53; safety phrases: S1/2; S22; S24/25; S36; S45; S60; S61 (see Appendix 1)

Description: Rotenone is a colorless to red odorless crystalline solid; a white crystalline solid when pure; oxidation will cause yellowing to bright red coloring. Commercial product can be a soluble concentrate that may be mixed with water and used as a spray. Odorless. Molecular weight = 394.43; Specific gravity (H_2O:1) = 1.27 @ 20 °C; Boiling point = (decomposes below BP); 210–220 °C @ 0.5 mm; Freezing/Melting point = 165.6 °C; 176 °C; Vapor pressure = 8×10^{-4} mmHg @ 20 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 10–12 ppm @ 100 °C. Henry's Law constant = 1.12×10^{-13} atm-m³/mol @ 25 °C (est)[83]. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Strong oxidizers and alkalis.

Permissible Exposure Limits in Air:
NIOSH IDLH: 2500 mg/m³
OSHA PEL: 5 mg/m³ TWA
NIOSH REL: 5 mg/m³ TWA
ACGIH TLV®[1]: 5 mg/m³ TWA; not classifiable as a human carcinogen
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 5 mg/m³
PAC-2: 5 mg/m³
PAC-3: 160 mg/m³
DFG MAK: [skin]

Determination in Air: Filter; CH_3CN; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5007[18]. NIOSH Method 5007. Analyte: Rotenone. Matrix: Air. Sampler: Filter (1 µm polytetrafluoroethylene membrane). Flow Rate: 1 to 3 liters/min. Sample Size: 100 L. Shipment: Routine. Sample Stability: At least 7 days @ 25 °C in dark.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 30 ppb[93]. State Drinking Water Guidelines: Maine 28 µg/L; Florida 28 µg/L.

Determination in Water: Log K_{ow} = >4.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms. Very toxic to fish[83].

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Eye contact can cause severe irritation and permanent damage. Exposure can cause numbness of the mucous membrane; nausea, vomiting, abdominal pain; muscular tremors, incoherence, clonic convulsions; stupor. May cause a severe drop in blood sugar. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. LD_{50} (oral, rat) = <50 mg/kg; LD_{50} (dermal, rat) = <2 g/kg.

Long Term Exposure: May cause tumors. May affect the liver and kidneys. There is limited evidence that rotenone causes cancer of the liver and breast in animals, and damage to the developing fetus. There is limited evidence that this chemical is stored in breast milk and passed on to nursing infants. Repeated dermal contact can cause severe rash. In 2011 this chemical and paraquat were linked to the potential for Parkinson's disease.

Points of Attack: Central nervous system, eyes, respiratory system; liver and kidney.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Lung function tests. Blood sugar. Liver or function test.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >5 mg/m^3 NIOSH: *Up to 50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator with organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *Up to 125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any powered air-purifying respirator with an organic vapor cartridge in combination with a high-efficiency particulate filter). *Up to 250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting face-piece and is operated in a continuous-flow mode); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 2,500 mg/m^3:* Sa: Pd,Pp (APF = 1000) (any supplied-air respirator operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a refrigerator under an inert atmosphere and protect from prolonged exposure to light. Incompatible with oxidizers, chlorates nitrates, peroxides and alkalis. Where possible, automatically transfer material from drums or other storage containers to process containers. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust, then transfer material to a suitable container. Use absorbent dampened with alcohol to pick up remaining material. Wash surfaces well with soap and water. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 10000 (estimate).

Fire Extinguishing: This chemical is a combustible solid; flammable if pre-heated. Hazardous decomposition includes oxides of carbon, are released in fire. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Rotenone is decomposed by light and alkali to less insecticidal products. It is readily detoxified by the action of light and air. It is also detoxified by heating; 2 hours @ 100 °C results in 76% decomposition. Oxidation products are probably nontoxic. Incineration has been recommended as a disposal procedure. Burial with lime would also present minimal danger to the environment. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

S

Sethoxydim S:0205

Use Type: Herbicide
CAS Number: 74051-80-2
Formula: $C_{17}H_{29}NO_3S$
Synonyms: Caswell No. 072A; 2-Cyclohexen-1-one, 2-[1-(ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-;2-[1-(Ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxyl-2-cyclohexen-1-one; Cyethoxydim; (±)-2-[1-(ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexen-1-one; 2-[1-(Ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexen-1-one; 2-[1-(Ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxyl-2-cyclohexen-1-one;(*ZE*)-2-(1-Ethoxyiminobutyl)-5-[2-(ethylthio)propyl]-3-hydroxycyclohex-2-enone; Sethoxydim cyclohexanone herbicide
Trade Names: ALJADEN®; ALLOXOL® S; ARD 34/02®; BASF 9052®; CHECKMATE®; CONCLUDE®; EXPAND®; FERVINAL®; GRASIDIM®; GRASSOUT®; NABU®; NP-55®; POAST®; TRITEX-EXTRA®; ULTIMA®; VANTAGE®
Chemical class: Cyclohexadione; Cyclohexenone
EPA/OPP PC Code: 121001
California DPR Chemical Code: 2177
HSDB Number: 7342
UN/NA & ERG Number: UN3082 (liquid)/171
RTECS® Number: GW7191000
EC Number: 277-682-3
Uses: A selective post-emergence herbicide used to control annual and perennial grass weeds in broad-leaved vegetables, field crops, fruit, ornamentals and indoor applications. Not approved for use in EU countries[115]. Registered for use in the U.S. and Canada.
U.S. Maximum Allowable Residue Levels for Sethoxydim and its motabolites containing the 2-cyclohexen-1-one moiety (calculated as the herbicide) [40 CFR 180.412(a)]: in or on the following commodities: alfalfa, forage, 40.0 ppm; alfalfa, hay 40.0 ppm; almond, hulls 2.0 ppm; apple, dry pomace 0.8 ppm; apple, wet pomace 0.8 ppm; apricot 0.2 ppm; asparagus 4.0 ppm; bean, dry, seed 20.0 ppm; bean, forage 15.0 ppm; bean, hay 50.0 ppm; bean, succulent 15.0 ppm; beet, garden 1.0 ppm; beet, sugar, molasses 10.0 ppm; beet, sugar, roots 1.0 ppm; beet, sugar, tops 3.0 ppm; blueberry 4.0 ppm; caneberry subgroup 13A, 5.0 ppm; canola/rapeseed 35.0 ppm; canola/rapeseed, meal 40.0 ppm; carrot, roots 1.0 ppm; cattle, fat 0.2 ppm; cattle, meat byproducts 1.0 ppm; cattle, meat 0.2 ppm; cherry, sweet, 0.2 ppm; cherry, tart 0.2 ppm; citrus, molasses 1.5 ppm; citrus, dried pulp 1.5 ppm; clover, forage 35.0 ppm; clover, hay 50.0 ppm; coriander 4.0 ppm; corn, field, grain 0.5 ppm; corn fodder 2.5 ppm; corn forage 2.0 ppm; corn, sweet, forage 3.0 ppm; corn, sweet, kernel plus cob with husks removed 0.4 ppm; corn, sweet stover 3.5 ppm; cotton, seed, soapstock 15 ppm; cotton, undelinted seed 5.0 ppm; cranberry 2.0 ppm; egg 2.0 ppm; flax, meal 7 ppm; flax, seed 5.0 ppm; flax, straw 2.0 ppm; fruit, citrus 0.5 ppm; fruit, pome 0.2 ppm; goat, fat 0.2 ppm; goat, meat byproducts 1.0 ppm; goat, meat 0.2 ppm; grape 1.0 ppm; grape, raisin 2.0 ppm; hog, fat 0.2 ppm; hog, meat byproducts 1.0 ppm; hog, meat 0.2 ppm; horseradish 4.0 ppm; horse, fat 0.2 ppm; horse, meat byproducts 1.0 ppm; horse, meat 0.2 ppm; juneberry 5.0 ppm; lentil, seed 30.0 ppm; lingonberry 5.0 ppm; milk 0.5 ppm; nectarine 0.2 ppm; peach 0.2 ppm; peanut 25.0 ppm; peanut, soapstock 75.0 ppm; pea, dry, seed 40.0 ppm; pea, field vines 20.0 ppm; pea, field, hay 40.0 ppm; pea, succulent 10.0 ppm; peppermint, tops (stems and leaves) 30.0 ppm; pistachio 0.2 ppm; potato flakes 8.0 ppm; potato granules 8.0 ppm; potato waste, processed (wet and dry) 8.0 ppm; poultry, fat 0.2 ppm; poultry, meat byproducts 2.0 ppm; poultry, meat 0.2 ppm; salal, 5.0 ppm; safflower 15.0 ppm; sheep, fat 0.2 ppm; sheep, meat byproducts 1.0 ppm; sheep, meat 0.2 ppm; soybean, hay 10.0 ppm; soybean 16.0 ppm; spearmint, tops (stems and leaves) 30.0 ppm; strawberry 10.0 ppm; sunflower meal 20.0 ppm; sunflower, seed 7.0 ppm; tomato, concentrated products 24 ppm; tomato, dry pomace 12.0 ppm; tree nut 0.2 ppm; tuberous and corm vegetable crop subgroup 4.0 ppm; vegetable, brassica, leafy, group 5, 5.0 ppm; vegetable, bulb, group 3, 1.0 ppm; vegetable, cucurbit, group 9, 4.0 ppm; vegetable, fruiting 4.0 ppm; and vegetable, leafy, except brassica, group 4, 4.0 ppm. ***Tolerances with regional registration, as defined in section 180.1(n) are established for the combined residues and its metabolites containing the 2-cyclohexen-1-one moiety (calculated as the herbicide)*** **[***40 CFR 180.412(c)***]***:* in or on the following commodities: artichoke, globe, 5.0 ppm and rhubarb, 0.3 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans
Toxicity (oral) Category 4, CAUTION
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
Description: Amber color, oily liquid. Odorless. Flammable. Commercial product is available as an emulsifiable concentrate. Molecular weight = 327.53; Specific gravity (H_2O:1) = 1.04 @ 20 °C; Vapor pressure = 1.6×10^{-7} mmHg @ 20 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Highly soluble in water. Henry's Law constant = 2.2×10^{-11} atm-m^3/mol @ 25 °C (est)[83]. Highly soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with strong acids, oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc.). Contact with oxidizers may cause fire and explosions. Incompatible with all copper compounds.

Permissible Concentration in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 9.6 mg/m^3
PAC-2: 110 mg/m^3
PAC-3: 630 mg/m^3

Determination in Water: Log K_{ow} = >4.0 @ (pH = 5). Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Ingestion, inhalation, dermal and/or eye contact. May be absorbed through the unbroken skin.

Harmful Effects and Symptoms

Short Term Exposure: Contact may burn eyes, skin, and respiratory tract. Toxic if ingested. If swallowed, this chemical may cause pulmonary edema and other lung damage. LD_{50} (oral, rat) = 3145 mg/kg [FR48128(8/5/1998)]; LD_{50} (dermal, rat) = >5 g/kg[9].

Long Term Exposure: May cause liver, thyroid, or bone marrow damage.

Points of Attack: liver, thyroid, lungs, bone marrow.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develops. Complete blood count. Thyroid and liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: SCBA >9.6 mg/m^3. Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Shipping: This material may be classified as environmentally hazardous substances, solid or liquid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. Small spills: absorb with sand or other noncombustible absorbent material and place into containers for later disposal. Small dry spills: with clean shovel place material into clean, dry container and cover; move containers from spill area. Large spills: dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen, sulfur and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Siduron S:0208

Use Type: Herbicide

CAS Number: 1982-49-6

Formula: $C_{14}H_{20}N_2O$

Synonyms: 1-(2-Methylcyclohexyl)-3-phenylurea; *N*-(2-Methylcyclohexyl)-*N'*-phenylurea; Urea, *N*-(2-methylcyclohexyl)-*N'*-phenyl-

Trade Names: GREENFIELD®; GRO-TONE®[C]; H-1318®; TREY®; TUPERSAN®

Chemical class: Urea

EPA/OPP PC Code: 035509

California DPR Chemical Code: 603

HSDB Number: 1764

UN/NA & ERG Number: UN3077 (solid)/171; UN3082(liquid)/171

RTECS® Number: YT7350000

EC Number: 217-844-2

Uses: A pre-emergence herbicide used to control annual grasses, e.g., crabgrass, foxtail, and barnyard grass. Used on newly seeded or established turf and lawn grasses and as pre-emergence treatment to bare soil following spring seeding. Not listed for use in EU countries[115]. Registered for use in the U.S.

Regulatory Authority and Advisory Information:

Health Advisory: Mutagen

Toxicity (oral) Category 4, Caution

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R36/37/38; R52/53; safety phrases: S2; S26; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Colorless or white crystalline solid or powder. Odorless. Commercial product is available as an emulsifiable concentrate. Molecular weight = 232.33; Specific gravity (H_2O:1) = 1.08 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 135 °C; Vapor pressure = 4×10^{-9} mmHg @ 20 °C. Low solubility in water; solubility = 18.3 ppm @ 25 °C. Henry's Law constant = 6.8×10^{-11} atm-m^3/mol @ 25 °C (est)[83]. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in marine organisms.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Dermal contact may cause severe irritation or burns. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause skin sensitization. May cause reproductive and fetal effects.

Points of Attack: Skin. Reproductive cells.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]

Storage: Color Code-Blue: Health Hazard/Poison. Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, n. o. s. It usually falls in Hazard Class 9.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Do not touch spilled material; stop leak if you can do it without risk. Use water spray to reduce vapors. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. *Large spills:* dike far ahead of spill for later disposal. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters /0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incinerate in a unit with effluent gas scrubbing. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Simazine S:0310

Use Type: Pre-emergence herbicide, Algaecide

CAS Number: 122-34-9

Formula: $C_7H_{12}ClN_5$

Synonyms: A 2079; AI3-51142; 2,4-Bis(ethylamino)-6-chloro-*s*-triazine; Caswell No. 740; 2-Chloro-4,6-bis (ethylamino)-1,3,5-triazine; 1-Chloro-3,5-bis(ethylamino)-2,4,6-triazine; 2-Chloro-4,6-bis(ethylamino)-*s*-triazine; 6-Chloro-*N,N*'-diethyl-1,3,5-triazine-2,4-diamine; 6-Chloro-*N*2,*N*4-diethyl-1,3,5-triazine-2,4-diamine; 6-Chloro-*N,N*'-diethyl-1,3,5-triazine-2,4-diyldiamine; NSC 25999; Simazina (Spanish); *s*-Triazine, 2-chloro-4,6-bis(ethylamino)-; 1,3,5-Triazine-2,4-diamine, 6-Chloro-*N,N*'-diethyl-

Trade Names: AKTINIT S®; ALCO® Simizine; AQUAZINE®; ATLAS SIMAZINE®; BATAZINA®; BITEMOL®; CALIBER®; CDT®; CEKUSAN®; CEKUZINA-S®; FRAMED®; G 27692®; GEIGY 27692®; GESARAN®; GESATOP®; GESATOP-50®; H 1803®; HARLEQUIN®; HERBAZIN® 500 BR; HERBAZIN® 50; HERBEX®; HERBOXY®; HUNGAZIN DT®; OXON ITALIA SIM-TROL®; PREMAZINE®; PRIMATEL S®; PRIMATOL S®; PRINCEP®; PRINCEP® 80W; SIMADEX®; SIMANEX®; SIMAZINE® 80W; SIMAZAT®; SIM-TROL®; TAFAZINE®; TAFAZINE® 50-W; TANZINE®; TAPHAZINE®; TOTAZINE®; TRIAZINE A 384®; W 6658®; WEEDEX®; ZEAPUR®

Chemical class: Triazine

EPA/OPP PC Code: 080807

California DPR Chemical Code: 531

HSDB Number: 1765

UN/NA & ERG Number: UN2763/151

RTECS® Number: XY5250000

EC Number: 204-535-2 [*Annex I Index No.:* 612-088-00-3]

Uses: Simazine, a pre-emergence selective systemic herbicide, is severely regulated because of effect on humans through ground and drinking water. It is used to control broad-leaved weeds and annual grasses in corn, sorghum, sugar cane and other field crops, artichokes, asparagus, berry fruit, nuts, citrus crops, coffee, hops, oil palms, olives, vegetables and ornamental crops, turf grass, orchards, and vineyards. At higher rates, it is used for non-selective weed control in industrial areas. Before 1992, simazine was used to control submerged weeds and algae in large aquariums, farm ponds, fish hatcheries, swimming pools, ornamental ponds, and cooling towers. Simazine is available in wettable powder, water-dispersible granule, liquid, and granular formulations. It may be soil-applied. Not approved for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP) for all land uses because of its potential to contaminate ground water.

U.S. Maximum Allowable Residue Levels for Simazine [40 CFR 180.213(a)(1)]: alfalfa 15 ppm; alfalfa, forage 15 ppm; alfalfa, hay 15 ppm; almond 0.25 ppm; almond, hulls 0.25 ppm; apple 0.25 ppm; avocado 0.25 ppm; bermuda grass 15 ppm; bermudagrass, forage 15 ppm; bermudagrass, hay 15 ppm; blackberry 0.25 ppm; blueberry 0.25 ppm; boysenberry 0.25 ppm; cattle, fat 0.02 (N) ppm; cattle, meat byproducts 0.02 (N) ppm; cattle, meat 0.02 (N) ppm; cherry 0.25 ppm; corn, forage 0.25 ppm; corn, sweet, kernel plus cob with husks removed 0.25 ppm; corn, grain 0.25 ppm; corn, stover 0.25 ppm; cranberry 0.25 ppm; currant 0.25 ppm; dewberry 0.25 ppm; egg 0.02 (N) ppm; filbert 0.25 ppm; goat, fat 0.02 (N) ppm; goat, meat byproducts 0.02 (N) ppm; goat, meat 0.02 (N) ppm; grapefruit 0.25 ppm; grape 0.25 ppm; grass 15 ppm; grass, forage 15 ppm; grass, hay 15 ppm; hog, fat 0.02 (N) ppm; hog, meat byproducts 0.02 (N) ppm; hog, meat 0.02 (N) ppm; horse, fat 0.02 (N) ppm; horse, meat byproducts 0.02 (N) ppm; horse, meat 0.02 (N) ppm; lemon 0.25 ppm; loganberry 0.25 ppm; milk 0.02 (N) ppm; nut, macadamia 0.25 ppm; olive 0.25 ppm; orange, sweet 0.25 ppm; peach 0.25 ppm; pear 0.25 ppm; pecan 0.1 (N) ppm; plum 0.25 ppm; poultry, fat 0.02 (N) ppm; poultry, meat byproducts 0.02 (N) ppm; poultry, meat 0.02 (N) ppm; raspberry 0.25 ppm; sheep, fat 0.02 (N) ppm; sheep, meat byproducts 0.02 (N) ppm; sheep, meat 0.02 (N) ppm; strawberry 0.25 ppm; sugarcane, cane 0.25 ppm; sugarcane, molasses 1 ppm; walnut 0.2 ppm. ***Tolerances are established for the combined residues of the herbicide simazineand its metabolites 2-amino-4-chloro-6-ethylamino-s-triazine and 2,4-diamino-6-chloro-s-triazine*** **[***40 CFR 180.213(a)***(2)]***:* in or on raw agricultural commodities as follows: Banana 0.2 ppm; Fish 12 ppm. (N) = negligible amount of residue.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be carcinogenic to humans; EU GHS Category 2: Suspected human carcinogen

Poison Category: 3, CAUTION

Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer, Endocrine disruptor (S!)

Potential Ground Water Pollutant [California FAC Section 13149]

ADI (Acceptable Daily Intake) = 0.215 mg/kg/day[Sittig]

Safe Drinking Water Act: MCL, 0.004 mg/L; MCLG, 0.004 mg/L; Regulated chemical (47 FR 9352)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R40; R50/53; safety phrases: S2; S36/37; S46; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Simazine is a combustible, white to off-white crystalline solid or powder. Practically odorless. Molecular weight = 201.66; Specific gravity (H_2O:1) = 1.302 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = (decomposes); Vapor pressure = 2.2×10^{-8} mmHg @ 20 °C; Flash point = ~170 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = 4 ppm @ 20 °C.

Incompatibilities: A combustible solid. Incompatible with strong oxidizers.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4 μg/L; State Drinking Water Guidelines: Arizona 35 μg/L; Maine 3.5 μg/L; Minnesota 4 μg/L. EU Drinking Water Guidelines (MAC) = 0.2 μg/L. Canadian Drinking Water Standards: IMAC 0.01 mg/L.

Determination in Water: Analysis of simazine is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen-phosphorus-containing pesticides in water samples. In this method, approximately 1 liter of sample is extracted with methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using a nitrogen-phosphorus detector. The method detection limit has not been determined for this compound but it is estimated that the detection limits for the method analytes are in the range of 0.1 to 2 μg/L. Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin or eye irritation. Moderately poisonous if ingested; may cause tremor, convulsions, paralysis, cyanosis, slowed respiration and diarrhea. Approximate lethal dose = 1.5 cupful/150 lb man. LD_{50} in range (rat) 1780–7000 mg/kg. LD_{50} (oral, rat) = >500 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause tumors. Repeated exposure may cause weight loss and reduced red blood cell count. Simazine fed to rats for 2 years @ 1.0, 10, and 100 ppm produced no difference between treated and control animals in gross appearance or behavior. The rats fed 100 ppm had approximately twice as many thyroid and mammary tumors as the control animals, but it was stated that these were not attributable to simazine. A 2-year chronic-feeding study of simazine in dogs with simazine 80 W fed at 15, 150, and 1500 ppm showed only a slight thyroid hyperplasia at 1500 ppm and slight increases in serum alkaline phosphatase and serum glutamic oxalacetic transaminase in several of the dogs fed 1500 ppm. May cause dermatitis.

Points of Attack: Blood, skin.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Complete blood count. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Triazine pesticides, solid, toxic, require a shipping label of "POISONOUS MATERIALS." They fall in Hazard Class 6.1 and Packing Group I to III.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 130.

Fire Extinguishing: This chemical pesticide is a combustible solid. Hazardous decomposition includes oxides of nitrogen, carbon, and hydrogen chloride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions: Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Strong acid or alkaline hydrolysis leads to complete degradation of simazine. However, large quantities of simazine should be incinerated in a unit operating @ 850 °C equipped with off-gas scrubbing equipment. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Sodium aluminum fluoride

S:0350

Use Type: Insecticide
CAS Number: 15096-52-3
Formula: AlF_6Na_3; Na_3AlF_6
Synonyms: Aluminum sodium fluoride; Cryolite; ENT 24,984; Greenland spar; Hexafluoroaluminato de trisodio (Spanish); Ice Spar; Sodium aluminofluoride; Sodium fluoaluminate; Sodium hexafluoroaluminate; Villiaumite; Synthetic cryolite
Trade Names: KRYOCIDE®; CHIOLITE®; CRYOLITE 93®; ICE-SPAR®; ICETONE®; KOYOSIDE®; KRIOLIT®; PROKIL® Sodium aluminum fluoride; VILLIAUMITE®
Chemical class: Inorganic fluorine compound; Inorganic, aluminofluoride salt
EPA/OPP PC Code: 075101
California DPR Chemical Code: 173
HSDB Number: 1548
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: WA9625000
EC Number: 239-148-8 [*Annex I Index No.:* 009-016-00-2]
Uses: Sodium aluminum fluoride is used as an insecticide on food crops and ornamentals, and also in aluminum refining and making ceramics, glass and polishes. Cryolite is used to control a variety of pests on cucurbits (melons, cantaloupe, water melon, pumpkins, all types of squash), fruiting vegetables (eggplant, pepper, broccoli, Brussels sprouts, cabbage, cauliflower, collards, head and leaf lettuce, kohlrabi), kiwi (in California only), pears, radish, cranberry and peaches, grapefruit, lemon, lime, orange, tangelo, tangerines, tomatoes, apples, potatoes, beans and grapes. Also on ornamental plants, woody shrubs and vines. Not listed for use in EU countries[115]. Registered for use in the U.S.
U.S. Maximum Allowable Residue Levels for insecticidal fluorine compounds cryolite and synthetic cryolite (sodium aluminum fluoride) [40 CFR 180.145(a)(1)]: in or on the following agricultural commodities: apricot 7.0 ppm; blackberry 7.0 ppm; blueberry (huckleberry) 7.0 ppm; boysenberry 7.0 ppm; broccoli 7.0 ppm; Brussels sprouts 7.0 ppm; cabbage 7.0 ppm; cauliflower 7.0 ppm; collards 7.0 ppm; cranberry 7.0 ppm; cucumber 7.0 ppm; dewberry 7.0 ppm; eggplant 7.0 ppm; fruit, citrus 7.0 ppm; grape 7.0 ppm; kale 7.0 ppm; kohlrabi 7.0 ppm; lettuce 7.0 ppm; loganberry 7.0 ppm; melon 7.0 ppm; nectarine 7.0 ppm; peach 7.0 ppm; pepper 7.0 ppm; plum, prune, fresh 7.0 ppm; pumpkin 7.0 ppm; raspberry 7.0 ppm; squash, summer 7.0 ppm; squash, winter 7.0 ppm; strawberry 7.0 ppm; tomato and youngberry 7.0 ppm. ***Tolerances with regional registration, as defined by section 180.1(n) [40 CFR 180.145 (c)(1)]:*** in or on the folowing raw agricultural commodities: kiwifruit, 15.0 ppm.
Fish toxicity (threshold)[101]: Very low–7784.44797 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen
Health Advisory: Mutagen: Acute Oral Category: 4, Caution
European/International Regulations: Hazard Symbol (*natural and synthetic*): T, Xn, N; risk phrases: R20/22; R48/23/25; R51/53; safety phrases: S1/2; S22; S37; S45; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters
Description: Sodium aluminum fluoride is a snow-white solid or vitreous mass. Crystalline solid (natural product may be colored reddish or brown or even black but loses this discoloration on heating); synthetic product is an amorphous powder. Odorless. Molecular weight = 209.95; Specific gravity (H_2O:1) = 2.254 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 960–1027 °C[83]. Very slightly soluble in water.
Incompatibilities: Strong acids and strong oxidizers. Decomposes in alkaline envionment[83].
Permissible Exposure Limits in Air: *as fluorides* [F]
NIOSH IDLH: 250 mg[F]/m^3 TWA
OSHA PEL: 3 ppm/2.5 mg[F]/m^3 TWA
NIOSH REL: 3 ppm/2.5 mg[F]/m^3 TWA
ACGIH TLV: 2.5 mg[F]/m^3 TWA; Excursion Limit Recommendation: Excursions in worker exposure levels may exceed 3 times the TLV-TWA for no more than a total of 30 minutes during a work day, and under no circumstances should they exceed 5 times the TLV-TWA, provided that the TLV-TWA is not exceeded. Biological Exposure Index (BEI): Determinant: fluorides in urine; Sampling Time: prior to shift; BEI: 3 mg/g creatinine. Determinant: fluorides in urine; Sampling Time: end of shift; BEI: 10 mg/g creatinine. The determinant may be present in biological specimens collected from subjects who have not been occupationally exposed, at a concentration which could affect interpretation of the result. Such background concentrations are incorporated in the BEI value. The determinant is nonspecific, since it is also observed after exposure to other chemicals.
as aluminum, soluble salts
OSHA PEL: None
NIOSH REL: 2 mg[Al]/m^3 TWA
ACGIH TLV: 1 mg/m^3 [Al] (soluble fraction) TWA; Excursion Limit Recommendation: Excursions in worker exposure levels may exceed 3 times the TLV-TWA for no more than a total of 30 minutes during a work day, and under no circumstances should they exceed 5 times the TLV-TWA, provided that the TLV-TWA is not exceeded.
Determination in Air: Method: OSHA ID-110, Fluoride (F and HF) in Workplace Atmospheres; Procedure: ion-specific electrode analysis; Analyte: fluoride ion; Matrix: air, wipe (smear tabs for particulate fluoride); Detection

Level: 25 μg per sample. Method: NIOSH 7906, Issue 1, Fluorides aerosol and gas; ion chromatography/conductivity; Analyte: fluoride ion; Matrix: air; Estimated Level of Detection: 3 μg fluoride ion per sample (gas); 120 μg fluoride ion per sample (particulate. Method: NIOSH 7902, Issue 2; Procedure: ion-specific electrode; Analyte: fluoride ion; Matrix: air; Estimated Level of Detection: 3 μg fluoride ion per sample.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 50-200[Al]μg/L; State Drinking Water Standards: California 1000 [Al]μg/L; State Drinking Water Guidelines: Arizona 73 [Al]μg/L; Maine 1430 [Al]μg/L; California 200 [Al]μg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Sodium aluminum fluoride can affect you when breathed in. Eye contact can cause severe irritation, burns with possible loss of vision. Dermal contact can cause irritation and even burns, especially if prolonged. Inhalation can irritate the nose, throat and air passages. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Exposure can cause nausea, abdominal pain, diarrhea; salivation, thirst, sweating. LD_{50} (oral, rat) = >5 g/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. Repeated exposure can cause stiff spine; calcification of ligaments of ribs, pelvis. Repeated or high exposures may cause permanent lung damage.

Points of Attack: Eyes, skin, lungs and skeletal system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. Urine fluoride test (levels above 3 to 4 mg/L at the end of exposure represent increased exposure).

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is *conscious*, administer water, or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Specific engineering controls are recommended in NIOSH Criteria Document #76-103: *Inorganic fluorides*.

Respirator Selection: NIOSH/OSHA *12.5 mg/m³:* Qm (APF = 25) (any quarter-mask respirator). *25 mg/m³:* 95XQ (APF = 10)* [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering face-pieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or SA* (any supplied-air respirator). *62.5 mg/m³:* Sa:Cf (APF = 25)*+ (any supplied-air respirator operated in a continuous-flow mode); or PaprHie (APF = 25)* *if not present as a fume* (any powered, air-purifying respirator with a high-efficiency particulate filter). *125 mg/m³:* 100 F (APF = 50)+ [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering face-pieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *250 mg/m³:* Sa: Pd,Pp (APF = 1000) (any supplied-air respirator operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full faceplate and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50)+ [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering face-pieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Sodium aluminum fluoride must be stored to avoid contact with strong acids (such as hydrochloric, sulfuric and nitric), since violent reactions occur. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use

directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group III.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Highly hazardous decomposition includes disodium oxide and hydrogen fluoride. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR 165 recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Sodium cacodylate S:0420

Use Type: Herbicide, Rodenticide, Defoliant, Veterinary medicine

CAS Number: 124-65-2

Formula: $C_2H_6AsNaO_2$; $(CH_3)_2AsOONa$

Synonyms: Cacodilato sodico (Spanish); Cacodylic acid sodium salt; Dimethylarsinic acid, sodium salt; [(Dimethylarsino)oxy]sodium-As-oxide; [(Dimethylarsino)oxy]sodium-arsenic-oxide; Hydrodimethylarsine oxide, sodium salt; Sodium cacodylate trihydrate; Sodium dimethylarsinate; Sodium dimethyl arsonate; Sodium salt of cacodylic acid

Trade Names: ACME® Sodium cacodylate; ALKARSODYL®; ANSAR 160®; ARSECODILE®; ARSYCODILE®; BOLLS-EYE®; CHEMAID®; DREXEL EZY-PICKIN COTTON DEFOLIANT®; DREXEL KACK HERBICIDE®; DUTCH-TREAT®; HERB-ALL®; PHYTAR 560® (with Cacodylic acid); RAD-E-CATE®; SILVISAR®

Chemical class: Organoarsenic

EPA/OPP PC Code: 012502

California DPR Chemical Code: 1673

HSDB Number: 731

UN/NA & ERG Number: UN1688/152

RTECS® Number: CH7890000; CH7700000

EC Number: 204-708-2

Uses: This material has been used as a non-selective herbicide and defoliant for general weed control. Severely restricted for use in EU countries[115]. Not registered for use in the U.S. There are 47 global suppliers[97].

U.S. Maximum Allowable Residue Levels for total residues of combined arsenic (calculated as As) [21 CFR 556.60]: in food are established as follows: (a) In edible tissues and in eggs of chickens and turkeys: in uncooked muscle tissue 0.5 ppm; in uncooked edible byproducts 2 ppm; in eggs 0.5 ppm. (b) In edible tissues of swine: in uncooked liver and kidney 2 ppm; in uncooked muscle tissue and byproducts other than liver and kidney 0.5 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Health Advisory: Nerve Toxin (S!); Endocrine disruptor (S!): *As arsenic,* Mutagen, Reproductive Toxin

Acute Oral Category: 3, CAUTION
Carcinogen User Register Chemical (CAL/OSHA) as inorganic arsenic compound
Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg) as arsenic compounds
Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as arsenic compounds
Clean Water Act: Toxic Pollutant (Section 401.15) as arsenic and compounds
RCRA, 40CFR261, Appendix 8, Hazardous Constituents, waste number D004
EPCRA (Section 313): Includes any unique chemical substance that contains arsenic as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: organics 1.0%
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as arsenates, liquid, n. o. s; arsenates, solid, n. o. s; arsenical pesticides liquid, toxic, flammable, n. o. s.

Description: Sodium cacodylate is a white to yellowish crystalline solid or powder. It liquifies in the water of hydration at 60 °C and becomes anhydrous at 120 °C. Odorless. Molecular weight = 159.98; Specific gravity (H_2O:1) = <1 @ 20 °C (solid)[86]; Boiling point = 200 °C; Freezing/Melting point = 60 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0. Soluble in water.

Incompatibilities: Incompatible with oxidizers, strong bases, acids, active metals (iron, aluminum, zinc). Contact with acids reacts to form highly toxic dimethylarsine gas. Attacks some metals.

Permissible Exposure Limits in Air: *arsenic, organic compounds*
OSHA PEL: 0.5 mg[As]/m^3 TWA
NIOSH REL: See NIOSH Pocket Guide, Appendix A
ACGIH TLV®[1]: 0.01 mg[As]/m^3 TWA; Confirmed Human Carcinogen; BEI established
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 1.1 mg/m^3
PAC-2: 4 mg/m^3
PAC-3: 510 mg/m^3
arsenic, organic compounds
OSHA PEL: 0.5 mg[As]/m^3 TWA
ACGIH TLV®[1]: 0.01 mg[As]/m^3 TWA; Confirmed Human Carcinogen; Biological Exposure Index (BEI): Determinant: Inorganic arsenic plus methylated metabolites in urine; Sampling Time: end of workweek; BEI = 35 μg[As]/L. The determinant may be present in biological specimens collected from subjects who have not been occupationally exposed, at a concentration which could affect interpretation of the result. Such background concentrations are incorporated in the BEI value.
NIOSH IDLH: 5 mg[As]/m^3

Determination in Air: Filter; Reagent; Ion chromatography/Hydride generation atomic absorption spectrometry; NIOSH IV, Method #5022, Arsenic, Organo-[18].

Permissible Concentration in Water: Federal Drinking Water Standard: EPA 10 μg/L; State Drinking Water Guidelines: Arizona 10 μg/L; Connecticut 10 μg/L. Canadian Drinking Water Standards: IMAC 0.025 [As] mg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: *For arsenic:* The atomic absorption graphite furnace technique is often used for measurement of total arsenic in water. It also has been standardized by the EPA. Total arsenic may be determined by digestion followed by silver diethyldithiocarbamate; an alternative is atomic absorption; another is inductively coupled plasma optical emission spectrometry. See OSHA Method #ID-105 for arsenic[58].

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Sodium cacodylate is corrosive to the skin, eyes, and mucous membranes. It may cause disturbances of the blood, kidneys, and nervous system. Acute exposure to sodium cacodylate may be fatal. Headache, red-stained eyes, and a garlicky odor of the breath may be the first effects noticed. Other signs and symptoms include generalized weakness, intense thirst, muscle cramping, seizures, toxic delirium, and shock. Nausea, vomiting, anorexia, abdominal pain, and diarrhea may occur. Hypotension (low blood pressure), tachycardia (rapid heart rate), pulmonary edema, ventricular fibrillation, and other cardiac abnormalities are usually found following severe exposure. LD_{50} (oral, rat) = >2.5 g/kg.

Long Term Exposure: Repeated exposure may cause ulcers and hole in the nasal septum. Hoarseness and sore eyes also occur. Repeated contact may cause thickened skin, pigmentation changes. May cause liver damage and nerve damage causing sensation of “pins and needles,” weakness and loss of coordination in the limbs. May cause gastrointestinal tract and reproductive effects. Repeated exposures can cause metallic taste, poor appetite, nausea, vomiting, diarrhea and stomach pain, seizures and death. Birth defects have been observed in animals exposed to inorganic arsenic. It is likely that health effects seen in children exposed to high amounts of arsenic will be similar to the effects seen in adults.

Points of Attack: Arsenic may cause skin damage or problems with circulatory systems, and may have increased risk of causing cancer. Several studies have shown that *inorganic* arsenic can increase the risk of lung cancer, skin cancer, bladder cancer, liver cancer, kidney cancer, and prostate cancer. This chemical may also attack central nervous system, gastrointestinal tract, and reproductive system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Examination of the nose, skin, eyes and nails. Examination of the nervous system. Liver function tests. Test for urine arsenic. NIOSH recommended exposure levels should not exceed 100 micrograms per liter of creatinine in the urine. Results may be accurate within 2 days of eating shellfish or fish (which may increase arsenic levels); they are most accurate at the end of a workday.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give a slurry of activated charcoal in water to drink and induce vomiting. Do not make an unconscious person vomit. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Rush to health care facility

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Specific engineering controls are required under OSHA 1910.1018*, Inorganic Arsenic.* See also NIOSH Criteria Document #75-149, *"Inorganic Arsenic."*

Respirator Selection: SCBA >1.1 mg/m^3. *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFAg100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with calcium arsenate you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: The DOT label requirement[19] is "poisonous materials." Hazard Class 6.1; Packing Group II. Standard Transportation number 49-239-85.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes highly toxic oxides of arsenic, sodium and carbon and arsine gas. This chemical is a noncombustible solid. Use any extinguishing agent suitable for surrounding fires. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Chemical

Treatability of Arsenic–(1) Concentration Process: Chemical Precipitation; Chemical Classification: Metal; Scale of Study: Pilot Scale; Type of Wastewater Used: Domestic Wastewater+Pure Compound; Results of Study: 5 ppm @ 4 gpm @ pH = 7.0. Iron system–90% reduction; low lime system–80% reduction; high lime system–76% reduction; (three coagulant systems were used; Iron system used 45 ppm as Fe of $Fe_2(SO_4)_3$ @ pH = 6.0. Low lime system used 20 ppm Fe of $Fe_2(SO_4)_3$ and 260 ppm of CaO @ pH = 10.0. High lime system used 600 ppm of CaO @ pH = 11.5. Chemical coagulation was followed by multimedia filtration). (2) Concentration Process: Chemical Precipitation; Chemical Classification: Metal; Scale of Study: Full Scale Continuous Flow; Type of Wastewater Used: Domestic Wastewater; Results of Study: Effluent character (ppb): 2.5, 56% reduction with lime; 3.3, 24% reduction with lime; (lime dose of 350–400 ppm as calcium oxide @ pH = 11.3)[83].

Sodium chlorate S:0430

Use Type: Herbicide, Defoliant, Fungicide, Soil sterilent, Microbiocide

CAS Number: 7775-09-9

Formula: ClNaO3; NaClO3

Synonyms: Chlorate of soda; Chlorate salt of sodium; Chloric acid, sodium salt

Trade Names: ASEX®; ATLACIDE[C]; ATRATOL B-HERBATOX®[C]; BAREGROUND®; BEST MAGCHLOR DEFOLIANT®; CHAPMAN WEED FREE®; CHLORAX®; D-LEAF COTTON DEFOLIANT®; DE-FOL-ATE®; DESOLET®; DREXEL DEFOL®; DROP LEAF®; EVAU-SUPERFALL®; FALL®; GRAIN SORGHUM HARVEST AID®; GRANEX OK®; HARVEST-AID®; KLOREX®; KM SODIUM CHLORATE®; KUSA-TOHRUKUSATOL®; LOREX®; ORTHO C-1 DEFOLIANT & WEED KILLER®; OXYCIL®; RASIKAL®; SHED-A-LEAF®; TRAVEX®; TUMBLEAF®; 20 MULE TEAM HIBOR®[C]; UNITED CHEMICAL DEFOLIANT NO.1®; VAL-DROP®

Chemical class: Inorganic

EPA/OPP PC Code: 073301

California DPR Chemical Code: 536

HSDB Number: 732

UN/NA & ERG Number: UN1495 (solid)/140; UN2428 (solution)/140

RTECS® Number: FO0525000

EC Number: 231-887-4 [*Annex I Index No.:* 017-005-00-9]

Uses: Sodium chlorate is a non-selective herbicide that is used on cotton, corn, flax, soybeans, peppers, grain sorghum, peas, greens, sunflower crops, Sudan grass forage, rice and safflower crops to control, among others, Canadian thistle, Johnson grass, morning glory and St. Johns wort. It is also used on non-crop lands, ditches, fences and roadways for vegetation control. It has a soil-sterilant effect. The pesticidal uses of sodium chlorate are a small percentage (approximately 2%) of the total used in the United States. Approximately 3 million pounds of sodium chlorate are applied annually to agricultural, residential, and commercial use sites. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Sodium Chlorate [40 CFR 180.1020(a)]: Sodium chlorate is exempted from the requirement of a tolerance for residues in or on the following raw agricultural commodities when used as a defoliant, desiccant, or fungicide in accordance with good agricultural practice: beans, dry, edible; corn, fodder; corn, forage; corn, grain; cottonseed; flaxseed; flax, straw; guar beans; peas, southern; peppers, chili; potatoes; rice; rice, straw; safflower, grain; sorghum, grain; sorghum, fodder; sorghum, forage; soybeans; and sunflower seed. **[*21 CFR 175.105*]:** Sodium chlorate is an indirect food additive for use only as a component of adhesives[FDA].

Regulatory Authority and Advisory Information:

Health Advisory: Mutagen, Skin irritant/sensitizer

Toxicity (oral) Category 3, CAUTION

Highly Reactive Substance and Explosive (World Bank)[15]

Department of Homeland Security Screening Threshold Quantity (pounds): *Theft hazard* 400 (Commercial grade)

European/International Regulations: Hazard Symbol: Xn, H, N; risk phrases: R9; R22; R51/53; safety phrases: S2; S23; S17; S53; S46; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to water

Description: Sodium chlorate is a white crystalline solid. Molecular weight = 106.44; Specific gravity (H_2O:1) = 2.5 @ 20 °C; Boiling point = (decomposes) ~300 °C; Freezing/Melting point = 248 °C (also listed @ 255 °C and 264 °C); Vapor pressure = negligible (room temperature). Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 2 (Oxidizer). Highly soluble in water.

Incompatibilities: A strong oxidizer. Reacts violently with combustibles, sulfuric acid, and reducing materials. Reacts with strong acids, giving off carbon dioxide. Explosions may be caused by contact with ammonia salts, ammonium thiosulfate, antimony sulfide, arsenic, carbon, charcoal, organic matter, organic acids, thiocyanates, chemically active metals, oils, metal sulfides, nitrobenzene, powdered metals, sugar. Reacts with organic contaminants, forming shock-sensitive mixtures. Decomposes on heating above 250 °C or on burning, producing oxygen and toxic chlorine fumes. Attacks zinc, magnesium, and mild steel.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.11 mg/m^3
PAC-2: 1.2 mg/m^3
PAC-3: 32 mg/m^3

Permissible Concentration in Water: State Drinking Water Guidelines: California 800 μg/L; Maine 7 μg/L.

Determination in Water: Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Sodium chlorate can affect you when breathed in. Eye or dermal contact can cause severe irritation and even burns. Breathing sodium chlorate, especially dust or mist, can irritate the nose and throat. It can also cause cyanosis causing the skin to turn blue (methemoglobinemia) because it interferes with the blood's ability to carry oxygen. Damage to red blood cells (hemolytic anemia) can also occur. If severe or repeated, this can cause kidney damage. Ingestion can cause kidney damage. The effects may be delayed. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = >1000 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause tumors. Repeated or prolonged contact with skin may cause dermatitis. Kidney damage can occur from severe or repeated damage to red blood cells resulting from exposure. Very irritating substances may cause lung damage.

Points of Attack: Kidneys, lungs, blood, and skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Complete blood count. Test for methemoglobin if skin is blue. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Keep victim under medical observation. If ingested, seek medical attention. If individual is drowsy or unconscious, do not give anything by mouth; place individual on the left side with the head down. Contact a physician, medical facility, or poison control center for advice about whether to induce vomiting. If possible, do not leave individual unattended. If inhaled, and if symptoms develop, move individual away from exposure and into fresh air. If symptoms persist, seek medical attention. If breathing is difficult, administer oxygen. Keep person warm and quiet; seek immediate medical attention. Following dermal contact, remove contaminated clothing. Wash exposed area with soap and water. If symptoms persist, seek medical attention. Launder clothing before reuse. Following eye contact, immediately move individual away from exposure and into fresh air. Flush eyes gently with water for at least 15 minutes while holding eyelids apart; seek immediate medical attention. *Antidotes and special procedures:* Do not use *Methylene blue* to treat methemoglobinemia from sodium chlorate as it can cause increased toxicity. *Note to physician or authorized medical personnel:* Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 0.11 mg/m^3. Where potential exists for exposure to sodium chlorate, use a NIOSH/MSHA- or European Standard EN149-approved full facepiece respirator equipped with particulate (dust/fume/mist) filters. Particulate filters must be checked every day before work for physical damage, such as rips or tears, and replaced as needed. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Yellow: Reactive Hazard; Store in a location separate from other materials, especially flammables and combustibles. Prior to working with this chemical you should be trained on its proper handling and storage. Sodium chlorate must be stored to avoid contact with ammonium thiosulfate, antimony sulfide; arsenic, carbon, charcoal, organic matter; organic acids; sulfuric acid; thiocyanates and chemically active metals (such as potassium, sodium, magnesium, and zinc), since violent reactions occur. Protect storage containers against physical damage. Store in tightly closed containers in a cool, well-ventilated area away from sources of heat. See OSHA Standard 1910.104 and NFPA 43A *Code for the Storage of Liquid and Solid Oxidizers* for detailed handling and storage regulations. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This compound requires a shipping label of "OXIDIZER." It falls in Hazard Class 5.1 and Packing Group II. ***STN:*** 49-187-43; Sodium chlorate (chlorate of soda); 49-187-65; Sodium chlorate and sodium chloride, in water solution (oxidizing material).

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. Keep sodium chlorate out of a confined space, such as a sewer, because of the possibility of an explosion, unless the sewer is designed to prevent the build-up of explosive concentrations. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Sodium chlorate may burn, but does not readily ignite. Heat above 300 °C produces oxygen which can increase the intensity of fire and may ignite other combustible materials. Flood areas with water unless that is incompatible with other materials in the fire area. Hazardous decomposition includes chlorine. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. Containers may explode in fire. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: In accordance with 40CFR 165 recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.:

Sodium diacetate S:0455

Use Type: Fungicide, Bactericide

CAS Number: 126-96-5

Formula: $CH_3COONa \cdot CH_3COOH$

Synonyms: Acetic acid, sodium salt (2:1); Sodium acid acetate

Trade Names: CROP CURE®; DYKON®; GRAIN CURE®[C]; SENTRY SODIUM ACETATE®[C]

EPA/OPP PC Code: 044008

California DPR Chemical Code: 5065

HSDB Number: 736

RTECS® Number: AJ4375000

EC Number: 204-814-9

Uses: Sodium diacetate is a fungicide and bactericide registered to control molds and bacteria, thereby preventing spoilage in stored grains. The pesticide is applied to hay as a dust or soluble concentrate (liquid spray) during the baling process. It is applied to silage as a fermentation "aid" to preserve the quality of field corn, alfalfa, sorghum, oats and grasses, stored in silos. Sodium diacetate is composed of acetic acid and sodium acetate. It dissociates to acetate, sodium and hydrogen ions, normal components of plants and animals, and of human foods. Acetates are formed in living organisms during the metabolism of food. Acetates and acetic acid have long been used in both human and animal foods, without significant adverse effects. Sodium diacetate is also used as an antimicrobial agent in baked goods and other foods, and in medicine and cosmetics manufacturing as a freshener, flavoring and pH regulator. Not listed for use in EU countries[115]. 126-96-5. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Sodium Diacetate (40 CFR 180.1058): Sodium diacetate, when used post-harvestarvest as a fungicide, is exempt from the requirement of a tolerance for residues in or on alfalfa hay, Bermuda grass hay, bluegrass hay, brome grass hay, clover hay, corn grain, oat grain, orchard grass hay, sorghum grain, sudan grass hay, rye grass hay, and timothy hay,

Regulatory Authority and Advisory Information:

Acute Oral Category: 4, Caution

WGK (German Aquatic Hazard Class): 1-Low hazard to water

Description: A white crystalline solid or powder. May be combustible. Acetic acid odor. Molecular weight = 142.09; Specific gravity (H_2O:1) = 1529 @ 20°C; Boiling point = (decomposes). Soluble in water.

Incompatibilities: Dust may form combustible mixture with air. Contact with water liberates acetic acid. May not be compatible with nitrates or strong mineral acids. Moisture may cause hydrolysis or other forms of decomposition.

Routes of Entry: Inhalation, ingestion, may pass through the unbroken skin, eyes.

Harmful Effects and Symptoms

Short Term Exposure: Contact with the dust can cause eye irritation including burning, stinging, tearing, redness, and swelling. Can cause permanent injury to the cornea and may lead to other problems and blindness. May cause mild skin irritation with redness and burning. Symptoms of exposure include stomach or intestinal upset, nausea, vomiting, diarrhea. LD_{50} (oral, rat) = 5600 mg/kg[83]; LD_{50} (dermal, rat) = >2 g/kg[83].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested*. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Combustible at high temperature. Hazardous decomposition includes toxic oxides of carbon and metallic oxides. Move containers from fire area if you can do it without risk. *On a small fire*: use dry chemical. *On a large fire*: use water spray, fod, or foam. Do not use water jet. Do not move cargo or vehicle if cargo has been exposed to heat. *Fire involving tanks or car/trailer loads*: fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Sodium fluoroacetate S:0480

Use Type: Insecticide, Rodenticide, Wildlife control

CAS Number: 62-74-8

Formula: $C_2H_2FNaO_2$; FCH_2COONa

Synonyms: 1080; Acetic acid, fluoro-, sodium salt; Fluoroacetic acid, sodium salt; Compound 1080;

Fluoacetato sodico (Spanish); NSC 77690; SMFA; Sodium fluoacetate; Sodium fluoacetic acid; Sodium fluoracetate; Sodium monofluoroacetate

Trade Names: AI3-08434®; FLUORAKIL® 3; FRATOL®; FURATOL®; RATBANE 1080®; TEN-EIGHTY®; TL 869®; YASOKNOCK®

Chemical class: Unclassified

EPA/OPP PC Code: 075003

California DPR Chemical Code: 633

HSDB Number: 743

UN/NA & ERG Number: UN2629/151

RTECS® Number: AH9100000

EC Number: 200-548-2 [*Annex I Index No.:* 607-169-00-5]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Not listed for use in EU countries[115]. It is seldom used as an insecticide. Sodium fluoroacetate is primarily used around sewers, ships and warehouses, and in agriculture and by state agricultural departments as bait for rodents and large predators, to control rats, mice, squirrels, prairie dogs, coyotes, rabbits and otherpests. It is seldom used as an insecticide. It is very toxic to birds, domestic animals and wildlife either by consuming the bait or eating poisoned carcasses. It is sometimes used in 1% solutions which are injected into collars which are strapped to the necks of sheep, goats and other livestock that predators are attracted to. Coyotes that puncture the collars are likely to be fatally poisoned by the sodium fluoroacetate as a result.

Regulatory Authority and Advisory Information:
California Proposition 65 Developmental/Reproductive toxin (11/6/1998)
Health Advisory: Mutagen, Developmental/Reproductive Toxin (TRI)
Toxicity (oral) Category 1, DANGER–POISON
EPA Oral reference dose (RfD) = 0.0002 mg/kg/day (UF: 3000, MF: 1)
EPA Hazardous Waste Number (RCRA No.): P058
Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4,540 kg)
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: T+, N; risk phrases: R26/27/28; R50; safety phrases: S1/2; S13; S22; S36/37; S45; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Sodium fluoroacetate is a fluffy, colorless or white, hygroscopic solid (sometimes dyed black) or powder. Odorless. Molecular weight = 100.03; Boiling point = (decomposes); Freezing/Melting point = (decomposes) 200 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0. Soluble in water.

Incompatibilities: Alkaline metals and carbon disulfide. Decomposes at temperature >200 °C.

Permissible Exposure Limits in Air: NIOSH IDLH: 2.5 mg/m^3
OSHA PEL: 0.05 mg/m^3 TWA [skin]
NIOSH REL: 0.05 mg/m^3 TWA; 0.15 mg/m^3 STEL [skin]
ACGIH TLV®[1]: 0.05 mg/m^3 TWA [skin]
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.15 mg/m^3
PAC-2: 0.5 mg/m^3
PAC-3: 5 mg/m^3

Determination in Air: Filter; Water; Ion chromatography; NIOSH II(5) Method #S30[18]

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4000 μg[Fl]/L; Federal Drinking Water Guidelines: EPA 2000 μg[Fl]/L; State Drinking Water Standards: California 2000 μg[Fl]/L; Delaware 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[Fl]/L; Maine 1680 μg[Fl]/L.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: May affect the cardiovascular system and central nervous system, causing cardiac disorders and respiratory failure. Exposure may result in death This material is super toxic. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. The probable oral lethal dose in humans is less that 5 mg/kg, or a taste (<7 drops) for a 150 lb person. Symptoms include nausea, vomiting, apprehension, auditory hallucinations, facial paresthesia, twitching face muscle, pulsus altenans, ectopic heartbeat, tacard, ventricular fibrillation. Symptoms are usually seen within one-half hour of exposure, but severe effects may be delayed as long as 20 hours. A rebuttable presumption against registration of sodium fluoroacetate for pesticidal uses was issued on December 1, 1976 by the U.S. EPA. on the basis of reductions in nontarget and endangered species and because there is no human antidote. LD_{50} (oral, rat) = <50 mg/kg; LD_{50} (dermal, rat) = <100 mg/kg.

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause liver and kidney damage. May affect the central nervous system, causing epileptiform convulsive seizures that may be followed by severe depression.

Points of Attack: Cardiovascular system, lungs, kidneys, liver and central nervous system, skeletal system, teeth.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. Lung function tests. Consider chest x-ray following acute overexposure. Examination of the nervous system.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.15 mg/m^3. NIOSH: Up to 0.25 mg/m^3: Qm (APF = 25) (any quarter-mask respirator). *Up to 0.5 mg/m^3:* 95QX [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering face-pieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *Up to 1.25 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprHie (APF = 25) (any powered, air-purifying respirator with a high-efficiency particulate filter). *Up to 2.5 mg/m^3:* 100SaT (100 F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting face-piece and is operated in a continuous-flow mode); or PaprTHie (APF = 50) (any powered, air-purifying respirator with a tight-fitting face-piece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100 F (APF = 50) 100 F (APF = 50) (any air-purifying, full facepiece respirator with and N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from drums or other storage containers to process containers. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored. Metal containers involving the transfer of this chemical should be grounded and bonded. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Sodium fluorosilicate requires a shipping label of "poisonous materials." It falls in Hazard Class 6.1.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of sodium and carbon and hydrogen fluoride. This chemical is a noncombustible solid. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. This compound is unstable at temperatures above 110 °C and decomposes @ 200 °C. Thus, careful incineration has been suggested as a disposal procedure. According to this procedure, the produce should be mixed with large amounts of vermiculite, sodium bicarbonate and sand-soda ash. Slaked lime should also be added to the mixture. Two incineration procedures for this mixture are suggested. The better of these procedures is to burn the mixture in a closed incinerator equipped with an afterburner and an alkali scrubber. The other procedure suggests that the mixture be covered with scrap wood and paper in an open incinerator. (The incinerator should be lighted by means of an excelsior train.)

Sodium metaborate S:0513

Use Type: Herbicide, Insecticide, Fungicide, Nematocide

CAS Number: 7775-19-1

Formula: $NaBO_2$

Synonyms: Sodium metaborate; Monosodium metaborate; Boric acid, sodium salt; Sodium borate

Trade Names: ALLPRO BARACIDE®; ATRATOL®[C]; BAREGROUND®; MONOBOR-CHLORATE®; PRAMITOL®; TRI-KILL®; UREABOR®

Chemical class: Inorganic

EPA/OPP PC Code: 011104

California DPR Chemical Code: 689

HSDB Number: 5045

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: ED4640000

EC Number: 231-981-6

Uses: Not listed for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for residues of the pesticidal chemical boric acid and its salts, including sodium metaborate [40 CFR 180.1121]: in or on raw agricultural commodities when used as an active ingredient in insecticides, herbicides, or fungicides preharvest or postharvest in accordance with good agricultural practices. **[*40 CFR 180.940(c)*]:** Residues of sodium metaborate are exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food. Sodium metaborate when used as ingredients in an antimicrobial pesticide formulation may be applied to food-processing equipment and utensils.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: ACGIH A4, not classified as a human carcinogen

Toxicity (oral) Category 3, CAUTION

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: White lumpy solid or powder. Soluble in water. Molecular weight = 65.81; Specific gravity (H_2O:1) = 2.463 @ 20 °C; Boiling point = 1425 °C; Freezing/Melting point = 960 °C. Soluble in water.

Incompatibilities: Contact with moisture forms a basic mixture. Keep away from acids and strong oxidizers. Fuses to clear glass @ >965 °C.

Permissible Exposure Limits in Air: *Borate compounds, inorganic (including boric acid)*

OSHA PEL: None

NIOSH REL: None

ACGIH TLV®: 2 mg/m^3 TWA (inhalable fraction); 6 mg/m^3 (inhalable fraction); not classifiable as a human carcinogen.

Determination in Air: Collection on a filter and gravimetric analysis. See NIOSH Method #0500 Particulates NOR (total)[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 600 μ[B]g/L; State Drinking Water Guidelines: California 1000 μ[B]g/L; Maine 1400 μ[B]g/L; New Hampshire 630 μ[B]g/L; Minnesota 1000 μ[B]g/L; Wisconsin 960 μ[B]g/L. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, dermal exposure, inhalation, eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. Severe eye irritant. Irritates the skin and respiratory tract. High levels of ingestion and/or dermal exposures can be associated with weak, rapid pulse, cyanosis and abnormally low blood pressure. Nausea, vomiting, and diarrhea are common. The vomitus and feces may be blue-green in color. Hemorrhagic gastroenteritis can occur. Victim may encounter reduced body temperature, elevated body temperature or normal body temperature. High levels of inhalation can cause nausea, vomiting, weakness, headache, coma, death. The oral mucosa, lips and throat may turn red. Dermal contact may cause erythematous rash with desquamation (cooked lobster syndrome) to develop on the palms, soles, and buttocks along with a generalized rash. LD_{50} (oral, rat) = >2 g/kg.

Long Term Exposure: Repeated or long term exposure may cause headache, lethargy, restlessness, weakness, central nervous system irritation, and/or seizures. Borates are excreted principally by the kidneys. Based on animal studies, they may be fetotoxic, affect reproductive material and fertility, and exhibit teratogenic effects. There is insufficient information concerning the reproductive effects of borates in humans. Adverse testicular effects and infertility have been reported in animals. There have been limited animal studies which suggest decreased ovulation, fetotoxicity and developmental defects may occur with very high exposure levels. Maternal toxicity was present in some studies.

Points of Attack: Eyes, skin, respiratory system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Consider the points of attack in preplacement and periodic physical examinations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Exposed workers should be educated in the proper use of protective equipment and there should be strict adherence to ventilating provisions in work areas. Workers involved with the manufacture of boric acid should be provided with masks to prevent inhalation of dust and fumes. Wear impervious gloves: recommended gloves include Butyl rubber, Neoprene, Viton™.

Respirator Selection: A respiratory protection program that meets OSHA's Respiratory Protection Standard 29 CFR 1910.134 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant a respirator's use. Oxygen levels below 19.5% are considered IDLH by NIOSH/OSHA and require use of a full facepiece pressure/demand SCBA; or, a full facepiece, supplied-air respirator with auxiliary self-contained air supply is required under 1910.134-1998.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store urea in a refrigerator and and protect it from moisture. Keep away from strong oxidizers, chlorine, permanganates, dichromates, nitrites, inorganic chlorides, chlorites, perchlorates; hypochlorites can form explosive compounds. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9. Consult 49CFR, or appropriate Dangerous Goods Regulations, for additional description requirements (e.g., technical name) and mode-specific or quantity-specific shipping requirements.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. The material may be dampened with water to avoid dust and than transferred to a sealed container for disposal. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes boron and oxides of sodium. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters /0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Boric acids may be recovered from organic process wastes as an alternative to disposal.

Chemical class: Organoarsenic

EPA/OPP PC Code: 013803

California DPR Chemical Code: 34

HSDB Number: 754

UN/NA & ERG Number: UN2994 (liquid)/151

RTECS® Number: PA2625000

EC Number: 218-495-9

Uses: MSMA is used extensively as a selective post-emergence herbicide to control grassy weeds in cotton crops, in non-agricultural areas and in industrial applications. Not listed for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for total residues of combined arsenic (calculated as As) [21 CFR 556.60]: in food are established as follows: (a) In edible tissues and in eggs of chickens and turkeys: in uncooked muscle tissue 0.5 ppm; in uncooked edible byproducts 2 ppm; in eggs 0.5 ppm. (b) In edible tissues of swine: in uncooked liver and kidney 2 ppm; in uncooked muscle tissue and byproducts other than liver and kidney 0.5 ppm.

Human toxicity (long-term)[101]: Low–70.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–1936.86508 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Not likely to be a human carcinogen

Health Advisory: Nerve Toxin (S!); Endocrine disruptor (S!): *as arsenic*, Mutagen, Skin irritant/sensitizer

Acute Oral Category: 3, CAUTION

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as arsenic compounds

Clean Water Act: Toxic Pollutant (Section 401.15) as arsenic and compounds

RCRA Section 261 Hazardous Constituents, waste number D004

EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg)

EPCRA (Section 313): Includes any unique chemical substance that contains arsenic as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: as organic arsenic compounds, 1.0%

Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as arsenates

Description: Colorless crystalline solid. The solution may be yellow or dyed red or green. Odorless. Solid may float or sink in water; solid and solution are highly soluble in water. Molecular weight = 161.95; 162; 292 (hexahydrate); Specific gravity: 1.0 @ 20 °C (solid); 1.4–1.6 @ 20 °C (solutions) Boiling point = (decomposes); Freezing/Melting point = 135 °C; 133–138 °C (hexahydrate);. Hazard Identification (based on NFPA-704 M Rating System): Health Hazards (Blue): 1; Flammability (Red): 1; Reactivity (Yellow): 0.

Permissible Exposure Limits in Air: *arsenic, organic compounds*

OSHA PEL: 0.5 mg[As]/m^3 TWA

ACGIH TLV®[1]: 0.01 mg[As]/m^3 TWA; Confirmed Human Carcinogen; Biological Exposure Index (BEI): Determinant: Inorganic arsenic plus methylated metabolites in urine; Sampling Time: end of workweek; BEI = 35 μg[As]/L. The determinant may be present in biological specimens collected from subjects who have not been occupationally exposed, at a concentration which could affect interpretation of the result. Such background concentrations are incorporated in the BEI value.

NIOSH IDLH: 5 mg[As]/m^3

Determination in Air: Filter; Reagent: Ion chromatography/hydride atomic absorption: NIOSH IV [#5022, Arsenic, organo-][18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 10 μg/L; State Drinking Water Guidelines: Arizona 10 μg/L; Connecticut 10 μg/L. Runoff from spills or fire control may cause water pollution. Federal Drinking Water Guidelines: EPA 10 μg/L; State Drinking Water Guidelines: Arizona 10 μg/L; Connecticut 10 μg/L.

Determination in Water: See OSHA Method ID-105 for arsenic. Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the skin, eyes and respiratory tract; pulmonary edema and respiratory failure may develop in severe poisonings from inhalation. Ingestion can cause abdominal pain, severe vomiting and diarrhea, as well as dryness of the oral and nasal cavities. Commons signs of acute arsenic poisoning include abnormally low blood pressure, rapid heart rate and breathing, fever. This may be complicated by altered mental status, seizures, toxic delirium, encephalopathy, and delayed peripheral neuropathy. LD_{50} (oral, rat) = 700–900 mg/kg; LD_{50} (dermal, rabbit) = >2.5 g/kg.

Long Term Exposure: Repeated contact may cause skin sensitivity. Chronic exposure to arsenic compounds can cause dermatitis and digestive disorders, and elevated blood pressure. Renal damage may develop. In animals: kidney damage, muscle tremor, seizure, possible gastrointestinal tract, reproductive effects, possible liver damage.

Points of Attack: Arsenic may cause skin damage or problems with circulatory systems, and may increase the risk of getting cancer. This chemical may attack gastrointestinal tract, particularly the large intestine, and the kidney. Also may affect liver.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Kidney, liver, lung function tests. Consider chest x-ray following acute overexposure.

First Aid: If artificial respiration is administered, *avoid mouth-to-mouth resuscitation; use bag/mask apparatus*. Solid or solution: Irritating to skin and eyes. If swallowed, will cause nausea, vomiting, or loss of consciousness. Remove contaminated clothing and shoes. Flush affected areas with plenty of water. If in eyes, hold eyelids open and flush with plenty of water. If swallowed and victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water and have victim induce vomiting. If swallowed and victim is unconscious or having convulsions, do nothing except keep victim warm.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash. Specific engineering controls are required under OSHA 1910.1018*, Inorganic Arsenic.* See also NIOSH Criteria Document #75–149, *"Inorganic Arsenic."*

Respirator Selection: SCBA >2 mg/m^3 *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* Sa (APF = 10) (any supplied-air respirator); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFAg100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with sodium methane arsenate you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Arsenical pesticides, liquid, toxic are labeled "poisonous materials" and fall into Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes arsine, and oxides of arsenic and carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions: fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Chemical Treatability of Arsenic–(1) Concentration Process: Chemical Precipitation; Chemical Classification: Metal; Scale of Study: Pilot Scale; Type of Wastewater Used: Domestic Wastewater + Pure Compound; Results of Study: 5 ppm @ 4 gpm @ pH = 7.0. Iron system–90% reduction; low lime system–80% reduction; high lime system–76% reduction; (three coagulant systems were used; Iron system used 45 ppm as Fe of $Fe_2(SO_4)_3$ @ pH = 6.0. Low lime system used 20 ppm Fe of $Fe_2(SO_4)_3$ and 260 ppm of CaO @ pH = 10.0. High lime system used 600 ppm of CaO @ pH = 11.5. Chemical coagulation was followed by multimedia filtration). (2) Concentration Process: Chemical Precipitation; Chemical Classification: Metal; Scale of Study: Full Scale Continuous Flow; Type of Wastewater Used: Domestic Wastewater; Results of Study: Effluent character (ppb): 2.5, 56% reduction with lime; 3.3, 24% reduction with lime; (lime dose of 350–400 ppm as calcium oxide @ pH = 11.3)[83].

Strychnine S:0650

Use Type: Rodenticide, Avicide

CAS Number: 57-24-9; 60-41-3 (sulfate)

Formula: $C_{21}H_{22}N_2O_2$

Synonyms: Estricnina (Spanish); Strychnidin-10-One; Strychnos

Trade Names: BOOMER-RID®; CERTOX®; DOLCO MOUSE CEREAL®; GOPHER BAIT®; GOPHER-GETTER®; GOPHER-GO AG BAIT®; HARE-RID®; KWIK-KIL®; MOLE DEATH®; MOUSE-NOTS®; MOUSE-RID®; MOUSE-TOX®; NUX VOMICA®; PIED PIPER MOUSE SEED® (strychnine); RO-DEX®; SANASEED®

Chemical class: Alkaloid; Botanical

EPA/OPP PC Code: 076901

California DPR Chemical Code: 554

HSDB Number: 2001

UN/NA & ERG Number: UN1692/151

RTECS® Number: WL2275000; WL255000 (sulfate)

EC Number: 200-319-7 [*Annex I Index No.:* 614-003-00-5]; 200-477-7 (sulfate)

Uses: Strychnine products are allowed for use only below ground where exposure to food and feed crops is not expected. It can be used in orchards, feed crop sites, pastures, range land, alfalfa fields, irrigation systems, non-agriculture rights-of-way, forests, and residential sites. Pocket gophers are primary targets. Not listed for use in EU countries[115]. A U.S. EPA restricted Use Pesticide (RUP).

Regulatory Authority and Advisory Information:

Toxicity (oral) Category 1, DANGER–POISON

Health Advisory: Reproductive Toxin

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

EPA Hazardous Waste Number (RCRA No.): P108

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations *(Strychnine and salts)*: Hazard Symbol: T+, N; risk phrases: R27/28; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

Description: White crystalline prisms or white powder. Sprays may be dissolved in xylene or kerosene. Very bitter taste. Molecular weight = 334.41; 383.49 (sulfate); Specific gravity (H_2O:1) = 1.36 @ 20 °C (same for sulfate); Boiling point = (decomposes) 270 °C @ 5 mbar; 560 °C; Freezing/Melting point = 285–287 °C; 200 °C sulfate; Vapor pressure = 1.2×10^{-14} mmHg @ 25 °C; (sulfate) 1×10^{-8} mmHg @ 25 °C;. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0. Practically insoluble in water; solubility = 140 ppm @ 22 °C. The sulfate is slightly more soluble.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers. Dangerous when heated.

Permissible Exposure Limits in Air: NIOSH IDLH: 3 mg/m^3

OSHA PEL: 0.15 mg/m^3 TWA

NIOSH REL: 0.15 mg/m^3 TWA

ACGIH TLV®[1]: 0.15 mg/m^3 TWA; Excursion Limit Recommendation: Excursions in worker exposure levels may exceed 3 times the TLV-TWA for no more than a total of 30 minutes during a work day, and under no circumstances should they exceed 5 times the TLV-TWA, provided that the TLV-TWA is not exceeded.

Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 0.15 mg/m^3
PAC-2: 0.3 mg/m^3
PAC-3: 3 mg/m^3

sulfate
PAC-1: 0.45 mg/m^3 Ver. 27[89]
PAC-2: 5 mg/m^3
PAC-3: 40 mg/m^3

Determination in Air: Filter; Reagent; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5016[18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation of dust, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Affects the central nervous system, causing convulsions, muscle contractions, and respiratory failure. It causes violent generalized convulsions. Death results from respiratory arrest as the respiratory muscles are in sustained spasm. The lowest lethal oral dose reported for humans if 30 mg/kg. Respiratory paralysis and arrest are likely to occur following severe exposure to strychnine. Signs and symptoms of acute exposure generally involve excitation of all portions of the central nervous system. Convulsions, bilateral horizontal nystagmus (rapid, synchronous, horizontal, oscillations of the eyeballs), agitation, restlessness, apprehension, and abrupt, jerking movements of the extremities may occur. Victims may also experience stiffness, painful muscle cramping (especially in the legs), and opisthotonos (spasm in which the spine and extremities are bent with convexity forward, the body resting on the head and heels). Vomiting and renal failure, as well as cyanosis (blue tint to skin and mucous membranes) and rhabdomyolysis (destruction of skeletal muscle), may be found. LD_{50} (oral, man) = 30 mg/kg; LD_{50} (oral, rat) = >2000 μg/kg[9].

Long Term Exposure: Chronic allergen if inhaled or ingested.

Points of Attack: Central nervous system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Examination by a qualified allergist.

First Aid: Remove victims from exposure. Emergency personnel should avoid self-exposure to strychnine. *Warning:* Any unnecessary sensory input may induce seizures. Isolate the victims from any avoidable distractions. Rush to a health care facility! Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Remove contaminated clothing as soon as possible. If eye exposure has occurred, remove any contact lenses at once; eyes must be flushed with lukewarm water for at least 15 minutes. Wash exposed skin areas thoroughly with soap and water. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedure.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material is a toxic pesticide and should be labeled “poisonous materials.” It falls into Hazard Class 6.1. PG I. STN: 49 214 77 (solid); 49 214 78 (salt, solid).

Spill Handling: First remove all sources of ignition.

Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Toxic oxides of nitrogen are released in fire. Use dry chemical, carbon dioxide; or alcohol-resistant foam extinguishers. Vapors are heavier than air and will collect in low areas. Vapors may travel long distances to ignition sources and flashback. Vapors in confined areas may explode when exposed to fire. Storage containers and parts of containers may rocket great distances, in many directions. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Incineration. In accordance with 40CFR165. Do not discharge into drains or sewers. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Sulfentrazone S:0705

Use Type: Herbicide

CAS Number: 122836-35-5

Formula: $C_{11}H_{10}Cl_2F_2N_4O_3S$

Synonyms: 1-(2,4-Dichloro-5-methylsulfonylamidophenyl)-4-difluoromethyl-4,5-dihydro-3-methyl-1*H*-1,2,4-triazol-5-one; 2-(2,4-Dichloro-5-methylsulfonylamidophenyl)-4-difluoromethyl-2,4-dihydro-5-methyl-3*H*-1,2,4-triazol-3-one; 1-[2,4-Dichloro-5-(N^2-methylsulfonylamino)phenyl]-3-methyl-4-difluoromethyl-Δ^2-1,2,4-triazolin-5-one; Methanesulfonamide, *N*-[2,4-dichloro-5-(4-(difluoromethyl)-4,5-dihydro-3-methyl-5-*oxo*-1*H*-1,2,4-triazol-1-yl) phenyl]-

Trade Names: AUTHORITY® Sulfentrazone; CANOPY XL®; COVER®; F6285®; FMC® 97285; GAUNTLET®; SPARTAN®; SULFENTRAZONE® (F6285) 4F; SULFENTRAZONE® (F6285) 75DF

Chemical class: Triazolone; Aryl Triazolinone

EPA/OPP PC Code: 129081

California DPR Chemical Code: 5923

HSDB Number: 7014

UN/NA & ERG Number: UN3077 (solid)/171; UN3082(liquid)/171

RTECS® Number: PB0475010

EC Number: 602-896-4

Uses: Pre-emergence or pre-plant weed control on various products for the control of broadleaf and grass weed species in sugarcane, soybean, tobacco, and some turfgrass species. Registered for use in the U.S. Not listed for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Sulfentrazone and its major metabolite 3-hydroxymethyl sulfentrazone N-(2,4-dichloro-5-(4-(difluoromethyl)-4,5-dihydro-3-hydroxymethyl-5-oxo-1H-1,2,4-triazol-1-yl)phenyl)methanesulfonamide [40CFR 180.498(a)]: in or on the following raw agricultural commodity: soybean, seed: 0.05 ppm. ***Tolerances are established for inadvertent and indirect combined residues of sulfentrazone and its metabolites 3-hydroxymethyl sulfentrazone N-[2,4-dichloro-5-(4-(difluoromethyl)-4,5-dihydro-3-hydroxymethyl-5-oxo-1H-1,2,4-triazol-1-yl)phenyl)methanesulfonamide and 3-desmethyl sulfentrazone N-(2,4-dichloro-5-(4-(difluoromethyl)-4,5-dihydro-5-oxo-1H-1,2,4-triazol-1-yl)ph enyl)methanesulfonamide) [40CFR 180.498(d)]:*** in or on the following raw agricultural commodities when present therein as a result of the application of sulfentrazone to growing crops: cereal grains (excluding sweet corn), bran 0.15 ppm; cereal grains (excluding sweet corn), forage 0.2 ppm; cereal grains (excluding sweet corn), grain 0.1 ppm; cereal grains (excluding sweet corn), hay 0.2 ppm; cereal grains (excluding sweet corn), hulls 0.30 ppm; cereal grains (excluding sweet corn), stover 0.1 ppm; and cereal grains (excluding sweet corn), straw 0.6 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for human

Toxicity (oral) Category 3, CAUTION

Description: Tan solid or powder. Faint must, sulfur-like odor; Molecular weight = 387.19; Specific gravity (H_2O:1) = 1.33 @ 20 °C; Boiling point = (decomposes) 465 °C; Freezing/Melting point = 121–122 °C; Vapor pressure = 5.5×10^{-9} mmHg @ 25 °C; Flash point = >200 °C. Soluble in water.

Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Dust may form explosive mixture with air.

Permissible Concentration in Water: Federal Drinking Water Standards: EPA 4000 μg[Fl]/L; Federal Drinking Water Guidelines: EPA 2000 μg[Fl]/L; State Drinking Water Standards: California 2000 μg[Fl]/L; Delaware 2000 μg[Fl]/L; State Drinking Water Guidelines: Arizona 4000 μg[Fl]/L; Maine 1680 μg[Fl]/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = ~ 1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >2.5 g/kg; LD_{50} (dermal, rat) = >2 g/kg[83].

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children. May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds may increase risks of tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs, skin, blood, skeletal system, teeth. May affect fetus.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon and sulfur and hydrogen chloride and hydrogen fluoride gases. This chemical is partially combustible; it may burn but does not easily ignite; may support combustion at high temperatures. Use dry chemical powder extinguishers, foam, carbon dioxide. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. If this material cannot be disposed of according to label instructions, it may be dissolved or mixed with a combustible solvent and burned in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Sulfluramid S:0708

Use Type: Insecticide, Acaricide, Termiticide

CAS Number: 4151-50-2

Formula: $C_{10}H_6F_{17}NO_2S$

Synonyms: *N*-Ethylperfluorooctanesulfonamide; 1-Octane sulfonamide, *N*-ethyl-1,1,2,2,3,3,4,4,5,5,6,6,7,7,8,8,8-heptadecafluoro-

Trade Names: FINITRON®; FIRSTLINE®; FLUORGUARD®; GX-071®; MICRO-GEN ANT REACTOR®; VOLCANO®

Chemical class: Fluoroaliphatic Sulfonamide

EPA/OPP PC Code: 128992

California DPR Chemical Code: 2314

HSDB Number: 7100

UN/NA & ERG Number: Not regulated

RTECS® Number: RG9701300

EC Number: 223-980-3

Uses: Used as ant, roach and termite trap bait. Not listed for use in EU countries[115]. Actively registered for use in the U.S. According to the Fluoride Action Network, this chemical is not registered for use on food or crops and is scheduled to phased out by 2016.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, No data available

Toxicity (oral) Category 3, CAUTION

Description: White to off white crystalline solid or powder. Bland odor. Molecular weight = 527.18; Specific gravity (H_2O:1) = 1.156 @ 20 °C; Boiling point = 196 °C; Freezing/Melting point = 92–94 °C; Vapor pressure = 4×10^{-7} mmHg @ 25 °C; Flash point = 90 °C; Henry's Law constant = 5.37 atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salt.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation and dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin burns and respiratory problems. Possible eye contamination. Symptoms of actue exposure include salivation, lethargy, runny nose, decreased appetite. LD_{50} (oral, rat) = >500 mg/kg[83]; LD_{50} (dermal, rat) = >1000 mg/kg[83].

Long Term Exposure: Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Skin, eyes, lungs, endocrine system: testicles; skeletal system, teeth.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Absorb liquids in vermiculite, dry sand, earth, peat, carbon, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon and sulfur and hydrogen fluoride gas. This chemical is partially combustible; it may burn but does not easily ignite; may support combustion at high temperatures. Use dry chemical powder extinguishers, foam, carbon dioxide. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. If this material cannot be disposed of according to label instructions, it may be dissolved or mixed with a combustible solvent and burned in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Sulfometuron-methyl S:0715

Use Type: Herbicide

CAS Number: 74222-97-2

Formula: $C_{15}H_{16}N_4O_5S$

Synonyms: Benzoic acid, 2-[((((4,6-dimethyl-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]-, methyl ester; Benzoic acid, *o*-[(3-(4,6-dimethyl-2-pyrimidinyl)ureido) sulfonyl]-, methyl ester; Methyl 2-[((((4,6-dimethyl-2-pyrimidinyl)amino)carbonyl)amino) sulfonyl]benzoate; Sulfometuron methyl; Methyl 2-[((((4,6-dimethyl-2-pyrimidinyl)amino)carbonyl)amino) sulfonyl]benzoate

Trade Names: DPX-T5648®; KNOCKOUT®; LANDMARK® MP (sulfometuron-methyl + chlorsulfuron); OUST®; OUSTAR®; RIVERDALE®; STAMPRO®

Chemical class: Sulfonylurea

EPA/OPP PC Code:
122001; (122002 old EPA code number)

California DPR Chemical Code: 2149

HSDB Number: 7732

UN/NA & ERG Number:
UN3077 (solid)/171; UN3082(liquid)/171

RTECS® Number: DG9096550

EC Number: 277-780-6

Uses: Used to control annual and perennial grasses and broadleaf weeds on landscapes, rights-of-ways, fence rows, forests, industrial structure areas and non-crop land. Not listed for use in EU countries[115]. Registered for use in the U.S.

Regulatory Authority and Advisory Information:

Carcinogenicity: IARC and NTP have not classified the sulfonylurea herbicides with respect to human carcinogenicity. U.S. EPA considers the sulfonylureas not classifiable, not rated, or noncarcinogenic, *with the exception of* sulfosulfuron (141776-32-1), a likely human carcinogen, and triflusulfuron-methyl (126535-15-7) a Possible human carcinogen[96]

Toxicity (oral) Category 4, Caution

Health Advisory: Skin irritant/sensitizer

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

Description: White to colorless solid. Odorless. Freezing/Melting point = 202–203 °C. Molecular weight = 364.38;

Specific gravity (H_2O:1) = 1.48 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 198–203 °C; Vapor pressure = 6×10^{-15} mmHg @ 25 °C; Henry's Law constant = 5.17×10^{-14} atm-m^3/mol @ 25 °C (est)[83]. Soluble in water.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].[18].

Determination in Water: Log K_{ow} = negative to ~1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms

Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Dermal contact may cause allergic reaction. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg. LD_{50} (inhalation, rat) >5 ppm/4 hrs[92].

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or exposure to environmental degradation products[96].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of sulfur and nitrogen. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. Prevent water from entering containers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Sulfuryl fluoride S:0820

Use Type: Fumigant

CAS Number: 2699-79-8

Formula: F_2O_2S; SO_2F_2

Synonyms: Fluoruro de sulfurilo (Spanish); Sulfonyl fluoride; Sulfur difluoride dioxide; Sulfuric oxyfluoride; Sulphuryl difluoride; Sulphuryl fluoride

Trade Names: TERMAFUME®; VIKANE®; VIKANE FUMIGANT®

Chemical class: Inorganic toxic metals

EPA/OPP PC Code: 078003

California DPR Chemical Code: 618

HSDB Number: 828

UN/NA & ERG Number: UN2191/123

RTECS® Number: WT5075000

EC Number: 220-281-5 [*Annex I Index No.:* 009-015-00-7]

Uses: Sulfuryl fluoride is used to fumigate closed structures and their contents such as domestic dwellings, garages, barns, storage buildings, commercial warehouses, ships in port, and railroad cars. It controls numerous insect pests including termites, powder post beetles, old house borers, bedbugs, carpet beetles, clothes moths and cockroaches, as well as rats and mice. It is also used in organic synthesis of drugs and dyes. Use pending in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Sulfuryl Fluoride (40 CFR 180.575): barley, bran, post-harvest 0.05 ppm; barley, flour, post-harvest 0.05 ppm; barley, grain, post-harvest 0.1 ppm; barley, pearled barley 0.05 ppm; corn, field, flour, post-harvest 0.01 ppm; corn, field, grain, post-harvest 0.05 ppm; corn, field, grits, post-harvest 15 ppm; corn, field, meal, post-harvest 0.01 ppm; corn, pop, grain, post-harvest 0.05 ppm; grape, raisin 0.004 ppm; grape, raisin (40 CFR 180.145) 30 ppm; millet, grain, post-harvest 0.1 ppm; nut, tree, group 14, post-harvest 3 ppm; oat, flour, post-harvest 0.05 ppm; oat, grain, post-harvest 0.1 ppm; oat, groats/rolled oats, post-harvest 0.1 ppm; pistachio, post-harvest 3 ppm; rice, bran, post-harvest 0.01 ppm; rice, grain, post-harvest 0.04 ppm; rice, hulls, post-harvest 0.1 ppm; rice, polished rice, post-harvest 0.01 ppm; rice, wild, grain, post-harvest 0.05 ppm; sorghum, grain, grain, post-harvest 0.1 ppm; triticale, grain, post-harvest 0.1 ppm; walnut 2 ppm; walnut (40 CFR 180.145) 12 ppm; wheat, bran, post-harvest 0.05 ppm; wheat, flour, post-harvest 0.05 ppm; wheat, germ, post-harvest 0.02 ppm; wheat, grain, post-harvest 0.1 ppm; wheat, milled byproducts, post-harvest 0.05 ppm; wheat, shorts, post-harvest 0.05 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Not likely to be a human carcinogen

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical

Health Advisory: Developmental/Reproductive Toxin

Toxicity (oral) Category 2, WARNING

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: T, N; risk phrases: R23; R48/20; R50; safety phrases: S1/2; S45; S60; S61; S63 (see Appendix 1)

Description: Sulfuryl fluoride is a colorless gas. Odorless. Usually shipped as a liquefied compressed gas; Molecular weight = 102.055; Specific gravity (H_2O:1) = (liquid) 1.7 G/L; (gas) 3.7 G/L @ –55 °C; Boiling point = –55 °C; Freezing/Melting point = –137 °C; Vapor pressure = 12,000 mmHg @ 21 °C[DOE]. Soluble in water; reaction.

Incompatibilities: Can react with water, steam. Fluorides form explosive gases on contact with strong acids or acid fumes. Stable at temperatures <350 °C.

Permissible Exposure Limits in Air: NIOSH IDLH: 200 ppm

Conversion factor: 1 ppm = 4.18 mg/m^3 @ 25 °C & 1 atm

OSHA PEL: 5 ppm/20 mg/m^3 TWA; Vacated 1989 5 ppm/20 mg/m^3 TWA; STEL 10 ppm/40 mg/m^3 is still enforced in some states.

NIOSH REL: 5 ppm/20 mg/m^3 TWA; 10 ppm/42 mg/m^3 STEL

ACGIH TLV®[1]: 5 ppm/21 mg/m^3 TWA; 10 ppm/40 mg/m^3 STEL

Protective Action Criteria (PAC)

PAC-1: 10 ppm

PAC-2: 21_A ppm

PAC-3: 64_A ppm

Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values.

Determination in Air: Charcoal tube; Sodium hydroxide; Ion chromatography; NIOSH IV, Method #6012[18].

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <1. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, eye and/or dermal contact (liquid).

Harmful Effects and Symptoms

Short Term Exposure: May cause conjunctivitis, rhinitis, pharyngitis, paresthesia. Contact with the liquid may cause frostbite. High exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Overexposure can cause nausea, vomiting, itching, muscle twitching, tremors and seizures. LD_{50} (oral, rat) = 100 mg/kg.

Long Term Exposure: May cause kidney damage. Repeated high exposures can cause deposits of fluorides in the bones (fluorosis) that may cause pain, disability and mottling of the teeth. May cause reproductive and fetal effects. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Eyes, skin, respiratory system, central nervous system and kidneys. Reproductive cells. Skeletal system, teeth.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Consider the points of attack in preplacement and periodic physical examinations. Fluoride level in urine (for fluoride in urine use NIOSH #8308). Levels higher than 4 mg/L may indicate overexposure. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure. Kidney function tests. Examination of the nervous system. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Personal Protective Methods: Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear gas-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >10 ppm. NIOSH: *Up to 50 ppm:* Sa* (APF = 10) (any supplied-air respirator). *Up to 125 ppm:* Sa:Cf* (APF = 25) (any supplied-air respirator operated in a continuous-flow mode). *Up to 200 ppm:* SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode. *Escape:* GmFS100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern and having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Poison gas. Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from water, steam and strong acids. Procedures for the handling, use and storage of cylinders should be in compliance with OSHA 1910.101 and 1910.169, as with the recommendations of the Compressed Gas Association. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Sulfuryl fluoride requires a shipping label of "POISON GAS." It falls in Hazard Class 2.3. It is a violation of transportation regulations to refill compressed gas cylinders without the express written permission of the owner.

Spill Handling: If in a building, evacuate building and confine vapors by closing doors and shutting down HVAC systems. Restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak to disperse the gas. Wear chemical protective suit with self-contained breathing apparatus to combat spills. Stay upwind and use water spray to "knock down" vapor; contain runoff. Stop the flow of gas, if it can be done safely from a distance. If source is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place; and repair leak or allow cylinder to empty. Keep this chemical out of confined spaces, such as a sewer, because of the possibility of explosion, unless the sewer is designed to prevent the buildup of explosive concentrations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Initial isolation and protective action distances
Distances shown are likely to be affected during the first 30 minutes after materials are spilled and could increase with time. If more than one tank car, cargo tank, portable tank, or large cylinder is involved in the incident is leaking, the protective action distance may need to be increased. You may need to seek emergency information from CHEMTREC at (800) 424-9300 or seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Small Spills (from a small package or a small leak from a large package)
First: isolate in all directions (feet/meters) 100/30
Then: Protect persons downwind (miles/kilometers)
Day 0.1/0.2
Night 0.3/0.5

Large spills (from a large package or from many small packages)
First: isolate in all directions (feet/meters) 1000/300
Then: Protect persons downwind (miles/kilometers)
Day 1.1/1.8
Night 3.1/4.9

Fire Extinguishing: This chemical is a nonflammable gas. Hazardous decomposition includes sulfur dioxide and hydrogen fluoride. For small fires use dry chemical or carbon dioxide extinguishers. Gas is heavier than air and will collect in low areas. Containers may explode in fire. Storage containers and parts of containers may rocket great distances, in many directions. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If cylinders are exposed to excessive heat from fire or flame contact, withdraw immediately to a secure location. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156

Disposal Method Suggested: Addition of soda ash-slaked lime solution to form the corresponding sodium and calcium salt solution. This solution can be safely discharged after dilution. The precipated calcium fluoride may be buried or added to a landfill. Small amounts could also be released directly to the atmosphere without serious harm.

---

* Substance reported to cause eye irritation or damage; may require eye protection.
\+ May need acid gas sorbent.
* Substance reported to cause eye irritation or damage; may require eye protection.

T

Tebuconazole T:0133

Use Type: Fungicide, Plant growth regulator
CAS Number: 107534-96-3
Formula: $C_{16}H_{23}ClN_3O$
Synonyms: (RS)-1-(4-Chlorophenyl)-4,4-dimethyl-3-(1*H*-1,2,4-triazol-1-ylmethyl)pentan-3-ol; (RS)-1-*p*-Chlorophenyl-4,4-dimethyl-3-(1*H*-1,2,4-triazol-1-ylmethyl) pentan-3-ol; (±)-α-[2-(4-Chlorophenyl)ethyl]-α-(1,1-dimethylethyl)-1*H*-1,2,4-triazole-1-ethanol; Ethyltrianol; Fenetrazole; Terbutrazole; 1*H*-1,2,4-Triazole-1-ethanol, α-[2-(4-chlorophenyl)ethyl]-α-(1,1-dimethylethyl)-, (±)-
Trade Names: BAY®-HWG 1608; BAYER®-HWG-1608 CORAIL®; ELITE®; FOLICUR®; FOLITRAZOLE®; GAUCHO®; HORIZON®; HWG 1608®; LYNX-1.2®; PREVENTOL® RAXIL (tebuconazole+metalaxyl); SILVACUR®; TEBUJECT®; WOLMAN®; WOODLIFE®
Chemical class: Azole; Triazole
EPA/OPP PC Code: 128997
California DPR Chemical Code: 3850
HSDB Number: 7448
UN/NA & ERG Number: UN3082 (liquid)/171
RTECS® Number: XZ4803270
EC Number: 403-640-2 [Annex I Index No.: 603-197-00-7]
Uses: Used as a seed treatment against smuts and bunts of cereals; as a foliar spray against diseases of cereal, peanuts, oilseed rape, grapes, bananas, stone fruit, and pome fruit. Registered for use in EU countries[115]. Registered for use in the U.S.
U.S. Maximum Allowable Residue Levels for the fungicide Tebuconazole [40 CFR 180.474(a)(1)]: in or on the following raw agricultural commodities: banana 0.05 ppm; barley, grain 0.05 ppm; barley, hay 0.10 ppm; barley, straw 0.10 ppm; cherry 4.0 ppm; grape 5.0 ppm; grass, forage 8.0 ppm; grass, hay 25.0 ppm; grass, seed screenings 55.0 ppm; grass, straw 30.0 ppm; oat, forage 0.10 ppm; oat, grain 0.05 oat, hay 0.10 ppm; oat, straw 0.10 ppm; peach (includes nectarine) 1.0 ppm; peanut 0.1 ppm; wheat, forage 0.10 ppm; wheat, grain 0.05 ppm; wheat, hay 0.10 ppm; wheat, straw 0.10 ppm. *Tebuconazole and its metabolite 1-(4-chlorophenyl)-4,4-dimethyl-3-(1H-1,2,4-triazole-1-yl-methyl)-pentane-3,5-diol metabolite* ***[40 CFR 180.474(a)(2)]:*** cattle, meat byproducts 0.2 ppm; goat, meat byproducts 0.2 ppm; horse, meat byproducts 0.2 ppm; milk 0.1 ppm; sheep, meat byproducts 0.2 ppm.
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group C, Possible human carcinogen
Poison Category: 3, CAUTION
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R22; R51/R53; R63; safety phrases: S2; S22; S36/37; S61 (see Appendix 1)
Description: Clear, crystalline solid. Slightly soluble in water. Molecular weight = 307.87; Specific gravity (H_2O:1) = 1.25 @ 20 °C; Boiling point = (decomposes) 350 °C; Freezing/Melting point = 105–106 °C; Vapor pressure = 1×10^{-7} mmHg @ 25 °C. Low solubility in water.
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Ingestion, dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Poisonous if swallowed. Contact may irritate skin and cause eye irritation and possible severe injury. Avoid inhalation. LD_{50} (oral, rat) = >2.5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.
Long Term Exposure: Possible carcinogen.
Points of Attack: Liver, blood system.
Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Liver function tests, Complete blood count.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.
Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.
Respirator Selection: *At any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or

European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter k-mounted organic vapor canister having a high-efficiency particulate filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: First, remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Contact a licensed disposal facility about surplus and non-recyclable solutions. Burn in a chemical incinerator equipped with an afterburner and scrubber. Extra care must be exercised as the material in an organic solvent is highly flammable. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Incineration or permanganate oxidation.

Tebufenozide T:0135

Use Type: Insecticide, Insect growth regulator

CAS Number: 112410-23-8

Formula: $C_{22}H_{28}N_2O_2$

Synonyms: Benzoic acid, 3,5-dimethyl-, 1-(1,1-dimethylethyl)-2-(4-ethylbenzoyl)hydrazide; *N-tert*-Butyl-*N'*-(4-ethylbenzoyl)-3,5-dimethylbenzoylhydrazide; 3,5-Dimethylbenzoic acid 1-(1,1-dimethylethyl)-2-(4-ethylbenzoyl)hydrazine

Trade Names: CONFIRM®; MIMIC®; RH-5992®

Chemical class: Diacylhydrazine

EPA/OPP PC Code: 129026

California DPR Chemical Code: 3957

HSDB Number: 7050

UN/NA & ERG Number: UN3077(solid)/171

EC Number: 412-850-3 [*Annex I Index No.:* 616-076-00-9]

Uses: Tebufenozide is an insect growth regulator that interferes with molting of Lepidopteran larvae. It is used on fruitworm, fireworms, false armyworm, gypsy moth, and spanworms, and is applied pre-harvest. Registered for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Tebufenozide [40 CFR 180.482(a)(1)]: in or on the following raw agricultural commodities almond, hulls: 25 ppm; apple, pomace 3.0 ppm; apple 1.0 ppm; berry (crop group 13) 3.0 ppm; canola, refined oil 4.0 ppm; canola, seed 2.0 ppm; cotton 1.5 ppm; cotton, gin byproducts 30 ppm; cranberry 1.0 ppm; fruiting vegetables (except cucurbits) 1.0 ppm; head and stem Brassica crop subgroup 5.0 ppm; kiwifruit 0.5 ppm; leafy Brassica green crop subgroup 10.0 ppm: leafy greens crop subgroup 10.0 ppm; leafy petioles crop subgroup 2.0 ppm; peppermint, tops 10.0 ppm; pome fruit 1.5 ppm; spearmint, tops 10.0 ppm; tree nut crop group including pistachios 0.1 ppm; turnip, roots 0.3 ppm; turnip, tops 9.0 ppm; walnut 0.1 ppm.

Tebufenozide and its metabolites benzoic acid, 3,5-dimethyl-1-[1,1-dimethylethyl)-2-((4-carboxymethyl) benzoyl)hydrazide), benzoic acid, 3-hydroxymethyl,5-methyl-1-(1,1-dimethylethyl)-2-(4-ethylbenzoyl) hydrazide, the stearic acid conjugate of benzoic acid, 3-hydroxymethyl-5-methyl-1-(1,1-dimethylethyl)-2-(4-(1-hydroxyethyl)benzoyl)hydrazide [40 CFR 180.482(a)(2)]: in or on the following raw agricultural commodities: fat of cattle, goats, hogs, horses, and sheep 0.1 ppm; meat of cattle, goats, hogs, horses, and sheep 0.08 ppm; meat byproducts of cattle, goats, hogs, horses, and sheep 0.08 ppm; milk 0.04 ppm.

Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans
Acute Oral Category: 3, CAUTION
Health Advisory: Ground water pollutant (S!)
EPA Acceptable Daily Intake (ADI): Oral reference dose (RfD) = 0.018 mg/kg/day. This RfD is based on a chronic toxicity study in dogs which found growth retardation, alterations in hematology parameters, changes in organ weights, and histopathological lesions in the bone, spleen and liver at 8.7 mg/kg/day [64 FR 16850][83].
European/International Regulations: Hazard Symbol: N; risk phrases: R50/53; safety phrases: S2; S61 (see Appendix 1)

Description: An off-white powder. Commercial product can be a soluble concentrate that may be mixed with water and used as a spray. Molecular weight = 352.47; Specific gravity (H_2O:1) = 1.04 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 189 °C; Vapor pressure = mmHg @ 25 °C; Vapor pressure = 3×10^{-7} mmHg @ 25 °C. Practically insoluble in water.

Incompatibilities: Decomposes in temperatures >200 °C. Keep away from strong oxidizers and alkalies.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 100 ppb[14].

Determination in Water: Log K_{ow} = >3.5. Likely to bioaccumulate in marine organisms.

Incompatibilities: Contact with flammable material may cause fire and explosions. Contact with combustible or oxidizable materials may form heat-, shock-, and friction-sensitive explosive mixtures. Static electricity may also cause explosions. Keep away from all acids, especially dibasic organic acids, ammonium compounds, antimony sulfide, arsenic trioxide, metal sulfides, powdered metals, calcium aluminum hydride, cyanides, manganese dioxide, phosphorus, selenium, sulfur, thiocyanates, zinc

Permissible Concentration in Water: State Drinking Water Guidelines: Maine 140 μg/L. Environmental hazard; runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation of dust, dermal contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May be toxic if ingested, inhaled or on contact with skin or eyes. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Possible liver, kidney and blood effects. Animal studies suggest growth retardation.

Points of Attack: Bone, spleen, liver, kidney, cardiovascular system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group III.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Remove all sources of ignition, ventilate the spill area, and use absorbent to pick up spilled material. Follow by washing surfaces well, first with 60 to 70% ethanol and water, then with soap and water. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Tebuthiuron T:0137

Use Type: Herbicide

CAS Number: 34014-18-1

Formula: $C_9H_{16}N_4OS$

Synonyms: Caswell No. 366AA; *N*-[5-(1,1-Dimethylethyl)-1,3,4-thiadiazol-2-yl]-*N,N*'-dimethylurea; *N*-[5-(1,1-Dimethylethyl)-1,3,4-thiadiazol-2-yl]-*N,N*'-dimethylurea; 1-(5-*tert*-Butyl-1,3,4-thiadiazol-2-yl)-1,3-dimethylurea; Urea, *N*-(5-(1,1-dimethylethyl)-1,3,4-thiadiazol-2-yl)-*N,N*'-dimethyl-; Urea, 2-(5-*tert*-butyl-1,3,4-thiadiazol-2-yl)-1,3-dimethyl-; Urea, 1-(5-*tert*-butyl-1,3,4-thiadiazol-2-yl)-1,3-dimethyl-; Urea, *N*-[5-(1,1-dimethylethyl)-1,3,4-thiadiazol-2-yl]-*N,N*'-dimethyl-

Trade Names: BRULAN®; BRUSH-BULLET®; E-103®; GRASLAN®; HERBEC®; HERBIC®; PERFLAN®; RECLAIM; SHA-105501®; SPIKE®; SPRAKIL®; TEBULAN®; TIUROLAN®

Chemical class: Urea

EPA/OPP PC Code: 105501

California DPR Chemical Code: 1810

HSDB Number: 6863

UN/NA & ERG Number: UN3077(solid)/171

RTECS® Number: YS4250000

EC Number: 251-793-7 [*Annex I Index No.:* 616-020-00-3]

Uses: Tebuthiuron is a broad-spectrum herbicide that is used to control weeds in non-cropland areas, range lands, rights-of-way and industrial sites. In grasslands and sugar cane it controls woody and herbaceous plants and weeds such as alfalfa, bluegrasses, chickweed, clover, dock, goldenrod and mullein. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Tebuthiuron and its metabolites [40 CFR 180.390(a)(1)]: in or on the following raw agricultural commodities: grass, forage 10.0 ppm; grass, hay 10.0 ppm. ***[40 CFR 180.390(a)(2)]:*** cattle, fat 1.0 ppm; cattle, meat 1.0 ppm; cattle, meat byproducts 5.0 ppm; goat, fat 1.0 ppm; goat, meat 1.0 ppm; goat, meat byproducts 5.0 ppm; horse, fat 1.0 ppm; horse, meat 1.0 ppm; horse, meat byproducts 5.0 ppm; sheep, fat 1.0 ppm; sheep, meat 1.0 ppm; sheep, meat byproducts 5.0 ppm. ***[40 CFR 180.390(a)(3)]:*** milk, 0.8 ppm.

Regulatory Authority and Advisory Information:

Health Advisory: Developmental Toxin (TRI)
Toxicity (oral) Category (depending on formulation) 2, WARNING; Category: 3, CAUTION
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R22; R50/53; safety phrases: S2; S37; S60; S61 (see Appendix 1)

Description: Grayish to dark-brown pellets, granules, or powder; Technical grade is colorless. Musty odor. Molecular weight = 228.33; Specific gravity (H_2O:1) = 1.19 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 163 °C; Vapor pressure = 2.2×10^{-6} mmHg @ 20 °C; 0.27 mmHg @ 25 °C. Henry's Law constant = 1.2×10^{-10} atm-m^3/mol @ 25 °C[83,USDA]. Soluble in water: solubility: >2000 ppm @ 25 °C (powder).

Incompatibilities: Keep away from strong oxidizers and alkalies.

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 500 μg/L; State Drinking Water Guidelines: Arizona 35 μg/L; Florida 490 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. May cause corneal damage. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed causing nausea, vomiting and diarrhea. Dermal contact may cause allergic reaction. LD_{50} (oral, rat) = 640 mg/kg; LD_{50} (dermal, rat) = >5 g/kg[83].

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or exposure to environmental degradation products[96]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Eye examination by an ophthalmologist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of sulfur and nitrogen. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam.

Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Tefluthrin T:0144

Use Type: Insecticide, Miticide

CAS Number: 79538-32-2

Formula: $C_{17}H_{14}ClF_7O_2$

Synonyms: Cyclopropanecarboxylic acid, 3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethyl-, (2,3,5,6-tetrafluoro-4-methylphenyl)methyl ester, (1α,3α*(Z)*)-(±)-; (2,3,5,6-Tetrafluoro-4-methylphenyl)methyl *cis*-3-(2-chloro-3,3,3-trifluoro-1-propenyl)-2,2-dimethylcyclopropane carboxylate; Tefluthrine

Trade Names: FORCE®; FORCE® ST; FORZA®; JF 6064®; KOMET-RP®; PP 993®; R 151993®

Chemical class: Pyrethroid

EPA/OPP PC Code: 128912

California DPR Chemical Code: 3839

HSDB Number: 7135

UN/NA & ERG Number: UN3349 (solid)/151; UN3352 (liquid)/151; UN3082 (liquid)/171; UN3077(solid)/171

RTECS® Number: GZ1227850

Uses: A U.S. EPA restricted use Pesticide (RUP). Registered in the U.S. for use on corn. Elsewhere it is registered for use on a variety of crops, e.g., peanuts, sweet potato, sugarcane, cabbage, radish, Brussels sprouts, and strawberries. Registered for use in EU countries[115].

U.S. Maximum Allowable Residue Levels (combined) for Tefluthrin and its metabolite (Z)-3- (2-chloro-3,3,3-trifluroro-1-propenyl)-2,2-dimethylcyclopropanecarboxylic acid [40 CFR 180.440]: corn, field, forage 0.06 ppm; corn, field, grain 0.06 ppm; corn, field, stover 0.06 ppm; corn, pop, forage 0.06 ppm; corn, pop, grain 0.06 ppm; corn, pop, stover 0.06 ppm; corn, sweet, forage 0.06 ppm; corn, sweet, kernel plus 0.06 ppm; cob with husks removed ppm; corn, sweet, stover 0.06 ppm.

Regulatory Authority and Advisory Information:

Carcingenicity: EPA, Not yet evaluated

Toxicity (oral) Category 1, DANGER–POISON

Health Advisory: Endocrine disruptor (S!)

Marine pollutant (IMDG)

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R23/24; R28; R50/53; safety phrases: S1/2; S22; S23; S28; S36/37/39; S45; S60; S61 (see Appendix 1)

Description: Tan crystalline solid or powder. Musty odor. Commercial product is available as an emulsifiable concentrate. Molecular weight = 418.71; Specific gravity (H_2O:1) = 1.23 @ 20 °C; Boiling point = 156 °C; Freezing/Melting point = 46 °C; Vapor pressure = $6.5\ \ 10^{-5}$ mmHg @ 25 °C. Henry's Law constant = 1.6×10^{-3} atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water; solubility = <0.002 ppm. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate. Store at temperature <35 °C and away from alkaline materials.

Permissible Exposure Limits in Air:

NIOSH[2] IDLH = 5,000 ppm

OSHA PEL: 5 mg/m^3 TWA

NIOSH REL: 5 mg/m^3 TWA

ACGIH TLV®[1]: 5 mg/m^3 TWA

STEL set by HSE[33] = 10 mg/m^3.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. (pyrethrum).

Determination in Water: Log K_{ow} = <6.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal contact (may be poisonous), ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Toxic by inhalation and dermal and/or eye contact. Highly toxic if swallowed; nausea, vomiting, abdominal pain, and diarrhea may develop within 10 to 60 minutes following ingestion. Inhalation may cause skin, eye, and respiratory tract irritation. Stuffiness, runny nose and scratchy throat following inhalation exposure may be noted. Hypersensitivity reactions characterized by pneumonitis, cough, dyspnea, wheezing, chest pain, and bronchospasm may occur. High exposures may cause respiratory failure, including cardiopulmonary arrest; death may occur. Mild skin sensitizer. LD_{50} (oral, rat) = <50 mg/kg; LD_{50} (dermal, rabbit) = <200 mg/kg.

Long Term Exposure: Redness or rash of the skin (erythema), a skin condition that mimics sunburn, may occur following prolonged repeated exposure.

Points of Attack: Skin, lungs.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m³:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m³:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying ful facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m³:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG I.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations.

If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride, hydrogen fluoride, and oxides of carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Chemical class: Organophosphate

EPA/OPP PC Code: 059001

California DPR Chemical Code: 1

HSDB Number: 956

UN/NA & ERG Number: UN2783 (solid)/152

RTECS® Number: TF6890000

EC Number: 222-191-1

Uses: Temephos is one of the few organophosphates that is registered to control mosquito larvae. It is a non-systemic insecticide for use on wetlands, ponds, lakes and other moist areas to control mosquito, gnat, black fly, midge, pinkie and sandfly larvae. Banned for use in EU countries[115]. Registered for use in the U.S.

Regulatory Authority and Advisory Information:

Carcinognicity: EPA, Not yet determined

Health Advisory: Nerve Toxin, Developmental/Reproductive Toxin

Toxicity (oral) Category (depending on formulation) 2, WARNING; Category: 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Temephos is a crystalline solid, powder, or liquid (>30.5 °C). The technical product is a brown viscous liquid. Commercial product is available as an emulsifiable concentrate. Molecular weight = 466.48; Boiling point = 120–125 °C; Freezing/Melting point = 30.6 °C; Vapor pressure = 7.9×10^{-8} mmHg @ 25 °C (sest.)[83]; Flash point = 43–92 °C (based on formulation, NFPA). Henry's Law constant = 1.2×10^{-9} atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Strong acids and bases. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: OSHA PEL: 15 mg/m^3 TWA, total dust; 5 mg/m^3 TWA respirable fraction.

NIOSH REL: 10 mg/m^3 TWA, total dust; 5 mg/m^3 TWA respirable fraction.

ACGIH TLV®[1]: 1 mg/m^3 TWA, inhalable fraction and vapors [skin]; Not Classifiable as a human Carcinogen; BEI$_A$ issued for Acetylcholinesterase inhibiting pesticides.

No Protective Action Criteria (PAC) available.

Determination in Air: Collection on a filter and gravimetric analysis.

Permissible Concentration in Water: No criteria set. Experience in the field for a period of more than one year has shown, however, that 1 mg/L in drinking water is without effect.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = >6.0 Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Temephos can affect you when breathed in and quickly enters the body by passing through the skin. Severe poisoning can occur from dermal and/or eye contact. It is a moderately toxic organophosphate chemical. Exposure can cause rapid severe poisoning with headache, sweating, nausea and vomiting, diarrhea, loss of coordination, and death. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = 444[14]–> 1 g/kg[83]; LD_{50} (dermal, rat) = 1–> 3 g/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed.Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a label of "poisonous materials." This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Terbacil T:0185

Use Type: Herbicide

CAS Number: 5902-51-2

Formula: $C_9H_{13}ClN_2O_2$

Synonyms: 3-*tert*-Butyl-5-chloro-6-methyluracil; 5-Chloro-3-*tert*-butyl-6-methyluracil; 5-Chloro-3-(1,1-dimethylethyl)-6-methyl-2,4(1*H*,3*H*)-pyrimidinedione;5-Chloro-3-(1,1-dimethyl)-6-methyl-2,4(1*H*,3*H*)-pyrimidinedione; 5-Chloro-3-(1,1-dimethylethyl)-6-methyl-2,4(1H,3H)-pyrimidinedione; 5-Chloro-3-*tert*-butyl-6-methyluracil; 2,4(1*H*,3*H*)-Pyrimidinedione, 5-chloro-3-(1,1-dimethylethy)-6-methyl-; Uracil, 3-*tert*-butyl-5-chloro-6-methyl-

Trade Names: COMPOUND® 732; DuPont™® 732; EXPERIMENTAL HERBICIDE 732; GEONTER®; SINBAR®; TURBSVIL®; ZOBAR®[C]

Chemical class: Uracil

EPA/OPP PC Code: 012701

California DPR Chemical Code: 532

HSDB Number: 1418

UN/NA & ERG Number: None assigned

RTECS® Number: YQ9360000

EC Number: 227-595-2

Uses: Terbacil is a selective herbicide that treats a broad spectrum of broadleaf weeds and grasses. It is formulated as a wettable powder and is applied by aircraft or ground equipment on terrestrial food and feed crops (e.g., apples, mint/peppermint/spearmint, sugarcane, and ornamentals), forestry [e.g., cottonwood (forest/shelterbelt)], terrestrial food (e.g., asparagus, blackberry, boysenberry, dewberry, loganberry, peach, raspberry, youngberry and strawberry), and terrestrial feed (e.g., alfalfa, sainfoin (hay and fodder), and forage). Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Terbacil [40 CFR 180.209]: alfalfa, forage 1.0 ppm; alfalfa, hay 2.0 ppm; apple 0.3 ppm; asparagus 0.4 ppm; blueberry 0.2 ppm; caneberry subgroup 13a, 0.2 ppm; peach 0.2 ppm; peppermint, tops 2.0 ppm; spearmint, tops 2.0 ppm; strawberry 0.1 ppm; sugarcane, cane 0.4 ppm; watermelon 0.4 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

California Proposition 65 Chemical: Developmental/Reproductive toxin (5/18/1999)

Health Advisory: Developmental & Reproductive toxin (TRI)

Toxicity (oral) Category 4, Caution.

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White crystalline powder; colorless crystalline solid or powder. Odorless. Molecular weight = 216.65; Specific gravity (H_2O:1) = 1.35 @ 20 °C; Boiling point = (decomposes) <175 °C; Freezing/Melting point = 176 °C; Vapor pressure = 4.5×10^{-7} mmHg @ 29.5 °C. Henry's Law constant = 1.9×10^{-10} atm-m^3/mol @ 25 °C (est)[83]. High solubility in water; solubility = 712 ppm @ 25 °C.

Incompatibilities: Incompatible with strong oxidizers. Decomposes in temperatures >173 °C. Dust may form explosive mixture with air.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 90 μg/L; State Drinking Water Guidelines: Florida 91 μg/L Groundwater: Using the maximum groundwater concentration of 0.0089 mg/L an estimated daily intake, assuming 2 L/day of water, is 0.00025 mg[terbacil]/kg body wt/day for an adult, assuming 1 L/day of water, is 0.00089 mg[terbacil]/kg body wt/day for a 10 kg child; Surface water: Using the maximum concentration of 0.105 ∝g/L found near sugar cane fields an estimated daily intake, assuming 2 L/day of water, is 0.003 mg[terbacil]/kg body wt/day for an adult, assuming 1 L/day of water, is 0.00105 mg[terbacil]/kg body wt/day for a 10 kg child[83].

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin and eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact or inhalation may cause irritation to the skin, eyes and respiratory tract. Ingestion may be followed by dizziness, elevated temperature, nausea, vomiting, and diarrhea. Overexposure may produce pulmonary edema, cyanosis and methemoglobinemia. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause damage of the liver, kidneys, central nervous system.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Comprehensive physical examination with emphasis on the genito-urinary tract analysis to include sperm count, motility and morphology. Other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be carried out if, in the opinion of a physician, they are indicated. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Complete blood count. Test for methemoglobin if skin is blue.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash- or dust-proof chemical goggles (depending on physical state of material) and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where potential exists for exposures *over 1ppm*, use a NIOSH/MSHA- or European Standard EN149-approved respirator equipped with particulate (dust/fume/mist) filters. Particulate filters must be checked every day before work for physical damage, such as rips or tears, and replaced as needed. *Where potential for high exposures exists*, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Color Code-Green: General storage may be used. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong acids; oxidizers, heat and open flame. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: No information found.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Absorb liquid in vermiculite, dry sand, earth, or similar material. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index K_{oc} = 32.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of nitrogen and oxygen. Terbacil may burn, but does not readily ignite; may be ignited by heat or open flame. Dust may cause an explosion. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. If allowed, incineration with effluent gas scrubbing is recommended.

Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Terbufos T:0190

Use Type: Insecticide, Nematicide

CAS Number: 13071-79-9

Formula: $C_9H_{21}O_2PS_3$; $(C_2H_5O)_2PSSCH_2SC(CH_3)_3$

Synonyms: *S*-[(Tert-butylthio)methyl]-*O,O*-diethylphosphorodithioate; *S*-[((1,1-Dimethylethyl)thio) methyl]-*O,O*-diethylphosphorodithioate; Phosphorodithioic acid *S*-[(tert-butylthio)methyl]-*O,O*-diethylester; Phosphorodithioic acid *S*-[((1,1-dimethylethyl)thio)methyl]-*O,O*-diethyl ester

Trade Names: AC 921000®; ARAGRAN®; CONTRAVEN®; COUNTER®; COUNTER 15G SYSTEMIC INSECTICIDE®; PLYDOX®; TERBUROX®

Chemical class: Organophosphate

EPA/OPP PC Code: 105001

California DPR Chemical Code: 2925

HSDB Number: 6444

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TD7200000

EC Number: 235-963-8 [*Annex I Index No.:* 015-139-00-2]

Uses: This insecticide and nematicide is applied at planting time to corn, sugar beets, sorghum, maize, cotton, bananas and cabbage. It controls corn rootworms, wireworms, white grubs, maggots, billbugs and nematodes. Some above-ground pests can be controlled when soil has been treated with terbufos. Terbufos has no residential use. Not approved for use in EU countries[115]. A U.S. EPA restricted use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Terbufos and its cholinesterase-inhibiting metabolites [40 CFR 180.352(a)]: in or on the following raw commodities: bananas 0.025 ppm; beet, sugar, roots 0.05 ppm (negligible residues); beet, sugar, tops 0.1 ppm; corn, field, fodder 0.5 ppm; corn, field, forage 0.5 ppm; corn, pop, fodder 0.5 ppm; corn, pop, forage 0.5 ppm; corn, grain 0.05 ppm (negligible residue); corn, sweet, kernel plus cob with husks removed 0.05 ppm (negligible residue); corn, sweet, forage 0.5 ppm; corn, sweet, fodder 0.5 ppm; sorghum, fodder 0.5 ppm; sorghum, forage 0.5 ppm; and sorghum, grain 0.05 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group E, evidence of non-carcinogenicity for humans

Toxicity (oral) Category 1, DANGER–POISON

Health Advisory: Nerve Toxin

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)

Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

European/International Regulations: Hazard Symbol: T+, N; risk phrases: R27/28; R50/53; safety phrases: S1/2; S36/37; S45; S60. S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Terbufos is a clear, colorless to pale yellow or reddish-brown liquid. Mercaptan-like odor. Some commercial products are granular solids. Molecular weight = 288.45[9]; Specific gravity (H_2O:1) = 1.105 @ 24 °C; Boiling point = 315 °C; 68.9 °C @ 0.01 mm; Freezing/Melting point = –29 °C; Vapor pressure = 3×10^{-4} mmHg @ 25 °C; Flash point = 88 °C (oc). Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 3, Reactivity 0. Slightly soluble in water; solubility = <1 mg/mL.

Incompatibilities: Incompatible with alkaline conditions (hydrolyzes) and strong oxidizers. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: ACGIH TLV®[1]: 0.01 mg/m^3 TWA, inhalable fraction and vapor [skin]; not classifiable as a human carcinogen; BEI issued (1999)

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.091 mg/m^3
PAC-2: 1 mg/m^3
PAC-3: 1 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 0.2 μg/L[107]; EPA Health Advisory: zero; State Drinking Water Guidelines: Maine 0.35 μg/L; Florida 0.18 μg/L. Canadian Drinking Water Standards: IMAC 0.001 mg/L.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography.

Detection limit = 6.0 ng/L. Analysis of terbufos is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen-phosphorus-containing pesticides in water samples. In this method, approximately 1 liter of sample is extracted with methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using a nitrogen-phosphorus detector. Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion and dermal contact.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: This material may be fatal if swallowed, inhaled, or absorbed through the skin. Repeated inhalation or dermal contact may progressively increase susceptibility to poisoning. Acute exposure to terbufos may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may be noted, although hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. Delayed pulmonary edema may occur after inhalation. LD_{50} (oral, rat) = wide variation reported from more than 1000 μg/kg to >2 g/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1. **STN:** 49 216 74.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Tetrachlorvinphos T:0275

Use Type: Insecticide

CAS Number: 961-11-5 (mixture of E- and Z-isomer); 22248-79-9 (Z-isomer)

Formula: $C_{10}H_9Cl_4O_4P$

Synonyms: Benzyl alcohol, 2,4,5-trichloro-α-(chloromethylene)-, dimethyl phosphate; 2-Chloro-1-(2,4,5-trichlorophenyl)ethenyl dimethyl phosphate; 2-Chloro-1-(2,4,5-trichlorophenyl)vinyl dimethyl phosphate; 2-Chloro-1-(2,4,5-trichlorophenyl)vinyl phosphoric acid dimethyl ester; CVMP; *O,O*-Dimethyl-*O*-2-chloro-1-(2,4,5-trichlorophenyl)vinyl phosphate; Dimethyl 2,4,5-trichloro-α-(chloromethylene)benzyl phosphate; ENT 25841; NCI-C00168; OMS 595; Phosphoric acid, 2-chloro-1-(2,3,5-trichlorophenyl)ethenyl dimethyl ester; Phosphoric acid, 2-chloro-1-(2,4,5-trichlorophenyl)vinyl dimethyl ester; Phosphoric acid, 2-chloro-1-(2,4,5-trichlorophenyl) ethenyldimethyl ester; Phosphoric acid, 2-chloro-1-(2,3,5-trichlorophenyl)ethenyl dimethyl ester; Tetraclorvinfos (Spanish); 2,4,5-Trichloro-α-(chloromethylene)benzyl phosphate

Trade Names: AMERICARE RABON®; CLEAN CROP®; EQUI-FLY® ORAL LARVICIDE; EQUITROL®; FLY PATROL®; GARDONA®; IPO 8®; RABON®; RABOND®; SD 8447®; STIROFOS®

Chemical class: Organophosphate

EPA/OPP PC Code: 083702 (E-isomer); 083701 (Z-isomer)

California DPR Chemical Code: 305

HSDB Number: 4066

UN/NA & ERG Number: UN2783 (solid)/152; UN3018 (liquid)/152

RTECS® Number: TB9100000

EC Number: 203-506-3 (E-isomer); 244-865-4 (Z-isomer)

Uses: Tetrachlorvinphos is applied dermally to livestock to control flies and mites. It is used as an oral larvicide in cattle, hog, goats and horses; in cattle ear tags to control flies; in cattle feedlots; in poultry dust boxes to control poultry mites; and in poultry houses. Tetrachlorvinphos also is used in pet sleeping areas and pet flea collars and to control flies around refuse sites, recreational areas, and for general outdoor treatment. Not approved for use in EU countries[115] (isomer unspecified). Registered for use in the U.S. (both isomers).

U.S. Maximum Allowable Residue Levels for Tetrachlorvinphos [40 CFR 180.252(a) (1)]: cattle, fat 1.5 ppm; egg 0.1 ppm; goat, fat 0.5 ppm; hog, fat 1.5 ppm; horse, fat 0.5 ppm; milk, fat (reflecting negligible residues in whole milk) 0.5 Poultry, fat. ***[40 CFR 180.252(a) (2)]*** this pesticide may be safely used in accordance with the following prescribed conditions: (i) It is used in the feed of beef, dairy cattle, and horse at a rate of 0.00015 pound (0.07 gram) and swine at the rate of 0.00011 pound (0.05 gram) per 100 pounds of body weight per day. (ii) It is used for control of fecal flies in manure of treated cattle, horse, and swine. (iii) To assure safe use of the pesticide, the label and labeling of the pesticide formulation shall conform to the label and labeling registered by the U.S. EPA.

Human toxicity (long-term)[101]: Very low–875.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–49.75254 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: IARC: Group 3, unclassifiable as to human carcinogenicity

Health Advisory: Nerve Toxin, Tumorigen

Toxicity (oral) (depending on formulation) Category: 2, WARNING Category 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

DOT Inhalation Hazard Chemicals as organophosphates

Description: Tan, brown or off-white crystalline solid or powder. Slight chemical odor. Molecular weight = 365.96; Specific gravity (H_2O:1) = 1.52 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 94–98 °C; Vapor pressure = 4.2×10^{-8} mmHg @ 20 °C. Henry's Law constant = 2×10^{-9} atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides[18].

Permissible Concentration in Water: State Drinking Water Guidelines: Florida 1.5 μg/L. Runoff from spills or fire control may cause water pollution.

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, skin and eye contact. May be absorbed through the unbroken skin.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, dizziness, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, irritability, tingling of the skin, drowsiness, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat, male) = 1480 mg/kg[83]; (oral, rat, female) = 465–985 mg/kg[83]; LD_{50} (dermal, rat) = >10 g/kg[IARC].

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Neurotoxic. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Liver and kidney toxin.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase, kidneys.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 g in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of phosphorus, sulfur, nitrogen, and carbon. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Tetramethrin T:0350

Use Type: Insecticide

CAS Number: 7696-12-0

Formula: $C_{19}H_{25}NO_4$

Synonyms: AI3-27339; Bioneopynamin; Caswell No. 844; (1-Cyclohexane-1,2-dicarboximido)methyl chrysanthemumate; Cyclohex-1-ene-1,2-dicarboximidomethyl (±)-*cis-trans*-chrysanthemate; (1-Cyclohexene-1,2-dicarboximido)methyl 2,2-dimethyl-3-(2-methylpropenyl) cyclopropanecarboxylate; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, (1,3,4,5,6,7-hexahydro-1,3-dioxo-2*H*-isoindol-2-yl)methyl ester; 2,2-Dimethyl-3-(2-methyl-1-propenyl)cyclopropanecarboxylic acid (1,3,4,5,6,7-hexahydro-1,3-dioxo-2*H*-isoindol-2-yl) methyl ester; ENT 27339; NSC 190939; *d*-Phthalthrin; 2,3,4,5-Tetrahydrophthalimidomethylchrysanthemate; 3,4,5,6-Tetrahydrophthalimidomethyl (±)-*cis-trans*-chrysanthemate; 3,4,5,6-Tetrahydrophthalimidomethyl (±)-*(Z)*-*(E)*-chrysanthemate; 3,4,5,6-Tetrahydrophthalimidomethyl *cis and trans dl*-chrysanthemummonocarboxylic acid; *N*-(3,4,5,6-Tetra hydrophthalimido)-methyl *dl-cis-,trans*-chrysanthemate; *N*-(3,4,5,6-Tetrahydrophthalimido)-methyl *dl-(Z)*,*(E)*-chrysanthemate; Tetramethrin, (±)-; Tetramethrine; Tetramethrin, racemic; (±)-*cis/trans*-Phthalthrin

Trade Names: FMC 9260®; ENT-27339; EVERCIDE INTERMEDIATE® 2265 (tetramethrin+fenvalerate); MULTICIDE®; NEO-PYNAMIN®; NEOPYNAMINE®; NEOPYNAMIN FORTE®; NIAGARA®-9260; NIA®-9260; PHTHALTHRIN®; SP-1103; SUMITOMO® SP-1103

Chemical class: Pyrethroid

EPA/OPP PC Code: 069003

California DPR Chemical Code: 1695

HSDB Number: 6738

UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151

RTECS® Number: GZ1730000

EC Number: 231-711-6

Uses: Tetramethrin is often formulated as an aerosol and used primarily for indoor pest control or in mosquito coils. It is also used in shampoos to control fleas and ticks on pets. It is often formulated with other insecticides and synergists. Not approved for use in EU countries[115]. Registered for use in the U.S.

Human toxicity (long-term)[101]: Very low–8750.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.26608 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Toxicity (oral) Category 4, Caution

Health Advisory: Mutagen, Skin irritant/sensitizer, Endocrine disruptor (?)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Marine pollutant

Description: White to colorless crystalline solid. Commercial products are available in various forms including as emulsifiable concentrates. Molecular weight = 331.40; Specific gravity (H_2O:1) = 1.11 @ 20 °C; Boiling point = 140 @ 12 mmHg @ 25 °C; Freezing/Melting point = 69-74 °C; Vapor pressure = 10 Pa @ 20 °C. Henry's Law constant = $1.69\sigma10^{-6}$ atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Keep away from alkaline materials. May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air:

NIOSH[2] IDLH = 5,000 ppm
OSHA PEL: 5 mg/m^3 TWA
NIOSH REL: 5 mg/m^3 TWA
ACGIH TLV®[1]: 5 mg/m^3 TWA
STEL set by HSE[33] = 10 mg/m^3.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008[18]. (pyrethrum).

Permissible Concentration in Water: Acceptable Daily Intake (ADI) =0.02 mg/kg as pyrethroid

Determination in Water: Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, dermal contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and respiratory tract. Toxic by inhalation and dermal and/or eye contact. Highly toxic if swallowed; nausea, vomiting, abdominal pain, and diarrhea may develop within 10 to 60 minutes following ingestion. Inhalation may cause skin, eye, and respiratory tract irritation. Inhalation can cause stuffiness, runny nose and scratchy throat. Hypersensitivity reaction characterized by pneumonitis, cough, dyspnea, wheezing, chest pain, and bronchospasm may occur. Mild skin sensitizer. High exposures may cause respiratory failure, including cardiopulmonary arrest; death may occur. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous). LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Dermal contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse. Possible liver toxin.

Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring., the following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to its sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Skin disease: Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece);

or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m³:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus). *Note:* Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1. PG III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Chemical class: Benzimidazole

EPA/OPP PC Code: 060101

California DPR Chemical Code: 587

HSDB Number: 2027

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: DE0700000

EC Number: 205-725-8 [*Annex I Index No.:* 613-054-00-0]

Uses: Thiabendazole is a fungicide used to control blight, mold, stain and rot that are found on fruit and vegetables; Dutch elm disease; and diseases found in food storage and other diseases. It is also used to treat roundworms and similar conditions in livestock and humans. Registered for use in EU countries[115]. A U.S. EPA restricted use Pesticide (RUP).

U.S. Maximum Allowable Residue Levels for Thiabendazole and its metabolite benzimidazole (free and conjugated) in or on the following food commodities:[*40CFR 180.242(a)(1)*]: apple, wet pomace 12.0 ppm; Avocado (There are no U.S. registrations on the indicated commodity) 10.0 ppm; banana, post harvest 3.0 ppm; bean, dry, seed 0.1 ppm; beet, sugar, dried pulp 3.5 ppm; beet, sugar, roots 0.25 ppm; beet, sugar, tops 10.0 ppm; cantaloupe (There are no U.S. registrations on the indicated commodity) 15.0 ppm; carrot, roots, postharvest 10.0 ppm; citrus, oil 15.0 ppm; fruit, citrus, group 10, postharvest 10.0 ppm; fruit, pome, group 11, postharvest 5.0 ppm; mango 10.0 ppm; mushroom 40.0 ppm; papaya, postharvest 5.0 ppm; potato, postharvest 10.0 ppm; soybean 0.1 ppm; strawberry (There are no U.S. registrations on the indicated commodity) 5.0 ppm; sweet potato (postharvest to sweet potato intended only for use as seed) 0.05 ppm; wheat, grain 1.0 ppm; wheat, straw 1.0 ppm. **[*40CFR 180.242(a)(2)*]:** cattle, meat 0.1 ppm; cattle, meat byproducts 0.4 ppm; goat, meat byproducts 0.4 ppm; Hog, meat byproducts 0.3 ppm; horse, meat byproducts 0.4 ppm; milk 0.1 ppm; sheep, meat byproducts 0.4 ppm. **[*40CFR 180.2010*]:** Use/Limits: As a seed treatment for dry pea (including field pea, pigeon pea, chickpea or lentil), using a maximum application rate of 0.075 pounds of active ingredient per 100 pounds of seed. Vines or hay grown from treated seed may not be fed to livestock.

Human toxicity (long-term)[101]: Very low–700.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–18.65477 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

U.S. EPA Carcinogens: Likely to be a carcinogen in high doses; Unlikely to be a carcinogen in low doses

Health Advisory: Mutagen, Developmental/Reproductive Toxin (TRI)

Toxicity (oral) Category 3, CAUTION

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: N; risk phrases: R52; R53; safety phrases: S2; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Water polluting

Description: White to tan crystalline solid or powder. Odorless. There are various formulation types registered with the EPA, including ready-to-use, dusts, flowable concentrates, emulsifiable concentrates, wettable powders, granules, and water dispersable granules. Molecular weight = 201.26; Specific gravity (H_2O:1) = 1.4 @ 20 °C; Freezing/Melting point = 304 °C. Vapor pressure = 4.1×10^{-8} mmHg @ 20 °C. Henry's Law constant = 2.12×10^{-11} atm-m^3/mol @ 25 °C (est)[83]. Low solubility in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with alkaline materials and copper-containing products. When heated to decomposition this material forms toxic oxides of nitrogen and sulfur.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms and signs that sometimes follow ingestion include dizziness, nausea, vomiting, diarrhea, epigastric distress, lethargy, fever, flushing, chills, rash and local edema, headache, tinnitus, paresthesia, and hypotension. Blood enzyme tests may indicate liver injury[83]. LD_{50} (oral, rat) = >3 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause thyroid, liver, spleen and kidney problems. May affect testes. May cause tumors.

Points of Attack: Liver, kidney, spleen, thyroid. May cause tumors and affect reproductive system.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Mahor organ tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location in tightly closed container @ 15-30 °C. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a “poisonous materials” label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes oxides of phosphorus, sulfur, and nitrogen. Containers may explode in high temperatures. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Thiafluamide T:0424

Use Type: Herbicide
CAS Number: 142459-58-3
Formula: $C_{14}H_{12}O_2N_3SF_4$
Synonyms: Acetamide, *N*-(4-fluorophenyl)-*N*-(1-methylethyl)-2-[(5-(trifluoromethyl)-1,3,4-thiadiazol-2-yl)oxy]-; Flufenacet; *N*-(4-Fluorophenyl)-*N*-(1-methylethyl)-2[(5-(trifluoromethyl)-1,3,4-thiadiazol-2-yl)oxy]acetamide benzoate
Trade Names: AXIOM® Thiafluamide; DOMAIN®; EPIC®; FOE 5043® technical
Chemical class: Anilide; Thiadiazole[83]
EPA/OPP PC Code: 121903
California DPR Chemical Code: 5293
HSDB Number: 7011
UN/NA & ERG Number: UN3077./171
RTECS® Number: AC2845000
EC Number: [*Annex I Index No.:* 613-164-00-9]
Uses: Flufenacet is applied to the soil surface or incorporated pre-emergence in field corn, corn grown for silage, or soybeans to control certain annual grasses and broadleaf weeds. Not listed for use in EU countries[115]. Registered for use in the U.S.
U.S. Maximum Allowable Residue Levels for flufenacet and its metabolites containing the 4-fluoro-N-methylethyl benzenamine moiety [40 CFR 180.527(a)]: in or on the following commodities: cattle, kidney 0.05 ppm; corn, field, forage 0.4 ppm; corn, field, grain 0.05 ppm; corn, field, stover 0.4 corn, sweet, forage 0.45 ppm; corn, sweet, kernel plus cob with husks removed 0.05 ppm; corn, sweet, stover 0.30 ppm; goat, kidney 0.05 ppm; hog, kidney 0.05 ppm; horse, kidney 0.05 ppm; sheep, kidney 0.05 ppm; soybean, seed 0.1 ppm; wheat, bran 0.80 ppm; wheat, forage 6.0 ppm; wheat, grain 0.60 ppm; wheat, hay 1.2 ppm; wheat, straw 0.35 ppm. ***Tolerances with regional registration, as defined in part 180.1(l) [40CFR 180.527(c)]:*** grass, forage 7.0 ppm; grass, hay 0.4 ppm; ***[40CFR 180.527(d)]:*** alfalfa, forage 0.1 ppm; alfalfa, hay 0.1 ppm; alfalfa, seed 0.1 ppm; clover, forage 0.1 ppm; clover, hay 0.1 ppm; grain, cereal, group 15, except rice 0.1 ppm; grain, cereal, forage, fodder, and straw, group 16, except rice 0.1 ppm; grass, forage, fodder, and hay, group 17, 0.1 ppm.
Human toxicity (long-term)[101]: Intermediate–28.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Low–245.00 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA, Not likely to be a carcinogen
Toxicity (oral) (depending on formulation) Category 2, WARNING; Category: 3, CAUTION
European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R43; R48/22; R50/53; safety phrases: S2; S13; S24; S37; S60, S61 (see Appendix 1)
Description: Tan solid. Mercaptan-like odor. There are various formulation types registered with the EPA, including ready-to-use, dusts, flowable concentrates, emulsifiable concentrates, wettable powders, granules, and water dispersable granules. Molecular weight = 363.31; Specific gravity (H_2O:1) = 1.3 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 75.5–78 °C; Vapor pressure = 1.4×10^{-6} mmHg @ 25 °C. Henry's Law constant = 5.76×10^{-9} atm-m^3/mol @ 25 °C (est)[83]. Soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation of dust, ingestion, dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Contact with eyes or skin may cause irritation or injury. May cause skin sensitization May be harmful if swallowed. LD_{50} (oral, rat) = 371-2347 mg/kg[83]; LD_{50} (dermal, rat) = >2 g/kg[83].
Long Term Exposure: May cause damage of the liver, spleen and thyroid. Enzyme inhibition. May be a skin sensitizer. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.
Points of Attack: Skin, liver, blood, spleen, thyroid, skeletal system, teeth.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested
Personal Protective Methods: A restricted entry interval of 12 hours following application is suggested by one manufacturer[Bayer]. To enter treated area, wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear)

should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with thiafluamide you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group III.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon, hydrogen fluoride, and hydrogen cyanide (hydrocyanic acid)[83]. Use dry chemical, carbon dioxide; water spray; or alcohol-resistant foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed.

Thiazopyr T:0425

Use Type: Herbicide

CAS Number: 117718-60-2

Formula: $C_{16}H_{17}F_5N_2O_2S$

Synonyms: 3-Pyridinecarboxylic acid, 2-(difluoromethyl)-5-(4,5-dihydro-2-thiazolyl)-4-(2-methylpropyl)-6-(trifluoromethyl)-, methyl ester

Trade Names: MANDATE®; MON-13200®; VISOR®

Chemical class: Pyridinecarboxylic acid; Picolinic Acid

California DPR Chemical Code: 3984

HSDB Number: 7015

UN/NA & ERG Number: UN2920/132

RTECS® Number: US5649212

Uses: Not permitted as an active ingredient by the European Commission after July 25, 2003. Used as a preemergent herbicide to control annual grasses and certain broadleaf weeds on citrus crops. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Thiazopyr and its metabolites determined as 2-(difluoromethyl)-6-(trifluoromethyl)-3,4,5-pyridinetricarboxylic acid, all expressed as the parent equivalents [40 CFR 180.496]: in or on the following raw agricultural commodities: grapefruit: 0.05 ppm; and orange: 0.05 ppm.

Human toxicity (long-term)[101]: High–5.60 ppb, Health Advisory

Fish toxicity (threshold)[101]: Low–406.10450 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Health Advisory: Tumorigen, Endocrine disruptor (S!)

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive]

Description: Light tan crystalline solid or powder; granular solid. Sulfurous odor. Molecular weight = 396.38; Specific gravity (H_2O:1) = 1.3777 @ 25 °C[83]; Freezing/Melting point = 78 °C. Low solubility in water.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Determination in Water: Log K_{ow} = >3.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation of dust, ingestion, dermal contact, eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Skin: moderately irritating. Eyes: substantially irritating. High toxicity. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: Repeated overexposure can cause effects of the kidney, liver, thyroid, blood. This chemical can cause neurotoxic effects. May affect central nervous system. Repeated exposure may cause weight loss and reduced red blood cell count. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Central nervous system, liver, kidney, thyroid, blood, skeletal system, teeth.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Corrosive liquids, flammable, require labels of "Corrosive" and "Flammable." They fall in Hazard Class 8.

Spill Handling: If a spill occurs, clean it up promptly. Don't wash it away. Instead, sprinkle the liquid spill with sawdust, vermiculite, or kitty litter. Sweep it into a plastic garbage bag, and dispose of it as directed on the pesticide product label. Wash all contaminated surfaces with a soap and water solution.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, carbon and hydrogen fluoride. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *If tank, rail car or tank truck is involved in a fire, isolate* for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters (0.5 mile) in all directions. *On a small fire:* use dry chemical, CO_2, water spray or alcohol-resistant foam. Vapors are heavier than air and will collect in low areas. Vapors in confined areas may explode when exposed to fire. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

Thidiazuron T:0426

Use Type: Herbicide, Defoliant, Plant growth regulator

CAS Number: 51707-55-2

Formula: $C_9H_8N_4OS$

Synonyms: 5-*N*-Phenylcarbamoylamino-1,2,3-thiadiazole; 1-Phenyl-3-(1,2,3-thiadiazol-5-yl)urea; *N*-Phenyl-*N*'-1,2,3-thiadiazol-5-yl-urea; *N*-Phenyl-*N*'-(1,2,3-thiadiazyl) urea; TDZ; (N-1,2,3-Thiadiazolyl-5)-*N*'-phenylurea; Urea, *N*-phenyl-*N*'-1,2,3-thiadiazol-5-yl

Trade Names: DAZE®; DEFOLIT®; DROPP®; GINSTAR EC® (thidiazuron + diuron); LEAFLESS® Tthidiazuron; SN 49537®

Chemical class: Urea

EPA/OPP PC Code: 120301 (208100 and 208800 are old EPA code numbers)

California DPR Chemical Code: 2162

HSDB Number: 7734

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: YU1395000

EC Number: 257-356-7

Uses: Used primarily as a cotton defoliant in order to increase the harvest yield. Not applied to food crops. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Thidiazuron and its aniline-containing metabolites in or on the following food commodities: [40 CFR 180.403(a)]: cattle, fat 0.4 ppm; cattle, meat 0.4 ppm; cattle, meat byproducts 0.4 ppm; cotton, gin byproducts 24.0 ppm; cotton, undelinted seed 0.3 ppm; goat, fat 0.4 ppm; goat meat 0.4 ppm; goat, meat byproducts 0.4 ppm; hog, fat 0.4 ppm; hog, meat 0.4 ppm; hog, meat byproducts 0.4 ppm; horse, fat 0.4 ppm; horse, meat 0.4 ppm; horse, meat byproducts 0.4 ppm; milk 0.05 ppm; sheep, fat 0.4 ppm; sheep, meat 0.4 ppm; sheep, meat byproducts 0.4 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity:

Health Advisory: Developmental/Reproductive Toxin

Toxicity (oral) Category 3, CAUTION

European/International Regulations: Hazard Symbol: Xi; risk phrases: R36/37/38; safety phrases: S2; S22; S26; S36 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Colorless, crystalline solid or powder. EPA registered formulations include wettable powders, soluble concentrates and emulsifiable concentrates. Molecular weight = 220.26; Specific gravity (H_2O:1) = 1.495 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 212 °C; Vapor pressure = 2×10^{-10} mmHg @ 25 °C; Henry's Law constant = 3.3×10^{-13} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Slightly soluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Heat of decomposition can form toxic nitrogen oxides and sulfur oxide.

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >2 g/kg[83]; LD_{50} (dermal, rat) = >5 g/kg[83].

Long Term Exposure: May cause reproductive and fetal effects.

Points of Attack: Reproductive cells.of mammals.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl,[41] primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96].

Routes of Entry: Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Dermal contact may cause allergic reaction. LD_{50} (oral, rat) = >2000 mg/kg[83]; LD_{50} (dermal, rat) = >1 g/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin, lungs.

Medical Surveillance: In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of sulfur, nitrogen and oxygen. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are

expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Thifensulfuron methyl T:0427

Use Type: Herbicide

CAS Number: 79277-27-3

Formula: $C_{11}H_{11}N_5O_6S_2$

Synonyms: Methyl 3-[(((((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl)amino)sulfonyl]-2-thiophenecarboxylate; 2-Thiophenecarboxylic acid, 3-[((((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl)amino)sulfonyl]-, methyl ester; Thiameturon-methyl

Trade Names: ALLY®; BASIS® (rimsulfuron+thifensulfuron methyl); CANVAS® (thifensulfuron methyl+tribenuron methyl+metsulfuron-methyl); DPX-M6316®; EXPRESS®; HARMONY® Extra (thifensulfuron methyl+tribenuron methyl); INM-6316®; PINNACLE®; PROSPECT®; RELIANCE® SYNCHRONY®, (chlorimuron-ethyl+thifensulfuron methyl)

Chemical class: Sulfonylurea

EPA/OPP PC Code: 128845

California DPR Chemical Code: 2237

HSDB Number: 7354

UN/NA & ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: XM8463000

EC Number: [*Annex I Index No.:* 016-096-00-2]

Uses: A herbicide for postemergence broadleaf weed control in crops for food such as soybeans and cotton. Not listed for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for herbicide thifensulfuron methyl [40 CFR 180.439(a)]: in or on the following raw agricultural commodities: barley, grain 0.05 ppm; barley, straw 0.10 ppm; canola, seed 0.02 ppm; corn, field, forage 0.10 ppm; corn, field, grain 0.05 ppm; corn, field stover, 0.10 ppm; cotton, gin byproducts 0.02 ppm; cotton, undelinted seed 0.02 ppm; flax, seed 0.02 ppm; oat, grain 0.05 ppm; oat, straw 0.10 ppm; soybean 0.10 ppm; wheat, grain 0.05 ppm; and wheat, straw 0.10 ppm.

Human toxicity (long-term)[101]: Low–91.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–19952.62315 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information: Acute Oral Category: 4, Caution European/International Regulations: Hazard Symbol: N; risk phrases: R52; R53; safety phrases: S2; S60; S61 (see Appendix 1)

Description: Pale yellowish-bown liquid. Molecular weight = 387.39; Specific gravity (H_2O:1) = 1.56 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 171–176 °C; 186 °C[Merck]; Vapor pressure = 1.3×10^{-10} mmHg @ 20 °C. Henry's Law constant = 2.92×10^{-14} atm-m^3/mol @ 25 °C (est)[83]. Soluble in water; solubility 2.8 g/L.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Determination in Water: Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, dermal contact, ingestion.

Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].

Short Term Exposure: May cause skin and eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Triflusulfuron-methyl produced interstitial cell hyperplasia and adenomas[96].

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83].

Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl,[41] primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Thiodicarb T:0446

Use Type: Insecticide, Molluscicide, Ovicide
CAS Number: 59669-26-0
Formula: $C_{10}H_{18}N_4O_4S_3$
Synonyms: AI3-29311; Bismethomylthioether; Bis-(*O*-1-methylthioethylimino)-*N*-methylcarbamic acid)-*N,N*'-sulfide; [Carbamic acid, *N*-methyl-, compounded with (2-methylthio)acetaldoxime]bis-, thioether; Caswell No. 900AA; Dimethyl-*N,N*'-[thiobis((methylimino) carbonyl)oxy)]bis(ethanimidothioate); Dimethyl *N,N*'-[thiobis((methylimino)carbonyloxy)]bis(thioimidoacetate); Dimethyl *N,N*'-[thiobis((methylimino) carbonyloxy)] bis(ethanimidothioate); Ethanimidothioic acid, *N'N*'-[thiobis((methylimino)carbonyloxy)]bis-, dimethyl ester; 3,7,9,13-Tetramethy l-5,11-dioxa-2,8,14-trithia-4,7,9,12-tetra-azapentadeca-3,12-diene-6,10-dione; *N,N*'-[Thiobis((methylimino)carbonyloxy)]bis dimethylester
Trade Names: CGA® 45156; CHIPCO[C]; DICARBOSULF®; DICARBASULF®; LARVIN®; LEPICRON®; SEMEVIN®; NIVRAL®; UC-51762®; UC 51769®; UC 80502®
Chemical class: Carbamate (N-methyl)
EPA/OPP PC Code: 114501
California DPR Chemical Code: 2202
HSDB Number: 6940
UN/NA & ERG Number: UN2757 (solid)/151
RTECS® Number: KJ4301050
EC Number: 261-848-7; Not classified in Annex I
Uses: Not approved for use in EU countries[115]. Registered for use in the U.S. Thiodicarb is used primarily on cotton, sweet corn, and soybeans. The remaining usage is spread among leafy vegetables, cole crops, ornamentals, and other minor use sites. Thiodicarb acts as an ovicide against cotton bollworms and budworms.
U.S. Maximum Allowable Residue Levels for Methomyl [40 CFR 180.253]: The U.S. EPA has determined that methomyl is a degradate of thiodicarb, which is a registered pesticide. Therefore, methomyl residues resulting from applications of both thiodicarb and methomyl have been considered in an aggregate risk assessment and compared to appropriate toxicological endpoints for methomyl
Human toxicity (long-term)[101]: Intermediate–18.61702 ppb, CHCL (Chronic Human Carcinogen Level)
Fish toxicity (threshold)[101]: Low–353.55339 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group B2, Probable human carcinogen.
California Proposition 65 Chemical: Carcinogen (8/20/1999)
Acute Oral Category: 2, WARNING
Health Advisory: Nerve Toxin (S!)
EPA Hazardous Waste Number (RCRA No.): U410
RCRA Universal Treatment Standards: Wastewater (mg/L), 0.019; Non-wastewater (mg/kg), 1.4
Safe Drinking Water Act: Priority List (55 FR 1470)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: T, Xi, N; risk phrases: R23; R25; R43; R50/53; Safety phrases: S2; S22; S24; S36/37, S45; S60, S61 (see Appendix 1)
Description: White to light tan crystalline powder. Slight sulfurous odor. Registered with the EPA as liquid, flowable concentrate, granular, pelleted/tableted, water-dispersible granules, and wettable powder. Molecular weight = 354.47; Specific gravity (H_2O:1) = 1.47 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 169-173 °C; Vapor pressure = 1.1×10^{-7} mmHg @ 20 °C. Low solubility in water.
Incompatibilities: May react violently with chlorobenzenediazonium salts, mercurous chloride. Incompatible with cadmium bromide, zinc acetate. May form explosive materials with phosphorus pentachloride. Carbamates are incompatible with strong oxidizing acids, peroxides, and hydro-peroxides; strong reducing agents such as hydrides; strong acids and bases. Contact with nitrides or chemically active metals (aluminum, copper, magnesium, neptunium, sodium, tin, titanium, zinc, etc.) causes the release of potentially explosive hydrogen gas and a metal salt. Moisture may cause hydrolysis or other forms of decomposition. Sunlight and UV can cause decomposition of aqueous solutions[83].
Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.
Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Dermal contact, ingestion and inhalation.
Harmful Effects and Symptoms
Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. LD_{50} (oral, rat) = 60–625 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.
Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. Neurotoxic. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. Skin sensitizer.
Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.
Medical Surveillance: Routine biological monitoring of pesticide applicators and field workers includes testing

of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. Skin: Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do NOT induce vomiting*. *If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Thiophanate-methyl T:0485

Use Type: Fungicide

CAS Number: 23564-05-8 (thiophanate-methyl); 23564-06-9 (thiophanate-ethyl)

Formula: $C_{12}H_{14}N_4O_4S_2$

Synonyms: Allophanic acid, 4,4'-*O*-phenylenebis(3-thio-, diethyl ester; 1,2-Bis(ethoxycarbonylthioureido)benzene; 1,2-Bis(3-(ethoxycarbonyl)-2-thioureido)benzene; 1,2-Bis[3-(ethoxycarbonyl)thioureido]benzene; Carbamic acid, [1,2-phenylenebis(iminocarbonothioyl)]bis-, diethyl ester; Caswell No. 344A; Cercobin-methyl; 1,2-Di-(3-ethoxycarbonyl-2-thioureido)benzene; Diethyl [1,2-phenylenebis(iminocarbonothioyl)]bis(carbamate); Diethyl [(1,2-phenylene)bis(iminocarbonothioyl)]bis(carbamate); Diethyl 4,4'-*O*-phenylenebis(3-thioallophanate); Diethyl 4,4'-(*O*-phenylene)bis(3-thioallophanate); Ethyl thiophanate; 4,4'-*O*-Phenylenebis(ethyl 3-thioallophanate); [1,2-Methyl thiophanate; Phenylenebis(iminocarbonothioyl)]biscarbamic acid diethyl ester; (1,2-Phenylenebis[iminocarbonothioyl)] biscarbamic acid diethyl ester; 4,4'-*O*-Phenylenebis(3-thioallophanic acid)dimethyl ester; Thiofanate; Thiophanate; Thiophenite

Trade Names: BASF® 32500 F; BASF® 32500 Fungicide; CERCOBIN®; CLEARY® 3336; CONSYST®; DITEK®[C]; DOMAIN®; DOUSAN®[C]; ENOVIT®; EVOLVE®; FANATE®; FUNGITOX®; FUNGO®; MILDOTHANE® Turf Liquid; NEOTOPSIN®; NF-35®; NF-44®; NSC 170810®; PELT®; PRO-TURF®; SIPCAVIT®; SNARE®; SPECTRO®; SYSTEC®; SYSTEMIC® FUNGICIDE; TD 1771®; TOPSIN®; TOPSIN-WP METHYL®; 3336 TURF FUNGICIDE®; ZYBAN®

Chemical class: Benzimidazole; Carbamate

EPA/OPP PC Code: 102001

California DPR Chemical Code: 1696

HSDB Number: 6937 (-methyl) actively registered in U.S; 6938 (-ethyl) not currently registered in U.S.

UN/NA & ERG Number: UN2757 (solid)/151

RTECS® Number: BA3675000

EC Number: 245-740-7 [*Annex I Index No.*006-069-00-3]

Uses: Thiophanate-methyl is a systemic fungicide used to control a broad spectrum of fungal diseases on fruits, vegetables, turf and ornamentals, including shade trees, and diseases in the field, nurseries, and in greenhouses. *Note:* Do not confuse with thiophanate-ethyl (CAS: 23564-06-9), which is not currently registered for use in the U.S. Registered for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Thiophanate-Methyl and its metabolite methyl 2-benzimidazoyl carbamate (MBC), calculated as thiophanate-methyl [40 CFR 180.371(a)]: in or on almond 0.1 ppm; almond, hulls 0.5 ppm; apple 2.0 ppm; apricot 15.0 ppm;

banana 2.0 ppm; bean, dry, seed 0.2 ppm; bean, snap, succulent 0.2 ppm; beet, sugar, roots 0.2 ppm; beet, sugar, tops 15.0 ppm; cattle, fat 0.15 ppm; cattle, meat 0.15 ppm; cattle, meat byproducts 0.15 ppm; cherry, sweet 20.0 ppm; cherry, tart 20.0 ppm; goat, fat 0.15 ppm; goat, meat 0.15 ppm; goat, meat byproducts 0.15 ppm; grape 5.0 ppm; horse, fat 0.15 ppm; horse, meat 0.15 ppm; horse, meat byproducts 0.15 ppm; milk 0.15 ppm; onion, bulb 0.5 ppm; onion, green 3.0 ppm; peach 3.0 ppm; peanut 0.1 ppm; peanut, hay 5.0 ppm; pear 3.0 ppm; pecan 0.1 ppm; pistachio 0.1 ppm; plum 0.5 ppm; potato 0.1 ppm; sheep, fat 0.15 ppm; sheep, meat 0.15 ppm; sheep, meat byproducts 0.15 ppm; soybean, seed 0.2 ppm; soybean, hulls 1.5 ppm; strawberry 7.0 ppm; ppm; sugarcane, cane 0.1 ppm; vegetable, cucurbit, group 9 1.0 ppm; ppm; wheat, grain 0.1 ppm; wheat, hay 0.1 ppm; wheat, straw 0.1 ppm. ***Tolerances with a regional registration, as defined in 180.1(m) [40 CFR 180.371(c)]:*** in or on canola, seed 0.1 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans

California Proposition 65 Chemical: Listed female and male reproductive toxin (5/18/1999)

EPA Oral reference dose (RfD) = 0.08 mg/kg/day.

Health Advisory: Developmental/Reproductive Toxin

Toxicity (oral) Category 4, Caution.

Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]

EPA Hazardous Waste Number (RCRA No.): U409

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R20; R43; R50/53; R68(3); safety phrases: S2; S36/37; S46; S60; S61 (see Appendix 1)

Description: Colorless crystalline solid, or light brown powder. EPA registered formulations include dust, granular, wettable powder, water-dispersible granular, and flowable concentrate, ranging from 1.5% to 90% active ingredient Molecular weight = 342.42; 370.48 (-ethyl); Specific gravity (H_2O:1) = 1.44.5 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = (decomposes) 172.22 °C[88]; Vapor pressure = 1 x10^{-7} mmHg @ 20 deg°C[88]. Henry's Law constant = 1.21×10^{-9} atm-m^3/mol @ 25 °C (est)[83]. Low solubility in water; solubility = <1 mg/mL @ 20 °C[88]. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Decomposes in temperatures >150 °C. Carbamates are incompatible with strong oxidizing acids, peroxides, and hydro-peroxides; strong reducing agents such as hydrides; strong acids and bases. Contact with nitrides or chemically active metals (aluminum, copper, magnesium, neptunium, sodium, tin, titanium, zinc, etc.) causes the release of potentially explosive hydrogen gas and a metal salt. May form explosive materials with phosphorus pentachloride. Contact with copper salts can form dangerous complexes.

Permissible Exposure Limits in Air: No OELs have been established in the US for this chemical.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)][18].

Determination in Water: Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Absorbed through the skin, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Skin sensitizer. LD_{50} (oral, rat) = >5 g/kg; >2000 (-ethyl); LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: A potent acetylcholinesterase (AChE) inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May be mutagenic. Cancer risk. Skin sensitizer.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing may help diagnose allergy.

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do NOT induce vomiting*. *If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. A regulated, marked area should be established where this chemical is handled, used, or stored. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This is a solid toxic carbamate and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. *On small fire:* use dry chemical powder, carbon dioxide, water spray, or foam. *On large fire:* use water spray, fog or alcohol-resistant foam. Do not scatter material using straight water jet streams. Dike fire-control water for later disposal; do not scatter the material. Move containers from fire area if you can do it without risk. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not allow water to get inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Incineration with effluent gas scrubbing is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

California DPR Chemical Code: 589

HSDB Number: 863

UN/NA & ERG Number: UN2771(solid)/151

RTECS® Number: JO14000000

EC Number: 205-286-2 [*Annex I Index No.:* 006-005-00-4]

Uses: Thiram is used as a fungicide to prevent crop damage in the field and to prevent crops from deterioration in storage or transport. Thiram is also used as a seed, nut, fruit, and mushroom disinfectant from a variety of fungal diseases. In addition, it is used as an animal repellent to protect fruit trees and ornamentals from damage by rabbits, rodents, and deer. Thiram has been used in the treatment of human scabies, as a sun screen, and as a bactericide applied directly to the skin or incorporated into soap. Thiram is used as a rubber accelerator and vulcanizer and as a bacteriostat for edible oils and fats. It is also used as a rodent repellent, wood preservative, and may be used in the blending of lubricant oils. Registered for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Thiram [40 CFR 180.132]: apple 7 ppm; banana, pulp 1 ppm; peach 7 ppm; strawberry 7 ppm.

Human toxicity (long-term)[101]: Low–56.0 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.53654 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicty: EPA, Not likely to be a human carcinogen; IARC: Group 3, unclassifiable as to human carcinogenicity

Health Advisory: Tumorigen; Mutagen, Reproductive Toxin (TRI), Endocrine disruptor (S!), Skin irritant/sensitizer

Toxicity (oral) Category 3, CAUTION

FAO Acceptable Daily Intake (ADI) =0.01 mg/kg

EPA Hazardous Waste Number (RCRA No.): U244

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Rotterdam Convention Annex III [Chemicals Subject to the Prior Informed Consent Procedure (PIC)] (as dustable powder formulations containing a combination of Benomyl @ or >7%; carbofuran @ or >10%; thiram @ or >15%)

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R20/22; R36/38; R43; R48/22; R50/53; safety phrases: S2; S26; S36/37; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Thiram is a colorless to yellow, crystalline solid. Characteristic odor. Commercial product can be a soluble concentrate that may be mixed with water and used as a spray. Commercial pesticide products may be dyed blue. Molecular weight = 240.44; Specific gravity (H_2O:1) = 1.43 @ 20 °C; Boiling point = 129 °C @ 20 mmHg[88]; Freezing/Melting point = 155–156 °C; Vapor pressure = 1.7×10^{-5} mmHg @ 25 °C; Flash point = 88 °C (cc); 137.8 °C[88]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Slightly soluble in water; solubility = <1 mg/mL @ 22.2 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Combustible material. Dust may form explosive mixture in air. Water, acid, oxidizing materials. Heat, or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide. Flammable gases are generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Decomposition products in fire include oxides of nitrogen and sulfur. Corrosive to iron, copper brass and zinc metals, especially in the presence of moisture. Heat alkalies (lime), moisture can cause decomposition. Decomposes on prolonged storage. Degradation produces ethylene thiourea.

Permissible Exposure Limits in Air: NIOSH IDLH: 100 mg/m^3

OSHA PEL: 5 mg/m^3 TWA

NIOSH REL: 5 mg/m^3 TWA

ACGIH TLV®[1]: 0.05 mg/m^3, measured as inhalable fraction and vapor TWA; not classifiable as a human carcinogen

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.15 mg/m^3
PAC-2: 6.8 mg/m^3
PAC-3: 1500 mg/m^3

DFG MAK: MAK: 1 mg/m^3, inhalable fraction TWA; Peak Limitation Category II(2); danger of skin sensitization; Pregnancy Risk Group C

Determination in Air: Filter; CH_3CN; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5005[18].

Permissible Concentration in Water: Federal Drinking Water Guidelines: 40 ppb[93]. State Drinking Water Guidelines: Florida 35 μg/L; Maine 35 μg/L.

Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = <2.0. Unlikely to bioaccumulate in marine organisms. See also disulfiram.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. High exposures can cause kidney and liver damage. Brain and nerve damage can also occur. *Inhalation:* Inhalation can cause irritation of the respiratory tract with stuffy nose, nosebleeds, hoarseness, cough and/or phlegm. Animal studies indicate that irritation of the nose and throat may occur at levels above 5 mg/m^3. *Skin:* Exposure to spray containing 45% thiram resulted in irritation and skin sensitization. Skin irritation can lead to rash, and allergy. *Eyes:* May cause irritation, tearing and sensitivity to light. *Ingestion:* No information available on human exposure. In animal studies, 38 ppm in food caused nausea, vomiting, diarrhea, hyperexcitability, weakness and loss of muscle control. Death may occur from ingestion of approximately one teaspoonful. *Note:* Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. LD_{50} (oral, rat) = 500[83]; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin sensitization. Prolonged contact has caused eye irritation, tearing, increased sensitivity to light, reduced night vision and blurred vision. Occupational exposures to 0.03 mg/m^3 over a 5 year period has caused mild irritation of the nose and throat. Whether it has this effect in humans is not known. May affect the thyroid and liver. Thiram has caused birth defects in laboratory animals and has been shown to be a teratogen in animals.

Points of Attack: Eyes, skin, respiratory system and central nervous system.

Medical Surveillance: Preplacement and periodic medical examinations should give special attention to history of skin allergy, eye irritation, and significant respiratory, liver, or kidney disease. Workers should be aware of the potentiating action of alcoholic beverages when working with tetramethylthiuram disulfide. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.15 mg/m^3. NIOSH: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *100 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or GmFOv100 (APF = 50) [Any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or PaprOvHie (APF = 25) (any powered air-purifying respirator with an organic vapor cartridge in combination with a high-efficiency particulate filter); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [Any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a cool place away from strong oxidizers; strong acids; oxidizable materials. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Thiocarbamate and dithiocarbamate pesticides, solid, toxic, require a label of "poisonous materials." They usually fall in Hazard Class 6.1. STN: 49 411 87.

Spill Handling: Immediate steps should be taken to limit spread to the environment. Easily penetrates the soil to contaminate groundwater and waterways[88]. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Cover the spill with weak solution of calcium hypochlorite (Up to 15%). Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes sulfur dioxide, carbon disulfide; and oxides of nitrogen and carbon. This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or alcohol foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. Thiram can be dissolved in alcohol or other flammable solvent and burned in an incinerator with an afterburner and scrubber.

Tralkoxydim T:0649

Use Type: Herbicide

CAS Number: 87820-88-0

Formula: $C_{20}H_{27}NO_3$

Synonyms: 2-Cyclohexen-1-one, 2-[1-(ethoxyimino)propyl]-3-hydroxy-5-(2,4,6-trimethylphenyl)-; 2-[1-(Ethoxyimino)propyl]-3-hydroxy-5-mesitylcyclohex-2-en-one; 2-[1-(Ethoxyimino)propyl]-3-hydroxy-5-(2,4,6-trimethylphenyl)-2-cyclohexen-1-one; Tralkoxydime

Trade Names: ACHIEVE®; ACHIEVE®-40DG; ALPHA GRASP®; ICI-A 604®; PP 604®; SPLENDOR®

Chemical class: Cyclohexanone; Cyclohexanedione (oxime)

EPA/OPP PC Code: 121000

California DPR Chemical Code: 5457

HSDB Number: 7016

UN/NA & ERG Number: UN2588 (Pesticide, solid, poisonous, n.o.s.)/151; UN2902 (Pesticide, liquid, poisonous, n.o.s.)/151

RTECS® Number: GW7191600

Uses: Tralkoxydim is a post-emergent herbicide applied to actively growing weeds in wheat, barley, triticale and cereal rye to control wild oats, green foxtail, yellow foxtail, annual ryegrass and Persian darnel. Registered for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Tralkoxydim [40 CFR 180.548]: time-limited levels were revoked on 2/28/2003

Human toxicity (long-term)[101]: Intermediate–20.83 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Very low–1154.96119 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely to be carcinogenic to humans

Toxicity (oral) Category 3, CAUTION

Description: Off white, beige to pale pink crystalline solid or powder. Faint burnt odor. Molecular weight = 329.47; Boiling point = (decomposes); Specific gravity (H_2O:1) = 1.14 @ 20 °C; Freezing/Melting point = 105–110 °C; Vapor pressure = 3.5×10^{-9} mmHg @ 25 °C; Specific gravity (H_2O:1) = 1.16 @ 20 °C; Flash point = >225 °C; Slightly soluble in water; solubility <10 mg/L.

Incompatibilities: Keep away from strong oxidizers and alkaline materials. Non-corrosive, stable at normal warehouse temperature.

Permissible Concentration in Water: Hydrolysis half-life of 6.3 days (pH 5), 114 days (pH 7), 1594 days (pH 9)[83]. Runoff from spills or fire control may cause water pollution.

Determination in Water: Log K_{ow} = ~2.0. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, dermal absorption.

Harmful Effects and Symptoms

Short Term Exposure: Highly toxic. May be fatal if inhaled, swallowed, or absorbed through the unbroken skin. Health effects may be delayed. LD_{50} (oral, rat) = 900 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause liver problems and affect the adrenal glands.

Points of Attack: Liver, adrenal glands.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Tests of liver and adrenal gland function.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance;

give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Wearing protective equipment, clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper and your clothing in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: Decomposition products in fire include toxic oxides of nitrogen and carbon *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Tralomethrin T:0651

Use Type: Insecticide

CAS Number: 66841-25-6

Formula: $C_{22}H_{19}Br_4NO_3$

Synonyms: (S)–α-Cyano-3-phenoxybenzyl (1R,3R)-3-(2,2–dibromovinyl-2,2-dimethylcyclopropanecarboxylate [metabolate of tralomethrin]; (S)–α-Cyano-3-phenoxybenzyl (1S,3R)-3-(2,2–dibromovinyl)-2,2-dimethylcyclopropanecarboxylate [metabolate of tralomethrin]; Cyano(3-phenoxyphenyl)methyl; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(1,2,2,2-tetrabromoethyl)-, cyano(3-phenoxyphenyl)methyl ester; 2,2-Dimethyl-3-(1,2,2,2-tetrabromoethyl)cyclopropropanecarboxlic acid, cyano(3-phenoxyphenyl)methyl ester;2,2-Dimethyl-3-(1,2,2,2-tetrabromoethyl)cyclopropanecarboxylate; (1R,3S)3[(1'RS)(1',2',2',2'-Tetrabromoethyl)]-2,2-dimethylcyclopropanecarboxylic acid, (S)-α-cyano-3-phenoxybenzyl ester; Tralomethrine

Trade Names: DETHMOR®; HAG-107®; RU-25472®; RU-25474®; SCOUT®; SCOUT® X-TRA Gel insecticide

Chemical class: Pyrethroid

EPA/OPP PC Code: 121501; (128822 old EPA code number)

California DPR Chemical Code: 2329

HSDB Number: 6740

UN/NA & ERG Number: UN3352 (liquid)/151; UN3349 (solid)/151

RTECS® Number: GZ2009500

EC Number: 266-493-1.

Uses: Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Tralomethrin and its metabolites (S)-alpha-cyano-3-phenoxybenzyl (1R,3S)-3(2,2-dibromovinyl)-2,2-dimethyl- cyclopropanecarboxylate and (S)-alpha-cyano-3-phenoxybenzyl (1S,3R)-3-(2,2-dibromovinyl)-2,2-dimethyl-cyclopropanecarboxylate calculated as the parent. [40 CFR 180.422(a)(1)]: in or on the following food commodities: broccoli 0.5 ppm; cottonseed 0.02 ppm; cottonseed oil 0.20 ppm; lettuce, head; lettuce, leaf 3.0 ppm; soybeans 0.05 ppm; and sunflower seed 0.05 ppm. ***[40 CFR 180.422(a)(2]:*** in or on all food items (other than those covered by a higher tolerance as a result of use on growing crops) in food-handling establishments, 0.02 ppm. ***[40 CFR 180.422(a)(3)]:*** for the combined residues of the insecticide tralomethrin and its metabolites cis-deltamethrin [(S)-alpha-cyano-3-phenoxybenzyl (1R,3S)-3(2,2-dibromovinyl)-2,2-dimethyl-cyclopropanecarboxylate] and trans-deltamethrin [(S)-alpha-cyano-3-phenoxybenzyl (1S,3R)-3-(2,2-dibromovinyl)-2,2-dimethyl-cyclop ropanecarboxylate] as follows: in or on all feed items (other than those covered by a higher tolerance as a result of use on growing crops) in feed-handling establishments, 0.02 ppm.

Human toxicity (long-term)[101]: Low–52.50 ppb, Health Advisory

Fish toxicity (threshold)[101]: Extra high–0.06714 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Toxicity (oral) Category 2, WARNING

Health Advisory: Endocrine disruptor (?), Skin irritant/sensitizer

European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R36/38; R50/53; safety phrases: S2; S26; S60; S61 (see Appendix 1)

Description: Yellow-orange resinous solid. Commercial product is available as wettable powder or as an emulsifiable concentrate. Molecular weight = 665.05; Specific gravity (H_2O:1) = 1.67 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 141 °C; Vapor pressure = 3.5×10^{-11} mmHg @ 25 °C;. Soluble in water; solubility = <100 μg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Exposure Limits in Air:

NIOSH[2] IDLH = 5,000 ppm

OSHA PEL: 5 mg/m^3 TWA

NIOSH REL: 5 mg/m^3 TWA

ACGIH TLV®[1]: 5 mg/m^3 TWA

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008 ***U.S. Maximum Allowable Residue Levels.*** (pyrethrum).

Permissible Concentration in Water: Acceptable Daily Intake (ADI) = 0.02 mg/kg as pyrethroid.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas-liquid chromatography/ultraviolet. See NIOSH IV, Method #5008. Log K_{ow} = >4.5. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, ingestion, absorbed through skin.

Harmful Effects and Symptoms

Short Term Exposure: Contact may cause burns to skin and eyes. Poisonous; may be fatal if inhaled, swallowed or absorbed through skin. Pyrethroids can cause dermatitis which may be allergic in nature. Persons with pre-existing skin disorders may be more susceptible to the effects of this agent. LD_{50} (oral, rat) = <100 mg/kg; LD_{50} (dermal, rat) = >1500 mg/kg.

Long Term Exposure: Dermatitis and lung allergy.

Points of Attack: Skin, lungs.

Medical Surveillance: The following are recommended: Employees should be screened for history of certain medical conditions which might place the employee at increased risk from pyrethroid exposure. Chronic respiratory disease: In persons with chronic respiratory disease, especially asthma, the inhalation of pyrethroids might cause exacerbation of symptoms due to their sensitizing properties. Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Any employee developing the above-listed conditions should be referred for further medical examination[9].

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Respirator Selection: NIOSH/OSHA *for pyrethrum*: *50 mg/m^3:* CcrOv95 (APF = 10) [any air-purifying half-mask respirator equipped with an organic vapor cartridge(s) in combination with an N95, R95, or P95 filter. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *125 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprOvHie (APF = 25) (any air-purifying full facepiece respirator equipped with an organic vapor cartridge in combination with a high-efficiency particulate filter). *250 mg/m^3:* CcrFOv100 (APF = 50) [any air-purifying full facepiece respirator equipped with organic vapor cartridge(s) in combination with an N100, R100, or P100 filter]; or PaprTOvHie (APF = 50) [any powered, air-purifying respirator with a tight-fitting face-piece and organic vapor cartridge(s) in combination with a high-efficiency particulate filter]; or SCBAF (APF = 50) (any self-contained breathing apparatus with full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *5000 mg/m^3:* SaF:Pd,Pp (APF = 2000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Note: Substance reported to cause eye irritation or damage; may require eye protection.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location at temperature <35 °C and away from alkaline materials. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: This material is a toxic pesticide and should be labeled "poisonous materials." It falls into Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Ventilate area of spill or leak. Use water spray to reduce vapor. Absorb liquids in vermiculite, dry sand, earth, or a similar material and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of carbon and hydrogen bromide gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Incineration would be an effective disposal procedure where permitted. If an efficient incinerator is not available, the product should be mixed with large amounts of combustible material and contact with the smoke should be avoided. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers.

WGK (German Aquatic Hazard Class): 2-Water polluting
Description: Colorless to pale yellow crystalline solid. Slight odor. Commercial product is available in various forms, including wettable powders and as an emulsifiable concentrate. Molecular weight = 293.75; Specific gravity (H_2O:1) = 1.27 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 82.3 °C; Vapor pressure = 1.5×10^{-8} mmHg @ 25 °C; Flash point = 71.5 °C. Henry's Law constant = 8.10×10^{-11} atm-m^3/mol @ 25 °C (est)[83]. Low solubility in water; solubility = <1 mg/L @ 20 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: Keep away from strong oxidizers and acidic media, anhydrides, acid halides, active hydrogen compounds[88].
Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Routes of Entry: Inhalation, ingestion, absorbed through the skin.
Harmful Effects and Symptoms
Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years. LD_{50} (oral, rat) = 90–300 mg/kg; LD_{50} (dermal, rat) = >2000 mg/kg[83].
Long Term Exposure: Workers exposed to chlorophenoxy compounds over a 5 to 10 year period at levels above 10 mg/m^3 complained of weakness, rapid fatigue, headache and vertigo. Liver and thyroid damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction. Skin sensitizer.
Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney, thyroid.
Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH),

and serum lutenizing hormone (LH), may be indicated. If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Incompatible with Clay- and Mineral-based absorbents[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 130.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon, amines, hydrazine and hydrogen chloride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *Ona a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Strong acid or alkaline hydrolysis leads to complete degradation of triadimefon. However, large quantities of triadimefon should be incinerated in a unit operating @ 850 °C equipped with off-gas scrubbing equipment. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

EPA Hazardous Waste Number (RCRA No.): U389
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb(.4.54 kg)
RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Non-wastewater (mg/kg), 1.4
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xi, Xn, N; risk phrases: R22; R43; R48/22; R50/53; safety phrases: S2; S24; S37; S60; S61 (see Appendix 1)
Description: Colorless crystalline solid or an oily, amber liquid (technical). May be dissolved in a flammable solvent. Commercial product is available as an emulsifiable concentrate. Molecular weight = 304.66; Specific gravity (H_2O:1) = 1.273 @ 25 °C; also reported 1.04 @ 25 °C; Boiling point = 117 °C @ 0.4 mmHg; Freezing/Melting point = 29 °C; Vapor pressure = 1.6×10^{-4} mbar @ 25 °C; Flash point = 89.5 °C(cc);. Practically insoluble in water; solubility = 4 ppm @ 25 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.
Incompatibilities: May react with strong oxidizers such as chlorates, peroxides, nitrates, etc. Readily hydrolyzed by strong acids or alkalies.
Determination in Air: Filter; none; Gravimetric; NIOSH IV[18] [Particulates NOR; #0500 (total), #0600 (respirable)]
Determination in Water: Log K_{ow} = >4.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.
Harmful Effects and Symptoms
Short Term Exposure: Skin irritant and contact dermatitis may develop. Some thiocarbamates may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. LD_{50} (oral, rat) = 1100 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.
Long Term Exposure: Skin sensitizer.
Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes, spleen, liver, kidney.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Tests of liver, kidney and spleen function.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a dark, secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. A regulated, marked area should be established where Aldicarb is handled, used, or stored. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Stable when stored in glass or polyethylene containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Pesticides, solid, toxic/poisonous, n.o.s require a shipping label of "poisonous materials" and fall in Hazard Class 6.1. Technical name required.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. For liquids, isolate spill or leak area in all directions for at least 50 meters /150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other noncombustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes toxic oxides of nitrogen, sulfur, and carbon and hydrogen chloride gas. *On a small fire:* use dry chemical, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. If allowed, incineration with effluent gas scrubbing (carbon dioxide may be released) is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Triasulfuron T:0656

Use Type: Herbicide
CAS Number: 82097-50-5
Formula: $C_{14}H_{16}ClN_5O_5S$
Synonyms: Benzenesulfonamide, 2-(2-chloroethoxy)-*N*-[((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino) carbonyl]-; 2-(2-Chloroethoxy)-*N*-[((4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino)carbonyl]benzenesulfonamide; 1-[2-(2-Chloroethoxy)phenylsulfonyl]-3-(4-methoxy-6-methyl-1,3,5-triazin-2-yl)urea; 3-(6-Methoxy-4-methyl-1,3,5-triazin-2-yl)-1-[2-(2-chloroethoxy)phenylsulfonyl]urea; Urea, *N*-[2-(2-chloroethoxy)phenylsulfonyl]-*N′*-(6-methoxy-4-methyl-1,3,5-triazinyl-2-yl)-
Trade Names: AMBER®; CGA 131036®; LOGRAN®; RAVE®
Chemical class: Sulfonylurea; Triazine
EPA/OPP PC Code: 128969 (128985 old EPA code number)
California DPR Chemical Code: 5100
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: DB1554000
EC Number: [Annex I Index No.: 650-041-00-9]
Uses: Used for the control of annual ryegrass, paradoxa grass and a wide range of broadleaf weeds in wheat and the post-emergence control of wild radishes in wheat, oats and barley. Registered for use in EU countries[115]. Registered for use in the U.S.
U.S. Maximum Allowable Residue Levels for Triasulfuron [40 CFR 180.459]: barley, grain 0.02 ppm; barley, straw 2.0 ppm; cattle, fat 0.1 ppm; cattle, kidney 0.5 ppm; cattle, meat 0.1 ppm; cattle, meat byproducts, ppm; except kidney 0.1 ppm; goat, fat 0.1 ppm; goat, kidney 0.5 ppm; goat, meat 0.1 ppm; goat, meat byproducts, except kidney 0.1 ppm; grass, forage 7.0 ppm; grass, hay 2.0 ppm; hog, fat 0.1 ppm; hog, kidney 0.5 ppm; hog, meat 0.1 ppm; hog, meat byproducts, except kidney 0.1 ppm; horse, fat 0.1 ppm; horse, kidney 0.5 ppm; horse, meat 0.1 ppm; horse, meat byproducts, except kidney 0.1 ppm; milk 0.02 ppm; sheep, fat 0.1 ppm; sheep, kidney 0.5 ppm; sheep, meat 0.1 ppm; sheep, meat byproducts, except kidney 0.1 ppm; wheat, forage 5.0 ppm; wheat, grain 0.02 ppm; wheat, straw 2.0 ppm
Human toxicity (long-term)[101]: Low–70.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Very low–68600.000680 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity: IARC and NTP have not classified the sulfonylurea herbicides with respect to human carcinogenicity. U.S. EPA considers the sulfonylureas not classifiable, not rated, or noncarcinogenic, *with the exception of* sulfosulfuron (141776-32-1), a likely human carcinogen, and triflusulfuron-methyl (126535-15-7) a Possible human carcinogen[96].
Toxicity (oral) Category 4, Caution
European/International Regulations: Hazard Symbol: N; risk phrases: R50; R53; safety phrases: S2; S60; S61 (see Appendix 1)
Description: White crystalline solid. Molecular weight = 401.85; Specific gravity (H_2O:1) = 1.47 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 178 °C. Soluble in water.
Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salt.
Determination in Water: Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, passing through the skin, ingestion.
Harmful Effects and Symptoms: Human health effects from the sulfonylurea herbicides at low environmental doses or at biomonitored levels from low environmental exposures are unknown. The sulfonylurea herbicides are generally of low toxicity in mammalian studies. Animal studies showed low acute toxicity and little chronic, reproductive, or developmental toxicity or teratogenic effects. Developmental or teratogenic effects tended only to occur at high or maternally toxic doses. At high sublethal, chronic oral doses, such nonspecific effects as weight loss and anemia were observed. Some chemical-specific effects were noted at high doses in animals[96].
Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH- or CEN (UK)-approved air-purifying respirators for pesticides. May be harmful if swallowed. Dermal contact may cause allergic reaction.
Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergy.
Points of Attack: Skin.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl,[41] primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of sulfur and nitrogen. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Triazophos T:0658

Use Type: Insecticide

CAS Number: 24017-47-8

Formula: $C_{12}H_{16}N_3O_3PS$

Synonyms: *O,O*-Diethyl *O*-(1-phenyl-1*H*-1,2,4-triazol-3-yl) phosphorothioate; 1-Phenyl-3-(*O,O*-diethyl-thionophophoryl)-1,2,4-triazole;

1-Phenyl-1,2,4-triazolyl-3-(*O,O*-diethylthionophosphate); Phosphorothioic acid, *O,O*-diethyl *O*-(1-phenyl-1*H*-1,2,4-triazol-3-yl) ester

Trade Names: HILAZPOPHOS®; HOE 2960 OJ®; HOE 002960®; HOSTATHION®; SUTATHION®

Chemical class: Organophosphate

EPA/OPP PC Code: 344600

California DPR Chemical Code: 3543

HSDB Number: 6455

UN/NA & ERG Number: UN3018 (liquid)/152

RTECS® Number: TF5635000

EC Number: 245-986-5 [*Annex I Index No.:* 015-140-00-8]

Uses: Triazophos is a broad-spectrum insecticide and acaricide used to control sucking and chewing pests on a variety of crops, including cotton, rice, corn, beets and fruit trees. Not currently registered for use in the U.S. Not approved for use in EU countries[115]. There are more than 30 global suppliers[97].

Regulatory Authority and Advisory Information:

Acute Oral Category: 2, WARNING.

Health Advisory: Nerve Toxin

EPCRA Section 302 Extremely Hazardous Substances: TPQ = 500 lb (227 kg)

EPCRA Section 304 RQ: EHS, 1 lb (0.454 kg)

DOT Inhalation Hazard Chemicals

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: T, N; risk phrases: R21; R23/25; R50/53; safety phrases: S1/2; S36/37; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Tan, oily liquid. Commercial product is available in various forms, including as an emulsifiable concentrate. Molecular weight = 313.34; Specific gravity (H_2O:1) = 1.247 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 0 to 5 °C; Flash point = 132 °C; Vapor pressure = 1×10^{-5} mmHg @ 25 °C. Henry's Law constant = 3.1×10^{-8} atm-m^3/mol @ 25 °C (est)[83]. Slightly soluble in water; solubility = 40 mg/L @ 25 °C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Incompatible with acids and alkalies.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.25 mg/m^3

PAC-2: 2.8 mg/m^3

PAC-3: 12 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV[18], Method #5600, Organophosphorus Pesticides

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 50–82 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates.

First Aid: *Eyes:* Speed in removing material from skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin and/or eye contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 g in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Incompatible with Clay- and Mineral-based absorbents[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.25 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste.

If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Tribenuron-methyl T:0659

Use Type: Herbicide

CAS Number: 101200-48-0

Formula: $C_{15}H_{17}N_5O_6S$

Synonyms: Benzoic acid, 2-[((((4-methoxy-6-methyl-1,3,5-triazin-2-yl)methylamino)carbonyl)amino)sulfonyl]-, methyl ester; Benzoic acid, 2-[((((4-methoxy-6-methyl-1,3,5-triazin-2-yl)-*N*-methylamino)carbonyl)amino)sulfonyl]-, methyl ester; 2-[((((4-Methoxy-6-methyl-1,3,5-triazin-2-yl)-methylamino)carbonyl)amino)sulfonyl]-, methyl ester; Methyl 2-[((((4-methoxy-6-methyl-1,3,5-triazin-2-yl)methylamino)carbonyl)amino)sulfonyl]benzoate; Sulfmethmeton-methyl

Trade Names: ALLY®; CANVAS®; DPX-L-5300®; EXPRESS®; EXPRESS®-75 DF; HARMONY EXTRA®; INL-5300®; L 5300®; MATRIX®

Chemical class: Sulfonylurea (Triazinyl); Triazine

EPA/OPP PC Code: 128887

California DPR Chemical Code: 2338

HSDB Number: 6851

UN/NA & ERG Number: UN3077(solid)/171; UN2763 (Triazine pesticide, solid, toxic, not otherwise specified)/151

RTECS® Number: DH3565000

EC Number: 401-190-1 [*Annex I Index No.:* 607-177-00-9]

Uses: Used to control annual grasses and broadleaf weeds on barley, blueberries, oats, wheat, flax and rape seed (canola). Registered for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for the residues of the herbicide tribenuron methyl ***[40 CFR 180.451(a)]:*** in or on the following raw agricultural commodities: barley, grain 0.05 ppm; barley, straw 0.10 ppm; canola, seed 0.02 ppm; cotton, gin byproducts 0.02 ppm; cotton, undelinted seed 0.02 ppm; flax, seed 0.02 ppm; oat, grain 0.05 ppm; oat, straw 0.10 ppm; wheat, grain 0.05 ppm; and wheat, straw 0.10 ppm. Tolerances with regional registration, as defined in 180.1(n), are established. ***[40 CFR 180.451(c)]:*** in or on the following raw agricultural commodities: grass, forage, fodder and hay, group (except Bermudagrass); forage 0.10 ppm; and grass, forage, fodder and hay, group (except Bermudagrass); hay 0.10 ppm.

Human toxicity (long-term)[101]: High–5.60 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–251188.64315 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen

Toxicity (oral) Category 4, Caution

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: Xi; risk phrases: R43; safety phrases: S2; S22; S24; S37 (see Appendix 1)

Description: Off-white to light brown crystalline solid. Slight pungent odor. Molecular weight = 395.40; Specific gravity (H_2O:1) = 1.456 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 141 °C. Soluble in water.

Incompatibilities: Incompatible with oxidizers, acids, acid chlorides, acid halides, isocyanates, halogenated organics, peroxides, phenols (acidic), epoxides, anhydrides. Contact with strong reducing agents such as halides may generate explosive a flammable gas.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 6 ppb[93]

Determination in Water: Log K_{ow} = <–0.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, passing through the skin and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks of tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs, skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Urinary levels of the sulfonylurea herbicides reflect recent exposure. There is very limited information on the biomonitoring of sulfonylurea herbicides or their metabolites. Detection of the metabolites may reflect exposure to more than one particular sulfonylurea herbicide or exposure to environmental degradation products. The urinary metabolites dimethoxypyrimidine and dimethylpyrimidine can be used as nonspecific markers of exposure to the pyrimidinylsulfonylureas, a group that includes bensulfuron-methyl[41], primisulfuron-methyl, and sulfosulfon. The urinary metabolite methoxymethyl triazine can be used as a nonspecific marker of exposure to the triazinylsulfonylureas, a group that includes chlorosulfuron, prosulfuron, and triasulfuron[96]. For those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Store in a refrigerator and protect from exposure to oxidizers or moisture[52]. A regulated, marked area should be established where this chemical is handled, used, or stored in compliance with OSHA Standard 1910.1045. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate and restrict persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area of spill or leak after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable.

Fire Extinguishing: Hazardous decomposition includes oxides of sulfur and nitrogen. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods. Recycle any unused portion of the material for its approved use or return it to the manufacturer or supplier. Ultimate disposal of the chemical must consider: the material's impact on air quality; potential migration in soil or water; effects on animal, aquatic, and plant life; and conformance with environmental and public health regulations[83].

Tribufos T:0665

Use Type: Herbicide, Defoliant, Plant growth regulator

CAS Number: 78-48-8

Formula: $C_{12}H_{27}OPS_3$

Synonyms: A13-25812; Butyl phosphorotrithioate; Caswell No. 864; Fosforotritioato de *S,S,S*-tributilo (Spanish); Merphos-oxide; Phosphorotrithioic acid, *S,S,S*-tributyl ester; TBTP; *S,S,S*-Tributyl phosphorotrithioate; *S,S,S*-Tributyl trithiophosphate

Trade Names: B-1776®; BUTIFOS®; BUTIPHOS®[C]; CHEMAGRO® 1776; CHEMAGRO® B-1776; DEGREEN®; DEF®; DEF DEFOLIANT®; DELEAF DEFOLIANT®; EASY OFF®-D; E-Z-OFF® D; FOLEX® 6EC FOS-FALL® A; ORTHO® phosphate defoliant

Chemical class: Organophosphate derivative

EPA/OPP PC Code: 074801

California DPR Chemical Code: 190

HSDB Number: 668

UN/NA & ERG Number: UN2783 (solid)/152; UN2811/154

RTECS® Number: TG5425000

EC Number: 201-120-8

Uses: Tribufos is an organophosphate defoliant used for cotton crops. It is specifically used to defoliate cotton in preparation for machine harvesting. It was first registered in the United States in 1961. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for the residues of the defoliant tribuphos [40 CFR 180.272]: in or on food commodities as follows: cattle, fat (negligible residue) 0.02 ppm; cattle, meat byproducts (negligible residue) 0.02 ppm; cattle, meat (negligible residue) 0.02 ppm; cotton, undelinted seed 4 ppm; goat, fat (negligible residue) 0.02 ppm; goat, meat byproducts (negligible residue) 0.02 ppm; goat, meat (negligible residue) 0.02 ppm; milk (negligible residue) 0.002 ppm; sheep, fat (negligible residue) 0.02 ppm; sheep, meat byproducts (negligible residue) 0.02 ppm; and sheep, meat (negligible residue) 0.02 ppm.

Human toxicity (long-term)[101]: High–1.46444 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)[101]: Intermediate–13.345590 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely human carcinogen in high doses; not likely to be a human carcinogen in low doses

Health Advisory: Nerve Toxin, Developmental/Reproductive Toxin

Acute Oral Category: 2, WARNING

DOT Inhalation Hazard Chemicals

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

DOT Inhalation Hazard Chemicals

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Clear, colorless to light yellow liquid. Mercaptan-like odor. Commercial product is available as an emulsifiable concentrate. Molecular weight = 314.54; Specific gravity (H_2O:1) = 1.06 @ 20 °C; Boiling point = 150 °C @ 0.3 @ mmHg; Freezing/Melting point = <–25 °C; Vapor pressure = 1.6×10^{-6} mmHg @ 20 °C; Vapor pressure = 4×10^{-6} mmHg @ 25 °C; Flash point = 195 °C. Henry's Law constant = 3×10^{-7} atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Hydrolyzed slowly in the presence of alkaline materials. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.091 mg/m^3
PAC-2: 1 mg/m^3
PAC-3: 1 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV[18], Method #5600, Organophosphorus Pesticides

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K_{ow} = >5.5. Values above 3.0 are likely to bioaccumulate in marine organisms.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. LD_{50} (oral, rat) = 150–450 mg/kg; LD_{50} (dermal, rat) = >150 mg/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. A nerve toxin; tribufos may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. This chemical is a suspected or known human carcinogen in high doses. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.

First Aid: Speed in removing material from skin is of extreme importance. *Eye:* Contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin and/or eye contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions,* do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel*: *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 g in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 g of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also diazepam, an anticonvulsant, might be considered. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. One recommendation is the use of DuPont™ Tychem® suit fabrics[88]. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >0.091 mg/m^3. Engineering controls should be used wherever feasible to maintain airborne concentrations of this chemical below the prescribed exposure limit. Respirators and protective equipment are less effective than engineering controls, and should be used only in non-routine or emergency situations which may result in exposure concentrations in excess of the TWA environmental limit. *At any concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. Eliminate all ignition sources (no smoking, flares, sparks or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other noncombustible material and transfer to containers. Do not get water inside containers.

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of nitrogen, phosphorus, sulfur, and carbon. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Trichlorfon T:0670

Use Type: Insecticide, Anthelmintic

CAS Number: 52-68-6

Formula: $C_4H_8Cl_3O_4P$; $(CH_3O)_2POCHOHCCl_3$

Synonyms: Chlorophos; Chlorophthalm; Chloroxyphos; DETF; Dimethoxy-2,2,2-trichloro-1-hydroxy-ethylphosphine oxide; *O,O*-Dimethyl (1-hydroxy-2,2,2-trichloraethyl)phosphonsaeure ester (German); *O,O*-Dimethyl (1-hydroxy-2,2,2-trichloroethyl)phosphonate; Dimethyl 1-hydroxy-2,2,2-trichloroethylphosphonate; *O,O*-Dimethyl (2,2,2-trichloro-1-hydroxyethyl)phosphonate; Dimethyl (2,2,2-trichloro-1-hydroxyethyl)phosphonate; ENT 19,763; 1-Hydroxy-2,2,2-trichloroethylphosphonic acid dimethyl ester; Hypodermacid; Methyl chlorophos; Metifonate; Metrifonate; Metriphonate; NCI-C54831; Phoschlor; Phosphonic acid, (2,2,2-trichloro-1-hydroxyethyl)-, dimethyl ester; Polfoschlor; 2,2,2-Trichloro-1-hydroxyethyl-phosphonate, dimethyl ester; (2,2,2-Trichloro-1-hydroxyethyl)phosphonic acid dimethyl ester; Trichlorophene; Trichlorphon

Trade Names: AEROL 1 (PESTICIDE)®; AGROFOROTOX®; ANTHON®; BAY 15922®; BAYER 15922®; BAYER L 13/59®; BILARCIL®; BOVINOX®[C]; BRITON®; BRITTEN®; CEKUFON®; CHLORAK®; CHLOROFTALM®; CICLO-SOM®; COMBOT®; COMBOT EQUINE®; DANEX®[C]; DEP®; DEPTHON®; DIMETOX®; DIPTEREX®; DIPTEREX® 50; DIPTEVU®; DITRIFON®; DYLOX®; DYLOX-METASYSTOX-R®; DYREX®; DYVON®; EQUINO-ACID®; EQUINO-AID®; FLIBOL E®; FLIEGENTELLE®; FOROTOX®; FOSCHLOR®; FOSCHLOR R®; FOSCHLOR R-50®; LEIVASOM®; LOISOL®; MASOTEN®[C]; MAZOTEN®; NEGUVON®; NEGUVON A®; PHOSCHLOR R50®; PROXOL®; RICIFON®; RITSIFON®; SATOX 20WSC®; SOLDEP®; SOTIPOX®; TRICHLORPHON FN®; TRINEX®; TUGON®; TUGON FLY BAIT®; TUGON STABLE SPRAY®; VERMICIDE BAYER 2349®; VOLFARTOL®; VOTEXIT®; WEC 50®; WOTEXIT®

Chemical class: Organophosphate

EPA/OPP PC Code: 057901

California DPR Chemical Code: 88

HSDB Number: 881

UN/NA & ERG Number: UN2783/152

RTECS® Number: TA0700000

EC Number: 200-149-3 [*Annex I Index No.:* 015-021-00-0]

Uses: Not approved for use in EU countries[115]. Registered for use in the U.S. except California. Trichlorfon has non-agriculture uses on golf course turf, home lawns and similar venues, and in non-food contact areas of food and meat processing plants. Also on ornamental shrubs and plants, and ornamental and bait fish ponds. Overseas, trichlorfon is used as cattle pour-on, which is classified as a food-use. It is used against insects such as lepidopteran larvae (caterpillars), white grubs, mole crickets, cattle lice, sod webworms, leaf miners, stink bugs, flies, ants, cockroaches, earwigs, crickets, diving beetles, water scavenger beetles, water boatman, backswimmers, water scorpions, giant water bugs and pillbugs. All food and feed uses in the U.S. were voluntarily canceled November 21, 1995. It was used on Brussels sprouts, barley, beets, blueberries, beans (dry and snap), corn, field corn, popcorn, sweet corn, cotton, cow peas, lima beans, tomatoes, cabbage, carrots (including tops), cauliflower, collards, cowpeas, southern peas, black-eyed peas, crowder peas, pumpkins, collards, lettuce and alfalfa, cotton, peanuts, peppers, pumpkins, tobacco, soybeans and treatment to manure.

U.S. Maximum Allowable Residue Levels for the residues of Trichlorfon ***[40 CFR 180.198]:*** in or on the following raw agricultural commodities: cattle, fat 0.1 ppm (negligible residue); cattle, meat byproducts 0.1 ppm (negligible residue); and cattle, meat 0.1 ppm (negligible residue).

Human toxicity (long-term)[101]: Intermediate–14.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Intermediate–24.99773 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Likely human carcinogen in high doses; Unlikely human carcinogen in low doses; IARC: IARC: Group 3, unclassifiable as to human carcinogenicity; ACGIH A4 Not classifiable as a human carcinogen.

Toxicity (oral) Category 2, WARNING.

Health Advisory: Nerve Toxin, Tumorigen; Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

Dropped from Extremely Hazardous Substance (EPA-SARA) in 1988

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

U.S. DOT 49CFR172.101, Inhalation Hazard Chemical as organophosphates

U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R22; R43; R50/53; safety phrases: S2; S24; S37; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters

Description: Trichlorfon is a white to pale yellow or pink crystalline or waxy solid. Faint, ether-like odor. Molecular weight = 257.44; Specific gravity (H_2O:1) = 1.73 @ 25 °C; Boiling point = (decomposes) >100 °C @ 0.1 mmHg; Freezing/Melting point = 77–84 °C; Vapor pressure = 8×10^{-6} mmHg @ 20 °C. LEL (Lower Explosive Limit) = 7500 ppm. Henry's Law constant = 1.7×10^{-11} atm-m^3/mol @ 25 °C (est)[83]. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Highly soluble in water; solubility = 15.4 g/100 ml @ 25 °C.

Incompatibilities: Decomposed by alkali materials. Forms explosive mixture with air. Alkaline materials, e.g., lime, lime sulfur, etc. Corrosive to iron and steel. In the presence of strong reducing agents such as hydrides, organophosphates form highly toxic and flammable phosphine gas. Contact with oxidizers can cause the release of toxic oxides of phosphorus. Corrosive to some metals.

Permissible Exposure Limits in Air: OSHA PEL: None
NIOSH REL: None
ACGIH TLV®[1]: 1 mg/m^3 (intermittent) TWA, sensitizer, not classifiable as a human carcinogen; BEI$_A$ issued for acetylcholinesterase inhibiting pesticides.
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 1.2 mg/m^3
PAC-2: 13 mg/m^3
PAC-3: 57 mg/m^3

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides[18].

Determination in Water: NIOSH Method 1657. The determination of organophosphorus pesticides in municipal and industrial wastewater by gas chromatography. Detection limit = 6.0 ng/L. Log K$_{ow}$ = <0.6. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion and dermal contact.

Harmful Effects and Symptoms: Organophosphates are highly toxic. Symptoms may develop rapidly, or there may be a delay of several hours following exposure before they become noticeable. The delay tends to be longer in the case of some compounds that dissolve fats, lipids, oils and non-polar solvents such as toluene. Symptoms may increase in severity for more than a single day and last for several days. In severe cases of organophosphate intoxication, respiratory failure may occur.

Short Term Exposure: Probable oral lethal dose (human) 50-500 mg/kg, between 1 teaspoon and 1 ounce for a 150 lb (70 kg) person. Toxicity relatively low among organophosphate insecticides, although a potent acetylcholinesterase inhibitor. Skin sensitivity has been reported. Symptoms of exposure: muscle weakness, twitching, respiratory depression, sweating, vomiting, diarrhea, chest and abdominal distress, sometimes pulmonary edema, excessive salivation, headache, giddiness, vertigo and weakness, runny nose and sensation of tightness in chest (inhalation), blurring of vision, tearing, ocular pain, loss of muscle coordination, and slurring of speech. Delayed pulmonary edema may occur after inhalation. LD$_{50}$ (oral, rat) = 212 mg/kg; LD$_{50}$ (dermal, rat) = >5 g/kg.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Neurotoxic; chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver and kidney damage. May cause reproductive and fetal effects. Skin sensitizer.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. Reproductive cells. Kidney and liver.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Routine biological monitoring of pesticide applicators and field workers includes testing of plasma and red blood cell acetylcholinesterase levels (for enzyme poisoned by this chemical). These tests are normally accurate only if done within about two hours of exposure. If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate pesticides is recommended until enzyme levels recover. Do not drink any alcoholic beverages before or during use as it promotes absorption of organophosphates. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: **Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt**. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Dermal contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions,* do nothing except keep victim warm.

Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water*. Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical, you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong bases. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Organophosphorus pesticides, solid or liquid (nonflammable), require a "poisonous materials" label. This chemical falls in Hazard Class 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Stay upwind; keep out of low areas. Ventilate area of spill or leak. Remove and isolate contaminated clothing at the site. Do not touch spilled material; stop leak if you can do so without risk. Use water spray to reduce vapors. *Small spills:* absorb with sand or other noncombustible absorbent material and place into containers for later disposal. *Large spills:* dike far ahead of spill for later disposal. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Seek professional environmental engineering assistance from the U.S. EPA Environmental Response Team at (908) 548-8730 (24-hour response line).

Fire Extinguishing: Hazardous decomposition includes hydrogen chloride and oxides of phosphorus, sulfur, and nitrogen. May be fatal if inhaled, ingested or absorbed through skin. Inhalation or contact with some of these materials will irritate or burn skin and eyes. Vapors may cause dizziness or suffocation. *Small fires:* dry chemical, carbon dioxide; water spray; or foam. *Large fires:* water spray, fog, or foam. Stay upwind; keep out of low areas. Ventilate closed spaces before entering them. Firefighting gear (including SCBA) may not provide adequate protection. If exposure occurs, remove and isolate gear immediately and thoroughly decontaminate personnel. Wear positive-pressure breathing apparatus and special protective clothing. Remove and isolate contaminated clothing at the site. Move container from fire area if you can do so without risk. Fight fire from maximum distance. Dike fire-control water for later disposal; do not scatter the material. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Destruction by alkali hydrolysis or incineration. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Triclopyr T:0794

Use Type: Herbicide

CAS Number: 55335-06-3

Formula: $C_7H_4Cl_3NO_3$

Synonyms: Acetic acid, [(3,5,6-trichloro-2-pyridinyl)oxy]-; Triclopyr, triethylamine salt; 3,5,6-Trichloro-2-pyridinyloxyacetic acid

Trade Names: [*Note:* See the following record, Triclopyr, triethylamine salt, for trade names containing the salt of triclopry] ACCESS®; CROSSBOW®, (triclopyr+2,4-D ester); ET®; GARLON®; GRAZON® Triclopyr; PATHFINDER®; REDEEM®; RELY®; REMEDY®; RIVERDALE TAHOE® Nufarm (Australia); TURFLON®

Chemical class: Chloropyridinyl

EPA/OPP PC Code: 116001

California DPR Chemical Code:

HSDB Number: 7060

UN/NA & ERG Number: UN3082 (liquid)/171

RTECS® Number: AJ9000000

EC Number: 259-597-3

Uses: Triclopry is a systemic herbicide used on rice, range land and pasture, rights-of-way, forestry and grasslands, including home lawns, for control of broadleaf weeds and woody plants. Triclopry is usually available as a triclopyr butoxyethyl ester (BEE) or as a triclopry triethylamine salt (TEA). Registered for use in the U.S. Some products may be classified as Restricted Use Pesticides (RUP). Registered for use in EU countries[115].

U.S. Maximum Allowable Residue Levels for Triclopyr and its metabolites 3,5,6,-trichloro-2-pyridinol and 2-methoxy-3,5,6-trichloropyridine ***[40 CFR 180.417 (a)(1)]:*** for the combined residues of the herbicide in or on the following raw agricultural commodities: fish 3.0 ppm; grass, forage 500 ppm; grass, forage, hay 500 ppm; shellfish 3.5 ppm. ***[40 CFR 180.417 (a)(2)]:*** in or on the following agricultural commodities: egg 0.05 ppm; meat, fat, and meat byproducts, except kidney and liver, of cattle, goat, hog, horse and sheep 0.05 ppm; meat, fat, and meat byproducts, except kidney, of poultry 0.1 ppm; milk 0.01 ppm; liver and kidney of cattle, goat, hog, horse and sheep 0.5 ppm; rice, grain 0.3 ppm; rice, straw 10.0 ppm.

Human toxicity (long-term)[101]: Very low–350.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: Very low–23713.98000 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group D, Not classifiable as a human carcinogen

Toxicity (oral) Category 3, CAUTION

European/International Regulations: Hazard Symbol: Xn, Xi, N; risk phrases: R22; R36; R43; R52; R63; safety phrases: S2; S24; S37; S60; S61 (see Appendix 1)

Description: White to colorless, feathery solid. Molecular weight = 256.48. Freezing/Melting point = 148–150 °C; Specific gravity (H_2O:1) = 1.34 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 149.5 °C; Vapor pressure = 1.3×10^{-6} mmHg @ 25 °C. Highly soluble in water; solubility = 440 mg/L @ 24 °C.

Incompatibilities: Decomposes in temperatures >280 °C. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 500 ppb[14]

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Harmful if swallowed. May cause irritation to the eyes, skin and respiratory tract. May be an eye irritant and a skin sensitizer. LD_{50} (oral, rat) = EPA: 729 mg/kg; LD_{50} (dermal, rabbit) = >2 g/kg.

Long Term Exposure: May cause heart, kidney and liver problems. Skin sensitizer.

Points of Attack: Heart, liver, kidneys, skin.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Heart, liver, and kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Personal Protective Methods: Incompatible with Clay- and Mineral-based absorbents[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Spill Handling: If you spill this chemical, first remove all sources of ignition. You should then dampen the solid spill material with 60-70% methanol, then transfer the dampened material to a suitable container. Use absorbent paper dampened with methanol to pick up any remaining material. Your contaminated clothing and absorbent paper should be sealed in a vapor-tight plastic bag for eventual disposal. Solvent-wash contaminated surfaces with 60-70% methanol followed by washing with a soap and water solution. Do not reenter the contaminated area until the safety officer (or other responsible person) has verified that the area has been properly cleaned.

Shipping: This material may be classified as an environmentally hazardous substance. It falls in Hazard Class 9.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, chlorinated pyridine, phosgene, and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Description: A clear, fluffy solid. Molecular weight = 257.66. Vapor pressure = unknown. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0.
Incompatibilities: Flammable. Keep away from strong oxidizers and strong acids.
Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: Harmful if swallowed. May cause irritation to the eyes, skin and respiratory tract. May be a sever eye irritant. May be a skin sensitizer. LD_{50} (oral, rat) = >2 g/kg; LD_{50} (dermal, rat) = >2 g/kg.
Long Term Exposure: Triclopyr may cause heart, kidney and liver problems. Repeated exposure may cause skin sensitization.
Points of Attack: Heart, liver, kidneys, skin.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Heart, liver, and kidney function tests. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.
First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.
Personal Protective Methods: Incompatible with Clay- and Mineral-based absorbents[88] Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading.
Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.
Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.
Spill Handling: If you spill this chemical, first remove all sources of ignition. You should then dampen the solid

spill material with 60-70% methanol, then transfer the dampened material to a suitable container. Use absorbent paper dampened with methanol to pick up any remaining material. Your contaminated clothing and absorbent paper should be sealed in a vapor-tight plastic bag for eventual disposal. Solvent-wash contaminated surfaces with 60-70% methanol followed by washing with a soap and water solution. Do not reenter the contaminated area until the safety officer (or other responsible person) has verified that the area has been properly cleaned.

Shipping: This material may be classified as an environmentally hazardous substance. It falls in Hazard Class 9.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, chlorinated pyridine, phosgene, and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in ***40 CFR*** Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

Chemical class: 2,6-Dinitroaniline

EPA/OPP PC Code: 036101

California DPR Chemical Code: 597

HSDB Number: 1003

UN/NA & ERG Number: UN1596 (Dinitroanilines)/153; UN3077(solid)/171

RTECS® Number: XU9275000

EC Number: 216-428-8 [*Annex I Index No.:* 609-046-00-1]

Uses: Trifluralin is a selective, pre-emergence herbicide used to control many annual grasses and broadleaf weeds in a large variety of tree fruit, nut, vegetable, and grain crops, including soybeans, sunflowers, cotton, and alfalfa. It is also used on rights-of-way, on set-aside land (i.e., arable land temporarily taken out of use). A general use pesticide (GUP). Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for Trifluralin [40 CFR 180.207(a)]: alfalfa, forage 3.0 ppm; alfalfa, hay 2.0 ppm; almond, hulls 0.05 ppm; asparagus 0.05 ppm; barley, grain 0.05 ppm; barley, hay 0.05 ppm; barley, straw

0.05 ppm; bean, mung, sprouts 2.0 ppm; carrot, roots 1.0 ppm; celery 0.05 ppm; corn, field, forage 0.05 ppm; corn, field, grain 0.05 ppm; corn, field, stover 0.05 ppm; cotton, gin byproducts 0.05 ppm; cotton, undelinted seed 0.05 ppm; endive 0.05 ppm; flax, seed 0.05 ppm; fruit, citrus, group 10, 0.05 ppm; fruit, stone, group 12, 0.05 ppm; grape 0.05 ppm; hop, dried cones 0.05 ppm; mustard, seed 0.05 ppm; nut, tree, group 14, 0.05 ppm; okra 0.05 ppm; peanut 0.05 ppm; peanut, hay 0.05 ppm; peppermint, oil 2.0 ppm; peppermint, tops 0.05 ppm; rapeseed, seed 0.05 ppm; safflower, seed 0.05 ppm; sorghum, grain, forage 0.05 ppm; sorghum, grain, grain 0.05 ppm; sorghum, grain, stover 0.05 ppm; spearmint, oil 2.0 ppm; spearmint, tops 0.05 ppm; sugarcane, cane 0.05 ppm; sunflower, seed 0.05 ppm; vegetable, brassica, leafy group 5, 0.05 ppm; vegetable, bulb, group 3, 0.05 ppm; vegetable, cucurbit, group 9, 0.05 ppm; vegetable, foliage of legume, group 7, 0.05 ppm; vegetable, fruiting, group 8, 0.05 ppm; vegetable, leaves of root and tuber, group 2, 0.05 ppm; vegetable, legume, group 6, 0.05 ppm; vegetable, root and tuber, group 1, except carrot 0.05 ppm; wheat, grain 0.05 ppm; wheat, straw 0.05 ppm.

Human toxicity (long-term)[101]: High–5.00 ppb, Health Advisory

Fish toxicity (threshold)[101]: High–1.57645 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA Group C, Possible human carcinogen; EU GHS Category 2: Suspected human carcinogen.

Health Advisory: Mutagen (S!), Developmental/Reproductive Toxin (S!), Endocrine disruptor (S!)

Acute Oral Category: 4, Caution

Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)

Safe Drinking Water Act: Priority List (55 FR 1470)

EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations (*containing <0.5 ppm NPDA*): Hazard Symbol: Xi, N; risk phrases: R40; R43; R50/53; safety phrases: S2; S36/37; S46; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 2-Hazard to waters

Description: Trifluralin is an orange crystalline solid or powder. A combustible solid. Commercial product is available as granules or as an emulsifiable concentrate. Molecular weight = 335.32; Specific gravity (H_2O:1) = 1.34 @ 22 °C; Boiling point = (decomposes) 139–140 °C; Freezing/Melting point = 46–47 °C; Vapor pressure = 1.9×10^{-4} mmHg @ 29 °C; Flash point = >85 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Practically insoluble in water; solubility = <0.1 mg/mL @ 22.5 °C[88]. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Dust may form explosive mixture with air. Store in temperatures above 4.4 °C. Fluorocarbons can react violently with barium, potassium, sodium. Dintroanilines must be kept away from excessive heat, shock and friction sources that might cause an explosive reaction.

Permissible Exposure Limits in Air: Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 2.3 mg/m^3

PAC-2: 26 mg/m^3

PAC-3: 78 mg/m^3

Permissible Concentration in Water: Federal Drinking Water Guidelines: EPA 10 μg/L; State Drinking Water Guidelines: Arizona 2 μg/L; Maine 45 μg/L; Florida 4.5 μg/L; Wisconsin 7.5 μg/L. Canadian Drinking Water Standards: IMAC 0.045 mg/L

Determination in Water: Method: ASTM D5812; Procedure: gas chromatography with electron capture detector; Analyte: trifluralin; Matrix: finished drinking water; Detection limit: 0.05 $\propto$g/L. Log K_{ow} = >5.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Inhalation can cause irritation of the respiratory tract with cough, phlegm, and/or tightness in the chest. The vapor can cause eye and skin irritation. Dermal contact can cause irritation and rash which can be exacerbated by sunlight. The majority of reported trifluralin exposure cases were occupational in nature. Other reported symptoms include respiratory depression, abdominal cramps, nausea, diarrhea, headache, lethargy and parasthesia following dermal or inhalation exposure. LD_{50} (oral, rat) = >5 g/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: May cause cancer; skin sensitization; tumors. High or repeated exposure may affect the liver and kidneys and may cause anemia. May cause reproductive and fetal effects. Fluorides may cause bone disease (pain and tenderness of the bones); mottled teeth in children.

Points of Attack: Reproductive cells. Reproductive cells. Skin, eyes, liver, kidneys, and blood.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. Kidney and liver function tests. Complete blood count. In addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. Give artificial respiration if victim is not breathing. *Do not* use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Dinitroanilines react with cellulose-based and expanded polymeric absorbents[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA >2.3 mg/m^3. *At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:* SCBAF:Pd,Pp (APF = 10,000) (any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF:Pd,Pp:ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus). *Escape*: GmFOv100 (APF = 50) [any air-purifying, full facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter]; or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in a cool, dry place and protect from prolonged exposure to light. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Dinitroanilines require a label of "poisonous materials." They usually fall into Hazard Group 6.1. Formulation may fit "environmentally hazardous substances, solid", usually falling in Hazard Class 9.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Dampen spilled material with alcohol to avoid dust, then transfer material to a suitable container. Use absorbent dampened with alcohol to pick up remaining material. Wash surfaces well with soap and water. Collect waste material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 8000

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen fluoride. *On a small fire:* use dry chemical, alcohol-resistant foam, CO_2 or water spray. *On a large fire:* use water spray, fog or regular foam. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. Use water spray or fog; do not use straight streams. *Fire involving storage or vehicular tanks: isolate* for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from tanks engulfed in fire. For massive fire, use unmanned hose holders or monitor nozzles; if this is impossible, withdraw from area and let fire burn. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. All federal, state, and local environmental regulations must be observed. Trifluralin does contain fluorine, and therefore incineration presents the increased hazard of HF in the off-gases. Prior to incineration, fluorine-containing compounds should be mixed with slaked lime plus vermiculite, sodium carbonate or sand-soda ash mixture (90:10).

Triforine T:0846

Use Type: Fungicide

CAS Number: 26644-46-2

Formula: $C_{10}H_{14}Cl_6N_4O_2$

Synonyms: *N,N′*-[1,4-Piperazinediylbis(2,2,2-trichloroethylidene)] bisformamide

Trade Names: CELA50®; CW524®; DENARIN® FUNGINEX®; SAPROL®; TRIFORIN®; W524®

Chemical class: Piperazine, trichloromethylformamide derivative

EPA/OPP PC Code: 107901

California DPR Chemical Code: 1905

HSDB Number: 6743

UN/NA&ERG Number: UN3077 (solid)/171; UN3082 (liquid)/171

RTECS® Number: TK9200000

EC Number: 272-872-0

Uses: Triforine is a systemic fungicide with protectant, eridicant, and curative activity. It is locally systemic, is quickly absorbed by the plant and should be applied on or before an infection occurs. Triforine is used for control of black spot, brown rot, scab, petal blight, rust and other diseases on fruits such as apples, peaches, plumbs, nectarines, apricots, and strawberry; in hops, vegetables, cereals, and ornamentals such as roses and chrysanthemums. Triforine breaks down rapidly in the environment. Not approved for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for the fungicide triforine [40 CFR 180.382(a)]: in or on the following food commodities: almond, hulls 0.20 ppm; almond 0.01 ppm; apple 0.01 ppm; apricot 8.0 ppm; bell pepper 5.0 ppm; blueberry 0.1 ppm; cantaloupe 1.0 ppm; cherry 3.0 ppm; cranberry 0.1 ppm; cucumber 0.5 ppm; eggplant 1.0 ppm; hop, dried cone 60 ppm; hop, spent 60 ppm; nectarine 8.0 ppm; peach 8.0 ppm; plum 3.0 ppm; plum, prune, fresh 3.0 ppm; strawberry 2.0 ppm; and watermelon 1.0 ppm. ***Regional registrations are established [40 CFR 180.382(c)]:*** in or on the following food commodities: asparagus 0.01 ppm.

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Suggestive evidence of carcinogenicity, but not sufficient to assess human carcinogenic potential; likely to be carcinogenic to humans

Toxicity (oral) Category 4, Caution

EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%.

European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R50/53; safety phrases: S2; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): No value assigned.

Description: Colorless (white) to tan crystalline solid or powder. Commercial product is available as an emulsifiable concentrate. Some commercial liquids may be dissolved in a hydrocarbon solvent. Molecular weight = 434.96; Specific gravity (H_2O:1) = 1.01 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 155 °C; Vapor pressure = 1.7×10^{-7} mmHg @ 25 °C. Henry's Law constant = 3.8×10^{-9} atm-m^3/mol @ 25 °C (est)[83]. Low solubility in water; solubility 25 mg/L @ 20C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Combustible solid; dust forms explosive mixture with air. Decomposed in strong acid to trichloroacetaldehyde and piperazine salts, and in strongly alkaline media to chloroform and piperazine[88]. May react with strong oxidizers such as chlorates, peroxides, nitrates, etc.

Determination in Water: Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Routes of Entry: Inhalation, ingestion, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This material can irritate the eyes, skin and respiratory tract. It may cause eye (corneal) damage. LD_{50} (oral, rat) = >1.5 g/kg; LD_{50} (dermal, rat) = >10 g/kg.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™

Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing. Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Dampen the spilled solid material with water. Clean up with dampened absorbent paper and transfer material to a suitable trash container. Seal the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a soap and water solution. Do not reenter the contaminated area until and expert verifies that the area has been properly cleaned.

Fire Extinguishing: Heat of decomposition releases toxic oxides of nitrogen and carbon and hydrogen chloride gas. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: It is the responsibility of chemical waste generators to determine if a discarded chemical is classified as a hazardous waste. See 40 CFR Parts 261.3 for U.S. EPA guidelines for the classification determination. Additionally, in order to ensure complete and accurate classification, waste generators must consult state and local hazardous waste regulations.

EC Number: 603-543-7 [*Annex I Index No.:* 613-282-00-0]

Uses: Used as a biocide in water-treatment facilities. Turf and seed protectant and treatment for grains, cereals, forage, fodder, straw, corn, barley, wheat to prevent rusts, powdery mildew and other pathogens. Registered for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for the fungicide triticonazole from the treatment of seed prior to planting ***[40 CFR 180.583]:*** in or on raw agricultural commodities as follows: grain, cereal, forage, fodder and straw, group 16, except rice 0.10 ppm; grain, cereal, group 15, except rice 0.01 ppm.

Regulatory Authority and Advisory Information:

Toxicity (oral) Category 3, CAUTION

May be toxic to aquatic organisms

European/International Regulations: Hazard Symbol: Xn, N; risk phrases: R51/53; safety phrases: S2; S13; s20/21; S39/25; S57; S61 (see Appendix 1)

Description: White powder. Liquid suspension may be greenish. Odorless. Commercial product can be a soluble concentrate that may be mixed with water and used as a spray. Molecular weight = 317.81; Specific gravity (H_2O:1) = 1.22 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 137–140 °C; Vapor pressure = 3.4×10^{-9} mmHg @ 25 °C (est.)[83]; Henry's Law constant = 1.5×10^{-10} atm-m^3/mol @ 25 °C (est)[83]; Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Practically insoluble in water; solubility <19 mg/L. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Incompatible with strong oxidizers, alkaline and acid materials.

Permissible Exposure Limits in Air:

Determination in Air: Adequate enforcement methodology (liquid chromatography/mass spectrometry (LC/MS), and liquid chromatography/mass spectrometry (LC/MS/MS) methods (Method 148.02) is available to enforce the tolerance expression. [75 FR 4287](1/27/2010)

Permissible Concentration in Water:

Determination in Water: Log K_{ow} = >3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Routes of Entry: Inhalation, dermal and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation of the eyes, skin, and respiratory tract. Some liquid formulations can be absorbed through the unbroken skin and have caused substantial but temporary eye problems. Harmful if ingested or inhaled. LD_{50} (oral, rat) = >2 g/kg; LD_{50} (dermal, rat) = >2000 mg/kg[83].

Long Term Exposure: May have major organ effects. In chronic animal (rats, dogs) studies triticonazole caused liver and/or adrenal effects[Bayer MSDS].

Points of Attack: Possibly liver and adrenal glands.

Medical Surveillance:

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person drink or vomit.

Note to physician: If ingested, remove by lavage or vomiting. Use general supportive measures for central nervous system depression. Use quinidine for myotonia.

Personal Protective Methods: Incompatible with Clay- and Mineral-based absorbents[88]. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6),*** the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: Evacuate persons not wearing protective equipment from area of spill or leak until clean up is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after clean up is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Soil Adsorption Index (K_{oc}) = 130.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon and hydrogen chloride gas. Use water spray; fog, carbon dioxide, or regular foam extinguishers. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Strong acid or alkaline hydrolysis leads to complete degradation of triticonazole. However, large quantities of triticonazole should be incinerated in a unit operating @ 850 °C equipped with off-gas scrubbing equipment. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

U

Urea U:0110

Use Type: Fertilizer, Fungicide
CAS Number: 57-13-6
Formula: CH_4N_2O; H_2NCONH_2
Synonyms: Carbamide; Carbamide resin; Carbamimidic acid; Carbonyl diamide; Carbonyldiamine; Isourea; NCI-C02119; Pseudourea
Trade Names: PRESPERSION, 75 UREA®; SUPERCEL 3000®; UREAPHIL®; UREOPHIL®; UREVERT®; VARIOFORM II®
Chemical class: Inorganic carbamide
EPA/OPP PC Code: 085702
California DPR Chemical Code: 662
HSDB Number: 163
UN/NA & ERG Number: Not regulated
RTECS® Number: YR6250000
EC Number: 200-315-5
Uses: Used in fertilizers and animal feeds, as a fungicide, in the manufacture of resins and plastics, as a stabilizer in explosives and in medicines, and others. Urea is used to protect against frost and is used in some pesticides as an inert ingredient as a stabilizer, as an inhibitor and as an intensifier for herbicides. Registered for use in EU countries[115]. Registered for use in the U.S.
U.S. Maximum Allowable Residue Levels for Urea (40 CFR 180.920 and 40CFR 180.950): Urea is exempt from requirements for a tolerance. **[*40 CFR 180.1117*]:** An exemption from the requirement of a tolerance is established for residues of the frost protectant urea in or on the following raw agricultural commodities when used before harvest in the production of: alfalfa, almonds, apples, apricots, artichokes, asparagus, avocados, beans, bell peppers, blackberries, blueberries, broccoli, brussels sprouts, boysenberries, caneberries, canola, cantaloupes, carrots, cauliflower, casaba, celery, cherries, chili peppers, chinese cabbage (bok choy, napa), cooking peppers, corn, cotton, crenshaw, cucumbers, figs, grapefruit, grapes, honeydew melon, hops, kiwifruit, kohlrabi, lemons, lentils, lettuce, limes, macadamia nuts, musk melon, nectarines, olives, onions, oranges, peaches, pears, peanuts, peas, persian melon, pistachios, plums, potatoes, pumpkin, prunes, radish, raspberries, rice, safflower, sorghum, spinach, spinach (New Zealand), squash (winter and summer), strawberries, sugar beets, sunflower, sweet pepper, table beets, tangerines, tomatoes, walnuts, watermelon, and zucchini.
Regulatory Authority and Advisory Information: Health Advisory: Mutagen, Reproductive Toxin, Skin irritant/sensitizer
WGK (German Aquatic Hazard Class): 1-Low hazard to waters
Description: Urea is a white crystalline solid. Odorless. Molecular weight = 60.06; Specific gravity (H_2O:1) = 1.335 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point = 133 °C; pH = 7.2 (10% solution); Vapor pressure = 1.32×10^{-5} @ 20 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. Highly soluble in water.
Incompatibilities: Will develop an odor of ammonia in the presence of moisture. Violent reaction with strong oxidizers, chlorine (may form explosive material with chlorinating substances), permanganates, dichromates, nitrites, inorganic chlorides, chlorites, perchlorates and hypochlorites (may form an explosive material, chlorine nitride). Contact with hypochlorites can result in the formation of explosive compounds. Amides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic amides with strong reducing agents. Amides are very weak bases (weaker than water). Mixing amides with dehydrating agents such as phosphorus pentoxide or thionyl chloride generates the corresponding nitrile. The combustion of these compounds generates mixed oxides of nitrogen (NOx). This compound is decomposed by strong base or acid[88].
Permissible Exposure Limits in Air: AIHA WEEL: 10 mg/m^3 TWA
Protective Action Criteria (PAC) Ver. 27[89]
PAC-1: 10 mg/m^3
PAC-2: 10 mg/m^3
PAC-3: 1700 mg/m^3
Permissible Concentration in Water: No data.
Determination in Water: Log K_{ow} = <– 2.0. Negative; unlikely to bioaccumulate in marine organisms.
Routes of Entry: Inhalation, ingestion, eye and/or dermal contact.
Harmful Effects and Symptoms
Short Term Exposure: *Inhalation:* Causes irritation of the respiratory tract. Dust may cause difficult breathing especially if the person has asthma. *Skin:* May cause irritation, burning or stinging. *Eyes:* Causes irritation. *Ingestion:* May cause gastrointestinal irritation with nausea, vomiting, and diarrhea. Acute effects: Eye, Brain, Hematological (unspecified); Kidney; Nervous system toxin; Central nervous system; Respiratory toxin (acute effects other than severe or moderate irritation); Respiratory irritant – acute, severe, or moderate but not mild irritant effects; Blood toxin (methemoglobinemia); Skin irritant (moderate)[DOE]. LD_{50} (oral, rat) = >8000 mg/kg; LD_{50} (dermal, rat) = >8000 mg/kg.
Long Term Exposure: Prolonged dermal contact may cause dermatitis. May cause cardiac disturbances. Some toxic effects have been seen in sheep with impaired liver function. Tumorigen.

Points of Attack: Skin. Possible heart and liver problems.

Medical Surveillance: Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. One suggested materia is DuPont™ Tychem® suit fabric[88]. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: SCBA > 10 mg/m^3. Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Store urea in a refrigerator and and protect it from moisture. Keep away from strong oxidizers, chlorine, permanganates, dichromates, nitrites, inorganic chlorides, chlorites, perchlorates; hypochlorites can form explosive compounds.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until cleanup is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after cleanup is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Do not reenter the contaminated area until an expert verifies that the area has been properly cleaned. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Not regulated. STN: 49-601-31, Hazardous substance, liquid or solid, n.o.s[83].

Fire Extinguishing: This chemical is a combustible solid. Use dry chemical, carbon dioxide; water spray; or foam extinguishers. Hazardous decomposition includes nitrogen oxides. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full face-pieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Controlled incineration in equipment containing a scrubber or thermal unit to reduce nitrogen oxide emissions[83].

Urea sulfate U:0115

Use Type: Herbicide, Plant growth regulator

CAS Number: 21351-39-3

Formula: $CH_4N_2O{\cdot}H_2O_4S$

Synonyms: Monocarbamide dihydrogen sulfate; Monourea sulfuric acid adduct; Urea sulfuric acid monoadduct; Sulfuric acid, monourea adduct; Urea dihydrogen sulfate; Urea, sulfate (1:1)

Trade Names: ENQUIK®; N-TAC DESSICANT®; SUPERQUIK®; WILTHIN®

Chemical class: Unclassified

EPA/OPP PC Code: 128961

California DPR Chemical Code: 2270

UN/NA & ERG Number: UN1760/154

RTECS® Number: YU1975000

EC Number: 244-343-6

Uses: Mainly used on cotton, wine grapes, apples, asparagus and rights-of-way. Not listed for use in EU countries[115]. Registered for use in the U.S.

Regulatory Authority and Advisory Information: Toxicity (oral) Category 2, WARNING

U.S. EPA Hazardous Waste Number (RCRA No.): D002 (Corrosive)

Description: A yellow to pink or greenish liquid. Molecular weight = 158.134; Specific gravity (H_2O:1) = 1.132 @ 20 °C; Boiling point = ~ 100 °C; Freezing/Melting point = 5.8 °C; Flash point = >200 °C. Hazard Identification (based on NFPA-704 M Rating System): Health 2-3 (depending on dilution), Flammability 0, Reactivity 2; Water reactive. Soluble in water; dangerously reactive.

Incompatibilities: To avoid dangerous spattering, do not add water to this material. This material reacts with water and other forms of moisture, releasing corrosive sulfuric acid. Incompatible with strong oxidizers such as hypochlorites and sulfides, alkaline materials. Corrosive to aluminum, mild steel, copper and zinc and other metals; contact may form flammable gases such as hydrogen. When heated to temperature 110 °C, this material will decompose, releasing oxides of nitrogen, carbon and sulfur.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution from point of rel; ease. Although this material may not be a listed marine pollutant, it may be a toxic hazard to aquatic organisms, fish, wildlife and cattle. Avoid spills or release to waterways. Highly soluble. Will disperse with current.

Harmful Effects and Symptoms

Short Term Exposure: Skin and eye contact can cause burns and permanent damage. Inhaling this chemical can cause severe respiratory tract irritation. High levels of exposure may cause pulmonary edema, a medical emergency that may be delayed for several hours. Harmful if swallowed; may cause burns to the digestive tract, mouth, throat and stomach. Dermal contact may cause allergic reaction. LD_{50} (oral, rat) = 300–350 mg/kg; LD_{50} (dermal, rat) = >2 g/kg.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies and possible lung disease.

Points of Attack: Skin, lungs.

Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: Move victim to fresh air. Call 911 or emergency medical service. Give artificial respiration if victim is not breathing. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; give artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In the cases of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. For minor skin contact, avoid spreading material on unaffected skin. Keep victim warm and quiet. Effects of exposure (inhalation, ingestion or skin contact) to substance may be delayed. Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. One suggested materia is DuPont™ Tychem® suit fabric[88]. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Follow regulations in OSHA 29CFR1910.134 or European Standard EN149. Use a NIOSH/MSHA- or European Standard EN149-approved respirator; or use an approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: Color Code-White: Corrosive or Contact Hazard; Store separately in a corrosion resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store urea in a refrigerator and and protect it from moisture. Keep away from strong oxidizers, chlorine, permanganates, dichromates, nitrites, inorganic chlorides, chlorites, perchlorates; hypochlorites can form explosive compounds.

Spill Handling: Wear safety goggles, full work clothing and impervious gloves and boots. If vapors are present, wear a NIOSH- or CEN (UK)-approved respiratory protection.

As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. If you spill a liquid, the floor area may be slippery. Contain spills with inert material such as dry earth or dry sand. Scoop into containers and seal up for proper disposal in accordance with all local, state, and federal laws. Seal your contaminated clothing and the absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a strong soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen and carbon; ammonia and amines, hydrogen chloride gas and organic chloride fumes. Also, *deadly and flammable phosgene gas* may be released. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *Small fire:* dry chemical, carbon dioxide or water spray. *Large fire:* dry chemical, carbon dioxide, alcohol-resistant foam or water spray. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal; do not scatter the material. *Fire involving storage or vehicular tanks:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. Always stay away from tanks engulfed in fire. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full face-pieces and are operated in a pressure-demand or other positive-pressure mode. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies.

Shipping: Corrosive liquid, acidic, organic, n.o.s. (Urea Sulfate). It falls into Class 8 and Packing Group II or III (depending on dilution). DOT "corrosive to aluminum." Not regulated if transported by motor vehicle or railcar in packaging that will not react dangerously or be degraded by this material [See 49 CFR §173.154(d)].

Disposal Method Suggested: Do not contaminate waterways by discharge of waste effluents or equipment washwaters. Ensure disposal complies with government requirements and local regulations. If possible, container contents should be completely used and the containers rinsed three times prior to discard. Rinse material should be treated as a corrosive material. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

V

Vernolate V:0145

Use Type: Herbicide
CAS Number: 1929-77-7
Formula: $C_{10}H_{21}NOS$
Synonyms: Carbamic acid, dipropylthio-, *S*-propyl ester; Carbamothioic acid, dipropyl-, *S*-propyl ester; Dipropylthiocarbamic acid-*S*-propyl ester; PPTC; Propyl-*N,N*-dipropylthiolcarbamate; *S*-Propyl dipropylthiocarbamate; *S*-Propyl dipropyl (thiocarbamate); *N*-Propyl-di-*N*-propylthiolcarbamate
Trade Names: R-1607®; REWARD®[C]; SURPASS®[C]; SURPASS®-E[C]; VERNAM®[C]; VERNAM®-E[C]; VERNAM®-G[C]; VOMZLATE®
Chemical class: Thiocarbamate
EPA/OPP PC Code: 041404
California DPR Chemical Code: 1987
HSDB Number: 1028
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: FA4725000
EC Number: 217-681-7 [*Annex 1 Index No.* 006-066-00-7]
Uses: Vernolate is a selective herbicide used to control a variety of weeds as their seeds germinate. These weeds include annual broadleaf weeds, annual grasses, perennial grasses, nut sedges and seedling Johnson grass. Agricultural crop use sites include soybeans, peanuts, groundnuts, soya beans, maize, tobacco, and sweet potatoes. A U.S. EPA restricted Use Pesticide (RUP) as dipropylthiocarbamic acid-*S*-propyl ester. Not currently registered for use in the U.S. Not approved for use in EU countries[115]. There are more than 15 global suppliers[97].
Human toxicity (long-term)[101]: High–7.00 ppb, Health Advisory
Fish toxicity (threshold)[101]: Low–344.93242 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information: Health Advisory: Mutagen
Acute Oral Category: 3, CAUTION
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, inactive]
EPA Hazardous Waste Number (RCRA No.): U385
RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.003; Non-wastewater (mg/kg), 1.4
European/International Regulations: Hazard Symbol: Xn; N; risk phrases: R22; safety phrases: S2; S22; S51/53; S61
Description: Clear, colorless liquid. Faint, aromatic or garlic-like odor. Molecular weight 203.35; Specific gravity (H_2O:1) = 0.953 @ 20°C; Boiling point = 149°C @ 30 mmHg; Vapor pressure = 1.04×10^{-2} mmHg @ 25°C. Henry's Law constant = 3.9×10^{-5} atm-m^3/mol @ 25°C (est)[83]. Soluble in water; solubility = 95 ppm @ 20°C; 107 mg/L @ 25°C.
Incompatibilities: Esters react with acids to liberate heat along with alcohols and acids. Strong oxidizing acids may cause a vigorous reaction that is sufficiently exothermic to ignite the reaction products. Heat is also generated by the interaction of esters with caustic solutions. Flammable hydrogen is generated by mixing esters with alkali metals and hydrides. As an ester, it will hydrolyze to form sulfur dioxide and alcohols; reaction is more rapid under basic conditions. It may react exothermically with acids to generate alcohols. Heat will be generated by interaction with basic or caustic solutions. Flammable hydrogen is generated by mixing with alkali metals and hydrides.
Permissible Concentration in Water: State Drinking Water Guidelines: Florida 7 μg/L. Runoff from spills or fire control may cause water pollution.
Determination in Water: Method: EPA-TSC-NERL 507; Procedure: Determination of Nitrogen- and Phosphorus-Containing Pesticides in Water by Gas Chromatography with a Nitrogen-Phosphorus Detector; Analyte: Vernolate; Matrix: ground water and finished drinking water; Detection limit: 0.055 μg/L. Log K_{ow} = >3.5. Values above 3.0 may be able to bioaccumulate in marine organisms.
Harmful Effects and Symptoms
Short Term Exposure: Some thiocarbamates may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death. LD_{50} (oral, rat) = >1000 mg/kg; LD_{50} (dermal, rat) = >5 g/kg.
Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.
Medical Surveillance: Preliminary medical exam to detect chronic diseases of central nervous system, liver, heart, kidneys, lung and skin, as well as endocrinological or immunological disturbances, should protect susceptible individuals. Periodical medical exams of internal organs, skin and eyes are important to avoid chronic occupational intoxications. They should include lab and patch tests when necessary[83]. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended:

If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Wherever and whenever workplace conditions warrant respirator use, a respiratory protection program must be followed that meets one or more of the following government standards: OSHA's 29 CFR 1910.134, ANSI Z88.2, or European Standard EN 149.

Storage: Color Code-Blue: Health Hazard/Poison. Store in a dark, secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from strong alkalis (such as sodium hydroxide, sodium bicarbonate, etc.). Stable when stored in glass or polyethylene containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9 and Packing Group III.

Spill Handling: For solids, isolate spill or leak area in all directions for at least 25 meters/75 feet. For liquids, isolate spill or leak area in all directions for at least 50 meters/150 feet. Increase, in the downwind direction, as necessary. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leak if you can do it without risk. Prevent entry into waterways, sewers, basements or confined areas. Cover with plastic sheet to prevent spreading. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Do not allow water to get inside containers.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, sulfur, and carbon. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber. Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. If allowed, incineration with effluent gas scrubbing (carbon dioxide may be released) is recommended. Containers must be disposed of properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office. All federal, state, and local environmental regulations must be observed.

Vinclozolin V:0147

Use Type: Fungicide
CAS Number: 50471-44-8; 83792-61-4 (M2)
Formula: $C_{12}H_9Cl_2NO_3$; $C_{11}H_{11}Cl_2NO_2$ (M2)
Synonyms: Caswell No. 323C; (RS)-3-(3,5-Dichlorophenyl)-5-ethenyl-5-methyl-2,4-oxazolidinedione; 3-(3,5-Dichlorophenyl)-5-ethenyl-5-methyl-2,4-oxazolidinedione; 3-(3,5-Dichlorophenyl)-5-ethenyl-5-methyl-2,4-oxazolidinedione; (RS)-3-(3,5-Dichlorophenyl)-5-methyl-5-vinyl-1,3-oxazolidine-2,4-dione; *N*-3,5-Dichlorophenyl-5-methyl-5-vinyl-1,3-oxazolidine-2,4-dione; 2,4-Oxazolidinedione, 3-(3,5-dichlorophenyl)-5-ethenyl-5-methyl-; 2,4-Oxazolidinedione, 3-(3,5-dichlorophenyl)-5-methyl-5-vinyl-
Trade Names: BAS-352-F®; BAS-35204-F®; CURALAN®; FLOTILLA®; FUMITE RONALIN®; MASCOT® contact turf fungicide; ORNALIN®[C]; POWERDRIVE®; RONILAN®; RONILAN-DF®; RONALINE-FL®; TOUCHE®; VINCHLOZOLINE®; VINCLOZOLINE®; VORLAND®
Chemical class: Dicarboximide; Oxazole; Halogenated dicarboximide
EPA/OPP PC Code: 113201
California DPR Chemical Code: 2129
HSDB Number: 6747
UN/NA & ERG Number: UN3077(solid)/171
RTECS® Number: RP8530000
EC Number: 256-599-6 [*Annex I Index No.:* 607-307-00-4]
Uses: Vinclozolin is a non-systemic fungicide which has been used on vines (such as grapes), strawberries, raspberries, chicory grown for Belgian endive, lettuce, kiwi, canola, succulent beans, and dry bulb onions. Import tolerances have been established to permit. Not approved for use in EU countries[115]. Registered for use in the U.S.
U.S. Maximum Allowable Residue Levels for Vinclozolin [Revoked tolerances subject to the channel of trade provisions. The following table lists commodities with residues resulting from lawful use that are subject to the channels of trade provisions of section 408(l)(5) of the Federal Food, Drug, and Cosmetics Act (FFDCA)] [40 CFR 180.380 (e)]: cucumber 1.0 ppm; fruit, stone, except plum, prune, fresh 25.0 ppm; pepper, bell 3.0 ppm; strawberry 10.0 ppm. All other uses were revoked in 2008.
Fish toxicity (threshold)[101]: Low–396.87174000 ppb, MATC (Maximum Acceptable Toxicant Concentration)
Regulatory Authority and Advisory Information:
Carcinogenicity[83]: EPA Group C, Possible human carcinogen; EU GHS Category 2: Suspected human carcinogen
California Proposition 65 Chemical: Carcinogen and developmental toxin (8/20/1999).
Health Advisory: Mutagen, Developmental/Reproductive Toxin, Endocrine disruptor (S!)
Acute Oral Category: 4, Caution
Potential Ground Water Pollutant [California FAC Section 13145(d)/12811, active]
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
European/International Regulations: Hazard Symbol: Xi, N; risk phrases: R40; R43; R51/53; R60; R61; safety phrases: S2; S45; S53; S61 (see Appendix 1)
Description: Vinclozolin and Vinclozolin (M2) are colorless or white crystalline solids or powder. Mild aromatic odor. Vinclozolin is formulated as a 50% extruded granule (EG) sold only in water-soluble packets and as a 50% dry flowable (DF) formulation for open pour[83]. Molecular weight = 286.11; Specific gravity (H_2O:1) = 1.51 @ 20°C; Freezing/Melting point = 108°C; Specific gravity (H_2O:1) = 1.51; Boiling point = 131°C @ 0.5 mmHg; Vapor pressure = 1.25×10^{-5} mmHg @ 20°C; Flash point = 177.5°C (est.). Henry's Law constant = 1.07×10^{-8} atm-m^3/mol @ 25°C (est)[83]. Practically insoluble in water; solubility = 2.6 mg/L @ 20°C[83].
Incompatibilities: Hydrolysis may occur under alkaline conditions. Incompatible with strong oxidizers and alkalies. Amides are incompatible with strong reducing agents and with azo and diazo compounds, generating flammable and toxic gases. Amides are very weak bases but react with strong bases, forming salts and reacting like an acid. The combustion of these compounds generates mixed oxides of nitrogen.
Determination in Water: Log K_{ow} = >3.0. Values above 3.0 may be able to bioaccumulate in marine organisms.
Determination in Air: Filter; none; Gravimetric; NIOSH IV[18] [Particulates NOR; #0500 (total), #0600 (respirable)]
Routes of Entry: Inhalation of dust or aerosols, ingestion, dermal and/or eye contact.
Harmful Effects and Symptoms
Short Term Exposure: May irritate eye, skin, and respiratory tract. Harmful if ingested. LD_{50} (oral, rat) => 5 g/kg; LD_{50} (dermal, rat) = >5 g/kg.
Long Term Exposure: Possible reproduction and developmental effects. Skin sensitizer.
Points of Attack: May attack prostate gland. Reproductive cells. Skin.
Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. In

addition to comprehensive initial medical and work histories emphasizing reproductive experience and menstrual history, patient should have physical examination and testing of genito-urinary tract, sperm count, motility and morphology. If required, other tests, such as serum testosterone, serum follicle stimulating hormone (FSH), and serum lutenizing hormone (LH), may be indicated. Tests of renal and prostate function. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Environmentally hazardous substances, solid or liquid, usually fall in Hazard Class 9.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 25 meters (75 feet) for solids. For spills increase, in the downwind direction, as necessary, the isolation distance shown above. Do not touch or walk through spilled material. Stop leak if you can do it without risk. Prevent dust cloud. *Small dry spill:* with clean shovel place material into clean, dry container and cover loosely; move containers from spill area. *Large spill:* cover powder spill with plastic sheet or tarp to minimize spreading. Prevent entry into waterways, sewers, basements or confined areas.

Fire Extinguishing: Hazardous decomposition includes oxides of nitrogen, and carbon and hydrogen chloride. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. *On a small fire:* use dry chemical, CO_2, water spray or regular foam. *On a large fire:* use water spray, fog or regular foam. Do not scatter spilled material with high-pressure streams of water. Move containers from fire area if you can do it without risk. Dike fire-control water for later disposal. *Fire involving tanks:* from a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. Always stay away from tanks engulfed in fire. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full facepieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Do not discharge effluent containing this product into lakes, streams, ponds estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. It is the responsibility of chemical waste generators to determine the toxicity and physical properties of a discarded chemical and to properly identify its classification and certification as a hazardous waste and to determine the disposal method. U.S. EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult and follow all regional, national, state and local hazardous waste laws to ensure complete and accurate classification and disposal methods.

W

Warfarin W:0100

Use Type: Rodenticide
CAS Number: 81-81-2; 129-06-6 (sodium salt)
Formula: $C_{19}H_{16}O_4$; $C_{19}H_{15}O_4$. Na (sodium salt)
Synonyms: 3-(α-Acetonylbenzyl)-4-hydroxycoumarin; 2H-1-Benzopyran-2-one,4-hydroxy-3-(3-oxo-1-phenylbutyl)-; Coumadin; Coumarin, 3-(α-acetonylbenzyl) -4-hydroxy-; 4-Hydroxy-3-(3-oxo-1-phenylbutyl) coumarin; Kumander; Kypfarin; 3-(α-Phenyl-β-acetylethyl)-4-hydroxycoumarin; 3-(1'-Phenyl-2'-acetylethyl)-4-hydroxycoumarin; Prothromadin; Toxic chemical category code, N874
Sodium: 3-(α-Acetonylbenzyl)-4-hydroxy-coumarin sodium salt; Coumadin sodium; 4-Hydroxy-3-(3-oxo-1-phenylbutyl)-2H-1-benzopyran-2-one sodium salt; Marevan (sodium salt); Prothrombin; Sodium coumadin; Sodium warfarin
Trade Names: ARAB RAT DETH®; ATROMBINE-K®; BRUMIN®; COMPOUND 42®; D-CON®; CORAX®; DETHMORE®; EAGLES-7®; EASTERN STATES DUOCIDE®; GROVEX SEWER BAIT®; HOPKINS BAR BAIR®; HOPKINS COV-R-TOX®; HOPKINS RODEX®; KILLGERM SEWARIN P®; KILMOL®; LIQUA-TOX®; MAR-FIN®; MOUSE PAK®; PLUSBAIT®; RAT-A-WAY®; RAT-B-GON®; RAT-O-CIDE®; RAT-GARD®; RAT & MICE BAIT®; RATRON®; RATS-NO-MORE®; RATTUNAL®; RAX®; RCR SQUIRREL KILLER®; RENTOKIL®; RENTOKIL BIOTROL®; RODEX BLOX®; RODENTEX®; RODETH®; RODEX®; ROUGH & READY MOUSE MIX®; SAKARAT®; SOLFARIN®; SOREXA PLUS®; SOREX CR1®; SEWARIN®; SPRAY-TROL BRANCH®; TWIN LIGHT RAT AWAY®; RODEN-TROL®; WARFARAT®; WARF COMPOUND®; VAMPIRINIP®
Sodium Salt: ATHROMBIN®; LIQUA-TOX®; PANWARFIN®; RATSUL SOLUBLE®; TINTORANE®; VARFINE®; WARAN®; WARCOUMIN®; WARFILONE®
Chemical class: Coumarin
EPA/OPP PC Code: 086002 (warfarin); 086003 (sodium salt)
California DPR Chemical Code: 621 (warfarin); 1184 (sodium salt)
HSDB Number: 1786; None found for the sodium salt
UN/NA & ERG Number: UN3027/151
RTECS® Number: GN4550000; GN4725000 (sodium salt)
EC Number: 201-377-6 [*Annex I Index No.:* 607-056-00-0]; 204-929-4 (sodium salt)
Uses: Warfarin and its sodium salt is an anticoagulant rodenticide used for controlling rats and house mice in and around homes, animal and agricultural premises, and commercial and industrial sites. It is effective in very low dosages. About a week is required before a marked reduction in the rodent population is noticeable. Rodents do not become bait-shy after once tasting warfarin; they continue to consume it until its anti-clotting properties have produced death through internal hemorrhaging. It can be used year-after-year wherever a rodent problem exists. Warfarin and its sodium salt are only slightly dangerous to humans and domestic animals when used as directed, but care must be taken with young pigs, which are especially susceptible. The sodium salt is also used to treat people with blood hypercoagulation problems. Registered for use in EU countries[115]. Registered for use in the U.S.

Regulatory Authority and Advisory Information:
California Proposition 65 Chemical: Listed; Developmental/Reproductive Toxin (7/1/1987)
Toxicity (oral) Category 1, DANGER–POISON.
Health Advisory: Reproductive and Developmental Hazard; Endocrine disruptor (S!)
EPA Hazardous Waste Number (RCRA No.): U248, warfarin salts when present at concentrations <0.3%; P001, warfarin salts when present at concentrations >0.3%.
Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg) warfarin and warfarin sodium
Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
European/International Regulations (*81-81-2*): Hazard Symbol: T, N; risk phrases: R61; R48/25; R52/53; safety phrases: S2; S45; S53; S61 (see Appendix 1)
WGK (German Aquatic Hazard Class): No value assigned*
Sodium salt:
EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
EPA Hazardous Waste Number (RCRA No.): U248, warfarin salts when present at concentrations <0.3%; P001, warfarin salts when present at concentrations greater than 0.3%
U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
European/International Regulations (*81-81-2*): Hazard Symbol: T, N; Risk phrases: R61; R48/25; R52/53; safety phrases: S2; S45; S53; S61 (see Appendix 1).

Description: Warfarin is a colorless, odorless crystalline solid. Although warfarin is often available commercially as the sodium salt, the following physical properties primarily refer to the pure substance. Molecular weight = 308.32; 330.33 (sodium salt); Specific gravity (H_2O:1) = 1.347 @ 20 °C; Boiling point = (decomposes); Freezing/Melting point =161.11 °C; Vapor pressure = 0.09 mmHg @ 21.7 °C[9]. LEL (Lower Explosive Limit) = 65.000 ppm (sodium salt). Henry's Law constant = 3×10^{-9} atm-m^3/mol @ 25 °C (est)[83]. Practically insoluble in water; solubility = 0.002%[NIOSH].

Incompatibilities: Strong oxidizers; strong acids; strong bases. Dust mixtures with air may cause explosion.

Permissible Exposure Limits in Air: IDLH = 100 mg/m^3
warfarin 81-81-2
OSHA PEL: 0.1 mg/m^3 TWA
NIOSH REL: 0.1 mg/m^3 TWA
ACGIH TLV®[1]: 0.1 mg/m^3 TWA
NIOSH IDLH: 100 mg/m^3
DFG MAK 0.5 mg/m^3, inhalable fraction TWA; Peak Limitation Category II(2).
Protective Action Criteria (PAC), Ver. 27[89]
PAC-1: 1.8 mg/m^3
PAC-2: 20 mg/m^3
PAC-3: 350 mg/m^3
Protective Action Criteria (PAC) (sodium salt) Ver. 27[89]
PAC-1: 0.82 mg/m^3
PAC-2: 9 mg/m^3
PAC-3: 9 mg/m^3

Determination in Air: Use NIOSH Analytical Method (IV) #5002.

Determination in Water: Log K_{ow} = <3.0. Values above 3.0 are likely to bioaccumulate in aquatic organisms.

Permissible Concentration in Water: Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, inhalation, skin and/or eye contact. Absorbed through the unbroken skin; dermal contact should be avoided.

Harmful Effects and Symptoms: The onset of the symptoms of poisoning may be delayed for a few days following ingestion. Typical symptoms of poisoning include increased bleeding. Coagulation problems may be detected by laboratory analyses only. Large exposures may cause excessive bleeding from minor cuts or abrasions, bleeding from the gums and/or blood in feces. Massive internal bleeding may result in shock. A victim with anemia and/or liver disease may have more severe and persistent poisoning that may be extremely difficult to control.

Short Term Exposure: Warfarin is classified as very toxic, and may cause hemorrhage at even low levels. Probable oral lethal dose in humans is 50–500 mg/kg, between 1 teaspoon and 1 ounce for a 150 lb person. Warfarin sodium is a powerful anticoagulant. Hemorrhage is the most common sign and may be manifested by hemorrhagic skin rashes and lip, nose, and upper airway bleeding. Upper airway pain, difficulty in speaking and swallowing, and dyspnea (shortness of breath) may occur. Back pain may be noted. Other symptoms of warfarin exposure begin a few days or weeks after ingestion. They include epistaxis (nose bleed), bleeding gums, pallor, and sometimes hematomas around joints and on buttocks, blood in urine and feces; hematoma on arms, legs; bleeding lips, mucous membrane hemorrhage; petechial rash; abnormal hematologic indices. Later, paralysis due to cerebral hemorrhage, and finally hemorrhagic shock and death may occur. Acute effects: *Warfarin*: Eye, other than irritation; Hematological effects – acute, unspecified; Gastrointestinal tract; Heart, cardiovascular system; Kidney; Liver; Nervous system toxin; Narcotic; Respiratory toxin other than severe or moderate irritation. *Warfarin (sodium salt):* Hematological, unspecified; Central nervous system; Blood toxin – anemia; Narcotic. LD_{50} (oral, rat) = 1500 μg/kg; LD_{50} (dermal, rat) = >1 g/kg.

Long Term Exposure: Anemia can result from severe or repeated bleeding. Repeated exposure may affect the liver and kidneys. Material is believed to be teratogenic in humans. There is limited evidence that warfarin may decrease fertility in females. Animal tests indicates that warfarin may cause malformations in human babies. Chronic effects: *Warfarin*: Brain; *Warfarin (sodium salt)*: Hematological effects, unspecified; Bone; Gastrointestinal tract; Heart, Cardiovascular system; Kidney; Liver.

Points of Attack: Blood and cardiovascular system; brain, blood, bone, heart, kidney, liver.

Medical Surveillance: Persons with who are taking anticoagulants or are suffering from bleeding disorders must be protected from exposure. Consider the points of attack in preplacement and periodic physical examinations. Blood test for prothrombin time. Complete blood count. Persons taking “blood thinning” medications are at increased risk.

First Aid: *Emergency life-support procedures:* Acute exposure to warfarin may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation exposure:* Move victims to fresh air. Emergency personnel should avoid self-exposure to warfarin. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. RUSH to a health care facility. *Dermal/eye exposure:* Remove victims from exposure. Emergency personnel should avoid self-exposure to warfarin. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Remove contaminated clothing as soon as possible. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes. Wash exposed skin areas twice with soap and water. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. RUSH to a health care facility. *Ingestion exposure:* Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Vomiting may be induced with syrup of ipecac. If elapsed time since ingestion of warfarin is unknown or suspected to be greater than 30 minutes, do not induce vomiting and RUSH to a health care facility. ipecac should not be administered to children under 6 months of age. ***Warning:*** Syrup of ipecac should be administered only if victims are alert, have an active gag-reflex, and show no signs of impending seizure or coma. If ANY uncertainty exists, RUSH to a health care facility. The following dosages of ipecac are recommended: children up to 1 year old, 10 mL (1/3 oz); children 1 to 12 years old, 15 mL (1/2 oz); adults, 30 mL (1 oz). Ambulate (walk) the victims and give large quantities of water. If vomiting has not occurred after 15 minutes, ipecac may be re-administered. Continue to ambulate and give water to the victims. If vomiting has not occurred within 15 minutes after second administration of ipecac, administer activated charcoal. Activated charcoal may be administered if victims are conscious and alert. Use 15 to 30 g (1/2 to 1 oz) for children, 50 to 100 g (1-3/4 to 3-1/2 oz) for adults, with 125 to 250 mL (1/2 to 1 cup) of water. Promote excretion by administering a saline cathartic or sorbitol to conscious and alert victims. Children require 15 to 30 g (1/2 to 1 oz) of cathartic; 50 to 100 g (1-3/4 to 3-1/2 oz) is recommended for adults. RUSH to a health care facility[83].

Personal Protective Methods: Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, 40 CFR 170.240(d)(4-6), the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard. Firefighters should wear NIOSH-approved self-contained breathing apparatus and full protective clothing.

Respirator Selection: *Up to 0.5 mg/m^3*: Qm (APF = 25) (any quarter-mask respirator). *Up to 1 mg/m^3:* 95XQ (APF = 10) [any particulate respirator equipped with an N95, R95, or P95 filter (including N95, R95, and P95 filtering facepieces) except quarter-mask respirators. The following filters may also be used: N99, R99, P99, N100, R100, P100]; or Sa (APF = 10) (any supplied-air respirator). *Up to 2.5 mg/m^3:* Sa:Cf (APF = 25) (any supplied-air respirator operated in a continuous-flow mode); or PaprHie (APF = 25) (any powered, air-purifying respirator with a high-efficiency particulate filter). *Up to 5 mg/m^3:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SaT: Cf (APF = 50) (any supplied-air respirator that has a tight-fitting face-piece and is operated in a continuous-flow mode); or PaprTHie (APF = 50) (any powered, air-purifying respirator with a tight-fitting facepiece and a high-efficiency particulate filter); or SCBAF (APF = 50) (any self-contained breathing apparatus with a full facepiece); or SaF (APF = 50) (any supplied-air respirator with a full facepiece). *Up to 100 mg/m^3:* Sa: Pd,Pp (APF = 1000) (any supplied-air respirator operated in a pressure-demand or other positive-pressure mode). *Emergency or planned entry into unknown concentrations or IDLH conditions:* SCBAF: Pd,Pp (APF = 10,000) (any NIOSH/MSHA- or European Standard EN 149-approved self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode); or SaF: Pd,Pp: ASCBA (APF = 10,000) (any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary, self-contained breathing apparatus operated in a pressure-demand or other positive-pressure mode). *Escape:* 100F (APF = 50) (any air-purifying, full facepiece respirator with an N100, R100, or P100 filter); or SCBAE (any appropriate escape-type, self-contained breathing apparatus).

Storage: Color Code-Blue: Health Hazard/Poison. Store in a secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from oxidizers. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Coumarin derivative pesticides, solid, toxic, require a shipping label of "poisonous materials." Hazard Class is 6.1.

Spill Handling: First remove all sources of ignition. Evacuate persons not wearing protective equipment from area of spill or leak until cleanup is complete. Collect powdered material in the most convenient and safe manner and deposit in sealed containers. Ventilate area after cleanup is complete. It may be necessary to contain and dispose of this chemical as a hazardous waste. If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Contact your local or federal environmental protection agency for specific recommendations. If employees are required to clean up spills, they must be properly trained and equipped. OSHA 1910.120(q) may be applicable. Do not touch spilled material. Eating and smoking should not be permitted in areas where it is handled, processed or stored. *Small spills:* sweep onto paper or other suitable material. Place in an appropriate container and burn in a safe place. *Large quantities:* may be destroyed by dissolving in a flammable solvent (e.g., alcohol) and atomizing in a combustion chamber.

Fire Extinguishing: Warfarin is combustible; however, no flash point can be found. Extinguish fire using agent suitable for type of surrounding fire. Use alcohol-resistant foam, carbon dioxide; or dry chemical. Wear full protective clothing and self-contained breathing apparatus when engaged in fire-fighting. Hazardous decomposition includes oxides of sodium (warfarin sodium). If material or contaminated runoff enters waterways, notify downstream users of potentially contaminated waters. Notify local health and fire officials and pollution control agencies. From a secure, explosion-proof location, use water spray to cool exposed containers. If cooling streams are ineffective (venting sound increases in volume and pitch, tank discolors, or shows any signs of deforming), withdraw immediately to a secure position. If employees are expected to fight fires, they must be trained and equipped in OSHA 1910.156. The only respirators recommended for fire fighting are self-contained breathing apparatuses that have full face-pieces and are operated in a pressure-demand or other positive-pressure mode.

Disposal Method Suggested: Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. If allowed, consider incineration.

Z

Zilkonium chloride Z:0090

Use Type: Biocide, Algaecide, Fungicide
CAS Number: 8001-54-5
Formula: $C_6H_5CH_2N(CH_3)_2RCl$; R = mixture of alkyls
Synonyms: Alkyl dimethyl benzyl ammonium chloride [50% (C_{12}), 30% (C_{14}), 17% (C_{16}), 3% (C_{18})]; Alkyl dimethylbenzyl ammonium chloride; Alkyldimethyl(phenylmethyl) quaternary ammonium chlorides; Benzalkonium chloride; BTC; Pheneene germicidal solution and tincture; Quaternary ammonium compounds, alkylbenzyldimethyl, chlorides; Zephiran chloride
Trade Names: AMMONYX®; ARQUAD DMMCB-75®; BARQUAT® MB-50; BARQUAT® MB-80; BAYCLEAN®; BIO-QUAT 50-24®; CATAMINE® AB; CONSAN®; DRAPOLENE®; GARDIQUAT®-1450; HYAMINE®-3500; INTEXAN® LB-50; KATAMINE® AB; NEO GERM-I-TOL®; ONYX BTC; OSVAN; RODALON®; SENTINEL®; TRITON® K-60; VIKROL® RQ
Chemical class: Quarternary ammonium salt; Benzalkonium chloride compounds
California DPR Chemical Code: 5069
EPA/OPP PC Code: 069106, 069109
HSDB Number: 234 as Benzalkonium chloride compounds
UN/NA & ERG Number: UN3267/153
RTECS® Number: BO3150000
EC Number: 264-151-6 [*Annex I Index No.:* 612-140-00-5]
Uses: Used as an algaecide to control slime mold, algae, fish pathogens, and mollusks in ponds, canals and bodies of water. Also widely used in deodorants, detergents, sanitizers and germicides for applications in food plants, laundries, and operating rooms. Not listed for use in EU countries[115]. Registered for use in the U.S. but not California.
U.S. Maximum Allowable Residue Levels for Quaternary ammonium compounds, alkyl (C12-C18) benzyldimethyl, chlorides are included on this list. [40 CFR 180.940(a)]: Residues of the following chemical substances are exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food. (a) The following chemical substances when used as ingredients in an antimicrobial pesticide formulation may be applied to: Food-contact surfaces in public eating places, dairy-processing equipment, and food-processing equipment and utensils. Limit: When ready for use, the end-use concentration of all quaternary chemicals in the solution is not to exceed 200 ppm of active quaternary compound. ***[40 CFR 180.940(c)]*** Residues of the following chemical substances are exempted from the requirement of a tolerance when used in accordance with good manufacturing practice as ingredients in an antimicrobial pesticide formulation, provided that the substance is applied on a semi-permanent or permanent food-contact surface (other than being applied on food packaging) with adequate draining before contact with food. (c) Chemical substances when used as ingredients in an antimicrobial pesticide formulation may be applied to food-processing equipment and utensils. Limits: When ready for use, the end-use concentration of this specific quaternary compound is not to exceed 200 ppm within the end-use total concentration that is not to exceed 400 ppm active quaternary compound.
Regulatory Authority and Advisory Information: Health Advisory: Mutagen, Developmental/Reproductive Toxin, Skin irritant/sensitizer
European/International Regulations: Hazard Symbol: Xn, H, N; risk phrases: R21/22; R34; R50; safety phrases: S2; S36/37/39; S45; S61 (see Appendix 1)
Description: White to yellowish-white amorphous powder; or clear, colorless liquid or off-white paste. Colorless. Aromatic odor, bitter taste. This material is probably combustible. Molecular weight = 424.15; Specific gravity (H_2O:1) = 0.977 @ 20°C; Freezing/Melting point = 34.5°C; Hazard Identification (based on NFPA-704M Rating System): Health 3, Flammability 0, Reactivity 0. Very soluble in water; forms an alkaline solution.
Incompatibilities: Corrosive; hygroscopic. Keep away from moisture, strong oxidizers; acids. When heated to decomposition or on contact with acids or acid fumes, may produce highly toxic chloride fumes. Deadly phosgene gas may be formed. In the presence of moisture, may cause pitting of some metals.
Routes of Entry: Inhalation, dermal and/or eye contact.
Harmful Effects and Symptoms
There have been nearly 2700 incidents reported to the Opp incident data system (ids) and the California Department of Pesticide Regulation from 1982 to 2004 associated with exposure to end-use products containing quaternary ammonium compounds: Most of the incidents are related to dermal, ocular and inhalation irritation. Allergic-type reaction has also been reported in some incidents[83].
Short Term Exposure: Corrosive. Can severely irritate skin, eyes and respiratory tract. Central nervous system poison can cause depression, seizures, shock, and coma and respiratory collapse. Ingestion can cause abdominal pain, vomiting and diarrhea. Ingestion of concentrated solutions may produce burns of the mouth, throat, and stomach; necrosis and peritonitis of the G.I. tract may occur. Inhalation can cause difficult breathing and possibly

result in pulmonary edema, a medical emergency that can be delayed for hours. Severe exposure can cause lung damage and possible respiratory muscle paralysis. Low blood oxygen (hypoxemia) may occur. Dermal contact may cause allergic contact dermatitis. High levels of exposure may cause respiratory failure and/or cardiovascular collapse. It also may cause renal failure. LD_{50} (oral, rat) = 240 mg/kg.
Long Term Exposure: Neurotoxic. May damage the central nervous system. This material is toxic to the kidneys, liver, heart, gastrointestinal tract. Prolonged or continuous lung exposure may cause occupational asthma. May cause contact dermatitis; allergy.
Points of Attack: Kidney, liver, heart, central nervous system, lungs, gastrointestinal tract; skin.
Medical Surveillance: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring.
First Aid: Eyes: First check the victim for contact lenses and remove if present. Flush victim's eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim's eyes without specific instructions from a physician. *Immediately* transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop. Skin: *Immediately* flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, *immediately* call a physician and be prepared to transport the victim to a hospital for treatment. Inhalation: *Immediately* leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, self-contained breathing apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing. Ingestion: *Do not induce vomiting.* If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and *immediately* call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim's airway is open and lay the victim on his/her side with the head lower than the body. *Do not induce vomiting. Immediately* transport the victim to a hospital[NTP].
Personal Protective Methods: Smoking, eating, and drinking before washing should be absolutely prohibited when any pesticide is being handled or used. Applicators and other handlers must wear: Coveralls worn over long-sleeved shirt and long pants; Chemical-resistant gloves such as DuPont™ Tychem® suit fabrics, barrier laminate, or Viton®; Chemical-resistant footwear plus socks; Protective eye wear; Chemical-resistant headgear for overhead exposure; Chemical-resistant apron when cleaning equipment, mixing, or loading[83]. Agricultural Use/ Engineering Controls: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides, ***40 CFR 170.240(d)(4-6)***, the handler PPE requirements may be reduced or modified as specified in the Worker Protection Standard.
Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with an organic vapor/acid gas cartridge (specific for organic vapors, HCl, acid gas and SO_2) with a dust/mist filter[88].
Storage: Color Code-White: Corrosive or Contact Hazard; Store refrigerated and separately in a corrosion-resistant location. Prior to working with this chemical you should be trained on its proper handling and storage. Store in tightly closed containers in a cool, well-ventilated area away from incompatible materials listed above. Metal containers involving the transfer of this chemical should be grounded and bonded. Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters. Use only non-sparking tools and equipment, especially when opening and closing containers of this chemical. If this material contains a flammable carrier, sources of ignition, such as smoking and open flames, are prohibited where this chemical is used, handled, or stored in a manner that could create a potential fire or explosion hazard. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.
Shipping:: Corrosive liquid, basic, organic, n.o.s. materials require a label of "CORROSIVE MATERIAL." It falls in Hazard Class 8 and Packing Group I, II or III, depending on concentration. Technical name required.
Spill Handling: Wear safety goggles, full work clothing and impervious gloves and boots. If vapors are present, wear a NIOSH- or CEN (UK)-approved respiratory protection. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. Increase, in the downwind direction, as necessary, the isolation distance shown above. If you spill this chemical, you should dampen the solid spill material with water, then transfer the dampened material to a suitable container. Use absorbent paper dampened with water to pick up any remaining material. If you spill a liquid, the floor area may be slippery. Contain spills with inert material such as dry earth or dry sand. Scoop into containers and seal up for proper disposal in accordance with all local, state, and federal laws. Seal your contaminated clothing and the

absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with a strong soap and water solution. Do not reenter the contaminated area until the Safety Officer (or other responsible person) has verified that the area has been properly cleaned.

Fire Extinguishing: When heated to decomposition the material may produce highly toxic amine, ammonia, hydrogen chloride, and organic chloride fumes; toxic and flammable phosgene gas may be released. Use dry chemical, alcohol-resistant foam, carbon dioxide, or water fog. In fire use water spray to knock down fumes. *Fire involving storage or vehicular tanks:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. For emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA) or pressure-demand supplied air respirator with escape SCBA and a fully encapsulating, chemical-resistant suit. Heated vapors may travel to source of ignition and flash back.

Disposal Method Suggested: High-temperature incineration. In accordance with 40CFR165, follow recommendations for the disposal of pesticides and pesticide containers. Must be disposed properly by following package label directions or by contacting your local or federal environmental control agency, or by contacting your regional EPA office.

Zinc phosphide Z:0150

Use Type: Rodenticide

CAS Number: 1314-84-7

Formula: P_2Zn_3; Zn_3P_2

Alert: Metallic phosphides on clothes, skin, or hair can react with water or moisture to generate phosphine gas. Vomitus containing phosphides can also off-gas phosphine. Phosphine is extremely flammable and explosive; it may ignite spontaneously on contact with air.

Synonyms: Fosfuro de zinc (Spanish); Phosvin

Trade Names: BAKER BRAND®[C]; BLUE-OX®; E-Z FLO®[C]; GOPHA-RID®; HOPKINS®; KILRAT®; MOLETOX II®; MOUS-CON®; MR. KILL RAT®; MR RAT GUARD®; NOTT ZINC PHOSPHIDE 93®; RATOL®; ROBAN II AG®[C]; RUMETAN®; ZINC-TOX®; ZP®

Chemical class: Inorganic toxic metals

EPA/OPP PC Code: 088601

California DPR Chemical Code: 626

HSDB Number: 1059

UN/NA & ERG Number: UN1714/139

RTECS® Number: ZH4900000

EC Number: 215-244-5 [*Annex I Index No.:* 015-006-00-9]

Uses: A U.S. EPA restricted Use Pesticide (RUP). Registered for use in EU countries[115]. Zinc phosphide reacts with the acidic conditions in the gut to form phosphine gas, which interferes with cell respiration. The rodenticide may be used to control many species of rodents, including mice, ground squirrels, prairie dogs, voles, moles, rats, muskrats, nutria and gophers. It may be used as an indoor or outdoor spot treatment for rodents as well as around burrows or underground in orchards, vineyards, various food crops, range lands, and non-crop areas. Zinc phosphide is formulated as a bait/solid, dust, granular, pellet/tablet or wettable powder and is also applied as a broadcast treatment by ground or aerial applications.

U.S. Maximum Allowable Residue Levels for Zinc phosphide [40 CFR 180.225(a)(1)]: Note: The following residue limits are for phosphine compounds that produce phosphine gas: ***[40 CFR 180.284(a)]:*** alfalfa, forage 0.2 ppm; alfalfa, hay 0.2 ppm; barley, grain 0.05 ppm; barley, hay 0.2 ppm; barley, straw 0.2 ppm; bean, dry, seed 0.05 ppm; beet, sugar, roots 0.05 ppm; beet, sugar, tops 0.2 ppm; grape 0.01 ppm; grass (rangeland) 0.1 ppm; potato 0.05 ppm; sugarcane, cane 0.01 ppm; timothy, hay 0.5 ppm; timothy, forage 0.5 ppm; wheat, forage 0.05 ppm; wheat, grain 0.05 ppm; wheat, hay 0.05 ppm; wheat, straw 0.05 ppm. ***[40 CFR 180.284(c)]:*** artichoke, globe 0.01 ppm; beet, sugar, roots 0.04 ppm; beets, sugar, tops 0.02 ppm.

Regulatory Authority and Advisory Information:

Toxicity (oral) Category 1, DANGER–POISON (human, fatal <1 teaspoon/5 g)

EPA chronic reference dose (cRfD) for zinc phosphide is = 0.0001 mg/kg/day

Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); 40CFR401.15 Section 307 Toxic Pollutants; Section 313 Water Priority Chemicals (57FR41331, 9/9/92)

Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc

EPA Hazardous Waste Number (RCRA No.): P122 (concentrations equal to 10% or more); U249 (concentrations of 10% or less)

Superfund/EPCRA 302 Extremely Hazardous Substances: TPQ = 500 lb (227kg)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg), when present at concentrations greater than 10%

AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as zinc compounds

EPCRA Section 313 (Category N982, Zinc compounds) Form R *de minimis* concentration reporting level: 1.0%

European/International Regulations: Hazard Symbol: T+, H, F, N; risk phrases: R15/29; R28; R32; R50/53; safety phrases: S1/2; S3/9/14; S28; S30; S36/37; S43; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Zinc phosphide is a dark gray to black crystalline solid, powder or paste. Mild garlic odor. Flammable solid. Molecular weight = 258.1; Specific gravity

(H_2O:1) = 4.55 @ 13°C; Boiling point = 1100°C; Freezing/Melting point = 420°C; Vapor pressure = 1×10^{-7} mmHg @ 25 °C. Hazard Identification (based on NFPA-704M Rating System): Health 3, Flammability 3, Reactivity 1, Practically insoluble in water; slowly decomposes, releasing toxic and flammable fumes of phosphine gas.

Incompatibilities: Reacts with water. See above. A strong reducing agent; violent reaction with strong oxidizers. Decomposes on contact with water and acids and when heated, releasing spontaneously flammable phosphine as well as toxic fumes of phosphorus and oxides of zinc. Incompatible with carbon dioxide, halogenated agents. Slightly corrosive to some metals. Contact with metals may evolve flammable hydrogen gas. Containers may explode when heated or if contaminated with water[ERG].

Permissible Exposure Limits in Air:

NIOSH[2] IDLH = 50 ppm.

OSHA[2] PEL = 0.3 ppm TWA

Protective Action Criteria (PAC) Ver. 27[89]

PAC-1: 0.091 ppm

PAC-2: $\mathbf{1}_{\mathbf{A}}$ ppm

PAC-3: $\mathbf{1.8}_{\mathbf{A}}$ ppm

Subscript "**A**" signifies 60-minute AEGL (Acute Emergency Guideline Level) values.

Permissible Concentration in Water: Canadian Drinking Water Standards: AO ≤ 5.0 mg[Zn]/L. The USEPA[6] recommends that drinking water should contain not >5 milligrams per liter of water (5 mg/L) because of taste.

Determination in Water: Water slowly decomposes zinc phosphide, releasing phosphine poisonous and flammable gas.

Routes of Entry: Inhalation, ingestion, eye and/or dermal and/or eye contact. Absorbed through the unbroken skin.

Harmful Effects and Symptoms

The vomitus, feces, and sometimes the breath may have a decaying fish odor. Warning: Highly toxic phosphine gas may evolve from vomitus and feces of victim. Acute symptoms of oral ingestion include nausea, abdominal pain, tightness in the chest, excitement, agitation, and chills. Signs of severe poisoning include labored breathing, shock, halted urine output, metabolic acidosis, muscle cramps, and convulsions. The compound's caustic action may cause the esophagus to close. Inhalation of zinc phosphide dust is followed in several hours by vomiting, diarrhea, bluing of the skin, rapid pulse, fever, and shock[83].

Short Term Exposure: Serious health hazard. Poisonous if ingested. Irritates the respiratory tract. Contact with the eyes can cause severe irritation, burns, photophobia, and possible permanent damage. Dermal contact causes irritation. This chemical is a central nervous system depressant. Inhalation of zinc phosphide dust is followed in several hours by vomiting, diarrhea, cyanosis (bluing of skin), rapid pulse, fever and shock. The breath smells of phosphine. The compound is very caustic and may cause closing of the esophagus. Inhalation of phosphine (formed when zinc phosphide is exposed to flame, water or acids) can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Zinc phosphide is very caustic when ingested and forms phosphine. Extensive liver damage and kidney damage can occur. Ingestion of 4–5 grams has produced death in human adults, but also doses of 25 to 50 grams have been survived. The lowest oral lethal dose reported for women is 80 mg/kg. Symptoms of oral ingestion include nausea, abdominal pain, vomiting, tightness in chest, excitement, agitation and chills; faintness, weakness, dyspnea, fall in blood pressure, change in pulse rate, diarrhea, intense thirst, convulsions, paralysis, and coma. Early labored breathing, shock, halted urinary output, metabolic acidosis, muscle cramps and convulsions are grave prognostic signs. LD_{50} (oral, rat) = 21 mg/kg[83]; LD_{50} (dermal, rat) = >900 mg/kg.

Long Term Exposure: The substance may cause effects on the liver, kidneys, heart, and nervous system. Repeated low exposure causes chronic poisoning, anemia, bronchitis, and gastrointestinal, visual, speech, and motor disturbances.

Points of Attack: Lungs, liver, kidneys, heart, blood and central nervous system.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Liver and kidney function tests. EKG. Lung function tests. Consider chest x-ray following acute overexposure. Complete blood count.

First Aid: *Emergency life-support procedures:* Acute exposure to zinc phosphide may require decontamination and life support for the victims. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic sheeting and disposable plastic bags to assist in preventing spread of contamination. *Inhalation exposure:* Move victim to fresh air. Emergency personnel should avoid self-exposure to zinc phosphide. Evaluate vital signs including pulse and respiratory rate and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer 100% humidified oxygen or other respiratory support. Rush to a health care facility. Obtain authorization and/or further instructions from the local hospital for performance of other invasive procedures. *Dermal/eye exposure:* Remove victims from exposure. Emergency personnel should avoid self-exposure to zinc phosphide. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer 100% humidified oxygen or other respiratory support. Remove contaminated clothing as soon as possible. If eye exposure has occurred, eyes must be flushed with lukewarm water for at least 15 minutes.

Wash exposed skin areas thoroughly with soap and water. Rush to a health care facility. *Ingestion exposure:* Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer 100% humidified oxygen or respiratory support. Rush to a health care facility. DO NOT induce vomiting or attempt to neutralize[83]. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled get medical attention for phosphine (IDLH level = 50 ppm), remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. If the zinc salt is ingested, get medical attention for phosphine poisoning. Give one tablespoonful of mustard in a glass of warm water; repeat until vomit fluid is clear; avoid use of all oils. Do not make an unconscious person vomit. Medical observation is recommended for at least 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. Death from phosphine may occur following convulsions, which may occur suddenly after apparent recovery of patient.

Note to physician or authorized medical personnel: In cases of zinc salt ingestion, empty stomach with emetics or gastric lavage with 1:5000 solution of potassium permanganate. As first aid for pulmonary edema, a physician or authorized paramedic may consider administering a corticosteroid spray.

Advanced treatment for phosphine exposure: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed begin fluid administration. For adults, bolus 1000 mL/hour intravenous saline or lactated Ringer's solution if blood pressure is under 80 mmHg; if systolic pressure is over 90 mmHg, an infusion rate of 150 to 200 mL/hour is sufficient. For children with compromised perfusion administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Personal Protective Methods: Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear dust-proof chemical goggles and face shield unless full facepiece respiratory protection is worn.

Respirator Selection: Where potential exists for exposures to zinc dusts, use a NIOSH/MSHA- or European Standard EN149-approved respirator equipped with particulate (dust/fume/mist) filters. Particulate filters must be checked every day before work for physical damage, such as rips or tears, and replaced as needed. Where potential for high exposure exists, use a NIOSH/MSHA- or European Standard EN149-approved supplied-air respirator with a full facepiece operated in the positive-pressure mode, or with a full facepiece, hood, or helmet in the continuous-flow mode; or use a NIOSH/MSHA- or European Standard EN149-approved self-contained breathing apparatus with a full facepiece operated in pressure-demand or other positive-pressure mode.

Storage: (1) Color Code-Yellow Stripe (*strong reducing agent*): Reactivity Hazard; Store separately in a area isolated from flammables, combustibles, or other yellow-coded materials. Color Code-Red Stripe: Flammability Hazard: Store separately from all other flammable materials. Prior to working with this chemical you should be trained on its proper handling and storage. Before entering confined space where this chemical may be present, check to make sure that an explosive concentration does not exist. Store in tightly closed containers in a cool, well-ventilated area away from chlorine compounds, oxidizing agents, and combustible materials. Sources of ignition, such as smoking and open flames, are prohibited where this chemical is handled, used, or stored, Use only non-sparking tools and equipment, especially when opening and closing containers. Wherever this chemical is used, handled, manufactured, or stored, use explosion-proof electrical equipment and fittings. Piping should be electrically bonded and grounded. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Zinc phosphide requires a shipping label of "Dangerous when wet material, poisonous materials." It falls in Hazard Class 4.3, Subsidiary Risks: 6.1. Label 4.3, 6.1.

Spill Handling:

Small spills (from a small package or a small leak from a large package)

when spilled in water:

First: Isolate in all directions (feet/meters) 200/60
Then: Protect persons downwind (miles/kilometers)
Day 0.2/0.3
Night 0.6/1.4

Large spills (from a large package or from many small packages)

First: Isolate in all directions (feet/meters) 1500/
Then: Protect persons downwind (miles/kilometers)
Day 1.3/2.1
Night 4.6/7.4

Clean up and disposal must be supervised by a specialist. For spills, clean up and emergency situations, wear a positive-pressure, pressure-demand, full facepiece self-contained breathing apparatus (SCBA) or pressure-demand supplied-air respirator with escape SCBA and a fully encapsulating, chemical-resistant suit. DuPont™ Tychem® has been suggested in the literature. Eliminate all ignition sources. Avoid touching or walking through spilled material. Stop leak if you can do it without risk. Avoid getting water on spilled substance or inside containers. Use water spray to reduce vapors or divert vapor cloud drift. Avoid allowing water runoff to contact spilled material. Cover small spills with noncombustible and DRY materials such as lime, earth, sand or soda ash followed with plastic sheet to minimize spreading or contact with rain. Dike for later disposal; do not apply water unless directed to do so[ERG].

Fire Extinguishing: Flammable solid. Water or moisture reacts with this chemical, releasing phosphine, a spontaneously flammable and poisonous gas. Reaction with water may generate high heat that will increase the concentration of fumes in the air. Hazardous decomposition includes metal fumes, zinc oxide, and sulfur oxide and other poisonous fumes are released in heat of fire. Zinc fume may be released in fire situations and may cause "metal fume fever"[17]. fire may restart after it has been extinguished. Vapors may accumulate in confined areas (basement, tanks, hopper/tank cars etc.). Contact with metals may evolve flammable hydrogen gas. Containers may explode when heated or if contaminated with water. Runoff from fire control or dilution water may be corrosive and/or toxic and cause pollution. As an immediate precautionary measure, isolate spill or leak area in all directions for at least 50 meters/150 feet for liquids and at least 25 meters/75 feet for solids. *Fire involving tanks, tank trucks or vehicle loads:* isolate for 800 meters/0.5 mile in all directions; also, consider initial evacuation for 800 meters/0.5 mile in all directions. Wear protective suits, gloves, boots, and self-contained breathing apparatus when fighting fires involving zinc phosphide. Approach fire from upwind, stay out of low areas, to avoid hazardous vapors and toxic decomposition products[17]. *DO NOT* use carbon dioxide or halogenated extinguishing agents (as phosphine gas will be released). *Small fire:* CO_2, dry chemical, dry sand/clay/ground limestone, alcohol-resistant foam. *Large fire:* water spray, fog or alcohol-resistant foam. *Note:* some foams will react with the material and release corrosive/toxic gases. Move containers from fire area if you can do it without risk. Use water spray or fog; do not use straight streams. Dike fire-control water for later disposal; do not scatter the material. *Fire involving tanks or car/trailer loads:* fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in the case of rising sound from venting safety devices or discoloration of tank. *Always* stay away from tanks engulfed in fire.

Disposal Method Suggested: Zinc phosphide is a poor candidate for incineration[83]. Generators of waste (equal to or greater than 100 kg/mo) containing this contaminant, EPA hazardous waste number P122, U249, must conform with USEPA regulations in storage, transportation, treatment and disposal of waste ***[40 CFR 240-280, 300-306, 702-799 (7/1/2006)]***. Must be supervised and handled by a specialist.

Ziram Z:0158

Use Type: Fungicide, Microbiocide, Animal repellant
CAS Number: 137-30-4

Formula: $C_6H_{12}N_2S_4Zn$

Synonyms: Amyl zimate; Antrene bis(dimethyl carbamodithioato-*s,s'*)zinc; Carbamic acid, dimethyldithio-, zinc salt; Carbazinc; Carbamodithioic acid, dimethyl-, zinc salt; Dimethylcarbamodithioic acid, zinc complex; Dimethylcarbamodithioic acid, zinc salt; Dimethylcarbamate, zinc salt; Dimethylcarbamo dithiocarbamic acid, zinc salt; ENT 988; Methyl zimate; Methyl ziram; NCI-C50442; Zinc bis(dimethyldithio carbamate); Zinc bis(dimethyldithiocarbamoyl)disulphide; Zinc dimethyldithiocarbamate; Zinc, bis(dimethylcarbamodithioato-*s,s'*)-, (T-4)-; Zinkcarbamate; Zinc *N,N*-dimethyldithiocarbamate; ZnDMDC

Trade Names: AAPROTECT®; AAVOLEX®; AAZIRA®; ACCELERATOR®-L; ACCELERATOR® MZ® Powder; ACETO ZDED®; ACETO ZDMD®; ALCOBAM ZM®; ANCANZATE ME®; CARBAZINC®; CIRAM®; CORONA COROZATE®; COROZATE®; CUMAN®; CUMAN L®; CYMATE®; DRUPINA® 90; EPTAC-1®; FUCLASIN®; FUCLASIN® ULTRA; FUKLASIN®; FUNGOSTOP®; HERMAT ZDM®; HEXAZIR®; KARBAM WHITE®; KYPZIN®; METHASAN®; METHAZATE®; MEXENE®; MEZENE®; MILBAM®; MILBAN®; MOLURAME®; MYCRONIL®; OCTOCURE ZDM-50®; ORCHARD® BRAND ZIRAM; PERKACIT ZDMC®; POMARSOL® Z FORTE; PRODARAM®; PROKIL® Ziram; RHODIACID®; SOXINAL®-PZ; SOXINOL®-PZ; TRICARBAMIX Z®; TSIMAT®; TSIRAM® (Russian); ULTRA ZINC DMC®; VANCIDE® MZ-96; VANCIDE® 51Z Dispersion (with Zinc 2-mercaptobenzothiazolate); VANCIDE® 51Z Dispersion (with Ziram); ZERLATE®; ZINCMATE®; ZIMATE®; ZIMATE®; METHYL®; ZIRAMVIS®; ZIRASAN®; ZIRBERK®; ZIREX 90®; ZIRIDE®; ZIRTHANE®; ZITOX®

Chemical class: Dithiocarbamate

EPA/OPP PC Code: 034805

California DPR Chemical Code: 629

HSDB Number: 1788

UN/NA & ERG Number: UN2771(solid)/151

RTECS® Number: ZH0525000

EC Number: 205-288-3 [*Annex I Index No.:* 006-012-00-2]

Uses: Ziram is an agricultural fungicide registered to control fungal diseases on a wide range of crops including stone fruits, pome fruits, nut crops, vegetables and commercially grown ornamentals, and as a soil and seed treatment. In addition, it is formulated as a bird and rabbit repellent for outdoor foliar applications to ornamentals. Registered for use in EU countries[115]. Registered for use in the U.S.

U.S. Maximum Allowable Residue Levels for the fungicide Ziram, calculated as zinc ethylenebisdithiocarbamate [40 CFR 180.116]: in or on raw agricultural commodities: apples 7 ppm; apricots 7 ppm; beans 7 ppm; beets (with or without tops) or beet greens alone 7 ppm; blackberries 7 ppm; blueberries (huckleberries) 7 ppm; boysenberries 7 ppm; broccoli 7 ppm; brussels sprouts 7 ppm; cabbage 7 ppm; carrots 7 ppm; cauliflower 7 ppm; celery 7 ppm; cherries 7 ppm; collards 7 ppm; cranberries 7 ppm; cucumbers 7 ppm; dewberries 7 ppm; eggplants 7 ppm; gooseberries 7 ppm; grapes 7 ppm; kale 7 ppm; kohlrabi 7 ppm; lettuce 7 ppm; loganberries 7 ppm; melons 7 ppm; nectarines 7 ppm; onions 7 ppm; peaches 7 ppm; peanuts 7 ppm; pears 7 ppm; peas 7 ppm; peppers 7 ppm; pumpkins 7 ppm; quinces 7 ppm; radishes (with or without tops) or radish tops 7 ppm; raspberries 7 ppm; rutabagas (with or without tops) or rutabaga tops 7 ppm; spinach 7 ppm; squash 7 ppm; strawberries 7 ppm; summer squash 7 ppm; tomatoes 7 ppm; turnips (with or without tops) or turnip greens 7 ppm; and youngberries, in or on almonds 0.1 ppm and pecans 0.1 ppm.

Human toxicity (long-term)[101]: Very low–140.00 ppb, Health Advisory.

Fish toxicity (threshold)[101]: Extra high–0.6214300 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Regulatory Authority and Advisory Information:

Carcinogenicity[83]: EPA, Suggestive evidence of carcinogenicity, but not sufficient to assess human carcinogenic potential; Likely to be Carcinogenic to Humans. IARC: Group 3, unclassifiable as to human carcinogenicity

Acute Oral Category: 2, WARNING.

Health Advisory: Mutagen, Developmental & Reproductive Toxin (TRI), Very toxic by Inhalation (EU)

US/ADI (Acceptable Daily Intake) = 0.0125 mg/kg/day[16]

Clean Water Act: Section 307 Toxic Pollutants, as zinc and compounds

Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470), as zinc

AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as zinc compounds

EPA Hazardous Waste Number (RCRA No.): P205 (Ziram)

Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg) as Zinc, bis(dimethylcarbamodithioato-*S,S'*)-

CERCLA Reportable Quantity (RQ): 10 lb (4.54 kg)

The "Director's List" (CAL/OSHA) as zinc compounds

EPCRA Section 313: (Category N982, Zinc compounds)

Form R *de minimis* concentration reporting level: 1.0% as zinc compounds

Regulated Marine Pollutant

European/International Regulations: Hazard Symbol: T+, Xn; Xi; N; risk phrases: R22; R26; R37; R41; R43; R48/22; R50/53; safety phrases: S1/2; S22; S26; S28; S36/37/39; S45; S60; S61 (see Appendix 1)

WGK (German Aquatic Hazard Class): 3-Severe hazard to waters.

Description: Ziram is white (when pure), combustible powder. Odorless. Commercial product is available as wettable powders, liquids, and pastes. Molecular weight = 305.81; Specific gravity (H_2O:1) = 1.66 @ 25°C; Boiling point = (decomposes); Freezing/Melting point = 246–250°C (crystals); 146°C (dust)[IARC]; Vapor pressure = 1×10^{-7} mmHg @ 20°C; Flash point = 93.3°C. Practically insoluble in water; solubility = <1 mg/L @ 21.1°C. Physical and toxicological properties may be affected by carrier solvents in commercial formulations.

Incompatibilities: Combustible material. Dust may form explosive mixture in air. Water, acid, oxidizing materials.

Heat, or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide. Flammable gases are generated by reaction with aldehydes, nitrides, and hydrides. Incompatible with oxidizers including peroxides, acids, acid halides, mercury[88]. Decomposition products in fire includes carbon monoxide, carbon dioxide, and nitrogen compounds of sulfur and nitrogen. Corrosive to iron, copper brass and zinc metals, especially in the presence of moisture. Heat alkalies (lime), moisture can cause decomposition. Decomposes on prolonged storage. Degradation produces ethylene thiourea. May corrode iron, copper and other metals.

Permissible Concentration in Water: Federal Drinking Water Guidelines: 4 ppb[14]. State Drinking Water Guidelines: Maine 25 μg/L. Canadian Drinking Water Standards: AO$\leq$5.0 mg[Zn]/L.

Determination in Water: EPA EMSLC Method 630. The Determination of Dithiocarbamate Pesticides in Municipal and Industrial Wastewater by UV-VIS Spectrophotometry. Log K_{ow} = <2.0. Highly toxic to marine organisms, but unlikely to bioaccumulate. A regulated marine pollutant.

Routes of Entry: Inhalation of dust or aerosol, ingestion; absorption through intact skin.

Harmful Effects and Symptoms

Short Term Exposure: Concentrated solutions are slightly corrosive to eyes, skin, and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can be corrosive, and cause irritation, watering, pain, and inflammation of the eyelids. Dermal contact can cause irritation and minor ulceration. Ingestion can cause gastritis, nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. In vivo, it may cause hemolysis, dystrophy of the muscle, liver and kidney damage, emphysema, local necrosis of the intestine, neural and visual disturbances, irritation of the skin and mucous membranes and dermatitis. It can also cause headache, tightness of the chest and irritation of the respiratory tract[88]. May cause edema and hemorrhage of the brain. Severe exposure may result in death. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups. LD_{50} (oral, rat) = 100–300 mg/kg[83]; LD_{50} (dermal, rat) = >6 g/kg.

Long Term Exposure: May be neurotoxic; may affect the central nervous system. May tend to inhibit alcohol metabolism and may interfere with thyroid function, tending to cause goiter. May cause tumors and is mutagenic according to literature. May cause reproductive and fetal effects. A skin sensitizer/irritant.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, brain, skin, eyes. Thyroid. Reproductive cells.

Medical Surveillance: This chemical is a suspected or known human carcinogen. Exposed persons should contact a physician for advice regarding the possible long term health effects and advice for medical monitoring. There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count and chest x-ray following acute overexposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel*: Medical observation is recommended for 24 to 48 hours following breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic might consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Evaluation by a qualified allergist, including exposure history and testing, may help diagnose allergy.

Personal Protective Methods: Reacts with the following absorbent materials: Cellulose-Based; Mineral- and Clay-Based; Dirt/Earth[88]. Wear protective gloves and clothing to prevent any reasonable probability of dermal and/or eye contact. Safety equipment suppliers/manufacturers can provide recommendations on the most protective glove/clothing material for your operation. All protective clothing (suits, gloves, footwear, headgear) should be clean, available each day, and put on before work. Contact lenses should not be worn when working with this chemical. Wear splash-proof chemical goggles and face shield unless full facepiece respiratory protection is worn. Employees should wash immediately with soap when skin is wet or contaminated. Provide emergency showers and eyewash.

Respirator Selection: Where the neat (undiluted) test chemical is weighed and diluted, wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge, i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)[88]

Storage: Color Code-Blue: Health Hazard/Poison: Store in a tightly closed container in a dry, well-ventilated and secure poison location. Prior to working with this chemical you should be trained on its proper handling and storage. Where possible, automatically transfer material from other storage containers to process containers. Store pesticides in original containers, complete with labels listing ingredients, use directions, and first aid. Keep them away from areas where flooding is possible or where they might leak into wells, drains, ground water, basements, or surface water.

Shipping: Thiocarbamate and dithiocarbamate pesticides, solid, toxic, require a label of "poisonous materials." They usually fall in Hazard Class 6.1.

Spill Handling: As an immediate precautionary measure, isolate spill or leak area in all directions for at least 25 meters/75 feet. Increase, if necessary, in the downwind direction. Wear a NIOSH-approved half-face respirator equipped with a combination filter cartridge [i.e. organic vapor/acid gas/HEPA (specific for organic vapors, HCl, acid gas, SO_2 and a high-efficiency particulate filter)][NTP]. DuPont™ Tychem® suit fabrics are recommended in the literature. First, dampen the solid spill material with 5% ammonium hydroxide, then transfer the dampened material to a suitable container. Use absorbent paper dampened with 5% ammonium hydroxide to pick up any remaining material. Seal all contaminated clothing and absorbent paper in a vapor-tight plastic bag for eventual disposal. Wash all contaminated surfaces with 5% ammonium hydroxide followed by washing with a soap and water solution. Do not reenter the contaminated area until an expert or other responsible person has verified that the area has been properly cleaned.

Fire Extinguishing: When heated to decomposition ziram emits toxic fumes of carbon monoxide, carbon dioxide, sulfur oxides and nitrogen oxides. Fires involving ziram can be controlled with dry chemical, carbon dioxide or Halon extinguishers; water spray may also be used[88]. *Fires involving a tank, rail car or tank truck:* isolate and consider evacuation for 800 meters/0.5 mile in all directions[ERG].

Disposal Method Suggested: Do not discharge into drains or sewers. Dispose of waste material as hazardous waste using a licensed disposal contractor to an approved landfill. Consult with environmental regulatory agencies for guidance on acceptable disposal practices. Generators of waste containing this contaminant (≥100 kg/mo) must conform with EPA regulations governing storage, transportation, treatment, and waste disposal. A potential candidate for liquid injection incineration at a temperature range of 650 to 1,600°C and a residence time 0.1 to 2 seconds. Also, a potential candidate for rotary kiln incineration at a temperature range of 820 to 1,600°C and residence times of seconds for liquids and gases, and hours for solids[83].

Appendix 1: European/International Hazard Codes, risk phrases, and safety phrases

HAZARD CODES

Explosive (E)
Oxidizing (O)
Highly flammable (F)
Extremely Flammable (F+)
Toxic (T)
Very toxic (T+)
Harmful (Xn)
Irritant (Xi)
Corrosive (C)
Dangerous to the Environment (N)

(LIST OF R-PHRASES) RISK PRECAUTIONS

R1 - Explosive when dry.
R2 - Risk of explosion by shock, friction, fire or other sources of ignition.
R3 - Extreme risk of explosion by shock, friction, fire or other sources of ignition.
R4 - Forms very sensitive explosive metallic compounds.
R5 - Heating may cause an explosion.
R6 - Explosive with or without contact with air.
R7 - May cause fire.
R8 - Contact with combustible material may cause fire.
R9 - Explosive when mixed with combustible material.
R10 - Flammable.
R11 - Highly flammable.
R12 - Extremely flammable.
R14 - Reacts violently with water.
R15 - Contact with water liberates extremely flammable gases.
R16 - Explosive when mixed with oxidizing substances.
R17 - Spontaneously flammable in air.
R18 - In use, may form flammable/explosive vapour-air mixture.
R19 - May form explosive peroxides.
R20 - Harmful by inhalation.
R21 - Harmful in contact with skin.
R22 - Harmful if swallowed.
R23 - Toxic by inhalation.
R24 - Toxic in contact with skin.
R25 - Toxic if swallowed.
R26 - Very toxic by inhalation.
R27 - Very toxic in contact with skin.
R28 - Very toxic if swallowed.
R29 - Contact with water liberates toxic gas.
R30 - Can become highly flammable in use.
R31 - Contact with acids liberates toxic gas.
R32 - Contact with acids liberates very toxic gas.
R33 - Danger of cumulative effects.
R34 - Causes burns.
R35 - Causes severe burns.
R36 - Irritating to eyes.
R37 - Irritating to respiratory system.
R38 - Irritating to skin.
R39 - Danger of very serious irreversible effects.
R40 - Limited evidence of a carcinogenic effect.
R41 - Risk of serious damage to eyes.
R42 - May cause sensitization by inhalation.
R43 - May cause sensitisation by skin contact.
R44 - Risk of explosion if heated under confinement.
R45 - May cause cancer.
R46 - May cause heritable genetic damage.
R48 - Danger of serious damage to health by prolonged exposure.
R49 - May cause cancer by inhalation.
R50 - Very toxic to aquatic organisms.
R51 - Toxic to aquatic organisms.
R52 - Harmful to aquatic organisms.
R53 - May cause long-term adverse effects in the aquatic environment.
R54 - Toxic to flora.
R55 - Toxic to fauna.
R56 - Toxic to soil organisms.
R57 - Toxic to bees.
R58 - May cause long-term adverse effects in the environment.
R59 - Dangerous for the ozone layer.
R60 - May impair fertility.
R61 - May cause harm to the unborn child.
R62 - Possible risk of impaired fertility.
R63 - Possible risk of harm to the unborn child.
R64 - May cause harm to breastfed babies.
R65 - Harmful: may cause lung damage if swallowed.
R66 - Repeated exposure may cause skin dryness or cracking.
R67 - Vapours may cause drowsiness and dizziness.
R68 - Possible risk of irreversible effects.
R 14/15 - Reacts violently with water, liberating extremely flammable gases.
R 15/29 - Contact with water liberates toxic, extremely flammable gas.
R 20/21 - Harmful by inhalation and in contact with skin.
R 20/22 - Harmful by inhalation and if swallowed.
R 21/22 - Harmful in contact with skin and if swallowed.

R 20/21/22 - Harmful by inhalation, in contact with skin and if swallowed.
R 23/24 - Toxic by inhalation and in contact with skin.
R 24/25 - Toxic in contact with skin and if swallowed.
R 23/25 - Toxic by inhalation and if swallowed.
R 23/24/25 - Toxic by inhalation, in contact with skin and if swallowed.
R 26/27 - Very toxic by inhalation and in contact with skin.
R 26/28 - Very toxic by inhalation and if swallowed.
R 26/27/28 - Very toxic by inhalation, in contact with skin and if swallowed.
R 27/28 - Very toxic in contact with skin and if swallowed.
R 36/37 - Irritating to eyes and respiratory system.
R 36/38 - Irritating to eyes and skin.
R 37/38 - Irritating to respiratory system and skin.
R 36/387/38 - Irritating to eyes, respiratory system and skin.
R 39/23 - Toxic: danger of very serious irreversible effects through inhalation.
R 39/24 - Toxic: danger of very serious irreversible effects in contact with skin.
R 39/25 - Toxic: danger of very serious irreversible effects if swallowed.
R 39/32/24 - Toxic: danger of very serious irreversible effects through inhalation and in contact with skin.
R 39/23/25 - Toxic: danger of very serious irreversible effects through inhalation and if swallowed.
R 39/24/25 - Toxic: danger of very serious irreversible effects in contact with skin and if swallowed.
R 39/23/24/25 - Toxic: danger of very serious irreversible effects through inhalation, in contact with skin and if swallowed.
R 39/26 - Very toxic: danger of very serious irreversible effects through inhalation.
R 39/26/27 - Very toxic: danger of very serious irreversible effects through inhalation and in contact with skin.
R 39/27 - Very toxic: danger of very serious irreversible effects in contact with skin.
R 39/28 - Very toxic: danger of very serious irreversible effects if swallowed.
R 39/26/28 - Very toxic: danger of very serious irreversible effects through inhalation and if swallowed.
R 39/27/28 - Very toxic: danger of very serious irreversible effects in contact with skin and if swallowed.
R 39/26/27/28 - Very toxic: danger of very serious irreversible effects through inhalation, in contact with skin and if swallowed.
R 68/20 - Harmful: possible risk of irreversible effects through inhalation.
R 68/21 - Harmful: possible risk of irreversible effects in contact with skin.
R 68/22 - Harmful: possible risk of irreversible effects if swallowed.
R 68/20/21 - Harmful: possible risk of irreversible effects through inhalation and in contact with skin.
R 68/20/22 - Harmful: possible risk of irreversible effects through inhalation and if swallowed.
R 68/21/22 - Harmful: possible risk of irreversible effects in contact with skin and if swallowed.
R 68/20/21/22 - Harmful: possible risk of irreversible effects through inhalation, in contact with skin and if swallowed.
R 42/43 - May cause sensitization by inhalation and skin contact.
R 48/20 - Harmful: danger of serious damage to health by prolonged exposure through inhalation.
R 48/21 - Harmful: danger of serious damage to health by prolonged exposure in contact with skin.
R 48/22 - Harmful: danger of serious damage to health by prolonged exposure if swallowed.
R 48/20/21 - Harmful: danger of serious damage to health by prolonged exposure through inhalation and in contact with skin.
R 48/20/22 - Harmful: danger of serious damage to health by prolonged exposure through inhalation and if swallowed.
R 48/21/22 - Harmful: danger of serious damage to health by prolonged exposure in contact with skin and if swallowed.
R 48/20/21/22 - Harmful: danger of serious damage to health by prolonged exposure through inhalation, in contact with skin and if swallowed.
R 48/23 - Toxic: danger of serious damage to health by prolonged exposure through inhalation.
R 48/24 - Toxic: danger of serious damage to health by prolonged exposure in contact with skin.
R 48/25 - Toxic: danger of serious damage to health by prolonged exposure if swallowed.
R 48/23/24 - Toxic: danger of serious damage to health by prolonged exposure through inhalation and in contact with skin.
R 48/23/25 - Toxic: danger of serious damage to health by prolonged exposure through inhalation and if swallowed.
R 48/24/25 - Toxic: danger of serious damage to health by prolonged exposure in contact with skin and if swallowed.
R 48/23/24/25 - Toxic: danger of serious damage to health by prolonged exposure through inhalation, in contact with skin and if swallowed.
R 50/53 - Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.
R 51/53 - Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.
R 52/53 - Harmful to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

(LIST OF S-PHRASES) SAFETY PRECAUTIONS

S 1 - Keep locked up
S 2 - Keep out of the reach of children
S 3 - Keep in a cool place
S 4 - Keep away from living quarters
S 5 - Keep contents under … (appropriate liquid to be specified by the manufacturer)
S 6 - Keep under … (inert gas to be specified by the manufacturer)

S 7 - Keep container tightly closed
S 8 - Keep container dry
S 9 - Keep container in a well-ventilated place
S 12 - Do not keep the container sealed
S 13 - Keep away from food, drink and animal feedingstuffs
S 14 - Keep away from … (incompatible materials to be indicated by the manufacturer)
S 15 - Keep away from heat
S 16 - Keep away from sources of ignition–No smoking
S 17 - Keep away from combustible material
S 18 - Handle and open container with care
S 20 - When using do not eat or drink
S 21 - When using do not smoke
S 22 - Do not breathe dust
S 23 - Do not breathe gas/fumes/vapour/spray (appropriate wording to be specified by the manufacturer)
S 24 - Avoid contact with skin
S 25 - Avoid contact with eyes
S 26 - In case of contact with eyes, rinse immediately with plenty of water and seek medical advice
S 27 - Take off immediately all contaminated clothing
S 28 - After contact with skin, wash immediately with plenty of (to be specified by the manufacturer)
S 29 - Do not empty into drains
S 30 - Never add water to this product
S 33 - Take precautionary measures against static discharges
S 35 - This material and its container must be disposed of in a safe way
S 36 - Wear suitable protective clothing
S 37 - Wear suitable gloves
S 38 - In case of insufficient ventilation wear suitable respiratory equipment
S 39 - Wear eye/face protection
S 40 - To clean the floor and all objects contaminated by this material use … (to be specified by the manufacturer)
S 41 - In case of fire and/or explosion do not breathe fumes
S 42 - During fumigation/spraying wear suitable respiratory equipment (appropriate wording to be specified by the manufacturer)
S 43 - In case of fire use … (indicate in the space the precise type of fire-fighting equipment. If water increases the risk add: Never use water)
S 45 - In case of accident or if you feel unwell seek medical advice immediately (show the label where possible)
S 46 - If swallowed, seek medical advice immediately and show this container or label
S 47 - Keep at temperature not exceeding …°C (to be specified by the manufacturer)
S 48 - Keep wetted with … (appropriate material to be specified by the manufacturer)
S 49 - Keep only in the original container
S 50 - Do not mix with … (to be specified by the manufacturer)
S 51 - Use only in well-ventilated areas
S 52 - Not recommended for interior use on large surface areas
S 53 - Avoid exposure–Obtain special instructions before use
S 56 - Dispose of this material and its container to hazardous or special waste collection point
S 57 - Use appropriate containment to avoid environmental contamination
S 59 - Refer to manufacturer/supplier for information on recovery/recycling
S 60 - This material and its container must be disposed of as hazardous waste
S 61 - Avoid release to the environment. Refer to special instructions/safety data sheet
S 62 - If swallowed, do not induce vomiting: seek medical advice immediately and show this container or label
